## KEY TO PRONUNCIATION

For a full explanation of the various sounds indicated, see the KEY TO PRONUNCIATION in Vol. I.

ē as in ale, fate.  
 â " " senate, chaotic.  
 â " " glare, care, and as *e* in there.  
 ã " " am, at.  
 ä " " arm, father.  
 á " " ant, and final *a* in America, armada, etc.  
 α " " final, regal, pleasant.  
 a " " all, fall.  
 ē " " eve.  
 ē " " elate, evade.  
 ē " " end, pet.  
 ē " " fern, her, and as *i* in sir, etc.  
 e " " agency, judgment.  
 i " " ice, quiet.  
 i " " quiescent.  
 i " " ill, fit.  
 ò " " old, sober.  
 ò " " obey, sobriety.  
 ò " " orb, nor.  
 ò " " odd, forest, not.  
 o " " atom, carol.  
 oi " " oil, boil.  
 õ " " food, fool, and as *u* in rude, rule.  
 ou " " house, mouse.  
 ū " " use, mule.  
 ũ " " unite.  
 ũ " " cut, but.  
 u " " full, put, or as *oo* in foot, book.  
 ũ " " urn, burn.  
 y " " yet, yield.  
 B " " Spanish Habana, Córdoba, where it is like English *v* but made with the lips alone.

ch as in chair, cheese.  
 d " " Spanish Almodovar, pulgada, where it is nearly like *th* in English then.  
 g " " go, get.  
 g " " German Landtag = *ch* in Ger. ach, etc.  
 h " " *j* in Spanish Jijona, *g* in Spanish gila; like English *h* in hue, but stronger.  
 hw " " wh in which.  
 k " " *ch* in German ich, Albrecht = *g* in German Arensburg, Mecklenburg, etc.  
 n " " in sniker, longer.  
 ng " " sing, long.  
 n " " French bon, Bourbon, and *m* in the French Étampes; here it indicates nasalizing of the preceding vowel.  
 sh " " shine, shut.  
 th " " thrust, thin.  
 th " " then, this.  
 zh " " *z* in azure, and *s* in pleasure.

An apostrophe [*ʼ*] is sometimes used as in tã'b'l (table), kãz'm (chasm), to indicate the elision of a vowel or its reduction to a mere murmur.

For foreign sounds, the nearest English equivalent is generally used. In any case where a special symbol, as *ç*, *h*, *κ*, *ñ*, is used, those unfamiliar with the foreign sound indicated may substitute the English sound ordinarily indicated by the letter. For a full description of all such sounds, see the article on PRONUNCIATION.

## A PARTIAL LIST OF THE LEADING ARTICLES IN VOLUME VI

- CONSUL, MERCANTILE.  
Professor George W. Kirchwey.
- CONTAGIOUS DISEASES (Treatment of Legal Aspects).  
Professor George W. Kirchwey.
- CONTINENT.  
Mr. David Hale Newland.
- CONTRABAND OF WAR.  
Professor George W. Kirchwey.
- CONTRAST.  
Professor E. B. Titchener.
- COOKERY.  
Mrs. Sarah Tyson Rorer.  
Dr. Edwin West Allen.
- COOPER, JAMES FENIMORE.  
Dr. Horatio S. Krans.
- COOPERAGE  
Mr Herbert Treadwell Wade.
- COÖPERATION.  
Professor Samuel McCune Lindsay.  
Professor Alvin Saunders Johnson.
- COÖRDINATE.  
Professor David Eugene Smith.

# THE NEW INTERNATIONAL ENCYCLOPÆDIA

---

**C**ONSUL (Lat.). The title given to the two chief magistrates established in Rome on the expulsion of the kings in 509 B.C. So violent was the hatred of the monarchy that the Romans were unwilling to intrust the new Republic to a single executive, but gave the entire administration to two consuls, of equal rank and jurisdiction, that each might check any tyranny on the part of the other. At first the entire power of the King, in state and church, at Rome and abroad, was vested in the two consuls, and each was wholly responsible for the acts of both; the acts of either, however, were nullified by the dissent of his colleague. Gradually their powers were limited, and many of their functions were given to other officials, such as the censors, the prætors, and the ædiles. They held office for one year only, and years were reckoned by their names. In the early days of the Republic one consul was generally commander in chief in the field, while the other remained to administer affairs at Rome; but often both were forced to lead the armies in battle. In such cases they commanded by turns, a day at a time. They presided at meetings of the Senate, at elections, and at the chief public festivals. Together with the Senate, they exercised a general supervision of the state. As a mark of their high office, they wore a white toga with a crimson border (*toga prætexta*), sat in public on the 'curule chair' (*sella curulis*), and were accompanied by 12 attendants (*lictors*) bearing the *fascēs* (q.v.).

The consuls were elected by the *Comitia Censuriata* (see *COMITIA*). In the earlier period the date of the election and of entering upon office was irregular and dependent on circumstances; but if convenient the election took place generally in July, and after 153 B.C. the consulship began regularly on January 1. At first only patricians were eligible to the office, and a consul could not be reelected. After a long struggle of the plebeians for recognition, it was established by the *Leges Liciniae Sextiae* (see *LICINIAN ROGATIONS*), in 367 B.C., that one of the consuls must be a plebeian. Meantime, between 444 and 367 B.C. the consulship was frequently suspended, and the military tribunate with consular power, an office to which plebeians could be elected, was substituted for it. In 342 B.C. both consulships were opened to the plebs by a popular vote, and it

was ordained that ten years must elapse before a consul could be eligible for reelection; however, it was not until 215 B.C. that two plebeian consuls were elected together, and one of these was quickly ousted. Not until 162 B.C. did the plebeians succeed in obtaining two effective consuls.

With the organization of the Empire by Augustus, the consulship ceased to be of real importance. In the division of functions between the Emperor and the senatorial body the consuls remained the head of the latter; but their nomination became a prerogative of the Emperor, and their election a farce. They still gave their names to the year, but the position was simply one of honor, so that we very often find several consuls named in succession in one year, the *eponymous* consuls holding office only for four, or even two, months, and then being replaced by others. The original pair were called *consules ordinarii*, their substitutes *consules suffecti*. Under the later Empire nothing but the name and the honor of the consulship remained. The Emperor Honorius was made consul in the very year of his birth! Official dating by the name of the consuls came to an end in 537 A.D. Consult: Mommsen, *Römische Staatsrecht*, ii (Leipzig, 1887-88); Daremberg and Saglio, *Dictionnaire des antiquités romaines*, vol. i (Paris, 1892); Pauly-Wissowa, *Real-Encyclopädie der classischen Altertumswissenschaft*, vol. iv (Stuttgart, 1901); Greenidge, *Roman Public Life* (London, 1901).

**CONSUL, MERCANTILE.** An agent appointed by one nation to reside within the territory of another for the special purpose of promoting commercial intercourse between them. The earliest prototype of this official is the ancient Greek *proxenus*, whose functions were to represent his country, and to protect its citizens while trading at the place of his residence. Modern Greek applies this term to the consul of to-day. That "consul" has superseded "proxenus" as the title of the international agent of commerce is due to the supremacy of Italian commerce in the Middle Ages. During that period Italian traders in a foreign country were accustomed to have their disputes settled by magistrates of their own upon whom they conferred the proud title of "consul." In 1485 Richard III appointed the first consul for English merchants (Lorenzo Strozzi, at Pisa), being moved thereto, it is said, "by observing

from the practice of other nations the advantage of having a magistrate for settling disputes among merchants trading in another country."

This judicial function of the early consul is maintained at present in certain Oriental and African countries. In other lands his primary duties are those of an international commercial agent. The exact nature of his activities and the manner in which he is to perform them are determined mainly by the government appointing him and by treaty with the power in whose territory the consular office is exercised.

The consular service of the United States embraces one consular agent and consul general (located at Cairo, and enjoying a quasi-diplomatic position), consuls general, vice consuls general, deputy consuls, consular agents, consular clerks, and office clerks, numbering, in 1913, about 1200 persons. The fees received by the consular offices, which under the Law of 1906 are covered into the Treasury, practically cover the expenses of the service. Under earlier laws all or part of the fees were retained by the consular officials. Thus the total income of the Consul at London, whose salary was fixed at \$5000, approximated \$20,000. The abolition of the fee system by the Law of 1906 was accompanied by an increase in salaries, especially in the Oriental consulates. The number of consulates general (January, 1914) is 67, and of consulates 235. The incumbents of these offices who receive salaries of \$1000 or over are not allowed to transact business in or with the countries to which they are accredited. Formerly a large proportion of the officials in the consular service were foreigners resident in the countries in which the consulates were established. The Law of 1906 required that all officials receiving salaries of \$1000 and over must be American citizens. All consuls are appointed by the President by and with the advice and consent of the Senate. They qualify by taking a prescribed oath of office, and by executing a bond to the United States for the faithful discharge of their duties and for accounting for, paying over, and delivering up all fees, money, goods, effects, books, records, papers, and other property coming to their hands. Upon filing the oath of office and the bond a commission issues, and a request is made by the State Department to the government within whose jurisdiction the office is situated for an exequatur, upon the receipt of which the consular officer is entitled to perform his functions and enjoy the privileges of his station. The exact extent of these privileges depends upon the conventions or treaties existing between the United States and the countries to which the consuls are accredited. In the absence of any convention, a consul, after receiving his exequatur, while not entitled to the exemptions of a diplomatic agent (see DIPLOMATIC AGENTS; ALIEN), is a recognized officer of a foreign state, under the special protection of international law; he may raise the flag and place the arms of the United States over his gates and doors, and his official papers and archives are exempt from seizure and destruction. While the duties of consular officers pertain chiefly to commercial transactions, they are not limited to them. These officers "stand as protectors and advisers of their countrymen present in foreign lands; they act as judges, notaries, administrators of interests and of all

property of such as have no legal representative; they have to prevent frauds on the revenue; to notice infractions of treaty stipulations relating to trade; to advise their government of new laws or regulations within their district; to preserve the discipline of the commercial marine; to guard seamen from oppression; to aid the destitute; and to make reports upon matters affecting commercial, industrial, financial, and agricultural pursuits."

Some of the specific duties of consuls included under these general duties are the arbitration of disputes between master and crew, the relief of destitute seamen, the care of property of their countrymen in case of shipwreck, etc., the issuing of passports, the authentication of documents, and the certification of marriages, births, and deaths. The consuls of the United States are expressly prohibited from performing the marriage ceremony, but the statutes provide that when a marriage is duly solemnized in accordance with the law of the country in which the consul resides, the consul shall, upon proper application, issue a certificate of such solemnization, provided such persons would have been authorized to marry if residing in the District of Columbia.

Ministers and consuls of the United States in China, Siam, and Madagascar have the judicial powers which are bestowed upon them by Chapter 47 of the Revised Statutes, including jurisdiction in criminal cases and in civil cases involving sums of \$500 or less. The *personnel* of the consular courts is specially determined, varying with the country and the subject matter under dispute, thus, in capital cases it is provided that the consul must sit with four of his countrymen as assessors, and that their verdict must be approved by the minister before conviction can be had; and in some countries provision is made for a consular mixed court consisting of natives of the country and of the United States. Consuls have the judicial powers above referred to also in Turkey so far as relates to crimes and offenses committed by citizens of the United States, and in civil cases where such powers are permitted by the laws of Turkey or its treaties with civilized nations or by its usages with the Franks or foreign Christian nations; and in Persia, as to suits and disputes between citizens of the United States. Special provisions exist granting special powers to the consuls of the United States in the Barbary States, Muscat, Samoa, and in some other places where treaty has provided for them. In China, Madagascar, Siam, Turkey, and other non-Christian countries the property of deceased persons, both real and personal, is administered under the probate jurisdiction of the consular courts of those countries. (The judicial powers of the United States Consul in Japan were terminated on July 17, 1899, by the treaty with Japan which took effect upon that date.) Provision is made for an appeal from the consular courts under certain conditions to the minister, and to the circuit courts of the United States. See EX-TERRITORIALITY.

In recent years many complaints have arisen as to the character of the American consular service, and several bills, having for their object the placing of the service under the merit system, have been introduced in Congress. One of these was the Lodge Bill, introduced in 1906. It was amended so as to eliminate the require-

ment of competitive examinations for entrance to the service; but in the form in which it became law it provided for classification of service on the basis of work performed, with a view to promotion for efficiency from the lower to the higher grades. This plan had already been introduced by executive orders of President Cleveland (1895) and President Roosevelt (1905). The expectation that through the chance of promotion a better class of men will seek consular office has to a considerable degree been realized. Permanence of tenure is necessary if candidates for the service are to equip themselves with sufficient technical information; and some assurance of such permanence of tenure is held out by the new law.

Consult: Warden, *On the Origin, Nature, Progress, and Influence of Consular Establishments* (Paris, 1813); Tarring, *British Consular Jurisdiction in the East* (London, 1887); the *Consular Regulations of 1896* (United States Public Document, Washington, D. C.); *House Report No. 562, Fifty-sixth Congress, First Session*; *Senate Report No. 1202, Fifty-sixth Congress, First Session*.

**CONSULATE** (Fr. *consulat*). The form of government in France from 1799 to 1804. After the sudden overthrow of the Directory on the 18th Brumaire (Nov. 9, 1799), the members of the Council of Ancients and the Five Hundred, or rather such of them as approved of that act of violence on the part of Bonaparte, appointed three consuls—Sieyès, Bonaparte, and Roger Ducos. Sieyès and Ducos were quietly got rid of by pensions, and Cambacérès and Lebrun took their places. This approach to a monarchical government was confirmed, Dec. 24, 1799, by the Constitution of the Year VIII, by which Bonaparte was made First Consul. The consuls were elected by the Senate for 10 years and were eligible for reelection. There was a Conservative Senate (*sénat conservateur*) of some 60 members appointed for life, a Tribunal of 100 members, and a Legislative Assembly of 300, but their powers were very limited, while those of the First Consul were made almost absolute. He promulgated laws and appointed or dismissed ministers, ambassadors, members of the Council of State, military and naval officers, and all civil and criminal judges, excepting justices of peace and members of the Court of Cassation. Bonaparte at once took up his residence at the Tuileries and held a splendid court. In May, 1802, he was reelected for 10 years, and in August of the same year was made First Consul for life. Nothing but the Imperial name and insignia was wanting to complete the picture of absolutism, and these were supplied, May 18, 1804, when Napoleon was made Emperor. Consult: Hélice, *Les constitutions de la France* (Paris, 1875-80); Thiers, *Histoire du consulat et de l'empire* (Paris, 1845-62); and the various lives of Napoleon, the memoirs of the time, and general histories. See FRANCE; NAPOLEON I.

**CONSULATE OF THE SEA.** See CONSO-LATO DEL MARE.

**CONSUMERS' LEAGUE.** An "association of persons who desire, so far as possible, to do their buying in such a way as to further the welfare of those who make or distribute the things bought." The movement started in England in 1890. About the same time the Working Women's Society of New York was investigating the condition of women and cash

girls in the stores of that city. They called a public meeting in May, 1890, to ask the help of consumers in bettering these conditions, and as a result the Consumers' League of New York was formed in January, 1891. Similar leagues have since been organized in almost all the important cities of the United States. The leagues have been especially active in their efforts to improve the conditions of employment of workers in retail establishments, but wherever practicable they extend their activities to manufacturing as well. The leagues, according to the needs of their respective cities, draw up lists of conditions which a store must maintain in order to be called a "fair house." These include, as a rule, a minimum standard of wages, reasonable hours of employment, freedom from arbitrary exactions in the way of fines, etc., adequate provision for the employee's health and comfort while at work. Further conditions, designed to safeguard the public health, are frequently made, such as the proper protection of food exposed for sale from dust, etc. Stores which fulfill the conditions prescribed are placed on a "white list" and not only members of the league, but the general public as well, are urged to patronize such stores.

The promoters of the league soon found that its work must be extended to reach the makers of goods, both to improve their conditions and to protect the purchaser, who had no way to distinguish between factory-made goods and those made or finished in sweat shops. Accordingly the National Consumers' League was organized in 1899 with Mrs. Florence Kelley, who had been a successful factory inspector in Illinois, as secretary. In order to identify the factory-made article a "consumers' label" was adopted, which can be placed on goods made in factories maintaining the following conditions: (1) compliance with State factory law; (2) the manufacture of the goods on the premises; (3) no child under 16 employed; (4) a 10-hour day; (5) permission given for inspection by a representative of the league. The National League has provided for the education of purchasers through lectures, the distribution of literature, and organization. The State leagues use similar methods. While the membership of these leagues has nowhere become so great as to have a perceptible control over the sales of any business of extensive proportions, their indirect influence, through the creation of public sentiment, has been very considerable. One of the most noteworthy achievements of the leagues has been the fixing of the attention of the public upon the overwork from which the employees of stores suffer just before Christmas. In many cases the evils of evening selling have been mitigated, and in some cities the stores have been closed, by mutual agreement, on Christmas Eve, instead of remaining open until late at night, as formerly. The Consumers' Leagues have also exercised a considerable influence upon the course of labor legislation.

See FACTORY INSPECTION; SWEATING SYSTEM; UNION LABEL.

**CONSUMPTION** (Lat. *consumptio*, a consuming, from *consumere*, to consume, from *com-*, together + *sumere*, from *sub*, under, *emere*, to buy). One of the traditional divisions of political economy. J. B. Say, the earliest systematizer in the science, devotes a book to consumption, following books on production and distribution. Say's treatment of consumption is, however, little more than an analysis of the possible effects of productive and unproductive consumption and of public expenditures, which he treats under this head. The classical school generally followed Say in the order of divisions, but, in consequence of the exclusion of public expenditures, often left the division "consumption" with scarcely any other content than a discussion of luxury.

The marginal-utility school placed a new emphasis on consumption, through their derivation of value from utility, or want-satisfying power. The law of the declining scale of satisfaction is essentially a law of wealth consumption. The phenomena of varying elasticity of wants, of the search for variety in satisfaction, of the reinforcing of satisfactions through complementary relations, are further examples of principles derived from consumption serving important theoretical purposes. The general principles derived from investigations of family budgets, such as those of Dupcétiaux and Engle (q.v.) and those of the United States Department of Labor, are properly treated as inductive principles of consumption. Under the same head are to be classed investigations of the minimum wage and of the standard of living (q.v.). The social laws of consumption, as exemplified in imitation (fashion) and desire for distinction in dress, housing, etc., have usually been treated in cursory manner, but have served as a basis for illuminating studies by Sombart and other economists. In America especial stress has been laid upon the study of consumption by Prof. S. N. Patten (q.v.). While the importance of the study of consumption is generally admitted, no thoroughly satisfactory treatise covering the whole field has been written. The most systematic work on the principles of consumption has been done by Cuhel, *Zur Lehre von den Bedürfnissen* (Innsbruck, 1907), and Brentano, *Versuch einer Theorie der Bedürfnisse* (Munich, 1908). The most suggestive examples of the application of the principles of consumption to the problems of progress are found in Patten, *Theory of Prosperity* (New York, 1902), and Sombart, *Der moderne Kapitalismus* (Leipzig, 1902). See POLITICAL ECONOMY.

**CONSUMPTION.** See TUBERCULOSIS.

**CONTACT** (Lat. *contactus*, from *contingere*, to touch, from *com-*, together + *tangere*, to touch). In geometry, two lines, of which one at least is curved, are said to be in contact when they have two or more consecutive points in common. For example, in analytic geometry a tangent is said to be in contact with a circle in two consecutive points. This is called contact of the first order. If two curves have contact at three consecutive points, the contact is said to be of the second order, and so on;

e.g., the curves  $y = x^2$  and  $y = 3x^2 - 3x + 1$  have contact of the second order. The analytic condition for contact of the first order at a point  $x = a$ , between two curves,  $y_1 = \phi(x)$ ,  $y_2 = \psi(x)$ , is that  $\phi(a) = \psi(a)$ ,  $\phi'(a) = \psi'(a)$ ,  $\phi'$  and  $\psi'$  being the first derivatives. The condition for contact of the second order is that  $\phi(a) = \psi(a)$ ,  $\phi'(a) = \psi'(a)$ ,  $\phi''(a) = \psi''(a)$ . Contact of the third order requires the derivative of the third order, and so on. In contact of the  $n$ th order between two surfaces there must be  $(n + 1)$  consecutive common points.

**CONTACT ACTION, CHEMICAL.** See CATALYSIS; REACTION.

**CONTACT DEPOSITS.** See ORE DEPOSITS.

**CONTA'GION** (Lat. *contagio*, contact, from *contingere*, to touch, from *com-*, together + *tangere*, to touch). The communication of a disease from the sick to the healthy, either by direct contact of a part affected with the disease, or by indirect contact through the medium of the excretions and exhalations of the body. Among the contagious diseases are measles, scarlet fever, smallpox, erysipelas, typhus fever, bubonic plague, epidemic influenza (the grippé), diphtheria, and tuberculosis. See BACTERIA; EPIDEMIC; INFECTION.

**CONTAGIOUS ABORTION IN ANIMALS.** This disease has been increasing in importance economically until it now ranks second only to tuberculosis among the diseases of cattle. In the United States alone the direct loss among dairy and range cattle reaches into the millions, while the potential loss is enormous and inestimable. While most frequent among cows, the disease is commonly met with in mares and less often in sheep, goats, and swine. It occurs in otherwise healthy mothers as a result of external infection, producing inflammatory lesions of the fetal membranes and cotyledons, usually appearing in an enzootic form. In the cow it is caused by the *Bacillus abortus*, commonly known as "Bang's bacillus," and in the mare by the *Bacillus abortivus equinus*, and possibly other microorganisms.

Premonitory symptoms when present are manifested two or three days before the expulsion of the fetus by swelling of the udder, edematous swelling of the vulvar lips, reddening of and small inflamed nodular formations on the vulvovaginal mucosa, and the appearance of a mucous or mucropurulent odorless discharge from the vagina. In cows abortion seldom occurs before the fourth month of pregnancy, but may occur at any time after that period. The fetus is expelled with ease and is usually dead at birth. If abortion occurs at the end of six months, the young may be alive, but lives only a few hours. Mares abort between the fourth and the eighth month of gestation.

If an aborting cow is placed in a herd which has hitherto been healthy, an outbreak of abortion may occur. Bulls that have served aborting cows transmit the disease to other cows. In general, the microorganisms to which the disease is due are found in the male and female genital organs and on the afterbirth from aborting animals.

The bacillus has the udders of apparently healthy cows as its normal habitat and may be eliminated continuously for years in the milk of infected cows that no longer abort.

The treatment for this disease includes isolation of affected animals and the application of thorough antiseptics. In case of an outbreak

of abortion the fœtus and fetal membranes from aborting animals should be burned or deeply buried, the posterior parts of the animals should be washed in some antiseptic solution, repeated antiseptic vaginal douches should be given, and the stable should be thoroughly disinfected. In order to prevent the possible spread of the infection, the posterior parts of other cows or mares in the same stable should be carefully washed with a solution of lysol, creolin, potassium permanganate, or corrosive sublimate. Solutions of carbolic acid and of methylene blue, preferably administered by mouth, have been found to have valuable curative effects.

Noncontagious abortion is occasionally met with among farm animals, there being a number of conditions which may cause it. A general cachexia or anæmia may be among the predisposing causes of abortion; and among other conditions and causes which may lead to abortion mention should be made of acute diseases of the vital organs, contagious fevers, chronic diseases of the abdominal organs; diseases of the ovaries, kidneys, or bladder; diarrhœa; fatty degeneration of the heart; ingestion of large quantities of cold water; various forms of indigestion, especially those which are accompanied by the formation of gas in the stomach; imprudent feeding with succulent forage in large quantities, such as roots, potatoes, apples, pumpkins, ergotized grasses, sweaty or rusty grains and grasses; mechanical injuries; standing in stalls with too great a backward slope; nervous excitement, and muscular strain. Consult: *Report Bureau of Animal Industry, United States Department of Agriculture for 1911*; Hutyra and Marek, *Pathology and Therapeutics of Diseases of Domestic Animals*, vol. i; Hoare, *System of Veterinary Medicine*, vol. i.

**CONTAGIOUS DISEASES.** The law takes cognizance of contagious and infectious diseases as they menace the public health, for the protection of which health and quarantine laws are enacted under the broad authority of the police power of the state. For purposes of administration, this power may be delegated to municipal corporations or like political subdivisions.

While the right to take summary measures for the public safety is one of the most ancient of government prescriptions and is rarely challenged, yet it is none the less formidable, inasmuch as it involves the power of the state forcibly to confine those suffering from infectious diseases, even where properly cared for by friends or relatives, and other like interference with the personal rights of liberty and property. Maritime quarantine was early practiced by the commercial nations, and was enforced by the Venetians in the fifteenth century; but municipal health regulation is of somewhat later development, and the two are still usually separated in administration. Thus, e.g., the Board of Health of the City of New York exercises jurisdiction within the city proper and upon the waters of the bay to the limits of quarantine, which, with its shipping, is under the authority of the Board of Quarantine Commissioners and the health officer of the port. In the United States the enactment of quarantine laws is held to be among the powers preserved to the States under the Constitution. Under their authority State boards of health are created and general statutes passed delegating the power to local boards in cities, towns, and

villages. Violations of the sanitary code are usually made misdemeanors and punished by imprisonment or fines. For the purpose of avoiding any questions that might arise from the possible interference of local regulations of the public health with the Federal prerogative of regulating interstate commerce, Congress early passed acts adopting such State laws and requiring their observance by Federal officials (Act of Feb. 25, 1799; Act of April 29, 1878 [20 Stat. L. 37]). In 1879 a National Board of Health was created, but its powers were little more than advisory, and by the Act of Congress, Feb. 25, 1893 (27 Stat. L. 449), it was abolished and its powers and duties transferred to the Marine Hospital Service, which, under the direction of the Secretary of the Treasury, performs the functions of national quarantine. Questions pertaining to the people at large arising from immigration and importation belong to Federal jurisdiction as incidental to the constitutional right of regulating commerce. Thus conditions of entry are imposed, such as detention, inspection, and disinfection, and under the Act of 1893 protective restrictions may even be laid upon interstate intercourse where a danger is threatened and State authority is wanting or lax. The Federal quarantine may arrest the entrance of forbidden persons or things; but once past the "Barge Office" or customhouse, the local authorities take jurisdiction. Naval vessels as well as commercial are bound to observe quarantine rules.

In Great Britain a similar system of sanitary protection prevails. In England the controlling statute, the Public Health Act (38 and 39 Vict. c. 55 [1875]), is comprehensive in its provisions and regulations, though it does not extend to Scotland or Ireland, or, except as to special provisions, to the city of London. The Infectious Disease (Notification) Act (52 and 53 Vict. c. 72) and the Infectious Disease (Prevention) Act (53 and 54 Vict. c. 34), as the titles signify, provide respectively for the course to be pursued in notifying the proper authorities in cases of defined contagious illness, and the regulations to be adopted in the way of inspection and disinfection to prevent infection. The first applies to the United Kingdom, and may be adopted by urban and rural authorities of ports and local districts; the second is confined to England.

In its international aspect the obligation resting upon a state to adopt proper regulations to prevent the spread of epidemics belongs to the so-called natural duties rather than the more defined and absolute principles of international jurisprudence. But with the increase of international intercourse and the development of a more sensitive national conscience, a demand has arisen among civilized nations for the recognition of the right to such protection by another state, as well as the long-established one of surrounding itself by defensive barriers. The United States, Great Britain, Germany, and other countries, have provided for inspection of meats and like food exports. In 1879 Sir Shenstone Baker prepared a Code of International Quarantine, which was approved by the United States. Consult Lumley, *The Public Health Acts* (London, 1902). See **QUARANTINE: POLICE POWER.**

**CONTARINI**, kôn'tà-réné. The name of a distinguished Venetian family, one of the 12 that elected the first Doge. Between 1043 and

1684 eight doges were furnished by this family, and several of its members were men of note.—DOMENICO, Doge in 1043–70, was the first of the family to be invested with that dignity; during his reign the rebuilding of St. Mark's Church was begun.—ANDREA, Doge in 1368–82, terminated the long war between Venice and Genoa by defeating the Genoese fleet at Chioggia. His return from this expedition was depicted by Paolo Veronese by order of the Republic.—AMBROGIO was Ambassador of Venice to Persia in 1473–77 and gave an account of his travels, published in Venice (1487).—GASPARO (1483–1542), Cardinal and diplomatist, went as Venetian Ambassador to the Diet of Worms in 1521, thence accompanied Charles V to the Netherlands, England, and Spain, and in 1523 concluded the Emperor's alliance with Venice. In 1535 he was made Cardinal by Pope Paul III, and as Papal Legate to the Diet of Ratisbon, in 1541, made the most extensive concessions to the Protestants, endeavoring to bring about a reconciliation with the Catholic church. Of his earnest efforts to introduce sweeping reforms in the latter, his *Consilium de Emendanda Ecclesia* (1537) is sufficient proof. The best known of his other writings is *De Magistratibus et Republica Veneta* (1543).—GIOVANNI (1549–1605) was a painter of the Venetian school, who formed himself chiefly after the works of Titian and Palma the Younger. Called to Vienna by Emperor Rudolph II, he painted many portraits, but he is more noted for his historical compositions, among which are "The Doge Marino Grimani Adoring the Virgin," "Conquest of Verona by the Venetians," both executed for the Doge's Palace in Venice; and "Baptism of Christ." Consult Romanin, *Storia di Venezia* (10 vols., Venice, 1853–61); for Ambrogio's journey, *Hakluyt Society Publications*, No. 49 (London, 1873); for Gasparo, Brown, *Studies in Venetian History*, vol. ii (ib., 1907), and *Regesten und Briefe des Cardinals Gasparo Contarini* (Braunsberg, 1881).

**CONTARINI FLEMING.** A romance by Benjamin Disraeli (1832).

**CONTÉ, kōn'tā', NICOLAS JACQUES** (1755–1805). A French chemist and inventor, born at Aunou-sur-Orne (Orne). He was at first a painter, but afterward turned to the mechanical arts, and, when France was deprived, through war with England, of its plumbago supply, invented a substitute in the shape of a mixture of graphite and clay. This substance he utilized for the manufacture of black-lead pencils, known as *crayons Conté*, by a process since followed in making all pencils. He also made extensive researches concerning the military aërostat, became director of the aërostatic school at Meudon, and was appointed by Napoleon chief of the aërostatic corps of the French army of invasion in the Egyptian expedition. During that expedition his inventive genius proved to be of great service; for, after the reverse at Aboukir, the revolt at Cairo, and the consequent loss of instruments and supplies, he directed the manufacture of cloth, surgical instruments, bread, arms, ammunition, and other necessities. He also devised (1798) a barometer, similar to the later one of Vidi. In 1802 he assisted in founding the Society for the Encouragement of National Industry, and was appointed to superintend the publication of the commission's great work on the Egyptian expedition. At the time

of his death he was constructing an engraving machine with which he hoped to do this work. Consult Jomard, *Conté, sa vie et ses travaux* (Paris, 1852).

**CONTEMPORANEITY** (from Lat. *contemporaneus*, simultaneous, from *com-*, together + *tempus*, time). A term used in geology to imply that two formations were deposited during the same period of time. This does not necessarily mean that they must contain the same fossil species, nor is it likely that they will, except when the two areas of deposition are in the same basin. The term "contemporaneity" is sometimes confused with *homotaxy*, which means that certain formations occupy the same relative positions with respect to the development of life forms. Thus, certain formations of the Devonian in Europe and North America might show similar faunas, but not have been deposited at exactly the same time. They would be homotaxial. See GEOLOGY.

**CONTEMPT'** (Lat. *contemptus*, from *contemnere*, to despise, from *com-*, together + *temnere*, to despise). In law, any disobedience of, or disrespectful or disorderly conduct in the presence of, any court or legislative body. It is punishable because it tends to impair the dignity, power, and authority of such bodies, and thus interfere with the administration of the law, and generally the body concerned has an inherent power summarily to impose upon the offender a penalty of fine or imprisonment, or both. All courts have such power. The guilty person may usually have these penalties remitted by "purging" the contempt; i.e., by making pecuniary reparation, as far as possible, for any damage caused by his acts and apologizing for his fault. If satisfactory, an order or minute is then entered reciting that this has been done and directing that the culprit be relieved from the penalty. The power to punish as contempt any willful misconduct committed in the presence of the court, which was an ordinary incident of common-law procedure, received a great extension in the process for enforcing the decrees of the courts of equity, or chancery. "Equity acts *in personam*," i.e., its judgments, as distinguished from those of the common law, are orders or decrees directing specified persons to do or to refrain from doing certain acts. The breach of such an order, though committed out of court, as must usually be the case, is a contempt and the ordinary process of the equity tribunals is to punish such an act of disobedience by imprisonment. It is this use of the jurisdiction of punishing for contempt in labor disputes that has been under fire in recent years, under the name of "government by injunction," as an arbitrary method of dealing with offenses prohibited by judicial order and as subjecting offenders to the penalty of imprisonment without trial by jury and the other safeguards of the ordinary criminal law. Consult Rapajze, *Treatise on Contempt* (New York, 1884), and Oswald, *Contempt of Court, Committal, and Attachment, and Arrest upon Civil Process* (London, 1895).

**CONTEMPT OF PARLIAMENT.** See PARLIAMENT.

**CONTES À NINON, kōnt zā nē'nōn'** (Fr., Ninon stories). A collection of short stories by Emile Zola, which were collected and published in 1864, when their author was only 24 years old. It was his first important work and has been deemed by some critics his best

book of short stories, being free from the exaggerations and brutalities which marked many of his later writings. In 1874 he published *Nouveaux contes à Ninon*.

**CONTES DE MA MÈRE L'OYE**, kônt de mâ mâr lwâ (Fr., stories of my Mother Goose). A famous collection of fairy tales by Charles Perrault (1697), purporting to be written by his 10-year-old son. The stories are taken from popular tradition and are told in simple, childish language, which has made them very successful among children for 200 years.

**CONTES DES FÉES**, dà fâ (Fr., stories of the fairies). A collection of fairy stories from various sources by the Comtesse d'Aulnoy (1710), in which many of the tales received their literary form in French.

**CONTES D'HOFFMANN**, Les (Fr. tales of Hoffmann). An opera by Offenbach (q.v.), first produced in Paris, Feb. 10, 1881; in the United States, Nov. 14, 1907 (New York).

**CONTES DRÔLATIQUES**, drô'la'ték' (Fr., droll stories). A series of 30 tales by Balzac, abounding in Rabelaisian humor and copying the style and spelling of the sixteenth century. They were published variously in 1832, 1833, and 1837.

**CONTES DU LUNDI**, du län'dé' (Fr., Monday stories). A collection of short stories by Alphonse Daudet (1873).

**CONTI**, kônt'ê'. The house of Conti was a younger branch of the house of Bourbon-Condé. (See CONDÉ.) It first appears in French history in the sixteenth century, when François, son of Louis de Bourbon, first Prince of Condé, took the name of Marquis de Conti from his mother's fief of Conti-sur-Selles, in Picardy. Towards the end of the century he was made Prince of Conti. He died without heirs in 1614, and for 16 years the title was in abeyance. In 1629 it was bestowed upon the infant Armand de Bourbon, second son of the Prince of Condé. This second Prince de Conti is generally regarded as the founder of the house. His son, Louis Armand, Prince de Conti, succeeded him, and on his death, in 1685, left the title to his younger brother, François Louis (1664-1709), who styled himself Prince de la Roche-sur-Yon et de Conti and was the most noted member of the family. He had been educated under the eyes of the great Condé and embraced a military career with enthusiasm. He served in Hungary against the Turks, but, owing to incautious letters which he wrote home, he lost the favor of Louis XIV and on returning was banished to Chantilly. Pardoned through the intercession of the great Condé, the Prince served with distinction under the Duke of Luxembourg and was present at the battle of Steenkirk (1692) and Neerwinden (1693). In 1697 he was put forward by Louis XIV as a candidate for the Polish crown and was in fact elected King by a part of the nobles, but found himself powerless against the opposition of Russia, the Emperor Leopold I, and the Pope, and abandoned his claim. Louis XIV was never his friend and feared Conti's popularity, so that the Prince spent his later life in retirement. In 1709, however, he was summoned to take command of the Army of Flanders, but was carried off by an attack of the gout, Feb. 22, 1709. Massillon pronounced his funeral oration, and Saint-Simon, in his memoirs, speaks of him in glowing terms. His son was a worthless rōvé

of the time of the Regency; but his grandson, Louis François (1717-76), Prince de Conti, distinguished himself as a brave and popular commander. The last member of the house was Louis François Joseph (1734-1814), Prince de Conti, son of the preceding, who after a somewhat checkered career died at Barcelona. Consult: Martin, *Histoire de France*, vols. ix, x, xi (Boston, 1864-66); *Mémoires* of Fontenay-Mareuil, La Rochefoucauld-Doudainville (Paris, 1861-64), and Saint-Simon (London, 1889); Topin, *L'Europe et les Bourbons* (Paris, 1868); *Mémoires of Noailles* (ib., 1777); D'Argenson, *Mémoires* (London, 1893); Bernis, *Mémoires* (Paris, 1878); De Broglie, *Le secret du roi* (ib., 1879).

**CONTI**, AUGUSTO (1822-1905). An Italian philosophical writer, born near San Miniato in Tuscany. He studied law at several Italian universities and practiced in Florence until 1848, when he enlisted as a volunteer for service against Austria. Subsequently he practiced law and taught philosophy in San Miniato, in 1855 was made professor of philosophy in Lucca, in 1863 professor of the history of philosophy in Pisa, and in 1864 professor of mental and moral philosophy in Florence. His published works include: *Evidenza, amore e fede*, o i criteri della filosofia (1862, and subsequent editions); *Storia della filosofia* (1864, and subsequent editions); *L'Armonia delle cose* (2 vols., 1878); *Filosofia elementare* (1869; 9th ed., 1879); *Dio come ordinatore del mondo* (1871); *Il vero nell'ordine* (1876; 2d ed., 1891). In these and other works Conti makes an earnest attempt to bring into agreement the teachings of different philosophical schools.

**CONTI**, NICCOLÒ DEL. An Italian traveler of the fifteenth century. He learned Oriental languages and carried on an extensive traffic in the East. He traveled in Egypt, Arabia, Persia, and India, and later gave a complete account of his travels to Poggio Bracciolini, secretary of Pope Eugenius IV. Poggio's manuscript relating the observations and adventures of Conti was first published in 1723, under the title *Historia de Varietate Fortunæ*. Conti was one of the pioneers of European commerce in the East, and one of the first to advocate the idea of finding a western way by sea to the Eastern countries. Consult Giardina, *I viaggi di Niccolò dei Conti* (Catania, 1898).

**CONTINENT** (ML. *continens*, from Lat. *continere*, to touch, from *com-*, together + *tenere*, to hold). The largest natural land division, of greater area than an island or peninsula. The outer portion of the earth is composed of two layers—the solid rocky crust, or "lithosphere," and the water areas, or "hydrosphere." In the early period of its history the earth may have been surrounded entirely by the hydrosphere, but at present and, so far as known, in all geological ages, the crust has been folded into mountain chains, forming nuclei around which the continental land areas are grouped, while the waters have accumulated in the intermediate depressions. Geographers usually recognize as continents Eurasia (comprising Europe and Asia), Africa, Australia, North America, and South America; the two Americas, however, are sometimes grouped as a single continent, although such a classification is hardly justifiable unless Africa be included with the Eurasian continent. A sixth continent is probably represented by the land areas in the Antarctic

region (q.v.). It is estimated that the land constitutes about 55,000,000 square miles, or 28 per cent of the entire surface of the earth. The continents vary widely in form, area, relief, and distribution on the globe, yet they may have many features in common. Usually the regions of greatest elevation are found in the interior, while along the coast line there is a gentle slope outward which, continued beneath the sea, forms a slightly submerged land strip called the "continental shelf." On the seaward edge of the shelf the slope is very rapid down to the great depths of the sea. The average altitude of the continents, according to the calculations of Lapparent, Murray, Penck, Supan, and Heiderich, is shown below:

ESTIMATED AVERAGE ELEVATIONS OF THE CONTINENTS

CONTINENT	Lapparent	Murray	Penck	Supan	Heiderich
Europe	958	938	918	951	1,230
Asia	2,883	3,188	3,116	3,084	3,018
Africa	2,007	2,020	2,132	2,034	1,975
Australia	1,188	803	918	853	1,542
North America	1,953	1,886	1,968	2,001	2,723
South America	1,762	2,077	2,067	2,001	2,493

Between the form and distribution of the continents many interesting comparisons may be drawn. The two Americas, comprising the greater part of the land area in the New World, are triangular in shape, the apex of the one lying in the Isthmus of Panama and the apex of the other being represented by Cape Horn. Both continents are bounded on the west by a long mountain system, and both have a region of lower elevation in the eastern portion. The Old World, on the other hand, is composed of a single triangular land area which has its base on the Arctic Sea and its apex at the Cape of Good Hope. Here the main trend of the mountain chains is east and west. In general, the continents that extend into or lie within the Southern Hemisphere—South America, Africa, and Australia—are most regular, contrasting strongly in this particular with North America and Eurasia in the Northern Hemisphere. The northern continents have a wider extension from east to west than the southern, and are further characterized by a great group of islands lying along the southeastern coast.

That the great land areas are not stable either as to form or elevation may be regarded as established beyond doubt by geological evidence. Moreover, certain coastal regions are known at the present time to be undergoing changes of level by which land emerges above or sinks below the sea. The extent of these oscillations in past ages can only be conjectured. Lyell's theory that there has been a constant interchange between the land and water areas has been objected to on the ground that there is no evidence that the abyssal depths of the ocean have ever been elevated; for the existence of any considerable deposits abyssal in character and containing a deep-sea fauna has not been conclusively established within the interior of the continents. The changes of level between the land and the sea take place very slowly, and may be caused either by gradual vertical movement of the land area or by variations in

the level of the ocean itself. Geologists generally agree that the positions of the present continents were determined as far back as Archean times. The Laurentian plateau of North America, the Brazilian highlands of South America, and the Scandinavian peninsula and Lapland in Europe are composed of crystalline rocks, and except on the margins they are bare of all sediments. These primitive lands were extended in area by the deposition of sedimentary strata on their borders, and by great upheavals accompanied by foldings of the crust into mountain ranges.

The evolution of the continental lands can be studied only tentatively, and is largely conjectured from the evidence afforded by the characters of the fauna and flora that lived in past ages. During the Cretaceous and Tertiary times the animal and plant life of South America, South Africa, and India were strikingly similar, while there was also a uniformity between the life forms of Europe and North America. This circumstance can best be explained by the assumption that in these periods the continents had an east and west trend, so that Brazil, Central Africa, and lower India were united by one broad land strip, and eastern Canada with Europe by another. Between the northern and southern continents an ocean basin extended from the isthmus of Central America eastward to the Indian Ocean, or nearly at right angles to the basin now occupied by the Atlantic. The changes by which the continents assumed their present form took place gradually and were accomplished by a slow depression of portions of the land and by encroachment of the sea. It is probable that certain regions for a long time remained above sea level as large islands, the unsubmerged remnants of which still exist, e.g., in the Cape Verde and Canary islands, in the British Isles, and in Madagascar. These changes were doubtless completed before the appearance of mankind; at least within historical times, so far as is known, there has been no marked alteration in the form of the continents.

**CONTINENTAL CONGRESS.** See UNITED STATES.

**CONTINENTAL SYSTEM.** The name given to the commercial policy adopted by Napoleon for the purpose of shutting England out from all connection with the continent of Europe, and thus compelling her to acknowledge the maritime law as established at the Peace of Utrecht. This system began with Napoleon's famous Berlin Decree of Nov. 12, 1806, which declared the British Isles in a state of blockade and prohibited all commerce or correspondence with them; every Englishman found in a country occupied by French troops or by their allies was declared a prisoner of war; all merchandise belonging to an Englishman was made lawful prize; and all trade in English goods was entirely prohibited. No ship coming directly from England, or from a British colony was allowed to enter any port; and any ship seeking by false declarations to evade this regulation was confiscated with its cargo as if British property.

England was not long in making reprisals. By an Order in Council, Jan. 7, 1807, all neutral vessels were prohibited from trading from port to port within France or any country in alliance with it or under its control. Every neutral vessel violating this order was to be confiscated with its cargo. Napoleon responded by a decree dated Warsaw, Jan. 25, 1807, which ordered the confiscation of all English or English colonial merchandise found in the German Hanse towns. By a second Order in Council, Nov. 11, 1807, all harbors and places in France and her allies in Europe and the colonies, as well as in every country with which England was not at war, but from which the English flag was excluded, were placed under the same restrictions as if strictly blockaded. These orders were followed by reprisals on the French side. By the Milan Decree of Dec. 17, 1807, strengthened by a second, of Jan. 11, 1808, issued from the Tuileries, any vessel, of whatever nation, that had been searched by an English ship, or had submitted to be sent on a voyage to England, or paid any duty to the English government, was to be declared denationalized and treated as English. By the Treaty of Tilsit (1807) Russia consented to close her ports to English commerce, and in order the more effectually to annihilate such commerce, there appeared, Aug. 3, 1810, the tariff of Trianon for colonial goods; this was extended by a decree of September 2; on October 18 followed the decree of Fontainebleau, ordering the burning of all English goods, an order which was to be carried out with more or less modification in all countries connected with France.

The consequence of the Continental System was undoubtedly the springing up upon the Continent of many branches of manufacture. On the other hand, the price of foreign goods rose to an extraordinary height, the daily comfort of the middle classes was seriously affected, and the American carrying trade, then very prosperous, was practically ruined. On the whole, the Continental System, both politically and economically, was a mistake. Russia abandoned it in 1810, and with the breaking up of Napoleon's power the system collapsed entirely. On the English side the enforcement of the Orders in Council gave offense to the United States and was one of the principal causes of the War of 1812. Consult: Mahan, *The Influence of Sea Power upon the French Revolution and Empire* (Boston, 1894); Thiers, *Histoire du consulat et de l'empire* (Paris, 1845-62); Cime, *Etude sur les tarifs de douane et les traités de commerce* (Paris, 1875); Henry Adams, *History of the United States* (New York, 1889-91). See NEUTRALS; NAPOLEON I.

**CONTIN'GENT** (from Lat. *contingere*, to touch). A quota of troops, furnished to the common army by another branch of the service or by different coöperating nations or armies. It was the naval contingent that saved the day in the defense of Ladysmith against the Boers in 1899. The various contingents of the international armies formed the common army under the leadership of Count Waldersee, the German commander, in the China campaign of 1900. The troops to be furnished by each of the United States under a call for volunteers by the President is its *quota*.

**CONTINGENT REMAINDER.** See REMAINDER.

**CONTINUANCE.** In law, the adjournment

of a cause from day to day or from one term of the court to the next succeeding term. The proceedings of a case on trial or otherwise before the court are continuous until it is disposed of by judgment decree or other final proceeding. An interruption of the proceeding, whether by the absence of a party, or his failure to proceed, or by the termination of the sitting of the court, naturally results in a discontinuance of the proceeding, with the consequence that it loses its place on the calendar and must be begun over again at a future term or sitting of the court. To obviate this result, the court may make an order continuing the case from day to day or from time to time until disposed of. Continuances are granted as a matter of course when necessitated by the adjournment of the court in which the case is pending and, on the request of either party to the suit, for good cause, as for the illness of a party or his counsel or the illness or disappearance of a material witness, and the like. In this class of cases, however, the application is addressed to the discretion of the court which may grant or withhold the continuance prayed for. See ADJOURNMENT; and consult Blackstone, *Commentaries on the Laws of England*, and the authorities cited under PROCEDURE, LEGAL.

**CONTINUED FRACTION.** See FRACTION. **CONTINUITY** (Lat. *continuas*, from *continuus*, uninterrupted, from *continere*, to hold together, from *com*-, together + *tenerere*, to hold). In geometry, a vital principle which asserts that if from the nature of a particular problem we would expect a certain number of solutions, then there will be the same number of solutions in every case, although some may be imaginary. For example, a straight line and a circle in the same plane intersect in two points real, coincident, or imaginary. The sum of the angles of a quadrilateral is a perigon, whether the quadrilateral is convex, cross, or concave. In this case, however, angles which have decreased and have passed through zero must be regarded as negative. By the principle of continuity theorems concerning real points or lines may be extended to imaginary points or lines. This change can take place only when some element of the figure passes through either a zero value or an infinite value; e.g., rotate an asymptote of the hyperbola about the origin; before rotation it cuts the curve in two infinite points; after rotation it cuts it in two real points or two imaginary points. In case of the real points, rotate it still further and these pass to infinity, and imaginary points occur. Many propositions of elementary geometry may be inferred from this principle. It was first stated by Kepler, emphasized by Boscovich, and put into appropriate form by Poncelet in his *Traité des propriétés projectives des figures* (2d ed., Paris, 1865-66).

More generally, continuity is a philosophical concept exemplified in space and time. It has been defined as a series of adjacent parts with common limits; as infinite divisibility, i.e., that, however small the segment between the two points, a further division is possible; but in modern analysis continuity is the essential property of a continuum. By a continuum is understood a system or manifoldness of parts possessed in varying degree of a property *A*, such that between any two parts distant a finite length from each other an infinite number of other parts may be interpolated, of which those

that are immediately adjacent exhibit only indefinitely small differences with respect to the property *A*. This is expressed by Cantor as a *perfekt zusammenhängende Menge*, a perfect concatenation of points; e.g., all numbers rational and irrational in any interval form a continuum. A concatenation not perfect is called a semicontinuum, e.g., the rational or the irrational numbers in any interval. A straight line is said to possess continuity.

By the continuity of the roots of an equation is meant that, as a result of certain variations of the function, different pairs of roots may during the process become equal or imaginary, the total number always continuing the same—an example given by Leibnitz. By the continuity of a function of  $x$  is meant the fact that indefinitely small and continuous changes in the value of  $x$  between certain limits produce indefinitely small and continuous changes in the function. Consult: Jordan, *Cours d'analyse* (Paris, 1893); Poncelet, *Traité des propriétés projectives des figures* (ib., 1865-66); *Encyclopädie der mathematischen Wissenschaften*, vol. i (Leipzig, 1901); Cantor, *Mathematische Annalen*, vols. xx and xxi (ib., 1882-83); Mach, in *The Open Court*, vol. xiv (Chicago, 1900).

**CONTINUITY, LAW OF.** A principle first formulated by Leibnitz (q.v.), which is expressed in the Latin sentence, *Natura non facit saltum* ('Nature does not make sudden leaps'). This is a denial of discreteness, and the assertion that differences of kind are merely differences of degree. The law of continuity may be illustrated in the solar spectrum, which presents us with a series of colors blending into each other in such a way that it is impossible to say where one color ends and another begins. By abstracting from the intervening colors and shades we can represent any detectable differences to ourselves as discrete, but this appearance of discreteness comes from failure to attend to the mediating shades. Generalizing this, we get the law that all gaps between differing kinds are bridged over by intervening kinds, which form a continuum of differing degrees. Darwinism gives a view of evolution that supports the law of continuity in biology. De Vries's doctrine of mutation (q.v.), on the contrary, would deny the validity of the law of continuity in this field. William James (q.v.) has vigorously assailed the universality of the law of continuity, maintaining that experience presents us with discontinuities as well as with continuities, and "that conjunctions and separations are, at all events, coördinate phenomena which, if we take experiences at their face value, must be accounted equally real." James seems to be justified in his contention; the law of continuity is an unwarrantably sweeping generalization. Consult James, *Essays in Radical Empiricism* (1912). See LEIBNITZ.

**CONTINUOUS SERVICE.** See ENLISTMENT.

**CONTIO.** See COMMITMENT.

**CONTORNIATE** (It. *contorniato*, from *contorno*, contour, from ML. *contornare*, to turn around, from Lat. *com-*, together + *turnare*, to turn, from *turnus*, Gk. *τέρνος*, *turnos*, lathe). A term applied to a class of antique copper medals, slightly larger than coins, which have a deep line cut round the edge, like a furrow, and are thereby marked by a strongly projecting edge. They show on one side a head, often of an emperor or other ruler, sometimes Homer,

Sallust, Horace, or other authors, and on the other a scene from the circus or amphitheatre or from mythology or, rarely, daily life. No contorniate is known to be certainly earlier than the third century A.D.; most of them are later. Of the many explanations of the use of contorniates none has won general acceptance. Consult Smith, *A Dictionary of Greek and Roman Antiquities* (3d ed., London, 1890).

**CONTORTED STRATA.** See GEOLOGY.

**CONTOURS** (Fr., from ML. *contornare*, to go around). In topographical surveying and military sketching, the lines in which horizontal planes, at constant vertical intervals, intersect the surface of the ground. *Contouring* is a method of exhibiting relief of ground by means of lines so drawn on a map as to indicate points of equal elevation. The lines so drawn on a map and the corresponding lines on the ground are called *contours*. The word *contouring* is applied to the field work directed especially to obtaining data for drawing contours. The difference of elevation of points in adjacent contours is called the *contour interval*, and is usually constant for all the contours on the same map. The horizontal distance between contours, measured in a radial direction with reference to the curvature of the contours, is called the *contour distance*. For equal contour intervals the map contours are closer together, as the slope is steeper. It follows that for steep slopes the map contours will approach each other very closely, and for a vertical wall or cliff they will coincide. Contours are designated by their heights above a datum plane. The height is expressed in feet, except when the metric scale is used, when contour intervals are in meters. Facility in reading contoured maps is essential for military officers. It enables them quickly to form a mental picture of the general configuration of the ground over which they are to operate, to know the nature of the slopes to be traversed and the amount of cover available for the concealment of troops. See SURVEYING; ENGINEERING, MILITARY. See article MAP, where contour lines are shown on the topographical map there given.

**CONTRABAND OF WAR** (It. *contrabbando*, Sp., Portug. *contrabando*, from ML. *contrabannum*, contraband, from *contra*, against + *bannum*, *bannum*, proclamation, from OHG. *ban*, Ger. *Bann*, AS. *bann*, Eng. *ban*). In international law, goods of such character as to be liable to seizure by a belligerent in the course of trade between a neutral and the enemy in time of war. Munitions of war intended for the use of the enemy and chemicals or other raw materials to be converted into instrumentalities of war by the enemy are always deemed contraband. Other things innocent in character are similarly regarded if intended for the use of the armed forces of the enemy, but not if intended for general use or consumption in the country of the enemy. It is obvious that the latter class of cases may often call for delicate discrimination and may lead to sharp differences of opinion between the belligerent intercepting such a cargo and the neutral state whose commerce is thus interfered with. To some extent the matter has been regulated by treaty among the leading powers, but no satisfactory definition for contraband goods has yet been reached. The changes in methods of modern warfare render the list a constantly shifting one. Great Britain has adopted the classification of (a) *goods ab-*

*solutely contraband*, and (b) *goods occasionally contraband*. In the case of a Swedish ship in the War of 1812 bound for the neutral port of Bilbao with a cargo of grain intended for the use of the British fleet lying there, the cargo was held to be subject to confiscation as contraband. So, in the Crimean War, Great Britain claimed coal destined for a Russian port to be included under the head of *occasional contraband*. France in the War of 1859 refused to treat coal as contraband. The United States at the time of the Civil War adopted the English position, as did Germany in the War of 1870, and Russia in the war with Japan. Such differences threaten to furnish serious controversy in the event of war between any of the great commercial nations. The rules of international law do not prohibit subjects of neutrals from carrying contraband to either belligerent, but they do so at their own risk. So neutral merchants may trade in arms, ammunition, and stores in time of war as in time of peace, but either belligerent may capture such goods as are of direct and immediate use in war, if it can intercept them in their passage to the enemy while not within neutral jurisdiction. While a neutral power is bound to prevent the departure of armed expeditions from its shores and the supplying of munitions of war, etc., to belligerent vessels in its ports, no duty is imposed of restraining contraband trade, though it has no right to interfere in behalf of subjects whose property is seized by one belligerent on the way to another, provided it belongs to the class of forbidden commodities.

Three requisites are necessary to constitute the offense of *carrying contraband*: 1. Sale and transport of contraband goods within a neutral territory is permissible, but they may not be sent across the frontier to a belligerent by land or sea. 2. The goods must be intended eventually for a hostile destination. 3. The offense is completed with the deposit of the contraband cargo at the belligerent destination.

The ship when captured is generally taken to a prize court by the captor, and the penalty of conviction is the confiscation of the contraband goods, unless the owner of the contraband also has ownership in the vessel, in which case the ship, or his share therein, is likewise confiscated, and also any innocent goods of his ownership. False papers or misrepresentation as to destination may lead to the ship's condemnation. The carrying of agents or dispatches of an enemy must be distinguished as more properly unfriendly neutral service than carrying of contraband. The Trent Affair (q.v.), in which a British vessel carried agents of the Confederate government to England, comes under the former description.

The term *contraband of war* was inappropriately though ingeniously applied during the Civil War by Gen. B. F. Butler, while in command at Fort Monroe, to captured slaves, as a ground for retaining them when demanded by their Southern owners. Consult M. Wiegner, *Die Kriegskonterbande* (Berlin, 1904). See NEUTRALITY; BLOCKADE; INTERNATIONAL LAW.

**CONTRABASS**. See DOUBLE BASS.

**CONTRABASS TUBA**. See TUBA.

**CONTRACT** (from Lat. *contrahere*, to draw up, from *com*, together + *trahere*, to draw). In English and American law, an agreement, enforceable at law, between two or more parties to do or not to do a particular thing. The ele-

ments essential to all forms of contracts are: (a) an obligation founded on the promise made by a party to the contract and resulting from his intent to enter into such an obligation; (b) a meeting of the minds of all the parties to the contract as to the terms and conditions of the promise given. Additional elements may be required to give validity to various classes of contracts, as is pointed out below.

**Classification**.—Contracts are usually classified as: (a) contracts of record; (b) contracts by specialty; and (c) simple contracts.

Contracts of record, so called, are conclusive legal obligations created by the judgment or order of a court of record. Examples of contracts of record are judgments, recognizances, statutes staple, etc. They are not true contracts at all, as they do not contain a promise and are not founded upon the intention of the party bound, but should properly be classified as *quasi contracts*.

**Contracts by specialty** are contracts depending for their validity upon the formality of their execution. They are required to be in writing and to be perfected by sealing and delivery by the party to be bound thereby. The usual form of specialty contract is a covenant (q.v.). A bond (q.v.), though in strictness not a contract, being an acknowledgment of indebtedness instead of a promise to pay, has always been regarded and classified as a specialty contract. Contracts by specialty require no consideration to give them validity. As in the case of other contracts, courts of equity will not specifically enforce a specialty contract unless it is founded upon a consideration.

At common law the seal required to be placed upon specialty contracts was of great technical importance, but the law in this respect has been greatly modified by modern statutes. In nearly all of the United States a scroll or mark with the pen may be used in place of a seal. In a number of States it is provided by statute that the seal upon a sealed instrument is only presumptive evidence of a consideration; the effect of which probably is to make a consideration necessary to the validity of a sealed instrument, at least where it is intended by the parties that a consideration is to be given. In a few States all distinction between specialty contracts and simple contracts has been abolished by statute. The common-law form of action for enforcing all kinds of specialty contracts, except a bond, was the action of covenant (q.v.). Recovery upon a bond was secured by the common-law action of debt (q.v.). These distinctions are not preserved in modern systems of pleading. The usual period of limitation upon specialty contracts is 20 years.

**Simple contracts** are contracts which do not depend for their validity upon any particular formality as to execution, but upon the existence of a consideration, which is a detriment, or a surrender of a right, given in exchange for the promise. (See CONSIDERATION.) A simple contract may be in writing or by parole, or may even be implied from the acts and conduct of the parties manifesting their intentions.

As no formality is required in the creation of a simple contract, it always comes into existence as the consequence of an offer and acceptance. The offer must be accepted in accordance with its terms within a reasonable time, or within the time stated in the offer, in order to give rise to a contract. A refusal to accept, or

a counteroffer, puts an end to the first offer, which cannot thereafter be accepted unless renewed. In contracts entered into by letter, in most jurisdictions, the offer is deemed to be accepted upon the posting of the letter of acceptance, but in a few States it is held that there is no acceptance until the letter of acceptance is actually received by the person making the offer. Inasmuch as there must be an agreement in order to create a contract, any mistake as to the terms of the offer or acceptance will prevent a meeting of the minds of the parties and no contract will arise. But a mistake as to some collateral matter will have no effect upon the contract unless induced by fraud, in which case the defrauded party may rescind the contract. Thus, if A offers to sell property to B for \$10,000, and B accepts, understanding the offer to be \$5000, no contract arises; but if B understands the offer made and accepts it because he erroneously believes the property is of much greater value, a contract does arise. Simple contracts are frequently classified as *express* and *implied*. An express contract is one entered into on terms expressed in spoken or written words. An implied contract is one which is inferred from the acts or conduct of the parties. The latter should not be confounded with the so-called contracts implied in law, as, e.g., the obligation to repay money paid by mistake, which are not true contracts, because not based upon intention. They are properly classified as *quasi contracts* (q.v.). Express contracts may be by parole or in writing, the only difference in legal effect being in the method of proof. A few simple contracts are required, however, by the Statute of Frauds (q.v.) to be executed in writing. Simple contracts are further classified as *unilateral* and *bilateral*. A unilateral contract is one in which only one party to the contract makes a promise in exchange for the other party's giving something or doing some act. A bilateral contract is one in which each of the two parties gives his promise in exchange for the promise of the other, the promise of each being a consideration for the promise of the other.

Contracts are also said to be *executory* or *executed*. An executory contract is one which has not been fully performed. As the performance of a contract terminates its existence as a legal obligation, it will be observed that the expression "executed contract" is a contradiction in terms. A present sale of personal property is sometimes said to be an executed contract, but the expression is improper, as the sale may be effected by a mere meeting of the minds without any promise, and hence without contract. See SALES.

As a contract proper is always an expression of the will or intent of the party to be bound, a promise made by a person mentally incapable of a free act of will or consent, or by a person under a legal disability to bind himself by contract, is unenforceable. Thus, the contract of a lunatic or idiot, or of a person so under the influence of a narcotic or of intoxicating liquor as not to be capable of a free exercise of will, or (at the common law) by a married woman, is wholly void. The disability of the married woman in this respect has, however, been generally removed by statute. The contract of an infant, i.e., a person under the age of 21 years, is, on the contrary, not void, but may be disaffirmed by him when he attains full age.

*Performance.*—In the case of all true contracts, whether by specialty or simple contracts, the obligations of a party to perform may not arise until the happening of a condition, or the performance of his promise by the other party, as expressly or impliedly provided in the contract by its terms. If there be no such provision in the contract, by certain settled rules of construction (known as the law of conditions implied in law), the performance of one party may be deemed a condition precedent to the performance of the other, or the performance of each of the parties may be a concurrent condition to the performance by the other; i.e., each party must tender his performance before he can recover damages for the breach of contract by the other. In general, impossibility of performance is no defense to an action brought to recover damages for breach of contract. If, however, the contract contemplates the continued existence of the parties or the subject matter of the contract, the death of a party or failure of subject matter is a defense. Thus, in contracts for personal service, death of the employer or employee terminates the contract, and a contract for the use of a particular building or other property is terminated by the destruction of the property.

*Suits upon Contracts.*—Owing to the rule of pleading in actions upon contract at common law, the plaintiff must show that he has given consideration for the defendant's promise. A third person for whose benefit the contract was made, but who was not a party to it, could not sue upon it. This is still the rule in most jurisdictions, although not in all; and in a few, notably New York, in the single case when A gives money or property to B upon his agreement to pay money to C, C may sue upon the contract upon the theory that a debt has been created in his favor. Equity exercises jurisdiction to compel specific performance of a contract when legal damages would be inadequate. It also exercises its powers to rescind or reform written contracts affected with fraud or mistake. Fraud is also a defense at law to an action founded on contract, it having been early adopted by the courts of law, although it is a defense equitable in character. Contracts which contravene rules of public policy or statutory enactment are illegal and void. See ILLEGALITY.

*Contracts in the Civil Law.*—In the Roman law contract (*contractus*) signified an agreement which created an actionable obligation. The original roots of contractual obligations were apparently pledge and vow. In the first case, the debtor gave the creditor a pledge, which the creditor held until the debtor had fulfilled his promise. If a debtor had nothing else to pledge, he pledged his own person in the form of a sale. This transaction the Romans called *nexum*. It created something analogous to a judgment debt; and as the debtor was in default, the creditor levied on his body (*manus iniectio*). By the time of Gaius this contract had become antiquated. A vow to the gods to do something for, or pay something to, the third person enabled the priest to intervene and insist upon performance—from this root sprang the sacral contract of the priestly law, the *sponsio*, and out of the *sponsio* grew the sacral contract of *stipulatio*.

At the time of Gaius (early Empire) five classes of contracts were recognized: (a) The

verbal contract, *stipulatio*, which was actionable because a certain form of words (question and answer) had been observed. It was usual to draw up a written statement (*cautio*) reciting the terms of the agreement, but the validity of the contract rested on the exchange of the spoken words. (b) The *literal* contract (from *litera*, 'writing'). This was actionable because a formal entry had been made in the creditor's ledger (*expensilatio*). In the case of the verbal and the literal contract it was neither the agreement alone nor the form alone which created the obligation, but the two together. (c) The *real* contract. This was actionable because something (*res*) had passed from the creditor to the debtor, and the return of the thing or an equivalent had been promised. To this class belonged the bailments known as *mutuum*, *commodatum*, *depositum*, *pignus*. Besides these there were many other real contracts without special names. Ultimately it was recognized that any agreement for reciprocal performances would become a binding contract as soon as one party had performed. (d) The *consensual* contract. This was actionable by virtue of the agreement (*consensus*) between the parties, although no form had been observed and nothing had passed. There were only four contracts of this class: *emptio venditio*, sale; *locatio conductio*, hiring; *societas*, partnership; and *mandatum*, commission of agency.

Agreements that fell within none of these four classes were simple pacts (*pacta*), not contracts, and were not actionable. Such pacts might, however, be available for defense, e.g., when a creditor had given his debtor an informal release or an extension of time, and pacts made immediately after the conclusion of a contract (*pacta adiecta*) were treated as part of the contract.

In order that a contract should be valid it was necessary that the parties should be of such age as to be capable of binding themselves and of sound mind, and that the object to be attained should be neither impossible, illegal, nor immoral. Mistake (*error*) was regularly fatal to the validity of a contract, provided the mistake was excusable and essential. A mistaken reason or motive for contracting was not regarded as essential. Where, however, the mistake was caused or utilized by the other party, these limitations disappeared, and the contracts were voidable for fraud (*dolus*). Duress (*metus*) also made a contract invalid.

In modern European codes all agreements except those looking to impossible or immoral ends are valid and actionable, unless a special form is required by law and the required form has not been observed. It is therefore maintained by many writers that the Roman category of real contracts has disappeared, and that there are now but two classes, the formal and the consensual.

**Bibliography.** For special branches, consult REAL PROPERTY; SALE; MORTGAGE; ETC. Also consult: Parsons, *Law of Contracts* (9th ed., Boston, 1904); Anson, *Principles of the Law of Contract* (7th ed., Oxford, 1893; 2d Amer. ed., Chicago, 1887); Chitty, *Treatise on the Law of Contracts* (14th ed., London, 1904); Addison, *Treatise on the Law of Contracts* (10th ed., ib., 1902); Marrison, *Elements of Contracts* (2d ed., Boston, 1901); Hollingsworth, *The Law of Contracts* (1896); Page, *Law of Contracts* (Cincinnati, 1905); and the authorities referred

to under such special titles as NEGOTIABLE INSTRUMENTS; SALE; ETC.

**CONTRACT, SOCIAL.** See SOCIAL CONTRACT. **CONTRACTION** (Lat. *contractio*, from *contrahere*, to draw up). The wish or necessity for economizing labor and parchment led the scribes of the Middle Ages to use a great many abbreviations or contractions in their manuscripts. These contractions were transplanted into the first printed books; and more recently they have been reproduced in many works, where it was thought desirable that the modern print should represent as nearly as possible all the peculiarities of the ancient manuscript. A knowledge of contraction, therefore, is indispensable, not only to readers of old writings, but to readers of the printed books of the fifteenth, the sixteenth, and the earlier part of the seventeenth centuries, and to all who desire to avail themselves of the vast stores of historical and archaeological materials accumulated in the rolls and records published by the governments of Great Britain, France, and other countries. See PALEOGRAPHY.

Contraction may be divided into six classes: (1) contraction, properly so called; (2) contraction by elision or suspension; (3) contraction by writing a smaller letter above the word contracted; (4) contraction by running two or more letters into one character; (5) contraction by symbols representing syllables or words; (6) contraction by initial letters.

**CONTRACT LABOR LAW, or ALIEN LABOR LAW.** The provisions of the statutes of the United States relative to immigration prohibiting the bringing into the country of aliens who are under contract to perform labor or service of any kind in the United States. The first provisions of this character were enacted in 1885. These were general in terms and were interpreted by the courts to have reference only to persons imported under a contract to perform unskilled manual labor. As this interpretation was unsatisfactory to the labor organizations at whose instance the law was passed, it was amended by a subsequent Act of Congress (Act of March 3, 1903, chap. 1012) so as to cover "labor or service of any kind, skilled or unskilled." See IMMIGRATION.

**CONTRACT SURGEON and ACTING DENTAL SURGEON.** In the United States army, a civilian physician or dentist employed under contract with the surgeon-general of the army. Civilian physicians and dentists may be employed as contract surgeons and acting dental surgeons under contracts entered into by, or with the authority of, the surgeon-general of the army. They are entitled to the transportation and fuel allowances of first lieutenants, and when on duty at a post or station where there are quarters belonging to the United States, they receive the quarters in kind allowed by regulations to a first lieutenant; they are not entitled to commutation of quarters nor to the 10 per centum increase of pay when serving beyond the territorial limits of the United States. They are entitled to the same official obedience from enlisted men as commissioned officers, and may be detailed on councils of administration and boards of survey, act as post treasurer, etc., and witness payments to enlisted men under the provisions of paragraphs 1315 to 1337 of the *Regulations*, but may not be detailed for duty on courts-martial. Generally expressed, the contract surgeon's eligibility

for duty is the same as that of a first lieutenant of the Medical Corps, except in so far as it is limited by the fact that he is not a commissioned officer. Candidates for appointment as acting dental surgeons must be not less than 21, nor more than 27 years of age, and must be graduates of standard medical or dental colleges, trained in the several branches of dentistry, of good moral character, and, prior to appointment, will be required to pass a satisfactory professional examination before a board of dental surgeons, convened for that purpose. Contracts with acting dental surgeons are made for three years, but may be annulled, for cause, at any time. They are attached to the medical department, and are assigned to duty in accordance with the recommendations of the surgeon-general of the army, or the chief surgeon of a military department. An acting dental surgeon is allowed, as an assistant, one enlisted man from the hospital corps, and must operate upon those entitled thereto only.

The United States is the only country in the world employing army dental surgeons. Consult *United States Army Regulations* (1913). See SURGEON, MILITARY.

**CONTRAFAGOTTO** (It., counterbassoon). The name in orchestral scores for the double bassoon. See **BASSOON**.

**CONTRALTO**. See **ALTO**.

**CONTRARY MOTION**. See **MOTION**, in Music.

**CONTRAST** (Fr. *contraste*, from ML. *contrastare*, to withstand, from Lat. *contra*, against + *stare*, to stand). The enhancement of the difference between objects or attributes of objects which results from their juxtaposition or immediate comparison. Contrast has been employed, very loosely, as a principle of explanation in psychology; and we cannot even now say that the whole field of "contrast phenomena" has been adequately explored. It is, clearly, no explanation of a given fact to refer it to a general law of contrast, any more than it is an explanation of a mental connection to refer it to the "association of ideas." We must know, in each particular case, the conditions under which the fact is determined and the connection takes shape.

1. One chapter of the psychophysics of contrast may, however, be considered closed. This is the chapter that deals with the contrast of light and colors. If we lay two black strips upon a gray ground and then push a white cardboard under one of them so that the white projects on either side, we see at once that the black on white is blacker than the (same) black on gray. If we lay a gray disk upon a red ground of the same brightness and stand so far away that the contour of the disk is eliminated, we see a bluish green in place of the gray disk; and the color is most intensive along the line of junction of disk and ground. These experiments may be varied in many ways.

The principal laws of contrast, as determined by such experiments, are five in number: (a) Contrast always takes the direction of greatest opposition. A white induces a black, a color its complementary color. (See **VISUAL SENSATION**.) (b) The more saturated the color (the redder the red, the purer the white), the greater is the contrast effect. (c) The contrast effect is greatest along the line of junction of the contrasting surfaces (marginal contrast). (d) The more nearly alike two colors are in bright-

ness (both light or both dark), the better will be the contrast effect. And (e) the more nearly homogeneous the contrasting surfaces (the less distinction there is at the line of junction), the

Disks for mounting upon the color mixer, to show light and color contrast. The black portions of the disks are black, the white portions white, and the shaded portions of some color. From Helmholtz, *Physiol. Optik* (1896).

better will be the contrast effect. Helmholtz sought to explain these facts, in purely psychological terms, as deceptions of judgment; we see aright, but estimate wrongly; and Wundt accepts the explanation for certain of the phenomena. The psychological theory, however, breaks down when one attempts to carry it out in detail. There can be no doubt whatsoever that, as Hering maintains, contrast of light and color is a matter of direct physiological conditioning, the result of the interaction of excitations within the visual organ, a symptom or expression of the functional unity of the retina.

2. Whether contrast occurs in the perceptual sphere, whether, e.g., "great" and "small" contrast as do blue and yellow, is a much-disputed question. There are certain optical illusions (see **ILLUSION**) which seem to be most easily "explained" by reference to a law of space contrast. In its most direct form the theory of spatial contrast affirms that "the space sensation of a stimulated retinal point is a function primarily of the position of the point stimulated, but also of the space sensations of the neighboring retinal elements" (Loeb); the formula that holds of sensation is thus applied, without modification, to the sphere of visual space perception. It has been said, again, that lines of different direction exercise "contrastive" influences upon the movements of regard, i.e., upon the movements made by the eyes as we attentively follow the course of the lines. (Heymans.) And, lastly, it has been asserted that figures of the same size, surrounded by like figures of another size, look larger "by contrast" if the surrounding figures are smaller, and smaller if these are larger. (Wundt.) Most of these illusions can, however, be otherwise explained; and, despite the array of authorities, the fact seems to be that a given perception is never really changed by contrast with other perceptions. "Perceptual contrast" consists rather in a feeling. When we see a middle-sized man by the side of a dwarf, we are surprised at his height; when we see him by the side of a

giant, we are disappointed in his height. Our perception of the man's height is not affected by the neighborhood of smaller and larger men; the contrast that we "feel" is felt, literally, as surprise or disappointment.

3. Many psychologists, again, assume the existence of an affective contrast (see AFFECTION); a particular pleasure appears more pleasant if it follows a preceding unpleasantness, and conversely. (Fechner, Höffding, Lehmann.) The affective value of a stimulus, however, is not constant, as is its sensation value, but varies with the present state of the organism and the corresponding disposition of consciousness. The "particular" pleasure, then, is not a determinate amount of pleasantness, that may "seem" to be greater or less according to its affective setting. The pleasure actually aroused may differ within wide limits, while the stimulus remains the same. Moreover, where there is affection, there is also sensation; where there is affective contrast there must also be a "perceptual contrast," in the sense just defined of the conditions of the arousal of a contrast feeling. It is, then, perhaps safer to give up the idea of an "affective contrast" altogether.

4. Lastly, we must note that, in certain psychological systems (Wundt, Höffding), the law of contrast figures as a general law of the mental life. Wundt, e.g., speaks of the "law of psychical contrasts" as one of the three psychological laws of relation; all "volitional processes . . . are arranged in groups made up of opposite qualities; . . . these opposites obey in their succession the general law of intensification through contrast. . . . The law is secondarily applied to ideas and their elements." The rejection of this law does not necessarily carry with it the rejection of spatial and affective contrast, though its acceptance would naturally incline us to accept the alleged illustrations of its working.

**CONTRAT SOCIAL**, kôn'trà' sô'sé'ál'. See ROUSSEAU, JEAN JACQUES.

**CONTRAYERVA** (Sp. *contrayerba*, antidote, from *contra*, against + *yerba*, Lat. *herba*, Eng. *herb*). A medicine once in much repute against low fevers and as a mild stimulant and diaphoretic, but not used in the United States. It consists of the rootstocks (rhizomes) of different species of *Dorstenia*, tropical American plants of the natural order Moraceae. The genus is remarkable for the plane receptacle in which the numerous small flowers are fixed—the male flowers in superficial depressions, the female flowers in deep sockets. The flowers have neither calyx nor corolla. The fruit consists of achenia, imbedded in the fleshy receptacle from which they are projected by elastic force when ripe. *Dorstenia contrayerba* is a perennial plant with palmate leaves and somewhat quadrangular receptacles. Its rootstock is knotty, one to two inches long, about one-half inch thick, reddish brown, pale within, sending out on all sides many slender fibres (roots), which are generally loaded with small brown knots. It has a peculiar aromatic smell and a somewhat astringent,

warm, bitter taste. It keeps badly. It contains so much mucilage that a decoction of it will not pass through a filter. *Dorstenia brasiliensis*, a stemless species, with oblong, heart-shaped leaves, and a circular receptacle, a native of the West Indies and Brazil, possesses similar properties, but is said to be more energetic. Other species have been represented as efficacious against serpent bites; hence the name "contrayerba," a counterpoison.

**CONTRERAS**, kôn'trà'rás. A village about 12 miles southwest of the city of Mexico, the scene, Aug. 19 and 20, 1847, during the Mexican War, of an important battle between a Mexican force of 7000 under General Valencia, supported by another of 12,000 under General Santa Anna, and a United States force of 4500 under General Scott. The Mexicans occupied a strong position on high ground and fought for a time with great gallantry, but, being attacked both in front and rear at daylight on the 20th, finally gave way and fled in confusion, after having lost in killed and captured over 1500. The American loss in killed and wounded was reported by General Scott at 60. Consult Wilcox, *History of the Mexican War* (Washington, 1892), and *Autobiography of Lieutenant General Scott* (New York, 1864).

**CONTRERAS**, HERNANDO DE (c.1520-50). A Spanish adventurer, a son of Rodrigo de Contreras, Governor of Nicaragua. After the confiscation of his father's property he plotted revenge by organizing, in company with his brother Pedro, an expedition against Peru, which he determined to seize as his inheritance, tracing his claim somewhat remotely to certain rights of his grandfather, Pedrarias, the former Governor of Nicaragua. After murdering the Bishop of Nicaragua, they captured Panama, April 20, 1550, and took a large part of the treasure left there by the licentiate La Gasca. While Hernando was pursuing La Gasca, who was already on his way from Peru to Spain, the citizens of Panama retook the city and pursued the brothers. Hernando was shortly afterward drowned (May, 1550) while endeavoring to make his escape, and Pedro fled into the interior of the country, where every trace of him was lost.

**CONTRERAS**, JUAN SENEN DE (1760-1826). A Spanish soldier. He was born in Madrid, studied military matters, under commission from Charles III, in England and various continental countries, and took part, in 1788, in the campaign of Austria against the Turks. In the War of Independence he greatly distinguished himself, in particular at Talavera and at the defense of Tarragona, where he was captured by the French. He was imprisoned in the castle of Bouillon, but escaped thence in 1812 and made his way to London, whence he returned to Spain in 1814. He wrote an account of the siege of Tarragona which appeared in Paris in 1825 as volume iii of the *Mémoires relatifs aux révolutions de France et d'Espagne*.

**CONTRIBUTION** (Lat. *contributio*, from *contribuere*, to contribute, from *com-*, together + *tribuere*, to grant, from *tribus*, tribe; probably connected with *trabs*, beam, Umb. *trefu*, Welsh *tref*, village, Goth. *þaupr*, AS. *þorp*, OHG. *dorf*, Ger. *Dorf*, village). In the law of war, a levy of money or supplies imposed by an invader upon the citizens of an enemy's territory. The term *requisition* is usually applied to a levy of supplies, which may consist of food,

forage, clothing, or means of transport. Contributions are an outgrowth of the conditions of pillage and devastation which formerly marked the course of an invader. Private property in land was of course exempt from seizure owing to its immovability; but personal property, being of a portable character, was appropriated for the purpose of maintaining and strengthening the invading force. This practice reached its height during the seventeenth century, when armies of adventurers swept over Europe, depending upon the country for support. Gradually, with the growth of more humane feelings and for the more practical reason of increased efficiency and discipline in armies, the practice hardened into the usage of permitting inhabitants of invaded territories to purchase immunity from plunder by payment of a money indemnity.

A contribution is of the nature of an extraordinary tax (regular taxes being appropriated as public property by the enemy), and though it is levied primarily by the invader, it may be administered by local representative authorities, and its incidence thus regulated. Modern usage has approved the giving of receipts or *bons de réquisition* for the sums or quantities taken, to guard against burdensome demands by later bodies of invaders; also to furnish a basis for recovery from the domestic government in the event of national division of the loss. Yet the state is not generally held liable for losses entailed by contribution; but these losses are considered to have been beyond the state's control, except when a certain territory has been given over to an enemy to protect the rest of the country. In that case justice demands a different rule. Effort has been made by international convention to modify the usage of exacting contribution, and modern warfare has relaxed its severities, though during the Franco-Prussian War it was rigorously enforced by Prussia. The Allies made no levies in the Crimea, nor did the United States in Mexico in 1847. The British also generally purchased supplies from the Boers. In each of these cases, however, this conduct appears to have been dictated by motives of momentary policy. Contribution should be distinguished from tribute, which is usually a condition of peace exacted by treaty. Consult the authorities referred to under WAR. See TAX; TRIBUTE, CONQUEST.

In municipal or private law contribution denotes the right of one person to exact from another his proportionate share of a common loss; as where one of two sureties on an obligation discharges the whole obligation, he is entitled to call upon his cosurety to contribute his share of the amount so paid. The term is sometimes employed of the right of a surety to recover from the principal debtor the amount paid by the surety in discharge of the latter's liability, but this is more properly termed "indemnity" or "exoneration" (q.v.). In exceptional cases, also, a tenant in common or joint tenant of real estate might at common law be compelled to contribute to the cost of necessary repairs. (See PRINCIPAL AND SURETY; COMMON, TENANCY IN.) In maritime law, also, the principle of contribution is applied in cases where, in order to save a ship or cargo, a part of the goods are cast overboard. In such case the loss is equitably distributed so as to fall on the entire ship and cargo. See MARITIME LAW.

**CONTRIBUTORY NEGLIGENCE.** See NEGLIGENCE.

**CONTRITION** (Lat. *contritio*, grief, from *conterere*, to bruise, from *com-*, together + *terere*, to rub). Sorrow for sin. As a term of Roman Catholic theology, it signifies "a sorrow of mind and a detestation for sin committed, with a firm purpose of not sinning in the future." A smaller degree of sorrow, arising from "the consideration of the turpitude of sin or from the fear of hell and of punishment," is called "attrition."

**CONTROL/ER** (variant of *comptroller*, q.v. for etymology). On shipboard, a contrivance for holding the anchor chain and keeping it from running out while getting up anchor or mooring. It is made in two parts, one of which slides vertically. When this part is up, the chain slips freely over the jaws of the controller; when the movable part is lowered, the chain drops in a slot, where it is caught and held. For further security the controller usually has an arch-shaped iron strap above it; this keeps the chain in place and has sockets for a heavy bar which holds the chain down against the jaws.

**CONTUCCI, ANDREA.** See SANSOVINO.

**CONTUSION.** See BRUISE.

**CON/ULARIA** (Neo-Lat. nom. pl., from Lat. *conus*, cone). A genus of fossil Pteropoda of curious form found abundantly in some Paleozoic rocks and rarely in Permian and Triassic beds. The shell, when perfectly preserved, has the form of an elongated quadrangular pyramid of which the sides are flattened and the edges sharp. In size they vary from half an inch to 10 inches in length. The surface is ornamented by numerous transverse ridges, and the interior is divided by septa in the apical portion. The aperture is closed by four incurved lobes, which are extensions of the sides of the pyramid. Certain forms in the Utica slate of New York State, originally described as algae, have been shown to be sessile *Conularia*, in which the young remain attached to the parent shell to form a colony with the appearance of a branching seaweed. Consult: Hall, "Geological Survey of New York," in *Paleontology*, vol. v, part ii (Albany, 1879); Ruedemann, "Notes on the Discovery of a Sessile *Conularia*," in *American Geologist*, vol. xvii (Minneapolis, 1896); Slater, "A Monograph of the British *Conulariæ*," in *The Palaeontographical Society*, vol. for 1907 (London, 1907). See also PTEROPODA.

**CONUN/DRUM** (probably a pseudo-Latin word; hardly from Lat. *conandum*, thing to be attempted, from *conari*, to attempt). A pun in the interrogative form, a kind of riddle (q.v.) involving the discovery of some odd or absurd resemblance between things utterly dissimilar, or of some odd difference between similar things. The conundrum is usually put in the form of a question, the answer to which either is or involves a pun. A good example is the following: Q. When is it easiest to read? A. In the autumn, when Nature turns the leaves. Save in folklore and savage life, the conundrum has almost entirely supplanted the riddle.

**CON/VALLARIA.** See LILY OF THE VALLEY.

**CONVECTION OF HEAT, CONVECTION CURRENTS.** See HEAT, Expansion.

**CONVENT.** See MONASTERY.

**CONVENTICLE** (Lat. *conventiculum*, dim. of *convetus*, assembly, from *convenire*, to assemble, from *com-*, together + *venire*, to come). 1. The private religious meetings in the early Church. 2. Later a cabal among the monks of

a monastery formed to secure the election of a favorite as abbot; the word consequently fell into disrepute. 3. It was given as an appellation of reproach to the assemblies of Wiclif's followers and was afterward applied (4) to the meetings of English and Scottish Nonconformists. In this connection the legal term developed. The Conventicle Act of 1664 made all assemblies for religious purposes, other than those of the Church of England, illegal, permitted houses to be searched for suspected conventicles, and imposed the penalty of transportation for repeated offenses.

**CONVENTION** (Fr., from Lat. *conventio*, a coming together, a meeting, from *convenire*, to meet, from *com-*, together + *venire*, to come). In the civil law, a contract, pact, or treaty. Hence, in more general usage, a rule of conduct depending upon agreement, express or implied, rather than on any positive rule of law. Thus, we speak of the *conventions* of a constitution, meaning those parts of it which are the result of custom and of general agreement, as distinguished from the *law* of the constitution, which is embodied in statutes or in judicial decisions. The term is also employed in a technical sense, in the language of diplomacy, and in military affairs, with the signification of treaty or agreement respecting the conduct of military operations or the relations of the contracting parties to one another.

In the political sense, the term "convention" signifies an extraordinary assemblage of delegates, representing the people of a state or the members of a political party, for other purposes than the regular functions of government. Thus, a regular legislative body is not a convention, though the term is sometimes applied to the joint meetings of the two houses of a State Legislature when convened for the formal election of a United States Senator. The two houses of Parliament constitute a convention, whether acting jointly or severally, if assembled, without authority of law. This was the character of the two "convention Parliaments," as they were called, which met in 1660 to restore Charles II to the throne, and in 1689 to alter the succession from the house of Stuart to William and Mary. In both of these cases the illegal and revolutionary acts performed were afterward validated and confirmed by regular acts of Parliament. Of a similar character was the convention by which the first French Republic was declared in 1792, and under which the Revolution was carried on till the establishment of the Directory in 1795.

**Constitutional Conventions.** The fact that conventions may be made up of delegates representing the whole body of the people of a state, and chosen specifically to represent the popular will in a particular matter, has made them a favorite instrument for framing a new scheme of government or for amending an old one. The convention is thus a more immediate representative of the people, with a higher and more imperative mandate than the legislature. There has been only one national constitutional convention in the United States—that which framed the Constitution; but the high character of this assemblage, the patriotic spirit and wisdom which animated it, and the astonishing success which has attended its labors, have made it the immortal type of such gatherings. In the United States its members are revered as the "Fathers of the Constitution."

This convention met, pursuant to the call of the Congress, in Philadelphia, on the 14th of May, 1787, to frame measures for the preservation of the union of the States and the establishment of a stable and efficient government; and, under the presidency of George Washington, it completed its labors on the 17th of September. It included most of the men of authority and influence in the country, among them such well-known figures as Alexander Hamilton, Benjamin Franklin, James Madison, Roger Sherman, Robert Morris, Elbridge Gerry, and Rufus King, and all but one (Rhode Island) of the original 13 States were represented in its deliberations and in the final vote by which the Constitution was adopted. The Constitution (Art. V) provides for its own amendment by the process of a convention called upon the demand of two-thirds of the States; but the greater ease and simplicity of the alternative method, of proposing amendments to the several States by a two-thirds vote of the two houses of Congress, has caused the latter method to be preferred. See CONSTITUTION OF THE UNITED STATES.

In the States composing the American Union, however, the convention method of amending their constitutions has usually been followed. The ordinary procedure is for the Legislature to call a convention to be chosen by vote of the electors, and providing for the submission of the results of its work to the Legislature, and then to the people for ratification. In many cases the proposed amendments are submitted directly to the people, without previous reference to the Legislature, and in at least one recent case (Mississippi, 1890) an amended constitution was promulgated and put into effect by the constitutional convention which framed it, without ratification by the people or the Legislature. Doubtless such amendment, by convention only, is valid, if the powers of that body are not limited by the statute calling it into existence. But where the Legislature, in calling a convention, prescribes for the submission of its conclusions to the Legislature or the people, or both, for ratification, the amendments do not acquire the force of law until such ratification has been had. See Jameson, *Treatise on Constitutional Conventions* (4th ed., Boston, 1887).

**Political Convention.** A gathering of delegates representing a political party for the purpose of placing in nomination the candidate of that party for an elective office. The method of holding elections is carefully regulated by statute in all communities in which public offices are filled by popular vote, but the method of nominating candidates for such offices is usually left to the initiative of the voter. Under the party system which prevails in most popular governments, the process by which candidates are selected and placed in nomination is usually supervised by the party organizations seeking to control the election. In Great Britain candidates for Parliament are named by committees composed of party leaders, and in the early history of the United States the necessary leadership was supplied by party committees in Congress. Nominations for the presidency were made in this way until 1824. At the present time, however, nearly all nominations for elective offices in the United States, whether great or small, are made by the primary and convention systems. The primary is

the meeting of the electors themselves, at which delegates to the nominating conventions are chosen. In some instances, however, the system is more complicated, the voters at the primaries choosing delegates to local conventions, and these, in their turn, electing delegates to represent the party in State or national conventions. The enormous extension of this system is doubtless due to the ease and completeness with which it lends itself to partisan control of elections, and thus of the machinery of government. It has doubtless done much to build up the system of party domination and the power of the great party leaders. The party organization, controlling the primaries, makes up a convention of its partisans and dependents, and thus dictates the nominations for office, leaving to the voter no choice but that of supporting or rejecting the candidate of his party. Then, when the party organization of city, county, or State, through a refinement of these methods, becomes wholly subservient to one man, we have the "boss" system which exists and flourishes to a large extent in the United States. The party convention, as the chief instrumentality of boss rule, has excited so much resentment in recent years that its existence is seriously threatened. In some of the States attempts have been made to render the primaries and conventions more truly representative of the body of the voters by statutory regulation of the nominating machinery, and in others a system of "direct nomination" of candidates for public office by primaries held for this purpose or by direct ballot has been instituted. This movement is gaining ground rapidly and bids fair to destroy the convention system altogether or to leave it only the function of formulating and declaring the principles of the party.

National conventions—for the nomination of candidates for the presidency and vice presidency of the United States—were first held about 70 years ago. The Anti-Masonic party (1828-32) was the first political party to perfect the national-convention system, and that party held the first national convention in the presidential campaign of 1832. Both factions of the Democratic-Republican party had, however, held nominating conventions that were not national nor systematically representative during the campaigns of 1824 and 1828. The collapse of the congressional nominating caucus in the campaign of 1824 hastened the development of the convention system. Political conventions, like most other representative bodies, usually reach their conclusions by a majority vote of the delegates present. The national conventions of the Democratic party, however, are governed by a peculiar rule, requiring a two-thirds vote for a candidate in order to secure the nomination. Another practice, peculiar to the machinery of the Democratic party in nominating its candidates for the presidency and vice presidency, is the "unit rule," as it is called, under which certain State conventions bind the delegates of those States in the national convention of the party to cast the unanimous vote of the delegation according to the wishes of the majority of its members.

Although the principal business of political conventions is the nomination of candidates for office, they have, in the course of American political development, become the councils of the great parties, and in and by them the prin-

ciples of political action are formulated and declared. The "platforms," as they are called, adopted at State and national conventions, constitute the declarations of policy of the parties making them, upon which they seek the verdict of the people at the ensuing election. This declaration of principles has become one of the most important functions of political conventions and often constitutes the principal part of their work. See ELECTION; NOMINATION; POLITICAL PARTY. Consult Bryce, *The American Commonwealth* (ed. 1912).

**CONVENTION, NATIONAL** (Fr. *convention nationale*). The third assembly of the deputies of the French people chosen after 1789, and the one which assumed the government of France on the overthrow of the throne in 1792. After the Legislative Assembly had decreed the suspension of the King, Aug. 10, 1792, it voted the election of a National Convention, which commenced its sittings on September 21, immediately after the dissolution of the Legislative Assembly. Its first act was to declare the abolition of the kingship and to make France a republic. Upon this followed the trial and condemnation of the King. Through the support of excited mobs, the extreme Jacobin party became predominant in the convention, where, from the elevated seats on which its members sat, it received the name of the Mountain. (See MONTAGNARDS.) The Revolutionary Tribunal and the Committee of Public Safety were created by this party. The Girondists (q.v.), at first a powerful party, were destroyed, many of them perishing by the guillotine; and a new constitution, thoroughly democratic, was adopted Aug. 10, 1793. Its operation, however, was suspended until peace should be restored. Meanwhile the rulers in the convention displayed marvelous energy, almost a million citizens being placed under arms, and immense supplies of military stores being raised by means of continual requisitions. By order of the majority of the convention thousands of its political opponents were thrown into prison, and the number who died by the guillotine increased daily both in Paris and throughout France. In the end the National Convention became subject to the dictatorial power of Robespierre (q.v.) and independent opinion was no longer expressed. The overthrow of Robespierre was followed by a great reaction. The Jacobins were suppressed; and finally the remnant of the convention, after concluding peace with Prussia and Spain, dissolved itself, Oct. 26, 1795, leaving to the nation a new constitution, which placed the government in the hands of the Directory (q.v.). During its long lease of life the National Convention had passed over 8000 decrees and acts and had set into motion forces which profoundly influenced the history of France and of Europe. See FRANCE; DANTON; HÉBERT; MARAT; ROBESPIERRE; ETC.

**CONVENTIONAL.** In art, a term which indicates that a work has been produced in accordance, not with the absolute principles of beauty in form and color, or with the appearance of natural objects, but with the theories and rules concerning forms and colors which prevail at a given time or in a given country or social class. An artist who adheres too rigidly to such rules is said to be conventional. The term is also used to describe representations of natural objects; as, e.g., leaves which

are not strictly true to nature. Such representations are frequently used for decorative effect, and the objects are said to be conventionalized.

**CONVENTION PARLIAMENT.** A British term for a Parliament convened without royal authority. The English sovereign has a vested prerogative in the assembling of Parliaments, but when the crown is in abeyance convention Parliaments meet—as before the restoration of Charles II (1660), and when William and Mary were offered the sovereignty after James II had fled the kingdom (1689). The acts of such Parliaments are subsequently ratified by a Parliament summoned in due form.

**CONVERGENCE.** See SERIES.

**CONVERSANO,** kŏn'vēr-sā'nō. A city in southern Italy, in the Province of Bari, situated on an eminence about 20 miles southeast of the city of that name and 5 miles from the Adriatic coast (Map: Italy, M 7). It is the seat of a bishop, has a beautiful cathedral of the thirteenth century, the nunnery of San Benedetto, and a castle which belonged to the family of Acquaviva. A trade in wine, oil, flax, cotton, and almonds is carried on. It was founded by the Etruscans. Pop. (commune), 1881, 11,890; 1901, 13,685; 1911, 15,112. Consult S. Simone, *Il duomo di Conversano* (Troni, 1896).

**CONVERSAZIONE,** kŏn'vēr-sā'tsĕ-ō'nā (It., conversation). A gathering for social purposes and conversation, where amateurs and others meet for interchange of ideas on literature, art, or science.

**CONVERSE,** FLORENCE (1871- ). An American author, born in New Orleans. She graduated from Wellesley College in 1893 and was a member of the editorial staff of the *Churchman* from 1900 to 1908, when she joined the staff of the *Atlantic Monthly*. Besides her stories in the magazines, she is author of *Diana Vetricia* (1897); *The Burden of Christopher* (1900); *Long Will, A Romance* (1903); "Everyman's Library," (1908); *The House of Prayer* (1908); *A Masque of Sibyls* (1910); *The Children of Light* (1912).

**CONVERSE, FREDERICK SHEPHERD** (1871- ). An American composer, born at Newton, Mass. He was educated at Harvard University and at the Royal Academy of Music, Munich. From 1899 to 1901 he was instructor in harmony in the New England Conservatory of Music. At Harvard he was instructor in music in 1901-04 and assistant professor in 1904-07. His compositions include: "Sonata in A"; "Suite for Piano"; "Festival of Pan" (1904); "Night and Day"; "La belle dame sans merci"; "Three Love Songs"; "Two Songs for a Soprano Voice"; "Quartet in A Minor"; "Two Songs for Low Voice"; "Silent Noon"; "Laudate Dominum"; "The Pipe of Desire"; "The Sacrifice"; "Job," an oratorio; and "Ormazd," a symphonic poem.

**CONVERSION** (Lat. *conversio*, from *convertere*, to turn, from *com-*, together + *vertere*, to turn; connected with OChurch Slav. *vrŭtĭti*, Skt. *vart*, to turn, Goth. *vairpan*, AS. *weorpan*, OHG., Ger. *werden*, to become). In logic, the transposition of subject and predicate in a proposition—e.g., "No S is P" becomes by conversion "No P is S." Conversion is *simple* when no other change is made in the original proposition than the transposition of subject and predicate. It is *limited* or *accidental* (*per accidens*) when the quantity of the proposition is reduced

from universality to particularity—e.g., "All S is P" becomes by limited conversion "Some P is S." Simple conversion here would be unwarranted. Conversion is by *contraposition* when it is preceded by obversion (q.v.). The proposition obtained by conversion is called the converse of the original proposition. See LOGIC.

**CONVERSION.** At common law, the unauthorized assumption by one not the owner of the dominion of the owner over goods and chattels. The act of conversion may consist either in the destruction of the property, its sale or transfer to a third person, or the use of it as owner. For example, a person converts the horse of another by wrongfully taking it into his possession or detaining it; an auctioneer or agent for B converts the furniture of A by selling it as the property of B, although he may believe that it is B's property; a manufacturer converts A's cotton or wool when he makes it into cloth, even though in good faith he thinks the cotton or wool is his own; a person who wrongfully draws out a gallon of liquor from a cask and fills up the cask with water converts the entire quantity. In each of these cases the converter wrongfully assumes the dominion over the property and exercises it to the exclusion of the owner. The mere loss of property by a carrier, or its deterioration because of careless storage by a warehouseman, is not conversion, as neither carrier nor warehouseman in such case exercises an act of ownership over it.

The common-law action by the owner against the converter was that of *trover*, so called from the French *trouver*, to find, because the declaration contained an averment that the defendant had found the property and had thereafter converted it to his own use. This averment, being in most cases fictitious, is no longer employed, and the action is now spoken of as one of conversion rather than of trover.

The amount of damages recoverable in an action of this kind is generally the value of the plaintiff's interest in the property at the time of the conversion. Where the conversion was willful the owner may usually recover the enhanced value due to the repair or improvement of the property by the converter, and he may in any case, whether the conversion was innocent or willful, usually retake the property in its improved form, in lieu of suing for damages. Whether the defendant has the right to reduce damages by tendering the property to the plaintiff is a question upon which the courts in this country are not agreed. Upon principle it would seem he has no such right. In case the property is still in possession of the converter, the owner has the option of reclaiming or of suing for damages. If he resorts to the latter alternative, obtains judgment, and collects it, the title to the converted property vests in the defendant. But neither in England nor in the United States does title vest in the defendant without the plaintiff's assent, unless the judgment is satisfied. See TORT; TROVER; RECAPTION; DAMAGES, and consult the authorities there referred to.

*Conversion of property* in equity is quite a different thing from the common-law tort, which we have been considering. In equity, real property is treated as converted into personality, and personal property into realty, where the owner has properly expressed his intention that such an alteration should take place. Land may be converted into the purchase money, in equity, by a contract to sell; it may be converted into per-

sonality, also, by a devise in a will to sell it and distribute the proceeds. As equitable conversion works a radical change in the legal character and the devolution of property, the intention of the owner to effect such a conversion must be clearly manifested.

The conversion of land into personality is also brought about in the administration of the estates of bankrupts or of intestates, generally under statutory provisions. The land is sold by trustees or administrators, and the proceeds applied to the payment of debts. Conversion is applied, by some authorities, to the change of partnership debts, with the consent of creditors, into the debts of one partner, or the change of a partner's debts into those of the firm. See *EQUITY*; and consult the authorities there referred to.

**CONVERTER.** A device used in transforming molten pig iron into steel by the Bessemer process (see *IRON*; *STEEL*). The converter consists of a heavy sheet-iron, pear-shaped vessel, suitably lined with acid or basic refractory material, and having numerous holes in the bottom through which a powerful air blast is driven during the process. From this vessel the resultant molten steel is poured into molds. A similar apparatus is also employed in converting copper matte into crude metal. See *COPPER*.

**CONVEX.** See *CONCAVE*.

**CONVEYANCE** (from *convey*, OF. *conveier*, *convoier*, Fr. *convoyer*, from ML. *conviare*, to accompany, from *com*, together + *via*, way; connected with Lith. *veža*, wagon, track, Skt. *vaha*, road, Goth. *wags*, OHG. *wee*, Ger. *weg*, AS. *weg*, Eng. *way*, from Lat. *vehere*, Skt. *vah*, to carry). The technical term for a transfer of real property, the word having in law retained its earlier English meaning of a transfer, or passing, of a thing from one to another. It comprehends all manner of transfers—whether by livery of seisin, judgment of law, or deed—whereby any interest in land is vested in another, but it is strictly applicable only to transfers *inter vivos*, and does not include devises of land by will, or the devolution of an estate upon the heir by descent, or to the husband and wife of their curtesy and dower, or to the state of its right by escheat or forfeiture; neither does it include involuntary transfers of property, as by bankruptcy, the creation of judgment or statutory liens, etc. It is, thus, a term of much narrower signification than *alienation*, and somewhat more restricted than *common assurance*, though it is much wider than the term *grant*, as it includes transfers of interests which do not require, or which cannot be effected by, that process. A lease for years, even though made by parol, is a conveyance, and so is a mortgage, a declaration of trust, a marriage settlement, the creation of a power affecting land, etc. The term is also applied to the transfer of title to a ship, but not to the alienation of other species of personal property. The general substitution of written for parol and ceremonial transfers of land, effected by the Statute of Frauds (29 Car. II, c. 3, 1676), has made the term *conveyance* one of common application to the instrument of transfer as well as to the transaction itself.

The difficult and technical character of the law of real property appears at its worst in the complicated processes which have from time to time been developed for transferring such property. The earlier methods of the common-law

system depended for their efficacy largely on the notoriety of the transaction, the feoffment, or livery of seisin, being a public ceremonial, and the subsequently devised processes of "levying a fine" and "suffering a recovery" being attended with the publicity of judicial proceedings. These "notorious" conveyances, as they were termed, have in modern times given place to more convenient modes of transfer, which are called "secret" conveyances. This salutary change has been brought about by the general substitution of written deeds of transfer, which take effect upon delivery, for the older and more formal methods, and the form and style of these deeds, formerly in the highest degree technical and complicated, have in recent years been greatly simplified by statute. The general prevalence of registry acts and of the practice of recording deeds in the United States does not affect the secret character of the conveyance, as such, this being complete upon the delivery of the deed, the object of the recording being only to guard against a subsequent fraudulent transfer of the same property to an innocent purchaser for value.

The earlier modes of conveyance at the common law, besides their notoriety, and in part as a consequence thereof, had the extraordinary operation of transferring a greater estate in the land than the transferor himself had. That is to say, a tenant for life or years might by feoffment convey the premises in fee simple to a stranger. It is true the fee thus conveyed was a defeasible one; but it placed the landlord—reversioner or remainderman—in the situation of a disseisee, and forced him into the disadvantageous position of a plaintiff seeking to recover his land from one who claimed it under a notorious public conveyance. This was called a "tortious," or wrongful, conveyance, and the term "tortious" was thus applied to all the earlier modes of alienation which possessed this curious power. Conveyances by deed, on the other hand, have never been attended with these consequences, have never possessed a tortious operation, and have therefore been distinguished as "innocent" conveyances. Whatever they may purport to do, they pass only such interest as the grantor can lawfully convey. All modes of conveyance are now of this character, the older conveyances and the tortious effect of them having been done away with, both in England and in the United States, by statute. A curious survival of this obsolete and discredited doctrine appears in the modern American doctrine of conveyance by estoppel (q.v.). Notwithstanding the improvements which have been effected in recent years in the substitution of secret for notorious conveyances and the simplification of the former, the conveyance of land continues to be a much more cumbrous, uncertain, and expensive operation than the transfer of personal property. Many suggestions have been made looking to the elimination of these objections and the assimilation of the two species of property in this respect, and in several of the United States and in some of the British colonies different systems for achieving these objects have been adopted and are now on trial. These will be explained under the titles *LAND TRANSFER*; *REGISTRATION OF TITLE*. See the several titles of the various modes of transfer referred to in this article, and in addition, *ALIENATION*; *CONVEYANCING*; *TITLE*; *WARRANTY*; and the authorities there referred to.

**CONVEYANCING.** The act or art of preparing the deeds or instruments used for the transfer of property from one person to another. As such writings not only form the evidence of the right of the person possessing or claiming possession of property, but do in themselves constitute the title thereto, it is of the greatest importance that the conveyancer employed to prepare them should be possessed of a competent knowledge of the law and have the skill required to frame them in such a form as clearly to express and attain the object intended. In the early stages of society there is no call for the profession of a conveyancer; property is held in right of occupancy, without any written title, and even lands are conveyed from one to another without writing, the new owner being usually put in possession in presence of witnesses called for the purpose, by some symbolical form, such as the delivery of earth and twigs.

In the early history of the Jews the symbolical mode of transferring title prevailed (Ruth iv. 7). But they subsequently developed a much more artistic system of conveyancing, making use of all the safeguards that are used in modern times, viz., writing, witnesses, subscribing, sealing, and recording the documents (Jer. xxxii. 9-12). In Rome, as elsewhere, early transfers of property, whether land or goods, were of a ceremonial character. Later, a distinction was made between property capable of transfer by a simpler process (*res nec mancipi*) and such as could be effectually transferred only by the older and more formal method (*res mancipi*). It was not until Justinian's reign that the distinction between the two classes of property was abolished and a simple form of conveyance made sufficient for both.

Strictly speaking, the term "conveyancing" has no application to the various modes by which the title to chattels is transferred. These processes have almost always been of the simplest character, and do not usually call for expert knowledge or for elaborate writings to render them safe and effective. It is to the feudal system of land tenure, and to the complexities and refinements which it introduced into the simple notion of ownership, that we owe the difficulties and dangers which attend the transfer of title to land at the present time. As the feudal system nowhere exercised a stronger and more persistent influence than in England, so there is no country in Europe in which the conveyance of lands is as complicated and precarious an undertaking as it is in that country and in most of the United States. The number and variety of estates and other interests which may exist at one and the same time in the same parcel of land, and the diversity of circumstances under which these varied interests may arise, may be transferred and extinguished, have combined to make conveyancing one of the most technical and difficult branches of the work of the legal profession. In England it has resulted in the development of a special branch of lawyers who are known as "conveyancers." In the United States the process of specialization has not gone so far as that, the business of conveyancing being still for the most part in the hands of the profession at large or latterly, in the larger cities, in those of title-guarantee companies, which generally employ a large force of specially trained lawyers for the purpose.

The process through which the conveyancer

must go may be briefly described. He has first to make a careful search of the public records and from these to prepare an abstract (q.v.) of the title to the land in question. He must then examine with the greatest care all of the documents constituting the chain of title, in order to determine their validity and sufficiency. He will then be prepared to draw up the appropriate document to effect the transfer desired—which may be a deed of trust, a marriage settlement, a grant of the lands, or a last will and testament. In England, where no system of general registration of land titles is in force, the conveyancer has recourse to the original documents of title, which are carefully preserved and transferred with the land.

The complexity, uncertainty, and expense of the old method of conveyancing have long called for radical reform. In England, in the United States, and in Canada land-transfer reform associations exist, and are vigorously pushing for legislation in this direction; something has already been achieved, but much remains to be done. Few even of professional conveyancers would deny the truth of the statement made by the Duke of Marlborough in the *Fortnightly Review*, that heretofore "in every country the theory of the land laws has depended on the fact that land was never intended to be dealt with by free commerce and barter, and its sale and exchange have at all times been surrounded with legal difficulties of every description." As property is subdivided into smaller and smaller portions, and as the number of conveyances which make up the chain of title to a piece of real estate continually increases, the difficulty and cost of establishing a clear title become more and more burdensome. So great has the task of searching and verifying titles become in New York and other large cities that land-title guarantee companies have been formed, which insure purchasers and mortgagees against flaws in titles.

In the United States the system of conveyancing generally adopted is that by deeds of grant, or bargain and sale; many States have enacted statutes simplifying the older methods, and several prescribe an exact form of deed, defining the legal effect of the specific words of conveyancing, limiting, conditioning, and so on. It follows that the laws of the States are not uniform, but the essentials of a conveyance by deed are practically the same, requiring that it be in writing, be signed and sealed by the grantors, be acknowledged before a notary or other officer authorized by the statutes, and be actually delivered. The direction which all present agitation for reform in conveyancing is taking is that pointed out by the success of the Torrens system of Australia. The main principle in that system is the registration of *titles* as distinguished from the registration of deeds. It was introduced first in South Australia about 1857 by Sir Robert Richard Torrens, was eminently successful practically, and was afterward adopted in the other Australian colonies and elsewhere. Under it the ownership passes only on the filing, in the proper registry office, of the title; thus the actual transfer and the public notice of it are simultaneous, and the records of the office cannot be impeached by flaws in the conveyance itself, nor can a purchaser be deceived by the existence of a deed not recorded and of which he could have no knowledge. The system of registration is a very simple one; a

special folio of the record is devoted to a single piece of land, and there in one place and together are recorded all transfers and transactions affecting the title of that piece of land or forming a charge on it; and, we repeat, the title to that land can shift only upon the registration itself. The government holds to the landowner under this system much the same relation that a corporation issuing certificates of registered stock holds to the purchaser thereof, i.e., the transfer of such stock certificates is made on the books of the company and takes effect only upon new entry therein. Under the Torrens system a "Master of Titles" is intrusted with the duty of seeing that the transfer is regular and is properly executed. A guarantee fund is established by the state to compensate any persons injured by errors of any kind. The great merit of this system is that, once established, it makes title certain and absolute, and obviates research in ancient conveyances. In Canada the system has been tried—though in a limited and imperfect form—in Toronto, and there is a strong agitation for its universal adoption under a compulsory law. In England a Land Transfer Reform Bill was introduced in 1875 by Lord Cairns, and passed, but in a mutilated and altogether unsatisfactory form; in 1882 a second act was passed simplifying the art of conveyancing and leading the way towards a general reform; in 1889 Lord Salisbury's government introduced a bill making the Torrens system compulsory, which was defeated only after its third reading and by a very small majority. In New York an Act was passed and went into effect in January, 1891, which provided for a reformed or block scheme of indexing conveyances to supplant the old system of consecutive registration of deeds indexed only by the names of the parties thereto. This is also a step in the direction of the Torrens system of registration. A voluntary Torrens system has been adopted in several of the States of the American Union, but the preliminary work of title registration is so great and attended with so much expense that little has yet been done to bring the system into extended use.

Jones, *Forms in Conveyancing and General Forms* (5th ed., Indianapolis, 1899); Wolstenholme, *Forms and Precedents Adopted for Use under the Conveyancing Acts* (5th ed., London, 1891); Sheppard, *The Touchstone of Common Assurances, etc.* (Amer. ed., Philadelphia, 1840-41); Greenwood, *Manual of the Practices of Conveyancing* (8th ed., London, 1891); Elphinstone, *Introduction to Conveyancing* (5th ed., ib., 1900); Hunter, *The Dominion Conveyancer* (Toronto, 1893); Brewster, *Conveyance of Estates in Fee by Deed* (Indianapolis, 1904).

**CONVEYOR.** A device for moving or transporting freight, either in bulk or in packages, for a limited distance. It is much used for grain, coal, ore, and the like, in the form of an endless belt or band passing over supporting pulleys. The edges are turned up by guiding pulleys to prevent loss of material sidewise. The belt may discharge endwise over the last pulley as it passes over it and changes direction; or the charge may be thrown off sidewise by a deflecting guide. Or, the conveyor may be an endless chain with buckets, which dump at a designated point. The belt conveyors usually run at a relatively high speed; the bucket conveyors must move more slowly, but have the

advantage that they can serve as elevators also. Conveyors for packages and small freight are usually belts or in slat form in terminals and warehouses, or convey parcels from store departments to the delivery-department vehicles. Conveyors are used in power plants for coal from bins to furnaces, and for ashes from the ash pits to the discharge carts.

**CONVICT** (Sp., Portug. *convicto*, from Lat. *convictus*, p.p. of *convincere*, to convict, from *com-*, together + *vincere*, to conquer). A person found guilty, after due trial, of a criminal offense; in general use applied only to those convicted of felony or serious crimes, not to those guilty of petty offenses. The system used by a country in dealing with convicts is termed the convict system. In Europe in the Middle Ages the punishments inflicted upon criminals were cruel and brutal. Wholesale execution and mutilation gave way to transportation to colonies in the seventeenth century. Down to the time of the Revolution convicts were transported from Great Britain to the English Colonies in America; after the Revolution transportation to Australia came into vogue and continued until near the middle of the nineteenth century. In Russia transportation to Siberia was a favorite mode of disposing of convicts until 1900, when the system, in its essentials, was abandoned. Transportation is still a part of the French penal system, although it is rarely employed. Confinement in prisons, with or without hard labor, enforced labor on public works, or, under a gradually vanishing system, on private works under lease or contract, are the prevailing modes of disposing of convicts. In some jurisdictions, as a reward for good behavior, convicts are given their liberty under parole. Consult: Drähts, *The Criminal* (New York, 1900); Whitin, *Penal Servitude* (ib., 1912); Aschaffenburg, *Crime and its Repression* (Boston, 1913). See CONVICT LABOR, CRIMINOLOGY; PENOLOGY; PRISONS.

**CONVICT LABOR.** In all penitentiaries the work of keeping the institution in good order and carrying on the domestic arrangements is done by the prisoners. In addition, repairs and improvements, such as constructing new buildings, are often made by inmates under expert direction. This would not furnish sufficient employment to keep the prisoners occupied. For the sake of the convict as well as for the pecuniary returns, it is customary to employ the prisoners in productive enterprises. In America the following general systems prevail.

In the lease system the convicts are leased to contractors for a fixed sum and period, the entire responsibility for the care and safekeeping of the convicts devolving upon the contractors. This system may reduce the cost to the State, but it tends to great abuses and should be abolished. It prevails only in some of the Southern States.

The contract system exists in two forms. In the first the labor of the convicts is furnished to contractors for a fixed sum, the contractors personally directing the employment in the institution. The raw material and machinery are furnished by the contractor, though in some cases the State furnishes the latter. In the second form, the piece-price system, the contractor furnishes the material and pays a stipulated price for the finished product. The direction of the industry is in the hands of the prison officials. The advantage of this form is that it

avoids the possibility of trouble coming from the presence in the institution of employers who are not directly responsible to the authorities.

The contract system has been in general use. It has many advantages. The industry is managed by experts who can buy and sell to better advantage than can the warden, who, presumably, is not so well posted. Moreover, the State is not subject to loss because of gluts in the market or because of official ignorance or duplicity. It necessitates no great investment in expensive machinery. It has furnished steady employment to the prisoners and has reduced appreciably the net cost of maintenance.

There are, however, serious objections to the plan. When it involves the presence of outside overseers, it may seriously interfere with prison discipline. From an educational standpoint the highly developed industry interferes with the training of the individual convict. This applies with special force to the younger prisoners. Employers have condemned the system on the ground that the cheap labor gave the contractor an unfair advantage. Labor unions have objected because they felt that it had a tendency to lower wages. The objections have weight. While the total of prison labor is but a small part of the labor of the country, the introduction of special industries may easily depress and unfairly compete with similar local industries.

For these reasons the contract system is losing ground and is giving place to the public-account system. The State furnishes the plant and materials and conducts the entire business through its officials. Any profits go to the State, and any loss is borne by it. Products are sold upon the open market, or, as in a number of States, only such articles may be made as will be utilized in other public institutions or in the various State departments. Under this system the individual prisoner may be employed as seems for his best interest. Generally speaking, this plan is probably the best yet proposed. In recent years a strong tendency has developed to employ convicts, without the intervention of a private contractor, on the highways and other public works. Experiments with the system were first made in Colorado, in 1908. Oregon, New Mexico, Arizona, and Utah now use this system. Convicts thus employed are not required to wear prison garb, and they are placed wholly on their honor, working under the direction of an unarmed foreman. The results of this system have been highly favorable. In Colorado, in 1911-12, convicts thus employed built 157 miles of road at a cost of \$298 a mile, or one-fifth the normal contract cost. Only one in 100 has tried to escape. Similar results have been attained in Oregon.

The advantages of employment upon the public highways are (1) physical improvement in the persons so employed, (2) gain in self-respect, with increased probability of reform, (3) solution of the problem of competition with free labor. Usually convicts so employed are given special inducements to good behavior, such as reduction in term and wages, which may either be paid to the dependents of the men under sentence, or may be reserved for them until their discharge. The system of wage payment to convicts has been established in several States in the United States and has also been tried in France, Germany, and England. It is gaining ground and may be expected to become practically universal, since it increases the efficiency

of convict labor and renders easier the work of reformation. Consult: *United States Industrial Commission Report on Prison Labor* (Washington, 1900); *Proceedings of National Prison Association* (Pittsburgh, 1898, 1899); Henderson, *Introduction to Study of Dependents, Delinquents, and Delinquents* (Boston, 1893); Henderson, *Outdoor Labor for Convicts* (Chicago, 1907); Whitin, *Penal Servitude* (New York, 1912). See PENOLOGY; CRIMINOLOGY.

**CONVOCAATION** (Lat. *convocatio*, from *convocare*, to call together, from *com*, together + *vocare*, to call, from *vox*, voice). An assembly of the clergy of the Church of England, analogous in many respects to Parliament, at the same time with which it usually meets. As a factor in the development of English institutions, it is of great interest, being in some shape perhaps older than Parliament, into which attempts were made to incorporate it in the reigns of Edward I and Edward II. Convocation formerly exercised the right of enacting ecclesiastical legislation and also of voting subsidies to the crown; but the former right was greatly restricted under Henry VIII and by later acts of Parliament, while the latter was abandoned in 1664, since which time the clergy have been taxed like other citizens. Certain convocations are of importance in the history of both church and state in England; in particular that of 1529, which reasserted the royal supremacy; and declared that "the Bishop of Rome has not, in Scripture, any greater jurisdiction in the kingdom of England than any other foreign bishop"; that of 1562, which confirmed the Articles of Religion; that of 1603, which enacted an important body of canons; and that of 1661, which completed the revision of the Book of Common Prayer. About the beginning of the eighteenth century a factious spirit prevailed, so that the sittings of the Lower House were distinguished by contention with the bishops. Convocation was prorogued in 1717, and not again assembled until the revival of church life in the nineteenth century caused a demand for the renewal of its sessions. By the influence of Bishops Wilberforce, of Oxford, and Philpotts, of Exeter, the Convocation of Canterbury reassembled in 1852 and that of York in 1856, since which time their meetings have been regularly held. The provinces of Canterbury and York have each a convocation of its own. The Upper House is composed of the diocesan bishops, the Lower of bishops suffragan, deans, archdeacons, and certain representatives of the lower clergy, known as proctors. Convocation is reflected with every new Parliament, and now commonly meets three times a year. While Convocation has at present no legislative functions, its discussions are of great interest to members of the Church of England. A "House of Laymen" has recently been organized, which, while not constitutionally forming a part of convocations, discusses similar topics on parallel lines. In 1905 was formed the Representative Church Council, composed of joint sessions of both convocations, together with the House of Laymen. Consult: Trevor, *The Convocations of the Two Provinces: Their Origin, Constitution, and Forms of Proceeding, with a Chapter on their Revival* (London, 1854); Lathbury, *A History of the Convocation of the Church of England* (ib., 1842; 2d ed., 1853); Whitehead, *Church Law* (ib., 1872).

In the University of Oxford the term "Convocation" is applied to the assembly composed of

all masters of arts, nonresident as well as resident, which finally accepts or rejects the statutes which have passed the narrower governing bodies, the Hebdomadal Council and Congregation. See OXFORD UNIVERSITY.

**CONVOLVULACEÆ** (Neo-Lat. nom. pl., from Lat. *convolvulus*, bindweed, from *convolvere*, to roll together, from *com-*, together + *volvere*, to roll). A family of dicotyledonous plants, the morning-glory family, comprising 45 genera and about 1000 species, chiefly displayed in the tropics. They are annuals or perennials, many are twining or climbing in habit, and one genus, *Cuscuta*, is a climbing parasite. (See DODDER.) In many the stems contain a milky juice, and some have tuberous roots which are of economic value as furnishing jalap, scammony, sweet potato, etc. Some are noted for their beautiful flowers, as the morning-glory. The leaves are generally alternate and without stipules. The calyx is five-parted and the corolla with a five-lobed and plaited limb which is usually valvate, sometimes convolute. The stamens are inserted within the corolla, alternating with its lobes. The ovary is free and consists of two (rarely more) carpels and bears two or more ovules. The fruit ripens into a berry, nut, or capsule.

**CONVOLVULUS** (Lat., bindweed), or BINDWEED. A genus of plants, the type of the family Convolvulaceæ. This genus contains nearly 150 species, herbaceous and shrubby, generally with a twining stem and milky juice; large and beautiful flowers. The plants of this genus are very abundant in the tropics, but comparatively rare in cold climates. Many are cultivated as ornamental plants, particularly species of *Convolvulus* and *Ipomœa*, the latter being commonly known as "morning-glory." Some species have large farinaceous roots, capable of being used as food, of which the sweet potato (q.v.), or batatas, is the most important. Two or three species are common in the eastern United States and are called "bindweed." *Convolvulus arvensis* is a troublesome weed in some sandy soils near the coast, and *Convolvulus sepium* in richer soils. The former has rose-colored fragrant flowers, the latter large white flowers. Both are ornamental; the latter is now often planted to cover posts and trellises. *Convolvulus scammonia* yields scammony, and the root of *Ipomœa pandurata* is used as a purgative in the United States. *Convolvulus scoparius*, a shrubby species, native of the Canary Isles, yields one of the kinds of wood called "rosewood," which has a strong smell of roses. *Ezogonium purga*, formerly known as *Ipomœa jalapa*, of this order yields jalap, a well-known cathartic. It abounds in Mexico. For illustration, see Plate of DICOTYLEDONS.

**CONVOY** (Fr. *convoi*, from *convoyer*, to convey). The name given to one or more ships of war appointed to protect a fleet of merchant vessels against the attacks of an enemy or pirates. If a merchant ship part company with the convoy, or neglect to obey the signals, all claims of insurance are forfeited. The name is sometimes applied to the merchant vessels so escorted. In the military service a convoy is, properly speaking, a train of wagons laden with provisions or warlike stores; the term, however, is applied also to the detachment of troops, or escort, appointed to protect such a train.

**CONVULSION** (Lat. *convulsio*, convulsion). A symptom of disease occurring in sudden at-

tacks during which the patient generally loses consciousness; the muscles of a part or of much of the body are contracted and relaxed involuntarily, in spasmodic and irregular movements; the eyes are generally open, the eyeballs turned up or to one side; the teeth are set tight together; the tongue or cheeks are frequently bitten; the breathing is at first arrested, then labored and deep; the face is generally red, and the saliva oozes from the mouth as froth. In epilepsy (q.v.) the convulsions are as just described, and the patient generally sleeps immediately after them before regaining consciousness. In hysteria (q.v.) there is less writhing and more rigidity, the patient is not entirely unconscious in most cases, the cheeks remain pale, and he regains consciousness after a period of confusion, without sinking into a sleep; the tongue is not bitten, and froth does not issue from the mouth. Uræmic convulsions are very similar to those of epilepsy. Convulsive seizures accompany many diseases. They may be due to cerebral pressure, as in brain tumors, tertiary syphilis, cerebral hemorrhage, thrombosis, or embolism (see APOPLEXY), or extradural hemorrhage and meningitis; certain nervous diseases, e.g., general paresis, epilepsy, and hysteria; certain general toxæmias as uræmia, the puerperal state, lead poisoning, acute and chronic alcoholism. Convulsions in children (spasms) are likely to arise from slighter causes than in adults. Besides the diseases mentioned above, which may occur at any age and cause convulsive seizures, the following causes are operative in infants and young children: dentition, acute inflammations of the ear, gastrointestinal irritation (overloading the stomach, worms, etc.), the onset of the acute exanthemata; birth injuries, tubercular meningitis, and rickets.

In cases of infantile convulsions the clothing should be removed and the patient immersed in a hot bath up to the neck for 10 or 15 minutes or till the limbs relax. An enema of soap-suds will always be of advantage to a child. The epileptic patient should never be grasped and held by any one, but should be protected from falling from the bed with cushions and pillows. The tongue should be protected from being bitten by being thrust back into the mouth, or by a rubber eraser inserted between the teeth. The patient should not be allowed to bury the nose and mouth in the pillows.

**CONVULSIONARIES** (Fr. *convulsionnaires*, from Lat. *convulsio*, convulsion, from *convellere*, to convulse, from *com-*, together + *vellere*, to pluck). A fanatical sect of Jansenists who sprang up in France about 1730. Their meeting place was the churchyard of Saint-Médard, in a suburb of Paris, where was the tomb of a certain Francis of Paris, who died in 1727 and was reckoned very holy by the Jansenists on account of his extravagant asceticism. At this tomb people began to gather for preaching and prayer. Miracles and cures are also alleged to have been performed, for proof of which we are referred to a work written by Carré de Montgeron, a member of the Parliament of Paris, and entitled *La vérité des miracles opérés à l'intercession de M. de Paris et autres appellans* (3 vols., Paris, 1737). "They threw themselves into the most violent contortions of body, rolled about on the ground, imitated birds, beasts, and fishes, and at last, when they had completely spent themselves, went off in a swoon." Some

of the phenomena seem to have been genuine and of a sort that would now be ascribed to hysteria. In 1733 the King issued an order for the imprisonment of these fanatics, but it was found impossible to put a complete stop to the mischief. They brought Jansenism into so much disrepute that Voltaire declared the tomb of Francis to be the grave of Jansenism. Consult P. F. Mathieu, *Histoire des miracles et des Convulsionnaires de Saint-Médard, précédée de la vie du diacre Paris, d'une notice sur Carré de Montgeron et d'un coup d'œil sur le Jansénisme* (Paris, 1864).

**CONWAY.** A river in North Wales, 30 miles long, noted for its scenic beauty. It rises in a small mountain lake and flows between Llanrwst and Trefriw into the Irish Sea. At Conway it is half a mile broad at spring tides, which rise here 21 to 24 feet. The Conway has been famous for its pearls since Roman times.

**CONWAY, or ABERCONWAY.** A seaport market town and municipal borough of Carnarvonshire, North Wales, beautifully situated on a steep slope on the left bank of the Conway, 22 miles northeast of Carnarvon (Map: Wales, C 3). It is surrounded by triangular walls, 12 feet thick, with 21 towers and battlements. The principal streets are wide and regular. Here is situated St. Mary's Church; it is also the seat of the Royal Cambrian Academy of Art. Conway Castle, one of the noblest ancient structures in Britain, stands on a precipice overlooking the river. It was built in 1284 by Edward I to check the Welsh. Its walls are 12 to 15 feet thick, with eight vast towers, four of which are each surmounted by a slender turret. Inside is a great hall, called Llewelyn's. Pop., 1891, 3400; 1901, 4681; 1911, 5242. Outside the town can be found evidences of the Roman camp, Conovium, in the ruins of baths, roads, and pillars. Consult *Historical Sketch of Conway Castle and its Environs* (Carnarvon, 1852).

**CONWAY.** A city and the county seat of Faulkner Co., Ark., 30 miles north by west of Little Rock; on the St. Louis, Iron Mountain, and Southern Railroad (Map: Arkansas, C 2). It is the seat of Hendrix College (Methodist Episcopal, South), organized in 1884. Arkansas State Normal School, and Central Baptist College for Women, opened in 1892. Conway has an extensive cotton trade, lumber, flour, and cottonseed-oil mills, cotton compress, broom factory, and excelsior works. The city was settled in 1871 and incorporated three years later. It is governed by a mayor, who is elected every two years, and a council. The electric-light plant, water works, and sewerage system are owned and operated by the municipality. Pop., 1890, 1207; 1900, 2003; 1910, 2794.

**CONWAY.** A town in Carroll Co., N. H., containing the villages of Kearsarge, North Conway, Conway, and Conway Centre, about 60 miles (direct) north-northeast of Concord, on the Saco River and on the Boston and Maine Railroad (Map: New Hampshire, N 5). The village of North Conway is famed for beautiful scenery and is a popular summer resort. Conway is the centre of an extensive granite industry and has a ribbon-peg factory, spool mill, box factory, and lumber and canning interests. The water works are municipally owned. Pop., 1890, 2331; 1900, 3154; 1910, 3413. Consult Mrs. M. E. Eastman, *East of the White Hills*.

**CONWAY, HENRY SEYMOUR** (1721-95). An

English field marshal, a second son of Francis Seymour, first Lord Conway. He was aid-de-camp to the Duke of Cumberland at the battles of Fontenoy (1745) and Culloden (1746). On March 30, 1759, he was appointed lieutenant general, and he served in 1761-63 under the Duke of Brunswick in Germany. In 1757 he was in the unsuccessful Rochfort expedition. For his attitude in Parliament in the Wilkes case he was deprived of his military command by the King, which resulted (1765) in the crown's abandoning its right to remove army officers for what they did in Parliament. He persistently opposed the war with America, and on Feb. 22, 1782, in an address to Parliament, urged the advisability of discontinuing aggressive warfare against the American Colonies. Shortly after the resignation of Lord North, he became commander in chief of the army (March 27, 1782).

**CONWAY, HUGH.** The literary pseudonym of Frederick John Fergus, part of which may have been first suggested to him by his student life on the school frigate *Conway*.

**CONWAY, MONCURE DANIEL** (1832-1907). An American clergyman, historian, and ethical writer. He was born in Stafford Co., Va., and was graduated at Dickinson College (1849) and at the Harvard Divinity School (1854), having studied law and been a Methodist minister in the interval. He imbibed humanitarian and rationalistic ideas and returned to Virginia to preach them, but was obliged to leave the State. He then took charge of a Unitarian church in Washington, D. C., but, too outspoken against slavery, was forced to go to Cincinnati, where he preached, wrote books, and edited *The Dial*. There, and later in Boston as editor of *The Commonwealth*, he urged emancipation, and in 1863 went to England to explain the cause of the war. He was minister of the ultraliberal South Place Chapel, London, from 1863 to 1884. At the close of the last century he returned to America and resided in New York City. Among his volumes are: *The Rejected Stone* (1861); *Idols and Ideals* (1877); *Demonology and Devil Lore* (1878); *The Wandering Jew* (1881); as well as biographies of *Edmund Randolph* (1888), *Thomas Carlyle* (1881), *Emerson at Home and Abroad* (1882), and *Hawthorne* (1890). His edition of the writings of Thomas Paine (4 vols., 1894-96), his life of Paine (2 vols., 1892), his *Autobiography* (1904), *My Pilgrimage to the Wise Men of the East* (1906), and *Addresses and Reprints, 1850-1907* (Boston, 1909), are his most important works.

**CONWAY, ROBERT SEYMOUR** (1864- ). An English classical philologist, born at Stoke Newington. He received from Gonville and Caius College, Cambridge, the degrees of B.A. (1887), M.A. (1891), Litt.D. (1898). He was fellow of Gonville and Caius College in 1888-94, classical lecturer in Newnham College in 1887-93, and professor of Latin, University College, Cardiff, Wales, in 1893-1903, when he took the corresponding chair in Victoria University, Manchester. He wrote *Verner's Law in Italy* (1887) and *Vergil, an Inaugural Lecture* (1903), collaborated in the translation of *Brugmann's Comparative Grammar* (1888-95), and edited *The Italic Dialects* (1897). He became a frequent contributor to classical periodicals. Among the latter papers may be mentioned one on Vergil's fourth Eclogue, the so-called Messianic Eclogue, printed in *Vergil's Messianic Eclogue, its Mean-*

*ing, Occasion, and Source* (London, 1907). He published also *Dialecticarum Italicarum Exempla Selecta in Usum Academicum Latine Reddita* (1899) and *The Restored Pronunciation of Greek and Latin* (1909).

**CONWAY, THOMAS** (1733-c.1800). An Irish soldier of fortune. He was educated in France, entered the French army, and had attained the rank of colonel when, early in 1777, he came to America with a recommendation from Silas Deane, and offered his services to Congress. He was appointed a brigadier general in May of this year, served at Brandywine and Germantown, where he led the main attack, and later in the year was made inspector general, with the rank of major general, contrary to Washington's wishes. He was the chief conspirator in the "Conway Cabal" (q.v.), for which, however, he no doubt got more than his share of blame, and upon the discovery of his intrigue resigned from the army in 1778. Soon afterward, on July 22, he was wounded in a duel by General Cadwallader, who challenged him because of his attacks upon Washington. Conway then returned to France, reentered the army, and in 1784 was appointed Governor of Pondicherry and the French settlements in Hindustan. In 1792 he was appointed commander of the Royalist forces in the south of France, but on the success of the Revolutionists fled from the country.

**CONWAY, SIR (WILLIAM) MARTIN** (1856- ) An English art critic and mountain climber, born in Rochester, the son of William Conway, afterward canon of Westminster. He was educated at Repton and at Trinity College, Cambridge; was a university-extension lecturer in 1882-85, professor of art at University College, Liverpool, in 1885-88, and Slade professor of fine arts, Cambridge, in 1901-04. He early became an enthusiastic mountaineer, was president of the Alpine Club in 1902-04; was the first to reach an altitude of more than 23,000 feet—in the Karakoram Himalayas in 1892; and explored Spitzbergen in 1896-97 and the Bolivian Andes and Tierra del Fuego in 1898. He was knighted in 1895. His principal books on art are: *The Woodcutters of the Netherlands in the Fifteenth Century* (1884); *The Artistic Development of Reynolds and Gainsborough* (1886); *Early Flemish Artists* (1887); *Literary Remains of Dürer* (1889); *The Dawn of Art* (1891); *Early Tuscan Artists* (1902). On travel and mountaineering he wrote, besides contributions to the Badminton Library, guidebooks to the Pennine and Lepontine Alps; *Climbing and Exploration in the Karakoram-Himalayas* (1894); *The Alps from End to End* (1895); *The First Crossing of Spitzbergen* (1897); *The Bolivian Andes* (1901); *Aconcagua and Tierra del Fuego* (1902); *The Alps* (1904); *Early Voyages to Spitzbergen* (1904); *No Man's Land, a History of Spitzbergen* (1906).

**CONWAY CABAL, THE.** In American history, the name given to an intrigue, organized under the leadership of Thomas Conway (q.v.), in 1777, during the Revolutionary War, for the purpose of bringing about the supersession of Washington, as commander in chief of the American armies, by Gen. Horatio Gates. With Conway were associated such men as Gates, Charles Lee, Thomas Mifflin, and Benjamin Rush, besides several other army officers and members of the Continental Congress, who charged Washington with gross incompetence and favoritism, and in particular endeavored to prove the superiority

of Gates over Washington as a commander by contrasting the victories of the former at Saratoga with the almost contemporaneous reverses of the latter at Brandywine and Germantown. The faction gained sufficient power to secure the appointment of Gates as head and of Thomas Mifflin as a member of the Board of War and the promotion, against Washington's emphatic advice, of Conway to the rank of major general and to the position of inspector general; but they did not succeed in retaining any considerable following, and in a few months their schemes fell through, and Conway was virtually forced to leave the service (1778). A good account of the intrigue is given in vol. ii of Fiske's *The American Revolution* (Boston, 1893).

**CON'WELL, RUSSELL HERMAN** (1842- ). An American Baptist clergyman. He was born at Worthington, Mass., and was educated at Wilbraham Academy and at Yale and Albany law schools. During the Civil War he served in the Union army (1862-65) and rose to the rank of lieutenant colonel. After the war he devoted himself to the practice of law. He was correspondent in Germany of the *New York Tribune* and the *Boston Traveler* from 1868 to 1870. After his ordination to the ministry in 1879 he occupied the pulpit of Grace Baptist Church, Philadelphia (1881-91). He founded and became president of Temple College (established 1888), and the Samaritan Hospital was also established by him (1890). In 1891 he became pastor of the Baptist Temple in Philadelphia. The following are his principal works: *Why the Chinese Emigrate* (1871); *Woman and the Law* (1875); *Lives of the Presidents* (1878); *Acres of Diamonds* (1888; 1905); *Life of C. H. Spurgeon* (1893); *The New Day* (1902); *How to Live the Christ Life* (1912). Consult his *Life*, by Burr (Philadelphia, 1905).

**CONYBEARE, kún't-bâr, FREDERICK CORNWALLIS** (1856- ). An English Orientalist. He was educated at Tonbridge School and at University College, Oxford, of which he became scholar in 1875 and fellow and prelector in 1881. He was made a fellow of the British Academy in 1903, an officer of the French Academy in 1906, and honorary doctor of theology at Giessen in 1907. In his special field, Armenian language and literature, he came to be recognized as probably the foremost authority of his time; but he wrote besides on religious history. His published works include: *Ancient Armenian Texts of Aristotle* (1892); *The Key of Truth, a Manual of the Paulician Church of Armenia* (1898); *Roman Catholicism in International Politics* (1901), which, with his writings on the Dreyfus case, made him very unpopular among continental clericals and anti-Semites; *Ritule Armenorum* (1905); *Old Armenian Texts of Revelation* (1906); *Myth, Magic, and Morals: a Study of Christian Origins* (1909); *A History of New Testament Criticism* (1910); *A Catalogue of the Armenian MSS. of the British Museum* (1912); and translations of *Philostratus' Life of Apollonius of Tyana* (1912) and *Heliodorus' Æthiopia and other Greek Romances* (1913).

**CONYBEARE, kún't-bâr, JOHN** (1692-1755). An English clergyman. He was born at Pinhoe, graduated at Oxford, and was ordained priest in 1716. In 1730 he became master of Exeter College, of which he had previously been a tutor. He had attracted notice by two sermons, on *Miracles* (1722) and on the *Mysteries of the*

*Christian Religion* (1724). In 1732 he published his great work, *A Defense of Revealed Religion, a reply to Matthew Tindal's Christianity as Old as the Creation* (1730). Conybeare was appointed dean of Christ Church, Oxford, in 1732, and Bishop of Bristol in 1750.

**CONYBEARE, JOHN JOSIAS** (1779-1824). An English scholar. He was the grandson of the Bishop of Bristol and became professor of the Anglo-Saxon language (1807) and of poetry at Oxford (1812). He made some contributions to the literature of geology and chemistry, but is chiefly remembered for his devotion to Anglo-Saxon literature. His *Illustrations of Anglo-Saxon Poetry* (1826) was edited by his brother, William Daniel Conybeare.

**CONYBEARE, WILLIAM DANIEL** (1787-1857). An English geologist and clergyman, the younger brother of John Josias Conybeare. He was educated at Westminster and Oxford. While at the latter institution he devoted much time to the study of geology, and his researches in this science afterward procured for him the friendship of Buckland, De la Bèche, Elie de Beaumont, and many of the leading geologists of the time. He contributed several papers on various geological subjects to English periodicals and was admitted to membership in the Royal Society and the Geological Society of London, receiving from the latter the Wollaston medal. In 1844 he became dean of Llandaff, an office he retained until his death in 1857. His most important scientific work is *Outlines of the Geology of England and Wales* (1822), in which he cooperated with William Phillips.

**CONYBEARE, WILLIAM JOHN** (1815-57). An English clergyman and essayist, the son of Rev. William Daniel Conybeare (q.v.). He graduated at Cambridge in 1837, took orders four years later, became principal of the Liverpool Collegiate Institution in 1842, and in 1848 succeeded his father as vicar of Axminster. He wrote *Perversion; or, The Causes and Consequences of Infidelity*, a religious novel (1856); *Essays Ecclesiastical and Social* (1856); and, far more important, with Rev. J. S. Howson, *Life and Epistles of St. Paul* (1851), which is still a valuable biography.

**CONYERS, kōn'yērz**. A city and the county seat of Rockdale Co., Ga., 30 miles by rail east-southeast of Atlanta, on the Georgia Railroad (Map: Georgia, B 2). It is in a cotton-growing and granite-quarrying region and has an oil mill, cotton factory, bottling works, and a flouring mill. The water works are owned by the city. Pop., 1890, 1349; 1900, 1605; 1910, 1919.

**CONZE, kōn'tse, ALEXANDER CHRISTIAN LEOPOLD** (1831-1914). A German archaeologist. He was born at Hanover and was educated at Göttingen and Berlin. He was professor of archaeology at Halle (1863-69), Vienna (1869-77), and Berlin (1877-87). He was also director of the Berlin Museum and in 1887 received an appointment as general secretary of the German Archaeological Institute. His writings include chiefly, in addition to some general studies, the following descriptions of travel and excavations: *Reise auf den Inseln des thrasischen Meeres* (1860); *Archäologische Untersuchungen in Samothrake* (2 vols., Vienna, 1875-80); *Beiträge zur Geschichte der griechischen Plastik* (2d ed., Halle, 1869); *Die Ergebnisse der Ausgrabungen zu Pergamon* (Reports

1-3, Berlin, 1880-88); *Die Arbeiten zu Pergamon, 1886-1898* (Athens, 1899); *Die Kleinfunde aus Pergamon* (Berlin, 1902).

**COO'DIES, THE**. A name applied to the New York Federalists who favored the War of 1812. It was derived from Abimalech Coody, the pseudonym adopted, in his communications to the press, by Gulian C. Verplanck, the leader of the faction. Consult Hammond, *The History of Political Parties in the State of New York* (4th ed., Cooperstown, 1846).

**COOK, MOUNT** (called by the Maoris *Aorangi*, bright cloud of the sky). A mountain in the Southern Alps, on the South Island, New Zealand (Map: New Zealand, S. 1., C 4). It has an altitude of 12,349 feet and is regarded as the highest point of Australasia. Its top is covered with perpetual snow. The first ascent was made in 1882. Since then the mountain has been repeatedly ascended and explored.

**COOK, ALBERT STANBUBROUGH** (1853- ). An American scholar, born at Montville, N. J. He graduated in 1872 at Rutgers College, studied at the universities of Göttingen and Leipzig, and in 1879-81 was associate professor of English at Johns Hopkins University. While professor of English (1882-89) in the University of California, he influenced the instruction in English in the entire State. In 1889 he was appointed professor of English language and literature in Yale University. He became an editor of the *Journal of Germanic Philology*, and published a valuable translation of Sievers's *Old English Grammar* (Boston, 1885). His publications further include: *The Phonological Investigation of Old English* (1888); *The Bible and English Prose Style* (1892); *The Art of Poetry* (1892); *First Book in Old English* (1894; 3d ed., 1903); *The Artistic Ordering of Life* (1898); *Biblical Quotations in Old English Prose Writers* (1904, 1913); *Higher Study of English* (1906); *Concordance to Beowulf* (1910).

**COOK, CHARLES** (1787-1858). An English Wesleyan clergyman, born in London. He was appointed in 1818 to the French mission of the Methodist church in Normandy and established Methodism in France. He engaged in a controversy with César Malan on predestination, which led to his work *L'Amour de Dieu pour tous les hommes*. Consult *Life of Charles Cook* (Paris, 1862), by his son.

**COOK, CLARENCE CHATHAM** (1828-1900). An American art critic and author, born in Dorchester, Mass. He graduated at Harvard in 1849, studied architecture, and spent several years in teaching. He was a contributor of articles on American art to the *New York Tribune*, from 1863 until 1869, when he was appointed Paris correspondent for the same paper and took up his residence abroad. He remained in Paris until the outbreak of the Franco-Prussian War, when he returned to New York and resumed his former relations with the *Tribune*. Cook was one of the earliest American art critics and on that subject, as well as archaeology, was an authority in his day. Besides his chief work, *The House Beautiful* (1878), he wrote *Central Park* (1869) and edited a translation of Lübke's *History of Art* (1878). From 1884 he edited *The Studio* for a number of years.

**COOK, EDWARD DUTTON** (1829-83). An English author and dramatic critic. He studied painting and engraving; with Leopold Lewis

wrote a melodrama, *The Dove and the Serpent*; in 1867-75 was dramatic critic of the *Pall Mall Gazette*, and from 1875 of the *World*. Of his works in fiction, the best known is *The Trials of the Tredgolds* (1864).

**COOK, SIR EDWARD TYAS** (1857- ). An English journalist and author, born in Brighton. He was educated at Winchester and at Oxford (New College), where he was president of the Union. In 1882-85 he was secretary of the London Society for Extension of University Teaching. He was assistant editor and in 1890-92 editor (succeeding W. T. Stead) of the *Pall Mall Gazette*, and, after its purchase by William Waldorf Astor, in 1893 with many members of its staff took charge of Sir G. Newnes's *Westminster Gazette*. From 1896 to 1901 he edited the *Daily News*, and from then until 1912 he was on the staff of the *Daily Chronicle*, although devoting much of his time to writing on a variety of subjects. Among his books are: *Popular Handbook to the National Gallery* (1888; 7th ed., 1912), with notes from Ruskin's works and a preface by Ruskin; *Studies in Ruskin* (1890; 2d ed., 1891), with special attention to Ruskin's career as a teacher (Cook had been one of his pupils); *Popular Handbook to the Tate Gallery* (1898); *The Rights and Wrongs of the Transvaal War* (4th ed., 1902); *Popular Handbook to Greek and Roman Antiquities in the British Museum* (1903); *Memoir of Edmund Garrett* (1909); *Life of Ruskin* (1911); *Homes and Haunts of Ruskin* (1913); and *Life of Florence Nightingale* (1913). With Alexander Wedderburn he edited (1903-11) the Library Edition of Ruskin's works, *Letters and Life*; and he was knighted (1912) upon the completion of this definitive edition.

**COOK, ELIZA** (1818-89). An English poet, born in London. Her first volume, entitled *Lays of a Wild Harp*, she published in 1835, and, after writing considerably for periodicals, particularly the *Weekly Dispatch*, she published *Melania and Other Poems* (1838). In 1840-54 she edited *Eliza Cook's Journal*, much of whose contents was republished in *Jottings from my Journal* (1860). Her unpretentious verse, including, notably, "God Speed the Plough," "The Old Armchair," and "The Star of Glengarry," has been very popular among a wide circle of readers in both England and America. A complete edition of her poetical works appeared in London in 1870 and in New York in 1882.

**COOK, FRANCIS AUGUSTUS** (1843-1916). An American naval officer. He was born in Northampton, Mass., and in 1863 graduated at the United States Naval Academy. He then served for two years as an ensign in the western Gulf blockading squadron, attained the rank of commander in 1880, was in charge of the department of seamanship at Annapolis until 1883, and was inspector of ordnance at the Boston Navy Yard from 1889 to 1893. He was subsequently assistant to Rear Admiral Ramsay, chief of the Bureau of Navigation in Washington, and in 1896, with the rank of captain, took command of the cruiser *Brooklyn*. At the beginning of the war with Spain (1898) he joined the "flying squadron" under Commodore Schley, and took an important part in the battle of Santiago (q.v.), pursuing the *Cristóbal Colon* until she ran ashore at Río Tarquino, when he received the surrender of her commander. At the close of the war he was relieved of sea duty at his own request and

was appointed to the United States Naval Examining Board. He was retired in 1903.

**COOK, FREDERICK ALBERT** (1865- ). An American explorer who claimed to have reached the North Pole on April 21, 1908. He was born at Callicoon Depot, N. Y., graduated at New York University in 1890, and was surgeon of the Peary Arctic expedition of 1891-92, and of the Belgian Antarctic expedition of 1897-99. Upon his return in 1909 "from the Pole"—as he said—he was received with great honors at Copenhagen, Denmark, and then, hastening to New York, he at once began making large sums of money by his writings and lectures. Doubts soon began to arise as to the veracity of his story—his companion on the journey he made in 1906 to Mount McKinley, Alaska, made an affidavit that no ascent of that mountain was made as described in Cook's narrative, and the Eskimos who were supposed to have been his companions on the dash to the Pole told the Peary party that they had spent the winter of 1907-08 at Jones Sound. This was followed by the sworn statement of a man who had been hired to prepare for Cook a set of observations for latitudes and longitudes on his journey to the Pole, to send with his other data to the University of Copenhagen for examination. In the meantime Cook disappeared from view, and the learned scientists at Copenhagen decided that his proofs were not sufficient; but the sale of his book, *My Attainment of the Pole* (1909; 3d ed., 1913), was very large. In 1913-14 he lectured in England. In addition to numerous magazine articles he is author of *Through the First Antarctic Night* (1900); *To the Top of the Continent* (1908). See *North Pole and Bradley Land*, by E. S. Balch (1913).

**COOK, GEORGE HAMMELL** (1818-89). An American geologist, born at Hanover (Morris Co.), N. J. He graduated in 1839 at the Rensselaer Polytechnic Institute (Troy, N. Y.), was a professor there in 1842-46, and in 1853 became professor of chemistry and the natural sciences at Rutgers College. His chair was changed to that of chemistry, natural history, and agriculture in 1867, analytical chemistry, geology, and agriculture in 1878, and geology and agriculture in 1880. In 1864 he was appointed State geologist of New Jersey, and in 1880 director of the New Jersey Agricultural Experiment Station (Somerville, Somerset County). He published a *Geology of New Jersey* (1868), a work that is still regarded as a standard of reference.

**COOK, CAPT. JAMES** (1728-79). A celebrated English navigator. He was the son of a farm laborer; was born at Marton, Yorkshire; was meagerly educated at the village school, and at 12 years of age was apprenticed to a small shopkeeper in the fishing village of Staithes. Disagreeing with his employer, he applied to a firm of Whitby shipowners engaged in the Newcastle, Norway, and Baltic trades, and in their service soon rose to the rank of mate. In 1755, at the outbreak of the French war, he volunteered for the royal navy. Showing ability, in 1759 he was given a master's warrant, and, in command of the *Mercury*, proceeded to the North American station. During a winter at Halifax he diligently applied himself to the study of mathematics and astronomical navigation. The charts and observations which he made of the coasts of Newfoundland and Labrador, published in 1776-78 and distinguished

for their accuracy even to the present day, introduced him to the notice of the Royal Society, and this society intrusted him with the command of an expedition to the Pacific, to observe the transit of Venus. He left Plymouth on Aug. 26, 1768, and, after touching at Madeira and Rio de Janeiro, doubled Cape Horn and reached Tahiti on April 13, 1769, where the transit was successfully observed, June 3. On the return voyage six months were spent in sailing around and charting the coast of New Zealand, which had not been visited by Europeans for more than a century. In a similar way the eastern coast of Australia was examined and named New South Wales. The entire separation of Australia from New Guinea was determined. After a two months' stay at Batavia he returned by the Cape of Good Hope, and arrived in England, June 12, 1771. The important geographical results of this successful voyage won universal recognition, and two months afterward Cook received the rank of commander and an appointment to organize a new expedition for the discovery of the imaginary *Terra Australis Incognita*. He sailed with two ships from Plymouth, July 13, 1772, and, in a three years' cruise of over 20,000 leagues, encircled the Antarctic region from New Zealand to Cape Horn. His claim that there is no other great southern continent is not admitted by contemporary explorers, though his maps in many respects are still valuable for Antarctic navigation. He returned to England, July 30, 1775. Taught a lesson by a mortality of 46 per cent in his first voyage around the world, Cook had made such excellent hygienic arrangements that only one man out of 118 died during the cruise. His detailed account of the measures and precautions adopted were read before the Royal Society, which granted him the Copley gold medal for his important services to humanity and to the maritime world. Promoted to the rank of captain, he received an appointment at Greenwich Hospital, but shortly afterward he offered to command an expedition in search of a passage round North America from the Pacific. He sailed July 12, 1776, by way of the Cape of Good Hope, and spent the following year in the South Pacific. Thence he set sail for the north in January, 1778, and, after rediscovering the Sandwich Islands, reached America, and added to geographical knowledge by making an almost continuous running survey of the coast as far as Bering Strait, where, stopped by impenetrable ice, he returned to winter at the Sandwich Islands. Here he was brutally slaughtered, Feb. 14, 1779, by the natives in a sudden attack aggravated partly by the cowardice and neglect of one of his officers and Cook's own rashness in dealing with the natives. His death occasioned widespread regret, and the King pensioned his wife and children. An obelisk erected in 1874 marks the spot where he fell. A practical and scientific seaman, a sagacious commander, kind but strict with his crew, Cook was also distinguished by indomitable perseverance and decision. An account of Cook's first voyage appeared originally as part of Hawkesworth's *Voyages* (1773); the narrative of the second was written by Cook himself, under the title of *A Voyage Towards the South Pole and Round the World, Performed in His Majesty's Ships the Resolution and Adventure, in the years 1772, 1773, 1774, and 1775* (1777); the story of Cook's third voyage, partly written

by Cook himself and partly by Capt. James King, appeared in 1784. Consult: Wharton, *Captain Cook's Journal during his First Voyage round the World* (London, 1897); Synge, *Captain Cook's Voyages round the World* (ib., 1897); Besant, *Captain Cook* (ib., 1890); Kippis, *Life of Captain James Cook* (ib., 1788); *Narrative of the Voyages round the World Performed by Captain James Cook* (2 vols., ib., 1878); Kitson, *Captain James Cook* (ib., 1907).

**COOK, JOHN** (1805-92). A Canadian clergyman and educator. He was born at Sanquhar, Dumfriesshire, Scotland, and was educated at Edinburgh University. He was ordained to the Presbyterian ministry in 1835, but came to Canada in 1836, and was appointed pastor of St. Andrew's Church, Quebec. When the Established church of Scotland was divided by the secession of those who afterward organized the Free church, the movement likewise affected Presbyterianism in Canada; but Cook remained a member of the Established church and maintained a mediating attitude, seeking to heal the breach between the two divisions. He aided in establishing Queen's University, Kingston, which was founded in protest of sectarian educational privileges, was acting principal in 1857-60, its first chancellor in 1877-80, and for many years a trustee. He was largely instrumental in founding Morvin College, Quebec, in 1862, and was its first principal. In 1861 he became an active supporter of Presbyterian union in Canada, and after this was accomplished in 1875 became the moderator of the first general assembly.

**COOK, JOSEPH** (1838-1901). An American lecturer and author, born at Ticonderoga, N. Y. He studied at Phillips (Andover) Academy and at Yale, and graduated at Harvard in 1865. He then spent three years at Andover Theological Seminary, preached in various Congregational churches, spent two more years in study in Germany, and then settled in Boston, where in 1873 he began his "Boston Monday Lectures," which became very popular and which he continued until 1880, when he set out on a two years' lecturing journey round the world. In 1883 he resumed his Monday Lectures in Boston. In 1888 he founded a religious monthly called *Our Day*. He lectured on many subjects, both in Europe and in America, and had great vogue with a part of the religious public for the reason that all of his philosophical discourses were attempts to harmonize religion and science. He published: *Biology* (1877); *Marriage* (1878; 8th ed., 1891); *Labor* (1880); *Socialism* (1880; 6th ed., 1893); *Occident* (1884); *Orient* (1886); *The Higher Levels of Arbitration* (1900); *New Defenses of the Lord's Day* (1900).

**COOK, MELVILLE THURSTON** (1869- ). An American botanist, born at Coffeen, Ill. He was educated at DePauw, Leland Stanford Junior, Chicago, and Ohio State universities. In 1894-95 he was principal of the high school at Vandalia, Ill. At DePauw he was instructor in biology in 1895-97 and professor from 1897 to 1904; for two years he headed the department of plant pathology and economic entomology at the Estacion Central Agronomica, Santiago de las Vegas, Cuba; from 1907 to 1911 he was plant pathologist of the Delaware Experiment Station at Newark, N. J., and thereafter he served as professor of plant pathology at Rutgers College and State plant pathologist. He is author of *Galls and Insects*

*Producing them* (3 vols., 1902-04) and *Diseases of Tropical Plants* (1912).

**COOK, ORATOR FULLER, JR.** (1867- ). An American botanist, born at Clyde, N. Y. He was educated at Syracuse University, where he was in charge of the biology department in 1890-91. As agent of the New York Colonization Society he made explorations and investigations in Liberia in 1891-97, and he also served as professor of natural sciences in Liberia College during this same period and as president of the institution in 1896-97. In 1898 he became custodian and assistant curator of the United States National Museum. He had charge of plant importation by the United States Department of Agriculture from 1898 to 1900, when he took up the investigation of tropical agriculture. In 1904 he became professor of botany at George Washington University. He is author of various articles and reports on Liberia and African colonization, Porto Rico, tropical agriculture, botany, zoology, and evolution.

**COOK, STANLEY ARTHUR** (1873- ). An English Orientalist, born in King's Lynn. He was educated at Gonville and Caius College, Cambridge, of which he became fellow and lecturer in Hebrew and Syriac. In 1896-1903 he was on the editorial staff of the *Encyclopædia Biblica*; in 1902 he became editor for the Palestine Exploration Fund; and he was the editorial adviser and a contributor on Old Testament and Semitic subjects to the *Encyclopædia Britannica*. He contributed to the *Jewish Quarterly*, the *Expositor*, etc., and wrote: *Glossary of Aramaic Inscriptions* (1898); *The Laws of Moses and the Code of Hammurabi* (1903); *Critical Notes on Old Testament History: Traditions of Saul and David* (1907); *Religion of Ancient Palestine* (1908); *I. Esdras* (1912).

**COOK, THEODORE ANDREA** (1867- ). An English journalist and sportsman, born in Exmouth, Devon. He was educated at Radley and at Wadham College, Oxford, making a remarkable record as a scholar and oarsman. He became assistant editor of the *St. James's Gazette* in 1898, and was its editor for the first four months of 1900. He then went on the staff of the *Daily Telegraph*, and in 1910 became editor in chief of the *Field*. Cook was one of the first Englishmen to take up *épée de combat* fencing and was captain of the English fencing team in the first international match at Paris in 1903 and at the Olympic Games of 1906. Among his many books are the following: *Old Touraine* (1892); *Tobogganing at St. Moritz* (1896); *The Story of Rouen* (1899); *A History of the English Turf* (1903); *Old Provence* (1905); *Eclipse and O'Kelly* (1907); *The Olympic Games* (1908); and *Thomas Doggett, Deceased* (1908).

**COOK, THOMAS** (1808-92). An English railway excursion and tourist pioneer, born at Melbourne, Derbyshire. His energy was at first devoted to the cause of temperance, but later to the work with which his name is now inseparably connected. Beginning in 1841 with trips between Leicester and Loughborough, on the Midland Railway, the business rapidly increased in spite of many difficulties. The tourist tickets of Thomas Cook & Son have now become known all over the world. See **COOK'S EXCURSIONS**.

**COOK, WALTER** (1846-1916). An American architect, born in New York City. He was educated at Harvard University and received his

professional training at the Royal Polytechnic School, Munich, and the Ecole des Beaux-Arts, Paris. In 1877 he returned to New York, becoming in succession a member of the firms of Babb, Cook and Willard, Babb, Cook, and Welch, and Cook and Welch. He was a member of the jury for the New York Public Library and for the University of California, became consulting architect for New York's Board of Estimate and Apportionment, and was a member of that city's Art Commission in 1905-07. At various times he was president of the New York Chapter of the American Institute of Architects, of the Institute itself, and of the Society of Beaux-Arts Architects; and he was elected a member of the National Academy of Design and made a chevalier of the Legion of Honor. The following buildings, among many, were designed wholly or in part by him: the DeVinne Press building, office buildings for the New York Life Insurance Company, a residence for Andrew Carnegie, the Choir School at the cathedral of St. John the Divine, the stadium and other buildings at the Pan American Exposition, Buffalo, and a number of branch buildings for the New York Public Library.

**COOKE, GEORGE ALBERT** (1865- ). An English clergyman, educated at Merchant Taylors' School and at Wadham College, Oxford, where he was scholar. He was lecturer in Hebrew at St. John's, chaplain of Magdalen, and, after 10 years as curate and rector, private chaplain to the Duke of Buccleuch from 1899 to 1908. He was made canon of St. Mary's, Edinburgh, in 1907 and canon of Rochester in 1908, and was chosen in 1908 Oriel professor of the interpretation of Holy Scripture at Oxford. He contributed to theological periodicals and to Hastings' *Dictionary of the Bible*, the *Encyclopædia Biblica*, etc., and published: *History and Song of Deborah* (1892), *Text-Book of North Semitic Inscription* (1903), *The Progress of Revelation* (1911), *Judges and Ruth* (1912).

**COOKE, GEORGE FREDERICK** (1756-1811). An English tragedian, born at Westminster. He made his debut on the stage in 1776 and soon became popular in England and Ireland. In 1810 he appeared in New York and other American cities, where his success was equally great. Although possessed of fine talents, Cooke ruined his career by intemperance, which also caused his death. His best work was in the characters of Shylock, Iago, and Richard III. Edmund Kean, who admired him as the greatest of actors, erected a monument to his memory in St. Paul's Churchyard, New York City. Consult Dunlap, *Memoirs of Cooke* (London, 1813).

**COOKE, GEORGE WILLIS** (1848- ). An American clergyman, editor, and author, born at Comstock, Mich. He studied at Olivet College (Mich.) and at the Meadville Theological School (Pa.) and was in 1872 ordained to the Unitarian ministry. Thereafter he held pastorates in Wisconsin, Michigan, and Indiana, and in Dedham and Lexington, Mass., and Dublin, N. H. After 1899 he devoted his time principally to lecturing (at the Concord School of Philosophy, the Boston School of Social Science, and the Rand School of Social Science in New York) and to writing. Besides contributing much to the periodical press, including editorials for *The Christian Socialist* (he became a Socialist in 1902), he is the author of: *Ralph Waldo Emerson* (1881); *George Eliot* (1883); *Poets*

and Problems: Tennyson, Ruskin, and Browning (1886); *The Guide Book to Robert Browning* (1891); *Unitarianism in America* (1902); *The Poets of Transcendentalism* (1902); bibliographies of James Russell Lowell (1906) and Ralph Waldo Emerson (1908); *Woman in the Progress of Civilization* (1912).

**COOKE, GRACE MACGOWAN** (1863– ). An American writer of stories, born at Grand Rapids, Ohio. She was married to William Cooke in 1877. In 1897–98 she was president of the Tennessee Woman's Press Club. Her writings include: *Mistress Joy*, with Annie Booth McKinney (1901); *Return: A Story of the Sea Islands*, in collaboration with her sister, Alice MacGowan (1903); *Huldah* (1904); *A Gourd Fiddle* (1904); *The Grapple* (1905); *Their First Formal Call* (1906); *Son Riley Rabbit and Little Girl* (1907); *The Power and the Glory* (1910); *The Doings of the Dollivers* (1910); *The Joy Bringer: A Tale of the Painted Desert* (1913); *The Girls of Silver Spur Ranch*, with Anne MacQueen (1913); *William and Bill*, with Caroline Wood Morrison (1914).

**COOKE, HENRY** (1788–1868). An Irish Presbyterian leader. He was born at Grillaigh, near Maghera, County Derry, May 11, 1788; studied at Glasgow and Dublin, entered the ministry in 1808, and from 1829 was pastor in Belfast, and from 1853 professor of sacred rhetoric in Assembly College there. He played a prominent part in his denomination's affairs and was especially active and successful in excluding Arians from the Irish Presbyterian church and in promoting educational movements. He was an orator of a high grade, but he left no publications other than speeches and sermons. For a half-century his life was a large portion of the religious and public history of Ireland. A statue of him was erected in Belfast in 1875. For his *Life*, consult J. L. Porter (3d ed., Belfast, 1875).

**COOKE, JAY** (1821–1905). An American banker and financier, born in Sandusky, Ohio. He was privately educated and in 1838 entered the banking house of E. W. Clarke & Co., in Philadelphia, where he developed such rare ability in banking and financial matters that he was made a junior member of the firm in 1842. In 1858 he retired from the firm, and until 1861 was engaged in financing railroad companies and negotiating their bond issues. In the latter year he established the banking house of Jay Cooke & Co., in Philadelphia. During the Civil War, as the principal financial agent of the Federal government, he performed services of great value to the nation. He negotiated the first five-twenty loan of \$513,000,000, the ten-forty loan of \$200,000,000, the seventy loan of \$830,000,000, and others, making a total of over \$2,000,000,000. He was an ardent advocate of the national banking system and was influential in securing its success at the start. The failure of his banking house in 1873, through having advanced too largely on Northern Pacific Railroad bonds, was one of the causes of the financial crisis in that year; but the principal and interest was eventually paid on all claims, and the firm continued successfully. Consult E. P. Oberholtzer, *Jay Cooke, Financier of the Civil War* (Philadelphia, 1907).

**COOKE, JOHN ESTEN** (1830–86). An American novelist. He was born at Winchester, Va., the son of a distinguished lawyer, John Rogers Cooke, and brother of Philip Pendleton Cooke

(q.v.). He studied law, but showed early a literary bent. His best work, *The Virginia Comedians* (1854), a Colonial romance uneven in merit, was yet full of a promise not destined to be realized. He entered the Confederate service on Stonewall Jackson's staff, and on the death of the latter was transferred to the staff of Gen. J. E. B. Stuart. Later he was inspector general of the horse artillery of the Army of Northern Virginia. From the close of the war until his death his pen was rarely idle. Novels dealing with military events in Virginia and biographies of the great generals under whom he had served were produced with a speed fatal to high excellence, which did not, however, prevent his work from having historical value. The most popular of his military novels is *Surry of Eagle's Nest* (1866), which is understood to be partly autobiographical. Among his many books may be named the following: *Leather Stocking and Silk* (1854); *The Youth of Jefferson* (1854); *Henry Saint John, Gentleman* (1859), a sequel to *Virginia Comedians: Wearing of the Gray* (1867) and its sequel, *Mohun, or, the Last Days of Lee and his Paladins* (1868); *Life of Stonewall Jackson* (1863, 1876); *Life of R. E. Lee* (1871); and *Virginia: A History of the People* (1883), an excellent book contributed to the "American Commonwealths Series."

**COOKE, JOSEPH BROWN** (1868– ). An American surgeon, born at Saratoga Springs, N. Y. After graduating from the College of Physicians and Surgeons, New York, he became a practicing physician and surgeon in New York City in 1890. He was visiting physician to the Northwestern Dispensary in 1892–94 and to St. Mary's Free Hospital for Children in 1892–96. In 1900 he became surgeon to the New York Maternity Hospital and in 1903 obstetrician to the New York Polyclinic Medical School and Hospital and adjunct professor of obstetrics. His publications include: *Manual of Obstetrical Technique* (1900; 6th ed., 1908); *A Nurse's Handbook of Obstetrics* (1903; 6th ed., 1913); *Textbook of Obstetrics* (1905); and a novel, *The Mystery of Carney-Croft* (1906).

**COOKE, JOSIAH PARSONS** (1827–94). An American chemist, born in Boston. He graduated at Harvard in 1844 and soon afterward was appointed to the chair of chemistry and mineralogy at Harvard College. In this capacity he stimulated the scientific study of chemistry at collegiate institutions, urging laboratory instruction, which before his time had not been introduced into the undergraduate course of American colleges. It was Cooke who introduced his pupil Theodore William Richards, at the time a graduate student of chemistry at Harvard, into the study of atomic weights—a subject to which Richards (q.v.) subsequently made a number of contributions. The joint communication, by Cooke and Richards, on the relative values of the atomic weights of hydrogen and oxygen, was published in the *Proceedings of the American Academy of Arts and Sciences* for 1887 and shortly afterward reprinted in the *American Chemical Journal* and in the *London Chemical News*. Cooke's other publications include: *Chemical Problems and Reactions* (1853); *Elements of Chemical Physics* (1860; 4th ed., 1886); *First Principles of Chemical Philosophy* (1868; rev. ed., 1882); *The New Chemistry* (1872; rev. ed., 1884);

*Michigan: A History of Governments* (1885; rev. ed., 1905); *The Credentials of Science the Warrant of Faith* (1888).

**COOKE, MORDECAI CUBITT** (1825-1912). An English botanist, born at Horning, in Norfolk. When a boy he was apprenticed in the draper's trade, afterward acted as clerk in a law office, and subsequently taught school. At the age of 35 he obtained a position in the India Museum, from which he was transferred to the Kew Botanical Gardens in 1880. In 1903 he was awarded the Victoria medal of honor by the Royal Horticultural Society, and the Linnæan gold medal by the Linnæan Society. He wrote more than 40 botanical works, dealing chiefly with fungi, and including: *Manual of Botanic Terms* (1862); *Handbook of British Fungi* (1874); *Mycographia* (6 vols., 1879); *Illustrations of British Fungi* (8 vols., 1881); *An Introduction to the Study of Fungi* (1895); *Mushrooms Edible and Poisonous* (1903); *Fungoid Pests of the Flower Gardens* (1906); *A Manual of Structural Botany* (new ed., 1907).

**COOKE, PHILIP PENDLETON** (1816-50). An American poet, elder brother of John Esten Cooke and first cousin of John Pendleton Kennedy, the novelist. He was born at Martinsburg, Va. He graduated at Princeton in 1834 and, like his more famous younger brother, studied law under his father, but preferred literary pursuits, and contributed many poems and stories to the *Southern Literary Messenger* and other magazines. He was equally devoted to field sports, which in part accounts for the fresh quality of his work, especially of his *Froissart Ballads* (1847), his only published book.

**COOKE, PHILIP ST. GEORGE** (1809-95). An American soldier, born near Leesburg, Va. He graduated at West Point and was assigned as second lieutenant of the Sixth Infantry in 1827, served for many years on the frontier, participated in the Black Hawk War of 1832, and became lieutenant of dragoons in 1833. During the Mexican War he served from October, 1846, to July, 1849, in California as lieutenant colonel of a battalion of Missouri volunteers and for a short time commanded a regiment in the city of Mexico. In 1847 he became major of the Second Dragoons. After 1849 he was reassigned to frontier duty, took part in several operations against the Indians, commanded the cavalry in the Utah expedition of 1857-58, became colonel of the Second Dragoons in 1858, and from August, 1860, to August, 1861, was in command of the Department of Utah. He was raised to the rank of brigadier general in November, 1861, and participated as a commander of a cavalry division in the Peninsular Campaign, commanded the Baton Rouge District of the Department of the Gulf from October, 1863, to May, 1864, and from May, 1864, to March, 1866, was general superintendent of the recruiting service. At the close of the war he was brevetted major general. He commanded the Department of the Platte in 1866-67, the Department of the Cumberland in 1869-70, and the Department of the Lakes from 1870 until his retirement in 1873. He published: *Scenes and Adventures in the Army, or Romance of Military Life* (1856); *The Conquest of New Mexico and California: An Historical and Personal Narrative* (1878); *New Cavalry Tactics* (1884).

**COOKE, RICHARD JOSEPH** (1853- ). An American Methodist Episcopal bishop, born in

New York. He entered the ministry in 1873 and was ordained in 1876; graduated at East Tennessee Wesleyan University in 1880 and studied in Berlin for a year; and was connected after 1889 with Grant University (Chattanooga, Tenn.), of which he became professor of New Testament exegesis in that year and vice chancellor in 1893. His greatest influence in the Methodist church was as editor of the *Methodist Advocate Journal* (1891) and as book editor of the church from 1904 to 1912, when he was chosen bishop. Among Dr. Cooke's works are: *Doctrine of the Resurrection* (1884); *Reasons for Church Creed* (1888); *Christianity and Childhood* (1891); *The Historic Episcopate* (1896); *Christ and the Critics* (1898); *The Incarnation and Recent Criticism* (1907); *The Wingless Hour* (1911); and *Freedom of Thought in Religious Teaching* (1913).

**COOKE, ROSE TERRY** (1827-92). An American poet and writer of short stories, chiefly of New England rural life, whose prominent characteristics are pathos and humor. She was born at West Hartford, Conn. After her marriage to R. H. Cooke in 1873 she lived at Winsted, Conn., till 1887, removing thence to Pittsfield, Mass., where she died in 1892. Her first published work was *Poems* (1860). A second and complete collection of her verses was made under the same title in 1888. She then turned to fiction, often defective in form, but spontaneous, fresh in its humor, and keen in its perception of New England traits and character. Her volumes, except for a single novel, *Steadfast* (1889), are collections of short stories: *Happy Dodd* (1879); *Somebody's Neighbors* (1881); *Root-Bound* (1885); *The Sphinx's Children* (1886); *Huckleberries* (1891).

**COOKE, THOMAS** (1703-56). An English writer, known as Hesiod Cooke. In 1725 he published a poem called *The Battle of the Poets*, in which he attacked Pope and the other wits and was rewarded by a place in the *Dunciad* (ii, 138). He did a large amount of miscellaneous literary work and was for a time editor of the *Craftsman*. He has a deserved place in literature as the translator of Hesiod (1728) and of Terence (1734).

**COOKE, SIR WILLIAM FOTHERGILL** (1806-79). An English electrical engineer, born at Ealing, in Middlesex. He received his education at Durham and Edinburgh, served on the Indian staff from 1826 to 1831, and then studied medicine and the physical sciences in France and in Germany. In 1837 he entered into partnership with Wheatstone, and together with him rendered services of the highest importance to electrical engineering, especially to telegraphy. In 1838 he built the first English telegraph line, between London and West Drayton. He published *The Electric Telegraph: Was It Invented by Professor Wheatstone?* (1854).

**COOKERY.** The art of preparing food for the table. In general, the preliminary processes of cleaning foods, paring vegetables, etc., are included under the term "cookery" as is also the preparation of foods by chilling or freezing. Some foods, e.g., fruits, are eaten both raw and cooked, both being wholesome. In the majority of cases, however, the effect of proper cooking is to render food more wholesome and palatable than in the raw state. The heat of cooking also sterilizes food if microorganisms, insects, or their eggs be present accidentally.

**History.** Cooking, in one form or another,

has been practiced since immemorial times, and the knowledge we possess of the ancient modes of cooking presents some interest in connection with the study of the customs and habits of the past. The Egyptians possessed wheaten flour of the finest sort. Their common bread was made of spelt, or of the centre of the lotus dried and pounded. Leeks and onions seem to have been common vegetables. Fish they salted and dried in the sun; quails, ducks, and small birds they salted and ate raw. We read of their roasting and boiling the flesh of the ox.

Fish was a common article of food with all classes of Greeks; but with the wealthier much skill and delicacy was used in cooking it, and choice and expensive varieties were sought after. Archestratus writes of "a boiled torpedo done in oil and wine, and fragrant herbs, and some thin grated cheese" (*au gratin*). Fish, stuffed with forcemeat and fried, boiled in pickle, baked in fig leaves soaked in oil, cooked in hot ashes, etc., are among the recipes that we find recorded. The Greeks boiled and roasted the flesh of sheep, pigs, lambs, and goats. They had poultry, small birds, and game, and sausage made of blood, partaking of the character of blood puddings (*Blutwurst*). The bread of Athens was the most celebrated in Greece; it was sometimes homemade, but chiefly bought in the market, and prepared in great variety, as pan loaves, rolls, sweet loaves, etc. The bread eaten by the poorer classes was made of barley and was sometimes flavored with oil, honey, poppy seed, etc. Athenian cheese cakes were also famous; and there were honey and sesame cakes, which, with fresh and dried fruits, as figs, almonds, olives, and nuts, seem to have been partaken of after dinner. They consumed vegetable food also in abundance and had cabbage, onions, lettuce, and so on.

In the Greek house there was no regular cook, though in the establishments of the wealthy several women were kept to attend to the kitchen. The women in general saw to the requirements of the table, and even the mistress of the house was not idle. Cooks stood in the market in Athens, ready to be hired for particular occasions. The most celebrated were those of Sicily; they were probably persons of some importance.

In the early days of Rome a gruel made of lentils, and called *puls*, was the common food of the people, and with green and other vegetables was, till later times, the usual fare of the inferior classes—meat being used but sparingly. By degrees, however, a taste for better eating crept in, and after the Asiatic conquests luxury was imported. The wealthy Romans were fond of elegant service at their tables and studied carefully the quality of the viands that were placed before them. They seem to have been as clever as the French in preparing surprises and in carrying out disguises in their dishes. The Romans prepared and cooked their food with oil to a great extent. Their meals probably consisted of two courses and a dessert, the first course being intended to excite an appetite; the second was a joint, roasted or baked. The Greeks and Romans used honey for the purposes for which we use sugar. Cane sugar probably was cultivated in China, and its manufacture understood there; but the Greeks took it for a kind of solid honey and used it only for medicinal purposes.

Of ancient British cooking not much is known; it was probably of an extremely rude description. Hares, poultry, and fish are said to have been forbidden as food. The Saxon chronicles

make some reference to cooking. The Danes and Germans appear to have paid little attention to the preparation of their eatables. The Normans were more curious in these matters; some offices among them were held in right of the kitchen. In early English cooking much use was made of the mortar. Oil and lard were used instead of butter. Many English cookbooks bear an early date, as *The Forme of Cury*, by Pegge (1780), and others date as follows: Sir J. Elliott's book (1539); Abraham Veale's (1575); and *The Widdowes's Treasure* (1625).

From the writings of early explorers a good deal is known of the cookery of the American Indians. They roasted food, baked it in earth ovens, and boiled it, as did most primitive peoples. We owe to them one of our common foods, Indian corn or maize, and some of our corn dishes, e.g., succotash (corn and beans cooked together), are of Indian origin.

The cooking of France was probably of an imperfect and rude kind until the introduction of Italian tastes by the princesses of the house of the Medici. The great difference between French and English or American cooking consists in the fact that the French cook their meat much longer, knowing that this renders it more tender. They are thereby enabled to multiply dishes by altering or annihilating the original taste of the meat and making it a vehicle for foreign flavors. The variety, daintiness, and grace of form which dishes thus acquire are very admirable. In the point of economy, the French are commonly said to surpass the Anglo-Saxon. Great attention is given by the French to the economical use of materials, to seasoning, and to careful cookery. Bread and pastry are less often made at home in France than in the United States. Jewish cookery is termed "Kosher," i.e., "ceremonially clean," in accordance with the requirements of the Mosaic law. The word is used of foods which meet these requirements, especially of meats from animals slaughtered in accordance with Jewish ecclesiastical law, as well as of methods of preparing food.

The art of cooking as a branch of woman's education has latterly engaged considerable attention in America, England, and other countries; and there are in New York, Boston, Philadelphia, Canada, and other places schools where young women can receive this kind of instruction. The preparation of food is an essential part of any course in home economics, a subject commonly found in the curricula of colleges and other schools for women—the colleges and similar institutions specializing commonly on the theories of nutrition, of cookery, etc., and the grade schools giving instruction quite largely in the art.

The principal cooking methods are boiling, steaming, roasting, broiling, frying, and baking. These terms and similar ones are not absolute, but are used somewhat loosely.

*Boiling* consists in cooking food in water at the boiling temperature, 212° F. or 100° C., with heat enough to insure vigorous ebullition. The water may be seasoned with salt, sugar, seasoning herbs, etc., according to the food used and the object sought.

*Steeping, infusing, and percolating* are special processes akin to boiling, usually employed in the making of such beverages as tea and coffee.

Another special form of cooking in hot water is *coddling*, in which eggs, e.g., are placed in boil-

ing hot water which is allowed to cool gradually without further application of heat.

*Steaming* consists in cooking food over boiling water or in live steam in some special device.

*Roasting*, a process more used formerly than at the present time, is employed chiefly with meats, fish, and fowl. The food is cooked in the open air in front of a fire, being suspended or placed on a spit or some similar device so that it can be rotated. Frequent basting is desirable. A similar method is *planking*, in which the meat or fish is fastened to a suitable board or plank and placed in front of a fire until cooked. Bread, particularly Indian corn bread, may be cooked in the same way. The term is now applied to cooking meat and vegetables in ovens, more properly known as "baking."

*Broiling*, or *grilling*, is a process similar in principle, in which the food—most commonly meat, fish, or fowl—is cooked on a gridiron, broiler, or other device over or under the fire. When bread or similar food is thus treated, it is termed *toasting*.

*Baking* is a general term applied to cooking in hot, relatively dry air in an inclosed space, as an oven, the process being used with meats and fish as well as with breadstuffs, vegetables, and other foods. Utensils of various sorts are used to contain the foods during baking. Meat baked in open, shallow pans resembles roasted meat in appearance, and in fact is generally termed "roast meat," since true roasting has become an uncommon practice in households.

*Frying* is of two sorts, viz., *deep frying*, in which the food is immersed in hot or boiling oil or fat, and *sautéing* (*pan frying*, *dry frying*, or *pan broiling*), in which the food is cooked in an open shallow utensil in its own fat or in a small amount of added fat, sometimes only enough to "grease the pan." Frying is a method used with meat, vegetables, batters, and other food materials.

There are also special forms of these cooking processes which are very largely determined by the kind of utensil used. For instance, *casserole* cookery, in which the foods are cooked in a covered vessel, usually earthenware. This is akin to *baking* or to *sautéing* if the food is cooked in a little fat with or without seasoning, or akin to *stewing* if water or other liquid is added. Casserole cooking is essentially the same as the process sometimes termed *braising*, in which the food, e.g., meat, is browned and then cooked in a moist heat in a closely covered utensil. The term *braising* is also applied to browning the surface of food, e.g., an omelet, by holding a red-hot iron over it.

A *double boiler*, or *bain marie*, is a common cooking device in which food is placed in a container which in turn is partly immersed in boiling water or in steam.

In so-called *fireless cookers* hot foods are placed in insulated air spaces and cooked by the retained heat alone or by this with the addition of heat supplied by hot stones or iron plates or in some similar way. The principle is similar to that employed in keeping liquids, etc., hot in vacuum jacketed bottles or similar containers. See FIRELESS COOKING.

The *chafing dish* is a common special cooking utensil. It is usually made of silver, copper, or other metal, and foods may be cooked in a pan directly over the flame, usually an alcohol lamp or in a pan over a hot-water pan

which is next to the flame. Electric chafing dishes are also common, as are many other special cooking appliances and utensils in which electricity is used as a source of heat instead of the usual fuels—wood, coal, gas, petroleum, etc.

Judging by the results of many careful laboratory experiments, the chief loss of weight in cooking meat is due to the driving off of water. When beef is pan-broiled, there appears to be no great loss of nutritive material, particularly if the material adhering to the pan is utilized for making gravy. When beef is cooked in water, 3 to 20 per cent of the total substance is extracted and found in the broth. This is not an actual loss if the broth is used for soup or in other ways. Beef used for the preparation of beef tea or broth, on an average, loses relatively little nutritive material, though much of the flavoring material is removed. The amount of fat in the broth varies directly with the amount originally present in the meat, the fatter the meat the greater the quantity removed. In cooking in water, the smaller the piece the greater the amount of material removed, and the longer the time the more material removed. Cookbooks generally state that when meat is boiled for the table it should be plunged at once into boiling water, so that the outer layer may be coagulated, and recommend that it should be placed in cold water and slowly raised to the boiling point when used for soup making. Experiments show that the amount of material removed is practically the same whichever method is followed. In general, soups and broths do not contain much of the nutritive material of the meat, though they do contain much of the flavoring material originally present.

Authorities quite generally agree that when meat is baked it should be submitted at once to a degree of heat which will sear the outside of the roast so that the juices may be retained in it, and that the subsequent cooking should be rapid rather than slow, and at a high rather than a moderate oven temperature. To insure a rare (underdone) or medium well-cooked roast, the cooking should continue 13 to 15 minutes per pound, and 13 to 15 minutes "to the oven"; and 20 minutes per pound and 20 minutes "to the oven" for a well-done roast.

Experiments have shown that meats of various kinds and cuts cooked by the ordinary methods are all very thoroughly assimilated, no marked difference being found which could be ascribed to the kind or cut, or to the method of cooking. There is a common belief, apparently borne out by experience, that for invalid cookery the meats should be cooked in such a way that they are very tender, and similarly that soft-cooked eggs are preferable to hard-cooked eggs. Breads and other foods made from flour and meals should be cooked sufficiently to remove the raw or "doughy" taste, i.e., until the starch is well gelatinized. It is a general belief, well borne out by experience, that cereal breakfast foods and similar articles are best when cooked slowly for a long time. Fried foods should not be cooked at a temperature so high that the fat undergoes decomposition, since acrolein, one of the products formed from overheated fat, is very irritating to the mucous surfaces. Very probably the presence of this substance in fried foods improperly cooked is responsible for the statement often

made that fried foods are the cause of digestion disturbances.

Vegetables are commonly fried, boiled, or baked. Potatoes should be cooked until they are tender and mealy. If boiled, the water is commonly poured off, and the potatoes allowed to stand where they will keep hot in order that they may "steam" or "dry out." Green vegetables are most commonly cooked in boiling salt water, and the process should be continued only until they are tender, as overcooking injures the flavor and color. Special directions for cooking fruits and nuts, for making breads, cake, pastries, bonbons, etc., as well as for preparing the foods enumerated above, can be found in the numerous books and journals devoted to cookery.

Every precaution should be taken to insure cleanliness in the cooking of food. This is important, not only because one wishes to avoid filth, but also because unclean methods make possible the transmission of disease.

In the United States and in other countries there is a growing effort to secure cleanliness in markets, food factories, bakeries, hotels, restaurants, and other places where food is handled, prepared, sold, and eaten. With this end in view legislation has been enacted in many places, providing for inspection and for punishment if the law is violated.

**COOK INLET.** A bay of the Pacific Ocean, indenting the south coast of Alaska, between the Alaskan and Kenai peninsulas (Map: Alaska, J 5). It is included between lat. 59° and 61° 20' N. and long. 149° and 154° W. In shape long, relatively narrow, and crooked, its length is about 200 miles and its greatest breadth 60 miles. Sudden storms, fogs, and tidal rips, due to high tides along the broken coast line, make navigation at the northern extremity somewhat dangerous, though steamers ply its waters without serious difficulty during the season. From November to May the northern part is locked in ice. It contains several islands, Augustine Island, with its volcano Mount St. Augustine, in violent eruption during 1883, being the largest. The coast scenery is grand, comprising active volcanoes (of which Mount Iliamna, 12,066 feet altitude, is the highest), snow-clad mountains, glaciers, and green hills. At its northern extremity are the Knik Arm and the Turnagain Arm, branching to the north-east and east. It was explored in 1778 by

the navigator whose name it bears, in the hope of finding a passage to the Arctic Sea. It receives the waters from a number of rivers, chief of which is the Sushitna River, coming from the north. Coal is found on its shores, along which are a number of small towns. Seldovia is the steamship port of call.

#### COOK ISLANDS, or HERVEY GROUP.

An archipelago of small islands in Polynesia, Pacific Ocean, consisting of six large and a number of small islands and reefs, extending from about lat. 19° to 22° S. and from long. 157° to 163° W. southeast of Samoa and northwest of the Austral Islands (Map: World, West. Hem., M 4). The total area is 150 square miles. Rarotonga, with an area of 26 square miles, is the largest island. The soil is generally fertile, but water is scarce. The chief products are copra, coffee, and oranges, and the trade is mostly with New Zealand, with which the group has monthly steam communication. Pop., 1906, 6708; 1911, 6964; chiefly consisting of Polynesian of the second, or Tongafiti, swarm of migration, and all converted to Christianity of evangelical type. The group was discovered by Cook in 1773-77; made a British protectorate in 1888, and annexed in June, 1901, to the Dominion of New Zealand. The islanders have a legislature of heads of families and an executive council of the higher chiefs; the acts of the legislature require the approval of the British Resident, whose residence is on Rarotonga.

**COOK'S EXCURSIONS.** A system of travel originated by Thomas Cook in 1841, by which companies of tourists are conducted by a manager or guide, who makes all the traveling arrangements and directs the disposition of the time.

**COOK'S TALE,** THE. One of the stories forming Chaucer's *Canterbury Tales*.

**COOK STRAIT.** A passage which separates North Island and South Island, New Zealand (Map: New Zealand, S. I., E 2). Its greatest width is 90 miles. It was discovered by Captain Cook on his first voyage in 1769.

**COOKTOWN.** A town and port of Banks Co., Queensland, at the mouth of the historic Endeavor River in 15° 27' 20" S. lat., 145° 17' E. long., 1050 miles northwest of Brisbane, with which and with other ports it is connected by steamship service (Map: Australasia, D 4). It is connected by rail with Laura in the gold fields, 67 miles westward. It was here that Captain Cook beached the *Endeavor* in 1770 after he had got her off a reef outside, having thrown his guns overboard to keep the ship afloat. Search has failed to recover the guns, which have evidently been covered up by the strong coral growths of the vicinity. A monument to Captain Cook was unveiled in 1889. There are fine public buildings, an admirable hospital, churches, schools, etc. It is the main port for trade with New Guinea, and the port is the outlet for a sugar country and a rich mineral country. It has pearl fisheries, coffee and rice grow near by, tin and gold are mined. Pop., 1901, 1936; 1911 (election district), 3349.

**COOLEY,** LeROY CLARK (1833-1916). An American chemist. He was born at Point Peninsula, in Jefferson Co., New York; graduated at Union College in 1858; and from 1860 to 1874 was professor of natural sciences in the New York State Normal School. In 1874 he became professor of physics and chemistry in Vassar

College. His chair was made that of physics only in 1894, and he became professor emeritus in 1907. His works include: *The New Text-Book of Physics* (1880); *The New Text-Book of Chemistry* (1881); *Laboratory Studies in Chemistry* (1894); *The Student's Manual of Physics* (1897).

**COOLEY, MORTIMER ELWYN** (1855- ). An American engineer, born at Canandaigua, N. Y. He graduated from the United States Naval Academy in 1878; in 1881 became professor of mechanical engineering and in 1904 dean of the department of engineering at the University of Michigan; was chief engineer in the United States navy during the Spanish-American War, and chief engineer officer of the Michigan Naval Brigade from 1895 to 1911. After 1900 he was known as an expert investigator and appraiser of public utilities through his work in appraising the railroads and public-service corporations of Michigan in 1900-01, 1903-05 and 1910-11, and through his municipal investigations in New York, Chicago, Boston, and other cities. In 1907 he became chairman of the Block Signal and Train Control Board of the Interstate Commerce Commission.

**COOLEY, THOMAS MCINTYRE** (1824-98). An American jurist and writer on constitutional law. He was born in Attica, N. Y., but removed to Michigan in 1843 and in 1846 was admitted to the bar. He compiled the general statutes of the State, was reporter for the Supreme Court (1858-64), and published eight volumes of reports and a digest of the Michigan decisions. He was professor in the law department of the University of Michigan and dean of the faculty in 1859. In 1861 he became professor of constitutional and administrative law in the school of political science in the university, and also dean, and later occupied the chair of American history in the academic department. From 1864 to 1885 he was a justice of the State Supreme Court, and was Chief Justice from 1868 to 1869. In 1887 he became chairman of the Interstate Commerce Commission, but resigned four years later. Judge Cooley's publications on constitutional law, which are authoritative, are: *The Constitutional Limitations which Rest upon the Legislative Power of the States of the American Union* (1868); *Story's Commentaries on the Constitution of the United States, with Additional Commentaries on the New Amendments* (1873); *Law of Taxation* (1876); *The Law of Torts* (1879); *General Principles of Constitutional Law in the United States* (1880; 3d ed., 1898).

**COOLGAR/DIE**. A mining town in Western Australia, 310 miles east-northeast of Perth, with which it is connected by rail and telegraph (Map: Western Australia, E 10). Gold, discovered here in 1891, has given rich yields since 1893. Lignite and copper are also mined. Pop., 1901, 4249; 1907, 2829.

**COOLIDGE, ARCHIBALD CARY** (1866- ). An American professor of history, born in Boston and educated at Harvard University, the University of Berlin, the Ecole des Sciences Politiques (Paris), and the University of Freiburg. He was acting secretary to the American legation at St. Petersburg in 1890-91 and secretary to the American legation at Vienna in 1893. In 1893-99 he was instructor in history at Harvard, from 1899 to 1908 assistant professor, and thereafter professor; in 1911 he also became director of the University Library.

He was a member of the Taft party to the Philippine Islands in 1905-06, Harvard lecturer at various French universities in 1906-07, and delegate to the Pan-American Scientific Congress at Santiago, Chile, in 1908-09. In 1913-14 he was American exchange professor at the University of Berlin. He is author of *The United States as a World Power* (1908; French and German translations).

**COOLIDGE, CHARLES ALLERTON** (1858- ). An American architect, born in Boston. He was educated at Harvard University and the Massachusetts Institute of Technology, and was in the office of H. H. Richardson, architect, in Boston from 1882 until he became a member of the firm of Shepley, Ruten & Coolidge in 1886. From 1892 to 1900 he had charge of the Chicago office of the firm. Among the notable buildings planned by him are the Ames Building, South Terminal Station, and the new Harvard Medical School buildings at Boston, the Chicago Public Library, Chicago Art Institute, and the Law School and Commons of Chicago University.

**COOLIDGE, MARY (ELIZABETH BURROUGHS) ROBERTS** (1860- ). An American economist, born at Kingsbury, Ind., and educated at Cornell and Leland Stanford Junior universities. She was on the staff of the *Rural New Yorker* (1880-81); taught history in the Washington (D. C.) High School (1882-84); was instructor in history and economics at Wellesley College (1886-90); and between 1896 and 1903 was assistant and associate professor of sociology at Stanford University. For four years she served as research assistant in the Carnegie Institution, and in 1909 she engaged in research for the San Francisco Relief Survey. She was married to Dane Coolidge in 1906. She revised Warner's *American Charities* (1908); and wrote *Chinese Immigration* (1909); *Why Women Are So* (1912).

**COOLIDGE, SUSAN**. The pen name of Miss Sarah Chauncey Woolsey (q.v.).

**COOLIDGE, THOMAS JEFFERSON** (1831- ). An American manufacturer and diplomat. He was born in Boston, Mass., and was educated at Harvard and in Europe. In 1892 he was sent as United States Minister to France, but was superseded by James B. Eustis in 1893. He was appointed member of the Joint High Commission to adjust disputes between the United States and Canada in 1899. He was interested in various banking, manufacturing, and transportation enterprises, as president, manager, or treasurer. Consult his autobiography (Boston, 1902).

**COOLIDGE, WILLIAM AUGUSTUS BREVOORT** (1850- ). An American writer on Switzerland. He was born near New York City and was educated at St. Paul's, Concord, N. H., Elizabeth College, Guernsey, and Exeter College, Oxford. In 1875 he became life fellow of Magdalen College, Oxford, but did not give up his citizenship in the United States. He was professor of English history at St. David's College, Lampeter, in 1880-81, and modern history tutor at Magdalen in 1881-85. His experiences as a member of the English Alpine Club, together with his knowledge of French, modern history, and jurisprudence, made him the foremost writer in English on Swiss topography, history, government, and biography. In 1908 he received the honorary degree of Ph.D. from the University of Bern. He wrote and revised several

guidebooks to Switzerland and the Alps, edited the *Alpine Journal* (1880-89), contributed articles on Switzerland to reviews and works of reference, and published *The Mountains of Cogne* (1893), *The Alps in Nature and History* (1908), and *Alpine Studies* (1912).

**COOLIE** (Beng. *kālī*, Hind. *qālī*, laborer, from Tamil *kālī*, daily hire). A name applied to an unskilled laborer in India and eastern Asia and to contract emigrant laborers sent from India and China to other countries, especially the West Indies and South Africa. In tropical countries where white labor is impossible, there arose with the abolition of slavery a need for cheap labor capable of doing the heavy tasks of plantations, factories, and shipping. For this purpose the acclimated cheap labor of the overpopulated Asiatic countries seemed especially adapted. The coolie trade began about 1834. It was accompanied by 'abuses which made it little better than a form of slavery, and Great Britain, which had been largely interested in the trade, undertook to put a stop to it in 1855. This threw it largely into the hands of the Portuguese. The coolie trade from Macao to Cuba and Peru was little better than the slave trade so far as its conditions were concerned. The traffic was regulated by the convention of 1866 between China, France, and Great Britain. The requirement by China of a return passage at the end of five years stopped the trade with the West Indies. Under the Indian Emigration Act of 1883 emigration under contract is allowed only to certain colonies, where good treatment is assured. These are the British colonies of British Guiana, Jamaica, Mauritius, Trinidad, St. Lucia, St. Kitts, St. Vincent, Grenada, Natal, and Fiji, and the French Guadeloupe and Martinique, as well as Dutch Guiana and the Danish St. Croix.

In the Transvaal, after the conclusion of the South African War, the deficiency of native labor in the Rand mines led to the enactment of an ordinance in February, 1904, providing for the importation of Chinese laborers under a system of indenture. The terms under which the importation of laborers was to be carried on were set forth in a convention between the British and Chinese governments concluded May 1, 1904. The Boer element in the Transvaal was bitterly opposed to the ordinance as tending to introduce a new factor into the already serious racial problem of South Africa. The compound system of housing the Chinese miners was not free from violence, and the many serious crimes committed by runaway coolies created a feeling of alarm in the Transvaal and in England, where the Liberal party denounced the system as one equivalent in practice to slavery. The issue was largely responsible for the Liberal triumph in the General Election of 1906, and one of the first acts of the Campbell-Bannerman ministry was an order for the stoppage of coolie importation until the establishment of responsible government in the Transvaal should enable the colony to pronounce on the system. By 1906 over 50,000 laborers had been imported, and the result has been that the treatment of these alien Asiatics has become one of the most vital questions in South African politics. (See UNION OF SOUTH AFRICA.) Consult: Jenkins, *The Coolie: His Rights and Wrongs* (London, 1871); Hope, *In Quest of Coolies* (ib., 1872).

**COOLIE LABOR.** See ORIENTAL IMMIGRATION.

**COOMAS'SIE.** See KUMASSI.

**COON OYSTER.** An oyster growing wild near shore, where it can easily be obtained by a raccoon. The name originated in the southern United States, where these oysters are often called "strap oysters," because their clustered manner of growth makes them long, narrow, and thin.

**COONS.** A popular name (contracted from raccoon) for members of the Whig party in 1838-45, when the raccoon formed the emblem of the party.

**COONTIE.** See ZAMIA.

**COOPER, Kŏp'ēr or kŭp'ēr, ANTHONY ASHLEY.** See SHAFTESBURY.

**COOPER, SIR ASTLEY PASTON** (1768-1841). A celebrated English surgeon, born in Norfolk. In 1784 he began the study of surgery in London under Mr. Cline and in 1789 was appointed demonstrator of anatomy at St. Thomas's Hospital. In 1793 he was appointed professor of anatomy at Surgeons' Hall; and in 1800, surgeon to Guy's Hospital. In 1813 he received the professorship of comparative anatomy in the College of Surgeons. An essay on the effects resulting from the destruction of the *membrana tympani* gained him, in 1802, the Copley medal of the Royal Society, of which he was elected a fellow three years afterward. In 1804-07 appeared his great work on *Hernia*. His other works include: *The Principles and Practice of Surgery* (1836-37); *On Dislocations and Fractures* (1822); *Anatomy and Diseases of the Breast* (1829-40); *Anatomy of the Thyroid Gland* (1832). He was the first to attempt the tying of the carotid artery—an attempt which, though unsuccessful in his hands, has since proved effectual in the hands of other practitioners. In 1817 he tried what was considered the boldest experiment ever attempted in surgery—the tying of the aorta—which did not prove successful. Consult his *Life and Correspondence*, 2 vols. (London, 1843).

**COOPER, COLIN CAMPBELL** (1856- ). An American landscape painter. He was born in Philadelphia and studied there at the Academy of Fine Arts and in Paris at the Julian and Delécluse academies. After a year as teacher in Drexel Institute, Philadelphia, he settled in New York. He was one of the first to give expression to the distinctive beauty of American cities, with their skyscrapers and manifold activities. A close observer, he reminds one, in his color and atmospheric effects, of the Impressionists. He also paints cathedrals and views of quaint German cities, such as Rothenberg, with feeling and charm. Among his best-known works are "Broad Street, New York" (Cincinnati Museum); "The Flatiron Building" (Dallas, Texas); "Quebec Cathedral" (Philadelphia Art Club); "Procession of Bruges" (1906, Lotos Club, New York); "View of Pittsburgh"; "Beauvais Cathedral" (1912); "The Avenue" (1913); "Cathedral of Siena" (1913).

**COOPER, EDITH EMMA.** See FIELD, MICHAEL.

**COOPER, EMMA LAMPERT.** An American painter, wife of Colin Campbell Cooper, born at Nunda, N. Y. She was educated at Wells College and studied art under Harry Thompson in Paris, Kevel in Holland, and Chase in New York. Her principal subjects are street scenes, interiors, and landscapes. Her pic-

ture in water color, "The Bread Winner," was awarded a medal at the World's Columbian Exposition, Chicago, 1893. Other works include "Through the Meadows" (1900), "Morning near Riverdale" (Wells College), water-color views of Wells and Lincoln cathedrals; "Courtyard, Verona" (1911); "The Market Stairway, Siena" (1912).

**COOPER, FREDERIC TABER** (1864- ). An American editor and writer, born in New York City and educated at Harvard and Columbia universities. He was assistant in Latin at Columbia (1891-94), associate professor of Latin and Sanskrit at New York University (1895-1902), literary editor of the *New York Commercial Advertiser* (1898-1904), and editor of *The Forum* (1907-09). His publications include: *History of the Nineteenth Century in Caricature*, with A. B. Maurice (1904); *The Craftsmanship of Writing* (1911); *Some American Story Tellers* (1911). He contributed to the first edition of the *NEW INTERNATIONAL ENCYCLOPEDIA*.

**COOPER, GEORGE HENRY** (1821-91). An American naval officer, born in Fort Diamond, New York harbor. He was appointed a midshipman in the United States navy in 1837 and in 1838-42 was attached to the *Constitution*, of the Pacific squadron. From 1847 to 1861 he was stationed successively on board the receiving ship at Norfolk, Va., at the naval station there, on board the *Susquehanna* of the East Indian squadron, again at Norfolk on board the *Roa-noke* of the Home squadron, and at the Portsmouth Navy Yard. Promoted in 1862 to be commander, he was in charge of several vessels during the Civil War, notably of the monitor *Sangamon*, which for seven weeks in 1863 was constantly employed in shelling Fort Sumter and Sullivan's Island. In 1867-69 he commanded the Norfolk Navy Yard, in 1874-78 that at Pensacola, Fla., and in 1880-82 that at Brooklyn, N. Y. He was promoted rear admiral in 1881 and until his retirement in 1884 commanded the North Atlantic squadron, with the flagship *Tennessee*, and headquarters at New York.

**COOPER, HENRY ERNEST** (1857- ). An American statesman, born at New Albany, Ind. He graduated at the Boston University Law School in 1878 and subsequently became established at Honolulu. Upon the outbreak of the Hawaiian revolution he was appointed chairman of the Committee of Safety and three days later (Jan. 17, 1893) publicly read the proclamation abolishing the monarchy. He was active in the organization of the provisional government and was subsequently appointed Minister of Foreign Affairs (1895-99), Minister of Public Instruction (1896-99), acting President of the Republic of Hawaii (Jan. 9 to March, 1898), and Attorney-General (1899-1900). He also served as Minister of the departments of the Interior and of Finance, and as first Secretary of Hawaiian Territory.

**COOPER, JACOB** (1830-1904). An American clergyman and author. He was born in Butler Co., Ohio, and was educated at Yale University, at Berlin, and at the Theological Seminary in Edinburgh. He was professor of Greek at Centre College, Ky., from 1856 to 1866; professor of Greek at Rutgers College from 1866 to 1883; and professor of ethics and metaphysics at the University of Michigan from 1883 to 1884. From 1893 until his death he was professor

of philosophy and logic at Rutgers College. His publications include: *The Eleusiman Mysteries* (1854); *The Loyalty Demanded by the Present Crisis* (1864); *Creation, a Transference of Power* (1900); *The Passage from Mind to Matter* (1901).

**COOPER, JAMES** (1810-63). An American statesman and soldier, born in Frederic Co., Md. He graduated in 1832 at Washington College (Pa.), studied law in the office of Thaddeus Stevens at Gettysburg, Pa., and, upon his admission to the bar in 1834, began practice in that place. In 1839-43 he was a Whig member of the Federal House of Representatives, in 1843-48 of the Pennsylvania Legislature, of which he was Speaker in 1847, and in 1848 was elected State Attorney-General. From 1849 to 1855 he was United States Senator. Upon the outbreak of the Civil War he organized the Maryland volunteers, and in 1861 was appointed a brigadier general in the volunteer army. He was subsequently assigned to the command of Camp Chase, Columbus, Ohio, where he was stationed until his death.

**COOPER, JAMES** (1846- ). A British theologian, born at Elgin, Scotland. After studying at the University of Aberdeen he was minister of St. Stephen's at Broughty Ferry in 1873-81 and of the East Parish of St. Nicholas at Aberdeen in 1881-96, and then became professor of church history in the University of Glasgow. The degrees of D.D., Litt.D., and D.C.L. were conferred upon him, respectively by Aberdeen, Trinity College (Dublin), and Durham. He was president of the Scottish Ecclesiological Society in 1903, 1911, and 1912, edited the Society's *Transactions*, and wrote and edited various books on ecclesiology, including *Reliques of Ancient Scottish Devotion* (1913), and a volume of sermons.

**COOPER, JAMES FENIMORE** (1789-1851). An American novelist, born at Burlington, N. J., Sept. 15, 1789. His father came of good English and Quaker stock; his mother, Elizabeth Fenimore, was a Swede and also of Quaker ancestry. He was the eleventh of 12 children and in his second year was taken by his father, William, to a large estate that he had acquired near Otsego Lake shortly after the Revolution. Here had been already laid out the site of Cooperstown. For some years the family lived in a log house, but the settlement prospered, and, determining to make it his home permanently, Cooper's father, who for many years represented the district in Congress, began in the year 1796 to build a manor house, Otsego Hall, which was for many years the finest residence in that region. That Cooper thus spent his boyhood years on the frontier of civilization, surrounded by primeval forests, and never far removed from the possibility of Indian raids, while in daily contact with the red men who came to Cooperstown for trade, was most important to his future literary development. The environment stimulated his imagination, made him responsive to the sense of mystery, and gave him materials for the most important section of his writings, the *Leatherstocking Tales*. He passed through the village school and received private instruction in the family of the Rev. Mr. Ellison, rector of St. Peter's, Albany, whose refined culture and un-American ideals had a not altogether desirable effect on the style and character of the future novelist, who was something of an aristocrat at heart. In

January, 1803, Cooper went to Yale College. Here he learned more out of doors than in the classroom. Indeed, he neglected his studies with such persistent defiance of academic restraints that he was expelled in his third year. His father resented the action of the faculty, but readers may be glad that the future novelist of the sea should have been led to choose a naval career. To fit himself for this, there being no naval academy at that time, Cooper entered the merchant service as a sailor before the mast (September, 1806), and after 16 months' experience on the sea, in London, and at Gibraltar, received a midshipman's commission (Jan. 1, 1808). He served for a time on the *Vesuvius*, then with a construction party on Lake Ontario, where he saw a new aspect of frontier life and became familiar with the details of shipbuilding. He saw also other forms of naval service before his resignation in 1811. Meantime he had been married (Jan. 1, 1811) to a daughter of John Peter DeLancey, who came of a conspicuous Tory family. The marriage was happy, but Cooper's resignation on the eve of the War of 1812 did not escape criticism, for a Tory connection seemed to imply lack of patriotism. For the next 10 years he lived chiefly in Westchester County, his wife's home, devoting himself to farming and becoming the father of six children before he conceived the idea of authorship. As it was, he began to write, less in emulation of the success of others than through conviction of their failure. He had been reading an English novel aloud, when he suddenly said to his wife, "I believe I could write a better story myself," and proceeded to try it. But *Precaution* (1820), dealing with high life in England, about which Cooper knew nothing, was naturally a failure and wholly uncharacteristic of his future work. Then, when advised to deal with more local themes, he remembered a story that John Jay had told years before about a spy, and his home in Westchester, the scene of much fighting during the Revolution, furnished a fit stage for the play of his fancy. The result was *The Spy* (1821-22), which achieved a success till then unapproached in America and determined its author to pursue his new-found career. It proved to a very self-conscious generation that it was not impossible for America to produce a novelist almost worthy of being ranked with the great author of *Waverley*. Even to-day it remains a stirring narrative that deals adequately with important events, and in Harvey Birch, the Spy, it has added to our national fiction one of its few imperishable characters.

In 1823 Cooper began what is now known as the "Leatherstocking Series" with *The Pioneers*, for he did not compose the famous five romances in their natural chronological order. Early in the next year he published *The Pilot*, thus practically for the first time joining the ocean to the domain of fiction, just as he had previously added the backwoods and as he was soon to add the prairie. He also added to Harvey Birch and Natty Bumppo his third great character, Long Tom Coffin. He now removed to New York City and shortly after had a serious illness. His next novel was *Lionel Lincoln* (1825), a story of Boston during the Revolution. This was not specially successful, but in 1826 *The Last of the Mohicans* placed him at the summit of his popularity and probably represented his highest achievement.

In 1826 he changed his name, in compliance with the wishes of his grandmother, from simple James Cooper to James Fenimore-Cooper, but soon dropped the hyphen. He could not easily get rid of the misapprehensions caused by his act in a crude society. Immediately afterward he went abroad and resided there for seven years, during which time he was the recipient in foreign capitals of many attentions from distinguished people, but felt called upon, as in *The Bravo* (1831), to proclaim vigorously the beneficent greatness of republican institutions. His pride in the better features of American government and society did not, however, prevent him from being one of the first Americans to perceive how really crude his fellow citizens were, and he told them their faults with a frankness that was not discreet. He exploited his prejudices against New England and in favor of the Episcopal church, and soon became in his native land a synonym of all that was unpopular and snobbish. His honest, if overemphatic, strictures outweighed with his comically sensitive critics such fine romances as *The Prairie* (1827), *The Red Rover* (1828—the dates of Cooper's books are often hard to determine exactly), and the less interesting, but creditable, *Water Witch* (1830). But the fault was not entirely on the side of his countrymen, for he took an injudicious part in more or less unnecessary foreign discussions of American political affairs.

On his return to America, in 1833, he at first spent his winters in New York City, but soon took up his permanent abode at Cooperstown. Here he published several volumes of travels, and still not restraining himself from criticism of his countrymen, especially in his story, *Home as Found* (1838), he was again embroiled in bitter controversy and exposed to almost incomprehensible vituperation, which was increased through the fact that in 1837 a dispute had arisen with regard to the claims of his townspeople upon a certain tract of the Cooper estate. The great author's determination to enforce his plain rights was distorted by the newspapers into a heinous crime. And, ironically enough, just at that time this proud aristocrat was being denounced in England for his obtrusive republicanism. But Cooper still plied his pen and produced his *History of the Navy of the United States* (1839), his *Pathfinder* (1840), his *Deerslayer* (1841), *The Two Admirals* (1842), and *Wing-and-Wing* (1842). For the admirable English and Mediterranean setting of the last two stories he was as much indebted to his European stay as he was to his return to the home of his boyhood for his equally admirable setting of the two novels preceding. Mention should be made here of an "antirent series" of novels, dealing with the well-known demagogic agitation against the proprietors of certain large estates in New York. These were *Satanstoe*, *The Chain-Bearer*, and *The Redskins* (1845-46). The first of them contains one of the best pictures that we have of life in Colonial New York.

Yet, while Cooper was thus composing novels which have been translated into many languages and have gained him an undying reputation abroad, especially in France, he was bringing libel suits against many of the Whig editors of his native State, among them Horace Greeley, Thurlow Weed, and James Watson Webb. He was Quixotic enough to conduct these suits him-

self, and he proved able to win verdicts which finally brought his critics to their senses, although they did little to restore his popularity. A later generation smiles wonderingly at the whole matter, but sympathizes with the pugnacious author. The last few years of Cooper's life saw the publication of enough novels to occupy an ordinary lifetime, but they added little to his reputation. He maintained his proud independence to the last, and just before his death forbade his family to give any biographer access to his papers—an injunction which has been obeyed,\* but which has not prevented the life written by Prof. T. R. Lounsbury (q.v.) in the *American Men of Letters Series* (Boston, 1885) from being an admirable piece of work. Cooper died at Cooperstown, N. Y., Sept. 14, 1861. Six months after his death a public meeting in New York, addressed by Daniel Webster and William Cullen Bryant, did something to atone for the evil treatment America had accorded one of the very greatest of her writers.

But even after the lapse of half a century it can hardly be said that Americans are prepared to do full justice to Cooper. His great romances are frequently spoken of as if they were, in the main, fit reading for boys only. His undoubted defects, such as his careless style, his exploitation of his prejudices, his stilted conversations, his inability, as a rule, to draw women who were not distressingly prim, the fact that he wrote entirely too many novels, and that not a few of his men are as wooden as his women—these grave faults have been put forward, while his greater merits have been kept in the background. For, when at his best, as in nearly all the romances named above, Cooper was a great novelist. He had the narrative faculty of carrying his readers along, however much they might grumble at this detail or that. In "Leatherstocking" he added a character to the small gallery of the world's fictitious personages—something no other American has ever done, except Mrs. Stowe—and in Harvey Birch, Long Tom Coffin, and other sailors, as well as in Uncas, Chingachgook, and other Indians, he created characters of undying power. His Indians, at whom it was once the fashion to sneer, as the creations of a romantic fancy, are now said by ethnologists to be far from overdrawn portraits. He was, as we have seen, practically the first writer to extend the domain of fiction over the sea, the primeval forest, and the prairie. If he was in a way a follower of a still greater romancer, Scott, he won the enthusiastic commendation of two great writers of fiction, Balzac and Hugo, and he has the unique credit of having written a prose epic of the planting of his native country, which is as spacious and free as the virgin woods and lakes amid which its scenes are laid. In other words, Cooper is a large genius, who ranks well with his fellow romancers. It is almost absurd to judge one of Cooper's rapidly written romances by the canons one might legitimately apply to a short story by Daudet or Maupassant. When the man is judged in the large by the effects of his best works, and when he is compared with his rivals like Simms and Bird, and with his predecessor, Brockden Brown, his full genius and the service he did American literature emerge splendidly. For carrying power his work has probably had no equal in America; with fewer crying faults he would

in all likelihood have been our greatest author.

A full bibliography of Cooper is not needed here, but to the works already named may be added: *The Wept of Wish-ton-Wish* (1829); *The Heidenmauer* (1832); *The Headsman* (1833); *Sketches of Switzerland* (1835); *The American Democrat* (1838); *The Chronicles of Cooperstown* (1838); *Homeward Bound* (1838); *Mercedes of Castile* (1840); *Wyandotté* (1843); *Ned Myers* (1843); *Afloat and Ashore* (1844); *The Crater* (1847); *Jack Tier* (1848); *Oak Openings* (1848); *The Sea-Lions* (1849); *The Ways of the Hour* (1850). Lounsbury's *Life*, already mentioned, contains a good bibliography and probably the best criticism that has yet been devoted to Cooper. Consult also: Clymer, *James Fenimore Cooper* (1901); Richardson, *American Literature*, vol. ii (New York, 1887-88); Wendell, *A Literary History of America* (ib., 1900); Brownell, *American Prose Masters* (ib., 1909)—the chapter "Cooper"; J. Erskine, *Leading American Novelists* (ib., 1910); M. E. Phillips, *James Fenimore Cooper* (ib., 1912); and essays by Mark Twain, T. W. Higginson, and Brander Matthews.

COOPER, LANE (1875- ). An American educator. He was born in New Brunswick, N. J.; graduated at Rutgers College in 1896; studied at Columbia, Yale, Berlin, Leipzig, and the Collège de France, and in 1902 became an instructor and in 1906 assistant professor of English at Cornell University. In his special field—English literature of the early nineteenth century—he published: *The Prose Poetry of Thomas De Quincey* (1902); *The Power of the Eye in Coleridge* (1910; in *Studies in honor of J. M. Hart*), and a monumental *Concordance to the Poems of Wordsworth* (1911). He also wrote: *Theories of Style* (1907), *A Manual of American Literature* (1909, in the "Tauchnitz Series," with Theodore Stanton and others); *The Function of the Leader in Scholarship* (1911).

COOPER, MYLES (1737-85). An English clergyman, scholar, and educator, second president (1763-76) of King's College (now Columbia University). He was educated at Queen's College, Oxford (M.A., 1760), was appointed a fellow of that college, and in 1762, on the recommendation of the Archbishop of Canterbury, came to America as fellow of King's College, professor of moral philosophy, and assistant to President Samuel Johnson. In 1763 he succeeded Dr. Johnson in the presidency. He strengthened the curriculum and to the academic department and divinity school already existing added a medical school, which was organized in 1768, and in 1769 conferred the first medical degrees bestowed in America. In 1771 he visited England on behalf of the college. A true Oxonian, a High-Churchman, and a Tory, he supported the cause of King George against the Colonies, and by such vehement pamphlets as *A Friendly Address to All Reasonable Americans on the Subject of our Late Political Confusion* (1775), *What Think ye of the Congress Now?* (1775), *The American Querist* (1774), made himself cordially detested. On May 10, 1775, he escaped from a mob attack upon the college and the next day took passage for England. He there received the livings of Sulhamsted-Abbotts and Cowley and afterward became senior minister of the English chapel at Edinburgh. Among those trained under him were Gouverneur Morris, Robert R. Livingston,

John Jay, and Alexander Hamilton: He was perhaps the finest classical scholar in eighteenth-century America.

**COOPER, PETER (1791-1883).** An American inventor, manufacturer, and philanthropist, born in New York City. He assisted his father in his successive occupations of hatter, brewer, and brickmaker; gained such education as his limited means allowed, and from 1808 to 1812 was apprenticed to a carriage builder. He invented a machine for shearing cloth, which was used during the War of 1812-15; then manufactured cabinet ware; was for a time a grocer, and finally established a glue and isinglass factory on Long Island, continuing the business for more than 50 years and acquiring great wealth. In 1828 he built large iron works in Baltimore, and afterward a rolling and wire mill in New York, and blast furnaces in Pennsylvania. In 1830 he designed and built the first American locomotive engine, a rude little contrivance, which he exhibited on the Baltimore and Ohio Railroad, and about 1845 made at Trenton the first rolled-iron beams for building purposes. He was among the earliest to promote the laying of the Atlantic cable and for 18 years was president of the New York, Newfoundland, and London Telegraph Company. He invented a method of propelling canal boats by an endless chain, which, while not adopted at the time, was used later on the Delaware and Raritan Canal. Mr. Cooper served in both branches of the New York Common Council and as a trustee in the Public School Society, an organization formed to advance the cause of public education. Upon the union of that body with the Board of Education he became a school commissioner. In 1876 he received the independent nomination for President. Peter Cooper engaged in many forms of mercantile life. In gratitude for his success and wishing to afford others opportunities which he himself had never enjoyed, he established (1857-59) "Cooper Union" (q.v.) in New York City. Consult Carter, "Life of Peter Cooper," in *Century Magazine* (New York, 1883-84), and Raymond, *Peter Cooper* (ib., 1901).

**COOPER, PHILIP HENRY (1844-1912).** An American naval officer, born at Camden, N. Y. After graduating from the United States Naval Academy in 1863 he served on the *Constellation* in the same year and on the *Richmond* in 1863-65, participating in the battle of Mobile Bay and the siege of Fort Morgan. He served on the *Powhatan* in 1865-67, was for two years an instructor at the Naval Academy, took part in the Tehuantepec surveying expedition (1870-71), and from 1894 to 1898 was superintendent of the Naval Academy. During the Spanish-American War he commanded the *Chicago*. He was promoted through the various grades to be rear admiral in 1902, and was squadron commander in 1903 and commander in chief of the Asiatic station in 1904. He was retired in the latter year.

**COOPER, SUSAN FENIMORE (1813-94).** An American author, born at Scarsdale, N. Y. She was the daughter of James Fenimore Cooper, the famous American novelist. Her chief publications include: *Rural Hours* (1850; 6th ed., 1854), a year's journal of country scenes; *Rhyme and Reason of Country Life* (1854), a volume of selections; *Fields Old and New* (1854); *Mount Vernon to the Children of America* (1858).

**COOPER, THEODORE (1839- )**. An American engineer, born at Cooper's Plains, N. Y., and educated at Rensselaer Polytechnic Institute. From 1861 to 1872 he was an engineer officer in the United States navy and in 1865-68 assistant professor at the Naval Academy. He was associated with James B. Eads in the construction of the St. Louis Bridge; later was superintendent of the Delaware Bridge Company's shops, and then assistant general manager and superintendent of the Keystone Bridge Company, and acted as assistant engineer in charge of the construction of the first elevated railroads in New York City. From 1879 to the time of his retirement he was a consulting engineer on many important bridges, buildings, and aqueducts. In 1903 he was a member of the board of experts on the Manhattan Bridge plans. His writings include *General Specifications for Iron and Steel Highway Bridges and Viaducts* (1885; 7th ed., rev., 1909) and *American Railroad Bridges* (1889).

**COOPER, THOMAS (1759-1840).** A British-American scientist, political economist, educator, and publicist, conspicuous for his versatility and his radicalism in politics. He was born in London, studied for a time at Oxford, and was admitted to the bar. In 1792 he spent four months in Paris and while there acted with James Watt, the famous inventor, as a delegate from the Manchester Constitutional Society to the Patriotic Societies of France. For this both he and Watt were warmly criticized at home, especially by Edmund Burke, who took them to task in a somewhat intemperate speech before Parliament. To this speech Cooper replied in a caustic pamphlet entitled *A Reply to Mr. Burke's Invective Against Mr. Cooper and Mr. Watt* (1792), the circulation of which in a cheap edition designed to reach the lower classes was prohibited by the British government. After an unsuccessful attempt, as a bleacher and calico printer, to apply a secret process learned in France for preparing chlorine from sea salt, he emigrated to America in 1795, and for a short time practiced law in Northumberland Co., Pa. He soon began to take an active part in support of the anti-Federalists in current political discussions, and for a violent attack upon President John Adams in the *Reading Advertiser* of Oct. 26, 1799, was tried under the Sedition Law (see ALIEN AND SEDITION ACTS), was convicted of libel, and, besides being fined \$400, was sentenced to six months' imprisonment. He was appointed a land commissioner for the State of Pennsylvania in 1806 and subsequently acted as president judge of a common pleas district until 1811, when he was removed because of his alleged arbitrary conduct and overbearing temper. He was professor of chemistry in Dickinson College, Pa., from 1811 to 1814, and of mineralogy and chemistry in the University of Pennsylvania from 1816 to 1819, and from 1820 to 1834 was president of South Carolina College, where he acted also as professor of chemistry and political economy and for a time of "rhetoric, criticism, and belles-lettres." From 1834 until his death he was engaged, with Dr. McCorr, in revising the statutes of South Carolina, which were published in 10 volumes (Columbia, 1836-41). Though he was strongly condemned by many for his radicalism in philosophy, religion, and politics, he undoubtedly exercised a powerful influence in the South, especially in South Carolina, and did much to inculcate in the minds of the politicians

of his State the doctrine of extreme States' rights, nullification, and free trade. In a speech which was widely circulated in 1827 he openly urged both nullification and secession upon South Carolina, and he was unquestionably responsible to a considerable degree for the nullification measures of 1832-33. Cooper was highly esteemed by Thomas Jefferson, who secured for him the appointment as first professor of natural science and law in the University of Virginia—a position he was forced to resign on account of the fierce attacks made on him by the Virginia clergy. Besides editing *The Emporium of Arts and Sciences* at Philadelphia from 1812 until 1814 and writing numerous pamphlets and articles for the press, he published: *Some Information Respecting America* (1794); *Political Essays* (1800); *An English Version of the Institutes of Justinian* (1812); *A Practical Treatise on Dyeing and Calico Printing* (1815); *Lectures on the Elements of Political Economy* (1826); and *A Treatise on the Law of Libel and the Liberty of the Press* (1830).

**COOPER, THOMAS** (1805-92). An English Chartist agitator, poet, and author. In youth he was a shoemaker, but at the age of 23, after a hard-gained education, became a schoolmaster. He was the leader of the Leicester Chartists in 1841, lectured during the riots of that year, was found guilty of conspiracy and sedition, and was sent to prison for two years. While in jail he wrote an epic poem, *The Purgatory of Suicide* (1845), and a series of stories entitled *Wise Saws and Modern Instances* (1845). Some time afterward he wrote papers on *The Condition of the People and Triumphs of Perseverance and Triumphs of Enterprise* (1856). In 1848 he was lecturing; in 1849 he edited a radical penny paper, *The Plain Speaker*, and in 1850 a free-thinking publication, *Cooper's Journal*. Near the close of 1855 he gave up skepticism and afterward lectured in support of Christianity. He published: *The Bridge of History over the Gulf of Time* (1871); *A Life of himself* (1872); several volumes of sermons and Christian evidences; *Collected Poems* (1878); and *Thoughts at Fourscore and Earlier* (1884).

**COOPER, THOMAS APTHORPE** (1776-1849). An actor who was born at Harrow, England, but came to this country in 1796 and for many years held a leading place on the American stage. He made his debut in Edinburgh and afterward played at Covent Garden, London, before coming to America, where he made his first appearance in Philadelphia, in the role of Macbeth. He quickly won great popularity. Later he went to New York and remained several years, gaining a wide reputation. In 1803-04 he was again in London and had a successful engagement at Drury Lane, in Shakespearean tragedy. A later visit to London, in 1827, met with a less flattering reception, for which he was requited, however, on his return to America; but before he retired from the stage his popularity in this country had greatly declined, as had also, apparently, his artistic talents. Among his best parts were Shylock, Richard III, Othello, Damon, and Virginus. In later life he was for a time a customhouse officer in New York, a son of President Tyler having married one of Cooper's daughters. It was at the home of this daughter in Bristol, Pa., that Cooper died. Consult: *Ireland in Matthews and Hutton, Actors and Actresses of Great Britain and the United States*, vol. ii (New York, 1886).

**COOPER, THOMAS SIDNEY** (1803-1902). An English animal painter, born in Canterbury. He was a pupil of the Royal Academy in London, and of Verboeckhoven in Brussels. He first exhibited at the Royal Academy in 1833, where he continued to send work for 69 consecutive years. He attained considerable reputation as a painter of cattle, and the skill and spirit with which he depicted them made his works very popular, but after 1860 he lost the originality that had been his distinguishing quality. Among his numerous pictures, in some of which Frederick R. Lee and Creswick painted the landscapes, are: "Ettrick Shepherds" (1842); "Cattle at Pasture" (1843); "River Scene" (1855, National Gallery); "Cow and two Sheep" (ib., 1860); "God's Acre" (1875); "Isaac's Substitute" (1880); and "Harbledown, near Canterbury" (1902). Consult his autobiography, *My Life* (1890).

**COOPER, WILLIAM RANSOM** (1868- ). A British consulting engineer. He was educated at Central Technical and King's colleges and the Royal University of Ireland. In 1895 he joined the staff of James Swinburne as an assistant consulting engineer. From 1899 to 1901 he edited *Science Abstracts*, and in 1906 he became editor of *The Electrician*. He published *Primary Batteries* (1901) and *"The Electrician" Primers* (1906); and also scientific papers, including the following: *Electric Traction on Tramsways* (1902); *Alternate Current Electrolysis* (1905); *Electricity Supply* (1908); *Dust Prevention* (1909); *Heat Tests of Electrical Machines* (1913).

**COOPERAGE** (from *coop*, AS. *cypa*, OS. *cōpa*, OHG. *chuofa*, Ger. *Kufe*, vat, from ML. *copa*, Lat. *cupa*, vat, Gk. *κύπη*, *kypē*, hole, Skt. *kūpa*, well). The art of making vessels of pieces of wood bound together by hoops. It is a very ancient art, such vessels having been in use among the Romans at the beginning of the Christian era. The upright pieces forming the sides of a barrel, or cask, or other cooper's work, are called *staves*; and, as casks are usually larger in the middle than at the top and bottom, this swelling, called the *belly* or *bulge*, is formed by skillfully shaping each stave so that it shall form part of the required double conoid, and so that, when all are built and hooped together, their edges shall coincide perfectly. For this purpose each stave is made broadest in the middle, and narrowed down in a curved line towards each end. A skillful cooper can produce this curve so accurately that no further fitting or alteration is needed when the staves are put together. The staves are made to meet at their inner edges, and by driving the hoops very hard, the inner part is compressed until the slight gaping outside is closed, and thus slight inaccuracies of fitting are remedied. There are several branches of cooperage. The *wet*, or *tight*, cooper makes vessels for holding liquids. The *dry*, or *slack*, cooper does inferior work, such as barrels for containing dry goods, where an inferior degree of accuracy is sufficient. The *white* cooper makes churns, pails, etc., which for the most part have straight sides. The best wood to employ is oak, which must be thoroughly dried before the staves are put together. Other woods employed are elm, pine, gum, beech, and bass in the order named. In warm countries the drying of the sun is sufficient, and casks are therefore mounted in summer only; but in northern countries artificial drying is commonly resorted to. The hoops are hammered down from the

narrow to the wide part of the cask, by means of a mallet striking a piece of wood or iron held against the hoop. Iron hoops are sometimes put on hot, in order that their contraction on cooling may bind the work together.

Like most other processes of manufacture, the cooper's trade has changed in modern times, with the substitution of machinery for handwork. The machinery used is commonly termed "barrel-making machinery"; but it is employed, with suitable modifications, in making casks and kegs as well as barrels. Barrel-making machinery may be divided into machines for the manufacture of staves, machines for manufacturing heads, and machines for setting up and finishing the barrel. For cutting staves a stove cutter with a knife 36 inches in length and  $6\frac{1}{2}$  inches in width with a face ground to a circle of 20 inches may be used, or a cylindrical stove saw, the latter being generally used for making slack staves from hemlock, jack pine, pitch pine, spruce, and other soft woods. It is a cylindrical sheet, having teeth upon one end. The bolts or blocks of wood, after having been steamed and cut on the equalizer so that they are of the desired length and square on the ends, are clamped in the usual manner, and the staves fall within the cylinder. They are then laid upon an endless conveyer, which carries them against two circular saws that cut them a definite length. Each piece is then placed in a pair of clamps, and moved against a rotary wheel provided with cutters, that dress the edge to the required bilge and bevel; the *bilge* is the increased width midway between the ends, which causes the enlarged diameter of the cask at the middle; the *bevel* is the angle given to the edge conforming to the radius of the cask. The surface of the stave is smoothed by passing it under revolving cutters, a recent form of machine takes off the surplus wood from riven staves without cutting across the grain, following winding or crooked pieces as they are split from the block. The heads are usually made of several flat pieces jointed and fastened with dowels, or pins of wood. The edge of each piece is pushed against the side of a rotary disk, provided with cutters that instantly straighten it; it is then pushed against bits that bore holes for the pins to be afterward inserted by hand. Several boards being pinned together, enough to make a head, the whole is first smoothed on one side and dressed to a uniform thickness; then it is clamped between two disks, and, as these disks turn, a saw trims the head into a circle with a beveled edge; if the wood is green, an oval form may be given to provide against shrinking.

The barrel has next to be "set up." A sufficient number of staves are set into a frame, their edges refitted if necessary; stout iron hoops, called "truss hoops," pushed up from below, grasp the lower ends tightly, and the whole may be lifted from the mold. One end of the barrel is formed, but the other end is open and flaring. A rope is passed about the open end and taken to a windlass, and the staves are drawn together by tightening the rope; in this stage the barrel is heated, to cause the staves to yield more easily to their required form. The barrel is now leveled by placing it upon a horizontal bed and bringing down upon it a powerful disk that presses upon its ends and forces the staves into their proper position. A machine is devised which trusses and levels the barrel at a single movement. The slack barrel stands in its truss

hoops, two on each end; those of the lower end rest on strong supports; those of the upper end are seized by hooks whose handles pass down through the platform to a common level; when all the parts are in place, powerful machinery pulls the upper trusses down, at once driving the barrel into the lower trusses, drawing together both ends, and leveling the whole. Each end of the shell, thus made, passes under a rotary cutter which forms a *croze*, or groove, to receive the head, and chamfers, or bevels, the ends of the staves. The heads are put in and the hoops set by hand. The barrel is then made to turn under a smoothing tool and rapidly finished. For the making of slack barrels, consult: Wagner, *Cooperage: A Treatise on Modern Shop Methods and Practice* (Yonkers, N. Y., 1910). For description of wooden barrels used in transportation of liquids and especially the series of tests to secure better specifications and designs, consult Newlin, "Tests of Wooden Barrels," *Bulletin of the United States Department of Agriculture*, No. 86 (Washington, 1914). Statistical Bulletins on tight and slack cooperage stock are compiled by the U. S. Census Bureau in co-operation with the finest service of the Department of Agriculture and are published annually. Other bulletins from the Forest Service dealing with cooperage are issued from time to time. See BARREL.

**COOPERAGE** (from Dutch *koper*, sort of boat, from *kopen*, Ger. *kaufen*. Goth. *kaupōn*, AS. *cýpan*, to buy, from Lat. *caupo*, innkeeper). The sale of tobacco, alcoholic liquors, or clothing to fishermen in the North Sea, or the barter of these articles for fish, nets, or other such property. As the goods for sale had escaped duty, the business was profitable, but it demoralized the fishermen. In 1882 a convention was held at The Hague, and a mission was founded for supplying the fishermen with good clothing, literature, etc., at a fair cost, and in 1887 six nations—Great Britain, Germany, Belgium, Denmark, France, and the Netherlands—signed an agreement to prohibit the sale of intoxicating liquors to fishermen at sea. Next year Great Britain embodied the terms of this convention in the North Sea Fisheries Bill. This act was repealed five years later and replaced by the North Sea Fisheries Act, 1893, which was more explicit than the former act. Consult Mather, *Nor'ard of the Dogger* (1888).

**COÖPERATION** (Lat. *cooperatio*, from *cooperari*, to cooperate, from *co-*, together + *operari*, to work, from *opus*, Skt. *apas*, work). In the widest sense of the word, all production is the result of the cooperation of nature, labor, and capital; but economists have generally restricted the term to three classes of enterprises, viz., (a) cooperative distribution; (b) cooperative production; and (c) cooperative societies for banking or loaning money. It is sometimes extended to profit sharing, by which the employee shares beyond his wages to some extent in the profits of his employer; but this is a misapplication of the term, for cooperation starts with the worker, while profit sharing starts with the employer.

**Coöperative Distribution.** This is sometimes called "consumers' cooperation," and is an effort to do away with the middleman and to have the consumers themselves organize distributive stores and reap the profit which would otherwise fall to the storekeeper. There can, of course, be no doubt that under existing condi-

tions of production the merchant who serves as an intermediary between the producer and the consumer, or between the wholesale dealer and the retail purchaser, performs an important social service for which he is entitled to a reasonable remuneration; but unfortunately the number of these intermediaries has increased beyond all measure; and, as they all must strive to subsist, there is still, in spite of great improvements in the distributive process, a vast difference between wholesale and retail prices. A French economist, Prof. Charles Gide, estimates that more than one-tenth of the population of France depends on commerce for its subsistence. In other words, every 10 persons support one intermediary. The economic waste of commercial competition indicated by these facts aroused, many years ago, the condemnation of such social reformers as François Fourier (q.v.) and Robert Owen (q.v.); but the first lasting, successful attempt to dispense with the middleman was made in 1844, by 28 poor weavers of Rochdale, near Manchester. They organized, under the name of Equitable Pioneers of Rochdale, to supply themselves with provisions, beginning with flour, butter, sugar, and oatmeal. Business was transacted at first in a small room in Toad Lane, with a capital of £28, each member having subscribed an equal share. They overcame all difficulties and outlived not only internal divisions and jealousies, but also external prejudices and opposition. The success of the store led to many imitations, a considerable number of which, however, had only a very short existence, owing in many cases to want of harmony among the members, bad management, insufficient capital, or dishonest officials. Notwithstanding all difficulties, coöperation continued to increase, and in 1884 no less than 305 societies in Great Britain made returns to the registrar, possessing a share and loan capital of £774,000, doing an annual trade of nearly £3,000,000, and making an annual profit of £225,000. It was then proposed to form a federation of societies for the purpose of undertaking the wholesale trade of the movement, thereby protecting the societies from the imposition of the wholesale traders and securing the profits of wholesale dealing. The North of England Wholesale Society began business in Manchester in 1864, and in 1871 became the English Wholesale Society. This organization has purchasing and forwarding depots not only in England and Ireland, but in New York, Hamburg, Copenhagen, Calais, and Rouen. It owns six steamships, which ply between England and the Continent. Following the same lines, the Scottish Wholesale Society was formed in 1868 and commenced business in Glasgow. Both of these organizations have prospered and grown and now supply a large portion of the goods sold by the retail societies. They not only purchase direct from the producers, but produce on their own account, or in connection with other associations. Among the industries in which they engage are the making of boots, clothing, furniture, flour, and butter. In 1912 the productive workers employed by the system numbered 51,072, while the employees engaged in the work of distribution numbered 71,019. The number of societies in 1912 was 1557, with a membership of 2,661,799; the aggregate trade transacted, £111,582,779, with profits of £12,024,481. In Germany coöperative distribution had its beginnings in the two decades 1850-70. It gained

little headway until after 1890, when it came under the influence of British experience. The German coöperative stores, originally forming a single association, were organized in 1902 in two competing central associations, the Allgemeiner Verband, controlling in 1905 260 stores and doing a business of 58,000,000 marks, and the Zentral Verband, controlling 787 stores, with a business of 188,000,000 marks. The former is essentially a middle-class, the latter a working-class organization.

In the United States isolated experiments of a similar nature were made as early as the eighteenth century. In 1847 the Workmen's Protective Union of Boston organized a successful store, which was afterward carried on under the name of the New England Protective Union. The Patrons of Husbandry, founded in 1867, for a time developed a variety of coöperation by encouraging the local "granges" to form purchasing clubs and to employ agents to buy supplies. The Sovereigns of Industry, a secret order with ritual, founded in 1874 to do for the artisan classes what the Patrons of Husbandry were doing for the farmers, founded numerous coöperative stores on lines resembling the Rochdale Pioneers. In 1877 the organization was doing a business of \$1,089,372, but by 1880 the order had collapsed. No reliable statistics of coöperative stores in the United States are available.

The foundation of a coöperative store on a small scale is a simple matter in itself. A group of consumers meet to discuss rules and regulations for the enterprise and agree to furnish the necessary capital by subscribing, say, five dollars each. As coöperative stores almost always do business on a cash basis, the original capital need not be very great. Each share of capital receives a fixed rate of interest, say, 5 per cent. The dividends may be credited as payments on additional shares up to the maximum number of shares allowed any one shareholder. In this wise the store serves also as a savings bank for the members. Usually the money subscribed as share capital need not all be paid at once; weekly payments of 10 cents are customary. Whatever profit the store makes after deduction of the interest on loans, the charge for depreciation in the value of the stock and plant, 5 per cent dividend on the capital, a reserve fund, and perhaps a bonus to employees, is divided among the purchasers according to the respective amounts of their purchases. Goods are sold at the usual prices of private stores. Outsiders may buy at the store, but only members receive shares in the gains. These shares are also usually credited as payments on the stock shares until they are paid in full. The amount of each member's purchase is recorded by means of checks distributed with every sale. The management of the business is in the hands of an executive committee, which appoints the storekeepers and oversees the purchase of goods and the finances. It is evident that the success of the society will depend largely on this committee, which must be honest and efficient.

**Coöperative Production.** An attempt to solve the more difficult problem of doing away with the employer, the "entrepreneur," by having the workers furnish their own capital. Under our present economic system the distribution of wealth among the agents of production involves a grave conflict of interests, which may lead to industrial warfare and jeopardize the welfare

of society by separating laborers and capitalists into distinct antagonistic classes; but the relation between capital and labor is most satisfactory when there is no sharp separation into classes. Productive coöperation, therefore, by uniting men in the twofold capacity of workers and capitalists, has been recommended by many social reformers as a cure for our social ills. The voluntary union of a number of workers to conduct an enterprise collectively is by no means a modern invention. Schmoller and other economic historians have shown that it is, indeed, one of the earliest forms of industrial organization. Coöperative enterprises were often undertaken by guilds, each member furnishing a share of the small capital required. But their conservatism of method led to their displacement by capitalistic industry, and it is not until the nineteenth century that we find widespread attempts to reestablish coöperative productive enterprises; but only a few of them, notably among masons and piano makers, were successful. The modern system of coöperative production dates in England from the close of the eighteenth century. The oldest-known association is the Hull Anti-Mill Society, founded in 1795 for the production of flour. The object of this undertaking was to curb the exactions of private millers rather than to improve the position of labor. Societies with the latter object were founded in considerable numbers in the decades 1830-50 under the influence of Owen, and later of the Christian Socialists. These enterprises were only moderately successful. The extension of consumers' coöperation in the latter half of the nineteenth century gave a considerable impetus to producers' coöperation, especially in organizations affiliated with the coöperative stores, but also in organizations producing for the open market. In 1910 there were of the latter in England 16 coöperative societies in textile manufactures, 20 in agricultural production, 16 in boots and leather manufactures, 10 in the metal trades, 11 in furniture and wood-working, 14 in printing, and 10 in miscellaneous industries. These 106 societies had a share capital of £688,990, and their products were valued at £1,392,237.

The first productive association in the United States of which we have any record was that of the Boston Tailors' Associative Union, which was formed in 1849, but did not last long. There were many other experiments of a like nature, the most promising of which seems to have been the stove foundry of the Iron Moulders' International Union, started in 1867 in Allegheny County, Pa. But the paid-up capital proved insufficient at a critical moment, and the enterprise failed. By far the most successful experiment in the United States is found among the coopers of Minneapolis. In 1868 a few journeymen coopers made an attempt to manage industry for themselves; they were so successful that in 1874 a strong organization known as the Coöperative Barrel Company was formed, with a membership of about 20 coopers. They bought a shop for \$3000, paying \$1000 cash. The company became exceedingly prosperous and is still in successful operation. The wages paid are equal for members and nonmembers employed; profits are distributed according to stock holdings, but all members hold equal amounts of stock.

This example has been followed by others and frequently with success. Experience seems to

show that where articles are produced to order and not for the general market, coöperative production may succeed, but that these enterprises fail when they are confronted with the difficulty of adjusting the supply to the variations of the market demands. Coöperation has made extensive progress in connection with certain agricultural processes, such as the manufacture of cheese, butter, etc. Such coöperation, however, is essentially an incident in the marketing of products and has no close relation to the above-described forms.

**Coöperative Credit and Banking Organizations.** These are founded for mutual financial aid and have been wonderfully prosperous in Germany, where they do a business of hundreds of millions of dollars. In 1849 Herr Schulze (Schulze-Delitzsch) founded a coöperative society to purchase raw material, among 13 cabinetmakers in Delitzsch, his native town. In the next year he founded the first of his loan associations (*Vorschussvereine*), which differed from the earlier banks in that the persons to whom loans could be granted must themselves be members of the association, paying regular monthly contributions. They thus themselves indirectly furnished the security for the credit afforded them. While these loan associations put the lender's interest foremost, Raiffeisen, another German, born in the Westerwald, organized a coöperative bank in 1849 which placed the borrower's interest as the keystone of his system. Both systems have spread over the country, especially Schulze-Delitzsch's banks. The plan has been copied in Belgium with the greatest success, and a few Schulze-Delitzsch banks have been founded in Russia. As a matter of fact, all these "people's banks" bear a close resemblance to our American building and loan associations (q.v.), whose special and marked development in this country makes the United States one of the pioneer countries and chief homes of this form of coöperation.

**COOPERIA**, koo-pé'ri-a. A genus of two

species of tender, bulbous plants, of the family *Amaryllidaceae*. The narrow, elongate, twisted leaves appear with the fragrant solitary flowers in summer. The flowers, which resemble those of the *Zephyranthes*, but have erect instead of versatile anthers and, unlike other members of the order, bloom at night, are 2 inches or more in diameter, usually waxy white, blushed with pink outside and green-tinged within. Those of *Cooperia pedunculata* (giant fairy flower), the most popular species, are larger, of purer color and longer duration than those of *Cooperia drummondii* (evening star), the other well-known species. The plants are of easiest culture. They do well in garden soil, and, if dug at the approach of frost and stored in dry soil, where the temperature is maintained below 50° F. but not so low as 32°, they may be kept over winter without trouble. The genus is named after Joseph Cooper, an English gardener. For illustration, see Colored Plate of *AMARYLLIDACEAE*.

**COOPER RIVER.** A river rising in Berkeley Co., S. C. It flows south and unites with the Ashley River, below the city of Charleston, in the estuary forming Charleston harbor (Map: South Carolina, E 4). It is navigable for 30 miles to the canal connecting it with the Santee River.

**COOPER'S CREEK.** An Australian river formed by the confluence of the Thomson and the Barcoo in Queensland, flowing southwest through South Australia into Lake Eyre. During the rainy season the river rises 20 feet and widens to 2 miles, while in the summer season its lower course is dry (Map: Queensland, A 10). On its banks the explorers Burke and Wills succumbed to starvation in 1861. Consult Burke and Wills, *Exploring Expedition* (Melbourne, 1861), and Wills, *Exploration* (London, 1863).

**COOPERSTOWN.** A village and the county seat of Otsego Co., N. Y., 35 miles (direct) southeast of Utica, on the Susquehanna River, at the outlet of Otsego Lake; and on a branch of the Delaware and Hudson Railroad (Map: New York, F 5). The village is growing in popularity as a summer resort and has a park, "Cooper Grounds," orphan house, hospital, library, and several hotels and boarding houses. Cooperstown is in a hop-growing and farming region, and contains an ice-cream and cheese factory. Cooperstown was first incorporated in 1812 and is now governed under a charter of 1889, revised in 1895. The executive holds office for a year. Pop., 1900, 2368; 1910, 2484.

The land on which Cooperstown stands was the site of an Indian town and in 1769 became the property of George Croghan, who attempted unsuccessfully to found a settlement. In 1785 it came into the possession of Judge William Cooper, who in 1786 founded a village and in 1790 moved thither with his family, including J. Fenimore Cooper, the future novelist, then an infant. The latter is buried here. Consult: Cooper, *The Chronicles of Cooperstown* (Cooperstown, 1838); Livermore, *A Condensed History of Cooperstown* (Albany, 1862); Halsey, *The Old New York Frontier* (New York, 1901).

**COOPER UNION FOR THE ADVANCEMENT OF SCIENCE AND ART.** An institution established in New York City in 1859 for the free instruction of the working classes in applied science, art, and social and political science. The Union embodies the social philoso-

phy of its founder, Peter Cooper (q.v.), and is unique among educational institutions in the United States. Its central idea is to afford working people full opportunity, by means of day and evening classes, to obtain a mastery in art, science, and technical knowledge bearing upon industries and the engineering professions, and also, through the medium of lectures, reading rooms, and art and scientific collections, to induce a more discerning citizenship and a broader mode of living. To accomplish these purposes, Mr. Cooper erected a large building at the point where the Bowery divided into Third and Fourth avenues, and deeded both land and building, valued at \$630,000, to a self-perpetuating board of trustees. This board was to consist of not less than five nor more than six members, and upon the board was especially enjoined the establishment of regular courses of evening study; the maintenance of a library, galleries, and collections, the establishment of a school of art for women, in order that those who "might otherwise struggle through a life of poverty and suffering" should be raised to "competence and comfort"; and the establishment of a polytechnic school "equal to the best technological schools now established or hereafter to be established." By 1864 the trustees had developed this broad scheme of education so far as their funds permitted; but afterward, for many years, the union was unable through lack of endowments adequately to extend in scope and was even obliged to turn away large numbers of its constantly increasing applicants. Indeed, except for large sums given by Peter Cooper, and afterward by Edward Cooper and William Cooper, and by Mr. and Mrs. Abram S. Hewitt, the union remained practically unendowed until 1900, when Andrew Carnegie gave \$300,000 and later \$300,000 more. These sums, together with considerable gifts made by Mr. Abram S. Hewitt and others, permitted the final founding out of the original plans.

The scope of the institution now includes, besides evening courses in the various lines of drawing, modeling, and design, five-year courses in civil, mechanical, and electrical engineering and chemistry as well as courses in elocution, oratory, and debate. The day courses include a four-year Day School of Technical Science, the Woman's Art School, the School of Stenography and Typewriting for Women, and the School of Telegraphy for Women. Degrees are conferred in civil, mechanical, and electrical engineering, and in chemistry. In 1912-13 the annual budget of the Union approximated \$205,000, its income-producing endowment to about \$3,000,000, and the total value of property in its control to over \$4,000,000. In the same year 3370 pupils were enrolled in the classes, of whom 1246 were in the evening technical courses and 1187 in the night art classes. Visitors to the reading room numbered 488,000. The trustees who were originally appointed in 1859, and to whose untiring efforts the success of the Union must in large measure be ascribed, were Peter Cooper (q.v.), Daniel F. Tiemann, Wilson G. Hunt, Edward Cooper, Abram S. Hewitt, and John E. Parsons. The director in 1914 was C. R. Richards.

**COORDINATES** (from *ML. coordinare*, to coordinate, from *Lat. co-*, together + *ordinare*, to arrange, from *ordo*, order). Magnitudes which serve to determine the position of an element—point, line, or plane—relative to some fixed figure. For instance, latitude and longi-

tude are arcs (or angles) that define the position of a ship at sea relative to the equator and the prime meridian; latitude, longitude, and elevation above sea level serve to determine the position of a balloon.

The method of treating geometry analytically by use of coördinates is due chiefly to Descartes

(1637) and Fermat, although the terms "coördinate" and "axes of coördinates" were first used by Leibnitz (1694). For the explanation of rectangular coordinates as used in plane geometry, see ANALYTIC GEOMETRY. As there explained, the axes in the rectangular system are at right angles to each other, but it is often more convenient to employ a system in which the axes form oblique angles. Coordinates referred to such a system of axes are called oblique coordinates. The notation is the same as in the rectangular system, and the lines which determine a point are drawn parallel to the axes; thus the coördinates  $(x, y)$  of a point  $P$  form the outer adjacent sides of a parallelogram of which the axes form the inner sides. Another system in common use is that of polar coordinates. This involves two magnitudes—the linear distance from a fixed point and the angular distance from a fixed line. In the figure the posi-

tion of point  $P$  is determined by the distance  $\rho$  from  $O$ , and the angle  $\theta$  between  $\rho$  and the fixed line  $OA$ .  $O$  is called the pole and  $\rho$  the polar radius or radius vector. If  $OA$  passes through the centre  $O$  of a circle, the polar equation of the circle is  $\rho = 2r \cos \theta$ . That is, the values of  $\rho$  and  $\theta$ , which satisfy this equa-

tion, determine points on the circle. If  $O$  is taken as the pole, the equation of the circle is evidently  $\rho = r$ . Rectangular coördinates may be changed to polar coördinates, and vice versa, by means of the equations

$$x = \rho \cos \theta, y = \rho \sin \theta;$$

$$\rho = \sqrt{x^2 + y^2}, \theta = \tan^{-1} \frac{y}{x}.$$

So far we have considered lines as loci of points whose coördinates satisfy given relations; but it is often more convenient to select magnitudes which determine lines passing through a given point. Thus  $ux + vy + 1 = 0$  may be taken as the equation of a straight line in which  $u$  is the negative reciprocal of the intercept on the  $X$ -axis, and  $v$  the negative reciprocal of the intercept on the  $Y$ -axis. For if  $y = 0, x = -\frac{1}{u}$ , and if  $x = 0, y = -\frac{1}{v}$ . The segment  $a$ , in the figure, is the intercept on the  $X$ -axis, and corresponds to  $y = 0$ , and  $b$  is the intercept on the  $Y$ -axis and corresponds to  $x = 0$ . Therefore,  $a = -\frac{1}{u}$  and  $b = -\frac{1}{v}$ , whence  $u = -\frac{1}{a}$  and  $v = -\frac{1}{b}$ . If  $x$  and  $y$  are regarded as constants and  $u, v$  as variables, the equation  $ux + vy + 1 = 0$  is the equation of all lines passing through the point  $(x, y)$ —i.e., of a pencil of which the point  $(x, y)$  is the vertex. Hence

this equation is called the line equation of the given point, and the system of coordinates one-point intercept coordinates. Two-point or bipunctual coördinates determine the position of an element in the plane by reference to two fixed points and a given direction. As in one-point coördinates there are two kinds, line coördinates and point coördinates, so these classes exist in two-point coördinates. Bipunctual line coördinates are the distances of a variable line taken in a constant direction from two fixed points. Bipunctual point coördinates are the negative reciprocals of the distances measured in a given direction from one of two fixed points to the line determined by the variable point and the other fixed point.

Although two magnitudes are sufficient to fix the position of a point in a plane, the introduction of a third has the advantage of rendering homogeneous certain equations involved; however, the coördinates of a single element are, in general, connected by a nonhomogeneous relation. Thus, if  $x, y, z$  in the figure represent the perpendicular distances of a point from the sides  $a, b, c$  of the triangle  $ABC$ , they are connected by the relation  $ax + by + cz = k = 2 \times \text{area of } ABC$ , or  $x \sin A + y \sin B + z \sin C = a$  constant. (See TRIGONOMETRY.) We may also take  $x, y, z$  oblique to  $a, b, c$ , each form-

ing the same angle with its corresponding side. Equations between the coördinates of two or more points in this system are homogeneous, as  $mx + py + qz = 0$ , the equation of a straight line. Such coördinates are called trilinear or

homogeneous coördinates. These form a special case of barycentric coördinates, the first homogeneous coördinates in point of time, introduced by Möbius (q.v.) in his *Der barycentrische Calcul* (1827). Tetrahedral space coördinates belong to the same class. If in the above figure rectangular axes are also assumed, and if  $P_1, P_2, P_3$  are the perpendiculars from the origin upon the sides  $a, b, c$ , respectively, then

$$\frac{x}{P_1} = \frac{BPC}{CBA}, \quad \frac{y}{P_2} = \frac{ACP}{CBA}, \quad \text{and} \quad \frac{z}{P_3} = \frac{BAP}{CBA};$$

these expressions may be designated by  $x', y', z'$ , and be employed to determine the position of point  $P$  ( $P$  denoting the point at which  $x, y$ , and  $z$  meet). Since they are expressed in terms of areas, they are called areal coördinates. In either the trilinear or areal system a point is determined if the ratios only of the coördinates are known. If  $lx + my + nz = 0$  is the trilinear equation of a straight line ( $L$  in the figure), then by making  $x, y, z$  constant and  $l, m, n$  variable, the equation is called the tangential equation of the point  $O(x, y, z)$ . Since  $l, m, n$  are variable, the equation represents any

straight line passing through  $O$ . If  $\lambda, \mu, \nu$  are the perpendiculars from  $A, B, C$ , upon the line  $L$ , and  $p_1, p_2, p_3$  the altitudes of the triangle  $ABC$ , the equation of the point  $O$  is

$$\frac{\lambda x}{p_1} + \frac{\mu y}{p_2} + \frac{\nu z}{p_3} = 0.$$

When the perpendiculars  $\lambda, \mu, \nu$  are taken for the coördinates of the line, the coefficients become the areal coördinates of the points referred

to the same fundamental triangle. Any homogeneous equation in  $l, m, n$  as tangential coördinates is expressed in terms of  $\lambda, \mu, \nu$  by substituting  $\frac{\lambda}{p_1}, \frac{\mu}{p_2}, \frac{\nu}{p_3}$  for  $l, m, n$ , respectively.

An equation in  $\lambda, \mu, \nu$  of a degree higher than the first represents a curve such that  $\lambda, \mu, \nu$  are always the perpendiculars upon the tangent. The curve must therefore be the envelope (q.v.) of the line  $(\lambda, \mu, \nu)$ . Tangential coördinates are often called "Boothian coördinates," in honor of James Booth, who invented them. Bicircular coördinates are magnitudes which determine a point with reference to two series of circles which intersect one another at a constant angle. Generalized, Lagrangian, Eulerian, and Rodrigue's coördinates are special systems used in treating certain problems of mechanics.

From the idea of coördinates of an element in a plane we easily pass to the notion of coördinates of an element in geometry of three dimensions. The determination of a point in such space requires three coördinates. In the Cartesian system these are represented by  $x, y, z$ . An origin being taken (as  $O$  in the figure), and three axes,  $OX, OY, OZ$  mutually at right angles to one another, the point is referred to the

three planes through these axes. Here  $z$  or  $PN$  is the distance of the point above the plane  $YOX$ ;  $y$  or  $NM$  is its distance from the plane  $XOZ$ ; and  $x$  or  $OM$  is its distance from the plane  $ZOY$ . In three dimensions, as in two, the problem may be stated to be: Given the law of the motion of  $P$ , to express the law of variation of its coordinate; the algebraic expression of the latter law is the equation of the surface traced by the point in moving over all the space it can traverse consistently with the law of its motion. Thus, the equation of a sphere referred to its centre  $O$  is  $x^2 + y^2 + z^2 = r^2$ . As in plane geometry, if the axes are taken oblique to one another, the coördinates are called oblique coördinates. Likewise, the polar coördinates in space corresponding to the polar coördinates in a plane are  $\rho, \theta, \phi$ . In the above figure  $\rho = OP$ , the distance from the origin;  $\theta = \angle POZ$ , the angle between  $OP$  and  $OZ$ , and  $\phi = \angle XON$ , the angle between planes  $XOZ$  and  $POZ$ . In plane geometry there are intercept equations for straight lines, and in solid geometry there are intercept equations for planes. And as certain equations of plane geometry are made homogeneous by the introduction of a third coördinate, so in solid geometry certain equations are made homogeneous by the introduction of a fourth coördinate. Thus, in

tetrahedral or barycentric four-plane coördinates, the four faces of a tetrahedron (q.v.) of reference are taken as the coördinate planes. The equation of any plane in this system is  $lx + my + nz + rw = 0$ , in which

$$l: m: n: r = \frac{x_1}{p_1}: \frac{y_1}{p_2}: \frac{z_1}{p_3}: \frac{w_1}{p_4}, \quad x_1, y_1, z_1, w_1$$

being the perpendiculars upon the plane from the vertices  $A, B, C, D$  of the tetrahedron of reference, and  $p_1, p_2, p_3, p_4$  the altitudes of the tetrahedron from  $A, B, C, D$  respectively. For the coördinate systems for space of  $n$ -dimensions, and for the transformations from one system into another, it will be necessary to refer to special works on the subject. Consult: Carr, *Synopsis of Pure Mathematics* (London, 1886); Lamé, *Leçons sur les coordonnées curvilignes* (Paris, 1859); Möbius, "Des barycentrische Calcul" (1827), in his *Gesammelte Werke*, vol. i (Leipzig, 1885); Townsend, *Modern Geometry of the Point, Line, and Circle* (Dublin, 1863-65); Scott, *An Introductory Account of Certain Modern Ideas and Methods in Plane Geometry* (New York, 1894); Clebsch, *Vorlesungen über Geometrie* (Leipzig, 1876-91); Pascal, *Reperitorium der höheren Mathematik*, German ed. (ib., 1902); Weber and Wellstein, *Encyklopädie der Elementar-Mathematik* (2 vols., ib., 1903), both with valuable bibliographies.

**COORG**, köörg, or KÜRG. A Province of British India, west of Mysore. Area, 1582 square miles. Pop., 1891, 173,055; 1901, 180,460; 1911, 174,976. It was a native principality of ampler dimensions before 1834, in which year it was annexed by Great Britain. Nearly the whole of the region is covered with forests, more or less dense. Its chief products are rice, coffee, lumber, and hogs. Specially notable are the ancient fortifications. The country is intersected by ramparts, which are from 15 to 25 feet in height, and by ditches of about 10 feet in depth and about 8 feet in width; while, being in some places double or triple, or even quadruple, they measure in aggregate length upward of 500 miles. Capital, Merikara.

**COORNHERT**, korn'hært, or CORNHERT, DIRK VOLCKERTSZOON (1522-90). A Dutch scholar and poet, born in Amsterdam. He lived in Haarlem from about 1542, supporting himself by his skill in engraving. In 1561 he became notary, and in 1562 secretary to the municipality also. Most active as a champion of political and religious liberty, he incurred the disapproval of the Spanish government, was imprisoned in 1567, and afterward took refuge at Cleves and Xanten. When the states threw off the Spanish yoke in 1572, he was recalled and made secretary to the States of Holland, in which capacity he rendered important services to William of Orange. He was a famous theologian, stoutly opposed the orthodox Protestant party, and by his writings aided materially in preparing the classical period of the literature of the Netherlands. His poetical works include *Abrahams uytgang* ('The Death of Abraham') and *Comedie van de blinde van Jericho* ('Comedy of the Blind Man of Jericho'). Of his works in prose, the *Zedekunst, dat is wellevens kunst* ('Ethics; that is, the Art of Right Living'), which appeared in 1586, deserves special mention. Consult Moorrees, *D. V. Coornhert de Libertijn* (1887).

**COOSA** (koo'sa) **RIVER**. A river formed by the confluence of the Etowah and Oostanaula

rivers in Floyd County in northwestern Georgia (Map: Alabama, C 2). It flows southwest and enters Alabama, where it flows between the hills of the southern extremity of the Appalachian Range and is joined by the Tallapoosa River to form the Alabama River. The Coosa is about 335 miles long, is navigable from its mouth to Wetumpka and from Greensport to Rome, Ga., and drains an area of 10,000 square miles.

**COOS** (koo's) **BAY**. An inverted V-shaped arm of the Pacific Ocean, about 10 miles long, in about lat. 43° 45' N., in Coos Co., Oreg. (Map: Oregon, A 4). On the eastern shore of its western arm (which has an average width of about one mile and runs nearly parallel to the coast) lies Empire City, a small coal-shipping port. The eastern arm expands considerably as it extends southward, and on its western shore, near its base, is Marshfield (Pop. 1910, 2980), also a coal-shipping port and manufacturing town. The bay receives the Coos River and has a depth of 14 feet of water over its bar at high tide.

**COO'SHIE** (native name) **ANT**. A South American leaf-cutting ant (*Ecodoma cephalotes*). See SAUBA ANT.

**COOS INDIANS**. See KUSAN.

**COO'SY**. See KUSI.

**COOT** (probably from Welsh *crota*, Corn. *cut*, Ir., Gael. *cutach*, bob-tailed). A kind of rail, or "mud hen" (*Fulica*), distinguished from other rails (q.v.) chiefly in having the toes edged with a scalloped membrane. Coots have a strong, straight bill, the base of which extends up the forehead and there dilates so as to form a remarkable naked patch. The color is generally dark with more or less white, and the length is about 15 inches. Coots are aquatic in their habits, preferring lakes, or pools with reedy margins, and retreating among the reeds on any alarm. The American coot (*Fulica americana*) is found breeding throughout all North America and is migratory in the north, but resident in the south. It is dark-slate color, deepening on the head and neck, and the crissum is white. The nest is a hollow heap of broken, dead reeds, the eggs (see Colored Plate of EGGS OF WATER AND GAME BIRDS) are usually about a dozen in number, clear clay color, dotted with dark brown. The young are covered with black down, striped with bright orange red. See PLATE OF RAILS, ETC.

The common coot (*Fulica atra*) of the Old World is found in most parts of Europe, Asia, and the north of Africa. It is about 16 inches long, black, with a narrow white bar across the wings, and the naked patch on the forehead pure white, on account of which it is often called "bald" coot. The crissum is not white, and this is the most important difference between it and its American cousin. It makes a large nest of water plants among reeds or rushes. Although not very highly esteemed for the table, the circumstance that many can be killed by a single shot, on the mud banks to which coots resort in winter, as on the south coast of England, makes coot shooting profitable to market gunners. Other species inhabit eastern Asia, Africa, and South America. The name "coot" is very often incorrectly applied in the United States to certain ducks, which are properly known as "scooters" (q.v.).

**COOTE**, SIR EYRE (1728-83). A British general, born at Ash Hill, County Limerick, Ireland. He joined the first regiment (thirty-ninth) sent to India and took a conspicuous

part in the capture of Calcutta. It was by his advice that Clive decided on the immediate and vigorous action which culminated in his victory over Siraj-ud-Daula at Plassey in 1757. On Jan. 22, 1760, he defeated Lally at Wandewash, destroying the power and prestige of France in India. Appointed commander in chief of the Indian forces in 1779, he began, in 1781, his celebrated campaign against Hyder Ali, whom he vanquished at Porto Novo, thus saving Madras to the English. He died on shipboard on his way from Calcutta to Madras. There is a monument to him in Westminster Abbey.

**COOTE, RICHARD.** See BELLAMONT.

**COOTER.** A name in the southern United States for the Carolina box tortoise. See TURTLE.

**COPAIBA**, kô-pâ'bâ (Sp. and Portug., from Brazil. *cupaiba*), or **COPAIVA**. A valuable medicinal substance, consisting chiefly of a resin (resin of copaiba) and a volatile oil (oil of copaiba), both of which are used in medicine. It flows from incisions made in the stems of trees of the genus *Copaifera*, such as *Copaifera langsdorffii* and others, natives of the tropical parts of America. Copaiba has a peculiar, not disagreeable odor, and an acrid taste. It is diuretic when taken in small doses; large doses cause gastrointestinal and renal irritation, and the administration of even a small quantity may give rise to an eruption somewhat like that of measles. It imparts a strong odor to the breath and mucous secretions. It is principally useful from its powerful stimulating and disinfectant action on the mucous membranes. It is much used in affections of the genito-urinary system, during the subacute or chronic stages, and is also employed in chronic catarrhs, etc. The medicinal dose of the balsam is from one-fourth to one fluid drachm. Balsam of copaiba is not infrequently adulterated with castor oil. The wood oil, Gurgina or Gurjun balsam of India, the produce of a species of *Dipterocarpus*, is sometimes sold as balsam of copaiba. See GURJUN BALSAM.

**COPÂIS** (kô-pâ'is) **LAKE.** See BÆOTIA.

**COP'AL** (Mex. *copalit*, resin). A resinous mineral substance of vegetable origin, chiefly used in the manufacture of varnishes and lacquers. The hardest varieties are used like amber, for making various objects. It appears in commerce in smooth rounded masses, colorless or lemon yellow, translucent or transparent, rather brittle, fusible at a somewhat elevated temperature, and but sparingly soluble in oil of turpentine. In making varnishes copal is first rendered soluble; for this purpose it is melted and, on cooling, reduced to a powder and exposed for some time to the action of atmospheric air. It is then boiled with linseed oil and oil of turpentine, and the resulting solution is filtered. Copal is dug in Zanzibar and Mozambique, at several places in western Africa, in New Caledonia, New Zealand, the East Indies, Brazil, etc. The varieties brought from Zanzibar and Mozambique are noted for their hardness and have therefore the highest market value; they are supposed to have been produced by trees like the *Trachylobium hornemannianum* and *Trachylobium mosambicense*. The copal dug in New Zealand and New Caledonia is known in commerce as *cocrie* and *dammar*; it is the semi-fossil resin of the *Dammara australis* and *Dammara orata*, trees still abundantly growing in those countries; the natives of New Zealand chew the resin when freshly exuded by the trees.

*Anime* (q.v.) is another variety of copal; in England, however, the name "anime" is applied to all the different varieties of copal. A mineral substance resembling copal, and known as *fossil copal*, is found at Highgate, London.

**COPALCHE**, or **COPALCHI** (kô-pâl'chè), **BARK.** A name given to the bark of two species of *Croton*, natives of Mexico. One, the product of *Croton pseudo-china*, reaches the market in small, slender, ash-colored quills which resemble a light variety of cinchona, for which they may easily be mistaken, but have a taste and an odor, especially when burned, which suggest cascarrilla (*Croton eluteria*), to which the tree is allied; the other in large quills, presumably derived from *Croton suberosus*, which is very bitter and yields an aromatic odor upon burning. The barks are credited with tonic, aromatic properties and have been used, particularly in Mexico, in intermittent fevers and in cases which seemed to demand a mild bitter. The barks have been sold for quebracho.

**COPALM**, kô'pâm. See LIQUIDAMBAR.

**COPAN**, kô-pân'. An ancient ruined city of Honduras. The buildings are of stone carved with symbolic designs. Good collections of the sculptures made by Saville and others are in the American Museum of Natural History (New York) and other American museums. The city was captured by Hernando de Chavez in 1530. See ARCHITECTURE, AMERICAN.

**COPARCENARY** (from *co* + *parcenary*, from OF. *parcenerie*, from *parcener*, partner, from ML. *partionarius*, having a share, from Lat. *partitio*, share, from *pars*, portion). An estate in England originating in descent to two or more persons, called thence "coparceners" or "parceners." It generally arises under the rule of law which makes the daughters of one dying without male heirs inherit equally, but it may also arise by local custom, as in the case of the descent of lands held by the tenure of *gavelkind*, where all the sons inherit equally. Although the property remains unsevered, yet each parcener is entitled to a distinct share of it, and consequently there is no benefit of survivorship, but the right of each descends to his or her heirs, who are still called "coparceners" with the surviving original parceners. If one of the coparceners alienates his share, the coparcenary is destroyed, and the estate becomes a tenancy in common (q.v.). It may also be destroyed by partition, whereby the estate is divided up among the coparceners in severalty. This may be effected either voluntarily by an interchange of deeds or by an action at law. Such parts of the property as cannot be divided (such as the manor house, etc.) pass to the eldest sister or her issue, but an equivalent in value is assigned to the remaining sisters. If the estates in coparcenary are by descent reunited in one person, they become again an estate in severalty.

In the United States, where descent is to all the children or to all of a group of heirs equally, without distinction of age or sex, coparcenary was from the beginning the usual form of common ownership of land. Such descendants are now usually declared by statute to take the land as tenants in common. See COMMON, TENANCY IN; JOINT TENANCY; DESCENT.

**COPE.** See COSTUME, ECCLESIASTICAL.

**COPE.** A custom or tribute due to the crown, or lord of the soil, out of the lead mines in Derbyshire, England.

**COPE, CHARLES WEST** (1811-90). An English historical and genre painter, etcher, and illustrator. He was born in Leeds and studied at Sass's Art School and the Royal Academy, of which he was made a member in 1848 and a professor in 1867. He visited Paris, Munich, and Italy to make special studies of the technique of fresco painting for his series of historical fresco decorations in the houses of Parliament (London). These include "The Embarkation of the Pilgrim Fathers in 1620" and the "Burial of Charles I." His numerous oil paintings include such subjects as "The Death of Cardinal Wolsey" (Osborne Castle); genre subjects, as "Maiden Meditation," "Mother and Child" (South Kensington); "Almsgiving" (ib.); and portraits—all executed in the conventional academic style. He also contributed illustrations for *de luxe* editions of Gray's *Elegy* (1847), Goldsmith's *Poetical Works* (1845), Thomson's *Seasons*, and other works. Consult C. H. Cope, *Reminiscences of C. W. Cope* (London, 1891).

**COPE, EDWARD DRINKER** (1840-97). An American naturalist, born in Philadelphia. He received his earliest training in private schools and then studied anatomy at the University of Pennsylvania. From 1864 to 1867 he was professor of the natural sciences at Haverford College, Pa. On the death of Leidy, in 1891, he was made professor of geology and paleontology at the University of Pennsylvania, where he was also professor of zoology and comparative anatomy; from 1878 until his death he was editor of the *American Naturalist*. He was geologist and paleontologist of the survey of the region west of the 100th meridian under Capt. G. M. Wheeler and also of the survey of the Territories under Dr. F. V. Hayden. He was president of the American Society of Naturalists in 1895 and of the American Association for the Advancement of Science in 1896. He made an immense collection of fossils which he described in his various reports, usually published by the government. His most important contributions were to the history of extinct vertebrates. Scarcely less important were his investigations of the herpetology and ichthyology of North America. In these fields (and especially in the former) his work was epoch making and laid the foundation for the modern classification of North American reptiles, amphibians, and fishes. Cope's contributions to science number about 400. The most important are: *Systematic Arrangement of Lacertina and Ophidia* (1864); *Systematic Arrangement of Extinct Batrachia, Reptilia, and Aves of North America* (1869-70); *Systematic Relations of the Fishes* (1871); *Cretaceous Vertebrates of the West* (1877); *Tertiary Vertebrates* (1885); *The Batrachia of North America* (1889); *The Crocodilians, Lizards, and Snakes of North America* (1898). Cope was deeply interested in the questions relating to the subject of evolution. He was the leader of the school of American evolutionists, teaching Neo-Lamarckism (q.v.), which considers the changes and variations wrought in the organism by the immediate influence of environment and the inheritance of such variations by the offspring as the most important factors of organic evolution. His most important works on evolution are: *Origin of Genera* (1868); *Origin of the Fittest* (1886); *Primary Factors of Organic Evolution* (1896).

**COPE, SIR JOHN** (?-1760). An English

general. He was at Dettingen in 1743, but is best known through his ignominious defeat at Prestonpans (q.v.) by the Highlanders, under Charles Edward Stuart, the "Young Pretender," Sept. 21, 1745, and perhaps more widely through the sarcastic Jacobite song, based on the event, "Hey, Johnny Cope! are ye waukin' yet!" In 1732 he headed a committee which made a famous report on revenue frauds and smuggling.

**COPE, THOMAS PYM** (1768-1854). An American merchant. He started at Philadelphia the first line of sailing vessels between that city and Liverpool, and made a large fortune during the War of 1812 by taking all the marine risks on his vessels, which were singularly fortunate in their voyages. He was largely instrumental in introducing the Schuylkill water into Philadelphia, in the completion of the Chesapeake and Delaware Canal, the construction of the Pennsylvania Railroad, and the foundation of the Mercantile Library of Philadelphia. In 1807 he was elected to the State Legislature.

**COPE, WALTER** (1860-1902). An American architect, born in Philadelphia. He received his professional training in architects' offices in Philadelphia. The work of Cope includes the buildings of Bryn Mawr College, the dormitory system and other buildings of the University of Pennsylvania, several buildings of Washington University in St. Louis, and the Pennsylvania Institution for the Blind at Overbrook. Cope was a fellow of the American Institute of Architects.

**COPECK** (Russ. *kopeika*, *kopeika*, from *kopati*, Ochurch Slav. *kopati*, to dig). A Russian coin, the oldest kind in Russia and the first substitute for furs as a medium of exchange. It is worth one-hundredth of a silver ruble, or about half a cent.

**COPEHAN.** See WINTUN.

**COPELAND, EDWIN BINGHAM** (1873- ). An American botanist, born at Monroe, Wis. He was educated at Leland Stanford Junior University and also studied at Leipzig and the universities of Halle, Wisconsin, and Chicago. Between 1897 and 1903 he was assistant professor of botany at Indiana University and at the State Normal School at Chico, Cal., assistant professor and professor at West Virginia University and instructor at Stanford. In 1903-08 he was botanist to the Philippine government; in 1908-09, superintendent of the Philippine Agricultural School; and in 1909 he became dean of the College of Agriculture, University of the Philippines. His publications include some 70 articles on botanical research and also *Elements of Philippine Agriculture* (1908) and *Cocoon Cultivation* (1912).

**COPENHAGEN** (Dan. *København*, Merchants' Haven, from *købe*, Ger. *kaufen*, to buy + *havn*, Ger. *Hafen*, haven). The capital and largest city of Denmark, situated on the islands of Seeland and Amager, in lat. 55° 41' N., and long. 12° 35' E. (Map: Denmark, F 3). The *Kalvebod*, or *Kallebo*, Strand, an inlet of the sound separating the two islands of Seeland and Amager, forms the excellent harbor of the city.

Copenhagen is divided into six parts, of which that lying within the former fortifications (now converted into boulevards) forms the nucleus of the city. The quarter situated on the island of Amager is called Christianshavn. The centre of the city is marked by the Kongens Nytorv (New King's Market Place), an irregular square with an equestrian statue of Christian V. From this square issue the principal streets, the finest

of which is Bredgade, leading to the esplanade of the citadel. The beautiful national theatre (the Royal, built 1874) and some of the more important commercial buildings are on this square. The most interesting of the numerous churches of Copenhagen are the Vor Frue Kirke, the metropolitan cathedral, famous for its statues of Christ and the Twelve Apostles, of a kneeling angel holding a shell for a font, and of other figures, designed and partly executed by Thorwaldsen; the Holmens Kirke, built in the seventeenth century, and containing monuments to the naval heroes, Juel and Tordenskjöld; Trinitatis Kirke, with a high round tower; the Vor Frelzers Kirke ('Church of Our Redeemer'), with an external winding staircase leading to the tower; and the handsome Frederiks Kirke, begun in 1749 and completed in 1894, whose magnificent dome is one of the most conspicuous objects of the city. Christiansborg, the king's residence and a noted palace (built 1731-45), was destroyed by fire (1794), rebuilt, and again burned in 1884. The royal abode was then removed to Amalienborg Plads, a group of four palaces built in the style of Louis XV. The Rosenborg Palace, built at the beginning of the seventeenth century, contains a remarkable collection of jewels, weapons, and regalia. The Palace of Charlottenborg (built 1672), situated on the Kongens Nytorv, is now the seat of the Royal Academy of Arts. Other notable public buildings are the exchange, erected in 1619-40 in the Dutch Renaissance style; the university; the new city hall; the Glyptothek, containing one of the choicest collections of sculpture and other objects of art in northern Europe; and the new Art Museum, with the Royal Picture Gallery, which ranks high among the minor collections of paintings, including choice specimens of the Dutch and Italian schools, and by modern Danish masters. The Moltke Palace contains a collection of Dutch paintings. The world-renowned Thorwaldsen Museum (built 1839-48) contains about 300 of the sculptor's works, together with furniture and art objects bequeathed by him to his native city. Within the central court is Thorwaldsen's tomb.

The University of Copenhagen (q.v.) occupies a distinguished place among European institutions of learning. Other prominent educational institutions are the polytechnic institute affiliated with the university, the veterinary school, founded in 1773, the military and naval schools, and the Academy of Arts. Copenhagen has a number of scientific and art associations, the most prominent of which are the Danish Royal Society, founded in 1742, and the Royal Northern Antiquarian Society, founded in 1825. The Royal Library contains about 600,000 volumes and about 20,000 manuscripts; and the National Museum, contained in the Prinsens Palace, includes the Danish, the ethnographical, the antique, and the numismatic collections.

The city is administered by a board of magistrates, including the president, appointed by the King, and a municipal council of 42 members.

The chief manufactures of Copenhagen include sugar, machinery, textiles, and porcelain ware. Shipbuilding is the principal industry. Over one-half of the commerce of Denmark passes through Copenhagen, and the chief financial institutions of the country are situated here. There is regular steam communication between Copenhagen and ports of Germany, Russia, England, France, and the United States. It is the seat of a United

States consul general. The area of the city with suburbs is 31 square miles (Copenhagen 28, Frederiksberg 3); pop., 1911, 559,398 (Copenhagen 462,161, Frederiksberg 97,237); 1906, 514,134 (Copenhagen 426,540); 1901, 454,466 (378,235); 1880, 261,360 (234,850); 1860, 163,307 (155,143); 1840, 120,819; 1769, 80,000.

Copenhagen was a fishing village until the middle of the twelfth century; it began to grow in importance after coming into the possession of Bishop Absalon, who fortified it in 1167. Owing to its good harbor, Copenhagen soon became a place of commercial importance and received from the Bishop of Roskilde municipal rights about the middle of the thirteenth century. It was repeatedly attacked by the Hanseatic towns. It was chosen for the capital of the kingdom in 1443 by King Christopher, the Bavarian. During 1658-59 it withstood a severe siege by the Swedes under Charles X, by its resistance probably saving the Danish monarchy. In 1700 it was bombarded by the united fleets of England, Holland, and Sweden. It suffered heavily from conflagrations during the eighteenth century. In 1801 the harbor of Copenhagen was the scene of the destruction of the Danish fleet by Nelson, and in 1807 the city was subjected to a bombardment by the British, during which the university and a number of public buildings were destroyed. Consult *Copenhagen, the Capital of Denmark* (Copenhagen, 1898); Seelig, *Führer durch Kopenhagen* (Hamburg, 1895); Nielsen, *Kjøbenhavns Historie og Beskrivelse* (6 vols., Copenhagen, 1877-92).

**COPENHAGEN, UNIVERSITY OF.** The only university in Denmark, and the oldest and one of the most famous in northern Europe. It was founded by Christian I in 1478, taking its statutes as well as some of its teachers from the University of Cologne, which up to that time had been the chief resort of Danish students. This first foundation perished during the civil wars accompanying the Reformation, but was reestablished in 1539 by Christian III, as a Protestant university, on the model of Wittenberg, then at the zenith of its influence. This foundation, destroyed by fire in 1728, was reestablished in 1732 by Christian VI and reorganized on its present basis in 1788. Among the distinguished men who have shed lustre on the university are Holberg, in the first half of the eighteenth century, and Oehlenschläger, the poet, Madvig, the classical scholar, Rask, the philologist, Oersted, the physicist, and Worsaae, the archaeologist, in the first half of the nineteenth century; Höfding, the philosopher, and Brandes the literary critic, in the latter half. Supported partly by the state and partly by endowment, the university is attended by some 3000 students, has a library of 400,000 volumes, museums, an academy of surgery, and an observatory. Instruction is gratuitous, and the courses are open to both sexes. The university has five faculties. Attached to it are botanical and zoological gardens.

**COPENICK, or KÖPENICK,** k'p'e-ník. A town in the Prussian Province of Brandenburg, situated on an island at the confluence of the Dahme and the Spree, 10 miles southeast of Berlin. It contains a royal palace built on the site of a sixteenth-century castle of the Elector Frederick William, now used as a seminary for teachers, and a seventeenth-century Rathaus. The chief manufactures include dyestuffs, saw-mill machinery, inks, glass, linoleum, starch,

sugar, chicory, and shoddy. Pop., 1900, 21,024; 1905, 27,721; 1910, 30,879. The city is mentioned in 1157 as the residence of the Slavic Prince Jacso. It was conquered by the Margrave of Brandenburg in 1240 and plundered by the Russians in 1760. Consult Graf zu Dohna, *Kurfürstliche Schlosser in der Mark Brandenburg* (Berlin, 1890).

**COPEPODA** (Neo-Lat. nom. pl., from Gk. κόπη, *kôpê*, oar + ποός, *pous*, foot). A large and important order of entomostracous crustaceans, characterized by having the five pairs of feet specially adapted for swimming. There are no branchial sacs on the feet, and there is never any bivalve shell. The copepods, sometimes called "water fleas," live in both salt and fresh water in swarms. Some species are parasitic on fish and sometimes do great damage in that way, but most copepods are free-swimming and feed on organic matter in the water. They thus act as scavengers and must be of great importance in keeping harbors clean. Moreover, they serve as food for many species of food fishes. Among our fresh-water species, those of the genus *Cyclops* are perhaps the best known. They are very minute, actively moving creatures. The genus *Argulus* is parasitic on carp, suckers, and other fish. They reach a considerable size, frequently half an inch in length. Consult: publications of United States Fish Commission and National Museum; Herrick and Turner, *Synopsis Entomostraca of Minnesota* (St. Paul, 1895); Calman, *The Life of Crustacea* (New York, 1911). For further information see CRUSTACEA; ENTOMOSTRACA.

**COPERNICAN SYSTEM.** The system which represents the sun to be at rest and the earth and planets to move round it; in other words, that which we now know, on unquestionable evidence, to be the true system of astronomy. It derives its name from Copernicus (q.v.), but, in point of fact, it may be described as being a growth to which he was only one of many contributors. The merit of having first formed the general notion of the system seems to be due to Pythagoras; Copernicus has the credit of having, after the lapse of centuries, again drawn the attention of philosophers to it and of having greatly increased the probability of its truth by his calculations and arguments; for the rest, the glory of having matured the idea belongs to Kepler, Galileo, and Newton, who, through the discovery of the law of gravitation, finally demonstrated its truth effectually. Many who have been used to reverence the name of Copernicus in connection with this system would be surprised to find, on perusing his work, *De Revolutionibus Orbium Caelestium*, how much of error, unsound reasoning, and happy conjecture combined to secure for him in all times the association of the system with his name.

*De Revolutionibus Orbium Caelestium*, dedicated to Pope Paul III, consists of six books, in which Copernicus undertook to demonstrate his whole system. The character of the reasoning which then passed for demonstration must be borne in mind in judging of the author's procedure in establishing his various positions. It was then thought a sufficient demonstration of a phenomenon to make a supposition, on which its occurrence would be intelligible, without attempting to bring the supposition itself, by an induction of facts, within the truth of nature; many abstract propositions, too, which would now appear to be ridiculous, were at that time

universally admitted to be of great weight in scientific arguments.

Illustrations of both of these peculiarities may be gleaned from the first of the six books of *De Revolutionibus*. It contains the following propositions: 1. The universe is spherical. This is established by such arguments as that the sphere is the most perfect figure, etc. 2. The earth is spherical; which flows from the same kind of considerations. 3. The earth and sea make one globe. 4. The motions of all the heavenly bodies must be uniform and circular, or compounded of uniform and circular motions. Here, again, we meet with singular reasons. A simple body must move in a circle, and nothing but circular motion could give periodicity to phenomena. 5. Supposing the distance of the stars to be immense, there is no reason why the earth should not have a motion round its axis as well as a motion in its orbit. 6. The sphere of the stars is immensely distant. 7 and 8. The ancients were wrong in placing the earth at the centre of the universe. The arguments under this head are as imaginary as those which they were designed to refute. The falling of a body to the earth is deduced from the assumption that it is only given to wholes to move circularly, while it is of the nature of parts, separated from their wholes, to move in straight lines. That there must be a *centrum mundi*, an entity not recognized by modern science, is admitted, the question being as to its position. 9. It is possible for the earth to have several motions. 10. Copernicus establishes the order of the planets and draws a diagram of the system much as it is now represented. It may be observed that, following the old systems, such as the Ptolemaic, he lays down a *sphere* for the fixed stars. See FIRMAMENT.

The most brilliant and valuable part of the *De Revolutionibus* is that in which he explained, for the first time, the variations of the seasons, the precession of the equinoxes, and the stations and retrogradations of the planets. In general, his explanations are correct as to the general nature of the causes of the phenomena. But Copernicus had neither mathematical nor mechanical knowledge sufficient to enable him to explain more than the mean motions of the solar system. To account for irregularities he was obliged to introduce a system of epicycles entirely resembling that of Ptolemy. (See PROLEMAIC SYSTEM.) This arose from the false notion of his time that all motions must be compounded of circular ones, with the application of which idea, and with the invention of convenient epicycles, the greater part of the *De Revolutionibus* is occupied. It may further be added, to rectify the vulgar notion regarding the relation of Copernicus to the system of the heavens, that he had no answer to offer to the mechanical objections to his system. One of the commonest objections was that against the axial motion of the earth, that it was inconsistent with the fact of bodies falling to the points of the earth directly beneath the points from which they are dropped; for this he had no answer, nor could he have, the laws of motion being not yet discovered. Consult: Wolf, *Geschichte der Astronomie* (Munich, 1877); Dreyer, *History of the Planetary Systems from Thales to Kepler* (Cambridge, 1906); also works mentioned under COPERNICUS.

**COPERNICIA**, kô'pér-nish'f-â. See CARNAUBA PALM.

COPERNICUS  
FROM THE PAINTING BY OTTO BRAUSEWETTER

chosen in that year to deliver the annual oration before the London Medical Association, he advanced in his lecture a new theory of electro-galvanism. His *Outlines of Pathology and Practical Medicine*, in which he especially treated of the ganglionic nerves and their functions and proposed a new and more simple classification of diseases, appeared in 1822; the *Elements of Physiology* in 1824, and *On Pestilential Cholera* in 1832. Copland's most important work was the *Dictionary of Practical Medicine* (1833-58), four closely printed volumes, to which he devoted the labor of many years.

**COPLEY.** A borough in Lehigh Co., Pa., 6 miles northwest of Allentown, on the Lehigh Valley and Ironton railroads, and on the Lehigh Coal and Navigation Canal. It has manufactures of silk, cement, and cigars. Pop., 1900, 1581; 1910, 2670.

**COPLEY,** kóp'li, JOHN SINGLETON (1737-1815). An American portrait and historical painter, along with West one of the two important masters of the early period. He was born in Boston of Irish parentage, July 3, 1737, and received instruction from his stepfather, Peter Pelham, a mezzotint engraver, in which art his first artistic efforts were made. In painting he was practically self-taught, although influenced by his older contemporaries, Blackburn and Smybert. His progress was rapid, and at 17 he was recognized in Boston as a prominent painter. In 1769 he married the daughter of a wealthy Boston merchant, purchased a stately house on Beacon Hill, and soon became the recognized painter of Boston society. After exhibiting repeatedly and successfully at the Royal Academy, in 1774, on the invitation of Benjamin West, he went to London. Through the latter's kindness he received a number of commissions for portraits, including those of Lord and Lady North and the King and Queen. The following autumn he went to Italy, spending almost a year in study, to the great improvement of his drawing. Notwithstanding his sympathy with the American Revolution he remained in London. He was elected to the Royal Academy in 1779, and through three very popular historical pictures he became one of the most celebrated English artists of his day. These were: "The Death of Lord Chatham" (1779-80), "The Death of Major Pierson" (1783), and the "Siege of Gibraltar" (1790), all in the National Gallery, London. He lived in considerable state, and his popularity continued until a few years before his death in London, Sept. 9, 1815. His son, Lord Lyndhurst, afterward became Lord Chancellor of England.

Copley's art falls into two distinct periods—an American, lasting until his removal to London, and a British period. In the former his art was somewhat primitive—faulty in line, hard in color, and stiff in pose, but the sitters were always distinguished in bearing, determined in expression, and convincing in appearance. His portraits are the most typical representations of the New England society of his day. After his study in Italy and his work in London his art approached more nearly that of contemporary British painters. His execution became less labored and his technique better, but his art is less characteristic and convincing. The principal portraits of his early period include those of John Hancock and Samuel Adams (1772), in the Boston Art Museum; Mrs. Ford, in the Boston Athenaeum; Mrs. Thomas Boylston

and several others in Memorial Hall, Harvard University, which possesses other examples of his works; Lady Wentworth and Mrs. Robert Harper, in the New York Public Library; besides others in private possession, principally in Boston. The portraits of Robert Izard and his wife (Boston Art Museum), painted in Rome, represent the transition to his later manner. In London he painted "A Youth Rescued from a Shark" (replica in the Boston Art Museum), with surprising realism; portraits of Lord Cornwallis (Corporation Art Gallery, London); the Earl of Mansfield (National Gallery, London); the Copley Family—one of his very best works—and John Quincy Adams (both in the Boston Art Museum). Among his later historical paintings was "The Offer of the Crown to Lady Jane Grey" (1808, belonging to Mr. Amory, Boston). Consult: Amory, *Domestic and Artistic Life of J. S. Copley, R.A.* (Boston, 1882); Perkins, *Sketch of the Life of Copley* (ib., 1873); Isham, *History of American Painting* (New York, 1905).

**COPLEY,** JOHN SINGLETON, LORD LYNDBURST (1772-1863). A British lawyer and statesman, three times Lord Chancellor of England. He was the son of J. S. Copley, R.A., and was born in Boston, Mass., May 21, 1772. While yet an infant, his father removed to England for the practice of his art. He was educated at Trinity College, Cambridge, where he was second wrangler and Smith's prizeman in 1794. In 1795-96, as a traveling bachelor and fellow of his college, he visited the United States, and in company with the French author Volney made a tour which he described in Latin letters to the vice chancellor of his university. Called to the bar at Lincoln's Inn in 1804, he chose the Midland circuit, but did not achieve financial success until 1812, when his defense of a Luddite at Nottingham established his reputation. In politics he was at first a Liberal, and long expressed sentiments hostile to the ministry of the day. He ably defended Watson and Thistlewood on their trial for high treason in 1817 and obtained their acquittal. He entered Parliament in 1818, and a year later became Solicitor-General in the Liverpool administration and was knighted. In 1824 he was promoted to the rank of Attorney-General, and held that office until 1826, when he became Master of the Rolls. When Canning was charged to form a ministry in 1827, he offered the Great Seal to Sir John Copley, who was raised to the Upper House as Baron Lyndhurst and remained Lord Chancellor from 1827 to 1830. In 1831 he became Lord Chief Baron of the Exchequer, which office he exchanged for the woolsack during the brief administration of Sir Robert Peel in 1834-35. In 1835 he led the opposition to the Melbourne ministry in the Upper House, in speeches of great power and brilliancy. Lyndhurst's orations and annual reviews of the session did much to reanimate the Conservative party, and pave the way for their return to power in 1841. He then became Lord Chancellor for the third time, and held the Great Seal until the defeat of the Peel government in 1846. After that time he took little part in home politics, but his voice was often heard on matters of foreign policy, and in denunciation of tyranny in Italy and elsewhere. He died in London, Oct. 12, 1863. Lord Lyndhurst's high attainments as a lawyer have never been questioned, and his judgments have never been excelled for clearness, method, and legal

**acumen.** In the House of Lords he had few equals among his contemporaries as a brilliant orator and debater. He delivered his last speech in Parliament at the age of 88 with his usual force and ability. Consult Martin, *Life of Lord Lyndhurst* (London, 1883), and Campbell's *Lives of the Chief Justices and Lives of the Chancellors*.

**COPMANHURST, THE CLERK OR.** An alias of Friar Tuck in the Robin Hood tales. Sir Walter Scott alludes to him by this title in *Ivanhoe*.

**COPPÉE, kô'pâ', FRANÇOIS EDOUARD JOACHIM** (1842-1908). A French poet, dramatist, and novelist. He was born in Paris and for a time was a clerk in the government service. *Le reliquaire*, his first book of poems, appeared in 1866 and was followed by *Les intimités* (1868), and *Poèmes modernes* (1869), which marked him as a member of the Parnassian school. He first attracted notice by a one-act play, *Le passant* (1869), the first of a series of curtain raisers in which he displayed greater talent than in his formal dramas, *Le luthier de Crémone* (1876), *Severo Torelli* (1883), *Les Jacobites* (1885), and *Pour la couronne* (1895). He also wrote the play *Mme de Maintenon* (1881). His later lyric work is contained in *Les humbles* (1872), *Le cahier rouge* (1874), *L'Arrière-saison* (1890), and *Dans la prière et dans la lutte* (1901); his narrative verse in *Une idylle pendant le siège* (1875), *Olivier* (1875), *L'Épilée* (1876), *Récits et élégies* (1878), and *Vingt contes nouveaux* (1883). His prose tales of the eighties include *Fille de triestese*, *Henriette*, *Madame Nunu*, and *Le coucher de soleil*. He told his own story in *Toute une jeunesse* (1890), and published a series of journalistic essays, *Mon franc parler* (1893-96). *Le coupable* (1897) is a novel of criminal psychology, and *La bonne souffrance* (1898) signalizes the writer's reconciliation with the Church. From 1880 to 1884 he was the dramatic critic of the well-known newspaper, *La Patrie*. He was elected to the French Academy in 1884. Coppée is an accomplished artist in the short story, and here it is the poet in him that lends these brief and finished narratives their distinctive charm. He was at first and by instinct an artist in verse, a skilled craftsman, though, perhaps, a little affected; indeed, his verse has often been characterized as poetical prose, owing to the lack of real inspiration in it and his delight in treating countless unimportant details of everyday life. After 1870 his facile suavity yielded to sterner notes in the lyric of democracy, of work, poverty, and self-denial, and of the indignant patriotism of defeat. To this succeeds the gentle idyllic vein with an occasional tragic touch. But whether in prose or verse, he continues the poet of the Parisian workman and the petty trading class. He continually harks back to his lost youth in his sweetly melancholy romances, from which much real and delightful local color and Parisian atmosphere can be gleaned. He was very aptly called *le poète des humbles*. He has happily described himself as "a man of refinement who enjoys simple people, an aristocrat who loves the masses."

Consult: Lescure, *Coppée, l'homme, la vie et l'œuvre* (Paris, 1888); Driulhet, *Un poète français: François Coppée* (ib., 1902); L'Abbé Delmont, *Trois illustres conquêtes de la foi: Coppée, Brunetière, Bourget* (1905); Ernest Gaubert, *François Coppée* (1906).

**COPPÉE, HENRY** (1821-95). An American

educator and author, born in Savannah, Ga. He graduated at West Point in 1845, served in the Mexican War, and was assistant professor at the Military Academy from 1850 to 1855, when he became professor of English literature and history in the University of Pennsylvania. Here he remained for 11 years, after which he was president of Lehigh University until 1875 and a professor there till his death. In 1874 he was appointed a regent of the Smithsonian Institution. Among his publications were: *Elements of Logic* (1857); *Gallery of Famous Poets* (1858); *Gallery of Distinguished Poetesses* (1860); *Grant and his Campaigns* (1866); *The Conquest of Spain by the Arab-Moors* (1881); *Elements of Rhetoric* (10th ed., 1887). He edited two volumes of the *Comte de Paris's Civil War in America* (1876).

**COPPER** (symbol, Cu), a metallic element, distinguished from all other metals by its peculiar red color. The name is derived from the Latin *cuprum* (from the island of Cyprus), later *cuprum*.

**Physical Characteristics.** Specific gravity, (cast) 8.921, (rolled or hammered) 8.952; streak or powder, red; hardness, 2.5 to 3; heat conductivity, 89.8 (gold being taken at 100); electric conductivity, 93.08 (silver being taken at 100); melting point, 1981.5° F.; malleability and ductility, high.

**Chemical Characteristics.** Valency, I and II; atomic weight, 63.57; specific heat, 0.093, electrochemical equivalents, (cuprous salts) 191.2 ampere hours per pound, (cupric salts) 382.4 ampere hours per pound. Copper is easily soluble in nitric acid, aqua regia, and boiling concentrated sulphuric acid, slowly soluble in hydrochloric acid with access of air. Copper combines with oxygen to form two important oxides, cuprous oxide (Cu<sub>2</sub>O) and cupric oxide (CuO). It combines readily with various metals forming alloys, the more important of which are bronze (copper with tin), brass (copper with zinc), and monel metal (copper with nickel). (See ALLOYS.) From acid, neutral, and alkaline solutions copper is precipitated by hydrogen sulphide and ammonium sulphide as a brownish-black precipitate, cupric sulphide (CuS). Ammonia added in excess to solutions of cupric salts produces a clear fluid of an azure-blue color. Metallic iron in contact with acid solutions is covered with a coating of metallic copper.

**Production and Prices.** The following table shows the world's copper production for the year 1913 as compiled by *The Engineering and Mining Journal*, New York.

THE WORLD'S COPPER PRODUCTION IN 1913

SOURCE	Metric tons
Africa	20,000
Australasia	45,300
Bolivia	5,000
Canada	34,587
Chile	40,195
Cuba	3,417
Germany	25,000
Japan	65,000
Mexico	52,815
Peru	28,715
Russia	44,000
Spain and Portugal	52,300
Other Countries	30,000
United States	567,387
Total	1,000,716

From the foregoing table it will be noted that North America supplies 64.8 per cent of the world's copper, the United States alone producing 55.7 per cent.

The production of the United States is shown by States in the annexed table, as compiled by *The Engineering and Mining Journal*:

COPPER PRODUCTION OF THE UNITED STATES  
IN 1913

STATE	Pounds
Alaska . . . . .	23,360,000
Arizona . . . . .	401,223,786
California . . . . .	32,266,435
Colorado . . . . .	7,320,000
Idaho . . . . .	8,594,722
Michigan . . . . .	161,000,000
Montana . . . . .	284,210,911
Nevada . . . . .	83,829,329
New Mexico . . . . .	48,710,000
Utah . . . . .	148,274,658
Southern States . . . . .	20,857,849
Other . . . . .	9,223,891
Total . . . . .	1,228,811,581

The annual average prices for New York delivery prevailing for the last 10 years are shown in the following table, as compiled by *The Engineering and Mining Journal*:

AVERAGE PRICES FOR COPPER, 1904-1913

YEAR	Electrolytic cents per lb	Standard sterling per long ton	Lake cents per lb.
1904 . . . . .	12 823	58 884	12 990
1905 . . . . .	15 590	69 465	15 699
1906 . . . . .	19 278	87 282	19 616
1907 . . . . .	20 064	87 067	20 661
1908 . . . . .	13 208	59 902	13 424
1909 . . . . .	12 982	58 732	13 335
1910 . . . . .	12 738	57 054	13 039
1911 . . . . .	12 376	55 973	12 634
1912 . . . . .	16 341	72 942	16 560
1913 . . . . .	15 269	68 335	15 686

The prices given are for three classes of copper, which may be briefly defined as follows: (1) *electrolytic* copper, or copper electrolytically refined; (2) *standard*, the London term for ordinary commercial brands; (3) *lake*, applied to the product of the Lake Superior mines (Michigan), which, because of its peculiar occurrence and treatment, is of especial value in plate and tube mills.

**History.** Copper and copper-alloy objects are found in the prehistoric remains of (1) Egypt, dating back to the fourth dynasty (3800 to 4700 B.C.); (2) Asia Minor, dating probably to 3000 B.C.; (3) China (2500 B.C. ?). The remains of the Mycenaean, Phoenician, Babylonian, and Assyrian civilizations (1800 to 500 B.C.) have yielded a variety of copper and bronze objects. It is probable that the Egyptians obtained their copper from the mines located on the Sinai Peninsula. The copper used by the Greeks and Romans was first mined on the island of Cyprus. Later, during the Roman conquests, copper was found and mined in central Europe, Spain, and Britain.

On the American continent copper was known to, and used by, the aboriginal races. No dates can, however, be applied to its first use. The Lake Superior deposits were known to the French explorers in the seventeenth century. During the eighteenth century some small shipments of

copper ores were made from the Atlantic seaboard to Europe, originating from mines in Connecticut, New Jersey, and Pennsylvania. It was not until 1844 that copper came into prominence as a mineral product of the United States. Since that date the increase in production has been phenomenal, until at present the United States is alone credited with 56 per cent of the world's production.

**Mineralogy.** The principal copper-bearing minerals are: native copper, cuprite, or copper oxide ( $\text{Cu}_2\text{O}$ ); malachite, or green carbonate of copper ( $\text{CuCO}_3 \cdot \text{Cu}(\text{OH})_2$ ); azurite, or blue carbonate of copper ( $2\text{CuCO}_3 \cdot \text{Cu}(\text{OH})_2$ ); chalcocypite, or copper pyrite ( $\text{CuFeS}_2$ ); bornite or peacock copper ( $\text{Cu}_5\text{FeS}_4$ ); chalcocite, or copper glance ( $\text{Cu}_2\text{S}$ ); chrysocolla, or silicate of copper ( $\text{CuSiO}_3 \cdot 2\text{H}_2\text{O}$ ); tetrahedrite, a copper-antimony sulphide ( $\text{Cu}_3\text{Sb}_2\text{S}_7$ ); enargite, a copper-arsenic sulphide ( $\text{Cu}_3\text{As}_2\text{S}_6$ ); and covellite, or cupric sulphide ( $\text{CuS}$ ).

**Geology and Mining.** The origin and geological occurrence of these minerals is so varied, and so complex as to preclude any detailed description within the scope of this article. Suffice it, therefore, to briefly enumerate and describe the deposits of chief economic importance in America, which are: (1) the *native copper deposits of Lake Superior*; (2) *vein deposits*, as exemplified at Butte, Mont.; (3) *contact deposits*, as exemplified at Bisbee, Ariz.; (4) *disseminated or so-called "porphyry" deposits*, of which the Utah, Nevada, Ray, Miami, and Chino mines are examples, and (5) *pyritic deposits*, exemplified at Ducktown, Tenn., and in northern California.

1. *The Lake Superior deposits.* The valuable mineral here is native copper, occurring as a cement binding together or replacing the pebbles of a conglomerate, and as a filling in an amygdaloidal diabase. The largest producer of this district, the Calumet and Hecla mine proper, is now deriving the major portion of its ore from the amygdaloidal beds, the conglomerate ores being nearly exhausted. The average yield of copper from the ores mined and milled during recent years is from 14 to 22 pounds per ton. The handling of such low-grade ore at a profit has only been possible because of the very unusual and favorable natural conditions.

2. *The Butte deposits* consist of several series of large and numerous veins in granite. The ores, as mined latterly, yield from 40 to 70 pounds of copper per ton. The ore of the upper part of the zone of secondary enrichment has been largely exhausted, and the present output is made up mainly of ores from the lower horizons, primary chalcocite and similar minerals occurring at a depth of 2000 feet and over.

3. *The Bisbee deposits* have yielded large tonnages of exceptionally high-grade ores. The main ore bodies have been found on or near a limestone-porphyrty contact, the chief tonnages of former years having come from the limestone side of the contact; now, however, the lower-grade ore occurring in the porphyry is being developed with excellent results. For the year 1912 the yield in copper per ton of ore was 122 pounds.

4. *The disseminated or so-called "porphyry" deposits* consist of large areas of altered rocks carrying uniformly disseminated copper values. The yield of copper per ton of ore varies from 20 pounds, as in the case of Utah copper, which is mined by steam shovels, up to 33 pounds at

Miami, which is operated as an underground mine. Two South American deposits of this type are worthy of note: they are the Braden mine, and the property of the Chile Copper Company, both located in Chile.

5. *The pyrite deposits* consist of large masses or lenses of cupriferous pyrite occurring practically free from gangue. Deposits of this character usually yield copper values ranging from 32 pounds per ton, as in Tennessee, to 60 pounds per ton, as in northern California. Their economic importance is largely due to associated recoverable mineral values, i.e., gold, silver, and sulphur. Foreign mines of importance of this type are the Mount Lyell mine in Tasmania and the Kyshtim mine in Russia.

#### METALLURGY

**Extracting.** The methods employed in recovering copper from its ores may be divided into two general classes: (1) *mechanical methods*; (2) *chemical methods*. Ordinarily a combination of both methods is used.

1. *Mechanical or milling methods*, presuppose that in all cases the material to be treated has been crushed to a degree of fineness sufficient to liberate the particles of valuable mineral from the associated valueless material, and may be subdivided into the following methods: (a) *wet*, (b) *dry*, (c) *magnetic*, (d) *electrostatic*, and (e) *floatation*. Briefly, (a) *wet* and (b) *dry* milling separate the copper minerals from the associated barren rock (gangue) by making use of the relatively greater weight (for a like bulk) of the copper minerals as compared with the gangue. In the first case water, in the second air under pressure, is used as the working medium. (c) *Magnetic* milling is used at times when the copper minerals are mechanically associated with certain iron minerals which are susceptible to magnetic influence, and which may therefore be removed by passing the crushed ore through a magnetic field, thereby removing the iron minerals with the consequent increase in grade (copper content) of the remaining material. (d) *Electrostatic* milling makes use of the varying electrical conductivity of minerals, the crushed and dry ore being passed by gravity through a field of static electricity, with the result that each falling particle of ore is charged with electricity in a degree dependent on its mineral character, and as a result is correspondingly deflected in falling. (e) *Floatation* methods depend upon the fact that certain minerals (usually sulphides) are buoyed up by oil films or attached gas particles, while the associated non-metallic minerals are not so affected, the result being that when the crushed ore is brought in contact with oil or dilute acid solutions in proper receptacles a separation is effected. In all of the above-mentioned methods the valuable mineral is separated from the barren material, suitable mechanical means being provided to maintain and to provide for the effected separation. The valuable product is usually termed "concentrate" and is given further treatment as indicated below, while the valueless product is called "tail" or "tailings" and is discarded.

2. *Chemical methods*, adapted for treating crude ore, or, as is now more often the case, using as their base material obtained from some one of the mechanical or milling methods above described, may be subdivided into (1) *dry*

*methods, or smelting*, and (2) *wet, or hydro-metallurgical*.

(1) *Dry methods, or smelting*, as carried on to-day, may be subdivided according to the type of furnace employed into (a) *reverberatory smelting*, (b) *blast-furnace smelting*, and (c) *electric smelting*. In (a) *reverberatory smelting* the dimensions of the furnaces employed reach a maximum width of 20 feet by a length of 120 feet, the height being small as compared with the width. The smelting procedure is as follows: The ore, after having received a preliminary heating or roasting treatment in circular multi-hearth furnaces of the McDougall or Wedge type, is mixed with suitable fluxes (limestone, quartz, or iron ore) and charged hot on the furnace bottom and fused by extraneous heat (usually from oil burners at one end of the furnace). The products of this fusion are *slag* and *matte*, which are removed from the furnace while molten. The *matte*, which accounts for the copper of the original ore, is subsequently retreated by processes hereafter described. The waste heat from furnaces of this type is used for steam generation. (b) *Blast-furnace smelting*. The ore, either in a crude state or partially roasted as metallurgical requirements may dictate, is mixed with proper fluxes and fuel and charged into furnaces whose height is invariably greater than their width (dimensions vary, ranging in width from 36 to 60 inches, in length from 36 to 612 inches, and in height from 6 to 24 feet). These furnaces have near their bottom a varying number of air inlets (tuyeres) through which air under pressure is forced with the purpose of giving the oxygen necessary for the burning of the fuel and for the thermo-chemical reactions incidental to smelting. The products from the fusion of the charge are *slag*, *matte*, and *fumes*. The *matte* is retreated, the fumes may or may not be treated, for the recovery of the sulphur which they contain. (c) *Electric smelting* is still in the experimental stage, the basic idea being to do away with the use of carbonaceous fuel as a heat producer, substituting therefor heat resulting from the passage of an electric current.

The old Welsh or German methods, consisting of stage smelting in furnaces of small dimensions, are but little used at the present time.

*Matte treatment.*—The *matte* obtained from the above-described smelting methods consists of a copper-iron sulphide, its composition changing with conditions. Usually the range of copper contained will be from 25 to 60 per cent (in exceptional cases the *matte* may be as low as 10 per cent copper, as at Ducktown, Tenn., in which case the *matte* is given a secondary smelting in blast furnaces for the purpose of increasing its copper content). In order to eliminate the iron and sulphur contained the *matte* may be treated in (a) *reverberatory furnaces* or (b) in *converters*. (a) The *reverberatory method* of treatment, not now generally used, provided for the resmelting of the roasted *matte* with the addition of silica in small reverberatory furnaces, the iron of the *matte* combining with the silica forming *slag* which is removed as formed, the resulting impure copper being subsequently refined. (b) The *converter method* of treatment, now practically universal, provides for the treatment of the molten *matte* in barrel-shaped vessels fitted with air inlets. According to the character of

the lining of these vessels they have been called *acid-lined* converters and *basic-lined* converters. The basic lining has superseded the acid and is now generally used. In both types the sulphur of the matte is eliminated by oxidation; while the iron forms a slag—in the first case with the siliceous (acid) lining of the converter, or in the second case with silica added through the mouth of the converter—and is poured off at intervals leaving the impure or so-called blister copper (analyzing 96 + per cent copper) to be finally cast as ingots or as anodes and subsequently refined.

(2) *Hydrometallurgical methods* aim at the obtaining of the copper contained in the ores under treatment in the form of an aqueous solution. Basically they are an adaptation of laboratory methods of analysis to commercial ends, and as so applied are a development of the last 50 years. The process is in general as follows:

(a) *Roasting the copper as occurring in the ores soluble*. This normally means preliminary roasting for those ores containing sulphur in combination with the copper. The roasting may be carried on with or without the addition of reagents ( $\text{FeS}$  or  $\text{NaCl}$ ) and means the heating of the ore by the use of extraneous fuel to a degree of heat varying from  $300^{\circ}$  to  $800^{\circ}$  C.

(b) *Leaching*. The roasted ore is subjected in suitable vessels to the action of a dilute acid solution (the solvent). Those solvents which have had the most successful application to date are sulphuric acid, ferric sulphate, hydrochloric acid, ferric chloride. (c) *Precipitating*.

The copper solution obtained is removed from the ore pulp and subjected to either chemical or electrical treatment. Probably the most used method of precipitating (removing in solid form) copper from solutions is that employing iron (scrap iron), the copper being deposited in a finely crystalline form, the equivalent iron replacing it in the solution. Copper thus produced is naturally impure and must therefore be melted down and refined. Hydrogen sulphide has also been used as a precipitant, the copper coming down in the form of a sulphide and subsequently retreated and refined. Carbonate of lime as a precipitant has been tried, the copper being brought down as an oxide, which is further treated for the production of commercial copper.

The passage of a suitable direct electric current through a copper-bearing solution, using insoluble anodes and pure copper cathodes, causes the contained copper to be deposited in a finely crystalline form at the cathode, this cathode copper being melted and cast in salable form or subjected to refining, depending on the character of the deposit.

**Refining.** Copper, either as produced in the form of "blister copper" or as a product from hydrometallurgical treatment, is usually refined by either of the following methods: (1) *reverberatory* or (2) *electrolytic*. 1. *The reverberatory method* (English process) procedure is to melt the impure copper down in saucer-shaped furnaces by extraneous heat and then subject it to proper oxidizing and reducing action with the addition of small quantities of silica and iron. But a small percentage of the world's copper is now handled by this method. 2. *Electrolytic refining*, now generally used, consists of casting the impure copper in slabs, placing them in suitable tanks as anodes, using as cathodes sheets of refined copper; the tanks

being filled with a copper sulphate solution (the electrolyte) showing some free acid. The passage of a direct electric current causes copper to be deposited at the cathode with the release of a corresponding quantity of sulphuric acid which attacks the copper of the anode, thus continuously regenerating the electrolyte. This cyclic action is continued until the anodes have been consumed to a minimum of waste. The impurities in the anode not being soluble fall and collect on the tank bottom in the form of a *sludge*. This sludge contains the precious metals and receives a subsequent treatment for their separate recovery. The refined copper cathodes are removed from the tanks when built up to a convenient thickness, are washed and dried, and melted down under proper oxidizing and reducing conditions in a special form of reverberatory furnace (casting furnace), the molten copper being cast in shapes adapted for commercial uses, and analyzes approximately 99.8 + per cent copper.

**Uses.** Copper, because of its abundance in nature and its amenability to metallurgical treatment and consequent low cost, its high electrical and thermal conductivity, its great tensile strength and the ease with which it may be worked, is consumed in large quantities in the manufacture of electrical and mechanical apparatus, alloy metals, munitions of war, coins, shipbuilding, and in architecture and the arts.

#### TERMINOLOGY

**Anode.** Term used in the electrolytic treatment of copper to denominate that electrode or conductor by which the electric current enters into the solution or electrolyte.

**Black copper** (coarse copper). An impure metal normally ranging from 70 per cent to 99 per cent copper with less than 2 per cent sulphur. Usually a product resultant from the smelting of oxidized (nonsulphur-bearing) ores.

**Blister copper.** The final product of direct smelting of copper ores, the copper ranging from 96 per cent up.

**Cathode.** Used in contradistinction to anode and indicates that electrode by which the electric current leaves the solution.

**Cement copper.** The copper obtained by precipitating copper from solutions by the use of iron.

**Concentrate.** The valuable mineral product resultant from mechanical treatment of an ore.

**Converting.** A special form of treatment for the oxidation and reduction of matte to blister copper.

**Electrolytic copper.** The copper produced by electrolytic refining methods.

**Flux.** Any material added in smelting for the purpose of facilitating the fusion of the charge.

**Head.** A term used in the mechanical treatment of ores, indicating the material as delivered to the mill, prior to any treatment other than crushing.

**Matte** (coarse metal). The valuable product resultant from smelting sulphur-bearing ores. Consisting of copper, iron, and sulphur in varying proportions.

**Mill.** A general term for a plant using mechanical or hydrometallurgical processes of ore treatment.

**Milling.** The mechanical treatment of an ore, having as its purpose the separation of the valuable from the nonvaluable minerals.

**Ore.** A mine product containing minerals of economic value.

**Refining.** The further treatment of white metal or blister copper with the purpose of producing a commercially pure copper (99.8 + per cent) and the incidental recovery of any associated precious metals.

**Roasting.** Subjecting ore or furnace product to heat without fusion with the object of removing or decreasing the contained sulphur.

**Slag.** The valueless scoria produced in smelting processes.

**Smelting.** The reduction of ores or concentrates in furnaces by heat and fusion.

**Tail (Tailings).** The waste or discarded product resulting from the mechanical treatment of an ore.

**White metal.** A matte containing but a relatively small amount of iron, the copper approximating 60 to 75 per cent.

**Wire bar.** A special form of casting suited in dimensions to the use of wire-drawing machines.

**Wire-bar copper.** Refined copper cast in wire bars.

**Bibliography.** For information on those subjects briefly touched upon in the foregoing article, consult the following books: CHEMISTRY, Fresenius, *Manual of Qualitative Chemical Analysis* (New York, 1913); Miller, *Quantitative Analysis for Mining Engineers* (ib., 1907); MINERALOGY, Dana, *System of Mineralogy* (ib., 1913); GEOLOGY, Kemp, *Ore Deposits of the United States and Canada* (ib., 1900); Weed, *Copper Mines of the World* (ib., 1907); MINING, Hoover, *Principles of Mining* (ib., 1909); METALLURGY, Richards, *Ore Dressing* (ib., 1909); Schnabel, *Handbook of Metallurgy* (ib., 1907); Greenawalt, *Hydrometallurgy of Copper* (ib., 1912); Peters, *Principles of Copper Smelting* (ib., 1907); STATISTICS, *Mineral Industry* (annual, ib.); *Engineering and Mining Journal* (weekly, ib.).

**COPPER, IN SHIPBUILDING.** A ship which has her bottom sheathed with sheet copper is said to be coppered, or copper-bottomed. The copper so used is in sheets measuring about 48 by 14 inches, and weighs 18 to 32 ounces per square foot. The copper is always applied over wood, to which it is nailed, at ordinary draft the line of the copper is usually well above water. It seems to keep the bottom free of serious marine growth, which readily attaches itself to wood and less readily to iron. Coppering checks the formation of marine growth in two ways—as a germicide (the carbonate of copper formed is a deadly poison to animal and vegetable life) and by exfoliation, the film of copper salt peeling off quite readily, carrying with it the attached growths. When cheapness is more desired than strict efficiency, alloys of copper are used for sheathing. Iron and steel ships are coppered by first putting on a thickness or two of wood planking; this is to avoid galvanic action, which may be serious if the hull and copper are connected. In the United States navy very few vessels have been coppered, and the Board of Construction in the Navy Department has decided against coppering except for certain small vessels for special service. A wooden ship is copper-fastened when the bolts used in her underwater body

are of copper instead of iron. Iron bolts rust rapidly when exposed to the action of salt water, particularly when merely damp, or wetted and dried alternately. This seriously reduces the strength of the ship. Copper bolts are eaten away much less rapidly.

**COPPERAS** (ME. *coperoase*, from OF., Fr. *couperose*, from ML. *coporosa*, *cuperosa*, *cup-rosa*, from Lat. *cupri rosa*, rose of copper). The name given to the commercial ferrous sulphate and also applied to the native mineral melanterite.

**COPPER BUTTERFLY.** Any of several small butterflies, so called in reference to their colors. In England collectors apply the name to those of the family Lycaenidae in general. In the United States it is restricted to the closely related forms of the genus *Chrysophanus*, which, however, is found also in the Old World.

**COPPER CLIFF.** A town in Sudbury District, Ontario, Canada, on the Canadian Pacific Railway, 4 miles west of Sudbury. It is of recent origin, having grown into recognition since 1901. It is dependent upon the mining and smelting of copper and nickel, which abound in the district. Good fishing and hunting are to be had in the vicinity. Pop., 1911, 3082.

**COPPERFIELD, DAVID.** See DAVID COPPERFIELD.

**COPPER GLANCE.** See CHALCOCITE.

**COPPERHEAD.** A venomous North American snake (*Ancistrodon contortrix*) of the rattlesnake family. It may exceed 4 feet in length, and has a burnished copper-colored head, hazel-brown (sometimes golden) body, with Y-shaped dark blotches on the sides, which usually meet over the back. The belly is marked with round black spots. The tail is tapered, greenish when young, chestnut in age, and has no rattle; nor

THE COPPERHEAD.

(Top of head, and face view.)

does the snake vibrate it against the grass, "and so produce a warning sound not unlike that of the rattlesnake," as is often said, more than is the habit of all snakes when excited. Another unfounded fable is that it waits until you pass and then strikes from the rear. The truth is it is sluggish, moving about mainly at night, and by day seeks to avoid notice and will not bite unless greatly alarmed or provoked; most accidents result from picking it up or touching it with the hand in handling brush or stones in the woods or clearing swamps. Its bite is as deadly as that of any snake of its size, and the absence of rattling makes it especially dangerous. In the fall it seeks some underground den, where occasionally several have been found entangled together in dormancy; these are usually, if not always, pregnant females. When aroused in spring, it seeks swamps and wet meadows, where its food (mainly mice) is most abundant, and where the young are brought forth alive in midsummer. This snake is known from Massachusetts to the Rio Grande, especially in mountainous districts, and is still common in the

rocky hills of the Hudson and Connecticut valleys. It has many names, such as "pilot," "red-eye," "red adder," "copper-belly," and, in the South, "cotton-mouth" and "moccasin"—the last confusing it with its near relative, the true or water moccasin (q.v.). Consult Stejneger, "The Poisonous Snakes of North America," in *Annual Report of United States National Museum for 1893* (Washington, 1895), and Ditmars, *The Reptile Book* (New York, 1907). See Plate of RATTLESNAKES.

**COPPERHEADS.** A name given by their political opponents during the Civil War to those Northern men who, believing the conquest of the South impossible—though not necessarily sympathizing with the Southern cause—strenuously objected to the vigorous prosecution of the war by the administration. In some parts of the country the name was uniformly used as synonymous with "Democrats." The most prominent and most obnoxious of the "Copperheads" was Clement L. Vallandigham (q.v.). The name was taken from the copperhead snake, which gives no warning before it strikes. It originated in 1862 and quickly came into general use throughout the North. Another explanation of the name is that it came from the habit of the extreme opponents of the war wearing as a badge a button cut out of a copper cent on which was the head of the Goddess of Liberty.

**COPPER INDIGO.** A name given to the mineral covellite, especially when found in spheroidal masses of an indigo-blue color, as is the case at various localities in Thuringia and at Vesuvius. Covellite is a copper sulphate.

**COPPERMINE RIVER.** A river of northern Canada, so named, in common with the mountains to the west of it, from the metallic products of the vicinity. It rises in Point Lake, Mackenzie Province, and enters Coronation Gulf, in the Arctic Ocean, about lat. 68° N. and long. 116° W. (Map: Canada, G 3). The Coppermine River is not navigable, being throughout its course of over 300 miles little better than a series of falls and torrents.

**COPPER NICKEL.** See NICCOLITE.

**COPPER-NOSED BREAM** (so called from the color of the snout). The blue sunfish, or dollardee (*Lepomis pallidus*), of the Mississippi valley. See SUNFISH; and Plate of DARTERS AND SUNFISH.

**COPPERPLATE ENGRAVING.** See ENGRAVING.

**COPPER PYRITES.** See CHALCOPYRITE.

**COPPER RIVER.** A river of Alaska, whose source is a glacier of the same name on the northern slope of Mount Wrangell. It flows at first northward, then westward and southward to the Gulf of Alaska, into which it empties at long. 145° W.—just west of Controller Bay (Map: Alaska K 5). Excepting the mountainous region in which the stream originates, the topography of its basin reverses the usual rule, for the river's upper course, once it is fairly clear of Wrangell's slope, lies through a broad plain, while its lower course carries it through the Chugach Mountains, which extend almost down to its delta. Its length is about 300 miles, and its basin has an area of about 23,000 square miles. Its fall is about 3600 feet, or at an average of nearly 12 feet a mile. From Copper Center the fall is nearly 7 feet a mile. Its chief tributary is the Chitna, from the east. Consult Mendenhall, "Geology of the Central

Copper River Region, Alaska," in *United States Geological Survey, House Document No. 197* (Washington, 1905).

**COPPERSMITH** (translation of the native Philippine *tambagut*, which is imitative of the bird's cry). One of several barbets (q.v.) of India and eastward to the Philippines, which are called by the natives by names meaning "coppersmith," "ironsmith," etc., on account of their sharply accented metallic notes. A familiar species in Natal is called "tinker bird." They are gorgeously plumaged, sluggish, fruit-eating birds, very numerous and noisy, but keeping in the tops of the trees and making only short, heavy flights. The crimson-breasted coppersmith (*Megalama hamacephala*) is one of the best known and most gaudy.

**COPPET**, kó'pá'. A village in the Canton of Vaud, Switzerland, situated on the west bank of the Lake of Geneva, 9 miles north-northeast of Geneva (Map: Switzerland, A 2). The house in which Madame de Staël lived is still standing and contains some excellent paintings and sculpture. Watches and clocks are made in Coppet. Pop., 1900, 552; 1910, 581.

**COP'PICE.** See CORPSE.

**COP'PINGER**, JOHN JOSEPH (1834-1909). An American soldier. He was born at Queens-town, Ireland, and early joined the papal army in the struggle against King Victor Emmanuel. Afterward he came to the United States, was appointed a captain in the Fourteenth Infantry in 1861, served throughout the Civil War, being brevetted major and lieutenant colonel for services at Trevilian's Station and Cedar Creek, respectively, in 1864. In 1865 he became colonel of the Fifteenth New York Cavalry. He served in several Indian campaigns (1866-68), receiving the brevet of colonel (1868), and was promoted to be major of the Tenth Infantry (1870), lieutenant colonel of the Eighteenth Infantry (1880), colonel of the Twenty-third Infantry (1891), and brigadier general on April 25, 1895. During the Spanish-American War he was appointed major general of United States Volunteers and was placed in command of the Fourth Army Corps, stationed at Camp Wheeler, Huntsville, Ala. He was retired from active service Oct. 11, 1898.

**COPPINO**, kóp-pé'nó, MICHELE (1822-1901). An Italian statesman and author. He was born in Alba, Piedmont, and was educated in Turin, where he became professor of Italian literature in 1861 and rector in 1869. He was Minister of Education in the cabinets of Rattazzi (1867), Depretis, Cairoli (1876-79), and Depretis (1884-88), in which capacity he secured the passage of a law regulating compulsory elementary education. He contributed largely to the *Rivista contemporanea*.

**COP'RA** (Hind. *khopra*, from Malayalam *Koppara*). The dried kernel of the coconut. It is used for the coconut oil which it yields and coconut stearin. Copra, either sun dried or kiln dried, contains 50-65 per cent of oil, while hot air dried may run as much as 74 per cent.

**COPRINUS.** See FUNGI, EDIBLE, for article, and Colored Plate.

**COPROLITES** (from Gk. *kópos*, *kopros*, dung + *lithos*, *lithos*, stone). The fossil excrements of animals found at times in the Paleozoic and Mesozoic strata of the earth's crust. Their true nature was first inferred from their occurrence in the bodies of several species of

ichthyosaurus, in the region where was situated the intestinal tube. It has been since shown that they are the voidings chiefly of saurians and also of fishes. They often contain portions of scales, bone, teeth, and shells, the indigestible parts of the food on which the animals lived. Occasionally they may be found exhibiting the spiral twisting and other marks produced by the conformation of the intestinal tube, similar to what is noticed in the excrement of some living fishes, and some specimens have been erroneously described as plants. These peculiar markings obtained for them the name, when their true nature was unknown, of "larch cones" and "bezoar stones." Coprolites are found to contain a large quantity of phosphate of lime; and as this forms a valuable manure, the deposits containing them have been largely quarried, especially in England, where they are found over extensive areas in Norfolk, Essex, Cambridgeshire, and Suffolk. The coprolites are extracted by washing the earth and are then treated with sulphuric acid; which converts their lime phosphate into a soluble form.

Among the most interesting coprolites are those of spiral form from the Waverly group of Pennsylvania and elsewhere, originally described as fossil algae and problematic plants under the generic names of *Palaeozyrus*, *Spirangium*, *Spiraxis*, and now known to be the dung of ancient sharklike fish such as *Cladoselache*. The silicified coprolites of the Lias of Hanover, Germany, have afforded great numbers of radiolarian remains which have been described by Rüst. (See *RADIOLARIA*.) Consult Mantell, *Petrifactions and their Teachings* (London, 1851), and id., *Medals of Creation* (ib., 1844).

#### COPROPHAGY. See BULIMIA.

**COPSE**, or **COPICE** (OF. *copenz*, from *coper*, Fr. *couper*, to cut, from OF. *coup*, *caup*, *cop*, *colp*, Fr. *coup*, from ML. *colpus*, blow, from Lat. *colaphus*, Gk. *κόλαφος*, *kolaphos*, buffet, from *κόλλω*, *kolaptein*, to strike). A name given in England and elsewhere to a natural wood or plantation in which the trees are periodically cut before being allowed to attain the size of timber trees, and where new shoots are permitted to grow from their roots or stumps. Some kinds of trees do not send up new shoots; but many—as the oak, birch, chestnut, ash, elm, maple, alder, hazel, and willow—very readily do so, especially when not allowed to attain too considerable a size before being cut over. Copsewoods are sometimes planted to vary and beautify the landscape, but more generally with a view to profit, either owing to a great local demand for their produce, or to peculiarities of soil and situation. It often happens that, owing to scantiness of soil or to unfavorable subsoil, oaks and other trees, after growing vigorously for a number of years, are arrested and remain almost stationary in their growth. In such circumstances it is advantageous to cut them over early and to treat the plantation as a copse, the former vigor being again manifested in the young shoots, and the land yielding in this way a greater return to its owner. Oak and birch are much planted as copsewood, in consequence of the demand for their bark; the trees are cut over every 12 to 25 years, dependent upon the character of the soil, climate, etc. The largest pieces of the wood are used for making wheel spokes and for other purposes of timber; the

smaller portions are used for making charcoal and firewood. Ash is sometimes planted as copse, with a view to the employment of the wood for handles of implements, hurdles, hoops, etc., the wood of the ash, even when very young, being highly valued for strength and elasticity. Chestnut copses are planted in England to supply hop poles. Hazel is a very common copsewood, being in great demand for making crates, etc. Besides the cultivation of different kinds of willow or osier for basket making, in which they are cut over annually, some of the species are cultivated as copse, and cut every five, six, or seven years, for hoops, crates, etc., the species which is deemed most suitable being *Salix cuprea*. *Salix alba* is also commonly employed in copse plantations for larger willow wood. In some countries copsewood is particularly valued for the regular supply of fuel which it affords.

In cutting copsewood care is taken to dress the stumps so that water may not lodge in them and cause them to rot. The size to which the stems are allowed to attain before being cut, and the frequency of cutting, differ according to the different kinds and the uses intended. Stems more than 4 inches thick are generally cut with the saw, but smaller stems with a curved bill or axe cutting upward.

#### COPTIC VERSION. See BIBLE.

**COPTIS** (Neo-Lat., from Gk. *κόπτειν*, *koptein*, to cut; referring to its divided leaves), or **GOLD-THREAD**. A genus of plants of the family Ranunculaceae. *Coptis trifoliata*, the best-known species, is a native of the north of Europe, Siberia, Greenland, Iceland, and North America. It grows in swamps and derives its popular name from the golden-yellow color of its long, threadlike rootstocks. The rootstocks are very bitter and have some reputation as a tonic. They also contain a yellow dye. The leaves of this plant have three wedge-shaped leaflets, and its leafless stems bear each a solitary, rather pretty white flower, the petal-like sepals of which have yellow bases.

#### COPTOS. See KORROS.

**COPTS**. The name given to the Christian descendants of the ancient inhabitants of Egypt. The Arabic word *Qubt* is probably nothing but a mutilation of *Egypt* (not of *Koptos*, or *Jacobite*). The number of the Copts was estimated in 1907 at 706,322, and the total number of Christians, 881,692. They are most numerous in the towns of Upper Egypt, south of Assiut. As they usually live in towns and are rarely engaged in agriculture, they present a certain contrast to the Mohammedan peasants. They are, as a rule, of smaller stature than the latter and of a lighter complexion. Most of the Copts still wear the black coat and black or blue turban which they were forced to assume in the time of the Mohammedan persecution. They are frequently goldsmiths and money lenders, and they are also excellent clerks and accountants, although few of them attain the higher governmental positions. Their character is apt to be marked by sullenness, distrust, and avarice. Although the Arabs owed the conquest of Egypt to the assistance of the Copts, they soon began to oppress them cruelly, taxing them to the utmost, hindering their religious worship, and occasionally even branding them. These persecutions reduced the numbers of the Copts very considerably. A few of them are at present

adherents of the Roman Catholic church; still fewer of the Greek church. The majority adhere to the old National church, which originated in a schism after the rejection by the Council of Chalcedon (451 A.D.) of the Monophysitic doctrine, the Egyptians not accepting the decision of the council. A long and bitter struggle against the orthodox Byzantine government arose, lasting until this was replaced by the Arab invasion. The Coptic sect is also called Jacobite, after a prominent teacher of the fifth century. The highest ecclesiastical dignity of the Monophysitic church is the Patriarch of Alexandria, who at present, however, resides at Cairo. This patriarch is always chosen from the monks of the convent of St. Anthony. By him the metropolitan of Abyssinia is nominated. The rest of the clergy represent orders similar to those of the Roman Catholic church. They have 12 bishops. The monks and nuns were once very numerous, but they have in the course of time greatly diminished in number. The elaborate rites of the church present some rather curious features—e.g., the celebration of the Lord's Supper with unleavened bread dipped in wine, and the strict division of the sanctuary or chancel from the body of the church. The Copts practice circumcision and baptize by immersion. The feasts and fasts, which are very strictly observed, are numerous. Owing to the extreme length of the service and the absence of seats, many worshippers lean on crutches which they bring with them. The Copts are very bigoted and are especially fanatical against other Christian denominations. Of late, however, the American Presbyterian mission has worked among them with success. At Qus it converted the Coptic Bishop and his whole congregation. The Coptic language, which was spoken from the third to the sixteenth century, but has now become extinct as a vernacular, belongs to the Hamitic group of African languages. It is of great importance linguistically as being the descendant of Ancient Egyptian (see EGYPT, *Language*), although its own literature is of comparatively small importance. In character Coptic was at first almost monosyllabic, like Egyptian, but it developed at a later period into a highly agglutinate language (q.v.). The morphological side of Coptic was therefore little developed, but the phonology became the real basis of the grammatical system for variations of meaning. It gained in consequence a far greater flexibility than Egyptian had possessed, and it also enriched its vocabulary by many Greek loan words, as well as a smaller number of Latin and Persian terms. Arabic words are significantly lacking in the Coptic vocabulary. The language was divided into five principal dialects. These were the Sahidic, or Thebaic and Achmimic in Upper Egypt, the Boheiric and Memphitic in Lower Egypt, and the Fayumic, or so-called Bashmuric, spoken near Lake Menzalen in central Egypt. There were also doubtless a number of dialects of much importance of which no record has been preserved. Of the Coptic dialects the oldest is the Sahidic, whose literature dates from the period extending from the third to the seventh century, comprising annals, translations of the Bible, apocryphal and Gnostic books, legends of the saints, and the like. This oldest literature has been in great part lost, and only fragments remain. The Boheiric dialect, dating from the seventh century, con-

tains by far the greater amount of extant Coptic literature, again in the main translations from the Greek or revisions of the older Sahidic texts, as well as a few translations from the Arabic. It is this dialect which is still used in the liturgy of the Coptic church. The Fayumic dialect has only very scanty literary remains, which have been discovered lately by excavations in Egypt. The Sahidic is the most harmonious and has more Greek loan words than the Boheiric, while the Fayumic stands midway between the two. The Coptic script has 31 letters, 24 of which are Greek uncials (see UNCIAL LETTERS), while the remaining characters, for *sh* (*sh*), *f*, *h* (German *ch*), *h*, *h* (French *j*), *o* (English *ch* in *child*), and *ti*, are derived from the Egyptian demotic script. After the Mohammedan conquest of Egypt, Arabic gradually displaced Coptic, although Coptic is said to have been spoken as late as 1633 by one old man.

Strzygowski, *Hellenistische und koptische Kunst in Alexandria* (Vienna, 1902); "Die Entstehung der koptischen Kirche," introduction to R. Haupt's *Katalog 5* (Halle, 1905).

**COPULA** (Lat., bond). A term employed in logic to designate the word which expresses the relation of subject and predicate in a judgment. Thus, in the sentence "Art is long," *art* is the subject concept, *long* the predicate concept, and *is* the copula. The copula is either expressed separately, as by some part of the verb "to be," as in the above sentence, or it is contained in the word expressing the predicate, as "The flower blooms," i.e., *is* blooming.

**COPULATIVE** (Lat. *copulativus*, from Lat. *copulare*, to join together, from *copula*, bond, from *co-*, together + *apere*, Gk. *ἀπέρω*, *haptern*, to fasten). A term applied to words and sentences that introduce something which adds to the preceding thought, in the same direction. They are sometimes for this reason called "cumulative conjunctions." The principal ones are *and* (the typical copulative conjunction), *also*, as well as *likewise*, *moreover*.

Adversative, marking degrees of opposition of thought in the words and expressions connected; as, *but*, *however*, *nevertheless*, *only*, *still*, *yet*.

Causal, introducing a reason or cause; as, *consequently*, *for*, *hence*, *therefore*.

Alternative, expressing a choice between two or more things; as, *either*, *else*, *nor*, *neither*, *whether*.

When two conjunctions connect closely related parts of a sentence, they are called "correlatives"; as, *either—or*, *neither—nor*, *whether—or*. The subordinating conjunctions may also

be subdivided, the principal classes being place, time, manner, cause, comparison, purpose. See CONJUNCTION.

**COPY** (OF. *copie*, abundance, from Lat. *copia*, from *co-*, together + *opes*, riches). In the fine arts, a reproduction of a work, whether painting, statue, or engraving, not by the original artist. A copy made by the master himself is called a repetition or replica (in French, a *doublé*). A copy of a statue, or other piece of sculpture, taken from a mold, is not called a copy, but a *cast* (q.v.).

**COPYHOLD.** A species of estate in land in Ireland and England, the modern form of the ancient tenure in villinage, closely resembling in many particulars the feu rights of Scotland. Copyhold is expressed technically as "tenure by copy of court roll at the will of the lord, according to the custom of the manor." This means that it is tenure of land, being part of a manor, the title being evidenced by the court rolls of the manor, and the right of the owner being in conformity with the immemorial customs of the manor. The addition, "at the will of the lord," serves only as a memorial of the derivation of this species of estate from the estates granted in old times to the bondmen, or villeins, which estates were, in theory at least, resumable at the pleasure of the lord. But the will of the lord has from a very early period been controlled by the custom of the manor, which forms the law of the tenure; and as this custom must be immemorial, i.e., extending to the reign of Richard I, no new copyholds can be created.

The custom of each manor may vary from that of others in important particulars. In some the copyhold lands are held for life only; in some they descend according to particular rules of their own; in most, however, they descend according to the ordinary rules of inheritance of freehold estates. But the custom, whatever it may be, cannot be altered by the holder of the copyhold; he cannot, e.g., entail his land unless the custom warrants it.

One practical distinction of much importance, drawn between freehold and copyhold land, is the mode in which it must be conveyed. An ordinary conveyance is ineffectual in regard to copyhold, and indeed would operate, like other attempts to break through the custom which forms the title, as a forfeiture. The owner comes to the steward of the manor and by a symbolical delivery, according as the custom may prescribe, surrenders the land to the lord of the manor, in order that it may be granted again to such person and on such terms as are desired and as the custom authorizes. The steward, by a repetition of the symbolical delivery, transfers the copyhold to the person in question in terms of the surrender; and the transferee then pays the customary fine, or fee, and takes the oath of fealty. This is called conveyance by surrender and admittance. In the case of an heir succeeding there is no surrender, but there is admittance only upon payment of the customary fine, and it is enforced by a customary penalty. A mortgage is effected by a surrender upon condition that the money is repaid and the admittance takes place only in event of failure of payment. A copyhold may in like manner be devised by will, the devisee being admitted on the death of the deviser.

The inconveniences and loss accruing through the variety of customs to which copyhold lands

are subject led the legislature to provide for their gradual extinction. By consent of the copyhold commissioners, all the services due to the lord of the manor may be commuted for a fixed rent. The lord of every manor is also authorized to enfranchise, or convert into freehold, the copyhold lands by agreement with their owners, and either the lord or the tenant may compel enfranchisement on payment either of a fixed sum, where it is at the instance of the lord, or of an annual rent, where it is at the instance of the tenant, fixed in both cases by the commissioners. See MANOR; TENURE; SEBF; and consult: Elton, *Treatise on the Law of Copyholds and Customary Tenures of Land* (2d ed., London, 1893), and Scriven, *Treatise on Copyhold, Customary Freehold, etc.* (7th ed., ib., 1896).

**COPYING MACHINES AND PROCESSES.** The various contrivances for procuring duplicates of manuscripts without the labor of transcribing them may be reduced to two classes. In the one, the writing or typewriting is first made and then copied; in the other, the copy and the original are produced at the same time. The essence of the first method is this: In writing the original, an ink is used that is made for the purpose, or common ink is thickened by the addition of a little sugar or glycerin. If the typewriter is used, a copying ribbon or one impregnated with such an ink is employed. When the writing is dry, a damped sheet of thin unsized or tissue paper is laid upon it, and over this a piece of oiled paper. The whole is then subjected to pressure, and the damped paper is found to have received an impression of the writing. It is of course the reverse of the original, but the thinness and transparency of the paper allows it to be read right on the other side. The machines for communicating the pressure are of various kinds. Some pass the sheets between rollers like the copperplate press; others act on the principle of the simple screw press. A simple plan is to wrap the sheets around a wooden roller of about an inch diameter, lay this upon a table, and roll it under a flat board, pressing all the while. In the second method of copying, prepared blackened or carbon paper is laid between two sheets of thin writing paper. The writing is traced firmly on the upper sheet, with a steel or agate point, or common lead pencil, and the lines are found transferred in black from the blackened sheet to the paper adjacent. By having several of these blackened leaves, a number of copies may be produced at once, so that the method can be employed in duplicating invoices, newspaper copy, and telegraph messages. The blackened paper is prepared by saturating it with a mixture of lard and lampblack. The *manifold writer* of Wedgwood, invented in 1806, was on this plan.

This is, of course, the underlying basis of obtaining carbon copies with the typewriter. A sheet of paper upon which the copy is to be made is placed next to the cylinder, and in contact with it a sheet of carbon paper. Other sheets of paper and carbon paper to the limits of the capacity of the machine and the number of copies desired follow, and finally the original sheet on which the ribbon leaves the mark of the characters when struck by the type. Press copies are being supplanted in large part by carbon copies for business and official correspondence, as the permanence and indelibility

of the ink is not so assured, and the cost of labor and material is much greater. The United States government Commission on Economy and Efficiency made recommendations to that effect in 1911.

The first suggestion for a copying press is said to have been made by Benjamin Franklin, who sanded the yet wet ink of his manuscript with emery and then passed the manuscript between rollers in contact with a soft, highly polished pewter plate. This received the impression from the emery, from which numerous copies could be made by the copperplate printing process. In 1778 James Watt adopted the simple plan of copying by pressing transparent, bibulous paper against the damp manuscript, so that the writing would be transferred as on a blotter and then read from the other side. Watt devised not only the copying process with a special ink but also a rotary and other presses.

In the *papyrograph* a specially prepared paper is used, upon which words are written with a common pen, but with a special ink. The sheet is then soaked in water, and the ink corrodes the fabric of the wet paper, leaving open lines in place of the writing. The sheet is then used as a stencil, like that prepared by the electric pen. The *mimeograph* is an apparatus invented by Thomas A. Edison, by which stencils of written pages are obtained for the purpose of producing an indefinite number of copies. It consists of a fine-pointed steel stylus, moving over the surface of a sheet of tissue paper, coated on one side with a film of sensitive material. This paper is placed on a plate of steel, known as the baseboard, upon which are cut intersecting corrugations, numbering 200 to the inch. As the stylus moves over the paper, it presses it down upon the steel plate, and the fine sharp points puncture the paper from the under side in the line of the writing. This paper, or stencil plate, is then fastened into a frame, which stretches it tight and smooth, again placed upon the baseboard with a sheet of paper between, and an ink roller of peculiar construction is passed over its surface, forcing the ink through the perforations upon the paper beneath, thus making a print. The patent for this instrument was applied for in 1878, and there have been numerous improvements since, the apparatus being used extensively in connection with the typewriter, where the stencil is made by the type bars striking a sheet of paper laid against a piece of gauze, the resulting effect being exactly the same as described above. Various mechanical devices for printing from stencils thus prepared are available.

A familiar form of copying device uses a gelatin surface against which a manuscript written with a special ink is pressed. The ink is absorbed by the surface, and a number of copies may be secured by simply placing fresh sheets against the surface.

In making copies of insurance policies and other documents where exact reproduction is desired, it is now customary to use a special form of camera and sensitized paper, making a direct photograph, but reversed, in that white is black, which is available for filing.

In connection with the typewriter there are many different devices for producing a greater or less number of facsimile letters or circulars, but in the main they all depend upon one or another of the principles mentioned above, unless they make use of some form of movable

type. For making copies simultaneously and at distant points a mechanical and electrical device known as the *telautograph* is available, but this is used more for the transmission of intelligence than to provide an exact copy.

The *Blue-Print Process* is peculiarly adapted to the reproduction of drawings and plans, and is used by architects, engineers, and mechanics. Two solutions are prepared: the first contains one part of citrate of iron in four parts of pure water; the second contains one part of red prussiate of potash in six parts of water. When ready for use, equal parts of the solutions may be mixed in a shallow dish and applied to sheets of paper with a sponge or a camel's-hair brush. Any paper will serve, but that is best which has but little sizing. The solution should be applied and the paper should be dried and kept in the dark. The solutions themselves will keep, separately, in the dark as long as desired, but if mixed soon begin to deteriorate. The drawing or writing to be copied should be made with very black ink, upon thin paper or tracing cloth. A photographer's printing frame, with a plain glass and a back easily removed, is used in the following manner: Place the drawing face down upon the glass, the prepared paper with its face against the back of the drawing; put the movable back in place, reverse the frame, and expose to light. In direct sunshine 2 to 7 minutes will be long enough, the time to be ascertained by trial; in diffused light, the exposure must be 5 to 10 times as long. After exposure the print should be immediately washed in clear water; when the chemicals are removed, the sheet is fastened by its corners to a line to dry, and the surface may afterward be finished by a hot iron or by pressure. A little practice is needed to secure the best results, and in a good print the lines will be clear white, and the background a deep blue. A light blue background indicates a weak solution, or insufficient exposure, overexposure is shown by a grayish tint. Clear, quick sunshine will give sharper lines than can be obtained by slow, diffused light, but in large blue-printing establishments electric lights and special machines are employed. The chemical change is evident; the light causes a reaction between the prussiate of potash and the iron, of which Prussian blue is the product; this occurs wherever the light has not been intercepted by the black lines of the drawing, which therefore appear in white upon an intensely blue and unfading background. Copies may be multiplied at will from negatives on glass or films, from engravings in books, from drawings, or from manuscripts.

**Black Prints** on a white ground may be made in the same general way, by using the proper solution in preparing the paper, of which there are now numerous varieties sold ready for use, while the rapid making of blue and other prints from tracings, especially those of large size, is an important industry in large cities where there are many architects and engineers.

**COPYRIGHT.** The exclusive right of reproducing, by writing, printing, or otherwise, the language and form of a literary or artistic production and of publishing and vending the same. In this broad sense the right is wholly modern, being based upon a series of statutes, beginning with 8 Anne, c. 19, in England, and with the first Federal Copyright Act passed by the Congress of the United States in 1790.

Copyright in published works exists in Eng-

land-to-day by virtue of the Copyright Act of 5 and 6 Vict., c. 45 (1842). With this must, however, be considered the following amendments: 1844, international provisions; 1847, Colonial act; 1850, designs and sculpture; 1852, international and engravings; 1862, fine arts; 1875, international, for dramatic works; 1875, Canada; 1882, musical compositions; 1886, international; 1887, order in council (confirming the Bern convention); and 1888 and 1902, musical compositions. In the United States the matter is one for national and not for State regulation, the power "to promote the progress of science and useful arts by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries" being vested in Congress by Art. I, Sec. 8, of the Constitution. The only effective restriction which this clause places upon the power of Congress to legislate concerning copyrights is the virtual prohibition of the grant of a perpetual right of this character. The apparent limitation of the power to a copyright for "writings" only has been removed by judicial construction, the term "writings" having been held to include maps, charts, music, prints, engravings, drawings, paintings, and photographs, as well as books, written and printed articles, and the like. The power to protect the author of a book in the right to dramatize the same, and the author of a dramatic composition in the right of publicly performing or representing it, is included within the constitutional provision. But it is not clear whether the protection afforded by the copyright law to sculptors places them in the category of authors of writings or of inventors or designers. However this may be, there is no dispute as to the authority of Congress to enact general copyright legislation. The law in force prior to 1909 is to be found in U. S. Rev. Stat., Tit. 60, c. 3. An important modification of this act is the enactment of March, 1891, introducing international provisions. Further amendments are 1893, deposit of copies; 1895, limitation of penalty for art infringements; 1897, additional penalty for dramatic infringements; 1897, instituting the register of copyrights; 1897, penalty for fraudulent notice. Under the Act of 1870 the supervision of the business of copyrights is placed under the control of the Librarian of Congress. Under the Act of 1897 the office of Register of Copyrights was created. The details of the copyright business are managed by the Register, who remains, however, subject to the general supervision of the Librarian of Congress. The statute provides that two copies of the work copyrighted, printed from type set within the limits of the United States (except in the case of musical compositions), shall be deposited in the office of the Librarian of Congress not later than the day of publication of the work in this or any foreign country, except that where the original publication was in a foreign language the amendment of 1905 prevents printing in the United States for 12 months thereafter. This discrimination against Great Britain has been strongly criticized in that country. The original jurisdiction of all suits under the copyright laws rests with the United States circuit courts. Under the interpretation of these courts copyright in published works exists only by virtue of the statute.

The terms of these acts are very similar to those of the English law and provide that the

author, inventor, designer, or proprietor of any book, map, chart, dramatic or musical composition, engraving, cut, print, or photograph, or negative thereof, or of a painting, drawing, chromo, statue, statuary, etc., being a citizen of the United States or a resident therein, or a citizen of any State which grants reciprocal privileges to citizens of the United States, may secure the sole liberty of printing, reprinting, publishing, copying, executing, and vending them for the term of 28 years, which period may, on the application of the author or inventor, or, if he be dead, of his widow or children, be extended to a further period of 28 years. The time limit of the first American act is that specified (for books thereafter printed) in the English Statute of 1709, and was originally adopted by analogy from the Statute of Monopolies (21 Jac. I, c. 3).

In order to make clear the claim of a work to copyright, it is necessary that it should be original, but the originality can exist in the form or in the arrangement as well as in the substance. Corrections and additions to an old work (itself not the property of the compiler) can also secure copyright. The copyright of private letters constituting literary compositions is in the composer, not in the receiver. As to the right of property in lectures, whether written or oral, the American courts have followed the English precedents.

It is to be borne in mind that what is thus protected by law, and thus erected into a species of property, is not the ideas, sentiments, and conceptions of the author, artist, or designer, but the substantial form in which he has embodied them. There is no property in thoughts and feelings, and there can therefore, in the legal sense of the term, be no theft or piracy of ideas. It is the literary or artistic creation, i. e., the form, which is protected, and not the substance. Hence ideas, whether expressed in conversation, or in lectures, or in copyrighted books, immediately become common property and may be employed by any one who will clothe them in a new and different form from that in which they were communicated to him. But the new form must be substantially different from that of the copyrighted matter. It must not be merely a disguised copy or reproduction of the original, for the law protects the arrangement of the matter as well as the language in which it is conveyed. On the other hand, as it is the financial and proprietary interest, and not the pride, of the author which the copyright law seeks to protect, it is no infringement of his rights to make a fair and reasonable use of a book by way of quotation or otherwise, whether for purposes of criticism or for the private use of the reader. Thus it has been held that "extracts and quotations fairly made, and not furnishing a substitute for the book itself, or operating to the injury of the author, are allowable." Furthermore, as the law is aimed at reproducing a work by printing, publishing, dramatizing, or translating any copy thereof, it is conceived that it is no infringement of the author's copyright to read in public a printed poem or other literary production, though of course it cannot be reprinted in a newspaper or magazine, even as an item of news, without permission. It has, however, been held by the English courts that the presentation, through reading or through singing, of a copyrighted work to a public which makes payment for the privilege, constitutes an infringement.

It is not necessary that matter shall be literary or artistic in form, nor even that it shall be original in substance, to be entitled to copyright. A translation or dramatization of another's work may be so protected, and so may be an abstract or newspaper report of a speech, a judicial opinion, or a debate. The law extends equally to compilations of the writings of others, to dictionaries, gazetteers, road and guide books, directories, calendars, catalogues, mathematical tables, and the like, the arrangement of the material being protected even though the matter of which it is composed is common property.

There is in the United States no general principle of law conferring the copyright on all published works, nor does it arise in favor of an author merely by virtue of his authorship. It is a peculiar privilege, which can be had for the asking, but which is not conferred on those who do not seek it. It is still possible for an author or an artist to dedicate the productions of his genius to the public. Having once done this by publishing his work, he is precluded from setting up an exclusive title to it thereafter. In other words, the steps requisite to secure copyright of any work entitled thereto must be taken in advance of publication. The process of obtaining a copyright is very simple, consisting only in the deposit in the Library of Congress at Washington, not later than the day of its publication in this or any other country, of a copy of the title-page and two copies of the book or other work to be copyrighted, and printing on the book or other work and on all reproductions thereof a notice that the copyright has been secured, together with the date thereof. In Great Britain, on the other hand, copyright attaches, without previous application therefor, in favor of all books, etc., first published in the United Kingdom. The right does not exist and cannot be acquired in favor of works previously published elsewhere. The English statute provides for registration at Stationers' Hall, not as a prerequisite to the existence of copyright, but as a preliminary to a suit for its infringement.

As already stated, copyright is a matter of only national and local concern. The granting of copyright by one nation to the productions of citizens of another has resulted as a slow development from influences that first began to have effect about the beginning of the nineteenth century. (For a historical treatment of this, see LITERARY PROPERTY.) At the present time many of the leading states of Europe have granted international copyright, mostly under specific conditions of time or place of publication. In Great Britain, the copyright law now in force is in substance that of 5 and 6 Vict., c. 45. The international provisions are contained in the Acts of 1844, 1852, 1875, 1886, and the order in council of 1887, confirming the Bern convention. The decision given in June, 1891, by the law officers of the crown that citizens of the United States could secure copyright throughout the territory of the British Empire by compliance with the provisions of the British statute, enabled President Harrison to include Great Britain in the proclamation of July 1, 1891, in the list of states the citizens of which could secure copyright in the United States under the Act of March, 1891. The term is for the life of the author and seven years, or for 42 years from the date of first publication, whichever may be the longer. The law provides that a copy of the first and of each subsequent edition

of every book must be sent, on demand, to the following libraries: The British Museum in London, the Bodleian in Oxford, the University Library in Cambridge, the Library of the Faculty of Advocates in Edinburgh, and the Library of Trinity College in Dublin.

The term for art copyright is fixed, under the Act of 38 Geo. III, at 28 years. Copyright in a dramatic production is protected for the same term, of 42 years (or for the life of the author and seven years), as that accorded to a work of literature. The copyright in letters vests in the writer, except in so far as any particular circumstance may give to the person to whom the letter is addressed, or to his representatives, a right to publish the same. The perpetual copyright of the authorized versions of the Bible and of the Book of Common Prayer (and possibly, adds Stephen, in the text of acts of Parliament) is vested in the crown. A perpetual copyright in books first issued by the following institutions (unless such books came into the control of the institutions for but a limited term) is vested in the universities of Oxford, Cambridge, Edinburgh, Glasgow, St. Andrews, and Aberdeen, and also in each college of the universities of Oxford and Cambridge, in Trinity College, Dublin, and in the colleges of Eton, Westminster, and Winchester. The book of registry of copyrights is kept at Stationers' Hall. There is no obligation to make registration, excepting that such entry must be made before the owner of the copyright is in a position to take action in regard to any alleged infringement. A bill for the reshaping of the British copyright act, known as the Monkswell Bill, was reported to the House of Lords by committee in 1900 but was not passed. It was originally introduced in November, 1886, at the instance of the British Society of Authors. It was reintroduced, with some material modifications, in 1900. Under this bill the term of copyright is extended to the life of the author and 30 years.

The provisions controlling copyright in Germany, including Alsace-Lorraine, date from 1871. The Statute of June 19, 1901, now in force, made no material changes in the conditions of copyright, but instituted detailed regulations for the relations of authors and publishers, covering the *Verlagsrecht*. There are also Acts of Jan. 9, 1876, for sculpture, and Jan. 10, 1876, for photographs. The copyright relations with the United States are defined in the convention of Jan. 15, 1892. The term is for the life of the author and for 30 years thereafter. Copyright registry for the Empire is kept in Leipzig. The protection of the law is afforded to the works of German citizens, whether published inside or outside of the Empire. Under this same law the works of aliens receive protection provided that they are published by a firm doing business within the Empire. In Italy literary copyright rests upon the Statute of September, 1882. The term is for the life of the author and for 40 years after his death, or for 80 years from the publication of the work. In Austria the term of literary copyright is 30 years after the author's death. In Belgium copyright (formerly perpetual) is now limited, under the Law of 1886, to the life of the author and 50 years thereafter. In Holland, under the Law of 1881, the term is for 50 years from the date of publication. In Hungary the term is the life of the author and 50 years. In Japan, under the Law

of March 3, 1899, the term is the life of the author and 30 years. In Russia the term is for the life of the author and 50 years. In Spain, under the Act of 1879, the term is for the life of the author and 80 years.

In 1909 the law in the United States relating to copyright underwent a thorough redrafting and rearrangement, resulting in considerable modification of the text. For important changes, see UNITED STATES COPYRIGHT ACT. Consult: Copinger, *Law of Copyright* (4th ed., London, 1904); Drone, *Treatise on the Laws of Property in Intellectual Productions* (Boston, 1879); McGillivray, *The Law of Copyright* (London and New York, 1902); Briggs, *The Law of International Copyright* (London, 1906); Hamlin, *Copyright Cases* (New York, 1904); Solberg, *Copyright in Congress, 1779-1904* (Washington, 1905).

**COQUELIN**, kô'klan', BENOÎT CONSTANT (1841-1909). A distinguished French actor, known as Coquelin Aîné, to differentiate him from his younger brother, Coquelin Cadet. Born at Boulogne-sur-Mer, Jan. 23, 1841, he early showed such dramatic gifts that he was sent to the Paris Conservatoire (1859). The following year he took the second prize for comedy and made his début on the stage of the Comédie Française in *Le dépit amoureux*. Later he appeared with brilliant success in *Le mariage de Figaro*, *Le malade imaginaire*, *Le misanthrope*, *Le barbier de Séville*, and other pieces in the classic repertoire. In modern plays he was no less effective, and he speedily became the leading comic actor of his time. Among his creations have been rôles in *Le lion amoureux*, *Gringoire*, *Tabarin*, *Paul Forestier*, *L'étrangère*, *Les faux ménages*, *Le monde ou l'on s'ennuie*, and *Denise*, to mention only a few. He was elected a *sociétaire* in the Théâtre Français in 1864, but in 1886 he retired and made an extensive tour abroad, visiting America in 1888. At the end of 1889 he returned to the Théâtre Français, where, as a salaried member of the company, he remained till 1892, creating among other parts that of Labussière in *Thermidor* (January, 1891). In 1893-94 he appeared again in the United States. His engagement in 1895 at the Renaissance Theatre in Paris led to a lawsuit from the Comédie Française, in which he was condemned to pay damages. In 1897, at the Porte-Saint-Martin, he produced Rostand's *Cyrano de Bergerac*, which became his most celebrated character. In 1899 came his Napoleon in *Plus que reine*. In 1900-01 he visited America once more, this time in company with Sarah Bernhardt, to whose Duc de Reichstadt he played Flambeau in Rostand's *L'Aiglon*. Coquelin was abundantly endowed for the stage. He had a trim figure and expressive face. The large tip-tilted nosé was a partial disqualification for tragedy, but an advantage in comedy. His eye was alert and penetrating, his voice naturally deep and resonant, but it could be exquisitely modulated to express varying moods. He lacked Fechter's fervor in love-making scenes, but he had a simplicity and directness that was more appealing; and in his versatility and the mastery of the technique of his art he was without a rival among his contemporaries. He entered into the soul of the character he was portraying and divested himself of every attribute that was not in harmony with it. Each of his characters was a new being, differing in thought and action from the others. Coquelin was known also as a writer and lecturer. Among

his publications are: *L'art et le comédien* (1880), which is known in English as "The Actor and his Art"; *Les comédiens par un comédien* (1882); *L'Arnolphe de Molière* (1882); and, in collaboration with his brother, Coquelin Cadet, *L'art de dire le monologue* (1884). Consult, for biographical matter, E. Zabel, "Coquelin im Berliner Schauspielhaus" in *Zur modernen Dramaturgie*, vol. iii (Oldenburg, 1903); for criticism, Edmondo de Amicis, "L'attore Coquelin," in *Ritratti letterari* (3d ed., Milan, 1881).

**COQUELIN**, ERNEST ALEXANDRE HONORÉ (1848-1909). A French actor, known as "Coquelin Cadet," to distinguish him from his more famous elder brother, Constant Coquelin. He was born May 16, 1848, at Boulogne-sur-Mer, and in youth was for a time in the employ of the Northern Railway, but went, in 1864, to Paris to enter the Conservatoire and make a career upon the stage. He was graduated three years later with the first prize in comedy and made his début at the Odéon. In 1868 he appeared with his brother at the Théâtre Français, and he continued there till 1875, playing in *Les plaisieurs*, *Le barbier de Séville*, *Les femmes savantes*, *Le mariage de Figaro*, *L'Avaré*, and other well-known pieces. In 1875 he went to the Variétés, but returned to the Comédie Française in the following year, and in 1879 he became a member of the company. Among the principal plays in which he created parts are: *Le sphinx*, *L'Ami Fritz*, *Les corbeaux*, *Denise*, and *L'Héritière*. M. Coquelin Cadet owed much of his reputation to the success of the numerous monologues of which he was the author, and in the rendering of which he gained great popularity in the salons of Paris. He wrote also, under the pseudonym of Pirouette, *Le livre des convalescents* (1880), *Le monologue moderne* (1881), *Farboles* (1882), *Le rire* (1887), *Pirouettes* (1888), and other humorous volumes.

**COQUELIN**, JEAN (1865- ). A French actor, son of Constant Coquelin (q.v.). He studied under his father and in 1890-92 was engaged at the Théâtre Français. In 1897 at the Porte-Saint-Martin he created the rôle of Ragueneau in *Cyrano de Bergerac*. He has also played Lubin in *Thermidor*, Verdet in *Le gendre de M. Poirier*, and Talleyrand in *Plus que reine* (1899).

**COQUEREL**, kô'krèl', ATHANASE LAURENT CHARLES (1795-1868). A French Protestant theologian. He was born in Paris and studied theology at Montauban. In 1818 he became pastor of the French church in Amsterdam and in 1830 was induced by Cuvier to return to Paris, where he won high reputation as a pulpit orator. An earnest opponent of the doctrine of predestination, he drew upon himself the violent attacks of the orthodox Calvinists and propagated his opinions in three periodicals founded by him. He was elected a member of the Constituent Assembly in 1848 and later also of the Legislative Assembly. Among his writings may be mentioned a reply (1841) to Strauss's life of Jesus, which was translated into English (1844); *Biographie sacrée* (1825-28); *L'Orthodoxie moderne* (1842); *Christologie* (1858). His son ATHANASE JOSUÉ (1820-75) was a pulpit orator and was prominent as the leader of liberal Protestantism in France. He wrote *Libres études* (1867); *Des Beaux-Arts en Italie* (1857; Eng. trans. by E. and E. Higginson, 1859); and *Jean Calas et sa famille* (1858). Consult

LIVING MADREPORES.

AN AUSTRALIAN CORAL REEF AT LOW TIDE.

# CORAL

For description, see article CORAL.

Stroehlin, *Athanase Coquerel, fils* (2 vols., Paris, 1886).

**COQUES**, kôk, or **COCK**, GONZALES (1618-84). A Flemish portrait painter. He was born in Antwerp and studied under the third Pieter Breughel, and afterward with David Ryckaert the elder. He quickly gained a reputation, received commissions from many of the princes and notable persons of the time, and held several positions of honor. He painted almost exclusively portraits and family groups engaged in different tasks, the backgrounds being often by other artists. They are very small, but a certain elegance of manner has given him the title of "Van Dyck in miniature." In his restricted sphere he attained a rare perfection, and the new style of art he created for the southern Netherlands was continued by Franchois and Biset. His art is represented in the galleries of Berlin, Dresden, Brussels, Paris, Vienna, etc., and in many private collections, including that of John Wanamaker, Philadelphia.

**COQUETTE**, kô-kê't' (Fr. *coquette*, flirt, fem. of *coquet*, gallant, little cock, from *cog*, cock; so called from its fanciful pluckage). A kind of humming bird, of which a dozen species are known, constituting the genus *Lophornis*, and scattered from the lowlands of Mexico to and throughout the Amazon region. The coquettes are small, crested, and exquisitely adorned with spangled frills on each side of the neck; the tail is long and capable of wide spreading; the colors varied and brilliant, and the whole effect of the bird is peculiarly gemlike. See CROSS FERTILIZATION and Plate of HUMMING BIRDS.

**COQUI**, kō'kē (probably of West Indian origin). A West Indian tree frog (*Hyloides martinicensis*), remarkable for undergoing its whole metamorphosis within the egg. "The pairing takes place on land in the months of May and June, when the female lays about 20 eggs, which are enveloped in a foamy mass and glued onto a broad leaf, or hidden in the axillæ of irridaceous plants. The mother seems to remain in the neighborhood watching the eggs, which are large, measuring 4 to 5 millimeters in diameter . . . pale and straw-colored. The embryo develops neither gills nor gill openings, but a large, well-vascularized tail, by means of which, being immersed in the watery fluid contained within the egg, it seems to breathe. After 21 days the tadpole, having used up all the available yolk and fluid, and most of its own tail, bursts the eggshell and hops away as a little frog." Coniult Gadow, *Cambridge Natural History*, vol. vii (London, 1901)

**COQUILLA** (kə-kwī'lā) NUT (Sp. *coquillo*, coconut). The fruit of a palm, *Attalea funifera*. It is exported from South America, being used to a considerable extent in America in the manufacture of buttons and in turning various small ornaments. It is also called "vegetable ivory." The imports into the United States were in 1913 approximately 30,000,000 pounds, valued at about \$1,000,000, and were chiefly from Colombia, Ecuador, and Panama. The importations of 1913 were nearly double those of a decade earlier. See ATTALEA; PIASSABA.

**COQUIMBITE**, kó-kim'bít. A hydrous sulphate of iron resembling copiapite (q.v.) in composition and occurrence, but crystallizing in hexagonal forms. It is found near Copiapó, Chile.

**COQUIMBO**, kô-kēm'bo. A seaport in the Province of Coquimbo, Chile, about 10 miles

south of La Serena, the capital of the province, with which it is connected by rail (Map: Chile, C 10). It has a good harbor, a lighthouse with a revolving light, a customs office, and exports chiefly copper ores and cattle. It is the residence of a United States consular agent. Pop., 1903, 8478; 1910, 12,106.

**COQUIMBO.** See BURROWING OWL.

**COQUINA**, kô-ke'na (Sp., shellfish, from Lat. *concha*, Gk. *kôvyn*, *konchê*, shell, Skt. *sankha*, conch shell). A porous variety of limestone which occurs in Florida. It is made up of cemented fragments of shells and corals that have been cast about by the waves and accumulated in some sheltered basin of the sea bottom. Coquina is extensively used for building stone in Florida and the Bermudas.

**CORA.** A group of tribes of the Piman family, occupying parts of the Rio de Jesus María, Jalisco, Mexico. See PIMAN STOCK.

**CORABÉCAN.** A small linguistic stock—the language is long extinct—whose representatives formerly dwelt in the forested region of eastern Bolivia. Rivet thinks that it is a dialect of Otquiquian, or Otuké.

**COR'ACLE** (Welsh *coriogl*, *corwogl*, coracle, from *corug*, *curiog*, Ir. *curachan*, skiff). A boat of oval shape with a frame of wickerwork covered with hide or oiled cloth, which covering is removed when the boat is not in use. The ordinary coracle will carry comfortably only one man, but it is so light that he can easily carry it on his back to a place where it may be safely deposited. See CURRACH.

**CORAI**, kó'râ', ADAMANTIOS. See CORAY, ADAMANTIOS.

**CORAL** (OF *coral*, Lat. *corallum*, *corallius*, from Gk. *κοράλλιον*, *korallion*, coral; of uncertain origin, possibly a loan word from Heb. *gōrāl*, small stone). A calcareous or horny secretion or deposit of many kinds of polyps of the class Anthozoa, which assume various and often beautiful forms. Millepore "coral" is produced by polyps of the class Hydrozoa. (See MILLEPORE.) The coral-producing polyps form

### STRUCTURE OF A SIMPLE CORAL.

1. Diagrammatic cross section of a coral: the black part represents the stony outer wall (theca) and partitions (septa), the open lines, the fleshy lining and partitions (mesenteries).  
2. Semi-diagrammatic view of a coral *a*, a septum, *b*, a tentacle, *c*, position of the gullet; *d*, theca, *e*, mesenterio filaments, *f*, epitheca, *g*, basal plate.

colonies which increase by gemmation, young polyp buds springing from the original polyp, sometimes indifferently from any part of its surface, sometimes only from its upper circumference, or from its base, and not separating from it, but remaining in the same spot, even when the original or parent polyp has ceased to exist, and producing buds in their turn. The calcareous or horny deposition begins when the

polyp is single, adhering to a rock or other surface, on which the coral grows or is built up, the hard deposits of former generations forming the base to which those of their progeny are attached. One layer of the chambers, of which the greater number of corals are composed, occasionally surrounds another like the concentric circles in the wood of exogenous trees; one layer is sometimes deposited above another; the whole structure sometimes branches like a shrub, spreads like a fan, or assumes the form of a cup, a flower, or a mushroom. Under the common name "coral" are included many species, also designated "madrepores" (q.v.), and some have received other names derived from peculiarities of their form and appearance, as "brain coral," etc. This last forms into large rounded masses furrowed with winding depressions like the convolutions of a mammalian brain or the windings of a meadow brook; hence its technical name is *Meandrina*. In the greater number of kinds, besides the plates which form and separate the polyp cells, and which are variously arranged, there is a more solid internal or central part, formed by the additional deposition of matter at the bottom of each polyp cell, or from the common living part in which the polyps are united. The calcareous framework is sometimes further strengthened by a greater or less mixture of horny animal matter with the purely calcareous substance.

**Kinds of Corals.**—Corals are roughly classed under two heads, the horny corals and the lime or stone corals. The former consist chiefly of a horny secretion from the polyps, which may include also separate particles of lime, while the stone corals consist almost wholly of lime firmly united in a solid mass. No sharp line can be drawn between these two groups, for all possible gradations can be found. The *Antipatharia* and *Alcyonaria* as a rule have a horny skeleton, while the millepores and madrepores are almost wholly limestone. The polyps of the common red, or precious, coral (*Corallum rubrum*) belong to the suborder *Alcyonaria* (q.v., for illustration); but the central axis in this and other corals forming the family *Corallidae* is quite solid, and is produced in concentric layers by the living gelatinous substance which envelops it like the bark of a tree, and from which the polyps project like buds, or, when their tentacles are expanded, like little flowers. Another alcyonarian coral of more than usual interest is the "organ-pipe" coral (*Tubipora*) in which no central axis fills in behind the polyps, but the chambers in which they live remain as open, elongated tubes, crowded together side by side to form a solid mass. Its polyps are violet or grass-green, but the coral itself is red or purplish. These corals are found in the Indian and Pacific oceans. Many of the madrepores have the whole calcareous framework covered,

as in the *Corallidae*, by a gelatinous living substance which unites all the polyps. The whole living part soon decomposes and disappears, when the coral is taken out of the water, in some species almost immediately running from the calcareous part as a watery slime.

**Utilization.**—Red coral—so much admired for its fine color and susceptibility to a high polish and much used for ornamental purposes—is chiefly obtained from the Mediterranean, in some parts of which extensive "fisheries" are carried on. It is brought up from considerable depths by means of a sort of grappling apparatus dragged after a boat or boats, the pieces being broken from the bottom by beams of wood which are sunk by weights and then entangled among hemp. Red coral has a shrublike branching form and grows to the height of about one foot, with a thickness like that of the little finger. Much of the coral of the Mediterranean is exported to India, but red coral is also obtained in the Red Sea, the Persian Gulf, etc. Black coral (*Antipathes*), the axis of which is more solid, is still more highly prized. Coral was known to the ancients and was used for ornamental purposes by the Gauls.

**Reefs.**—The formation of coral reefs and islands is one of the most noteworthy results of the action of coral polyps. Many kinds of polyps are concerned in the building of a reef, but the growth is mainly dependent on the stone corals. Reef-building corals only flourish in clean, fresh sea water, which is not over 125 feet in depth and never is cooler than 68° F. They are consequently confined to the tropics and to shallow water and never thrive near the mouths of rivers. Although reef-building corals are not found on the coast of the United States north of Florida, some species of coral occur much farther north. Even on the coast of New England there is to be found quite commonly a true stone coral (*Astrangia danae*), the polyps of which when expanded are large and very beautiful. See CORAL ISLAND AND CORAL REEF.

**Fossil Forms.** Among the fossil corals only those belonging to the Anthozoa are of importance, those of the Hydromedusae either not appearing until the Mesozoic, and then but sparingly (for fossil Hydrocorallinae and Tubulariae, see COELENTERATA), or not being clearly recognized as to their systematic position and only provisionally referred to the Hydrozoa. (See STROMATOPORA; GRAPTOLITE.) The Anthozoa appear in the Cambrian rocks with the Archæocyathinae, forms of peculiar structure and uncertain relationships. In the Upper Silurian period they have become the most important fossils, as well in number of individuals as in diversity of structure and importance as rock-building organisms. They continue thus throughout geologic times and are hence of

#### REPRESENTATIVE FORMS OF CORALS.

1. Beginning of a colony (of *Zoanthus*), showing simplest mode of budding from a creeping stolon (sc). 2. Sea pen, or pennatulid (*Verrucaria mirabilis*), a portion of the stem in the living condition; a, the same, dead. 3. Organ-pipe coral (*Tubipora muscos*), skeleton of a colony showing two living polyps; a, manner of growth, by budding from the lateral shelf-like expansions. 4. Red or "precious" coral (*Corallum rubrum*), part of a living colony. 5. Part of a fan coral (*Rhipidogorgia flabellum*), showing the polyp cells. All the foregoing are Alcyonarians. The following are "true" or "stone" corals. 6. *Syringopora rumulosa*, fossil in the Carboniferous of Germany. 7. *Halysites ctenularia*, fossil in the Silurian of Gotland. 8. *Favosites polymorpha*, fossil, Devonian; a, corallites, enlarged, two of them broken open and showing tabulae. 9. Cup coral (*Cyathophyllum cespitosum*), fossil in the Devonian of Germany. 10. Cup coral (*Cyathophyllum hezagonum*), fossil in the Devonian of Germany. 11. A madrepore (*Madrepora aspera*); the lower part shows the living polyps, the upper part naked (dead) corallum, at the summit of a bushy branch. 12. Part of a branching coral (*Dendrophyllia*) in which a common calcareous stem (sc, osmenchyma) is formed by calcification of the mesosarc (sc) and gives origin to the individual corallites (cc); p, an active polyp. 13. Star coral (*Astrum*), an example of the massive type of reef corals, in its living condition.

# CORALS FROM THE GREAT BARRIER REEF, AUSTRALIA

1. STAGHORN CORAL (*Madrepora muricata*), etc.
2. A MADREPORE (*Madrepora formosa*).
3. A MADREPORE (*Madrepora convexa*).
4. A FUNGOID FORM (*Podobacia crustacea*).
5. SEVERAL MUSHROOM CORALS (*Fungia laceria*).
6. A RELATED SPECIES (*Mussa multilobata*).
7. *HERPETOLITHIA TALPINA*.

CORAL FISH

great importance to the paleontologist and geologist. As they are also objects of great beauty, they are much sought by collectors and dealers. Especially rich and famous are the fossil coral faunas of the Silurian of North America and Gotland; the Devonian of the Helderbergs of New York, the Falls of the Ohio, and the Rhenish provinces; the Jurassic formations of middle Europe and the Tertiary beds of northern Italy.

The Anthozoa are divided by Haeckel into the subclasses Tetracoralla, Hexacoralla, and Octocoralla, according to the number of their septa, which were considered to be multiples of these figures. The Tetracoralla comprise, together with the Tabulata, the Paleozoic corals; the Hexacoralla and Octocoralla, the Mesozoic and later forms. Recent investigations on the embryology of the Hexacoralla and thecal structure of the Tetracoralla (Dr. M. Ogilvie) seem to demonstrate that these divisions are artificial, that the tetrameral system is only an ancestral feature strongly marked in certain of the old families (Cyathophyllide, Zaphrentide, Cyathaxonide), while hexamerall symmetry is but one of many forms of radial symmetry. The Anthozoa are therefore at present divided into but two subclasses, according to Ray Lankester: the Alcyonaria, or Octocoralla, and the Zoantharia. None of the fossil alcyonarians, which with doubtful forms do not appear till the Mesozoic, are of importance; the Paleozoic Heliolitide, which are referred with doubt to this subclass, are quite abundant in the Silurian and Devonian rocks.

The subclass Tabulata, of Milne-Edwards and Haime, comprising common and important Paleozoic genera, such as *Favosites*, *Aulopora*, *Syringopora*, *Hyalisites*, and *Chonetes*, which was long considered as a distinct subclass characterized by the slight development of the septa and the presence of numerous tabulae, has now been broken up, it having been recognized that some families belong to the Octocoralla, others (Favositidae, Syringoporidae, Halysitidae) exhibit close relationships to the Hexacoralla, and others (Chonetidae, Monticuliporidae) are even placed by some authors, as Ulrich, among the Polyzoa. All these very primitive groups of tabulate corals played important rôles as Paleozoic reef builders.

C. Bourne, "The Anthozoa," in Lankester's *Treatise on Zoology*, part ii (ib., 1900); Hickson, "Celeraterra," in *Cambridge Natural History*, vol. i. (ib., 1906).

**CORALBERRY.** See SNOWBERRY.

**CORAL FISH.** A name given in a general way to various tropical fishes of the families Chaetodontidae and Pomacentridae, because they frequent submarine coral growths. All are much compressed, high-backed fishes of brilliant hues; and most of them are marked with vertical black bars, and possess filamentous appendages upon the fins and tail. They remain among the branching corals for safety, and are further protected, apparently, by the curious pattern of their coloration. Many species abound in the waters from Bermuda to Brazil, where several

species are known as "angel fishes." All are small, but excellent eating.

**CORAL ISLAND AND CORAL REEF.** An island or marine ridge formed from the petrified skeletons of coral polyps. They are numerous in the warmer portions of the Pacific and in the Indian Ocean, where the growth of coral goes on with great rapidity, occurring to a lesser extent in the Gulf of Mexico and along the Atlantic shores of the West Indies. The coral islands and reefs may be classed, according to their general form, into fringing reefs, barrier reefs, and atolls. *Fringing reefs* are closely attached to the shore line of an island or land mass and extend outward as a submarine platform. *Barrier reefs* lie at some distance from the land, the intermediate space being occupied by a shallow lagoon of salt water. Usually some parts of the barrier rise above the level of the ocean as islets which support a scanty vegetation, while the position of the submerged reef is indicated by a line of breakers. An excellent illustration of this type is the Great Barrier Reef of Australia, over 1000 miles long, lying off the east coast of Queensland. *Atolls* (q.v.) are of rude circular form, inclosing a lagoon, but without any visible land to which the reefs are attached. Their presence is made known by a girdle of breakers and by wave-formed islets on which the coconut palm and a few other tropical plants grow. The central lagoon of placid, transparent water is usually less than 300 feet deep, and when there are passages through the reef it constitutes a safe harbor for ships. Soundings have shown that the slope of the bottom is gentle in the interior, but very steep on the seaward side of the reef, indeed being sometimes almost perpendicular. The Pelew Islands of the Caroline Archipelago, the Low Archipelago in the Pacific, and the Laccadive and Maldivé island groups in the Indian Ocean, exhibit many examples of atolls.

**Formation of Reefs.** The great masses of coral rock have been built up by the continuous growth of various genera and species of corals, which secrete carbonate of lime dissolved in the sea water. The coral polyps flourish only under certain conditions; their growth requires clear, warm, salt water, an abundance of food, and a water depth of not more than 20 fathoms. They cannot live in muddy or brackish water, or in regions where the mean temperature for any month falls below 68° F. The polyp also does not grow above the level of the lowest tides. As to the rate of growth of coral many observations and estimates have been made. Some species build up a reef as rapidly as three inches per year, others increase less than one inch in the same time. Alexander Agassiz estimates that the corals on the Florida coasts would construct a reef from the depth of seven fathoms to the surface in a period of from 1000 to 1200 years.

Under the special conditions necessary for the growth of coral it is a matter of interest to discover by what means the reefs and atolls have been formed, that often rise from depths of several hundred and even thousands of feet. Darwin, who recognized the fact that shallow water was necessary for the living polyp, inferred that the sites of the reefs must have undergone a gradual subsidence, corresponding to the growth of the reef upward. According to his theory, the colonies of polyps first settled along the

shores of an island, where after a time a fringing reef would be formed (Fig. 1). Then, if the ocean floor subsided at a sufficiently slow rate to permit the growth of the coral to be con-

FIG. 1.

tinued on the outward side of the reef, the water channel would gradually widen and deepen and a barrier reef (Fig. 2) would be formed,

FIG. 2.

which, after a long interval, upon the submergence of the entire island, would give way to an atoll (Fig. 3). This simple explanation,

FIG. 3.

first advanced by Darwin in 1835 and afterward elaborated by J. D. Dana, found wide acceptance among geologists. It was soon discovered, however, that in certain cases the theory of submergence did not conform with the actual conditions. Semper, in 1868, directed attention to the Pelew Islands, where the sea floor and the reefs built thereon have actually undergone elevation. Later, Murray pursued the study of the question still further and was able to show that reefs do not necessarily require a sinking shore for their formation, but they may grow on a stable foundation such as a submarine bank, raised to near sea level by accumulation of fossil organisms, or the slopes of a volcanic island. After becoming established in such localities the corals continue their growth outward, and at the same time wave action washes down debris from the reef to the bottom, forming a platform for their further activity. In case the original foundation was above sea level the projecting portion may have been cut down by breakers. The solvent action of water would remove the dead coral from the interior of the reef and thus excavate a basin to be occupied by the lagoon. The same conclusions were reached by Alexander Agassiz in his extended investigations of coral islands. Agassiz also explained certain barrier reefs as having been formed by the growth of a thin wall of coral on the outer edge of a wave-cut submerged platform surrounding a volcanic island. In the latter case neither subsidence, elevation, nor solution is necessary for reef development. The several theories of

reef building are probably to be accepted as valid, and each must be tested by actual conditions before its application in any particular instance can be determined. Darwin's theory of subsidence, therefore, has not been displaced by the more recent work, but given a limited field of application.

See ATOLL; CORAL.

**CORALLINÆ, or CORALLINE ALGÆ** (Lat. nom. pl. fem. of *corallinus*, made of coral, from *corallum*, *corallius*, coral). A group of red algæ (Rhodophyceæ, q.v.), distinguished by the calcareous incrustations secreted by the thallus. The thallus is branching, usually articulated, and forms stony masses like those of the branching corals with which these algæ are often associated. Corallinæ are important rock-making organisms in some formations, especially of Tertiary age, such as the Lower Eocene of Ariège, and the nummulitic Limestone of the Alps. The genus *Corallina* itself, now abundant, was rare during Tertiary time. Lithothamnium, however, appeared in Jurassic time, extending through the Cretaceous, was very abundant during the Tertiary, and has persisted to the present era. Consult: Gümbel, "Die sogenannten Nulliporen, etc.," in *Abhandlungen der königlichen bayerischen Akademie der Wissenschaften*, vol. ii (München, 1874); Unger, "Beitrag zur näheren Kenntniss des Leithakalkes," in *Denkschriften der Kaiserlich-königlichen Akademie der Wissenschaften zu Wien*, vol. xiv (Vienna, 1858); Zittel and Schimper, "Traité de paléontologie," part ii, *Paléophytologie* (Paris, 1891). See ALGÆ.

**CORAL SEA.** That part of the Pacific Ocean off the east coast of Australia, extending between the parallel of 25° S., and Torres Strait (Map: Australasia, G 4). Its boundaries are indefinite, but it is generally considered to extend from the Australian coast to the irregular line of islands, including the western outposts of the Solomon and New Hebrides groups, from New Caledonia to the Louisiade Archipelago. The coral growths of the Great Barrier Reef lie along its western boundary.

**CORAL SNAKE.** A poisonous serpent of the genus *Elaps*, common in tropical America and also represented in Africa, so called because coral red is its prevailing color. There are many species, each marked by some different arrangement of black and yellow rings; the epidermis is also iridescent, probably due to laminations on the scales, and no more beautiful snakes exist. (See Plate with article SNAKE.) All are small, of terrestrial habits, and provided with a poison apparatus sufficient for the

killing of small animals and birds, but rarely fatal to man. A representative species (*Elaps fulvius*) is well known from Mexico to South Carolina and common in Florida, as the "coral snake," "American cobra," "garter snake," and "harlequin"; it is the only poisonous snake, not

CORAL SNAKE OF FLORIDA.

crotaline, in the United States, and, though small and gentle, is not safe to handle. Coral snakes do not strike, as do other poisonous snakes, but twist rapidly about until the head touches the object of their irritation, when they seize it and chew until their fangs have sunk in. These snakes spend most of their time burrowing in the ground, where they lay six or eight eggs. Consult *Report of United States National Museum* (Washington, 1893), and Males and Ulrich, "Serpents of Trinidad," in *Proceedings of Zoological Society of London* (London, 1894); Ditmars, *The Reptile Book* (New York, 1907). See CYLINDER SNAKE.

**CORAM**, THOMAS (1668-1751). An English philanthropist, born at Lyme Regis, Dorsetshire. His father was a merchant captain, and he was probably a shipwright by profession. He settled in Taunton, Mass., in 1694 and returned to England in 1703. He was constantly interested in philanthropic schemes, particularly in the establishment of the Foundling Hospital, which was accomplished after many years of struggle. The institution was opened in Hatton Garden in 1740. Coram was also a promoter of the English settlements in Georgia and Nova Scotia. In later life he lost most of his fortune and at his death was in possession of an annuity from the government. He was buried in the chapel of the Foundling Hospital. One of Hogarth's best portraits is that of Coram, which has hung in the hospital since its presentation by the painter (1740).

**CORAM-BIS**. In Shakespeare's *Hamlet*, the name given in the quarto edition of 1603 to the character afterward called Polonius.

**CORANACH**, *kór'á-nák*, **CORONACH**, **COR-ANICH**, or **CRONACH** (Gael., Ir. *coranach*, from Gael., Ir. *comh*, with + Gael. *ranach*, a crying, from *ran*, to cry out). A funeral dirge, formerly in use among the Irish and Scottish Celts. "The cries (coranach) are called by the Irish the ulaghne and hululu, two words extremely expressive of the sound uttered on these occasions (funerals); and being of Celtic stock, etymologists would swear to be the origin of the *ololungon* of the Greek, and *ululatus* of the Latins."—Pennant's *Tour*.

The coranach seems to be identical with the Irish *caoine*, generally written and pronounced *keen*, a dirge for the dead, "according to certain loud and mournful notes and verses" wherein the pedigree, property, the good and great deeds of the deceased, and the manner of his death are recounted, in order to excite sorrow or revenge in the hearers and to show them the loss they have sustained.

The word, in one or other of its forms, occurs in the writings of many of the ancient Scottish authors:

"Cryand fer yow the cairfull corrinnoch."

Sir D. Lindsay.

"Cryand the corynooch on hie."

Battle of Harlaw.

"Be he the corrennoch had done about."

Dunbar.

The coranach has long since fallen into disuse among the Highlanders. The funeral lament performed on the bagpipes, which may be considered as an instrumental coranach, lingered on till the latter half of the eighteenth century.

For specimens of the coranach, see Sir Walter Scott's *Lady of the Lake* and accompanying notes; Crofton Croker's *Researches in the South of Ireland* (1824); *Blackwood's Magazine*, vols. xiii and xxiii; and Jamieson's *Etymological Dictionary of the Scottish Language*, revised by Longmuir and Donaldson, vol. i, p. 494, under *coranach* (Paisley, 1879).

**COR ANGLAIS**, *kór an'glá'* (Fr., English horn). 1. A wooden wind instrument of the double reed species, the body of which was formerly bent in the form of part of a circle, which accounts for its being called a horn. It is merely a large oboe (called in German *Altoboe*, i.e., 'alto of the oboe'), and is usually played by oboe players. Its compass is two octaves and a fifth from e to b'. Modern composers employ for this instrument only the G clef. It is a transposing instrument, and music for it is written a fifth above its real tones. 2. Also the name of an eight-foot organ stop occasionally used in French and English pipe organs. For illustration, see MUSICAL INSTRUMENTS.

**CORATO**, *kó-rá'tó*. A city of southeastern Italy, in the Province of Bari delle Puglie, about 26 miles west of the city of Bari (Map: Italy, L. 6). Not far from Corato are the ruins of the Castel del Monte, built by the Emperor Frederick II, in which the sons of Manfred (q.v.) were imprisoned. The town carries on a trade in cattle and leather, the surrounding country being well adapted for grazing. A good deal of tartar is manufactured here as well as wine and oil. Pop. (commune), 1881, 30,552; 1901, 41,573; 1911, 45,307.

**CORAY**, *kó-rá'*, **CORAËS**, or **KORAËS**, AN-AMANTIOS (1748-1833). A Greek classical scholar and patriot. He was the son of a merchant in Smyrna. He engaged in trade in Amsterdam, but in 1782 went to Montpellier to study medicine and natural history. From 1788 till his death he lived in Paris. Stimulated by the French Revolution, Coray was one of the first to attempt to revive modern Greek literature, and his political tracts did much to arouse the Greeks to successful revolt against Turkish rule. Of his classical works the most important is his edition of Heliodorus' romance, *Ethiopian Histories*, his commentaries on the writings of Hippocrates, and his editions of Xenophon's *Memorabilia*, Plato's *Gorgias*, and Strabo. His work, *Atacta, ou mélanges sur la littérature grecque moderne* (1828-35), did much to elevate the modern Greek literary language. Consult his autobiography in Greek (Paris, 1833) and a Latin translation of it by Schultz (Liegnitz, 1834); also Sinner, *Life and Works of Korais* (Zurich, 1837); and Bywater, in *Journal of Hellenic Studies*, vol. i (London, 1881). See ROMANIC LITERATURE.

**COR-BAN** (Heb. *gorban*, offering, from *garab*, to draw or bring near, to offer). A term used by the Jews to denote things offered or devoted to the Deity. In the Priestly Code it is the

regular word for an offering to God of any kind (Lev. ii. 1, 4, 12, 13, etc.). Such an object was necessarily sacred and could not be applied to profane use. Later the word came to be the technical expression for formally setting a thing apart as sacred to God or God's use, but it often was used when there was no real intention of devoting a thing to God. Certain of the schools held that the mere pronunciation of it, however rashly, constituted a vow. Hence it often became a convenient makeshift to avoid a distasteful duty. Thus a son might say his money or other property was corban and so escape the obligation to use it for the support or need of a parent. This interpretation was rebuked by Jesus (Matt. xv. 5; Mark vii. 11), and also by certain broad-minded and humane rabbis.

**CORBEIL**, kôr'bây' (Lat. *Corbolum*). A town in the Department of Seine-et-Oise, France, at the junction of the Essonne with the Seine, 18 miles south-southeast of Paris (Map: France, N., H 4). It consists of an old and a new town. From the tenth to the twelfth century it was the chief town of a powerful countship; was besieged by the Duke of Burgundy in 1418, by the Huguenots in 1562, and by Alexander Farnese in 1590. The Gothic church of Saint-Spire (tenth century) was rebuilt in the fifteenth century. The town has flour mills, print works, cotton factories, and manufactures of watches, clocks, etc. The Moulins de Corbeil are the largest flour mills in France. The Decauville engineering works are near by. Pop., 1901, 9362; 1911, 10,746.

**CORBEL** (OF. *corbel*, Fr. *corbeau*, basket, from Lat. *corbis*, basket). A support, usually of stone, projecting from a wall and forming an integral part of it. In France it is not a corbel unless it has parallel sides, but the English usage includes also those forms of support, called in French *culs-de-lampe*, which project from the wall to carry colonnettes, vaulting shafts, vault ribs, etc. They are often elaborately carved with foliage and volutes. A row of corbels supporting a horizontal coping or cornice is called a *corbel table*. See BRACKET; CANTILEVER; CONSOLE.

**CORBENIC**. The name of a stronghold erected by Galafres after his conversion as a shrine for the Holy Grail. It is called also the Palace of Adventure, and in it Galafres, christened Alphasan, is stabbed to death.

**CORBETT**, JULIAN STAFFORD (1854- ). An English barrister and man of letters, born in Surrey and educated at Trinity College, Cambridge. He practiced law until 1882, was special correspondent of the *Pall Mall Gazette* on the Dongola expedition, 1896, lectured on English history at Oxford in 1903, and was appointed lecturer in history to the Naval War College. Besides several romances, his writings include: *England in the Mediterranean* (1904); *The Campaign of Trafalgar* (1910); *Some Principles of Maritime Strategy* (1911); *The Spencer Papers* (1913).

**CORBETT**, LEE CLEVELAND (1867- ). An American horticulturist, born at Watkins, N. Y., and educated at Cornell University, where from 1891 to 1893 he was assistant horticulturist. He was professor of horticulture and forestry at the South Dakota Agricultural College in 1893-95 and at the West Virginia University from 1895 to 1901, and then he became horticulturist in the United States Department of Agriculture. His publications include *Garden*

*Farming* (1913); *Intensive Agriculture* (1913), and the following experiment station bulletins: *Pruning* (1903); *Cranberry Culture* (1903); *The School Garden* (1904); *Strawberries* (1904); *Tomatoes* (1905); *Raspberries* (1905); *Beans* (1907); *Cabbages* (1911); *Ice Houses* (1911); *Tomato Growing as Club Work in the North and West* (1913).

**CORBIE**, kôr'be'. A town in the Department of La Somme, France, 10 miles northeast of Amiens (Map: France, N., H 3). It has cotton, woollen, and hosiery factories. Pop., 1901, 4133; 1911, 4408. Corbie owes its fame to the Benedictine abbey founded here in 662 by Queen Balthilde. A beautiful statue of the Queen remains. Of the abbey, the church of St. Pierre alone remains. The banished King Desiderius was sent here by Charlemagne in 774. Corvei (q.v.) owes its origin to Corbie.

**CORBIE STEPS, CORBEL STEPS, or CROW STEPS** (a Scottish corruption of *corbel steps*, from OF. *corbel*, corbel, but confused by popular etymology with Scotch *corbie*, crow, from ME., OF. *corbin*, Lat. *corvinus*, crow, and supposed to mean 'steps for crows'). In architecture, the succession of steps with which the gables of old houses are ornamented in Scotland. This gable ornament is by no means peculiar to Scotland and France, but is met with in Flanders, Holland, and all over Germany, where it is even more characteristic and general, especially in the brick architecture of north Germany—both of churches and of houses.

**CORBIN**. A city in Whitley Co., Ky., about 80 miles (direct) south by east of Lexington (Map: Kentucky, F 6). It is at the junction of three divisions of the Louisville and Nashville system and is essentially a railroad town. There are some deposits of coal, railway repair shops, and a woodworking plant. Corbin has a Catholic academy and owns its water works. Pop., 1900, 1544; 1910, 2589.

**CORBIN**, HENRY CLARK (1842-1909). An American soldier, born in Clermont Co., Ohio. In 1862 he entered the Union army as a lieutenant in the Eighty-third Ohio Volunteers, but in the following month was transferred to the Seventy-ninth Regiment. He was major of the Fourteenth United States colored troops in 1863, lieutenant colonel in 1864, and colonel in 1865, and remained with the Army of the Cumberland until the close of the war, when he was brevetted brigadier general of volunteers. In 1866 he entered the regular army as a second lieutenant in the Seventeenth Infantry and became captain in the Thirty-eighth Infantry in the same year. He was appointed major and assistant adjutant general in 1880, lieutenant colonel in 1889, and colonel in 1896. After serving at the adjutant general's office in Washington, and on Governor's Island as chief of staff in the Department of the East, he was appointed adjutant general of the army in 1894. During the war in Cuba he was practically the head of the army and was involved in the criticism of the War Department, but in the reorganization of the army it was considered that he displayed industry and ability, and in 1900 he was promoted major general and adjutant general, "this grade to expire with the termination of office of the present incumbent." He was in command of the Division of the Philippines in 1904-06, when he was made a lieutenant general, and retired.

**CORBIN**, JOHN (1870- ). An American dramatic critic and author, born in Chicago. He

was educated at Harvard University. From 1897 to 1900 he was assistant editor of *Harper's Magazine*, during part of this time acting also as dramatic critic for *Harper's Weekly*; in 1902 he wrote the dramatic notices of the *New York Times* and in 1905-07 those of the *Sun*. From 1908 to 1910 he was literary manager of the New Theatre, during the short life of which his efforts contributed much towards notably artistic productions. Besides magazine stories and articles on the drama, he is author of *The Elizabethan Hamlet* (1895); *Schoolboy Life in England: An American View* (1898); *An American at Oxford* (1902); *A New Portrait of Shakespeare* (1903); *The First Loves of Perilla* (1903); *The Care Man* (1907); *Which College for the Boy* (1908); *Husband and the Forbidden Guests* (1910).

**CORBOULD**, kôr'bôld, EDWARD HENRY (1815-1905). An English painter and illustrator, born in London. He studied at Sass's Art School and the Royal Academy, and when only 19 painted "The Fall of Phaethon," for which he received a gold medal from the Society of Arts. Nearly all his paintings are large historical or romantic compositions in water color, academic in style. He was appointed instructor in water color to the royal family in 1851, and many of his pictures are in their possession. Some of his best-known pictures are "Lady Godiva" (National Gallery, Sydney); "Canterbury Pilgrims," and "The Heiress" (British Museum). Among his portraits are those of the Princess Alice and the Prince Consort. He illustrated *Percy's Reliques*, *The Book of British Ballads*, etc.

**CORBULO**, GNÆUS DOMITIUS (?-c.67 A.D.). A Roman general under Claudius and Nero, brother of Cæsonia, wife of the Emperor Caligula. In Nero's reign he conducted a successful campaign against the Parthians under Tiridates (61-63). His successes and his popularity excited the jealousy of Nero, who gave orders for his execution. Upon hearing the Emperor's orders, Corbulo committed suicide. His account of his experiences in Asia, which is mentioned by the Elder Pliny, has been lost. Consult Schoonover, *A Study of Gn. Domitius Corbulo* (Chicago, 1909).

**CORCHORUS**, kôr'kô-rûs (Neo-Lat., from Gk. κόρχορος, *korchoros*, a wild plant of bitter taste). A genus of plants of the family Tiliaceæ, containing about 30 species, both shrubby and herbaceous, natives of the warm parts of the globe. *Corchorus olitorius* is widely diffused in tropical countries and introduced into America. It is an annual, with a smooth, more or less branching stem, varying in height from 2 to 14 feet or upward, according to soil and climate. It has smooth, stalked, alternate, oval, or ovate-lanceolate leaves, and small yellow flowers, solitary or in pairs. It is much used as a pot herb and is called Jews' mallow, from being much cultivated by Jews in Syria and other parts of the East. It is still more valuable for the fibre of its inner bark, as is also *Corchorus capsularis*, a species very similar, but distinguished by its capsule, which is short, globular, and wrinkled in *Corchorus capsularis* and elongated and slender in *Corchorus olitorius*. Both are much cultivated in India, yielding the greater part of the jute (q.v.) of commerce, and of the fibre employed in making gunny bags (q.v.). *Corchorus capsularis* is sometimes called Chinese hemp. *Corchorus nilgaurus* is a small American shrub, occurring from the West Indies southward. It is of little

value. In Panama an infusion of its leaves is used instead of tea. See Colored Plate of FIBRE PLANTS with article HEMP.

**CORCORAN**, MICHAEL (1827-63). An American soldier. He was born at Carrowkeel, Ireland, emigrated to the United States in 1849, and enlisted in the army. He rose to colonel in the regular service, and in 1860 was court-martialed for refusing to parade his regiment in honor of the Prince of Wales. Before he was sentenced the hostilities of the Civil War began. He was sent to the front, was wounded, and was taken prisoner at the first battle of Bull Run. Upon his exchange he was commissioned brigadier general in 1862 and organized the Corcoran Legion, which in 1863 checked the Confederate advance on Norfolk and was subsequently attached to the Army of the Potomac. He died as the result of a fall from his horse. Consult his book, *The Captivity of General Corcoran* (Philadelphia, 1864).

**CORCORAN**, WILLIAM WILSON (1798-1888). An American financier and philanthropist, born in Georgetown, D. C. He was educated at Georgetown College, became an exchange broker in Washington, and in 1840 formed a partnership with George W. Riggs. At the time of the Mexican War he took a large part of the government loans and financed them so skillfully as to lay the foundation of a large fortune which he used with munificence. He was the founder of the Louise Home for impoverished gentlewomen, the Oak Hill Cemetery at Georgetown, and the Corcoran Art Gallery, and made many liberal gifts to colleges and benevolent associations. Consult a sketch of his life called *A Grandfather's Legacy* (Washington, 1879).

**CORCORAN ART GALLERY**. An important public collection of painting, sculpture, and ceramics in Washington, D. C. Its nucleus was the private collection of William Wilson Corcoran, which he presented to the city of Washington in 1869 with an endowment fund of \$900,000. It was opened to the public in 1874 and was originally situated on Pennsylvania Avenue, but in 1897 it was transferred to a new structure on Seventeenth Street, designed by Ernest Flagg in the Neo-Grecian style. The gallery contains, among other treasures, fine specimens of early American painters, an admirable collection of Barye bronzes, and the well-known "Greek Slave" by Hiram Powers. There is a free school of art connected with the institution, and biennial exhibitions of contemporary American painting contribute greatly to its usefulness. Consult Henderson, *The Art Treasures of Washington* (Boston, 1912).

**CORCOVODA**, kôr'kô-vô'dá (probably Peruvian in origin). A crane-like bird, known as the "white-backed trumpeter" (*Psophia leucopetra*) of Peru and the upper Amazon, closely related to the trumpeter (q.v.). It is domesticated and has some curious and friendly habits, described at length in *American Museum of Natural History Bulletin*, vol. ii (New York, 1887-90).

**CORCYRA**. See CORFU.

**CORDA**, AUGUST KARL JOSEPH (1809-49). An Austrian botanist, born in Reichenberg, Bohemia. At the age of 20 he published his *Monographia Rhizospermorum et Hepaticorum*, and in 1834 was made one of the keepers of the Museum in Prague. In 1847 he came to Texas, where he collected a large number of valuable botanic specimens; but on his voyage home, in 1848, he

was shipwrecked and drowned. His works include the following: *Icones Fungorum hucusque Cognitorum* (6 vols., 1837-54); *Prachtflora europäischer Schimmelpilzgebilde* (1839); *Beiträge zur Flora der Vorwelt* (1845).

**CORD'AGE** (from cord, Fr. *corde*, ML. *corda*, Lat. *chorda*, from Gk. *χορδή*, *chorde*, string; connected with Lat. *haru-spex*, inspector of entrails). A name applied chiefly to the running rigging of a ship and to the rope of which the rigging is made. See RIGGING; ROPE.

**CORDAITES**, kôr-dâ'y'tez (Neo-Lat. nom. pl., named in honor of A. J. Corda). A genus of fossil plants, of the family Cordaitæ, that shows intermediate characters between the conifers and the cycads. The genus appeared in Devonian time, reaching its maximum during the coal-measure period, when it was an important forest tree of the coal-swamp flora, and declined during the Permian. The tree grew to a height of 30 to 50 feet, with a trunk that branched freely, and it had dense foliage of parallel-veined leaves of lanceolate or linear form. These leaves are found in great abundance in some coal-measure shales, where they often lie packed in layers as do the fallen leaves of a modern forest. In the Middle Devonian of New Brunswick, Canada, a formation is called the "Cordaite shale," because of the number of Cordaitea leaves it contains. The inflorescence of Cordaitea was separate as in the cycads, and the male and female elements were arranged in catkins placed in the axils of the leaves. The fructification is nutlike, resembling somewhat that of the yew or that of *Cycas revoluta* (a cycad), and has been described under the names Cardiocarpum, Trigonocarpum, etc. The trunk had a large pith, which often decayed to form a cavity of which the casts, known as Artesia and Sternbergia, are found on the dumps of some coal mines. The wood of the trunk, described partly as Araucaroxylon, has a microscopic structure remarkably like that of the conifers. Consult H. Graf zu Solms-Laubach, *Fossil Botany*, pp. 104-122 (Oxford, 1891). See CARBONIFEROUS SYSTEM; CYCADACEÆ; CONIFEREÆ.

**CORDAY D'ARMONT**, kôr-dâ' dâr'mân', MARIE ANNE CHARLOTTE (1768-93). The assassin of Marat, generally known as CHARLOTTE CORDAY. She was born at Saint-Saturnin in Normandy. Her youth, passed in a convent, was spent in the reading of Plutarch, Rousseau, Raynal, Voltaire, and Corneille. Though she was noble by birth, she sympathized ardently with the cause of the Revolution in its early phases; but when the fall of the Girondists ushered in the Terror, she swung immediately to the opposite pole. She was convinced by Barbaroux that Marat and Robespierre were the enemies of France. To the fervent student of the classics the rôle of Brutus seemed a noble one, and she determined to save the nation by murder. Telling her father that she was bound for England, she journeyed to Paris (July 1, 1793), inquired there for the house of Marat, pretending to be the bearer of a message, and bought a knife on the way. Twice delayed, she found Marat at last in his bath, writing (July 13). He had asked that morning, in the *Ami du Peuple*, for 200,000 heads, and Charlotte told him she could give him those of the Girondists at Caen. As he was setting down the names she uttered, one by one, she drove the knife up to the hilt into his heart, then made a futile attempt to escape. Marat cried out, "à moi, ma chère amie!" and

then died immediately; and the girl, quickly captured, and saved with difficulty from the mob, was taken to prison. Brought to trial and speedily condemned, she died calmly (July 17, 1793). Consult: Dubois, *Charlotte Corday* (Paris, 1838); Vatel, *Charlotte Corday et les Girondins* (Paris, 1872); *Bibliographie des femmes célèbres* (3 vols., Turin and Rome, 1892-1905); Defrance, *Charlotte Corday et la mort de Marat* (1909).

**CORDEIRO**, kôr-dâ'ê-rô, JOÃO RICARDO (1836-82). A Portuguese dramatist. He was born in Lisbon and in 1863 became secretary in the Conselho de Beneficencia. He was the founder of the periodical *Futuro*. His reports on charitable work contain much of value concerning the problem of poverty. In 1877 he obtained a government position under the president of the ministry, Luciana de Castro. His plays include: *Fernando* (1857); *Amor e arte* (1860); *A sociedade elegante* (1862); *A familia* (1869); *Os paraizos conjugaes* (1882).

**CORDELE'**. A city and the county seat of Crisp Co., Ga., 65 miles south of Macon, on the Georgia Southern and Florida, the Seaboard Air Line, the Atlanta, Birmingham, and Atlantic, and the Georgia, Southwestern, and Gulf railroads (Map: Georgia, C 4). It is the commercial centre of a cotton-growing region, and manufactures cottonseed oil and lumber. There are a Carnegie library and a sanitarium. Cordele was settled in 1887 and is governed under a charter of 1904 which provides for a mayor, elected biennially, and a unicameral council. The water works are owned and operated by the municipality. Pop., 1900, 3473; 1910, 5883.

**CORDE'LLA**. In Shakespeare's *King Lear*, the youngest daughter of the King.

**CORDELIERS**, kôr-d'lyâ (Fr., cord wearers), or Society of the Friends of the Rights of Man and of the Citizen. The name given in France to the most austere branch of the Franciscan Friars on account of the girdle of knotted cord they wore. After 1790 the name was applied to the members of a political club which assembled in the abandoned chapel of a Franciscan monastery and exercised great influence on the progress of the Revolution in Paris. Its leaders were men of various opinions, Danton, Camille Desmoulins, Marat, Hébert, and the picturesque Anacharsis Clootz. It drew its strength from the very lowest classes of Paris and always had an armed mob at hand ready for insurrections. The members of the Cordeliers were the first to demand a republic, vitalizing the motto "Liberty, Equality, Fraternity," and took a very prominent part in the events of the 10th of August, 1792, and chiefly contributed to the overthrow of the Girondists (q.v.). While the club was at the height of its influence, Desmoulins began the publication of his popular journal *Le Vieux Cordelier*. Later, the spirit of the Cordeliers became so violent as to out-Jacobin the Jacobins, and men like Danton and Desmoulins abandoned it. In 1794 the Cordeliers awakened the enmity of Robespierre. On March 24 and April 5 most of the leaders were guillotined, and the club practically came to an end. Consult Bougeart, *Projet d'organisation des Cordeliers* (Paris, 1870); also *Les Cordeliers, documents pour servir à l'histoire de la Révolution* (Caen, 1891).

**CORDEY**, FREDERICK (1852- ). An English musician, born in London. He studied at the Royal Academy of Music, London, gained the Mendelssohn scholarship in 1875, and, after

studying in Cologne under Ferdinand Hiller, returned to London and in 1880-82 was conductor of the orchestra at the Brighton Aquarium. In 1890 he became professor of composition at the Royal Academy of Music. He was one of the earliest English champions of the cause of Wagner, and, together with his brother Henry, translated the later music dramas of Wagner into English. His compositions include three operas, *Morte d'Arthur* (1877), *Philomel* (1879), *Nordisa* (1887); three operettas; the cantatas, *The Cyclops*, *The Bride of Triermain*, *Dreamland*, *The Sword of Argantyr*; several works for declamation with orchestra: two suites for orchestra, *In the Black Forest* and *Roumanian Suite*; two overtures, *Ossian* and *Prospero*; incidental music to Shakespeare's *Tempest*, Parker's *The Termagant* and *The Black Tulip*. He also wrote several works on the theory of music.

**CORDEBIUS**, or **CORDIER**, kôr'dyâ', MATTHURIN (1479-1564). A French schoolmaster, especially skillful as a teacher of children. He taught in Paris, where he had as one of his scholars John Calvin, who dedicated to him the commentary on the *First Epistle to the Thessalonians*. Later he taught at Geneva, and died there. He wrote, besides philosophical works, a number of books for children, one of which, *Colloquium Scholasticorum Libri Quattuor ad Pueros in Latino Sermone Exercendos* (1564), appeared in numerous later editions and was translated into English and French.

**CORD GRASS** (*Spartina*). A genus of grasses having compound spikes, the species of which are found in wet places, many of them in salt or brackish tide marshes. The spikelets are arranged on one side and have only one perfect floret and very unequal glumes. The species are perennial, rigid, from creeping rootstocks, and have long, tough leaves; hence the name "cord grass." *Spartina stricta*, found in muddy salt marshes on the east and southeast coasts of England, and in America, although remarkable for its extreme stiffness and rigidity of habit, is used for making ropes on account of the toughness of its fibre. *Spartina cynosuroides* and *Spartina patens* are common in the United States, the former along the ocean and lake shores from Maine to the Pacific; the latter species is common in salt marshes, and this and *Juncus gerardi* furnish the best of the marsh hay. *Spartina cynosuroides* has been successfully used in the manufacture of twine and paper.

**COR/DIA'NI**. See SANGALLO.

**CORDIER**, kôr'dyâ', HENRI (1849- ). A French Orientalist, born in New Orleans. He studied in France and England and in 1869-76 lived in China. He became professor of the School of Political Science in Paris in 1886, and professor of history, geography, and Eastern legislation at the School of Living Oriental Languages. He wrote on China for *La Grande Encyclopédie*. His works include *Bibliotheca Sinica*, a bibliography of the Chinese Empire (1878-95); *La France en Chine* (1882); *Recueil de voyages et de documents pour servir à l'histoire de la géographie depuis le XIIIe siècle jusqu'à la fin du XVIe siècle* (1882-85); an *Atlas sino-chinois* (1896); *Histoire des relations de la Chine avec les puissances occidentales, 1860-1902* (3 vols., 1901-02); and *L'Expédition de Chine de 1857-58* (1905).

**CORDIER**, MATTHURIN. See CORDEBIUS.

**CORDIERE**, kôr'dyâr', LA BELLE (Fr., the

beautiful ropemaker). A nickname of the poetess Louise Labé, wife of Perrin, a ropemaker.

**CORDIERITE**, kôr'di-êr-î-t. See IOLITE.

**CORDILLERA**, kôr'dil-yâ'rá. The great system of elevations that extend along or near the Pacific coast of North and South America from northern Alaska to Cape Horn. The Cordillera of North America includes the mountain ranges in Mexico, the Rocky Mountains, the Sierra Nevada, the Coast and Cascade ranges in the United States, and the several ranges in British Columbia and Alaska. The whole western part of the continent traversed by these ranges is commonly called the "Cordilleran region." In South America the term is sometimes used as a synonym for the Andes, or the two may be united, i.e., Andean Cordillera, and is also applied to definite portions of the Andes, as in Colombia, where the three mountain ranges are known as the Eastern, Central, and Western Cordilleras. The term, originally Spanish, is used in America by geographers to signify an extensive system of elevations. See AMERICA; ANDES; ETC.

**CORDITE** (from *cord*, because it is made in the form of a cord instead of being granulated). A form of smokeless gunpowder used in England and some other countries. The original cordite was composed of 58 parts of nitroglycerin, 37 parts of nitrocellulose, and 5 parts of vaseline. It gave excellent ballistic results per unit of weight and volume of space occupied but it caused excessive erosion of the bore of guns using it. Moreover, at temperatures of over 90° F. there was an exudation of nitroglycerin and this could be readily detonated. These defects resulted in its condemnation. The next type devised was called Cordite, M. D., and carried less than 30 per cent of nitroglycerin, with a corresponding increase of nitrocellulose. The latest type is said to contain about 15 per cent of nitroglycerin and over 80 per cent nitrocellulose. In preparing cordite the nitrocellulose is dissolved in a solvent, incorporated with the other ingredients, and the solvent evaporated. While still in a plastic state it is pressed through holes in a plate which form it into a cord of any size desired. Cordite is very easy to handle as the charges are put up in bundles of convenient length. In its early form it required a powder chamber very much smaller than that necessary for a charge of pure nitrocellulose of equal power. When its excessive erosion was fully realized the nations using it were unable to turn at once to pure nitrocellulose as the chambers of their guns were too small. They have therefore been gradually reducing the amount of nitroglycerin and increasing the chamber capacities of their new guns so that both old and new pieces could use the same powder. Very few guns designed for the original type of cordite are now in existence except on unimportant ships. See EXPLOSIVES; SMOKELESS POWDER; GUNS, NAVAL.

**CÓRDOBA**, kôr'dô-ná, or **COR'DOVA**. The flourishing capital of the province of the same name in Argentina, on the Río Primero, a tributary of the Paraná, northwest by rail 246 miles from Rosario and 535 from Buenos Aires (Map: Argentina, E 10). It is situated at an elevation of about 1200 feet, and is regularly laid out and well built, except on the surrounding heights, which are inhabited mostly by the poorer classes. The city has a fine park, or

promenade, and plazas, in the principal of which is situated the cathedral, an imposing structure of composite architecture with a fine cupola, dating from the seventeenth century. A massive Jesuit church, the fine old government house, and the national observatory are worthy of mention. Among the educational institutions are the university—founded by the Jesuits in 1613, thus ranking in age next to that of Lima—a national college, two national normal schools, an episcopal seminary, and a public library. Other features of Córdoba comprise a well-equipped general hospital, asylums for orphans and the poor, etc. The city is an episcopal see. Though a part of the surrounding country is rendered fertile only by irrigation, Córdoba is an important commercial centre, owing to its geographical position. Live stock, wool, and hides are the chief exports of the vicinity, and beds of calcite are worked. The city has some industrial interests, principally manufactures of building material, lime, bricks, and flour. About 12 miles above the city a great dam stretches across the Río Primero; this insures a water supply and furnishes irrigation and power for an electric light and power plant. The population, which is increasing, was about 62,000 in 1900 and 95,000 in 1910. Córdoba was founded in 1573 by Luis Gerónimo de Cabrera. The vicinity had been visited some 30 years before by an officer of Pizarro. The town became the capital of the Spanish Intendencia of Tucumán, and rose to prominence as an educational centre and as the headquarters of the Jesuits in that region. It suffered to some extent in the revolutionary struggles. In 1871 Córdoba was the seat of the first national exposition of Argentina. The Province of Córdoba, of which the city is the capital, has an area of 62,000 square miles and a population of approximately 500,000. The atmosphere of Córdoba is scholastic, and the city, unlike other large Argentine towns, is of special interest as an academic and scientific centre. The national meteorological station here supplies the time for Argentina.

**CÓRDOBA.** A town of Mexico, in the State of Vera Cruz, on the railroad to the city of Mexico (Map: Mexico, L 8). It manufactures woolen and cotton goods and has a trade in sugar and coffee. It is famous for its scenic attractions. Pop., 1900, 8136; 1910, 9600.

**CÓRDOBA, FRANCISCO FERNÁNDEZ DE.** See FERNÁNDEZ DE CÓRDOBA, FRANCISCO.

**CÓRDOBA, GONSAIVO DE.** See GONSAIVO DE CORDOBA.

**CÓRDOBA Y FIGUEROA, é fè'gá-rò'a,** PEDRO DE (1692-c.1770). A Chilean historian, born at Concepción. He entered the army in 1725. In 1739 by order of President Velasco, he founded Los Angeles, the capital of Araucanía. About 1745 he wrote a history of Chile from the conquest until 1717. It has been published in the *Colección de historiadores de Chile*.

**CÓRDOBA Y VALCÁRCCEL, FERNANDO FERNÁNDEZ DE.** See FERNÁNDEZ DE CÓRDOBA Y VALCÁRCCEL, FERNANDO.

**COR'DON** (Fr. *cordon*, from *corde*, cord). A military term for a line of sentries, posted within view of each other, and designed to prevent forbidden contact or communication between one side of the line thus guarded and the other. When large separate bodies of troops are so disposed as practically to shut in a sec-

tion of country, they are spoken of as a "cordon of troops." Country inclosed by a series or system of blockhouses, as in South Africa under General Kitchener (1901), is described as "cordoned." A cordon instituted to prevent contagion from an infected place or district is a *cordon sanitaire*.

**CORDON.** A system of training by which a plant that is naturally diffusely branched is dwarfed to one or two stems in order to induce large fruits. Trees trained as cordons with two stems are usually carried horizontally in opposite directions about 18 inches from the ground. Single-stem cordons are carried obliquely, horizontally, or vertically, the laterals of such branches being kept spurred. Any plant which bears its fruit upon spurs will therefore lend itself to this style of training. In parts of Europe fruit trees are frequently trained, by a series of superimposed cordons, on the walls of houses or other buildings.

**CORDON BLEU,** kór'dòn' blé (Fr., blue ribbon). Knights of the ancient French Order of the Saint Esprit, or Holy Ghost, were so called because the jewel of the order was suspended on a blue ribbon. In late times the term was degraded to mean a "first-rate cook." The *cordon grand* is any member of the Legion of Honor, the decoration being suspended by a ribbon.

**CORDOVA.** See PRINCE WILLIAM SOUND.

**CORDOVA, kór'dò-vá, or CÓRDOBA, kór'-dò-bá** (Lat. *Corduba*, from Phœnician *Kartatuba*, Great City). A city of Spain and capital of the Province of Córdoba, situated on the Guadalquivir, 120 miles by rail north of Málaga (Map: Spain, C 4). It lies at an altitude exceeding 390 feet at the base of the Sierra de Córdoba. In appearance the city is less characteristically Moorish than might be supposed, its aspect being one rather of heterogeneity arising from the conglomerate architecture of various periods; it retains but few marks of the Saracen period and but faintly recalls the grandeur of the former metropolis of Mohammedan Spain. The streets are with few exceptions narrow and crooked, and the houses gloomy. The finest edifice is the cathedral, once the chief mosque of the "Infidels" and one of the most splendid examples of Moorish architecture. Together with the court, it occupies a site 570 feet by 425 feet, with a bell tower 300 feet in height. It is surrounded by a wall with strong buttresses and was originally both mosque and fortress. The interior is almost a labyrinth of pillars, for they number some 850, in various styles and mostly of marble, porphyry, and jasper. The building has suffered considerably through the changes of different epochs, made in the endeavor to convert the mosque into a Christian cathedral. A short distance from the cathedral, to the south, stands the marble triumphal column, erected 1765, of San Rafael, the patron saint of Córdoba. Among the Moorish remains are the ruined city walls, part of the Alcázar, and the old bridge of 16 arches, 730 feet long, connecting Córdoba with its suburb, Campo de la Verdad. The bridge, originally built by the Romans, was reconstructed on the same foundations by the Saracens. Córdoba contains a large number of churches and convents, a bishop's palace, a theatre, and a bull ring. The educational institutions include a lyceum, a theological seminary, a veterinary school, and a library.

Once a great centre of commerce, Córdoba is

in a state of decline. The railroad connection with Seville, Málaga, and Madrid brought in a little new life, but Córdoba is still a city of the Middle Ages. There are manufactures of leather (the celebrated "Córdovan" leather), liquors, hats, cloth, silk, and paper, besides the ancient silver-filigree industry for which Córdoba has long been famous. Iron is mined in the vicinity. Pop., 1900, 58,275; 1910, 65,160.

Córdoba is said to have been founded by the Phenicians, but was acquired 152 a.c. by the Romans. It rose to be the second city of Spain, the seat of a prætor, and a supreme tribunal. Taken by the Goths in the sixth century, it fell in 711 into the hands of the Saracens. At first it was subject to the Caliphate of Damascus, but in 756 the city became independent under 'Abderrahmán I, the founder of the dynasty of the Omayyades, whose rule continued till 1031 and embraced all Mohammedan Spain. From 912 to 961 it was the capital of the Caliphate of Córdoba, and the metropolis of Moorish Spain, rivaling in splendor the Eastern Caliphate of Bagdad. From the ninth century to the twelfth Córdoba was one of the greatest centres of commerce in the world. According to Arabian historians the city at the height of its splendor contained 200,000 houses, 1,000,000 inhabitants, 600 mosques, 80 institutions of learning, and a public library with 600,000 volumes. Such accounts are doubtless exaggerations, but certainly when all was dark over the rest of the Occidental world Córdoba held aloft the light of civilization. After the fall of the caliphate the decline was rapid: the city was taken by Ferdinand III of Castile in 1236. Córdoba was plundered by the French under Dupont in 1808. It is the birthplace of the two Senecas, the poet Lucan, and the philosopher Averroës.

**COR'DOVAN**, or **CORDUAM**. Originally a Spanish leather prepared from goatskins or split horsehide, and used throughout Europe during the Middle Ages for the boots of the wealthy. It was originally made by the Moors of Cordova. The modern application of the term is to a grain leather from the best and strongest portions of a horsehide and used for heavy boots, as for walking or hunting.

**CORDUBA**. See **CORDOVA**.

**COR'DUROY** (probably for Fr. *corde du roi*, king's cord). A cotton material having a cut pile like velvet, but with the surface ribbed. The gut which separates the ribs was produced by binding the pile weft to the cloth, but these ribs are now cut on the face of the fabric by a special form of knife operated at regular intervals during weaving. Cotton corduroy is woven upon a plush loom. See **FUSTIAN**.

**COR'DUROY ROAD**. A road built of straight logs, round or split, laid side by side across the roadway. Such roads are used in swampy ground, where they make travel, particularly in the rainy season, less difficult.

The logs are laid on a level foundation of natural soil, and placed together as close as possible to avoid big joints. They may be left loose or secured in position by two stringers, parallel to the axis of the road, which are spiked down to the logs. Sometimes the joints are filled with wooden wedges to reduce the shock to passing vehicles.

**COR'DUS**, **CREMUTUS**. A Roman historian, who in 25 A.D. was, according to Tacitus (*Annales*, iv, 34, 35), accused before Tiberius of having praised Cæsar's assassin, Brutus, and of

having termed Cassius the "last of the Romans." The true cause for this accusation, however, was his free expression of opinion regarding Sejanus, the influential minister of Tiberius (q.v.). Having pronounced an apology, he starved himself to death. Of his works, one of which was a history of the period 43-18 a.c., only a few fragments remain, preserved in the *Suasoria* of Seneca. Consult Rathlef, *De Cremuto Cordo* (Dorpat, 1860); H. Peter, *Die Geschichtliche Literatur über die Römische Kaiserzeit* (1897).

**COR'DYLINE**. See **TI**.

**CORE** (OF. *cor*, Fr. *œur*, from Lat. *cor*, heart). 1. In masonry, the inner portion of any heavy part of the structure, such as pier, buttress, main wall, etc., which is not visible, but is covered with a sheathing or surface of another material. Roman buildings have a concrete or rubble core, with a facing of brick or coursed-stone construction, sometimes of marble slabs or stucco. In mediæval structures the core is sometimes of brick, often of rubble, with facing of cut stone. In modern work, especially in America, the core, or backing, is generally of brick, even in buildings externally of cut stone. Concrete is now coming into more frequent use to form the core of buildings externally faced with brick or stone. (See **MASONRY**.) 2. The mold by which the interior of a hollow casting is shaped. 3. The cylindrical mass brought up by a hollow drill in boring through strata of earth and rock.

**COREA**. See **KOREA**.

**COREAL**, kô'râ-il', FRANCISCO. Probably the pseudonym of an author who in 1722 published a book entitled *Voyage aux Indes*. According to the statements of the author, he was born in Cartagena, Spain, in 1648 and spent more than 30 years in travel, chiefly in the Caribbean region and in South America. The work passed through several editions, one of the most important of these being published in Brussels in 1736. The numerous errors which it contains and the doubts which have been cast upon its authenticity justify the belief that it was a pseudonymous publication.

**CORELLI**, ARCANGELO (1653-1713). An eminent Italian violinist and composer, surnamed *Il Dicino*. He was born at Fusignano, near Bologna, and studied in Rome under Bassani and Matteo Simonelli. He is said to have been in Paris in 1672 and subsequently passed several years in Germany in the service of the Elector of Bavaria. In 1681 we find him settled in Rome, where he found a generous patron in Cardinal Ottoboni, and soon acquired fame as a virtuoso, teacher, and composer. According to Georg Muffat, he is the originator of the *concerto grosso* (q.v.). He was especially admired for the beauty of his tone and expressive execution and laid the foundation for the development of superior violin technique. His compositions rank among the best of his time and continue to this day models of classical study in instrumental music. The finest and most famous among them are 12 *Concerti grossi*, op. 6. His complete works were edited by Joachim.

**CORELLI**, MARIE (1864- ). An English novelist, whose talent runs to the romantic, sensational, and melodramatic. The adopted daughter of Charles Mackay, of English and Italian parentage, she was born in Italy and was educated in London and in France. *The*

*Romance of Two Worlds and The Vendetta* (1886) made her reputation, and many successes followed these two books. Secure in popular favor, she early came to regard with disdainful pity the severe literary criticism that cavalierly dismissed her from serious consideration. She made Stratford-on-Avon her home. Miss Corelli's books, all showing the real story-teller's gift, include: *Thelma* (1887); *The Horrors of Satan* (1895); *The Mighty Atom* (1897); *The Master-Christian* (1900); *Temporal Power* (1902); *God's Good Man* (1904); *Woman or Suffragette* (1907); *Holy Orders* (1908); *The Devil's Motor* (1910); *Zuska, the Problem of a Wicked Soul* (1911); *The Strange Visitation* (1912).

**CORENTYN**, kō'rën-tën' (Dutch *Corantyn*). A river of Guiana, South America. It rises near the boundary of Brazil, flows in a northerly direction, and empties into the Atlantic. Throughout its length it forms the boundary line between British and Dutch Guiana (Map: Guiana, F 3). It is navigable for a distance of over 40 miles for large steamers, while light vessels can ascend as high as 170 miles from its mouth, where navigation is interrupted by cataracts, which occur at a number of points on its middle and upper course. Its total length is about 400 miles.

**CO'REOP'SIS** (Neo-Lat., from Gk. κόρυς, *koris*, bedbug + ὄψις, *opsis*, appearance). An herbaceous annual or perennial plant of the family Compositae, nearly all natives of eastern North America, and popularly known as tickseed, the fruit being in the shape of a small tick. It is often raised for its showy yellow or rose-purple flowers with yellow or brown disks. The perennials are grown in hardy borders; the annuals in the garden in almost any soil. For illustration, see Plate of CRANBERRY.

**CORESPONDENT**. See DIVORCE.

**COREY**, WILLIAM ELLIS (1866- ). An American capitalist and steel manufacturer, born in Braddock, Va., and educated at Duff's College, Pittsburgh. When 16 years old, he entered the chemical laboratory of the Edgar Thomson Steel Works, and five years later he went into the Homestead Steel Works, where, in 1889, he became superintendent of the plate mill, in 1893 superintendent of the armor-plate department, and in 1897 general manager (succeeding Charles M. Schwab). From 1901 to 1903 he was president of the Carnegie Steel Company and from the latter year to 1911 president of the United States Steel Corporation. He was one of the circle of men associated with Andrew Carnegie in the development of his great steel industries.

**CORFE** (kōrf) **CASTLE**. A village of Dorsetshire, England, in the middle of Purbeck Isle or Peninsula, 24 miles east-southeast of Dorchester (Map: England, D 6). In the vicinity are stone and marble quarries, and clay works for potteries. Pop. (parish), 1901, 1440; 1911, 1406. The ruins of a castle, giving the name to the village, stand on a neighboring hill. Founded in the tenth century, it was long one of the strongest fortresses in the kingdom. Here King Edward the Martyr was murdered by his stepmother, Elfrida, in 979, and King John, during his disputes with his barons, kept his regalia here for safety. In 1642 Lady Bankes defended the castle for six weeks against Charles I. It was dismantled by Fairfax in

1645. Consult T. Bond, *History and Description of Corfe Castle* (London and Bournemouth, 1883).

**CORFLAM'BO**. In Spenser's *Faerie Queene*, a giant representing licentiousness.

**CORFU** (Gk. Κόρυφα, *Korkyra*, or *Képupa*, *Kerkyra*, Lat. *Corcyra*). The most northerly of the Ionian Islands (q.v.), in lat. 39° 20' to 39° 50' N., long. 19° 40' to 20° 10' E. (Map: Greece, A 2). It has a length of about 38 miles, with a breadth varying from 3 or 4 to 20 miles. Area, 275 square miles. Pop., 1907, 99,571. Like the rest of the Ionian Islands, it is mountainous, and the mountains are generally naked and dry, the highest summit, Pantokrator, being about 3000 feet above the sea. The valleys, however, are very fertile, and yield olive oil, wine, honey, oranges, figs, etc. Salt is also produced in some quantity. The climate is generally mild and healthful. The principal town, Corfu, on the east, situated on an elevation, has some good streets and a fine esplanade. It has (1907) 28,254 inhabitants and a considerable trade. It is the seat of a Greek archbishop and of a Catholic bishop. The early history of the island is purely mythical; the later inhabitants identified it with the Homeric Scheria (Phæacia). About 734 B.C. the Corinthians are said to have colonized the island, which, however, soon attained such wealth and maritime power as to assert its independence. After the Persian wars, in which Corcyra took no part, a further dispute with Corinth led the Corcyreans to ally themselves with Athens (435 B.C.), and the intervention of the latter city was one of the factors which contributed to the outbreak of the Peloponnesian War. Internal dissensions and varying foreign control marked the history of the island until it was taken under Roman protection in 229 B.C. During the greater part of the Middle Ages it belonged to the Byzantine Empire; later, it passed into the possession of the Venetians, who held it, in spite of two fierce attacks by the Turks, until 1797. Since that time Corfu has shared the fortunes of the other Ionian Islands. At present it forms, with some minor islands, a nomarchy of Greece. Consult: Riemann, *Corfu* (Paris, 1879); Partsch, *Die Insel Korfu* (Gotha, 1887); Schmidt, *Korkyrasche Studien* (Leipzig, 1890).

**COEI**, kō'ré. A city in the Province of Rome, central Italy, 36 miles southeast of Rome (Map: Italy, G 6). Important to the antiquarian are the huge polygonal blocks that formed the walls of the ancient Cora—a city that was an early member of the Latin League and that had for traditional founder the Trojan Dardanus, or Coras; also the ruins of a temple of Castor and Pollux, an old bridge, the churches of Sant Olivia and San Pietro, and of a so-called temple of Hercules. Its chief trade is in tobacco, oil, and southern fruit. Pop. (commune), 1881, 6300; 1901, 6709; 1911, 7308. Consult G. B. Piranesi, *Antichità di Cora* (Rome, 1770), and A. Nibby, *Analisi della carta dei dintorni di Roma* (Rome, 1848).

**CORIAN'DER** (Lat. *coriandrum*, Gk. κολανθός, *koriannon*, κόριον, *korian*, coriander, possibly from κόρυς, *koris*, bedbug, referring to the smell of the leaves), *Coriandrum sativum*. An annual or biennial plant of the family Umbelliferae, with branching stem, 1 to 2 feet high, the lower leaves bipinnate, the upper leaves more compound, divided into very narrow divi-

sions, and with globose fruit. It is a native of the south of Europe and of the East and has long been cultivated for the sake of its fruit. It has thus become naturalized in some parts of England and the United States, where its fruit, coriander seed, is much less used than in Germany and some other European countries. The whole plant, when fresh, has a very offensive smell, due to an essential oil, but the ripe and perfectly dry fruit has an agreeable aromatic smell and a sweetish aromatic taste. It is used in medicine as a carminative and in domestic economy as an aromatic, being very often mixed with bread in the north of Europe; spirituous liquors are flavored with it; and confectioners cover it with sugar, to make a well-known kind of confection. In the south of England it is common to sow coriander and caraway together, the coriander yielding a crop in the first year and the caraway in years following. Coriander delights in a rich soil and is much cultivated and used in India. It is little used in the United States.

**CORIGLIANO CALABRO**, kô'rê-lyâ'nô kâl-brô. A city in the Province of Cosenza, south Italy, 4 miles from the Gulf of Taranto and 70 miles southwest of Taranto (Map. Italy, L 8). It has a castle and an aqueduct, and markets a high quality of manna from the ash trees of the surrounding country, as well as some oil. It was destroyed in 1806 by the French. Pop. (commune), 1881, 13,272; 1901, 13,320; 1911, 16,338.

**CORIN.** In Shakespeare's *As You Like It*, a shepherd who offers his services to Rosalind and Celia.

**CORIN'NA** (Gk. *Kôpîvva*, *Korinna*). A Greek lyric poetess, nicknamed "The Fly" (*Mûla*, *Myia*), famous alike for her beauty and for her genius. She was born at Tanagra, in Boëtia. She was an elder contemporary of Pindar and, according to tradition, his rival. Ælian and Suidas speak of her five victories over him, and Pausanias saw at Tanagra a picture of her wearing about her head a fillet of victory, which he supposes she gained in a contest with her younger rival. Her poems were all in the Boëtian dialect. The older fragments were edited by Bergk, *Poetæ Lyrici Græci* (Leipzig, 1900); Smyth, *Greek Metric Poets* (London, 1900). In 1907, in a papyrus of the second century A.D., were found considerable remains of two poems attributed to Corinna. Consult *The Year's Work in Classical Studies* (for 1907), and Edmonds, *New Fragments of Corinna* (1910).

**CORINNA.** 1. A name given by Dryden to Mrs. Elizabeth Thomas, with whom he had a correspondence. She afterward made the acquaintance of Curll, the notorious publisher, and furnished him with a selection of letters interchanged between herself and Dryden. They were probably fictitious. 2. The daughter of Gripe in Van Brugh's comedy *The Confederacy*.

**CORINNE, OU L'ITALIE**, kô'rên' ôô lê-tâ-lê' (Fr., *Corinna*, or *Italy*). The most important novel of Madame de Staël, published in 1807, named from its heroine, who pines and dies after her lover proves false.

**CORINTH** (Gk. *Kôpîvθος*, *Korinthos*; said to have been called in early times "Ephyra"). An ancient city of Greece, situated at the south end of the isthmus connecting the northern division of Greece with the Peloponnesus. Its citadel was the Acrocorinthus, an isolated hill 1886 feet

high, with precipitous sides, commanding one of the finest views in Greece. At the northern foot of this hill lay the city of Corinth, on a broad terrace nearly 200 feet above the level of the isthmus. In the Homeric epic *Ephyra* is mentioned as the home of Sisyphus and Bellerophon (see also *MEDÆA*), but the city does not seem to have played a great part in the heroic age, and appears in dependence upon the rulers of Mycenæ, with which place it was connected by a very early system of roads. Discoveries of pre-Mycenæan pottery in graves show that there was a settlement at the foot of the Acrocorinthus in very early times, but as yet few remains of the Mycænæan age have come to light. The growth of the city seems to have occurred after the Dorian conquest of the Peloponnesus and to have been especially favored by the development of intercourse with the West; for this its situation with harbors on both the Corinthian and the Saronic gulfs gave it peculiar advantages, which were further enhanced by alliances with Samos and Chalcis on Eubœa, and by the building of an arrangement by which vessels could be hauled across the isthmus. By the end of the eighth century B.C. Corinth was the chief trading city of Greece, and the extent of its trade is shown by the number of Corinthian vases found in Italian graves as well as by the testimony of ancient writers. Among the colonies founded by Corinth at this period were Syracuse and Corcyra (See *CORFU*). The government was a strict oligarchy under the leadership of the family of the Bacchiade, but when, early in the seventh century B.C., Corcyra successfully maintained her independence of the mother city, a revolution occurred, and Cypselus became tyrant (c.657 B.C.). Under his rule and that of his son, Periander (q.v.), the prosperity of the city increased, Corcyra and Epidaurus were reduced, and the establishment of Potidea on the northern coast of the Ægean gave Corinth a share in the rich trade of Macedon and Thrace. About 582 the tyrants were overthrown, and a moderate oligarchy established, which seems to have remained the usual form of government, though occasionally interrupted by democratic revolutions. With the other cities of Peloponnesus (except Argos), Corinth became a member of the Lacedæmonian League and played a large part in the Persian wars. The great development of Athenian power was a serious blow to the commercial interests of Corinth; accordingly we find the city active in promoting the Peloponnesian War. (See *CORFU*.) After the fall of Athens the Corinthians became jealous of the Spartan rule and formed an alliance with Thebes and Athens, which led in 395 to the Corinthian War. Later, Corinth returned to the Spartan alliance and supported the city in the war waged with the Thebans under Epaminondas. Three years after the battle of Chæronea (338) it was garrisoned by the Macedonians, who held it until 196, with the exception of 242-223, when it was occupied by Aratus (q.v.) for the Achæan League. When the freedom of Greece was proclaimed by the Romans, Corinth was restored to the Achæan League. Having become the centre of the last uprising of Greece against the Roman power, it was utterly destroyed (146) by L. Mummius, the Roman general, and for a whole century it continued in ruins. In 46 B.C. Julius Cæsar rebuilt it, and it afterward became the capital of the Roman Province of *Achaia*; al-

though it never again attained its early importance, it became both prosperous and powerful. St. Paul planted a Christian church here, to which he addressed two epistles. In 1458 A.D. it was conquered by the Turks under Mohammed II, was taken by the Venetians in 1687, and retaken by the Turks in 1715, who held it till 1823. Reduced to ashes in the Greek Revolutionary War, and again utterly destroyed by an earthquake in 1858, Corinth is now rebuilt in a more convenient position on the shore of the Gulf of Corinth. Ancient Corinth was surrounded by walls, having a circuit of about  $4\frac{1}{2}$  miles, or, including the Acrocorinthus, of 8 miles. It had two harbors—*Lechæum*, on the Gulf of Corinth, and *Cenchreæ*, on the Saronic Gulf, opening into the *Ægean*. The former was connected with the city by two parallel walls. The wealth and prosperity of Corinth made it the seat of luxury and licentiousness. Besides the sea deities Poseidon and Amphitrite, Aphrodite claimed a large share in the religion of the city, and her temple alone is said to have had 1000 courtesans as sacred slaves. The Corinthian *hetæra* were famous throughout Greece. In the earlier period Corinth was noted for its work in clay and bronze, and even in later times "Corinthian bronze" was almost as precious as gold. Though devoted to art, and filled with costly paintings and statues at the time of its capture by Mummianus, the city does not occupy a prominent place in either art or literature, and but few Corinthians except Pericles and Timoleon appear among the famous names of Greece. Before 1896 the chief remains of ancient Corinth were the foundations on the Acrocorinthus and the seven columns of a very early Doric temple, probably of the time of Pericles. In 1896 excavations were begun by the American School of Classical Studies at Athens, and although few works of art or inscriptions have been found, the discoveries have furnished a sure basis for the topography of the ancient city, of which the traveler Pausanias (q.v.) gives a detailed description. The chief sites determined are the Theatre, the Fountains of Pirene and Glauce, the road to Lechæum, the Propylæa, and the Agora to which it led, and the identification of the old temple with the Temple of Apollo. The mediæval walls are still in a fair state of preservation. Consult: E. Curtius, *Peloponnesos* (Gotha, 1851-52); Wilish, *Beiträge zur inneren Geschichte des alten Korinths* (Zittau, 1887); id., *Geschichte Korinths von den Perserkriegen bis zum dreissigjährigen Frieden* (Zittau, 1896); these pamphlets contain also a bibliography of Corinthian history. The reports of the American excavations are published in the *American Journal of Archaeology* (2d series, New York, 1897 et seq.). For a popular account, consult Richardson, in the *Century Magazine* (New York, 1899) and Cooley, in *Records of the Past*, vol. i (Washington, 1902).

**CORINTH**, or **NEW CORINTH**. An episcopal city and seaport of Greece, situated on the north coast of the Isthmus of Corinth,  $3\frac{1}{2}$  miles north-east of the ancient city (q.v.) and  $1\frac{1}{2}$  miles southwest of the northern terminus of the Corinth Canal (Map: Greece, D 4), and about 55 miles west of Athens. The town was founded in 1858 after the destruction of the vestiges of old Corinth by an earthquake. It is wholly modern and has a good harbor. It has been prospering since the Corinth Ship Canal was

opened in 1893. Among its exports are oil, honey, silk, corn, and currants. It is the capital of the District of Corinth. Pop., 1896, 4188; (commune) 12,567; 1907, 5340; (commune) 14,867.

**CORINTH**. A city and the county seat of Alcorn Co., Miss., near the Tennessee border, 93 miles east-southeast of Memphis, Tenn., on the Southern, the Illinois Central, and the Mobile and Ohio railroads (Map: Mississippi, J 1). It contains a national cemetery, a park, and a museum. There are machine shops, and manufacturing of spokes, lumber, etc. The water works are owned by the city. Pop., 1890, 2111; 1900, 3661; 1910, 5020.

At the outbreak of the Civil War Corinth, being at the junction of the Mobile and Ohio Railroad running north and south and of the Memphis and Charleston running east and west, became a point of great strategic importance. It was fortified by the Confederates, and immediately after the battle of Shiloh (April 6, 7, 1862) General Beauregard with 50,000 men retreated thither, followed by General Halleck at the head of a force of over 100,000 men. Halleck advanced with great caution, being more than a month in covering a distance of only 23 miles, and when he approached Corinth, Beauregard, after slight skirmishes, quietly evacuated the place during the night of May 29, Halleck taking possession the following day. On Oct. 3, 4, 1862, a force of 22,000 Confederates under Generals Van Dorn and Price attempted to recapture the place, then defended by General Rosecrans with 20,000 troops. But the assailants, notwithstanding the heroic valor displayed, were repulsed with great loss. The Union loss was 315 killed, 1812 wounded, and 232 missing, while that of the Confederates (estimated) was 592 killed, nearly 2000 wounded, and 2225 prisoners.

**CORINTH**, **GULF OF**, or **GULF OF LEPANTO**. An arm of the Mediterranean extending from west to east through the centre of Greece and dividing the Peloponnesus from the northern mainland. The outer portion extends from the promontory of Araxus (now Kalogria) in Achæa to the narrow strait ( $1\frac{1}{4}$  miles) between Rhion and Antirrhion (south and north shores): the inner portion stretches from this point to the isthmus, a distance of about 80 miles. The gulf has the appearance of an inland lake, and the scenery is remarkably attractive, since the shores show striking contrasts of rocky promontories and fertile plains, while the background is everywhere marked by lofty mountains. The narrow neck of land which separates the Gulf of Corinth from the Saronic Gulf and unites the Peloponnesus to the mainland is called the Isthmus of Corinth. (See **ISTHMUS**.) It is about 10 miles in length, and about 4 miles in width at its northern extremity, near Mount Geraneion. In ancient times a wall was built across the isthmus to prevent invasion from the north. On the Saronic Gulf, at the point where this wall terminated and where the Isthmian games were celebrated, is situated the modern town of Isthmia. Excavations by the French School in 1883 brought to light remains of the ancient sanctuaries and houses on a fortified hill; near by are scanty ruins of the old Stadium. The isthmus is pierced by a canal, completed in 1893. See **CORINTH CANAL**.

**CORINTH CANAL**. The construction of a canal across the Isthmus of Corinth was begun by Nero, but the undertaking proved too vast and

was abandoned. In 1881 a French company obtained a concession to construct such a canal, and in 1882 work was begun. In 1889 the work was transferred to a Greek company and was brought to completion by Matsas, a Greek engineer, in 1893. The canal, uniting the Gulf of Corinth with the Saronic Gulf, shortens the journey from the Adriatic to the Piræus by 202 miles. It is 4 miles long, 70 feet wide, and 26 feet deep. The difficulties of navigation, however, in the Corinthian and Saronic gulfs have led large steamships to prefer the longer voyage around Cape Malea. At its western extremity a new town, Poseidonia, has sprung up, and at its eastern end is the modern town of Isthmia.

**CORINTHIAN ORDER.** The latest developed and most elaborate of the three orders of Greek architecture. See COLUMN; ORDERS OF ARCHITECTURE.

**CORINTHIANS, EPISTLES OF PAUL TO THE.** The two writings in the New Testament addressed by Paul to the church at Corinth represent what remains of a larger body of correspondence between Paul and this church, which he had founded in 51 A.D. Paul left the young church of Corinth in a flourishing condition the next year (52 A.D.) and soon after, in 53, began his great missionary work in western Asia Minor with headquarters at Ephesus (Acts xix). In the meantime the church at Corinth had been visited by the eloquent Apollos (Acts xviii. 24-xix. 1) and probably by other prominent Christian evangelists. It grew rapidly in numbers and complexity of membership. Divergent views appeared, a disputatious and divisive spirit was manifested, and some members were even guilty of serious immorality.

Sometime in 55 Paul sent Titus to Corinth to ask the church there whether it would be willing to contribute to the great collection he was planning for the poor brethren in Judæa (2 Cor viii. 6, 10 f., 16 ff.; ix. 1 ff.). Titus was well received, but may have reported the case of immorality to Paul on his return. This was probably the reason why Paul wrote the letter referred to in 1 Cor. v. 9. This letter is now lost.

Somewhat later Paul sent Timothy, by a roundabout route, to Corinth (1 Cor. xvi. 10 f.), but before his arrival there a deputation from the church of Corinth had arrived at Ephesus (1 Cor. xvi. 17 f.) with a letter from the church asking advice on a number of matters. It was this letter and the information Paul received from the members of the deputation and from others (cf. 1 Cor. i. 11) that led Paul to write the long letter now known as 1 Corinthians, written before Pentecost of 55 A.D. (1 Cor. xvi. 5-8).

In this letter he deals first with the reports brought to him of the grave disorders in the church, especially the party factions, gathering around the names of certain Apostles and their workers and Christ (chaps. i-iv), the grossly immoral practices (chap. v), and the contentious spirit which resulted in bringing one another before the courts of law (chap. vi), all of which things the Apostle sternly rebuked. The letter brought by the deputation showed Paul that the church had misunderstood his earlier letter, taking him to mean that he had forbidden them all companionship with any and all persons of bad character. The practical impossibility of complying with this command they had doubtless laid before the Apostle in their letter, in view of which protest he explains that his intention was to prohibit Christian companionship with

such persons in the membership of the church (v. 9-11: "I wrote unto you in my Epistle to have no company with fornicators; not at all meaning with the fornicators of this world . . . but . . . if any man that is named a brother be a fornicator, or covetous, or an idolater, or a reviler, or a drunkard, or an extortioner, with such an one no, not to eat").

The Apostle next replies to the questions on which his advice had been asked (chaps. vii-xvi). These questions regarded marriage (chap. vii), the eating of meat offered in sacrifice to idols (chap. viii), the proprieties of public worship (chaps. xi-xiv)—chiefly as to the use of the *charismata*, or spiritual gifts (chaps. xii-xiv), the doctrine of the resurrection (chap. xv), and the collection for the saints in Jerusalem (chap. xvi)—possibly also the return of Apollos to work among them (xvi. 12).

The writing known as 2 Corinthians presents a complicated problem as to its composition and date. Strong reasons appear for viewing it as made up from two (or parts of two) separate letters of Paul to the church of Corinth written at different dates. There are passages in 2 Corinthians which make it impossible to avoid the impression that the Apostle made a visit to Corinth which is not recorded in the Book of Acts, and that he wrote more letters to the church than are distinctively preserved in the New Testament. The passages referring to the visit are the following: (ii. 1) "But I determined this for myself, that I would not come again to you with sorrow"; (xii. 21) "Least again when I come my God should humble me before you"; (xiii. 2, 3) "I have said beforehand . . . as when I was present the second time . . . that, if I come again, I will not spare." From these it is clear that the Apostle had made a visit to Corinth which was of a sorrowful kind. This cannot possibly be the only previous visit of which we have record in the Acts—the visit in which he founded the church; since, while at that time he was discouraged regarding his gospel work in Corinth, there had been no sorrow between him and his people such as these passages necessarily imply. This inference is confirmed by the remaining passages: (xii. 14) "Behold, this is the third time I am ready to come to you"; (xiii. 1) "This is the third time I am coming to you," from which it is clear that the visit which he was about to make was, to the Apostle, his third visit to this place. The passages referring to the letter are the following: (ii. 3, 4) "Out of much affliction and anguish of heart I wrote unto you with many tears"; (vii. 8, 9-12) "For though I made you sorry with my Epistle, I do not regret it. . . . So although I wrote unto you, I wrote not for his cause that did the wrong, nor for his cause that suffered the wrong," etc., from which it is clear that the Apostle has in mind some other letter than that which we know as 1 Corinthians; since, while 1 Corinthians might be called a letter of censure, whose object was to shame its readers, it could not in any way be termed a letter of "affliction" and "anguish of heart" and "many tears."

The only reasonable explanation of these intimations is to be found in the theory that the facts were somewhat as follows: Timothy's mission (see above) had resulted disastrously. He had not quieted the disputes in the church and had noticed that even Paul's authority was set at naught. Some members were even insinuating that Paul was actuated by unworthy motives.

Timothy returned to Paul with a gloomy report, probably having left Corinth before the return of the deputation bearing 1 Corinthians. It was then that Paul decided to make the visit referred to in 2 Cor. ii. 1, xii. 21, xiii. 2, 3, which was a painful visit and, for some reason, fruitless (cf. 2 Cor. x. 10). Returning to Ephesus, he writes to the church out of the fullness of his mortification and grief a letter bearing upon his experience in this visit and upon the general situation in the church, a letter which might easily have been one "of many tears."

In such a case, however, it is quite certain that we have a portion of this painful letter preserved in the last four chapters of our second Epistle (chaps. x-xiii). The evidence for this statement lies in the following facts: 1. Between chaps. i-ix and chaps. x-xiii there is a marked and otherwise unaccountable difference in the feelings of the Apostle. The earlier chapters are full of cheer and satisfaction; the later of dissatisfaction and distress. 2. Between these two groups of chapters there is, further, a marked and otherwise unintelligible difference in the condition of the church's affairs. In the earlier chapters the church is manifestly loyal to the Apostle; in the later it is as manifestly disloyal. 3. Between these two groups of chapters there is a peculiar set of cross references. It is found in the following passages:

I. (ii. 3) "And I wrote this very thing, lest when I came, I should have sorrow from them of whom I ought to rejoice"; (xiii. 10) "For this cause I write these things while absent, that I may not when present deal sharply," etc.

II. (i. 23) "But I call God for a witness upon my soul, that to spare you I forbore to come to Corinth"; (xii. 2) "I have said beforehand, and I do say beforehand . . . that, if I come again, I will not spare."

III. (ii. 9) "For to this end also did I write, that I might know the proof of you, whether ye are obedient in all things"; (x. 6) "—being in readiness to avenge all disobedience, when your obedience shall be made full."

From these passages it would appear (1) that the actions or states of feeling described in the later chapters as future are in the earlier chapters described as past, (2) that between the future references to these states and actions and the references to them that are past there had come over the situation to which they apply a change for the better. These two phenomena are rendered the more significant by the fact that the passages in the earlier chapters are all of them from a portion of the letter (i. 23-ii. 11) in which reference is made expressly to the painful letter (ii. 3, 4) and most probably to the experiences of the sorrowful visit (ii. 5-11); while two of the three passages in the later chapters are from a portion of the letter (xiii. 1-10) in which reference is made specifically to a contemplated visit which has in it the possibilities of being one of unpleasantness between the Apostle and his people.

These internal evidences are confirmed by the fact that 2 Corinthians does not seem to have been known as early in the post-Apostolic Church as 1 Corinthians. This is especially evident from the fact that Clement of Rome, in writing to the Corinthian church (95 A.D.), though there was in the situation of the church that which would have made references on his part to 2 Corinthians most apt and forceful, apparently confines all his references to the less applicable

1 Corinthians. There seems to be no allusion to it before Polycarp's letter to the Philippian church (116 A.D.); while, generally speaking, references to it by the Fathers are few and not over clear. But if 2 Corinthians was thus so much later in coming to the notice of the church, this period of obscurity would involve necessarily a harsh usage for the first copies of both the letters of which it is composed, and this may easily have resulted in a loss of the closing portion from Paul's last letter (chaps. i-ix.) and, correspondingly, of the earlier portion of his painful letter (chaps. x-xiii.). Inasmuch, however, as both these fragments, when finally discovered, gave evidence of having been written by Paul (cf. i. 1, 2, which gives the apostolic greeting in the name of Paul: "Paul an Apostle," etc., and x. 1, which presents Paul by name as the writer: "Now I, Paul, myself entreat you," etc.), and as one showed itself clearly to be the beginning, while the other as clearly showed itself to be the close, of one of his letters, it would be not at all unnatural were the two fragments placed together as one Epistle and so received generally in the church.

In view, therefore, of the facts presented in the Epistles, we recognize three visits of Paul to Corinth: (a) at the founding of the church; (b) in response to the urgency call; (c) at the close of his mission work in the East. We recognize also four letters of Paul to the church: (a) the letter of prohibition (cf. 1 Cor. v. 9); (b) the canonical 1 Corinthians; (c) the painful letter (2 Corinthians x-xiii.); (d) the canonical 2 Corinthians (chaps. i-ix.).

Together with the Epistle to the Galatians and the Epistle to the Romans, the Corinthian Epistles have been almost universally received as genuine letters of Paul. The Tübingen school (1845) made these four Epistles the standard for their criticism against the remaining New Testament writings. Recently a school of Dutch critics (1880-90) has sought to disprove their apostolic origin. Other continental critics (1875-90), while admitting their substantial genuineness, have attempted to redistribute their contents among various documents. Still other critics (1880-87) confine their efforts to the elimination of certain minor interpretations. Apart, however, from the two-epistle theory for 2 Corinthians, as advanced in this article, the letters are not only unmistakably genuine products of Paul, but are clearly integral in their contents.

**Bibliography.** COMMENTARIES. A. Klöpper (Berlin, 1874); T. S. Evans, in the *Speaker's Bible Commentary* (New York, 1881); A. P. Stanley (London, 1882); T. C. Edwards, *1. **CORINTHIANS, THIRD EPISTLE TO THE.** See APOCYPHA.

**CORINTO**, kô-rên'tô (Sp., Corinth). A seaport in the Department of Chinandega, Nicaragua, situated on the island of Aserradores, between Realejo Bay and the Pacific (Map: Central America, D 4). It has an excellent harbor and is the chief Nicaraguan port of the west coast, having supplanted Realejo. It is the residence of a United States vice consul. Corinto was founded in 1899. Pop., 3000.

**CORIOLANUS**, GAIUS, or GNEUS MARCIUS. A Roman patrician. According to the legend, he was surnamed Coriolanus on account of his capture, 493 B.C., of the town of Corioli, belonging to the Volsci. Of a proud and haughty spirit, he was strongly opposed to the plebeians; on one occasion, during a time of famine, he argued in the Senate that grain which had arrived from Sicily should not be distributed gratuitously to the plebeians, unless they should give up their tribunes, an office lately instituted. For this he was impeached and banished. He took refuge among the Volscians, whom he aided in their war with the Romans. His victories at the head of his Volscian troops alarmed the Romans, who, on his approach to their city, sent a variety of deputations to plead with him. He was deaf to every entreaty. At last the noblest matrons of Rome, headed by his old mother and his wife, Volumnia, leading her two children, came to his tent. His burning desire to be revenged on those who had dishonored him was cooled by the tears of his relatives, and he led back the Volsci to their own territories, where he lived to an advanced age. To this

story numerous objections have been raised by the scientific modern historians of Rome.

**CORIOLANUS**. 1. A tragedy by Shakespeare, produced probably in 1609 and published in 1623. The plot is derived from *Plutarch's Lives*, and some speeches are taken verbatim from Sir Thomas North's translation of that work, published in 1579. 2. A tragedy by James Thomson, published, after his death, in 1748 or 1749.

**CORIPPUS**, FLAVIUS CAESCONIUS (sixth century A.D.). A Latin author, native of Africa. He wrote a panegyric on Justin the Younger, Byzantine Emperor (565-578 A.D.). Corippus was also the author of *Johannis*, an epic poem celebrating the exploits of a proconsul of that name in Africa in Justinian's time, in overthrowing the Moors. The poem, in 8 books and 5000 hexameters, is of importance for the history of Africa and for its accounts of contemporary manners and customs. For editions of Corippus' poems, consult Partsch, in *Monumenta Germaniæ Historica* (1879), and Petschenig, *Berliner Studien für klassische Philologie*, vol. iv (1886).

**CORIS/CO**. An island belonging to Spain, situated off the coast of Guinea, Africa, at the entrance to Corisco Bay, in lat. 0° 55' N., long. 9° 20' E. It has an area of about 5½ square miles, and its surface is very diversified. The island is densely wooded, chiefly with ebony and logwood, which, with the ivory obtained from the mainland, constitute the chief articles of trade. Pop., 1900, 1438, 1910, 845.

**CORITYBA**. See CURITIBA.

**CORK** (Oir., *Corach-Mor-Murham*, Great March of Munster). A maritime county in Munster, the southernmost and largest of the Irish counties (Map: Ireland, C 5). Area, 2890 square miles. Cork is hilly, with a great diversity of surface. The western part is rocky, mountainous, wild, and boggy; the east and south, rich, fertile, and picturesque. The Munster coal field occupies 400 square miles in the northwest section of the county, some iron is also mined; and Cork is rich in limestone and sandstone deposits. The dairy industry is extensive. The population is less than half what it was in 1850, due mainly to emigration to the United States. The capital is Cork. Pop., 1841, 858,100; 1891, 438,432; 1901, 404,611; 1911, 315,431.

**CORK**. A city, port, and parliamentary borough, capital of county Cork, Ireland, on the Lee, 11 miles above its discharge into the sea, and 165½ miles southwest of Dublin by rail (Map: Ireland, C 5). It stands in the centre of a picturesque valley, partly on an island, formerly a swamp, which the word "Cork," "Corroch," or "Coreagh" implies, and partly on the north and south banks of the river. Several bridges span the river to the central island. The situation is picturesque from the uneven ground, irregular streets, intersecting river, and overhanging heights. Cork is the seat of a Roman Catholic bishopric. Its finest building is the Anglican cathedral of St. Finn Barr, in Early French style, completed in 1879 on the site of the saint's seventh-century foundation. The Roman Catholic cathedral, also dedicated to St. Finn Barr, dates from 1808, but was subsequently restored. There are four monasteries and two nunneries. Notable Protestant churches, besides the cathedral, are St. Luke's, St. Nicholas, and St. Anne Shandon. The last named has a high tower of party-colored stones and a noted peal of bells; it is near the site of the Shandon

Castle, once an important stronghold. Roman Catholic churches include those of St. Patrick, St. Mary, Sts. Peter and Paul, St. Vincent de Paul, and Holy Trinity. The principal educational institution is University College, founded as Queen's College in 1849; it was rechartered under its present name in 1908. It occupies a fine building, in Tudor style, on the site of a seventh-century abbey. There are a school of science (1885), an agricultural school, and various parochial and industrial schools. Besides the public library (1790), there are several private collections of importance. There is a public park of 240 acres, with a well-known race course. There is also a handsome public cemetery. The banks of the Lee, above and below Cork, are studded with villas. The estuary contains several islets rising abruptly from the water, with narrow channels between them. It is a landlocked basin, having an entrance one mile in width, which is defended by batteries on Spike, Haulbowline, and Rocky islands, which are also occupied by a convict prison, government repairing dock, ordnance depots, and artillery barracks. On the shores of the estuary are the towns of Passage and Queenstown, formerly Cove of Cork. The Lee is navigable for a considerable distance above the city, and on the improvement of navigation the harbor commissioners have expended large sums. The harbor, formed by the Lee estuary, is noted for its size and safety and has been the main source of the rise and progress of the city. It has dry docks and patent slips. It has a large export and import trade, but of a fluctuating and latterly declining character. The chief manufactures of the city are leather, metallic goods, woolen and linen goods, beer and whisky. The United States is represented by a consul. Founded in 822 by St. Finn Barr, during the ninth century Cork was frequently devastated by the Danes, who early in the eleventh century made it a trading station and built the city walls. Desmond Macarthy, King of Munster, surrendered it to Henry II in 1172. During the Civil War it held out for the King and was taken by Cromwell in 1649. In 1690 it was again besieged and taken by Marlborough. Pop., 1901, 76,122; parliamentary borough, 100,022; in 1911, 76,673. parliamentary borough, 102,274. The great majority of the inhabitants are Roman Catholics. Cork returns two members to Parliament. Consult Cusack, *History of the City and County of Cork* (Dublin, 1875).

**CORK** (Sp. *corcho*, cork, from Lat. *cortex*, bark). The unusually developed epiphleum (see **BARK**) of the bark of the cork tree, or cork oak (*Quercus suber*), the *alcornoque* of the Spaniards, a species of oak (q.v.), a native of southern Europe and northern Africa. Theophrastus, in bk. ii of his *Historia Plantarum*, speaks of the cork tree as a native of the Pyrenees, and Plutarch mentions cork jackets, or life preservers. Spain and Portugal chiefly supply the world with cork, while in addition Algeria and Tunis, southern France and Corsica, and Italy, including Sardinia and Sicily, are also sources of supply. Some parts of the United States have been deemed favorable for the culture of the cork tree, and attempts in this direction were made in 1858, but were not vigorously prosecuted.

Seventy per cent of the world's cork is produced in Spain and Portugal. The cork production of Spain during 1912 was, approximately, 78,000 tons, of which 54,780 tons came from

the Seville district, 12,650 tons from Catalonia and Castellon, 7100 tons from Galicia, and 3460 tons from the two Castile provinces. While the finest cork is grown in various parts of the provinces of Seville, Badajoz, Caceres, Cadiz, Huelva, Córdoba, Gerona, Barcelona, Castellon, Ciudad Real, Toledo, Malaga, and Salamanca, the greatest part of the finest supplies, however, is grown near Barcelona. Most of the low-grade cork is produced in Seville. The total number of cork factories in Spain was 892, distributed through 107 towns, and these produced for export 8964 tons of cork, 746 tons of small squares, 583 tons of other manufactured cork, and 50,198 tons of cork wood and cork waste. About 5500 tons of cork sawdust are used in Spain annually in packing fruit for shipment. Some 40,000 persons were employed in some manner in the cork industry in Spain, with an average wage of about 67 cents per day. Planted trees are said to be inferior to the natural forests. The cork tree is not of great size, generally 20 to 40 feet high, with ovate-oblong evergreen leaves, which are sometimes entire and sometimes sharply serrated. It lives to a great age, in some instances 300 or 400 years, and is as much as 15 feet in circumference. It blossoms in April or May; the fruit ripens from September to January, falling on the ground as soon as ripe. The acorns are edible and in taste resemble chestnuts. The bark in trees or branches from three to five years old acquires a rough appearance, new layers of cellular tissue being formed, and the outer parts cracking from distension until they are finally thrown off in large flakes, when a new formation of the same kind takes place.

Cork intended for the market is generally stripped off a year or two before it would naturally come away, or when, according to the Spanish regulations, it measures 40 c.m. (15 inches) in circumference. This first, or virgin, cork is taken off when the tree is about 20 years old and has little commercial value. The process is repeated at intervals of about nine years, according to the vigor of the tree. The removal of the cork does not require the removal of the whole bark, but only of external layers of spongy cellular tissue, all or the greater part of which has ceased to have any true vitality and has become an incumbrance to the trees. Consequently, instead of being injurious, the taking of the bark, when done with proper care, rather promotes the health of the tree, which yields its best bark at about the age of 40 years and continues to yield crops for 150 years or more. In stripping off the cork longitudinal and transverse incisions are made to the proper depth, and each piece is then cut away from the tree. The average yield for one tree is about 45 pounds, although as much as 500 pounds may be secured. The slabs, after drying for a few days, are placed in boiling water for one hour. This process enables the useless outer coating of the slabs to be scraped off and increases their bulk one-fourth and also their elasticity, besides dissolving the tannin and other substances. Steam is sometimes employed instead of hot water. The cork is then scraped either by hand or by scraping machines, in which process it loses from 20 to 30 per cent of its weight. The cork is then cut crosswise into strips of the proper length, then lengthwise, and finally into pieces of the proper shape; or the strips of a given quality may be shipped direct

to the point of manufacture. In many Spanish districts the manufacturing industry is carried on in the homes by hand, but there are also cork-cutting machines, especially in the United States, of great efficiency, which handle the strips imported in bales. The United States in 1913 imported unmanufactured cork valued at \$3,152,670 and manufactures of cork valued at \$2,350,684. The cork, after being cut, is washed in oxalic salt, or some other solution, and then dried. It is now ready to be sorted and packed for the market. In Spain the corks, after being sliced and cut, are packed in lots of 30,000 in bagging cloth and called bales.

Besides its use for stopping bottles, casks, etc., cork is largely used, on account of its lightness, for floats of nets, swimming belts, etc.; and, on account of its impermeability to water, and its being a slow conductor of heat, inner soles of shoes are made of it. All these uses are mentioned by Pliny; but the general employment of corks for glass bottles appears to date only from the fifteenth century. It is also used for smokers' mouthpieces and many other modern devices. The bits that are left in the process of manufacture are ground to powder and used in the manufacture of linoleum, for the loose filling of refrigerators or other heat insulation, and for many other purposes. The Spanish black used by painters is made by burning cork in close vessels.

**CORK, EARLS OF.** See BOYLE.

**CORLEONE, kôr'lâ-ô'nâ** (It., lion heart). A city in the Province of Palermo, Sicily, situated 1950 feet above the sea, at the foot of Mount Cardellia and 21 miles south of Palermo (Map: Italy, H 10). Little industry of any kind is carried on, but Corleone has a splendid old church (restored). The ancient Korlium was founded by the Saracens and colonized with Lombards by Frederick II in 1237. Pop. (commune), 1881, 15,686; 1901, 14,803; 1911, 19,072.

**CORLISS, GEORGE HENRY** (1817-88). An American engineer and inventor, born at Easton, N. Y. In 1844 he removed to Providence, R. I., where he engaged in the manufacture of steam engines and in 1848 established the Corliss Steam Engine Company. He made and patented many improvements in steam engines and in 1876 furnished the "Corliss engine" of 1400 horse power to Machinery Hall in the Philadelphia Centennial Exhibition.

CORMS.

a, Colchicum; b, Arisaema (Indian turnip).

**CORM** (Gk. κορμός, kormos, the trunk of a tree, with boughs lopped off, from κελπεύ, keiréin,

Lith. skirti, OHG. scoran, Ger. scheren, Icel. skera, AS. scoran, Eng. shear). A compact subterranean stem which is related both to tubers and bulbs. It is very short and fleshy, usually more or less rounded or depressed, and in this feature is related to the tuber. It is related to the bulb, however, by the fact that this short and compact fleshy stem is invested by thin scale leaves. Corms are sometimes spoken of as "root bulbs," and in popular usage are constantly spoken of as "bulbs." Common illustrations are found in the Indian turnip, crocus, gladiolus, cyclamen, etc.

**CORMENIN, kôr'me-nân', LOUIS MARIE DE LA HAYE, VICOMTE DE** (1788-1868). A French jurist and politician, born in Paris. He was educated for the law, and as auditor of the Council of State, after 1810, drew up several of the Council's most important reports. He was a deputy from 1828 to 1846. His extensive knowledge of jurisprudence and of the practical affairs of government, and the clear and logical force with which he presented his ideas, soon secured for him great influence in public affairs. His famous *Lettres sur la liste civile* began to appear in 1831 and passed through 25 editions within 10 years. He was elected to the National Assembly in 1848, was made president of the commission appointed to remodel the constitution, and strongly advocated universal suffrage. Although he had opposed the admission of Louis Napoleon to the National Assembly, and afterward had protested against the coup d'état, he was appointed, in 1852, a member of the reconstituted Council of State. In 1855 he was elected a member of the Institute. Besides his numerous political pamphlets, published under the pseudonym of "Timon" and subsequently collected as *L'ampilete de Timon* (1848)—all models of political satire—Cormenin wrote *Etudes sur les orateurs parlementaires* (1838), which passed through nearly 20 editions, and a valuable *Droit administratif* (1822), summing up French administrative law in aphorisms.

**CORMON, kôr'môn', FERNAND** properly Fernand Piestre (1845- ). A French decorative, figure, and portrait painter. He was born in Paris, and studied under Cabanel at the Ecole des Beaux-Arts, then in Brussels under Portaels, and finally under Fromentin and Bussion in Paris. He exhibited constantly in the Salon after 1868 and was made a member of the Institute in 1898. Many of his works are of an archaeological character, the most important of these being a series of 10 mural paintings and a ceiling in the Natural History Museum, Paris (1898), some of the cartoons of which were exhibited at the St. Louis Exposition in 1904. They represent prehistoric men and animals and the development of the human race, are excellent in design, and show deep scientific knowledge. He came to enjoy high reputation as an instructor and met success also in painting portraits, which include those of President Loubet (Luxembourg), Gérôme, and Carrier-Belleuse. Other important works are: "Cain" (1880, Luxembourg); "The Victors of Salamis" (1887, Rouen), and "The Roman Legion" (1909, Leipzig).

**CORMONT, kôr'môn', THOMAS and REYNAUD DE.** Father and son; French architects of the thirteenth century; prominent among the builders of the cathedral of Amiens, following Robert de Luzarches (1223-69).

**CORMONTAIGNE**, kôr'môn'hé'ny, LOUIS DE (c.1695-1752). A French military engineer, who took part in some of the most important sieges in the War of the Polish Succession and that of the Austrian Succession. He had charge of the line of fortification from Calais to the Rhône, and he built new defenses at Strassburg, Metz, and Thionville. His improvements of Vauban's system of fortification are embodied in his *Architecture militaire, par un officier de distinction* (1741). For his biography, see Von Brese-Winiari, *Ueber Entstehen, der neueren Befestigungsmethode* (Berlin, 1844).

**COR/MORAN**. A Cornish giant in the story of Jack the Giant-Killer.

**COR/MORANT** (Fr. *cormoran*, It. *corvo marino*, from *corvo*, crow, and *marino*, marine; cf. Bret. *morvan*, cormorant, from *mor*, Lat. *mare*, sea + *bran*, crow). A group of web-footed birds comprising the steganopode family Phalacrocoracidae, characterized especially by a bare dilatable membrane beneath the lower mandible, but not in the form of a sac under the throat as in the pelicans; a compressed bill, rounded above, and with a strong hook at the point of the upper mandible; the nostrils linear and seemingly impervious to air, the claw of the middle toe serrated, used in trimming the plumage; the wings of moderate length; the tail rounded, the feathers stiff and rigid and used to aid in walking or climbing. The species are distributed over the coasts of most parts of the world, some of them ascending rivers and even visiting freshwater lakes in pursuit of fish, on which all of these birds subsist exclusively.

Cormorants are proverbially voracious. They do not take their prey by diving, when on the wing, but pursue it by swimming and diving, using their wings in progress under water, and sometimes descending to a great depth; a British species has been caught in a crab pot fastened 120 feet under water. When the prey has been taken in a manner inconvenient for swallowing, they toss it in the air and adroitly catch it as it descends. The behavior of cormorants in fishing and towards each other in their colonies has been described at length by E. Selous in *Bird Watching* (London, 1901). Some of the species frequent high rocks, others low islands, on which they make rude nests, chiefly of seaweed and almost always in colonies; some perch and even build their nests on mangroves and other seaside trees. Their greenish-blue eggs are covered with a calcareous incrustation. The flesh of all the species is dark and of a fishy taste, but is sometimes used as food, particularly that of young birds.

There are described about 25 well-defined species, of which seven are found in North America. The commonest is the double-crested cormorant (*Phalacrocorax auritus*, or *dilophus*), so called from the lateral crest of curly feathers on the sides of the head, and present in some one of its four subspecific forms throughout North America. The "common" cormorant (*Phalacrocorax carbo*) occurs abundantly on both sides of the Atlantic, especially northward, while on the Pacific coast three species are numerous—the tufted, or Brandt's cormorant (*Phalacrocorax penicillatus*), the red-faced cormorant (*Phalacrocorax bicristatus*, or *urile*), and the violet-green cormorant (*Phalacrocorax pelagicus*, or *violaceus*); the two latter are especially characteristic of Alaska. The British species are the "common" cormorant, which is about 33

inches long and almost of a black color, but during the breeding season exhibits a sprinkling of elongated white and almost bristly feathers on the head and back of the neck; and the green cormorant, or "shag" (*Phalacrocorax graculus*), which is smaller and dark green. Two notable species are Pallas's cormorant, now extinct (see EXTINCT ANIMALS), and Harris's, the surf-fishing, flightless species of the Galapagos Islands, which is exceedingly rare, of great size, and has wings useful only as fins. See FLIGHTLESS BIRDS.

Fishing with cormorants is a very ancient practice, still regularly followed among the Chinese and Japanese and lately revived as a sport in Great Britain. The birds are taken from the nest when young and are easily tamed and trained, or old cormorants may be trapped and taught to serve. They are kept for a while and fed meat, etc., until accustomed to their master and the feeding methods. Then a line is fastened to one leg by a leather anklet, and they are taken out in a boat to fish and drawn in after each capture. After a time they may be set free. A ring or strap collar is fastened about their necks, so that no fish can be swallowed, but only pouched, and they return to the boat to be relieved of their burden. After a suitable time the ring is removed, and they are allowed to fish for themselves or are fed. These birds make a living for many families on the Chinese coast, and well-trained ones are highly valued. The modern use of cormorants in this way in England was described and illustrated in *The Field* (London, October, 1890). See PLATE OF FISHING BIRDS and Colored Plate with WATER BIRDS.

**CORN** (Lat. *cornu*, horn; connected with Ir. Welsh *corn*, Gk. *kápron*, *karnon*, Goth. *haurn*, AS., Eng., OHG. *horn*, Ger. *Horn*, also with Gk. *képas*, *keras*, Skt. *srñga*, horn). A small hard growth resulting from an increase in the thickness of the cuticle or epidermis, which is generally caused by irritation, excessive pressure or friction on the part. Corns occur most commonly on the toes, as a result of tight shoes. Three varieties of corns are described, viz., 1. Laminated corns, or callosities, in which the hardened cuticle is arranged in layers, frequently of a dark brown color, from the effusion of blood in the deeper layers. 2. Fibrous corns (*clavi*), which are not only fibrous in their early stages, but have convex surfaces and, as time goes on, sink into the skin, sometimes producing great pain. Frequently a bursa, or small bag containing serum, is formed beneath, and if this should inflame, pus speedily forms, and the pain and constitutional irritation become severe. At other times the pressure may cause absorption of the ends of bones, and serious alterations in the condition of a joint. 3. Soft corns occur between the toes and cause much annoyance; they are generally small, and as they are constantly bathed in perspiration, the cuticle does not harden, as in the other varieties. They sometimes give rise to painful ulcerations and should never be neglected. The treatment of corns consists in the removal of all undue pressure or friction, either by removing the shoe altogether, or protecting the corn by surrounding it with a ring of felt or "corn plaster"; or the hardened cuticle may be softened by the application of water of ammonia and then scraped or filed away; or it may be extracted by using a dull instrument. A soft corn should be treated

by putting small rings of absorbent cotton around it and between the toes, and keeping it dry till it becomes a hard corn, and then treating it as such. Most druggists keep a "corn cure" composed of salicylic acid dissolved in collodion, several applications of which will remove a hard corn. In all serious cases application should be made to a surgeon or chiropodist.

Corns affect horses as well as man. In the foot of the horse they occur in the angle between the bars and outer crust and are caused by a bruise of the sensitive secreting sole. Two forms of feet are especially subject to them—those with deep, narrow, slanting heels, in which the sensitive sole becomes squeezed between the doubled-up crust and the shoe; and wide, flat feet, which, by the senseless cutting away of the bars and outer crust, allow the delicate interior parts to be pressed with all the force of the animal's weight on the unyielding iron shoe. Serum and blood are poured out, while the secreting parts, being weak and irritable, produce a soft, scaly, unhealthy horn. Corns constitute unsoundness; cause a short, careful, tripping gait; are a very frequent source of lameness among roadsters; abound in badly shod horses, especially those with the kind of feet alluded to, and usually occur in the inside heels of the forefeet, these being more especially subjected to weight and hence to pressure. The discolored spot indicating the recent corn must be carefully cut into with a fine drawing-knife, any serum or blood being thus allowed free vent. If the bruise has been extensive, a poultice will have the twofold effect of allaying irritation and relieving the sensitive parts by softening the hard, unyielding horn. When the injury has been of long standing, and soft faulty horn is secreted, a drop of diluted nitric acid may be applied. On no account must the bars or outer crust be removed, they are required for bearing weight, which may be further kept off the injured part by the use of a bar shoe. In horses subject to corns the feet should be kept soft by dressing with tar and oil, or any suitable emollient, the corn should be pared out every fortnight; a shoe with a wide web on the inside quarter should be used, and should be nailed only on the outside; and, if the sole is thin and weak, leather pads should be employed. In bad cases the shoes may be removed and the horses turned out to pasture for a few weeks with good results.

**CORN, INDIAN.** See MAIZE.

**CORNARO, kôr-nâr'ô, CATERINA** (1454-1510). Queen of Cyprus. She was born in Venice, of a patrician family. She was married to James II, of Lusignan, King of Cyprus, in 1472, and succeeded him on his death, only eight months later. When her son had also died, in 1475, the Republic of Venice assumed the government, and in 1489, fearing the conclusion of a marriage between her and Alfonso, the hereditary Prince of Naples, forced her to abdicate and leave the island. She was received in Venice with great pomp and thereafter resided at Castle Asolo, near Bassano. Caterina has been the favorite subject of romances and the heroine of several operas. Of her life in Venice her cousin, Cardinal Pietro Bembo, has left a vivid description in *Gli Asolani*. There is a famous portrait of this Queen by Titian in the Uffizi gallery in Florence. Consult Hare, *Most Illustrious Ladies of the Italian Renaissance* (New York, 1904) and McCurdy, *Essays in Fresco* (London, 1912).

**CORNARO, LODOVICO, or LUIGI** (1467-1566). A Venetian nobleman and hygienist. Up to his fortieth year he so wasted his forces, originally but feeble, in dissipations of every kind that his life was despaired of. He thereupon adopted strict rules of frugality in eating and drinking, with general care of his health and gentle exercises, and in consequence lived for almost a century. To promote those habits which had proved so advantageous in his own case, he wrote, in his eighty-third year, his celebrated treatise, *Discorsi della vita sobria* ('Essay on Temperate Living'), which was first published at Padua in 1558 and has been translated into many European languages. The work is mentioned with approval by Addison in No. 195 of *the Spectator*. There is a translation, *The Art of Living Long* (Milwaukee, 1903).

**CORN'BURY, EDWARD HYDE, LORD**, third EARL OF CLARENDON (1661-1723). An English politician, Governor of the colonies of New York and New Jersey from 1702 to 1708. He was a member of Parliament for Willshire from 1685 to 1695, and for Christchurch from 1695 to 1701, and in September, 1701, was appointed Governor of the Province of New York by King William, to whose side he had treacherously deserted in 1688, from that of his uncle, James II. He reached New York in May, 1702, was confirmed in his office by his cousin, Queen Anne, on the death of King William, and later in the year was also appointed first royal Governor of New Jersey. In both New York and New Jersey his arbitrary policy, his religious intolerance, his administrative incapacity, and his dissolute habits soon made him extremely unpopular, while in New York the dislike of the people was considerably intensified by his fraudulent appropriation of public funds and his attempts to override the Legislature, which insisted on its right to appoint a treasurer of its own for the "receipt and disbursement of any moneys the Legislature might order to be raised for public purposes," and contended that "the Assembly as representatives of the people of this province are entitled to the same privileges and have a right to the same powers and authorities as the House of Commons enjoy." Finally, as a result of lists of grievances passed by the legislatures of both colonies, Cornbury was removed from office in 1708 and was immediately thrown into prison in New York by his creditors; but, on his becoming third Earl of Clarendon by the death of his father in 1709, he was enabled to pay off his debts and returned to England. He became a Privy Councillor in 1711 and was Envoy Extraordinary to Holland in 1714. During his term as Governor of New York and New Jersey, he was fond of appearing in public dressed as a woman, and Lewis Morris, a contemporary, wrote: "He dresses publicly in women's clothes every day and puts a stop to all public business while he is pleasing himself with that peculiar but detestable maggot." William Smith, in his *History of the Late Province of New York* (New York, 1829-30), speaks of him as follows: "We never had a governor so universally detested, nor one who so richly deserves the public abhorrence. In spite of his noble descent, his behavior was trifling, mean, and extravagant. The indignation of the people was kindled by his despotic rule, savage bigotry, insatiable avarice, and injustice not only to the public, but even his private creditors." Consult Wilson, *Memorial History of the City of*

*New York*, vol. ii (New York, 1891-93), and Gordon, *A History of New Jersey* (Trenton, 1834).

**CORN COCKLE.** See **COCKLE.**

**CORN-CRACKER STATE.** Kentucky. See **STATES, POPULAR NAMES OF.**

**CORNCRAKE.** See **CRAKE.**

**CORNEA**, kôr'né-â (Neo-Lat., fem. of Lat. *corneus*, horny, from *cornu*, horn; so called from its resemblance to horn). The transparent anterior portion of the outer coat of the eye. It contains no blood vessels and obtains its nutrition by means of a system of spaces filled with lymph. The cornea is subject to inflammation, known as *keratitis*; ulcer of the cornea is very common, resulting most often from injury, inflammations of the conjunctiva, phlyctenular keratitis, various disturbances in nutrition, etc. A number of forms are seen attacking different portions of the cornea. Aside from inflammation of other portions of the eye accompanying the ulceration, there may result adhesion and prolapse of the iris, closure of the pupil, and opacity of a portion or the whole cornea. *Staphyloma* (q.v.), a protrusion of a part or the whole of the cornea, may follow. *Keratoconus* occasionally occurs in young adults, especially females; the cornea protrudes at the centre from weakness and intraocular pressure. See **EYE; EYE, DISEASES OF THE.**

**CORNEILLE**, kôr'nâ'y, PIERRE (1606-84). One of the greatest tragic poets of France. He was born at Rouen, June 8, 1606, the son of a lawyer and magistrate of worth, ennobled in 1637. He was trained by the Jesuits, took the advocate's oaths in 1624, and held minor legal offices until 1650. His first play, *Mélite*, presented in Paris (1629), was popular and was followed by *Citandre* (1632), a tragi-comedy; *La veuve* (1633), his first comedy; *La galerie du palais* (1633) and *La suivante* (1634), both comedies. These early plays are full of the insipid love in fashion at the time, and the title of one of them will suffice alone to show their realism. In 1634 he met Richelieu, composed a Latin elegy on his visit to Rouen, and was enrolled among the five poets of the Cardinal statesman, of whom Rotrou alone was at all worthy of his company. He soon incurred Richelieu's displeasure for too frank criticism of his literary work and wrote, uninfluenced by the Minister's favor, *La Place Royale, Médée*, his first tragedy (both 1635), and *L'illusion comique* (1636). But all this earlier work was completely eclipsed by the triumph of his epoch-making *Cid* (1636), though we may not leave these earlier dramas without recording that they are far superior to anything that had preceded them in vigor and in truth to nature, and that to them we owe the happy invention of the soubrette. Such promise as they gave, however, pointed less to the field of Corneille's great achievement than to the drama of intrigue and to the comedy of contemporary society, for some of them are full of rather coarse stage business and a battledore and shuttlecock repartee, and are written in a style that he felt needed apology for its familiar simplicity. Still, we must admit that in them Corneille created the comedy of manners as well as the beginnings of character comedy.

The tragi-comedy of *Le Cid* was so different from Corneille's earlier dramas that it hardly seems the work of the same hand. It gave him a preëminence over contemporaries and prede-

cessors, questioned only by interested rivals and the Academy, which Richelieu summoned to support them, and which it did with studied half-heartedness. Among the conservative critics passion ran as high as in the famous battle over Hugo's *Hernani*. Scudéry, a critic of repute, asserted that *Le Cid*'s subject was ill chosen, its structure unpardonable, its action clumsy, its versification bad, and that its undeniable beauties were stolen from a Spanish play by Guillen de Castro, which was indeed its acknowledged source. But the public spoke with no uncertain voice, and though *Le Cid* may lack the ethical depth and tragic force of some of Corneille's later dramas, it was and has remained the most popular on the stage of them all. Modern French drama dates from *Le Cid*.

In the controversy that raged around *Le Cid* Corneille's position was delicate. He was not by nature a tactful disputant, being indeed inclined to arrogance, as he showed on this occasion by his *Excuse à l'Artiste*; he could not afford to lose the favor that Richelieu continued to show him, and he could not secure a full hearing without imperiling it. He therefore withdrew for three years to Rouen. When he returned in 1639 to Paris, it was with a matured genius that almost immediately asserted itself in unparalleled splendor and fecundity. Yet the theme of *Le Cid*, the struggle between honor and love in the hero, between duty and love in the heroine, remains typical of the later tragedies. Typical of them all are also the five acts and the three "unities": the time limited to 24 hours, the scene to a single town, and the action to a central interest—self-imposed fetters worn with even greater complacency by Racine. The Spaniards knew nothing of these unities, and the effort to force their romantic drama into this rigid mold had, by the improbabilities, material and psychic, that it involved, given occasion for most of the criticism that had befallen *Le Cid*. Corneille therefore, in 1639, turned to classical subjects that would lend themselves more readily to the episodic treatment which the unities demanded. What survived of romance in him was the invariable intermingling of love with sterner themes.

*Horace* (1640) sets the love of man and woman against the love of race and fatherland in fourfold treatment of a single theme. In the more modern *Cinna* passion twists love of fatherland to its purpose and is opposed at once to the magnanimity and the patriotism of Augustus. *Polyeucte* (1642) opposes Christian to marital duty in a story of Christian martyrdom, which was a bold venture, for many thought, with Boileau, that the mysteries of the faith should be kept out of literature. These three, with *Le Cid*, mark the height of Corneille's achievement—the climax of the development of the elements of love and will—save that he touches for a moment a greater intensity of terror in *Rodogune* (1646). The other tragedies are more or less pale imitations of the merits of these. Among them it is worth while to name: *La mort de Pompée* (1643), which is but a series of dialogues and narratives; *Théodore* (1645), an even more dubious venture in Christian martyrdom than *Polyeucte* had been; *Héraclius* (1647), followed by Corneille's election to the Academy; *Nicomède* (1651); *Pertharite* (1652). The last was an unmistakable failure which led Corneille for a time to withdraw altogether from the stage.

During these years he had written also two comedies on Spanish models, *Le menteur*, the best comedy written in France before Molière, and *Suite du menteur* (1644-45), and a good tragi-comedy, *Don Sanche d'Argon* (1650), which, as the name implies, was Spanish also.

Disappointed by the failure of *Pertharite*, Corneille withdrew to Rouen, where he lived from 1652 to 1659, and turned his talent to versifying Thomas à Kempis's *Imitation of Christ* (1656), and to the writing of very frank critical essays on his own plays and the drama in general. He was recalled from this by a visit of Molière's company to Rouen in 1658, and between 1659 and 1674 wrote 11 tragedies of unequal mediocrity, though in each of them there were verses "with necks in thunder clothed and long resounding pace," such as he alone has known the art to create. The time to regret had passed, the time to cry halt had come, when Boileau wrote his famous epigram, *Après Agélas hélas* (1666); *Mais après Attila hold* (1667). A new conception of dramatic art had been introduced by Boileau and Racine, and when Corneille was beguiled into a contest for court favor, he was fated to see his young rival's *Bérénice* preferred to his *Tite et Bérénice* (1670). Other plays of this period are: *Œdipe* (1659); *La toison d'or* (1660); *Scrtorius* (1662); *Sophonisbe* (1663), after which he received an irregularly paid pension of 2000 livres, *Othon* (1664); *Psyché* (1671), in collaboration with Molière and Quinault; *Pulchérie* (1672); and *Suréna* (1674). He had written some devotional poetry between 1665 and 1670, and among his last compositions were some beautiful verses of thanks addressed to Louis XIV in 1676. Corneille's last years were passed in pecuniary straits, "satiated with glory and hungry for money," as he said, and when, at the urgent request of Boileau, the King sent him 200 pistoles, it was already too late. He had no time to spend them, and two days after he was dead (Oct. 1, 1684).

Corneille's works show him, as his friends describe and as his portraits paint him, a man of serious, rugged, and almost stern temper. A pious churchman, he was ill at ease in society, and awkward and unsuccessful when he attempted to flatter. The only touches of romantic sentiment revealed in his verses are found in those addressed to an actress of Molière's company, Mlle. du Parc, who scorned his attentions. Whether from pride or shyness, he never curried favor, nor took his place with courtiers at a time when this was almost necessary to literary prosperity. His public manners were not gracious, though he was an affectionate husband and brother. His best work never lost popular favor, and the most eminent of his literary contemporaries always did him justice. The greatest of them, Molière, spoke of him as his master, and Racine pronounced at the Academy a eulogy on his rival at once just and generous, that later critics have in the main confirmed.

The first impression made by an attentive reading of Corneille's work is its remarkable unevenness. Judged by his best, he ranks with the greatest. No dramatic poet rises to grander heights. Hence no poet is more quotable and few more quoted, for he has hundreds of lines that cling to the memory by their crash of sound and startling fullness of suggestion—"the most beautiful," says the French critic

Faguet, "that ever fell from a French pen." And the same critic says of Corneille's language that it is "the most masculine, energetic, at once sober and full, that was ever spoken in France."

Corneille's tragedies arouse admiration rather than tragic fear. His interest is not in the fate of his characters, but in the unconquerable mind with which they meet it, their haughty disdain of destiny. He is of the school of the emphatics, delighting in extraordinary situations and subjects, in whatever will challenge the will to its utmost utterance. There is no fine-spun sentiment even in the love of *Le Cid*. But tragedy with the limitations of the "unities" involves much talk and little action, and Corneille's disdain of the endless subject of talk allows the interest to flag for scenes and even acts. There is monotony even in his nobility, and that in spite of the lyric and epic elements which he found in the drama and from which Racine was to free it. Yet his declamations—the tirades of Camilla, Augustus, Cornelia, and many another—are supreme in their kind and will thrill audiences as long as the antinomies of love and patriotism, honor and duty, perplex men's souls.

The best edition of Corneille is Marty-Laveaux's (12 vols., 1862-68). For bibliography, consult Picot's *Bibliographie Cornélienne* (1895), and Le Verdier and Pelay, *Additions à la Bibliographie Cornélienne* (1908). The best translated biography is Guizot's *Corneille and his Times* (1857); a good modern study, Faguet's "Corneille" (Paris, 1886), in the series *Classiques Populaires*. *Le Cid*, *Horace*, and *Polycate* have been done into English blank verse by Nokes, and (with *Cinna*) into English prose by Mongan and McRae (1878-86). Consult: Sainte-Beuve, *Nouveaux lundis*, vol. vii (Paris, 1863-72); Guizot, *Corneille et son temps* (7th ed., ib., 1880); Lemaitre, *Corneille et la poétique d'Aristote* (ib., 1888); Liéby, *Corneille* (ib., 1892); Brunetière, *Époques du théâtre français* (ib., 1892); Lanson, *Corneille* (ib., 1898); Segall, *Corneille and the Spanish Drama* (New York, 1902); Huszar, *Pierre Corneille et le théâtre espagnol* (Paris, 1903); Canfield, *Corneille and Racine in England* (New York, 1904); Faguet, *Propos de Théâtre* (3 vols., 1903-06); Raab, *Pierre Corneille in deutschen Uebersetzungen* (Heidelberg, 1911); Wendt, *Pierre Corneille und Jean Rotrou* (Leipzig, 1911). The three-hundredth anniversary of the poet's birth was celebrated with prolonged festivities in May and June, 1906.

**CORNEILLE, THOMAS** (1625-1709). A French dramatist and miscellaneous writer, whose productions are obscured by the genius of his older brother Pierre. He was born at Rouen, Aug. 20, 1625. His 42 plays are for the most part of a facile mediocrity, but he has to his credit the longest run of the century for his *Timocrate* (1656), the largest price for his *La Devineresse* (1679), and one of the most sensational failures in his *Baron des Fonderies* (1686). He was given his brother's chair in the Academy after the latter's death (1685), and published a dictionary supplementary to the Academy's, and a complete translation of Ovid's *Metamorphoses*, as well as a *Dictionnaire universel, géographique et historique* (1708). He was blind from 1704, but his literary activity continued uninterrupted until his death at Les Andelys, Dec. 8, 1709). *Ariane* (1672)

and *Le comte d'Essex* (1678), an historical drama, are among his plays the best worthy of memory. His dramatic *Works* are edited by Thierry (Paris, 1881). Consult Reynier, *Thomas Corneille, sa vie et son théâtre* (Paris, 1893), and Alfred de Vigny, *Fragments inédits de critique sur Pierre et Thomas Corneille* (published in 1905).

**CORNEL** (OF. *cornille*, from Lat. *cornolium*, cornel tree, Lat. *cornus*, a cornel cherry tree, from *cornu*, horn, so called on account of the hardness of the wood). A term applied in America to various plants of the genus *Cornus*. In Europe the name seems to be restricted to *Cornus mas*, known as "cornel" or "cornelian cherry." It is a common shrub and was formerly much cultivated as a fruit tree. It has oval leaves, small heads of yellow flowers appearing before the leaves in spring. The fruit is oblong in shape, a little larger than the sloe, shining red, rarely yellow or white, and when perfectly ripe has an agreeable vinous acid taste. It is either eaten as it comes from the tree or is made into a preserve. When gathered green, it is pickled like olives. In America none of the plants to which the name is applied bears an edible fruit of value. *Cornus canadensis*, dwarf cornel, or bunchberry, is not properly edible, and, so far as known, has been little used by man. See Dogwood.

**CORNELIA**. A celebrated Roman matron, younger daughter of Scipio Africanus the Elder, and mother of the great tribunes Tiberius and Gaius Gracchus and of Cornelia, the wife of Scipio Africanus the Younger. On the death of her husband, refusing numerous offers of marriage, including even one from King Ptolemy, she devoted herself to the education of her 12 children, a task for which her lofty spirit, careful education, and wide attainments rendered her admirably fitted, and which had extraordinary results. On her death a statue was erected to her memory bearing the inscription "Cornelia, Mother of the Gracchi." The base, with the inscription, is now in the Capitoline Museum at Rome. To a Campanian lady who asked to see her jewels, she is said to have presented her sons as the only jewels of which she could boast. After the murder of Gaius, the second of her sons, she retired to Misenum, where she devoted herself to Greek and Latin literature and to the society of men of letters.

**CORNELIA GENS**. A distinguished clan of Rome, partly patrician, partly plebeian. The names (*cognomina*) of its patrician families, from which came more prominent men than from any other Roman gens, are Arvina, Blasio, Cethegus, Cinna, Cossus, Dolabella, Lentulus, Maluginensis, Mammula, Merenda, Merula, Rufinus, Scapula, Scipio, Sisenna, and Sulla.

**CORNELIAN CHERRY**. See CORNEL.

**CORNELISZ**, kôr-nâ'lis, or **CORNELISSEN**, called CORNELIS VAN HAARLEM (1562-1638). A Dutch historical and portrait painter. He studied in Haarlem under Pieter Pietersz and in Antwerp under Conquet, but finally returned to Haarlem, where he occupied a very influential position until his death. He is best known for his "Banquet of the Archer's Guild" (1583) in the Haarlem Museum. This painting is remarkable for the natural poses and clever grouping of the figures and undoubtedly influenced Frans Hals. His portraits are excellent, but his historical and mythological compositions, painted in the Italian style, are full of exag-

gerations and mannerisms. In his two large paintings of the "Massacre of the Innocents," in Amsterdam and The Hague, he displays great skill in foreshortening. Consult Wedekind, *Cornelis Cornelisz van Haarlem* (Leipzig, 1911).

**CORNELIUS**. Bishop of Rome, 251-253. He ranks as the twenty-first pope. His lenient course respecting the lapsed (q.v.), those who under persecution had renounced Christianity, led to the opposition of Novatian and to the Novatian schism. When persecution was renewed in Rome by Gallus, he fled to Civitavecchia, and there met a martyr's death, in June, 253. His day is celebrated with that of St. Cyprian on September 14. His correspondence with St. Cyprian on the question of the lapsed is of great historic interest and value, especially on the question of the position of the Roman see. Consult Harte's edition of the *Letters of Cyprian*, vol. ii (Vienna, 1871).

**CORNELIUS**, kôr-nâ'le-soos, KARL SEBASTIAN (1819-96). A German physicist, born at Ronshausen in Lower Hesse. He studied the exact sciences at Göttingen and at Marburg and from 1851 to the time of his death taught physics and physiography at Halle. His published works include: *Die Lehre von der Elektrizität und dem Magnetismus* (1855); *Theorie des Sehens und räumlichen Vorstellens vom physikalischen, physiologischen, und psychologischen Standpunkte aus betrachtet* (1861, followed by another work on the same subject in 1864); *Meteorologie* (1863); *Ueber die Bedeutung des Kausalprinzips in der Naturwissenschaft* (1867); *Ueber die Entstehung der Welt* (1870); *Ueber die Wechselwirkung zwischen Leib und Seele* (2d ed., 1875, followed by another work on the same subject in 1880); *Grundriss der physikalischen Geographie* (6th ed., 1886); *Abhandlungen zur Naturwissenschaft und Psychologie* (1887).

**CORNELIUS**, PETER (1824-74). A German composer, nephew of the painter Peter von Cornelius, born at Mayence, Dec. 24, 1824. He studied for the stage, but, not meeting with success as an actor, he turned his attention to music. He became intimate with Liszt, who in 1858 produced his opera, *Der Barbier von Bagdad*, in Weimar, where, however, it failed. He then moved to Vienna, where he composed his second opera, *Der Cid*, produced in Weimar in 1865. In the same year he followed Wagner to Munich, where he was appointed to a professorship at the Königliche Musikschule. Although he devoted much of his time to fighting for Wagner's art, he produced his great choral works, op. 9-14, between 1868 and 1872. In 1869 he began his opera *Gundod*, which, however, progressed so slowly that when the composer died, Oct. 26, 1874, the work remained a fragment. His pupil C. Hoffbauer completed it from the sketches. E. Lassen reorchestrated it and produced it in Weimar in 1891. Cornelius' masterpiece is *Der Barbier von Bagdad*, which was completely rescored by Motl and Levi and produced again in Munich in 1885. Its success was instantaneous and overwhelming, so that to-day it is in the regular repertoire of all German opera houses. In 1890 Seidl brought it out with great success at the Metropolitan Opera House, New York. Besides these works Cornelius wrote 69 songs for one voice and 7 duets, many of which are worthy to be ranked with the best songs of the great masters of song. Quantitatively Cornelius' musical output is rather

meagre, consisting of only 20 opus numbers, not including the operas. According to his own confession his close association with Wagner is to some extent responsible for this. His admiration of the Bayreuth master was so great that it almost suppressed his own creative impulses. Furthermore, Cornelius was a lyric poet of no mean order, a writer on music of unusual acumen, and a masterly translator. The chief characteristics of his music are nobility, refinement, and power of characterization. The more one studies it, the greater appears its charm. Cornelius' complete works were published in 1905 by Breitkopf and Härtel (5 vols.), his literary works and letters in 4 vols. Consult E. Istel, *Peter Cornelius* (Leipzig, 1904), and E. Sulger-Gebing, *Peter Cornelius als Mensch und Dichter* (Munich, 1908).

**CORNELIUS, PETER VON (1783-1867).** A German historical painter, the founder of the Munich school. He was born, Sept. 23, 1783, in Düsseldorf, where his father was inspector of the gallery. From him the lad learned the rudiments of art, and from about 1795 he received instruction in the Düsseldorf Academy under Langer. His earliest works are unimportant, but after his removal to Frankfurt-on-the-Main, in 1809, he acquired some celebrity. His first work of importance was his 12 drawings of Goethe's *Faust*, now in the Städels Institute of Frankfurt. In 1811 he went to Rome, devoting himself to the study of the art of the Cinquecento, especially to that of Raphael and Michelangelo. He was associated with the so-called Nazarene painters, among whom he found a lifelong friend in Overbeck, but he was too independent to follow their footsteps. During this period he executed his famous drawings for the Nibelungenlied. Together with Overbeck, Vent, and Schadow, he received a commission to decorate a room in the house of the Prussian Consul at Rome, with scenes from the "History of Joseph." In executing this task he revived fresco painting, which had been almost forgotten since the days of Raphael Mengs. His work and that of his associates excited the greatest admiration, and they were engaged to decorate a room in the Villa Massimi, opposite the Lateran, with frescoes from the works of Dante, Ariosto, and Tasso. He had scarcely begun his work when there came a double call to return to Germany. The Prussian government invited him to become head of the Düsseldorf Academy, and Crown Prince Louis of Bavaria chose him to decorate the new Glyptothek in Munich.

Cornelius arranged to pass his winters in Düsseldorf, where a great crowd of students soon gathered about him, and his summers in executing the frescoes in Munich. He returned to Germany in 1819, and in 1820 he began his work upon the frescoes, which were carried out by his pupils, painting after his designs. In two great halls of the Glyptothek he represented the myths of the Greek gods and heroes in works which are masterpieces of drawing and composition. In 1825 he became director of the Academy of Munich and was raised to the nobility by King Louis I of Bavaria. He finished the frescoes of the Glyptothek, representing in the third hall scenes from the *Iliad*. All of this work, however, was executed by his pupils and may best be studied in the original cartoons by Cornelius, which are now preserved in the National Gallery of Berlin. In 1830 he be-

gan the decoration of the Ludwigskirche in Munich, with frescoes representing the "General Confession of Faith of the Christian Church." Contrary to his usual custom, he himself painted upon the large altar wall (82 X 38 feet) a fresco of the "Last Judgment." During the same time he made the designs for the "History of Christian Art" for the 25 loggie of the old Pinakothek, which were painted by Zimmermann.

After a disagreement with the King of Bavaria he was called to Berlin by Frederick William IV in 1841 and given a commission to decorate the proposed Campo Santo, a burial place for the royal family of Prussia. The four cartoons executed for this purpose, now in the National Gallery in Berlin, surpass all his previous work. This is especially true of the one containing the "Four Apocalyptic Riders," which is a masterpiece of conception, dramatic life, and boldness of drawing. On the other hand, the "Beatitudes" show appreciation for the beautiful and compact in outline. Until nearly the time of his death Cornelius was occupied with cartoons. He resided mostly in Rome, but returned to Berlin in 1861 remaining there until his death, which occurred March 6, 1867. During this last period he executed his design for a silver shield, which was a christening present of the King of Prussia to the Prince of Wales, his godson, representing the "Expansion of the Church." He also painted his dramatic picture "Hagen Casting the Nibelungen Treasure into the Rhine," now in the National Gallery, Berlin.

More than any other man, Cornelius dominated German art of the early nineteenth century. For decades his "cartoon style," with its emphasis of design and neglect of color, prevailed in mural decorations, especially at Munich, where his influence has only recently disappeared. His contemporaries held him in high repute, echoing the opinion of Crown Prince Louis: "There has been no painter like Cornelius since the Cinquecento." Modern critics, on the other hand, are not equally favorable, some of them, as Muther, going to the opposite extreme of considering his activity harmful. It is true that he imitated Michelangelo, and that imitation can never produce the healthiest and greatest art; that Cornelius' work is of an intellectual character, requiring study for appreciation; that his colors are poor, and that he is sometimes deficient even in drawing. But, on the other hand, his works were certainly great in composition and in conception. His tendency, like Michelangelo's, was heroic, indeed Titanic, but he was not insensible to grace and was capable of expressing the tenderest emotion. He was more of a designer than a painter, and his work must be judged by his cartoons. And certainly no painter exercised greater influence upon German art and imagination than did Cornelius in his great cycles of frescoes in Munich and in his cartoons in Berlin. Among his pupils were Wilhelm Kaulbach (q.v.), Carl Hermann, Eberle, and many others.

Consult the monographs of Von Wolzogen (Berlin, 1867), Riegel (Hanover, 1870), Förster (Berlin, 1874), Koch (Stuttgart, 1905), and Eckert, in *Künstlermonographien* (Bielefeld, 1906); Grimm, *Neun Essays* (Berlin, 1865); Valentin, in *Dohme, Kunst und Künstler des neunzehnten Jahrhunderts* (Leipzig, 1883);

Muther, *History of Modern Painting* (Eng. trans., London, 1895).

**CORNELIUS A LAPIDE** (1568-1637). A Roman Catholic commentator, whose name was Van den Steen. He was born at Bochoit, near Liège. He became a Jesuit and lectured on the Scriptures in Louvain and in Rome, where he died. His fame rests upon his commentary on all the Bible except Job and the Psalms, the first complete edition of which was published in 10 vols., folio (Antwerp, 1681). The best edition appeared in Lyons (1838), in 11 vols., and an English translation of parts of it has been published (3 vols., London, 1876-87).

**CORNELL, ALONZO BARTON** (1832-1904). An American politician, son of Ezra Cornell (q.v.). He was born at Ithaca, N. Y., became a telegraph operator, and from 1855 to 1859 was manager of the Central Telegraph Office in New York City. Afterward he was first vice president of the Western Union Telegraph Company. In 1868 he was the Republican candidate for Lieutenant Governor of New York, and from 1869 to 1873 was surveyor of customs in New York. By calling to order a Republican State convention he was held to have violated President Hayes's order that officeholders refrain from politics, and as a consequence he lost the surveyorship. He was chairman of the Republican-State Committee from 1870 to 1878 and was three times Speaker of the New York Assembly. From 1880 to 1883 he was Governor of New York, after which he became connected with large financial interests. He wrote *The Life of Ezra Cornell* (1884).

**CORNELL, EZRA** (1807-74). An American capitalist and philanthropist, the founder of Cornell University. He was born in Westchester Co., N. Y., of Quaker parentage; removed with his father, a potter by trade, to De Ruyter, N. Y., in 1819; received a scant education and for some time taught a district school, besides assisting his father in farming and the making of pottery. He also learned the carpenter's trade, spent a year as a mechanic at Homer, N. Y., and in 1826 removed to Ithaca, where for eight years he managed a flour mill. In 1839 he joined his brother in the lumbering and farming business, but his attention being turned accidentally in 1842 to the project of constructing a telegraph line from Baltimore to Washington, he invented a machine for laying the wires underground and was subsequently put in charge of the work. The insulation being poor, however, the plan had to be abandoned, and on Cornell's suggestion the wires were strung on poles, and the line was thus speedily completed. Subsequently Cornell devoted his attention almost wholly to the construction of telegraph lines and the organization of telegraph companies, and was instrumental in forming the Western Union Telegraph Company in 1855. In 1858, having accumulated a large fortune, he settled on a farm at Ithaca, N. Y. He was a member of the first Republican National Convention in 1856, was president of the New York State Agricultural Society in 1862, and was a member of the State Assembly in 1862-63, and of the State Senate in 1864-67. After the passage of the Morrill Land-Grant Act in 1862 he succeeded in getting a bill through the Legislature assigning the whole of New York's land scrip to one institution, and in addition contributed an endowment of \$500,000 towards building such an institution at

Ithaca, N. Y. He subsequently (in 1866) bought up the scrip then remaining unsold and located it with great care in the timberlands of Wisconsin, of which the later advance in value greatly increased the endowment of the university. In 1868 "The Cornell University," so founded, was formally opened. Cornell also built a public library at Ithaca. Consult *The Life of Ezra Cornell*, by his son, A. B. Cornell (New York, 1884).

**CORNELL COLLEGE.** An institution of higher learning founded at Mount Vernon, Iowa, by members of the Methodist Episcopal church in 1853. It was not organized as a college until 1857. It includes an academic department and a department of civil engineering and is coeducational. The degrees are B.A., B.S., and B.S. in C. E. The enrollment in the college in 1913 was 704, and the faculty numbered 41. Besides the college proper, the organization includes an Academy, a Conservatory of Music, a School of Art, and a School of Oratory. The principal buildings of the college are the Library and College, Science, Chapel, Bowman, and Conservatory halls. The endowment amounted to about \$900,000, and the annual income to about \$90,000. The library contains about 39,000 volumes. The president in 1914 was James Elliott Harlan, LL.D.

**CORNELL UNIVERSITY.** An institution of higher education, situated at Ithaca, N. Y. The university owes its existence to the combined wisdom and bounty of the United States, the State of New York, and Ezra Cornell (q.v.). Under the Morrill Act of 1862 the State of New York received scrip representing 989,920 acres of land as its share of the public lands granted by the Federal government to the several States for the purpose of establishing colleges of agriculture and mechanic arts. Ezra Cornell offered \$500,000 as an endowment fund for a university on condition that the State should set aside the proceeds of the sale of its public lands for the same purpose, and that the narrower purpose of the Act of Congress in establishing colleges of agriculture and the mechanic arts should be enlarged to the breadth of his own memorable ideal: "I would found an institution where any person can find instruction in any study." After much wrangling in the Legislature, this offer was accepted, with the stipulation, however, that the university should offer free tuition to as many students residing in the State as there were Assembly districts. Cornell University was incorporated in 1865 and was formally opened in 1868, with a registration of 412 students. The plan of the whole institution was modeled with a view to the practical tendencies of the times, though classical and humanistic studies were provided for as amply as science and technology. Its liberal programme was warmly welcomed by such men as James Russell Lowell, Louis Agassiz, Theodore D. Dwight, John Stanton Gould, Goldwin Smith, George William Curtis, and Bayard Taylor, who signified their interest in it by accepting nonresident professorships on its faculty. Andrew D. White gave up for a while the prospects of a political career to become its first president. This auspicious beginning, however, was not maintained. From 1868 to 1882 the university was engaged in a struggle for existence that seriously diminished its students, disheartened its trustees, and brought the whole structure to the verge

of bankruptcy. Mr. Cornell, seeing that the State's land scrip, on whose proceeds the university was solely dependent except for the original endowment of \$500,000, was selling at about 50 cents an acre, a sum far less than its ultimate worth, bought up all the unsold "scrip" and located and transferred to the university before his death over 500,000 acres of the finest timberlands in Wisconsin. But the anticipated advance in forest values did not take place, taxes and cost of administration amounted to over \$60,000 a year, and the university was soon obliged to trench heavily on its capital to meet current expenses. A way of escape that offered in 1880 was blocked by Henry W. Sage, chairman of the board of trustees. In that year a New York syndicate proposed to buy 275,000 acres of the Western lands for \$1,225,000—an amount that would have released the trustees from their troubles. But Mr. Sage, believing that the lands would go still higher, refused his consent, and the bargain fell through. Less than two years later his faith was vindicated; 140,000 acres were sold for \$2,320,000, other sales were made later at increasing prices, and the university up to 1905 realized a net profit of some \$5,765,000. Besides its income from these sources Cornell received large private gifts. Henry W. Sage gave altogether \$1,175,000; Andrew D. White, \$200,000; O. H. Payne, \$970,000 for the New York branch of the Medical College; W. H. Sage, \$270,000, Hiram Sibley, \$155,000; D. B. Fayerweather, \$340,000; J. D. Rockefeller, \$250,000, Dean Sage, \$235,000; John McGraw, \$140,000, and H. W. Sibley, \$160,000.

Out of the 2704 students enrolled in the first five years, 2347 entered on the minimum entrance requirements. In 1872 the university became coeducational, and in 1877, in spite of the constant decrease in attendance, the entrance requirements were somewhat raised. In 1882 the faculty, including instructors and assistants, numbered but 49. The additions made to the library were few. During this anxious period in the history of the university the members of the faculty, ill paid and overworked, loyally stood by it and pursued their work notwithstanding all difficulties. New courses were offered in the departments of civil and mechanical engineering, architecture, agriculture, the sciences, humanities, and military science. After 1882 the university developed and expanded in accordance with the original idea of the founder. The Law School and the Andrew D. White School of History and Political Science were organized in 1887. The Sage School of Philosophy, which has become known for its work in mental and moral philosophy and in experimental psychology, was organized in 1890. President Schurman appealed to the State in 1892 for further aid, on the ground that Cornell, although not a State institution in the strict sense of the term, was educating 512 students free of tuition, and that the State was especially interested in education, agriculture, and allied subjects, for which, like the Western States, it should supply the necessary funds. The Legislature generously responded to his appeal by establishing at Cornell University the State Veterinary College in 1894, the State College of Forestry, the first institution of its kind in the United States, in 1898, and the State College of Agriculture in 1904, for the maintenance of which large legislative appropriations are annually made. The situa-

tion of Cornell University in a small town prevented it from adding a medical school to its departments, although a medical preparatory course has existed since its inception. In 1898 this problem was solved by establishing a medical college in the city of New York, with a branch at Ithaca, where the first two years of the course may be taken. In the same year the entrance requirements, which had been much raised since 1892, were put on a footing equivalent to those of the leading universities in the United States.

Cornell University comprises the following departments and colleges (the attendance given is in all cases that of 1912-13): 1. The Graduate Department, having charge of all students pursuing graduate work at the university under the several faculties. This department offers courses leading to the degrees of A.M., Ph.D., etc. It numbered 395 students. Twenty-four fellowships, ranging from \$500 to \$600 a year, and 17 scholarships, of the annual value of \$300 a year, are available for students. 2. The College of Arts and Sciences offers elective courses leading, whether sciences, letters, or the classics are mainly chosen, to the degree of A.B. The attendance was 1112. 3. The College of Law offers courses leading to the LL.B. degree and numbered 297 students. 4. The Medical College, partially conducted at New York City, confers the degree of M.D. and numbered 150 students. 5. The College of Agriculture offers courses leading to the B.S.A. degree and numbered 1849 students. Connected with this college is an agricultural experiment station, established by the Federal government in 1887. 6. The New York State Veterinary College confers the degree of D.V.M.; its attendance was 120. 7. The College of Architecture confers the degree of B.Arch. and had an attendance of 144. 8. The College of Civil Engineering confers the degree of C.E. and numbered 503 students. 9. Sibley College of Mechanical Engineering and Mechanic Arts, consisting of the departments of mechanical, electrical, experimental engineering, the department of mechanic arts, etc., confers the degree of M.E.; its total registration was 956.

Undergraduates are required, except for special reasons, to take a course of military drill, extending over one year, under the supervision of a United States army officer.

The government of the university is vested in a board of 39 trustees, the university faculty, composed of the professors and assistant professors, having charge of educational matters concerning the university as a whole, and the faculties of the several schools and colleges, who have charge of their respective divisions.

The number of regular students in 1912-13 was 4803, of whom 466 were women. To these must be added an enrollment of 1392 in the summer session and 597 in the winter school in agriculture. The staff of instruction numbered 750. The principal buildings of Cornell University include the \$300,000 Library, the gift of Henry W. Sage; Sage College and Prudence Riskey Hall, dormitories for women; Boardman Hall, Stimson Hall, Sibley College, Franklin Hall, Lincoln Hall, Rockefeller Hall, Morrill Hall, McGraw Hall, White Hall, Goldwin Smith Hall, Rand Hall, Auditorium, Home Economics building, and the several buildings of the veterinary and agricultural colleges. The campus, situated on a hill looking down upon Cayuga Lake and surrounded by gorges, falls, and cascades, is considered one

of the most beautiful in the world. Barnes Hall and Sage Chapel represent the religious life of the university. The libraries, including the famous Andrew D. White collection on the Protestant Reformation and the French Revolution and the Fiske Dante, Petrarch, and Icelandic collections, contain 427,000 volumes, besides 64,000 pamphlets. The income of the university is about \$2,487,510 a year. The presidents since its conception have been: Andrew D. White, LL.D. (1865-85); Charles Kendall Adams, LL.D. (1885-92); Jacob Gould Schurman, LL.D. (1892-).

**COR'NEE.** A commercial term originating in the United States, and denoting the operation, —or, more properly, the resultant effect—of acquiring contracts for the delivery of so much of a commodity, or of the stock or certificates of indebtedness of a corporation, as to raise abnormally the values thereof, to the advantage of the buyers. A corner is "effective" when those who have contracted to sell and deliver the stock or commodity are forced, for lack of other supply, to buy it, or the certificates or warehouse receipts representing it, from the buying or cornering pool at the pool's prices. Conversely, a corner is "smashed" when the buyers, finding their means inadequate to their operations, are forced to throw their holdings on the open market, or when those who have contracted to deliver the stock or commodity are able to obtain it independently of the pool. For the latter reason, because the total supply is not strictly determinable nor all obtainable, attempted corners in wheat and other actual commodities are seldom successful. On the other hand, corners in stocks and certificates having definite total issues may be carried just to the point where they bankrupt the seller, i. e., to a point where, if the prices are put any higher, the sellers repudiate their contracts and the corner is smashed for lack of a market. The possibility of any considerable corner arises from buying and selling on margin. In this usual and speculative form of stock dealing the broker or commission house lends the buyer or seller the money needed for the deal, demanding, however, for his own protection, a deposit of 5, 10, or 20 per cent of the face value of the contracts made. The dealer is thus enabled to buy or sell stock to a value of from 5 to 20 times the amount of his actual capital, and a combination of large dealers can without difficulty buy or sell the whole stock issue of the largest trusts or railroads. If, now, such a combination sells, i. e., agrees to deliver, practically the entire issue of a road, they may find when they attempt to buy the stock to fill their contracts that it is already held by the very persons to whom they contracted to sell it. That is, a rival combination has been secretly working against them, and the sellers of the stock are forced to buy the stock at exorbitant prices and then sell it back to those for whom they bought it. This is the process technically known as "squeezing the shorts." Until recent years nearly all corners of importance were manipulated for speculative reasons, i. e., for the immediate gain of the operators and without any view to investment. Of such a nature was the famous gold corner, organized in New York by Jay Gould and his associates. This corner, culminating on "Black Friday," Sept. 24, 1869, was smashed by the release of government gold by the Secretary of the Treasury—thus rendering the "shorts," or sellers of gold, independent

of the cornering syndicate that held the gold which the "shorts" had agreed to sell. Latterly, however, many corners or corners in effect have resulted, incidentally and often to the regret of all concerned, from the effort of rival combinations to buy the control of some large trust or railroad for permanent investment and administrative purposes. Of this kind was the corner in the Northern Pacific Railroad in May, 1901, when the price of the stock rose abruptly to 1000 bid. For an account of the gold corner of 1869, consult Boutwell, *Reminiscences of Sixty Years in Public Affairs* (New York, 1902). For an interesting account of the actual manipulation of a corner, consult Frederic, *The Market Place* (London, 1899). See MARGIN DEALS; SHORT; SPECULATION; TRUSTS.

**COR'NET** (OF., Fr. *cornet*, from ML. *cornetum*, *corneta*, bugle, dim. of *cornu*, horn). A stop or series of pipes in an organ, intended to imitate the tone of an obsolete wind instrument which has been superseded by the oboe. The CORNET-A-PISTON (Fr., cornet with pistons), a modern brass or silver wind instrument of the trumpet kind, has two or three valves and in brass bands takes the soprano and contralto parts. Its range is from c' to c<sup>3</sup>. It was first introduced in France as an orchestral instrument. The cornet-a-piston produces very penetrating tones, though less powerful than those of the trumpet. The rapidity of execution in runs, trills, staccatos, etc., which can be attained on this instrument, combined with the pealing quality of its tones, has made it the favorite solo instrument in open-air band concerts; but this very resonance will most likely keep it out of the symphonic orchestra.

**CORNET** (Fr. *cornette*, standard, so called as having two points or horns, dim. of *corne*, from Lat. *cornu*, horn). Formerly the lowest commissioned rank in the British cavalry, so called because the cornet carried the standard. Its equivalent rank in the infantry was the ensign (q.v.). In 1871 the titles of cornet and ensign were changed to second lieutenant.

**CORNETO**, kór-ná'tò, or CORNETO TARQUINIA (from It. *cornò*, horn). A town of central Italy, about 12 miles north of Civitavecchia, occupying a commanding eminence on the left bank of the Marta, and 2 or 3 miles from the Mediterranean, over which it has an extensive view. Corneto arose near the ruins of the Etruscan city of Tarquinii, and was built in part from its remains. It was erected into a city by Pope Eugenius IV in 1432, but the picturesque old battlemented walls and towers which surround it are said to belong to an earlier period. During the wars of the Guelphs and the Ghibellines this city maintained a firm allegiance to the popes. Pop. (commune), 1910, 6617. The scanty remains of Tarquinii lie about 1½ miles from Corneto. Tarquinii was regarded as one of the most ancient and important of the Etruscan cities and took part in the wars with Rome in the fourth century B.C., but later, with the rest of Etruria, came under the Roman dominion. It seems to have been destroyed by the Saracens. The Necropolis of Tarquinii, which is far the most important relic of the ancient city, is on the same hill as the modern city and extends into the neighboring plain. It is of great extent and has been said to cover 16 square miles. Many tombs have been opened, but most of them had been plundered in early times. The most important tombs are those decorated with paintings on the walls; noteworthy are the Grotta

# CORNFLOWER, ETC.

1. COCKLEBUR (*Xanthium strumarium*).
2. CORNFLOWER (*Centaurea cyanus*).
3. CALISAYA (*Cinchona calisaya*), var. *Ledgeriana*.

4. COLCHICUM (*Colchicum autumnale*).
5. COCA (*Erythroxylon coca*).
6. NIGHT-BLOOMING CATCHFLY (*Silene noctiflora*).

delle Iscrizioni (probably one of the earliest), Grotta del Barone, Grotta Querciola, Grotta del Convito Funebre, Grotta del Tifone, and Grotta dell' Orco. Consult: Dennis, *Cities and Cemeteries of Etruria* (London, 1907); Dasti, *Notizie di Tarquinia e Corneto* (Rome, 1878); and the periodical *Notizie degli Scavi* (1906, 1907).

**CORN FLAG.** See **IRIS**.

**CORN FLOWER**, or **BLUEBOTTLE** (*Centaurea cyanus*). A plant of the family Compositae, indigenous to Europe, where it is a common weed in grainfields and whence it has spread to other countries. Its long, slender, branched stems, which reach a height of from 1 to 2½ feet, bear terminal flower heads about 1½ inches in diameter during summer and autumn. These flower heads have a wreathlike appearance, due to the neutral ray florets, and from early times have been favorites for making garlands. Being hardy and of easiest culture, the cornflower has become one of the most popular annuals in American flower gardens and has developed many varieties, which range through various shades from deepest blue to white. In the United States it has at least 15 names, the commonest of which is perhaps "bachelor's-button," a name also applied to two other plants, *Ranunculus acris* and *Gomphrena globosa*.

**CORN HILL.** An important London street, named from a corn market formerly held there. The Tun, a prison, and the Standard, a water conduit, stood upon it in mediæval times.

**CORNIANI**, kôr'nê-â'nê, GIAMBATTISTA, CONTE DI (1742-1813). An Italian literary historian, born at Orzi-Nuovi (Brescia). In his youth he studied law and wrote for the theatre; but afterward he became connected with the College of Brescia and published some works on agriculture. In 1797 he was made one of the Tribunal of Cassation for the Cisalpine Republic. The work for which Corniani is best known is a literary history of Italy, *I secoli della letteratura italiana* (1804-13; new ed. by Ticozzi, 1832, and by Ticozzi-Predari, 1854-56).

**CORN NICE** (OF), It. *cornice*, ML. *corniæ*, border, from GK. *kopavís*, *korónis*, garland, from *kopavóns*, *korónos*, curved, connected with Lat. *corona*, crown, Ir. *cor*, circle). In architecture, the projecting cope or coping at the top of a wall; the crowning member of an entablature (q.v.). Its origin is to be found in the decoration of the eaves or projecting edge of the roof, its earliest forms recall primitive eaves construction; but, like so many forms derived from structural devices, it early became a decorative feature, quite independent of the eaves and even of the roof. The Egyptian cornice, invariably a high projecting cavetto and fillet above a round bead or torus, was probably derived from the overhanging eaves of papyrus stalks and earth in primitive huts. The Greeks developed two chief types of cornice in the Doric and Ionic orders, both recalling early eaves construction in wood. To these the Romans added a third, the Corinthian, of more ornate design than either, and these types have persisted through all the ages since, though with endless variations of detail. In all cornices of classic type the essential feature is the *corona* (q.v.), the broadly projecting square-edged member which casts the wide shadow which is one of the most important decorative effects of a cornice. A group of moldings, called the *bed-mold*, supports this shelf, and it is usually crowned by a *cymatium* or crown molding, which generally forms the front

of the gutter or eaves trough. This, however, is wanting on the Greek-Doric cornice, except upon the sloping or *raking* cornices of triangular pediments. The *bed-mold* may be plain or adorned with dentils; and the cornice may be further enriched with modillions or brackets, as in the Corinthian and Composite orders, or with *mutules*, under the corona, as in the Doric.

In Syrian-Christian and in Byzantine architecture the classic types were greatly modified, and in early Christian or basilican buildings the cornice gradually lost its importance. The Romanesque builders in Italy devised a new type, the arcaded, borne on small arches resting on corbels; in the West they more often employed the corbel table—a plain stone shelf or cope resting on corbels without arches or moldings. Gothic art, emphasizing vertical lines, subordinated the cornice as an architectural feature. Gothic cornices are little more than groups of vigorous moldings under a bevel-topped coping; but in some cases a deep hollow under the coping is filled with richly carved vines, leafage, or rows of crockets. The Renaissance revived the classic types, which are in general use to-day. As the top member of an entablature, the cornice is used not merely to mark the edge of the roof, but also as a band between successive stories, and as the topmost feature and finish in furniture and many forms of minor architecture. See **ENTABLATURE**, **ORDERS OF ARCHITECTURE**.

**CORNICÉE**, kôr'nêsh', ROUTE DE LA (Fr., cornice road). A renowned carriage road following the coast line of the Riviera between Nice and Genoa. It is noted for its striking views, particularly between Nice and Mentone, and is much traveled in preference to the railway.

**CORNIDES**, kôr'nê-dês, DANIEL VON (1732-87). An Hungarian historian, born at Szent-Miklós. He studied philosophy and theology at Erlangen, Germany. As the companion of Count Joseph Teleki, he visited Italy, Germany, and France, and while in Germany contributed greatly to the enlargement of the Hungarian department in the University of Göttingen and other institutions. In 1784 he was appointed librarian and professor of heraldry and diplomacy at the University of Pest. His principal works include: *Regum Hungarica, qui Sæculo XI Regnavere, Genealogia* (Pressburg, 1778); *Bibliotheca Hungarica* (Pest, 1792); *Commentatio de Religione Veterum Hungarorum* (Vienna, 1791). *Vindictæ Anonymi Bela Regis Notarii* (Buda, 1802).

**CORNIFEROUS SERIES** (from Lat. *cornu*, horn + *ferre*, to bear). In American geology, the second of the four great divisions of the Devonian system, so named on account of the hard cherty nodules found in many of its limestones. It includes the Schoharie and Corniferous stages. The rocks of the Corniferous series—mostly sandstones and limestones—are found along the Appalachians, in Ohio, and in Canada, where they inclose valuable deposits of petroleum. See **DEVONIAN SYSTEM**.

**CORNIFICIUS**, kôr'nê-fish'î-us. A Roman, unknown, save for Quintilian's references to him as author of a work on rhetorical figures, and, perhaps, of a general work on rhetoric. We still have four books entitled *Rhetorica*, and dedicated *ad Herennium*. Since many passages quoted by Quintilian from Cornificius appear in the *Rhetorica ad Herennium*, it was long held that Cornificius was author of the treatise. Re-

cent opinion, however, is against this view. Consult the editions by Kayser (Leipzig, 1854), Friedrich (part i, vol. i, of the Teubner *Cicero*, Leipzig, 1884), and Marx, who refuses to recognize the authorship of Cornificius and has published the text under the title *Incerti Auctoris de Ratone Dicendi ad C. Herennium Libri IV* (Leipzig, 1893); Kröhner, *Die Anfänge der Rhetorik bei den Römern* (Memel, 1871). Schauz, *Geschichte der römischen Litteratur*, § 197 a (3d ed., Munich, 1909), has also ceased to regard Cornificius as the author of the treatise *ad Herennium*. For further discussion of the question of authorship and a good account of the contents of the treatise, see the introduction to Wilkins's edition of the *De Oratore* of Cicero, vol. 1, pp. 51-64 (2d ed., Oxford, 1888).

**CORNIFICIUS, QUINTUS** (?-c.40 B.C.). A Roman general, a contemporary of Cicero. During the Civil War he supported Caesar, by whom he was appointed Governor of Syria and afterward of Africa. After Caesar's death he maintained the latter province for the Senate, but on the establishment of the Second Triumvirate was defeated and slain in battle by T. Sextius. Cornificius appears to have been distinguished also for his literary abilities.

**CORNING.** A city and the county seat of Adams Co., Iowa, 77 miles east-southeast of Council Bluffs, on the Burlington Route (Map-Iowa, C 4). It has a public library and a fine Masonic Temple. Agriculture and stock raising are the chief industries, and brick and tile are manufactured. Corning was incorporated under a State Law of 1871. It was formerly the seat of an Icarian settlement. The government is administered by a mayor and a unicameral council. The city owns its water works. Pop., 1910, 1702.

**CORNING.** A city and the county seat of Steuben Co., N. Y., 18 miles by rail west-northwest of Elmira; on the Chemung River, and on the New York Central, the Erie, and the Lackawanna railroads (Map-New York, C 6). Among the more prominent buildings are the city hall, free academy, public library, Corning Hospital, courthouse, city club, and St. Mary's Orphan Asylum. Corning has extensive manufactures of cut and flint glass, railway supplies, pneumatic drills, air compressors, terra-cotta goods, building and paving brick, lumber, sash and blinds, etc. Corning was incorporated as a city in 1890. Under the revised charter of 1905 the mayor holds office for two years and the council is elected. The board of public works, police, fire, and civil-service commissioners, and the board of health are appointed by the mayor and council. The water works are owned by the city. Pop., 1910, 13,730.

**CORNING, ERASTUS** (1794-1872). An American capitalist, born in Connecticut. In 1814 he settled in Albany, N. Y., where, as owner of the large ironworks there and later as a banker, he accumulated a large fortune. He was largely interested in the formation of the New York Central Railroad, of which he was president for 12 years. He was also active in promoting popular education and, taking part in public affairs, served as a State Senator in 1842-45 and as a Democratic Representative in Congress in 1857-59 and again in 1861-63.

**CORNING, J (AMES) LEONARD** (1855- ). An American neurologist, born at Stamford, Conn., and educated at the universities of Heidelberg and Würzburg. He is known as the dis-

coverer of spinal anæsthesia and as the first to inject liquid paraffin into the tissues, there to solidify; he also demonstrated that the action of stimulants, sedatives, and certain other medicinal substances may be increased if the subject remains in compressed air. As consulting neurologist he served various New York hospitals and, besides his contributions to the medical press, wrote: *Carotid Compression* (1882); *Brain Rest* (1883); *Brain Exhaustion* (1884); *Local Anæsthesia* (1886); *Hysteria and Epilepsy* (1888); *A Treatise on Headache and Neuralgia* (1888; 3d ed., 1894); *Pain in its Neuro-Pathological and Neuro-Therapeutic Relations* (1894), and also a romance, *The Princess Ahmedée* (1900).

**CORN INSECTS.** Insects affecting Indian corn are numerous and varied.—*Plant Lice:* An aphid (*Rhopalosiphum maidis*) is widely distributed by means of its migratory winged

INSECTS INJURIOUS TO INDIAN CORN

1 Larger cornstalk borer (*Diatraea*) a, boring larva within the base of the stalk. 2 Smaller borer (*Pamphila*) a, the moth at rest. 3 A flea beetle (*Diabrotica*) and its root-destroying grub

swarms; it lays its eggs on the stems of the corn beneath the ground, and the young attack the roots: the ants assist this injury by carrying females heavy with young and colonizing them upon the roots. (See *Insect Life*, vols. 1, ii, Washington, 1888-90.)—*Beetles:* Certain weevils attack the roots and stems, especially bill bugs of the genus *Sphenophorus*, the grubs burrowing in the bulbs of the young plants and eating the roots of the tender leaves near the surface of the ground; their work is sometimes confounded with that of a cutworm (larva of *Hadena stipitata*). Fall plowing is useful against both. The larvae of several flea beetles (*Diabrotica*) are often styled corn rootworms. The adult beetles, closely related to the cucumber, melon, and squash beetles, feed on the pollen and silk of corn and the larvae on the roots, and both do great damage in the Mississippi valley. Rotation of crops is the most effective remedy. The corn silvanus (*Silvanus surinamensis*) is prominent as destructive to grain. From an economic standpoint this is the most important member of the family Cucujidae. It is a flat beetle with the edges of the prothorax saw-toothed. Besides Indian corn, wheat, and other grain, it infests dried fruits and other foodstuffs. Another member of the same family, a bright-scarlet beetle, of the genus *Cucujus*, also infests stored grain.—*Moths:* The larvae of moths, "cutworms" and "webworms," do much damage. The worst species, however, is the "corn worm," or "corn bud worm," the caterpillar of a noctuid moth (*Heliothis armigera*), which destroys the flower buds,

(See COTTON INSECTS.) The large "stalk borer," often highly injurious in Southern fields, is the larva of a phalenid moth (*Diatraea saccharalis*), which perforates the stems at their base, where, in the axils of the starting leaves, the parent moth lays its eggs in spring. This insect is better known as the "sugar-cane borer" of the American tropics. Tidy methods of farming are the best preventive. Other smaller borers are the caterpillars of the moths *Pempelia ly-nosella* and *Gortyna nitela*. The cinch bug (q.v.) is also an enemy of Indian corn. Consult: Riley, "Insects of Missouri," in *United States Department of Agriculture, Division of Entomology, Reports 1 and 3* (Washington, 1881); Lintner, "Insects of New York," in *Agricultural Experiment Station, Report 1* (Albany, 1882); Comstock and Slingerland, "Wireworms," in *Agricultural Experiment Station, Bulletin 33* (Ithaca, 1891); Myrick (ed.), "Corn Pests and Diseases," in *The Book of Corn* (New York, 1904); Chittenden, "Corn Root-Worms," *United States Department of Agriculture* (Washington, 1905); Webster, "The Corn Leaf-Aphis," *United States Entomological Bureau* (Washington, 1907); Forbes, "Experiments with Repellants against the Corn Root-Aphis, 1905 and 1906," *Illinois Experiment Station* (Urbana, 1908); Garman, "The Corn Root-Worms," *Kentucky Agricultural Experiment Station, Bulletin No. 130* (Lexington, 1907); id., "Corn Pests," *Bulletin No. 145* (1909); Vickery, "Papers on Cereal and Forage Insects," *United States Entomological Bureau* (Washington, 1910); Turner, "Bud Worms in Corn," *Alabama Experiment Station, Circular No. 8* (Opelika, 1911); Kelly, "The Maise Bill-Bug," *United States Entomological Bureau, Bulletin 95*, part ii (Washington, 1911); Falloway, "Insects Injurious to Corn," *United States Entomological Bureau* (ib., 1912).

**CORNISH LANGUAGE AND LITERATURE.** The Cornish language belongs to the British subdivision of the Celtic family and stands, on the whole, nearer to the Old Breton than to the Old Welsh. (See CELTIC LANGUAGES.) It ceased to be a living language in the eighteenth century, although a small number of Cornish words are still used in the English dialect of Cornwall.

Only a small quantity of Cornish literature has been preserved. For the Old Cornish period, of which the language is practically the same as Old Breton, nothing exists but a few proper names in old records. For Middle Cornish we are somewhat better off. A vocabulary of the twelfth or thirteenth century has been preserved, which appears to be a copy of a more ancient original, and also a few texts dating from the fourteenth century to the seventeenth. The Middle Cornish literature, like the Middle Breton, consists almost entirely of religious poetry and drama. These monuments scarcely go beyond the fifteenth century.

For Old Cornish, consult: Stokes, "The Manusmissions in the Bodmin Gospels," *Revue celtique*, vol. i (Paris, 1870), and *Urkettscher Sprachschatz* (Göttingen, 1894); Henry, *Lexique étymologique du breton moderne* (Rennes, 1900); Pedersen, *Vergleichende Grammatik der keltischen Sprachen* (Göttingen, 1909-13). The Middle Cornish vocabulary is printed in Zeuss, *Grammatica Celtica*, ed. by Ebel (Berlin, 1868-71). For the other monuments, consult: Norris, *The Ancient Cornish Drama* (Oxford, 1859);

Stokes, "Pascon Agan Arluth," *Transactions of the Philological Society* (London, 1861-62); *Beunans Meriasek* (ib., 1872); Jenner, *The Cornish Language* (ib., 1873-74); Jago, *The Ancient Language of Cornwall* (Truro, 1882). For grammars, consult Jenner, *Handbook of the Cornish Language* (London, 1904), which treats of the language chiefly in its latest stages, with some account of its history and literature. DICTIONARIES: R. Williams, *Lexicon Cornu-Britannicum* (Llandovery, 1865); Loth, *Remarques et corrections au lexicon de Williams* (Paris, 1902); further corrections and additions in the *Revue celtique* (vol. xxiii, pp. 237-302; Paris, 1902); Stokes, *Cornish Glossary* (London, 1868-69); Jago, *English-Cornish Dictionary* (ib., 1887); Loth, "Études corniques," in *Revue Celtique*, vols. xviii-xxvi (1897-1905); *Les mots latins dans les langues britanniques: gallois, armoricain, cornique* (Paris, 1892).

**CORN LAWS.** A name given in England to the long series of statutes dating as far back as the reign of Edward III and terminating only in the year 1846, which had for their object the regulation of the trade in grain. The tenor of these laws varied with the idea which was uppermost in the minds of the legislators. At one time designed to secure a proper supply of grain, the exportation of grain was prohibited, or allowed only when a surplus of the home supply revealed itself in the low price for grain. Later the underlying principle was frankly the encouragement and support of the agricultural interests, resulting in the prohibition of the importation of grain, or permitting it only when the price of grain was extremely high and importation seemed unavoidable to prevent famine. At times, moreover, in the long and varied history of this legislation, resort was had to bounties as means of encouraging and promoting home production. The shifting of legislation attracted little comment and less agitation until the beginning of the nineteenth century. At that time the manufacturing interests grew restive under the restrictions which were placed upon the trade in grain, and early in the century something in the nature of a compromise was made by the adoption of a sliding scale in the duties on importation. The object of this device was to reduce the import duties in proportion as the price of grain increased, so that at famine prices grain might be imported duty free. By the Act of 1828, at the price of 62s. a quarter for wheat, the import duty was £1 4s. 8d. For every shilling less in the price, a shilling was added to the duty, but when the price rose above this point the duty decreased by a larger ratio than the rise in price. At the price of 69s. the duty was 15s. 8d., and at 73s. the duty sank to its minimum of 1s. Such an arrangement not only promoted speculative operations, but also prevented foreign countries from furnishing grain habitually for the British market.

This legislation was obviously in the interest of the landowners, but as the tendency of Great Britain to be an importing rather than an exporting country had already become manifest, it seemed clear that the effort to increase home production by restrictions on importation was virtually an attempt to aggrandize the landed interest by a tax upon the food of the people. The manufacturing interests, which were now rapidly coming into power, devoted their energies to combating this principle, which increased

the cost of living, and, through wages, the cost of manufacturing. But the public at large, though vaguely conscious that the laws were at variance with the principles of political economy, did not, till the very last, earnestly unite in calling for repeal. There was a powerful party who represented with wonderful plausibility that these restrictive statutes were identified with the best interests of the country. Their arguments might thus be summed up: 1. Protection was necessary, in order to keep certain poor lands in cultivation. 2. It was desirable to cultivate as much land as possible in order to improve the country. 3. If improvement by that means were checked, England would be dependent on foreigners for a large portion of the food of the people. 4. Such dependence would be fraught with immense danger; in the event of war supplies might be stopped, or the ports might be blockaded, the result being famine, disease, and civil war. 5. The advantage gained by protection enabled the landed proprietors and their tenants to encourage manufactures and trade; so much so, that if the corn laws were abolished, half the country shopkeepers would be ruined; that would be followed by the stoppage of many of the mills and factories, and no one would venture to say what would be the final consequences. It cannot be unconstructive to put on record that these arguments exercised a commanding influence over the laboring classes, the small town shopkeepers, almost all the members of the learned professions, and a considerable section of both houses of Parliament. Yielding at length to the continued agitation, and recognizing that England's prosperity lay in the development of her manufactures rather than in the further encouragement of agriculture, Sir Robert Peel, in 1846, at the time of the Irish famine, effected the repeal of the Corn Laws. By this act the maximum duty on foreign wheat was immediately reduced to 10s. per quarter when the price was under 48s., with lower duties as prices rose above that figure; these duties to cease on Feb. 1, 1849, after which the duty should be 1s. per quarter. (See ANTI-CORN LAW LEAGUE; COBDEN, RICHARD.) The area devoted to wheat cultivation in England is less to-day than it was 50 years ago, although the population has greatly increased. Modern methods of communication, however, have opened up new areas of supply, and the development of manufactures and commerce has amply compensated for the loss in agricultural production.

The following tables show the trade prior to and following the repeal of the Corn Laws.

years imports are measured in hundredweights. The increase in grain imports is shown in the following table:

YEAR	Wheat and wheat flour in cwt.s.	Value of all breadstuffs
		£
1860	31,841,926	31,676,353
1870	39,906,115	42,502,252
1880	68,459,814	62,557,269
1890	82,381,691	53,484,584
1900	98,597,450	50,929,313
1910	119,056,653	65,362,000
1912	123,724,589	73,428,538

In the meantime the aggregate value of all British imports and exports has risen from £376,000,000 in 1860 to £698,000,000 in 1880, £896,000,000 in 1905, and £1,232,000,000 in 1912. The growing dependence of Great Britain upon foreign sources of supply for breadstuffs is reflected in the decline of the area sown in grain crops, which in 1874 was reported as 9,431,276 acres, 6,953,034 acres in 1904, and 7,154,742 in 1912. Russia and other European countries contribute to the British imports, as does also India, but the principal sources whence imports are drawn are shown in the following statement:

## IMPORTS OF WHEAT IN 1912

	Cwts
India	25,379,000
Russia	9,005,000
Argentina	18,783,000
Australia	11,908,000
United States	19,974,000
Canada	21,551,000
Rumania	1,491,000

**Bibliography.** The text of the Corn Laws is to be found in *British Statutes* (rev. ed., 16 vols., London, 1882-1900), and the speeches on both sides of the question in Hansard, *Parliamentary Debates* (1815-46). A comprehensive and accurate presentation of the whole subject and its bearing on trade is given in McCulloch, *Dictionary of Commerce and Commercial Navigation* (London, 1870), Acland and Ransome, *Political History of England* (ib., 1894), summarizes the Corn Laws previous to 1815, and the progress of legislation from that time until 1846, when the Corn Laws were repealed. Other sources of information are: "The First and Second Reports from the Select Committee on the Epworth (Corn Law) Petitions," *Great Britain Parl. Papers, Sess. 1843*, vol. xi; Wilson, *Influences of the Corn Laws* (London, 1840); Thornton, *Historical Summary of the Corn Laws* (ib., 1841); Platt, *History of the*

## IMPORTS OF FOREIGN WHEAT, CURRENT PRICES OF WHEAT, AND DECLARED VALUE OF ALL BRITISH EXPORTS FROM 1801 TO 1859

AVERAGE PERIOD OF TEN YEARS	Average amount of wheat imported	Average price of wheat during each period	Average total declared value of all British exports
	Bushels	s d	£
1801 to 1810	600,946	81 5	40,737,970
1811 " 1820	458,578	84 11	41,506,794
1821 " 1830	534,992	58 3	36,600,536
1831 " 1840	907,638	56 10	45,249,037
1841 " 1850	2,877,999	53 3	57,412,494
1851 " 1859	4,547,311	54 9	103,253,189

Coincidentally with an increased importation of food stuffs there was a notable expansion of foreign trade, as shown in the exports. In later

*British Corn Laws* (ib., 1845); Morley, *Life of Richard Cobden* (ib., 1881); McCarthy, *The Epoch of Reform, 1830-50* (ib., 1882); Nichol-

son, *History of the Corn Laws* (ib., 1904); and for a full bibliography, *New York Public Library Bulletin*, vol. vi, No. 5 (New York, 1902).

**CORN MARIGOLD.** See CHRYSANTHEMUM.

**CORNO**, kôr'nô, MONTE (Mount Horn). The highest peak (9585 feet) of the Apennines (q.v.).

**CORN OIL, CORN PITH.** See MAIZE.

**CORNOYER**, PAUL (1864- ). An American painter. He was born in St. Louis and studied there at the School of Fine Arts and in Paris under Lefebvre, Benjamin Constant, and Louis Blanc. In 1899 he came to New York, where he devoted himself principally to city scenes of a tranquil character. A subtle sense of values and rare atmospheric qualities constitute the great charm of his pictures. His favorite subjects are snow and rain effects, and he is at his best in such paintings as "Morning, Madison Square" (W. M. Chase collection, New York); "A Rainy Day, Madison Square"; "Late Afternoon, Washington Square"; "After the Rain" (Brooklyn Museum); "Hazy Morning, Fifty-ninth Street" (1911); "Old New York" (1912), "Library Lane" (1912)—all interpretations of a highly poetic character. Cornoyer was elected in 1913 an associate member of the National Academy of Design.

**CORNPLANTER** (1732-1836). A celebrated half-breed chief of the Seneca Indians, the son of a trader named John O'Bail. During the French and Indian War he led a war party of the Senecas which had joined the French against the English, and took part in the defeat of Braddock in 1755. During the Revolutionary War he joined the English, took an active part in the border conflicts in New York, and seems to have been present at the massacre of Wyoming. Afterward, however, he became a steadfast friend of the whites and, with Red Jacket, directed the affairs of his tribe for many years. He spent much time and energy in exhorting his nation to avoid intemperance. His Indian name was Garyan-Wah-Gah. Consult Snowden, *Historical Sketch of Cornplanter* (1867).

**CORN SALAD**, or LAMB'S LETTUCE (*Valerianella*). A genus of plants belonging to the family Valerianaceae. The species are annual plants of humble growth, with repeatedly forked stems and very small flowers, native in Europe. Some of them are frequently used as spring salads, and sometimes as a substitute for spinach, particularly the common corn salad (*Valerianella olitoria*). For early spring plants the seed is sown in September and cultivated, mulched, and wintered like spinach. Corn salad lacks pungency as a salad plant, but comes early in the spring when other salad plants are scarce. For illustration, see SALAD PLANTS.

**CORNSHELLER.** See MAIZE.

**CORN SMUT.** See SMUT.

**CORN SNAKE** (so called from its color, which resembles that of red Indian corn).

CORN SNAKE (*Coluber guttatus*).  
(Plates of the top and side of the head)

Either of two harmless snakes in the southern United States: 1. *Coluber guttatus*, found in

Virginia and southward, 2½ feet long, reddish brown with black-bordered brick-red blotches. It climbs easily and feeds upon young birds and small rodents. 2. The milk snake (q.v.).

**CORNSTALK** (c.1720-77). A celebrated Shawnee Indian chief. He commanded the Indians in the stubborn battle of Point Pleasant (q.v.) on Oct. 10, 1774, during Lord Dunmore's War, and won the praise even of the whites by his great bravery and address. After the battle he made a treaty of peace with the Virginians, in spite of the opposition of a part of his tribe, and kept it loyally until 1777, when, the Shawnees being incited to renew hostilities, he appeared at Point Pleasant in person and notified the settlers that he might find himself forced "to run with the stream." The settlers decided to detain him and his son as hostages, and soon afterward, while still in confinement, the two were treacherously murdered by some whites infuriated by continued Shawnee outrages.

**CORNSTALK DISEASE.** A fatal disease that affects cattle, and occasionally horses and sheep, when turned into the fields in the fall after the corn has been gathered for the utilization of the stalks. The cause of the disease is still undetermined. By some investigators it has been considered as due to corn smut or to the organisms of the Burrill disease of corn. Others have believed that a poisonous principle is sometimes present in cornstalks which causes the death of animals. The name *taœrma maidis* for the disease was based on this theory. In some localities the disease has been supposed to be due to the combined action of indigestion and some poisonous substance absorbed by the corn, e.g., saltpetre. In a case of cattle poisoning in Kansas from eating dried cornstalks, an investigation revealed the presence of large quantities of potassium nitrate. This substance had formed in small white crystals which resembled mold, but was readily recognized by tasting. By cutting a cornstalk in two and tapping it on a table a considerable quantity of powdered nitrate of potash was jarred out. A chemical analysis showed that this substance constituted 18 per cent of the dry weight of the cornstalks. Feeding experiments with potassium nitrate showed that 500 grams would kill an adult animal weighing 1200 pounds. It has been suggested that hydrocyanic acid may form in the stalks and be the cause, but sufficient evidence of this is lacking.

The symptoms are those of violent digestive disturbances followed by delirium and complete unconsciousness. A pronounced weakness of the hind parts is usually observed, which finally leads to paralysis.

Corn smut has been extracted with alcohol and injected into guinea pigs with negative results, and no poisonous alkaloid has been isolated by chemical means. Corn affected with the Burrill corn disease has been fed to cattle without producing any poisonous effects. Some investigators consider cornstalk disease to be a form of hemorrhagic septicæmia. There is no medicinal treatment that seems to be of any benefit. The disease may be prevented by cutting the stalks early and feeding them only after they have been carefully cured and removed from the field.

**CORNU**, kôr'nu', JULIUS (1849- ). A Swiss philologist, born at Basel. He was educated in Paris, taught Romance philology in

his native town, and in 1877 became professor in the University of Prague, later accepting the same chair at Graz. Among his works are: *Phonologie du Bagnard* (1877); *Glanures phonologiques* (1878); *Études sur le poème du Cid* (1881-1900); and the Portuguese grammar in Groeber's *Grundriss der romanischen Philologie*.

**CORNUCOPIA** (Lat., horn of plenty, from *cornu*, horn + *copia*, plenty). The horn of plenty (regarding the origin of which several fables are told by the ancient poets) is generally placed in the hands of figures emblematical of Plenty, Liberality, etc., who are represented as pouring from it an abundance of fruits, corn, etc. It is frequently used in both architecture and heraldry. On the arms of banks and other public institutions it is often represented as pouring forth coins. See AMALTHEA.

**CORNUTUS**, LUCIUS ANNEUS. A Stoic philosopher of the time of Nero. He was a native of Libya, but a resident of Rome. He was the teacher and friend of the poet Persius Flaccus, who left to him all his books and a large sum of money. He took the books, but gave the money to the sisters of the donor. Although he was a friend of Nero, the tyrant banished him because he did not like his advice about the number of books in which he (Nero) proposed to write the history of the Romans. Cornutus was a voluminous writer, both in Latin and in Greek, but little is known concerning his works. His treatise in Greek, *On the Nature of the Gods*, is extant; it deals with popular mythology as expounded by the Stoics. It is edited by Lang (Leipzig, 1881). Consult Arnold, *Roman Stoicism* (Cambridge, 1911).

**CORNWALL** (AS. *Cornweallas* from Welsh, Ir. *Bret. corn*, horn, Lat. *cornu*, GK. *képas, keras*, Goth. *háurn*, Eng. *horn* + AS. *weallas*, strangers, Welsh, *Welsh*, Ger. *uetsch*, foreign, Lat. *Volca*, name of a people). A maritime county forming the southwest extremity of England (Map: England, B 6). Its area is 1357 square miles, most of which is arable or in meadow and pasture. The mining of tin and copper is an important industry, and there are extensive pichard fisheries. The chief towns are Bodmin (the county town), Launceston, Penzance, Falmouth, and Truro. Pop., 1901, 318,591; 1911, 325,283. Cornwall is very rich in remains of some ancient culture. These comprise cromlechs or dolmens (q.v.), found chiefly in the Land's End district; uninscribed monoliths, circles, and avenues of stone, caves, cliff and hill castles. The products of the Cornish tin mines were famous in the ancient world, and furnished the Phenicians with one of their chief articles of trade. The absence of Eastern coins and inscriptions, however, has seemed to some to indicate that the Phenicians never set foot in Britain, but carried on their trade indirectly through Gaul. Consult, however, Holmes, *Ancient Britain and the Invasions of Julius Cæsar* (Oxford, 1907). After the Saxon Conquest Cornwall constituted part of the British Kingdom of Damnoia, which held out against the kings of Wessex till 926, when Athelstane captured Exeter. At the time of the Norman Conquest the Saxons were in full possession of the land. Christianity was introduced from Ireland, probably as early as the fifth century; there are numerous Christian remains, especially from the seventh and eighth centuries. The inhabitants maintained an independent

priesthood till the tenth century, when the country was annexed to the see of Canterbury. William the Conqueror gave nearly the whole of Cornwall to his half brother, Robert of Montain, who was followed by a line of powerful earls, of whom the most celebrated was Richard, the second son of John, elected in 1257 King of the Romans. In 1337 Cornwall was created a duchy for the Prince of Wales, by whom it has continued to be held. During the civil war the inhabitants of Cornwall were intensely loyal and supplied Charles I with some of his bravest soldiers. Royalist victories were won at Braddock Down (Jan. 19, 1643) and Stamford Hill (May 15, 1643). From Sudeley Castle Charles I, on Sept. 10, 1643, issued a proclamation to the people of Cornwall, thanking them for their great devotion. Copies of this letter are still to be seen in a number of churches. See CORNISH LANGUAGE AND LITERATURE.

**CORNWALL**. A port of entry and the capital of Stormont Co., Ontario, Canada, on the St. Lawrence River, the Cornwall Canal, of which it is the terminus, and the Grand Trunk and the Ottawa and New York railroads, 56 miles east-southeast of Ottawa (Map: Ontario, K 3). It has steamship connections with the principal Canadian ports. The public buildings include the town hall, a commercial college, and a high school. There are three parks. The town owns the water and sewerage systems and is supplied with electric light and gas. Electric and water power is available for manufacturing. The products of the manufacturing industries include cotton, furniture, bedsteads, chairs, paper, and lacrosse supplies. Cornwall lies in a mixed farming and dairying district. Good fishing and hunting abound, and there is a summer resort 8 miles distant, at Stanley Island. The town's lacrosse club is one of the foremost in the Dominion. The United States is represented by a consular agent. Pop., 1901, 6704, 1911, 6598.

**CORNWALL**. A village in Orange Co., N. Y., 52 miles by rail from New York City, on the west bank of the Hudson River, a little north of the Highlands, and on the New York, Ontario, and Western and the West Shore railroads (Map: New York, B 1). It is in a picturesque region, much frequented as a place of summer resort. Idlewild Park and Storm King Mountain are among the prominent points of interest. Just outside the village limits there is a large carpet mill, which employs some 500 persons. There are also municipal water works and a public library. Pop., 1900, 1966; 1910, 2658.

Cornwall was settled about 1684, became a precinct in 1764, a township in 1778, and was incorporated in 1885. From the original township, Highlands, Blooming Grove, and Monroe, besides parts of Chester and Hamptonburg, have since been taken. Consult Eager, *History of Orange County* (Newburgh, 1846-47), and Beach, *Cornwall* (Newburgh, 1873).

**CORNWALL**, BARRY. See PROCTER, BRYAN WALLER.

**CORNWALL**, EARL OF. See GAVESTON, PIERES.  
**CORNWALLIS**, CAROLINE FRANCES (1786-1858). An English author, who was a linguist and a student of wide reading in various fields, and whose first work, *Philosophical Theories and Philosophical Experience*, by a Pariah, appeared in 1842. It was the first of a series entitled "Small Books on Great Subjects,"

which she had formed the idea of writing with the help of a few friends. Of the 22 volumes of this series, which appeared between 1842 and 1854, all the most important were written by herself. The subjects discussed were various—science, ragged schools, grammar, criminal law, Greek philosophy, etc. In 1864 appeared her *Letters and Remains*.

**CORNWALLIS, CHARLES**, first MARQUIS and second EARL (1738–1805). An English general and statesman. The son of the first Earl Cornwallis, he was born in London, Dec. 31, 1738. After an education at Eton and Cambridge he entered the army and served as aid-de-camp to the Marquis of Granby in the Seven Years' War. In 1760 he was elected member of Parliament for Eye, in 1766 received his promotion as colonel, in 1770 was made governor of the Tower of London, and in 1775 became major general. Though personally opposed to the war with America, he went with his regiment thither, and the first successes of the British arms were, in the main, due to him. After the battle of Long Island, in which he took a prominent part, he pursued Washington through New Jersey. A detachment of his army, consisting of Hessians, was captured by Washington at Trenton, Dec. 26, 1776, and part of his forces suffered a defeat at Princeton, Jan. 3, 1777. He had the principal share in the victory of the Brandywine, Sept. 11, 1777, after which he secured for the British the command of the Delaware River. In disgust at Howe's failure to grasp the critical situation of affairs and to attempt operations on a large scale, Cornwallis sent in his resignation, which the King refused to accept. He served under Clinton at the reduction of Charleston in 1780, achieved a great victory over Gates at Camden, S. C., on August 16 of that year, and defeated Greene at Guilford Court House, N. C. March 15, 1781. He was in the end outgeneraled by Greene and withdrew into Virginia, where he carried on a vigorous campaign against Lafayette, but without avail. Finally he was shut up in Yorktown by Washington and Rochambeau, aided by a French fleet under De Grasse, and was compelled to surrender on Oct. 19, 1781. With the surrender of Cornwallis the triumph of the American cause was virtually achieved. Although the disaster resulted in the resignation of the British ministry, Cornwallis escaped censure owing to royal favor. In 1786 he was appointed Governor-General of India and commander in chief and distinguished himself by his victories over Tipu Sahib and by his indefatigable efforts to promote the welfare of the natives. He returned from India in 1793, when he was raised to the rank of Marquis. Appointed Lord Lieutenant of Ireland, he succeeded in quelling the rebellion of 1798 and established order in a manner that gained him the good will of the Irish people. As Plenipotentiary to France he negotiated the Peace of Amiens. Reappointed Governor-General of India in 1804, he died at Ghazipur, in the Province of Benares, Oct. 5, 1805, on his way to assume the command of the army in the upper provinces.

Consult: Marshall, *Memoir* (Gateshead, 1806); Lord Cornwallis' *Correspondence*, ed. by Ross (London, 1859); Seton-Karr, "The Marquess Cornwallis," in *Rulers of India* (Oxford, 1890).

**CORO**, kô'rô, or SANTA ANA DE CORO. A city of the State of Falcón, Venezuela, situated east of the Gulf of Coro (Map: Venezuela, D 1). It

is engaged in cattle raising and is a centre for interior commerce. Coro contains several churches, interesting for their antiquity, though they either have been rebuilt or lie in ruins. La Vela, its port, which is 6 miles to the east, has a good harbor and a trade with the Dutch West Indies and is the residence of a United States consular agent. Population, 9452. Coro, one of the oldest cities in Venezuela, was settled by Juan de Ampués in 1527 and for a time was the Spanish capital of Venezuela. It was created the first bishopric of Venezuela in 1531, but subsequently the see was removed. Its decline dates from the transference of the governmental and ecclesiastical authorities to Caracas. It was the objective point of Miranda's first descent upon Venezuela in 1805, when he led an abortive expedition against the Spanish in the hope of precipitating the revolution of the Spanish-American colonies.

**COROADO**, kô'rô-k'ô'dô (Portug., crowned, in allusion to a peculiar style of wearing the hair). A name without ethnic significance, applied by the Portuguese to several Brazilian tribes. The name "Coroados" (also Bugres) is now applied to the people formerly called "Zuayanás" (of Tapuyan stock), and known also as "Caingangs." These are "the dread Bugres of South Brazil," who inflicted such destruction upon the settler of the interior. They are to be distinguished from the "real Coroados" of the states of Minas and Matto Grosso.

**COROLLA** (Lat., garland, dim. of *corona*, crown). In flowers, the inner one of the two sets of floral leaves. The individual parts are called "petals," and they are usually delicate in texture and variously colored, forming the showy part of the flower. In case they are absent the flower is said to be "apetalous." The corolla is supposed to serve as an attraction to insects, so that the flower may secure cross pollination. See FLOWER.

**COROLLARY** (Lat. *corollarium*, deduction, gratuity, money paid for a garland, from *corolla*, garland). A proposition the truth of which appears so clearly from the proof of another proposition as not to require separate demonstration. For example, having proved that the angles at the base of an isosceles triangle are equal, it follows as a corollary that an equilateral triangle is equiangular.

**COROMANDEL COAST** (Skt. *Cōramanḍala*, from *Cōra*, or *Cōla*, name of a people + *mandala*, circle, kingdom). A region in British India in former times comprising the portion of the east coast of Madras lying between Point Calimere, in about lat. 10° 17' N., and the mouth of the Kistna, in about lat. 15° 40' N. (Map: India, D 6). The name is sometimes applied to the whole of the west shore of the Bay of Bengal. The coast has numerous inlets, but possesses no safe harbors. Ships are compelled to anchor several miles off the coast, which is visited by the northeast monsoon from October till April. The districts along the coast were the battlefields for supremacy in India between England and France in the eighteenth century.

**COROMANDEL GOOSEBERRY**. See CARAMBOLA.

**CORONA** (Lat., crown). In astronomy, the name given to the faint outermost luminous appendage of the sun, seen only during total solar eclipses, when the brilliant central disk is obscured. See SUN.

**CORONÆ**, in meteorology, are colored rings seen around the moon through peculiar forms of cloud. See **HALO**.

**CORONA**. In architecture, the upper part of the classical cornice, especially the shelf-like portion between the bed-molding and the cymatium. (See **CORNICE**.) The term "corona" is also applied, especially by ecclesiastical writers, to the apse or semicircular termination of the choir, as in the case of "Becket's crown," at Canterbury. Corona is also applied in ecclesiastical nomenclature to a chandelier, in the form of a crown or circlet, suspended from the roof of a church, or from the vaulting of the nave or of chapels, to hold tapers which are lighted on solemn occasions. Famous mediæval examples are those in Charlemagne's Palatine Chapel at Aix-la-Chapelle and in St. Michael's, Hildesheim.

**CORONA**. In plants, a word applied to any crownlike appendage at or near the summit of an organ. It is usually restricted, however, to appendages which occur in connection with corollas. For example, in the species of *Silene* and allied forms, members of the pink family, there is a two-lobed outgrowth at the junction of the claw and blade of each petal. Taking the petals together, these outgrowths form a 10-lobed crown at the base of the blades. In the passion flowers there is a very conspicuous corona consisting of many rows of filamentous outgrowths. Similar outgrowths are found in the flowers of other families, but are most notable in sympetalous corollas, where they form folds or projections in the throat, as in oleander, various borages, etc. In the several species of *Narcissus* the corona which rises from the throat of the corolla is often very conspicuous. In all cases these appendages are out-

CORONA (p) OF NARCISSEUS.

growths from the inner face of the petals, and it has been suggested that they are the equivalents of similar outgrowths from the inner face of grass leaves, at the juncture of the blade and sheath. In this latter case the appendage is called a "ligule."

**CORONA**. A city in Riverside Co., Cal., 48 miles southeast of Los Angeles, on the Santa Fe and the Pacific Electric railroads (Map: California, H 9). The city contains a Carnegie library, Woman's Improvement Club, and fine

high school and city hall buildings. There is also a splendid circular boulevard on which big automobile races are held annually. Corona is an important shipping point for lemons and oranges. Citrus fruit growing, alfalfa milling, and the manufacture of clay products and crushed rocks are the chief industries. Pop., 1900, 1434; 1910, 3540.

**CORONA AUSTRALIS** (Lat., Southern Crown). A small southern constellation, described by Ptolemy and consisting of stars of moderate brightness. It is situated between Scorpio and Sagittarius.

**CORONA BOREALIS** (Lat., Northern Crown). A small and bright northern constellation between Hercules and Boötes. The arrangement of six of its principal stars, the brightest of which is of the second magnitude, in the form of an almost perfect semicircle renders it easily recognizable. In 1866 a *nova*, or temporary star, known as "T Corona," was discovered by Birmingham in this constellation. At first of the second magnitude, nine days after its discovery it was again invisible to the naked eye; it still exists as a star of the tenth magnitude. It is worthy of note as the first *nova* to which the then novel methods of stellar spectrum analysis were applied.

**CORONACH**, kōr'ō-nāk. See **CORONACH**.

**CORONA CIVICA**. See **CROWN**.

**CORONA CONVIVALIS**. See **CROWN**.

**CORONADO**, kō'rō-nā'dō (Sp., crowned). The name among Spanish-speaking fishermen of the West Indies and Mexico for the amber fishes of the genus *Seriola*. See **AMBER FISH**.

**CORONADO**, FRANCISCO VÁSQUEZ (?-c.1549). A Spanish explorer. He came to the New World about 1535, and, by marrying Doña Beatriz, the daughter of Estrada, the royal Treasurer for New Spain, secured preferment at the viceregal court in Mexico. He was appointed Governor of the Province of New Galicia, and in 1539 secured the command of an expedition for the conquest of the "Seven Cities of Cibola," which the friar Marcos de Niza claimed to have discovered on a preliminary expedition earlier in 1539. On Feb. 23, 1540, Coronado started from Compostela with a large force of horsemen, infantry, and native allies, supplied with artillery and abundant munitions and food. He followed the western coast of Mexico till some distance beyond Guaymas and then crossed the mountains into southeastern Arizona. On July 7 he reached and stormed the chief city of Cibola, the stone pueblo of Hawikuh, now represented by large ruins a short distance west of the pueblo of Zúñi, in New Mexico. Making this his headquarters, Coronado sent expeditions to the West, which explored the country as far as the Moqui villages of Tusayan, and to the Grand Cañon of the Colorado, which was first seen by Europeans when the soldiers under López de Cárdenas reached it early in September, 1540. Other parties explored towards the east, and in September, Coronado moved his forces to the Rio Grande, camping in the village of Tiguex, near Bernalillo, New Mexico. During the winter the natives of the river villages were subjugated after a fierce resistance. In April, 1541, Coronado led his whole army across the mountains into the great Buffalo plains of Arkansas and Indian Territory. Finding that he was being misled by a native guide, he sent his foot soldiers back to the Rio Grande, while he, with 30 horsemen, pushed northward, hop-

ing to find a country rich in treasure. In July he reached a group of tepee villages, somewhere near the border line between Kansas and Nebraska. Convinced that the country contained nothing of value for him, although he recognized its splendid agricultural possibilities, Coronado returned to Tiguex. A severe fall from his horse induced Coronado to turn homeward in the spring. After several months of deprivation he reached Mexico with such of his army as had not deserted along the route. The Viceroy received him coldly and allowed him to resign the government of New Galicia. Coronado lived quietly on his ample estates until his death, about 1549. The original documents describing Coronado's journey, which contain much information concerning the southwestern United States at the time it was first visited by Europeans, are translated in Winship, "The Coronado Expedition," in the *Fourteenth Report of the United States Bureau of Ethnology* (Washington, 1896). Consult also Winship, *Journey of Coronado* (New York, 1904).

**CORONA FUNEBRIS.** See CROWN.

**CORONA MURALIS.** See CROWN.

**CORONA NATALITIA.** See CROWN.

**CORONA NUPTIALIS.** See CROWN.

**CORONA OBSIDIONALIS.** See CROWN.

**CORONA SACERDOTALIS.** See CROWN.

**CORONA SEPULCHRALIS.** See CROWN.

**CORONATION** (from Lat *coronare*, to crown, from *corona*, crown). The act or ceremony of crowning the sovereign of a monarchical country. The use of crowns in antiquity, as a mark either of honor or of rejoicing, will be explained under CROWN. It was, no doubt, as an adaptation of this general custom to a special use that the practice of placing a crown on the head of a monarch at the commencement of his reign was introduced. The practice is very ancient, as we may learn from the fact that Solomon and Ahaziah were crowned, and it has been followed, in one form or another, in most civilized monarchies. The ceremony is religious as well as political and is usually performed by a high ecclesiastic, as a recognition that "the powers that be are ordained of God." Generally it has been accompanied by what was regarded as the still more solemn rite of anointing with oil—a ceremony which, from the time of the ancient Hebrews to our own, has been peculiarly significant of consecration or devotion to the service of God. The term employed for "crowned" in the Saxon chronicle is *gehalgod*, 'hallowed' or 'consecrated'; and it would seem that the ceremony as then performed at Kingston-on-Thames or Winchester was the same in all essentials as that which now takes place in Westminster Abbey.

In the early days of the European monarchies coronation was an indispensable rite, without which no accession to a throne would be recognized by the people; but in our day, the line of succession being clearly established, the ceremony is often deferred without prejudice to the loyalty of the subject. In most countries a solemn pledge, known as the "coronation oath," is exacted from the new sovereign as an indispensable preliminary to coronation. There are very early traces of this, both among the Jews and among the rulers who established themselves upon the ruins of the Roman Empire. Before the principle of hereditary succession was firmly established, the consent of the people was an important factor in a transfer of sov-

erignty and was purchased by the solemn pledge to rule justly and to preserve every man's rights. The present English coronation oath is the most definite and carefully considered agreement of the kind. After the revolution of 1688 it was made more explicit than ever, including an express engagement on the part of the sovereign to maintain "the laws of God, the true profession of the Gospel, and the Protestant reformed religion as it is established by law." The terms of this declaration were long resented by Roman Catholics in England, and finally, in 1910, the Accession Declaration Act was passed, which substituted a short formula for the objectionable clauses. The formula now runs: "I, ———, do solemnly and sincerely in the presence of God, profess, testify, and declare that I am a faithful Protestant, and that I will, according to the true intent of the enactments which secure the Protestant succession to the Throne of the Realm, uphold and maintain the said enactments to the best of my powers according to law." The oaths of other countries are neither so elaborate nor so specific as that of England.

For a learned treatment of coronation usages in general, as well as for a typical modern instance, consult Pascoe, *The Pageant and Ceremony of the Coronation of their Majesties King Edward the Seventh and Queen Alexandra* (New York, 1902).

**CORONATION, THE.** A play licensed by Shirley in 1635. It was, however, wrongly included in the earlier editions of Beaumont and Fletcher, as theirs.

**CORONATION CHAIR.** The ancient throne used at the coronation of English kings since Edward I. It is kept in a fair state of preservation in Westminster Abbey. Beneath the seat rests the famous Lia Fail, the Stone of Destiny, on which Scottish kings were crowned. The stone is said to be the one used by Jacob as a pillow and to have been taken to Tara in Ireland in the fifth century B.C., whence it was brought to Scotland and removed to England by Edward I.

**CORONATION GULE.** An inlet of the Arctic Ocean, penetrating the continent of North America, north of the Arctic circle, and included between long. 107° and 116° W., Bathurst Inlet being an extension towards the southeast. It is connected with other Arctic channels by Dease Strait on the northeast and Dolphin and Union Strait on the northwest (Map: America, North, G 3). It is studded with islands and receives the waters of the Coppermine River from the south.

**CORONATION OATH.** See CORONATION.

**CORONEL**, kó'ró-nél' (Sp., from Lat. *coronatus*, pertaining to a crown, from *corona*, crown). A port in the Province of Concepción, Chile, situated on the Bay of Arauco (Map: Chile, C 11). It is the commercial centre for the highly productive coal-mining district in the vicinity and is a coaling station. Pop., 1895, 2292; 1907, 5,258.

**CORONELLI**, kó'ró-nél'lé, MARCO VINCENZO (1650-1718). An Italian geographer, born in Venice. He became a monk and devoted himself to cosmography in Venice. He then went to Paris, where he was commissioned by Louis XIV to construct two large globes 4 meters in diameter, which are in the Bibliothèque Nationale in Paris. They are considered among the greatest curiosities of the science of the seven-

teenth century. In 1685 Coronelli returned to Venice, was made geographer of the Republic in 1702, and in that capacity published a number of maps and histories. His works include *Isola di Rodi, geografica, storica, antica e moderna* (1685-1702), and *Memorie istorico-geografiche del regno della Morea* (1685).

**CORONER.** A very ancient and important county officer in England, Ireland, and Wales, whose original duty appears to have been that of keeping, as distinguished from holding, the pleas of the crown; for coroners are designated in the earliest charters alluding to the office as *custodes placitorum coronæ* and *coronatores*. The exact date of origin of the office is not known, but the better modern view is that it was firmly established under Henry II in the twelfth century. From England the office of coroner has found its way to the United States and the self-governing English colonies.

The chief duty of the coroner was described by Lord Chancellor Campbell as follows: "The coroner, next to the sheriff, is the most important civil officer in the county, and he performs the duty of the sheriff when the sheriff is disabled from doing so; and there are peculiar duties prescribed to him, more particularly to inquire into the manner in which persons have come to their deaths where there is any reason to suppose that it may not have been by natural means; and, on the inquiry, the jury being sworn, the jury have all the rights of a grand jury to find a verdict of murder, and on that finding the accused may be tried and may be sentenced to death." The coroner's duties in respect to this inquiry as to suspicious deaths has hardly varied at all from the fourteenth century to the present time, except as regards the methods of procedure, such as summoning jurors, witnesses, etc.

Besides his duty of inquiring into causes of suspicious deaths, his other peculiar duties included that of inquiring concerning various classes of personal property, such as treasure-trove, wrecks. The goods thrown away by a thief in his flight (known as "wrecks"), to which the crown laid claim; the holding of inquests on certain felonies, such as the breaking of a house and the sudden injury of a person under suspicious circumstances. Until 1888, in England, the coroners were chosen by the freeholders at a county court held for the purpose, but by the Local Government Act of that year the county council were made the electors. The coroner is also *ex officio* a conservator of the King's peace, and in this capacity may act as a magistrate; his ministerial office is exercised only when he acts in place of the sheriff.

In the United States and in some of the colonies of Great Britain the duties and powers of coroners have been enlarged or restricted, and in some cases the office has been entirely abolished. The coroner is vested by statute in some jurisdictions with the power and duty to investigate into the causes and origins of fires which appear to be of incendiary origin or of such a nature as to require investigation; but *ex officio* the coroner has no authority to inquire into the cause or origin of a fire except when death has resulted from it.

For a fuller description of the manner of choosing coroners and of their duties and powers, the statutes of the jurisdiction must be consulted.

Consult: *Encyclopædia of the Laws of Eng-*

*land*, vol. iii (London, 1897); Binmore, *Instructions for Sheriffs, Coroners, and Constables* (2d ed., Chicago, 1894); Borden D. Smith, *Powers, Duties, and Liabilities of Sheriffs, Coroners, and Constables* (2d ed., Albany, 1897); Jarvis, *Office and Duties of Coroners, with Forms and Precedents* (5th ed., London, 1888); Stephen, *History of the Criminal Law* (ib., 1883); Pollock and Maitland, *History of English Law* (2d ed., London and Boston, 1899); Boys, *Treatise on Coroners* (Toronto, 1893).

**CORONET.** A special crown worn by princes and nobles on state occasions and always represented above their coats of arms. Coronets were apparently intended originally as fillets to confine the hair, and during the reign of Edward III, when they were not yet used as distinctions of rank, were ornamented with leaves. Later they came to be recognized as distinctions of nobility, but were assumed arbitrarily without royal warrant or restriction as to use. In more modern times they have been strictly regulated, especially in England. The following rules apply to that country: the coronet of the Prince of Wales differs from the crown of England only in having a single instead of a double arch; a duke's coronet has on the rim eight strawberry leaves of equal height; that of a marquis, four strawberry leaves and four pearls or balls of silver, alternately; that of an earl, eight pearls set on lofty spikes, alternating with strawberry leaves set lower; that of a viscount has 14 or 16 pearls close together; that of a baron, six pearls. The privilege of wearing coronets was first granted to viscounts by James I and to barons by Charles II. The French rules are essentially the same.

**CORONINI-CRONBERG**, kō'rō-nē'krōn-bērk, FRANZ, COUNT VON (1833-1901). An Austrian statesman, son of the following, and one of the early companions and schoolmates of Emperor Francis Joseph. After studying philosophy and law, he entered the army in 1850, served in the campaigns of 1859, 1864, and 1866, and was promoted to the rank of colonel in recognition of his distinguished services at the battle of Königgrätz. He was President of the Chamber of Deputies from 1879 to 1881 and in 1882 founded the Coronini Club (Liberal Centre). He became a member of the Upper House in 1897.

**CORONINI-CRONBERG**, JOHANN BAPTIST ALEXIUS, COUNT VON (1794-1880). An Austrian general, father of the foregoing, born at Gorz. He entered the army in 1813 and participated in the campaigns of 1813 and 1814. After serving for several years in Italy, he was in 1836 appointed chamberlain of the Archduke Francis Charles, in which capacity he became preceptor of the Emperor Francis Joseph. As major general he defended the passes of the Tirol against the Italians in 1848, and in the Crimean War (1854) was intrusted with the chief command of the army of occupation in Wallachia. He was commanding general in Upper and Lower Austria, Salzburg, and Styria in 1860, and in 1861 was appointed to the same position in Hungary. He retired in 1865.

**COROT**, kō'rō, JEAN BAPTISTE CAMILLE (1796-1875). A French landscape painter, born in Paris, July 17, 1796. His father was a petty official who married a millner and by shrewd management of her business gained a competence. Camille was educated in the college in Rouen and at a school in Poissy, and on his return to Paris was apprenticed to a draper,

in accordance with his father's wishes. But trade had no charms for him, and in the meanwhile he had acquired a taste for painting. After seven years of apprenticeship with the draper he resolved to be a painter. Upon the death of his sister his father made over to him her allowance, upon which Camille managed to subsist until financial success crowned his efforts. He first studied with Michallon, and upon the latter's death with Victor Bertin, a Classicist and an apostle of the historical landscape. The years 1825 to 1827 he spent in Italy, and in the latter year he made his debut at the Salon with two Italian landscapes—a "View of Narni" and the "Campagna at Rome." He again went to Italy in 1834 and in 1843, besides traveling in France, Switzerland, the Netherlands, and England. But the greater part of his life was passed in Paris and Ville d'Avray, in the forest of Fontainebleau and the valley of the Seine. In these places he found subjects for his most beautiful pictures.

It was some time before his works were recognized, but in his later life honors were heaped upon him. He received medals in 1848, 1853, and 1857; in 1846 he received the cross of the Legion of Honor, and in 1867 he was made a commander. The younger artists almost worshiped him, and in 1874 his friends gave him a gold medal to atone for the neglect of the Salon. Dealers sought his pictures, and it is said that in the time of his prosperity his income from sales alone amounted to 200,000 francs a year. But Corot never cared for money except to help his friends, which he did with a lavish hand. He was gentle, jovial, and kind, and the figure of Père Corot, in his blue blouse and woolen cap, with his long white hair and the inevitable pipe, brought joy and sunshine. He never married, but was devotedly attached to his sister and his mother. He died in Paris on Feb. 22, 1875.

Corot's art naturally falls into two periods, divided from each other by about the year 1843. During the first of these he painted like the contemporary Classicists, very detailed, with careful and severe drawing, but not without a certain charm of color. The influence of this classical training may be seen in the nymphs with which he loved to people his landscapes, and the absolute mastery over technique which we see in his second period. This may be said to have begun with his return from Italy in 1843, when he adopted the method of painting in the open air, which had been introduced from England by Constable and others. The works of his second period are the works from which we chiefly know him and which made him famous.

Corot was the great lyric poet of the Barbizon school, as Rousseau was the epic, and Dupré the dramatic. As Rousseau portrayed the strong and vivid side of nature—the oak, of all the trees, the plains, the hills, the river, and the forest—so Corot painted the tender, the wavering, the feminine side—the poplar, the birch, the willow, the wild flowers, sweet and shrinking. He was a painter of the misty morning and of the shadowy evening, of the hazy springtime. A light mist or a haze of atmosphere usually envelops his pictures. As with Rousseau drawing was the most important feature, so with Corot it was the tone and values of color. His pictures are always in a low key: browns, pale greens, and silvery grays are among his favorite colors, but in this sad setting the occasional

touches of bright color appear all the more effective. His values are perfect, and, above all, each picture is an expression of deep sentiment—"the confession of a beautiful soul." His works have well been called "painted music," and it is no accident that he was himself a gifted musician.

His landscapes have often been criticized because of their similarity, but they are only similar in theme; the treatment is infinitely varied. It has also been urged that his works are too even; that they do not contain certain acid tones and little defects which are found in nature and add to the effect of the picture. Such blemishes might indeed have made his work more realistic, but they would not have harmonized with the softness and delicacy of effect, which it was his chief effort to obtain. As regards the figures which usually form a part of his picture, whether they be nymphs and goddesses or French peasants, they rather heighten the effect of the landscape than otherwise, and with it they are always in perfect harmony. So great was his technical ability and so vivid his imagination that his usual method was to paint his works in his studio from sketches and notes taken from nature.

Corot has left a large number of works on a great variety of subjects. During his early period he painted many Italian landscapes and even religious subjects. Of these landscapes there are two good examples which he himself bequeathed to the nation, viz., the "Roman Forum" and "The Coliseum"; the latter is now in the Louvre, which also possesses "The Bridge of Narni" (1827). Of his religious pictures the "Baptism of Christ," in the church of St. Nicolas du Chardonnet in Paris, is a good specimen, and the Walters Gallery, Baltimore, the Havemeyer collection, New York, and the Boston Art Museum contain examples of his historical compositions. The landscapes of his later period are incomparably his best works. Among the best known is the "Dance of the Nymphs" (Louvre), a fresh morning scene of a peculiar blue tone, and the incomparable "Paysage," in the same collection, showing his marvelous treatment of a lake with overhanging foliage. There are about 80 of his pictures in the Louvre, including, besides those mentioned, "Morning" (1850), "Souvenir of Castelgandolfo" (1855), the "Road of Sin-le-Noble" (1874), and "The Fisherman." Other good examples are in the provincial museums and private collections of France and indeed of all Europe. Corot is especially well represented in the United States. The Metropolitan Museum in New York possesses three good examples, including "Ville d'Avray," a fine specimen of Corot's dainty treatment of water, foliage, and distant buildings in the early morning light. The faint rose of the sky suggests the coming dawn, and the touches of yellow and blue in the garb of the woman lend a soft brightness to the scene. There are other good examples in the Vanderbilt collection (Metropolitan Museum) and the Corecoran Gallery at Washington, in the Art Institute of Chicago, and the Walters Gallery, Baltimore. But not until the centenary exhibition in Paris in 1889 did men know what modern art possessed in Corot, "the greatest poet and the tenderest soul of the nineteenth century."

**Bibliography.** The principal authority for Corot is the monumental work of Robaut, *L'Œuvre de Corot* (4 vols. fol., Paris, 1905),

with admirable illustrations and a complete list of his paintings. Briefer biographies, with account of his work, are by Rousseau (ib., 1884); Roger Miles, in *Les artistes célèbres* (ib., 1891); Robinson, in *Van Dyke's Modern French Masters* (New York, 1896); Michel (Paris, 1905); Hamel (ib., 1905); Cornu (ib., 1911). Consult also: Alexandre Geoffroy, *Corot and Millet*, with critical essays (New York, 1903); Meyer-Graefe, *Corot et Courbet* (Leipzig, 1905); Gensel, *Corot und Troyon* (Bielefeld, 1906); Meynell, *Corot and his Friends* (New York, 1910); Muther, *History of Modern Painting* (London, 1907), and the bibliography under BARBIZON, PAINTERS OF.

**CORPORAL** (Fr. *caporal*, It. *caporale*, corporal, from *capo*, head, from Lat. *caput*, head; influenced by popular etymology with *corporal*, bodily, or *corps*, body of troops). A military title of similar relative noncommissioned rank throughout the armies of the world. In the United States it is the lowest noncommissioned rank. It may be preceded by the appointment of lance corporal, given to private soldiers desirous of and selected for promotion. In the British navy the term "ship's corporal" is applied to a petty officer who takes orders from the master at arms.

**CORPORAL** (Lat. *corporale*, from *corpus*, body, because the host or sacramental body of Christ rests upon it). A square linen cloth which is spread upon the altar during the mass and upon which rest the chalice and paten. It was originally large enough to be folded over the chalice, but this was later displaced by a separate piece, now known as the pall (q.v.). The older usage was long preserved in the French church and is still the custom in the Carthusian Order. Both corporal and pall must be blessed, and when not in use are carried in the burse, a square pocket of cardboard covered with silk, none except those in holy orders being allowed to touch them when they are in use.

**CORPORAL**, THE LITTLE (Fr., *Le petit corporal*). A term of familiarity and affection applied by the French soldiery to Napoleon I, who began his military career as a *sous-lieutenant* in Corsica.

**CORPORAL PUNISHMENT**. Punishment by the infliction of pain or hardship upon the body, as by confinement in the stocks, branding, or flogging. Ordinarily the term is understood to refer only to flogging or whipping of the body.

Much has been said for and against this last kind of punishment, as a means of both public and private correction. The contention of those who oppose its use and deny its value is that it degrades the one punished and the one who executes the punishment, and that it tends to deteriorate the character of the person punished by taking away his self-respect. Those who favor it generally admit that severe floggings which lacerate the body or which are so contrived as to cause extreme agony, as in the *bastinado*, do cause a degeneration in the moral character of the victim which increases his tendency to repeat his offense or commit others in spite of the danger of the second punishment, and that this is especially the case when such punishment is inflicted publicly. But the practice is supported by the argument that whipping which produces stinging but transient pain, without mangling the body and without such public disgrace as to destroy the sense of shame,

is an efficient corrective for those cruel or brutal or intractable offenders, such as wife and child beaters, who are insensible to the punishment of confinement or other ordinary penalties. Corporal punishment at the hands of public officers as a punishment for crime is usually inflicted by flogging in prison or at the public whipping post. The practice has generally been abandoned in civilized communities, though it still survives in England and in many American States as a means of discipline of convicts confined in prisons. Further information will be given under the titles CAT; FLOGGING; WHIPPING.

The authority of the husband, parent, guardian, and schoolmaster to inflict corporal punishment upon the wife, child, or pupil will be considered under HUSBAND AND WIFE; GUARDIAN; WARD; PARENT AND CHILD; SCHOOLMASTER; ETC. See also APPRENTICE. For a bibliography of corporal punishment as a punishment for crime, consult the authorities referred to under PENOLOGY; CRIMINOLOGY.

**CORPORAL TRIM**. An old soldier, the servant of Uncle Toby in Sterne's *Tristram Shandy*.

**CORPORAL VIOLET**, or FATHER VIOLET. A name given to Napoleon Bonaparte by his adherents in France when he was in exile. The violet typified the Empire, which, in the person of Corporal Violet, it was predicted, would return in the spring.

**CORPORATION** (Lat. *corporatio*, from *corporare*, to embody, from *corpus*, body; the classical terms were *corpus*, *universitas*, *collegium*).

**Roman and Civil Law**.—The legal conception of the corporation was clearly worked out at Roman law. As a ship remains the same ship, although all its parts be gradually renewed by successive repairs; as a human body remains the same body, although waste and repair periodically change all its minutest particles, so a body of human beings, like a bench of judges, a legion, or the Roman people, remains the same body in spite of all changes in its composition. In all cases in which such a body of persons is recognized as a separate legal entity—in all cases, i.e., in which the body itself is regarded as owning property, holding claims, and owing debts—a *corpus* or *universitas* exists; where, on the other hand, the members of an association are treated as joint proprietors, joint creditors, and joint debtors, all that exists is a *societas* or partnership.

The Roman law recognized both *private* and *public* corporations. Private corporations (at least in the Imperial period) could not be established except by special authorization or under certain general statutes. In the field of public law the towns (*municipia*), or, rather, the town councils (*collegia decurionum*), were regarded as corporations; and the Imperial treasury (*fiscus*) was recognized as an entity distinct from the Empire. From this latter theory was derived the valuable conclusion that the *fiscus* could be sued by private persons to recover property or enforce contractual claims. Charitable corporations were recognized; when the Empire became Christian, churches and monasteries received the rights of corporations; but where property was devoted to a permanent charitable use (*pia causa*) it was not necessary to give it to an existing charitable corporation nor to create a new corporation to hold it. The Roman law did not treat the persons who administered such property as titular owners sub-

ject to a trust, nor was it usual, as at English law, to incorporate boards of managers and to treat the corporations thus created as owners of the property. The Roman law, in its final development, treated the foundation itself as a legal entity, and viewed the persons who managed the property as mere officers and representatives of the foundation.

Modern civil law uses these Roman conceptions without substantial change. The German jurist Gierke, indeed, maintains that mediæval German law developed, and modern jurisprudence is bound to recognize, a third type of association, intermediate between corporation and partnership, which he terms the *fellowship* (*Gemossenschaft*); but his theory has obtained no legislative or judicial recognition. The German civil code (1896) declares that "societies which are not incorporated are governed by the rules relating to partnership."

As regards the theory of the "juristic person," modern civilians generally regard corporations and foundations as persons only by virtue of a legal fiction. This legal fiction is generally regarded as useful and indeed necessary, but a few writers regard it as unnecessary and harmful. These assert that a corporation is nothing but a plurality of natural persons acting under special rules as regards presentation (i.e., agency) and governed by special rules as regards succession, and they assert that harm is done by obscuring the fact that the private corporation is simply a particular method in which natural persons hold property and do business. Still another school maintains that permanent associations, public and private, have a character and a will which are not the sum or the resultant of the characters and wills of the individuals who compose them, and that such associations have thus a true personality which the law does not create, but merely recognizes. This is sometimes described as the anthropomorphic theory.

*English Common Law.*—Three distinct factors are to be recognized as essential to the existence of a corporation: (1) one or more natural persons, who are the incorporators, or so-called members; (2) one or more trustees, managers, or directors, who have the general control of its affairs and may or may not include all, and be coincident with, the incorporators; and (3) the corporation, or artificial person, created by the fiat of the law, and always separate and distinct from both its members and its trustees or managers. It is this separate existence, as a legal entity, which distinguishes it from a partnership and from a joint-stock company.

*Classification.*—Corporations are classified as to either the number of members, or the objects for which they are formed, or the fullness and completeness of their powers. With regard to the number of members, they are either *aggregate* or *sole*. An aggregate corporation has more members than one and is the more common form. A sole corporation consists of a single member and his successors, who are by law invested with the same capacities as an aggregate corporation. Thus the King of England, or a bishop, is a sole corporation. A very few sole corporations exist in the United States. In New York, e.g., a joint-stock company composed of seven or more members may sue and be sued in the name of its president, and the president is for this purpose a sole corporation.

With respect to the purposes of their existence corporations are classified as *ecclesiastical* and *lay*, and the lay are subdivided into *civil* and *eleemosynary*. Ecclesiastical corporations are concerned wholly with religious matters, including the management of ecclesiastical property, and are composed wholly of spiritual persons, as distinguished from laymen. There are none such, properly so called, in the United States. An eleemosynary corporation is one formed for purposes of charity, in the legal sense of that word, i.e., general public benefit and utility. Examples are found in schools, colleges, and hospitals. *Civil corporations* are those that are formed for temporal purposes. They are either (1) *public*, or *municipal*, i.e., created for governmental purposes, such as cities and villages; or (2) *private*, including others of a civil nature, such as railroad companies and manufacturing and general business corporations. Since municipal corporations are part of the machinery of government, they may be dissolved, restricted, or modified at the will of the legislature; but an act which creates a private corporation has in the United States been deemed to be in the nature of a contract, and (because of that provision of the United States Constitution which forbids the States to pass any laws impairing the obligation of contracts) cannot be repealed or materially altered or impaired without the consent of the corporation. This doctrine of the inviolability of a corporate charter rests upon the authority of the celebrated Dartmouth College Case (q.v.). The operation of this rule is obviated in some States by constitutional provisions, or by special clauses in the acts creating corporations, to the effect that the legislature shall have power to abrogate or modify such acts. The divisions of corporations with reference to their powers is into *complete* and *quasi*. Those are *quasi* which possess some, but not all, of the ordinary powers of a corporation. Counties, school districts, and in some States, as New York, towns, afford examples of *quasi* corporations.

Corporations are created by charter or letters patent from the crown, by legislative act, and by prescription. Some corporations which trace their origin to royal charter exist in the United States; while others may be found which derive their franchise from immemorial usage or prescription; but the most common mode of forming them is by act of the legislature. This latter method is either by special act or charter, or by a general law which enables persons so desiring, by conforming to prescribed conditions and formalities, to become ipso facto a corporation. The formation under a general law is most favored, and is made mandatory by the constitution of some of the States.

*Corporate Powers.*—The powers of a corporation are those given by its charter, or the general law under which it is organized, or fixed and determined by usage when it exists by prescription, together with those which are implied by law as reasonably necessary or proper to enable it to exercise its express powers and to realize the objects for which it exists. They generally include the power to make contracts, to sue and be sued, to hold property, to have a corporate seal, to make by-laws, and to elect and remove members and officers. If a corporation exceed its proper functions, it is said to act *ultra vires*. An *ultra vires* act is, according to the weight of authority, void; but money

paid, or the value of property given, to a corporation under an ultra vires contract may be recovered. In a few jurisdictions, e.g., New York, if the person dealing with a corporation has performed on his part an ultra vires contract, the corporation is held to be estopped from setting up its want of power. (See *ESTOPPEL*.) Corporations have been held liable for torts resulting from their negligent performance of an act, whether authorized or unauthorized, and it is now generally held that a corporation may be liable for any tort, the malice or negligence of the agent being imputed to the corporation. It was formerly held that a corporation could legally perform no act except under its corporate seal, but it may now act without a seal where natural persons may do so. The quantity of land which a corporation may hold is usually fixed by its charter, or a general law, and is commonly restricted in this country to so much as is necessary for the proper performance of its authorized functions.

*Public Control of Corporations.*—The right of visiting a corporation, conferred by charter or legislative appointment, is that of exercising legal superintendence and control over its actions. It is an absolute, summary power which is not reviewable by the courts, unless its arbitrary exercise would result in gross injustice. It is strictly applicable only to ecclesiastical and eleemosynary corporations; the visitor of the former being the bishop of the diocese, and of the latter, the founder and his heirs, or persons appointed by the founder. In the United States the visitors of charitable corporations are usually their trustees, the right of visitation being determined wholly by statute. Civil corporations are subject to the general law, and are amenable to the process of the courts, and for misuse of powers or flagrant wrongs may be dissolved by proceedings instituted in behalf of the State.

A corporation may be dissolved by legislative act, by judicial decree, by surrender of its franchise and acceptance of the same by the State, or by the death of so many members that enough are not left to elect new members pursuant to its charter. The power to dissolve by legislative act is unlimited in England, but in the United States it is restricted as pointed out above. A judicial decree dissolves for the violation of the conditions of the charter or the law under which it exists. Upon dissolution the property of the corporation becomes a trust fund for the benefit of the State or the stockholders, usually the latter. If the institution were charitable, this fund is administered by new trustees appointed by the court.

Strictly speaking, a corporation can have no legal existence outside the jurisdiction of the sovereignty under which it was created. By a legal fiction, however, and by the comity of nations and states, a corporation is held to exist legally wherever it is doing business, and it may sue and be sued, acquire property, etc., outside of the state of its creation by authority of the foreign state in which it is operating and subject to such restrictions as the latter may see fit to impose.

*Citizenship of a Corporation.*—Under the Constitution of the United States a corporation is deemed not to be a citizen of a State, so that it cannot as a foreign corporation claim equal protection of the law with the citizen of a State other than the State of its creation. It follows

that a State may impose any terms as a condition of a foreign corporation doing business within the State, provided it does not interfere with the corporation's constitutional right to carry on interstate commerce. A corporation, however, is a citizen within the meaning of the clause of the Constitution conferring jurisdiction on the Federal courts, and it may sue or be sued in the Federal courts, and may in a proper case remove a cause from a State to a Federal court. Consult: Angell and Ames, *Treatise on the Law of Private Corporations* (Boston, 1882); Cook, *Treatise on the Law of Corporations Having a Capital Stock* (Chicago, 1898); Thompson, *Commentaries on the Law of Corporations* (San Francisco, 1895-99); Clark and Marshall, *Treatise on the Law of Private Corporations* (St. Paul, 1901); Purdy, *Treatise on the Law of Private Corporations* (Chicago, 1905). See CHARTER; CERTIFICATE; DARTMOUTH COLLEGE CASE; CONTRACT; CITIZEN; ETC.; MUNICIPAL CORPORATIONS and its bibliography; and for the treatment of the subject of corporations in its relation to civil and Roman law, see article on CIVIL LAW. Consult also such general treatises as those of Kent and Blackstone.

**CORPOSANTS.** See CASTOR AND POLLUX.

**CORPS,** *kör* (Fr. *corps*). A military term denoting a body of officers, or officers and men, generally a distinct military organization, as the signal corps, corps of engineers, and the coast artillery corps, in the United States army; and the various battalions of volunteers throughout England, locally known as the volunteer corps. More specifically it applies to the corps d'armée, or army corps, which in the United States formerly consisted normally of about 25,000 men, divided into three divisions, each of three brigades of three regiments of infantry, with cavalry and artillery in proportion, commanded by a lieutenant general or major general. The term "army corps" was abolished in the British army in 1906. In the United States army the corps has been replaced by the field army, consisting of two or more divisions, and is the appropriate command of a lieutenant general. Some European armies are organized by combining army corps of varying strength and composition. (See ARMY ORGANIZATION.) In the navy it is used in the first sense; as the medical corps, the pay corps, the marine corps, etc. See NAVY.

**CORPS DIPLOMATIQUE,** *kör dé'plô'ma'ték'* (Fr., diplomatic body). The entire body of foreign ambassadors and diplomatists assembled at the court, or the capital, of a country.

**CORPSE** (OF., Fr. *corps*, body, from Lat. *corpus*, body). A dead human body is not property in the ordinary commercial sense of the term. In the absence of a statute authorizing it, a contract for the sale of such a body is void, as tending to outrage decency, humanity, and sound public policy; and an officer who seizes or holds the body under any legal process issued against the person while living is guilty of a criminal offense. But while a dead body is not property, it is the object of certain well-defined rights. The possessor of these rights is the surviving husband or wife, or the next of kin of the deceased, unless the deceased has made a valid disposition of his body by will. Accordingly, if one mutilates a dead body, or prevents its burial, or unlawfully interferes with it after burial, he may not only be punishable criminally,

but be liable in an action for damages to the husband or wife, or next of kin, of the deceased.

Controversies between persons as to the place of burial of a dead body, or as to its proper treatment, are within the jurisdiction of a court of equity in the United States and are not subject to ecclesiastical decision, as has from an early period been the case in England. This is upon the theory that the rights in a dead body are in the nature of a sacred trust, in the proper performance of which all are interested who were allied to the deceased by family ties.

Not only is a dead human body the object of legal rights, but it is also the object of legal duties on the part of the living. The husband or the wife, or the nearest of kin, or, in the absence or poverty of these, a stranger under whose roof a death occurs, is bound to give the body of the deceased a decent burial. Any one who casts it away without funeral rites or indecently exposes it is liable to criminal punishment. On the other hand, the expenses of a proper burial have priority over every other claim against the estate of the deceased. Consult the authorities referred to under *SALE (of personal property)*. See *BURIAL*; *BODY SNATCHING*.

**CORPUS LÉGISLATIF**, kōr' la'zhé'slà'táf' (Fr., legislative body). The name of the Lower House of the French national legislature from 1852 to 1870. The number of members was 251, elected by universal suffrage for a term of six years. They were largely the creatures of Napoleon III. Consult the histories of the period by Granier de Cassagnac, Taxile Delord, Beaumont-Vassy, and De la Gorce. See *FRANCE*; *NAPOLEON III*.

**CORPS OF ENGINEERS**. See *ENGINEERING, MILITARY*; *ARMY ORGANIZATION, UNITED STATES, Army*.

**CORPULENCE**. See *OBESITY*.

**CORPUS CATHOLICORUM** and **CORPUS EVANGELICORUM** (Lat., body of Catholics and body of Evangelicals). The names given in Germany after the Peace of Westphalia (q.v.) to the Roman Catholic and Protestant divisions of the empire respectively. The Elector of Mainz was at the head of the former as president. It generally held its meetings in a convent of that city in which the Diet happened to meet. The Elector of Saxony was at the head of the latter. When the Electoral House of Saxony became Roman Catholic, the control was given to the Privy Council, which was a Protestant body. Both were extinguished by the dissolution of the German Empire in 1806.

**CORPUS CHRISTI** (Lat., body of Christ). An important festival of the Roman Catholic church, in honor of the sacrament of the Eucharist. It was first celebrated in Liège in 1246 and decreed for the whole church in 1264 by Urban IV, partly in consequence of the vision of a Flemish nun named Juliana, and partly because the anniversary of the sacrament's institution fell at the most solemn and mournful time of the Christian year, when services of a festal character were impossible. It was assigned to the Thursday after Trinity Sunday, and this day is still observed in most parts of continental Europe by magnificent processions through streets decked with flowers and green boughs. In the United States and some other countries the solemnities are celebrated on the Sunday after Trinity. The office of Corpus Christi, composed by St. Thomas Aquinas, is one of the most beautiful in the breviary.

**CORPUS CHRISTI**. A city, port of entry, and the county seat of Nueces Co., Tex., 130 miles (direct) south by east of San Antonio, on Corpus Christi Bay, and on the National of Mexico, the San Antonio and Aransas Pass, and the St. Louis, Brownsville, and Mexico railroads, and on the line of the Texas and Gulf Steamship Company (Map: Texas, D 6). Corpus Christi is a popular health resort, has fine boating and bathing facilities, hotels, and boarding houses, and the vicinity abounds in ducks, geese, and other game. It contains a public library, sanitarium, and a fine county courthouse. The city is the centre of a market-gardening region, has a canning factory, and exports large quantities of fish and oysters. There is a good harbor, attracting considerable coasting trade. Corpus Christi adopted the commission form of government in 1909. The city owns its water works. Gen. Zachary Taylor encamped here during the Mexican War, and his intrenchments are still preserved. Pop., 1900, 4703; 1910, 8222.

**CORPUS CHRISTI COLLEGE** (Cambridge). In 1352 the two guilds of Corpus Christi and St. Mary in the town of Cambridge united to found a hall or college for educating clergy to fill the places of those carried away by the recent visitation of the black death. The master and two fellows of this new foundation served as chaplains of the guild and officiated also in St. Benet's Church, at which the members of the fellowship of Corpus Christi worshipped and which was appropriated to the college. The college was known as Benet College down to 1827, when the present and more official title was adopted. In the sixteenth century the patronage of Sir Nicholas Bacon, who was a member and a benefactor of the college, together with the mastership of Archbishop Parker, brought the foundation much profit and honor. The unrivaled collection of manuscripts, collected by the latter at the dissolution of the monasteries and bequeathed to the college, are among its chief treasures. Besides this and the Lewis collection of printed books, the college owns the most interesting collection of plate in the university. Christopher Marlowe and John Fletcher were members of Corpus Christi. The buildings are of much interest, including the earliest closed quadrangle in the university, standing almost unaltered since its erection in the fourteenth century. The college consists of a master, 11 fellows, and 22 scholars, besides undergraduates, who in 1913 numbered 103. Consult H. P. Stokes, *Corpus Christi* (London, 1898).

**CORPUS CHRISTI COLLEGE** (Oxford). One of the smaller colleges in the university. It was the first of the Renaissance foundations, and its establishment marks an epoch in the intellectual history of the university. It was founded in 1516 by Richard Foxe, Bishop of Winchester, and Lord Privy Seal, the principal Secretary of State and chief counselor and diplomat of Henry VII, partly at the suggestion and cost of Hugh Oldham, Bishop of Exeter, and founder of the Manchester Grammar School in 1515. In Corpus Christi College we find the first noteworthy attempt to depart from the older educational tradition of the university, in the establishment of an endowed chair of Greek, the first in Oxford, and in throwing open the professorial lectures to all members of the university. The honor of founding the

professorial system Foxe shares with Bishop Waynflete and Margaret of Richmond, whose executor he was. The statutes of his foundation contain the most stringent rules for life and work. These, with the liberal provisions for the study of Latin and Greek, and humanistic studies in general, called forth the high praise of Erasmus. Though his prediction of the future preëminence of the college in the university has not been fulfilled, Corpus Christi has always maintained an excellent reputation for scholarship. It has counted among its members John Keble, Thomas Arnold, "the judicious Hooker," his patron Bishop Jewell, Nicholas Udall, the author of the first English comedy, and, for a very brief period, Oglethorpe, the founder of Georgia, Chief Justice Coleridge, and Thomas Day, author of *Sandford and Merton*. The buildings of the college are among the most harmonious in Oxford, and in this, as in its size, character, and standing, it has been aptly reckoned among the three typical colleges of the university. Its statutes were revised in 1881, and the new provisions are not as yet fully carried out. It consists on its present foundation of a president, 14 fellows, of whom 3 are professorial fellows, 27 scholars, and 5 exhibitioners, besides undergraduates. In 1913 the latter numbered 89. (consult T. Fowler, *Corpus Christi* (London, 1898).)

#### CORPUSCULAR THEORY OF LIGHT. SEE LIGHT.

**CORPUS DELICTI** (Lat., body of the offense). In criminal law, the essential element of the alleged crime. If a person is charged with murder, the prosecution must prove the death, as by the finding and identification of the corpse, or by evidence of criminal violence adequate to produce death and to account for the disappearance of the body. In other words, the *corpus delicti* in such a case consists in the death of the person alleged to have been murdered and the criminal agency of the alleged murderer in producing that death. The same doctrine is applicable to other offenses. If one is charged with larceny, the prosecution must prove that the crime of larceny has been actually committed. See CRIMINAL LAW, and consult the authorities there referred to.

**CORPUS DOCTRINÆ** (Lat., body of doctrine). A collection of writings intended to have authority in the Protestant churches of Germany. The chief of such collections was the *Corpus Philippicum* (Leipzig, 1560), containing the Apostolic, the Nicæan, and the Athanasian creeds, the Augsburg Confession, and Melancthon's *Loci Communes*. This and similar collections were superseded by the *Formula Concordiæ*. See CONCORD, BOOK OF.

**CORPUS INSCRIPTIONUM LATINARUM** (Lat., body of Latin inscriptions). A great collection of Latin inscriptions, geographically arranged in 15 volumes, published by the Royal Academy in Berlin. The first volume appeared in 1863, the last in 1891. This work is the most important authority in the study of Roman epigraphy. Consult Egbert, *Latin Inscriptions* (New York, 1896).

**CORPUS JURIS** (Lat., body of law). A comprehensive collection of the entire body of law of a given jurisdiction. The phrase has been specifically applied to two great compilations of law, both based on the jurisprudence of the Roman Empire, viz.:

1. The *Corpus Juris Civilis*, or body of the

civil law known, by way of eminence, as the *Corpus Juris*, is made up of the Code, the *Pandects*, or Digest, and the Institutes, compiled and promulgated by the authority of Justinian (528-534 A.D.), and the Novels (*Novellæ Constitutiones*), subsequently promulgated by him to correct errors and defects in the previous work. The first instance of the use of the expression *Corpus Juris Civilis* to describe the collection is found in the year 1583. As a whole, the work became the textbook of mediæval law, was the basis of instruction in the great law schools of the Middle Ages, and is the foundation of the scientific study of law in all the universities of continental Europe to-day. It has been truthfully said that, "with the exception of the Bible, no book was ever more widely studied by the Caucasian races." The best edition is that of Mommsen (who edited the Digest), Krüger (Institutes and Code), and Schæel (the Novels). It has been translated into German, but never as a whole into English, though the Institutes and some portions of the Digest have been made available for English readers. See CIVIL LAW; CODE; DIGEST; and consult Lee, *Historical Jurisprudence* (New York, 1900); Hadley, *Roman Law*.

2. *Corpus Juris Canonici*.—The corresponding body of the canon law of the Church of Rome had a slower growth. The first compilation to which the name was applied was the *Decretum* of Gratian, a learned professor of the canon law at the University of Bologna, published about 1150 A.D. This was a private, unofficial collection of synodical canons and papal decretals, made for use as a textbook in the law school, but it at once became a leading authority in the Church. Subsequent official collections—principally the *Libri Extra Decretum* of Pope Gregory IX, the *Liber Sextus* of Boniface VIII, and the compilation of Clement V, known as the "Clementine Decretals"—were embodied in the *Corpus* and became parts of it. Thus completed, the entire work has continued to be the standard of the canon law. The best editions are those of Bohmer (1747) and Richter (Leipzig, 1833, 1877-81). See CIVIL LAW; CANON LAW; and consult Lee, *Historical Jurisprudence* (New York, 1900).

**CORRAL**, kôr-râl', PONCIANO (c.1810-55). A Central American general, born in Costa Rica. He settled in Nicaragua early in his youth and became Minister of State in 1853. Subsequently he became identified with the Legitimist government and commanded the army which defeated William Walker (q.v.) at Managua (1855). Shortly after, the battle of La Virgen (Sept. 3, 1855) and the occupation of Granada, he made terms with Walker, who, however, afterward accused him of treasonable negotiations with leaders of the Legitimist party. After a brief court-martial Corral was shot, Nov. 8, 1855. There seem to be no grounds for Walker's accusation. See the life of Corral by Cortés.

**CORREA DA SERRA**, kôr-râ' dá sêr-râ, JOSÉ FRANCISCO (1750-1823). A Portuguese politician, scholar, and botanist, who was educated and took orders in Rome. With the assistance of the Duke of Lafões he founded the Portuguese Academy of Sciences in Lisbon and was made its perpetual secretary. He soon came into conflict with the Church, through the Inquisition, and fled to France, where he remained until the death of Pedro III, when

he again took up residence with Lafôes. Later he was obliged (because he aided a French Girondist) to flee to England, where he became secretary to the Portuguese embassy. In 1813 he came to New York, and in 1816-20 he was Portuguese Minister at Washington. In this latter year he was called back to Portugal to become a member of the financial council; and he was elected to a seat in the Cortes. He had high rank as a botanist, but his principal work is the exceedingly important and well-edited *Collecção de livros inéditos da historia portugueza* (4 vols., 1790-1816).

**CORRECTION.** See CRIMINOLOGY; PENOLOGY; CHARITIES AND CORRECTION, THE NATIONAL CONFERENCE OF.

**CORREGGIO**, kôr-rêd'jô. A city in the Province of Regio nell' Emilia, north Italy, situated on a canal connecting with the river Secchia, 27 miles east of Parma (Map: Italy, E 3). In the Piazza is a statue of the painter Antonio Allegri, known as Correggio (q.v.), who was born here in 1494. The town was once the capital of a principality belonging to the Duchy of Modena, and the princely castle still remains. Pop. (commune), 1881, 12,587; 1901, 14,437, 1911, 16,996.

**CORREGGIO**, properly ANTONIO ALLEGRI (c.1494-1534). A Lombard painter of the Renaissance, the greatest master of the Emilian school. His family name was Allegri, but he is usually called Correggio from his birthplace, a small town near Modena. We are less informed about his life than about that of any other of the chief Italian painters. According to the traditional accounts, as given by Vasari and the local historians, Correggio was humble and poor and passed his life in drudgery. He made an unhappy second marriage and died under distressing circumstances. But in contemporary documents it appears that his parents were tradespeople in comfortable circumstances, that he inherited property from his uncle, and was well paid for his work. For his frescoes in the cathedral of Parma alone he received 1000 gold ducats, besides materials. If he did not seek the courts of princes, where he might have gained high prices, it was because of his financial and moral independence.

Allegri's earliest years were passed in his native town. The lords of Correggio at that time maintained a number of artists and scientists at their court, and it was in this atmosphere that the young artist grew up. It is generally believed that he acquired the rudiments of painting from his uncle, Lorenzo Allegri, an unimportant local painter. It is also supposed that he was a pupil of Francesco Bianchi-Ferrari at Modena, but late research has pointed out that this is unlikely, because his earliest work bears no resemblance to Bianchi's. Moreover, the latter died in 1510, when Correggio was not over 16 years old. On the other hand, he may have learned anatomy and optics, in which he excelled, from Giambattista Lombardi, head of the academy at Correggio. He seems ere this to have attracted the attention of Lady Veronica Gamba, of Correggio, about whom the scientific and artistic culture of the little court centred. A probable tradition represents him as having gone with her to Mantua during the plague in 1511. Certain it is that his first works show the influence of Andrea Mantegna, particularly in his taste

for mythological subjects, his love for illusions of perspective, and in the beautiful nude figures of children and geni which abound in his works. It is also likely that he studied under Lorenzo Costa (q.v.), who was at that time head of the school of Mantua, and perhaps under Dosso Dossi (q.v.), who was for a time in Mantua. In Correggio's earlier works we also find traces of the influence of Leonardo da Vinci. This influence appears in the handling of light and the modeling of figures, and is particularly evident in two paintings now considered to be early works of Correggio, viz., a "Holy Family," in the Malaspina Gallery, Pavia, and a "Madonna," in the Museo Civico of Milan, both of which were formerly in possession of Milanese families. But it is not necessary to assume, as Ricci, the chief authority on Correggio, does, that he must have therefore studied in Milan. He may have become acquainted with Leonardo's work in some other way. A similar supposition is made by Thode, that because of resemblances of Correggio's frescoes in the convent of San Paolo, Parma (1518-19), with Raphael's in the Farnesiana and elsewhere in Rome, the former must therefore have visited Rome in 1517-18. Even granting this resemblance, which is not generally conceded, this conclusion seems unwarranted. An artist of Correggio's merit could not have visited Rome in 1517 without attracting some attention, and Vasari's relations with the artists in Rome were such that Vasari could not have been misinformed when he made the statement that Correggio never visited the Eternal City. Correggio united in himself the tendencies of all the Lombard schools—of Mantua, Milan, Bologna, and Ferrara—but it is unwarranted to infer that he studied in all of them.

In 1513 he returned to Correggio, and in 1514 he signed a contract to paint an altarpiece for the Franciscan church in that town. In 1518 he removed to Parma in response to an invitation to decorate with frescoes the chamber of the Abbess of San Paolo. In this city he passed the greater part of his remaining life and painted his greatest works; here also he founded his school. Besides numerous easel works and altarpieces, he was engaged from 1520 to 1524 in painting the frescoes of the cupola of San Giovanni in Parma, and from 1526 to 1530 he adorned the great cupola of the cathedral. In 1530, probably because he was displeased with the criticisms of this last great masterpiece, he returned to his native town and there passed the remainder of his life in peace and quietness, under the patronage of Veronica Gamba, occupying himself with mythological subjects. He died on March 5, 1534. He was married in 1520 to Girolama Merlini, a maiden of 17. She may have been the inspiration of three of his most charming Madonnas, which seem to have been suggested by domestic scenes. She bore him four children, of whom a son and a daughter survived. This son, Pomponio, was a painter, but, unlike his father, a very mediocre one. Girolama died in 1529.

Correggio's individuality is so marked, and his mastery of technique was developed at such an early age, that it is impossible to divide his work into distinct periods such as in the case of Raphael. We may, however, distinguish two periods separated by the year 1518,

when his great decorative works began. His earliest works are those executed before 1514, of which, according to the researches of Morelli, there are nine in all, to which modern critics add six more. A characteristic example is a charming "Madonna" in the Uffizi in Florence. She sits enthroned in the clouds, with two angels making music on either side. The general disposition of the picture resembles Mantegna's, but the execution and the delicate transitions from light to shadow, the soft, round figures, and the dreamy, magical tone are characteristics of Correggio. The two paintings mentioned above as showing the influence of Leonardo also belong to this period.

In his large altarpiece for the Franciscans of Correggio (1514), now in Dresden, the painter appears before us with a style already developed, showing the influence of Mantegna and the Emilian school. The Madonna sits on a high Renaissance throne, with two saints on either hand. The most interesting figure of the composition is St. Francis, whom she is blessing. He seems the incarnation of the happy and gentle spirit that softened and changed the Middle Age. A number of other works of a religious nature belong in the period of 1514-18, among which is the charming "Zingarella" of the Naples Gallery.

The frescoes in the convent of San Paolo (1518) form an epoch in Correggio's career, for they were his first monumental efforts, and with them he may be said to have begun the school of Parma. They reveal him as a master of mythological representation, the peer of Raphael himself. On the principal wall of the Abbess's chamber is the figure of Diana returning from the chase, in a car drawn by white stags. The ceiling is decorated with a trelliswork of vines, from which peer 16 little cupids, bearing attributes of the chase—the most bewitching figures imaginable. Lower on the walls are 16 lunettes filled with the mythological figures, like the Fates, the Graces, and Satyrs.

In the cupola of San Giovanni of Parma Correggio attempted a grander style of composition (1520-24). This was the first example of a cupola to be treated with frescoes, and Correggio had no precedents to follow. He treated the cupola as if it were the heavens, portraying Christ and the Apostles amid the clouds. In the centre was Christ in glory, a specimen of keenest foreshortening. The Twelve Apostles, rapt in deepest wonder, are seated upon the cloud below, and in the pendentives are the four Evangelists and four fathers of the Church in groups of two—all figures of the utmost nobility of conception. The decorations of the cupola of the cathedral of Parma (1526-30) are grander still and constitute his most ambitious effort. Their subject is the "Ascension of the Virgin." In the upper half of the cupola Christ goes forward to meet the Madonna, who is borne upward by a host of angels. In the lower part stand the Apostles gazing in rapt wonder upon the scene, and behind them are a large number of beautiful genii with candelabra and the like, as if preparing for a great celebration. The innumerable hosts of the angels seem to float beneath the Madonna, and the whole picture is animated with ecstatic joy. The color is beautiful and soft—the great fresco has well been termed an apotheosis of color.

These three series of frescoes were his great-

est works. But in addition to these Correggio painted many other pictures during the period 1520-30. The famous "Marriage of St. Catherine," in the Louvre, was painted in 1522. It is impossible to conceive more beautiful and expressive heads than these, or hands and hair more perfectly painted. Correggio's works of this period may best be studied in the galleries of Parma and Dresden. Foremost among them is a series of five great altarpieces, the best of which are the so-called "Night" and "Day." The latter, which is in Parma, represents the Madonna and a very beautiful Magdalen, painted in the full light of the day, which is wonderfully diffused. The famous "Night," in Dresden (ordered in 1522, but not painted until 1529), is in reality a birth of Christ, in which the light issues from the new-born infant, lighting with wondrous radiance the Madonna, and the faces of the two women and the shepherds, which stand out in vivid contrast to the darkness above. Never were light and shade better handled than in these two pictures. On the other hand, Morelli has conclusively shown that the well-known "Reading Magdalen" of the Dresden Gallery is no Correggio at all, but probably a copy by Adrian van der Werff, or, as later critics assume, by an Italian painter.

The last period of Correggio's life was chiefly spent in painting mythological pictures. Earthly love was the theme he sought to portray, and none could portray it better than he. His work is sensuous, but not sensual. His "Io" and his "Leda" are as innocent and charming as the Greeks themselves conceived them. Perhaps the finest of these productions are the "Jupiter and Antiope" in the Louvre, and the "Danaë" of the Borghese Gallery, Rome.

Correggio's canvases are peculiarly impressive because of his wonderful treatment of light and shade, of which he was the greatest master among the Italians. He generally represents the chief figures in high light, which is vividly contrasted with the surrounding gloom. His colors are soft and harmoniously blended, and the values are accurately given: his carnation is perfect. His figures are faultlessly modeled, and with him a picture is no longer a flat surface. Another chief characteristic of his work is the dramatic action of his figures, which is sometimes so pronounced that their movements seem exaggerated, as was also the case with those of Michelangelo. But in the case of Correggio the effect is softened by the mystic light which envelops the picture. His drawing is said to be inaccurate, but such cases are certainly exceptional. Correggio drew with his brush, so to speak, and the general effect of the pictures is most charming. In the strength of his individuality, in the subjectivity of his pictures, he is second only to Michelangelo. His place in the history of art is among the five great Italian painters, with Michelangelo, Leonardo, Raphael, and Titian. The school of Parma which he founded was not of great importance, Parmigiano (q.v.) being the only pupil of note. But Correggio exercised great influence upon the Carracci in the following century and was the great model of the Baroque painters.

**Bibliography.** The researches of Morelli, epoch making for Correggio, are still an authority. Of the earlier monographs the most important was the comprehensive work by Landon (Paris, 1803-20). By far the most important work is that of Ricci (Eng. trans., Lon-

CORREGGIO

"HOLY NIGHT," FROM THE PAINTING IN THE ROYAL MUSEUM, DRESDEN

don, 1896). Others are by J. Meyer (Eng. trans., ib., 1876); Heaton (ib., 1882); Thode, "Correggio" in *Künstler-Monographien* (Bielefeld, 1898); Sturge Moore (London, 1896); and Gronau (Stuttgart and Leipzig, 1907). See also Berenson, *Studies in Italian Art* (London, 1901).

**CORREGIDOR**, kôr-rêj'fî-dôr, *Sp. pron.* kôr-râ'hê-dôr' (Sp. *corregidor*, Portug. *corregedor*, corrector). The Spanish and Portuguese title of the principal magistrate of a town. The term is sometimes applied also to certain provincial magistrates in Spain.

**CORREGIDOR ISLAND**, Philippine Islands, lies in the entrance to Manila Bay (Map: Luzon, D 9), and divides the entrance from the China Sea into two channels—the Boca Chica to the north, 3 miles wide, parting the island from Bataán on the mainland of Luzon; the Boca Grande,  $6\frac{1}{2}$  miles wide, from Cavite. The island is 4 miles in its greatest dimension, from east to west; its area is 2 square miles, and 5 dependent islands cover 2 square miles. The greatest elevation is 639 feet, near the western end. Three springs afford an abundant supply of water conveniently placed for shipping. There are four lighthouses. San José is the only town; its fixed population is about 500. The dependent islands are El Fraile, Horadada, La Monja, Pulo Caballo, and Santa Amalia. The island is the first post of the inner line of defense of Luzon and is heavily fortified. In the storming of Manila Bay, May 1, 1898, Admiral Dewey steamed safely past the island, which was supposed to have been strongly fortified by the Spanish, containing the base operations for the submarine defense of the bay.

**CORRELATION** (ML. *correlatio*, from Lat. *com*, together + *relatus*, p.p. of *referre*, to refer, from *re*, back + *ferre*, to bear). The reciprocal influence of plant organs. The removal or unusual development of one organ may affect the mode of development of others. For example, if the terminal shoot of a pine be cut away, one or more neighboring laterals will grow erect and in a measure take its place, and branches will be formed on all sides of the new leader. Otherwise it would have grown almost horizontal and become branched only in a horizontal plane. See GROWTH.

**CORRENTI**, kôr-rên'tê, CESARE (1815-88). An Italian statesman and revolutionist, born in Milan and educated in that city and in Pavia. He originated several important statistical works and the almanac *Nipote del Vestaverte*. As one of the strongest opponents of Austrian domination in Italy, he contributed materially towards the establishment of unification. In the work entitled *L'Austria e la Lombardia* (1845) he set the popular sentiment against Austria, and during the insurrection at Milan (March 18-22, 1848) was appointed Councillor of War and Secretary General of the provisional government, of which he eventually became in some respects the central figure. In 1860 he was appointed Councillor of State; in 1866 he was intrusted with the organization of the Venetian Provinces, and subsequently he served as Minister of Education in the Ricasoli (1866) and Lanza (1869-72) cabinets. Correnti had exceptional oratorical power and marked literary ability. The publications with which he became identified, either as editor or as collaborator, have advanced statistical science in Italy.

**CORRESPONDENCE** (Lat. *com*, together

+ *respondere*, to answer, from *re*, back + *spondere*, to promise). A term used in mathematics to express certain reciprocal relations. If each individual of one group of objects bears a certain relation to a definite number of individuals of another group, and a definite number of individuals of the first group bears the same relation to each individual of the second group, there is said to be a correspondence between the objects of the groups. If 1 of the first group corresponds to  $B$  of the second, and 1 of the second group corresponds to  $A$  of the first, the relation is called an  $A$  to  $B$  correspondence. If  $A = B = 1$ , it is called a 1 to 1 ( $= 1$ ) correspondence; e.g., two numbers are said to be equal when there exists a 1 to 1 correspondence between their units. In geometry the simplest cases of 1 to 1 correspondence, or "conformal representation," are furnished by two planes superposed one upon the other. Here to every point of the first figure there corresponds one and only one point of the second figure, and to every point of the second figure there corresponds one and only one point of the first. The simplest case of Chasles's (q.v.) correspondence formula may be stated thus: If two ranges of points  $R_1$  and  $R_2$  lie upon a straight line so that to every point  $x$  of  $R_1$  there correspond in general  $\alpha$  points  $y$  of  $R_2$ , and again to every point  $y$  of  $R_2$  there always correspond  $\beta$  points  $x$  of  $R_1$ , the configuration formed from  $R_1$  and  $R_2$  has  $(\alpha + \beta)$  coincidences, or there are  $(\alpha + \beta)$  times in which a point  $x$  corresponds with a point  $x$ . From these linear transformations Poncelet, Plücker, Magnus, Steiner, passed to the quadrate, where they first investigated 1 to 1 correspondence between two separate planes. The "Steiner projection" (1832) employed two planes  $E_1$  and  $E_2$  together with two straight lines  $g_1$  and  $g_2$  not coplanar. If we draw through a point  $P_1$  or  $P_2$  of  $E_1$  or  $E_2$  the straight line  $\alpha$ , or  $\alpha_2$  which cuts  $g_1$  as well as  $g_2$ , and determines the intersection  $X_2$  or  $X_1$ , with  $\Sigma_1$  or  $\Sigma_2$ , then are  $P_1$  and  $X_2$  and  $P_2$  and  $X_1$  corresponding points. In this manner to every straight line of the one plane corresponds a conic section in the other. In 1847 Plücker had determined a point upon the hyperboloid of one sheet, like fixing a point in the plane, by the segments cut off by two fixed generators upon the two generators passing through the point. This was an example of a uniform representation of a surface of the second order upon the plane. Correspondence relative to surfaces has been studied by Chasles, Clebsch, Cremona, Cayley, and others. In space of three dimensions, only a beginning has been made in the development of this theory. Consult: Schubert, *Kalkül der abzählenden Geometrie* (Leipzig, 1879); Klein, *Vergleichende Betrachtungen über neuere geometrische Forschungen* (Erlangen, 1872); Mübius, *Der barycentrische Calcul* (Leipzig, 1827); Holzmüller, *Theorie der isogonalen Verwandtschaften* (ib., 1882); Riemann, *Ueber die Hypothesen, die der Geometrie zu Grunde liegen* (ib., 1854); Pasch, *Vorlesungen über neuere Geometrie* (ib., 1882).

**CORRESPONDENCE SCHOOLS**. Institutions for the provision of instruction in all branches of education by mail to those who are unable to avail themselves of the opportunities of attending ordinary schools and colleges. The system aims to provide plans of work, outlines, and exercises by correspondence. The method probably originated with the University Exten-

sion movement in England, there organized in 1868 and introduced in America in 1873. In 1883 a Correspondence University was established in Ithaca, N. Y. The system received its greatest extension through the work of Pres. William R. Harper in connection with the Chautauqua Institution, which abandoned this function when it was taken over by some of the universities, notably Chicago and Wisconsin, and many private institutions established for this purpose, notably the International Correspondence Schools at Scranton, Pa. Almost every branch of knowledge, both for self-improvement generally or in connection with the trades or vocations, can be studied in this way.

**CORRESPONDING STATES, THEORY OF.** See CRITICAL POINT.

**CORREZE, kô'réz'.** A south central department of France (q.v.), formerly part of the Province of Limousin, taking its name from an affluent of the Vézère, the Corrèze, which traverses the department from northeast to southwest (Map: France, S., F 3). Area, 2273 square miles; pop., 1806, 310,514; 1901, 318,422; 1906, 317,430, 1911, 309,646. The surface of the department is mountainous, especially in the north and east, where it is broken in upon by offsets from the Auvergne Mountains, which range from 2500 to 3320 feet (Mont Besson) above the sea. It produces wheat, oats, barley, rye, maize, and potatoes, though not in quantities sufficient for its own needs. Grazing is also carried on. Coal, iron, lead, antimony, and copper are found in considerable quantities. Flour, beer, oil, lumber, dyestuffs, hats, woollens, shoes, chairs, paper, and leather are manufactured. Capital, Tulle.

**CORRIB, LOUGH.** A lake with an area of 68 square miles, which divides Galway, in the western part of Ireland, into an eastern and a western section (Map: Ireland, B 3). From its southern end, 4 miles north of Galway, it discharges its surplus waters by Galway River into Galway Bay. It receives the waters of the Clare and smaller rivers, and those of Lough Mask, subterraneously through the Pigeon Hole and other caves at its northern end. On its sides are metamorphic rock, Carboniferous limestone, and marble. Near it are many monumental heaps and megalithic circles. It contains 300 islets, and to the west are mountains 3000 feet high.

**CORRIENTES, kôr-ryân'tás.** A city of Argentina and capital of the province of that name, situated on the Paraná, just below the mouth of the Paraguay and not far below the mouth of the Bermejo (Map: Argentina, F 9). It has several plazas, hospitals for men and women, a poorhouse, a national college, a normal school, a theatre, and a library. The natural-history museum was at one time managed by the naturalist Bonpland. The city is the centre of a fertile district and has considerable trade in lumber and oranges. Its chief industry is shipbuilding, but there are also meat-curing establishments and a foundry. Pop., 1909, 23,904. Corrientes was founded in 1588. It occupied a place of considerable prominence in the revolutionary movements during the latter half of the nineteenth century.

**CORRIGAN, MICHAEL AUGUSTINE** (1839-1902). An American Roman Catholic prelate, born at Newark, N. J. He graduated in 1859 at Mount St. Mary's College (Emmitsburg, Md.), pursued a theological course at the American

College of Rome as one of the 12 students with whom that institution was begun, was ordained priest in 1863, and from 1864 to 1868 was professor of dogmatic theology and sacred Scriptures in the Diocesan Seminary of Seton Hall College (South Orange, N. J.). From 1868 to 1873 he was president of the college and in 1873 was appointed Bishop of Newark. During his administration of the diocese he greatly increased the number of churches, introduced religious communities, and founded charitable institutions. In 1880 he became coadjutor (with right of succession and the title of Archbishop of Petra) to Cardinal McCloskey, Archbishop of New York, and from that time directed the larger part of the work of the archdiocese. He entered into the office of Archbishop of New York in 1885 and received the pallium in 1886. His administration was marked by the prolonged controversy between Dr. Edward McGlynn (q.v.) and the Roman Catholic church. He effectively developed the archdiocese, which at the time of his death was one of the largest and most important in the world. Although personally retiring and unobtrusive, he became known, through his many activities, as one of the most prominent Roman Catholics in the United States. He was a scholar of high attainments. Consult J. A. Mooney, *Michael Augustine Corrigan: A Memorial* (New York, 1902).

**CORROBORREE** (Australian). A sort of ceremonial dance, of a more or less public character, in vogue among the Australian aborigines. The corroboree is held at night, and various types of it occur all over the country, or are borrowed from tribe to tribe, some of a warlike, some of an historical, others of a lascivious character. Generally the men do the dancing, and the women furnish the accompanying music. The songs that go with the corroboree give scope for individual and tribal invention. The corroboree combines in itself the elements of the public celebrations among civilized races and the opera of to-day. It is the nearest approach to a national institution among these primitive people. The corroboree serves also as a peace ratification and as a means of intercommunication, etc. Consult Roth, *Ethnological Studies among the Northwest-Central Queensland Aborigines* (1897).

**CORRODI, kôr-rô'dé, WILHELM AUGUST** (1826-85). A Swiss poet and draftsman, born at Zurich. He studied theology, but became a painter and from 1862 to 1881 taught drawing in Winterthur. In his poems, many of which are written in the popular dialect, he mirrors the life of his native canton, celebrating its customs and reviving many of its best traditions. His works, which are generally distinguished by a fine sense of humor, include: *Dur und Moll: Aus Natur und Leben* (1855); *Ein Buch ohne Titel, aber für Kinder von sieben bis siebenmal sieben Jahren* (1855); *Waldleben*, a lyrical novel (1857). The works of Corrodi written in the dialect of Zurich include: *De Herr Professor*, an idyl (1858); *Der Herr Vikar* (1858); *De Herr Dokter*, an idyl (1860, dramatized by the author in 1872); *Wie d'Warret wurkt*, a comedy (1887); and a translation of the works of Robert Burns into Swiss German (1872). Corrodi illustrated several of his own books.

**CORROSIVE SUBLIMATE.** See MERCURIC CHLORIDE.

**CORROZOZO NUTS.** See IVORY, VEGETABLE.

**CORRUGATED IRON.** A name given to sheet iron or steel in which grooves and ridges have been produced by passing the sheet between rollers, the surfaces of which are formed into rounded grooves and ridges, the ridges of one roller filling the grooves of the other. By corrugation the stiffness of the metal sheet is greatly increased, and it is adapted for use in many places where a metal covering of lightness and strength is required, such as roofs, awnings, and the side walls of sheds and factory buildings. Corrugated iron is frequently galvanized with a thin layer of zinc to make it less liable to corrode or rust; a small percentage of copper is also alloyed with iron before corrugating for the same purpose. It is manufactured in a variety of thicknesses and with corrugations varying in size.

**CORRUPTION OF BLOOD.** The blasting of inheritance: one of the consequences of an attainer for treason or felony under the old common law, whereby the offender was cut off, or outlawed, from all of his blood relationships and so rendered incapable of inheriting lands or of transmitting them by descent to his natural heirs, lineal or collateral. The effect of the corruption of blood being the extinction of the line of heirs of the person attainted, his lands at once, upon his execution, became subject to the law of escheat and became vested in his superior lord. In cases of treason the principle of forfeiture gave the lands to the king absolutely, and in cases of ordinary felony they went to the crown for a year and a day before escheating to the lord. This barbarous penalty survived in England, nominally at least, until 1870, when it was abolished by the Forfeiture Act. It has never been tolerated in the United States and is expressly forbidden by the Constitution, which declares (Art. III, Sec. 3, n. 2) that "no attainer of treason shall work corruption of blood, or forfeiture, except during the life of the person attainted." The constitutions of the several States contain similar provisions. See ATTAINER; FORFEITURE; TREASON.

**CORRUPT PRACTICES.** Dishonest methods employed with the intent to influence the results of public elections. The practices to which the expression refers are the use of bribery, treating, undue influence, personation of voters, making false election returns, and knowingly making a false declaration as to election expenses. Of these, bribery, personation, and making false returns are common-law offenses and render the offender liable to indictment, and so, it has been held in England, is the giving of entertainment to voters with the corrupt intention of influencing an election. Any of the acts enumerated above, excepting that of making a false declaration as to election expenses (which is purely a statutory offense), whether criminally punishable or not, will at common law vitiate the result produced by them, and, if the corruption be general, will have the effect of nullifying the election itself.

The prevalence of bribery and other corrupt practices at parliamentary elections in England, and at all partisan contests in the United States, has in recent years led to the enactment of statutes in both countries to check the evil. The English Parliament led the way in these reforms by enacting the Corrupt Practices Prevention Act in 1854, which was aimed particularly at the practice of electoral bribery. This was followed in 1868 by the Parliamentary Elections Act, and in 1883 by the Corrupt and Illegal Practices Pre-

vention Act. Altogether these statutes constitute a most comprehensive and well-devised body of legislation, and they have proved themselves to be admirably adapted to the end in view. They define with great particularity the acts which shall constitute the prohibited offenses, and prescribe the severe penalties of disfranchisement and the avoiding of the elections for their commission. The personation of voters is made a felony, and bribery and the other practices enumerated are declared to be misdemeanors. Many of the best provisions of these statutes have been incorporated in the election laws of American States. For the history and scope of these laws, see ELECTION; ELECTORAL REFORM. The English law may be further studied in Rogers, *Elections* (17th ed., London, 1895); Mattinson and Macaskie, *Law Relating to Corrupt and Illegal Practices* (3d ed., London, 1892).

**CORRY.** A city in Erie Co., Pa., 37 miles by rail southeast of Erie, on the Erie and the Pennsylvania railroads (Map: Pennsylvania, B 2). The State Fish Hatchery and the high-school buildings are prominent features. Corry has steelworks, machine shops, flour and feed mills, brickworks, and manufactures of tram locomotives, stationary, gas, and steam engines, leather goods, corsets, furniture, radiators, shovels, wrenches, brushes, toys, etc. It has also extensive dairying interests. There are three mineral springs of value in the vicinity. Settled in 1860, Corry enjoyed a rapid growth, due to the existence of petroleum in the vicinity. The city adopted the commission form of government in December, 1913. Pop., 1890, 5677; 1900, 5369; 1910, 5991.

**CORRY** (from Ofr. *coire*, ravine, Swiss *Kahre*). A name applied to the recesses in a mountain slope beneath a sharp peak with serrate spurs, characteristic of the high Alps. These are referred by E. Richter to glacial erosion under specific conditions, although no glaciers occur in them at the present time. See CIRQUE.

**COR/SAC** (native name), or ADIVE. A small fox (*Vulpes corsac*) of the deserts of Central Asia, its range extending through the open country from the Ural Mountains and Caspian Sea to Mongolia. It is pale, reddish yellow in hue, white on the ventral surface, and with the tip of the long bushy tail black. In the sixteenth century it was fashionable as a ladies' pet in France. It digs holes for itself or seizes upon marmot burrows, preys, chiefly at night, on young marmots, small rodents, insects, etc., and resembles the American kit fox (q.v.). The Russian traveler Przevalsky reports it as abundant in Tibet, where it is called *karsa* by the Mongols, and is both trapped and run down by dogs. During the breeding season, in February, the high deserts resound with its owl-like cries, night and morning. See FOX; and Plate of FOXES AND JACKALS.

**CORSAIRE** (Fr. *corsaire*, from Prov. *corsari*, Sp., Portug. *corsario*, It. *corsaro*, corsair, from *corsa*, Sp., Portug. *corso*, It. *corsa*, course, from Lat. *cursor*, course, from *cursare*, to run). A pirate or freebooter, or the vessel used by one. The term was used with special reference to the marauding vessels of the Barbary Powers.

**CORSAIE.** One of the smallest and most brilliantly orange-red rockfish (*Sebasticthys rosaceus*) of the California coast. See ROCK-FISH.

**CORSAIR.** THE. A narrative poem by Byron (1814). The romantic adventures of the lofty-spirited pirate who is its hero are supposed to be continued in *Lara*.

**CORSE, JOHN MURRAY** (1835-93). An American soldier, born in Pittsburgh, Pa. In his eighteenth year he entered at West Point, which he left to take up the study of law. He enlisted in the Union army at the outbreak of the Civil War, commanded a division at Memphis, and became brigadier general in 1863. He distinguished himself in the Chattanooga campaign, was in command of a division in General Sherman's "March to the Sea," and was brevetted major general for his heroism at Altoona Pass (q.v.). While defending this place Sherman sent him a sun telegram saying, "Hold the fort, for I am coming," an exhortation taken by Ira D. Sankey as the topic of a hymn. He was afterward collector of revenue in Chicago and postmaster of Boston.

**COR/SET** (Fr., dim. of *corps*, OF. *cors*, body, from Lat. *corpus*, body). An article appertaining to the costume of women, which was introduced into France about the time of the Revolution, when the French ladies adopted the Greek dress. Previously they had been worn by Germans, by whom they were invented. Bandages resembling corsets were used in Rome during the early ages, but only as a support, until a slender waist was considered a mark of beauty, when they were made to compress the form. Modern corsets, which vary with the dictates of fashion as regards shape, design, and material, are usually made of two thicknesses of white jean, silk, or other material, quilted together so as to form vertical cases, in which steels or whalebones are inserted, or they may be wholly, or in part, of some elastic or webbing material. Usually they are in two pieces, closed in front with steel or whalebone plates, which rest on the breastbone vertically, and laced at the back as tightly as the wearer may desire. With the more general participation of women in various athletic sports there have been many modifications in corsets aimed to secure freedom of movement, while the change from the hourglass figure, at one time fashionable, to classical or Empire costumes led to important innovations. As these styles demanded straight lines in preference to curves, corsets were modified accordingly, and at the same time a tendency developed to do away with these one-time essentials to dress and to emphasize the more natural figure. Whatever the changes called for by designers of fashions, the corset maker was always ready with new contrivances or substitutes to secure the desired figure. The manufacture of corsets in the United States more than doubled in value in the decade 1899-1909, and in 1909 the United States Census of Manufactures reported 138 establishments (a decrease from 205 in 1890, but increase in capital and product), with a capital of \$18,033,000, devoted to the manufacture of corsets. The value of the product in 1909 was \$33,257,000. As showing the tendency towards concentration and consolidation in this industry, it may be said that while the number of establishments in 1909 was no greater than in 1899 (138 at each census) the amount of capital invested increased from \$7,290,000 in 1899 to \$18,033,000 in 1909 and the value of the output from \$14,451,000 to \$33,257,000.

**COR/SICA** (Gk. *Kýpros*, *Kýrnos*, *Kopels*, *Kor-sis*, Lat. *Corsica*, Fr. *Corse*). An island belong-

ing to France (the fourth in size of the islands in the Mediterranean), situated between lat. 41° 21' and 43° N. and long. 8° 32' and 9° 31' E. (Map: France, S., L. 7). It is separated by the Strait of Bonifacio from Sardinia, on the south, and occupies an area of nearly 3368 square miles. In the northeast is a long, narrow peninsula, pointing in the direction of Genoa and terminating in Cape Corso. In its physical formation Corsica undoubtedly belongs more to Italy than to France. Its surface is traversed by numerous mountain ranges of rugged appearance and covered with beautiful forests. The principal chain runs from north to south, sending off numerous offshoots in every direction. The highest summits of the island are Monte Cinto, 8881 feet, Monte Rotondo, 8612 feet; Monte Padro, 7851 feet; and Monte d'Oro, 7845 feet high. The coasts are precipitous on the west, while on the east they are low and in some parts even swampy. The chief geological formation is granite, occasionally interspersed with porphyry and serpentine. There are a number of short and swift streams on the island, the principal of which are the Golo, Tavignano, and Taravo. The climate is generally healthful and the temperature moderate, the average for the summer being about 75° F. The lower parts of the island are occasionally visited by malaria, but the mountain regions are very salubrious. The vegetation of the island is rich, and the fine forests of chestnut, pine, and beech for which Corsica was famous in ancient times are still found on the mountain slopes. The flora of the valleys does not differ materially from that of Italy. There is an abundance of olives, oranges, citrons, vines, and other Mediterranean plants. The inhabitants, numbering about 300,000, are not enterprising, and, because the island is somewhat apart from the lines of regular traffic and intercourse with other peoples is wanting, they have retained many of their primitive customs.

The soil is very fertile, but agriculture is in a low state, less than half the total area being cultivated. There is scarcity of both labor and capital. The chief products are wheat, barley, rye, corn, wine, fruits, and chestnuts, the latter being used extensively for food. The agricultural work is done in part by laborers who come over from Tuscany. The number of cattle and horses is small, but sheep and goats are numerous. The silkworm is cultivated. There are also good fisheries of tunny and pilchard. Among the minerals mined are iron, lead, copper, and antimony, and there are quarries of granite, marble, and alabaster. The chief imports are foodstuffs, building materials, and metal ware. The exports consist mostly of wine, olive oil, fruits, and chestnuts. Corsica forms a department of France, and is divided into the five *arrondissements* of Ajaccio, Bastia, Calvi, Corte, and Sartène. The population in 1901 was 295,589; in 1906, 291,160, in 1911, 288,820, or 85.8 per square mile. The Corsicans are of mixed origin, independent in spirit, passionate and revengeful. (See VENDETTE.) They are simple and sober, but scorn work and pay little attention to the development of the natural resources of their island. The vernacular is a corrupt Italian. The capital is Ajaccio, with a communal population of 19,227 in 1911; Bastia had 29,412 inhabitants. There are no other large towns: Corte had in 1911 5211 inhabitants, and Sartène 4746.

Corsica is supposed to have been originally in-

habited by Ligurians. It was settled in succession by the Etruscans, the Phœnicians, and the Phœceans, and finally came into the possession of the Carthaginians in the fifth century B.C. Wrested by the Romans from the Carthaginians in the second half of the third century B.C., the island remained for seven centuries under the sway of Rome, until, after repeated attacks by the Vandals, it finally fell into their hands in 469. After the conquest of the Vandals by Belisarius in 534, Corsica was occupied successively by the Byzantine Empire, the Goths, Franks, and the Saracens. Towards the end of the eleventh century it came into the possession of the Pisans, by whom it was ceded in 1347 to the Genoese. The rule of the latter was marked by continuous revolts on the island, and the ruling city found itself compelled on several occasions to ask assistance from Austria and France. In 1736 a German adventurer, Baron Theodor von Neuhoof, became King of Corsica, but soon was obliged to leave the island, and was never able to return. The uprisings under the leadership of Paoli during the second half of the eighteenth century were of the most serious nature. In 1768 Genoa made Corsica over to France. Paoli made an attempt to resist the French rule, but the dispatch of French troops to the island compelled him to seek safety in England. He returned in 1790, and in 1793 headed a successful rising, in which the British lent assistance to the patriots. In the following year Corsica came under the protection of Great Britain, from which it obtained a constitutional form of government. Two years later the British were forced by the French to evacuate the island, which has ever since remained in the possession of France. Corsica is noted as the birthplace of Napoleon. Consult: Girolami-Cortona, *Géographie générale de la Corse* (Ajaccio, 1893); Vuillier, *The Forgotten Isles* (New York, 1896); Caird, *The History of Corsica* (London, 1899).

**CORSICANA**, kôr-sê-kânâ. A city and the county seat of Navarro Co., Tex., 62 miles, by rail, south-southeast of Dallas, on the Houston and Texas Central, the St. Louis Southwestern, and the Trinity and Brazos Valley railroads (Map: Texas, D 3). It is the seat of the State Orphan Asylum and has an Odd Fellows' widows' and orphans' home, a Carnegie library, sanitariums, a fine courthouse, Federal and high-school buildings, a natatorium, and an Elks Home. Corsicana is a progressive manufacturing centre, having among its industries large cotton mills, gins, and compresses, sheet-metal works, broom, harness, candy, overall, and soda-water factories, cottonseed-oil mills, brickyards, flour mills, a grain elevator, foundry and machine shops, planing mills, etc. It is also the seat of an extensive oil industry, there being in its vicinity a number of wells, oil machinery factories, and two large refineries. The sewage system is owned by the city. Pop., 1910, 9749.

**COR'SICAN BROTHERS**, THE. A romantic drama adapted by Boucicault from a French play. *Les frères corses*.

**CORSINI**, kôr-sê-nê. A celebrated Florentine family, which from the thirteenth century was prominent in the history of Italy. The most famous was ANDREA (1302-73), Bishop of Fiesole, who was canonized in 1629. He was for 40 years a monk in Florence and then was made Bishop of Fiesole, and later legate to Bologna. That town was in the midst of a civil

war, but the eloquence of Corsini was successful in subduing it. Austere in his life and ambitious only for his church, he was a type of the mediæval bishop. LORENZO became Pope Clement XII in 1730. He restored the Corsini Palace in Rome, now containing the interesting Corsini Gallery.

**CORS'NED** (AS. *corsnæd*, from *coren*, p.p. of *cōsan*, Goth. *kuusan*, OHG. *kuusan*, Ger. *kiesen*, to choose + *snæd*, bit, from *snipan*, Goth. *sneipan*, OHG. *snidan*, Ger. *schnneiden*, to cut). A form of ordeal in early English law, which consisted in administering to the accused a morsel of barley bread, about an ounce in weight, which had previously been endowed by execration with the magical power of exposing his guilt or innocence. If the accused was innocent, the bread was readily swallowed, if guilty, it struck in his throat and killed him. It was in this way (the chroniclers tell us) that Godwin, Earl of Kent, met his fate in the reign of Edward the Confessor when accused of the death of the King's brother. Compare the similar ordeal of the "water of jealousy," which, according to the Mosaic law, was administered among the Jews to a woman charged with adultery (Num. v.). Consult Blackstone, *Commentaries on the Laws of England*, bk. iv, p. 345. See ORDEAL.

**COR'SO** (It., course). A word used to express not only the racing of riderless horses, but also the slow driving in procession of handsome equipages through the principal streets of a town, such as almost always takes place in Italy on festive occasions. This custom has given the name "Corso" to the principal streets in almost all the larger towns of Italy. The best known of these is the Corso in Rome.

**COR'SON**, HIRAM (1828-1911). An American scholar, born at Germantown, Pa. He held positions in the Library of Congress and the Library of the Smithsonian Institution from 1849 to 1856, and taught in Girard College, Philadelphia (1865-66), and St. John's College, Annapolia (1866-70), and was professor of the English language and literature at Cornell University in 1870-1903. In 1906 he became a pensioner under the Carnegie fund. His publications include: *Handbook of Anglo-Saxon and Early English* (1871); *Introduction to the Study of Browning* (1886); *Introduction to Shakespeare* (1889); *Pramer of English Verse* (1892); *The Aims of Literary Study* (1895); *Selections from the Canterbury Tales* (1896); *The Voice and Spiritual Education* (1896); *Introduction to the Prose and Poetical Works of John Milton* (1899). His Shakespearean textual criticism is of the highest value, and his interpretation of poets, especially of Browning, is luminous and sympathetic.

**CORSON**, JULIET (1842-97). An American educator and author, born in Boston. She was secretary of the New York Free Training School for Women in 1872-73 and devoted herself to study and experiments on healthful and economical cookery and dietetics. In 1876 she established the New York School of Cookery. She wrote several popular books, among them *Fifteen-Cent Dinners for Workingmen's Families* (1877); *Dietary for Schools* (1878), prepared at the request of the United States Commissioner of Education; *Cooking Manual* (1878); *Local American Cookery* (1885); *Living on Five Hundred a Year* (1886).

**CORS'SEN**, WILHELM (1820-75). A noted German philologist, who devoted himself espe-

cially to the ancient Italic languages and dialects. He was born in Bremen, Jan. 20, 1820, studied philology in Berlin (1840-44), and became professor of classical philology at Schulpforta in 1846. On account of ill health he retired in 1866 and dedicated the remaining years of his life to research at Berlin. He died at Lichterfelde, near Berlin. His most important work, *Ueber Aussprache, Vokalismus und Betonung der lateinischen Sprache*, was published in 2 vols. in Leipzig (1858-59), receiving the prize offered by the Royal Prussian Academy of Sciences for the best work on that subject. A second edition appeared in 1868-70. It was followed and completed by *Kritische Beiträge zur lateinische Formenlehre* (1863) and *Kritische Nachträge* (1866). Corssen afterward visited Italy and then set himself to prove that the Etruscans were an Italic people, allied closely to the Latins, in support of which theory he published a monumental work, *Ueber die Sprache der Etrusker* (2 vols., Leipzig, 1874-75). His arguments met at once violent and universal opposition (see especially Wilhelm Deecke, *Corssen und die Sprache der Etrusker, eine Kritik*, Stuttgart, 1875) and have never found support.

**CORSTORPHINE**, GEORGE STEUART (1868-). A British geologist, born in Edinburgh. He was educated at the universities of Edinburgh and Munich, in 1895 became professor of geology and mineralogy at the South African College and keeper of the geological department of the South African Museum, in 1896 director of the Geological Survey of Cape Colony, and in 1902 consulting geologist of the Consolidated Gold Fields of South Africa, Ltd. From 1908 to 1912 he was in private practice, after 1913 he served as principal of the South African School of Mines and Technology. Besides his annual reports of the Geological Survey of South Africa (1896-1901), and papers in the *Transactions of the Geological Society of South Africa* (1903-04), he is coauthor with F. H. Hatch of *The Geology of South Africa* (1905).

**CORT**, kôrt, CORNELIS (c.1533-78). An eminent Dutch engraver and etcher. He was born in Hoorn, Holland, but removed to Antwerp, where he was first instructed by Hieronymus Cock, for whom he executed plates which were published with the signature of his master, as well as original landscapes. In 1566 he visited Venice, where, under the personal influence of Titian, whose best pictures he reproduced, he developed an admirable style. In 1571 he went to Rome and established an influential school there. The art of engraving had previously been confined to small plates, and Cort was the first to use a larger size. He was the chosen engraver of the two Zuechari, Miziano, and the miniature painter Clovio, besides reproducing works of Raphael, Michelangelo, and other Italian and foreign painters in Rome. His work furnished a model for an entire generation in Italy, and until the appearance of Goltzius he was considered the foremost engraver. Among his pupils were Philippe Thomassin and Agostino Carracci. Consult Longhi, *Calcographia* (Milan, 1830), and Bartsch, *Anleitung zur Kupferstichkunde* (Vienna, 1821).

**CORT**, FRANS DE (1834-78). A Flemish lyrical poet, born in Antwerp. After being associated with the publication *Grondecet*, he was appointed editor of the *Schelde* (1853). He was secretary to the general auditor of the

military court at Brussels from 1861 until his death. He was one of the most distinguished lyrical poets of Belgium, and his songs, although not conspicuous for fancy or imagination, are full of deep and genuine sentiment. His works comprise: *Liederen* (1857-59); *Zing-Zang* (1866); *Liederen* (1868). He translated lyrics of Burns and Jasmin and German verse, and after 1861 conducted the periodical *De Toekomst*. He edited (1869) the posthumous poems of Dautzenberg (q.v.), his father-in-law.

**CORTE**, kôrt. The capital of an arrondissement in the Department of Corse (Corsica, q.v.), at the confluence of the Tavignano and Restonica, 52 miles northeast of Ajaccio by rail (Map: France, S, M 6), picturesquely situated among the mountains and protected by a commanding citadel which has sustained many notable sieges. Corte was the seat of Paoli's reform government. A university founded by that patriot bears his name; a communal college, an ancient palace, from which Paoli ruled, and an old Franciscan monastery which served as the parliament house in 1765, and the house in which Paoli lived also remain. There are monuments to Paoli, General Gaffori, and General Casanova, Duke of Padua. Marble is quarried extensively in the neighborhood; lumber, wine, oil, and cheese are the staple products. Pop., 1901, 5425; 1911, 5211.

**CORTEGIANO**, kôrt'a-já'nô, IL (the Courtier). A famous work on etiquette by Baldassare Castiglione (q.v.), published in 1528. There are English translations by Thomas Hobbes (1561) and by L. E. Opydyke (New York, 1903).

**CORTELYOU**, kôrt'el-yôo, GEORGE BRUCE (1862-). An American public official and capitalist. He was born in New York City, graduated from the State Normal School of Westfield, Mass., in 1882 and in law from Georgetown University in 1895, and was engaged in teaching until 1889, when he entered public service as a post-office inspector. He became stenographer to President Cleveland in 1895, assistant secretary to President McKinley in 1898, and two years later secretary. He was reappointed by President Roosevelt in 1901, and in 1903-04 was the first Secretary of the Department of Commerce and Labor. As chairman of the Republican National Committee he conducted the campaign of 1904. He was Postmaster-General of the United States in 1905-07, and Secretary of the Treasury in 1907-09, and in the latter year became president of the Consolidated Gas Company.

**CORTE-REAL**, or **CORTERREAL**, kôrt'a-rá'il, GASPAR and MIGUEL (c.1450-c.1501). Portuguese navigators. In 1500 Gaspar seems to have visited the North American coast at various points between Labrador and the Bay of Fundy. From his last voyage, begun in 1501, he did not return, although he sent back two of his vessels which did arrive safely. His brother Miguel in 1502 set out to find him and reached the northeast coast of America, but he too failed to return. In 1503 King Manuel of Portugal sent an expedition to learn their fate, but in vain. Consult Harrisse, *Les Corte-Real et leurs voyages au nouveau monde* (Paris, 1883).

**CORTES**, kôrt'ás (Sp., Portug. pl. of *corte*, court). The name given in Spain and Portugal to the assembly of representatives of the nation. As one district of Spain after another was recovered by the Christian princes from the Moors,

there arose in each a corporation composed of the different "estates" or orders of the population, limiting the power of the princes. From the union of several of these territories were formed the three leading kingdoms of Castile, León, and Aragón, each having its Cortes, representing the clergy, the nobility, and the cities. In Aragón the Cortes appointed a judge, known as the *Justicia*, who decided disputes between the King and his subjects and confined the royal power within constitutional limits. In Castile the rights of the burghers were less extensive than in Aragón, but in both states the King was dependent on the Cortes. After the union of Castile and León with Aragón the crown succeeded in greatly lessening the powers of the Cortes. After 1713 it did not meet till 1789, on the accession of Charles IV. In 1809 the Cortes, as composed in 1789, was assembled by the Junta, and framed a new constitution, called the "Constitution of 1812," which, however, was set aside at the Restoration. See SPAIN, *Government*.

The history of the Portuguese Cortes is very similar to that of the Spanish. In 1826 Dom Pedro promulgated a new constitution after the model of the French, calling the Cortes again into life, and abdicating at the same time in favor of his daughter, Maria da Gloria. This constitution was set aside during the usurpation of Dom Miguel, but was restored in 1842. The Constitution of the Republic, adopted Aug. 21, 1911, provides for a Cortes of two chambers, the lower house chosen by the people, and the upper by the municipalities. The Cortes elects the president, who serves four years, is not re-eligible, and cannot be present at the debates of the chambers. The members of the cabinet have a right to the floor of both chambers. Consult Muro y Martínez, *Constituciones de España* (Madrid, 1881); Desdévives du Dezert, *L'Espagne de l'ancien régime* (Paris, 1897-99); Colmeiro, *Cortes de los antiguos reinos de León y de Castilla* (2 parts, Madrid, 1883-84); Stephens, *Portugal*, in the "Stories of the Nations Series", Prescott, *Ferdinand and Isabella*.

**CORTÉS**, kôr-täs, HERNÁN or HERNANDO (1485-1547). Conqueror of Mexico. He was born at Medellín, in Extremadura, Spain, and was sent to the University of Salamanca, but his superabundant animal spirits and unrestrained passions for the fair sex cut short his university career. The same cause made it impossible for him to remain at home, and so he decided to try his fortune in the New World. An accident, received in scaling a tumble-down wall while on his way to a final clandestine rendezvous, postponed his departure until the spring of 1504, when he sailed for Santo Domingo. There he joined the forces engaged in suppressing a native revolt and quickly won promotion, so that in 1511 he was the chief executive officer with the expedition dispatched under Velásquez for the conquest of Cuba, becoming subsequently alcalde of Santiago. Mining and stock raising, although profitable, were not sufficiently to his taste, and he persuaded Velásquez to give him the command of an expedition to the mainland, made known at that time by the discoveries of Grijalva. No expense was spared in equipping a fleet of seven vessels, carrying 300 men. Velásquez, however, became suspicious lest Cortés should refuse to recognize his authority when once he was in a position to establish himself

independently. Learning that he was to be superseded, Cortés gathered his forces and set sail, on Nov. 17, 1518, before Velásquez could order him to resign the command. Stopping for supplies at the settlements on the coast of Cuba, he proceeded to Cozumel Island, sailed along the Yucatan coast, and fought a bloody battle with the natives at Tabasco. In the early spring of 1519 he landed at San Juan de Ulloa. There he obtained numerous captives, one of whom was the famous Mariana, whom he made his mistress, and who, out of devotion to him, acted as the interpreter, guide, and counselor of the Spaniards, and frequently saved them from serious reverses. Finding a better harbor a little north of San Juan, the Spaniards removed thither and established a town, naming it La Villa Rica de la Vera Cruz. An independent government was organized by vote of the settlers, who determined to renounce their allegiance to Velásquez and to acknowledge only the supreme control of the King in Spain. In order to prevent those who opposed this movement from deserting him and carrying the news to Cuba, Cortés dispatched one vessel to Spain with messengers to represent his cause at the court, and then sank the rest of his fleet.

Starting on his march inland, Cortés entered the country of the Tlascalans, who fought him vigorously for a few days, but soon came to terms with the strangers and joined them against the Aztecs, by whom the Tlascalans had been subjugated not long before. From this time until the conquest was achieved, the tribe continued the most important and trusty of all the native allies of the Spaniards. Advancing into the country of the Cholulans, Cortés succeeded, after a little fighting, in persuading the people to accept a reconciliation with their traditional enemies from Tlascala and to join them in his train for the march on Mexico. Motecuhzoma, or Montezuma, the Aztec chieftain, pursued an irrevocable policy and finally determined not to oppose the Spaniards directly by force of arms, but to await their arrival and learn more of their purposes. On Nov. 8, 1519, Cortés entered the city of Mexico and established himself in one of its large communal dwellings, which had belonged to the family of Motecuhzoma's predecessors. The Spaniards were allowed to roam through the city at their pleasure and found much gold and other treasures in the storehouses. Realizing that a party among the native leaders were talking of driving the strangers out of town, Cortés induced Motecuhzoma to come to his house, where he was kept as a hostage. Shortly after, in April, 1520, messengers brought word that an expedition sent from Cuba by Velásquez under the command of Narváez, had landed at San Juan de Ulloa, with orders to arrest Cortés and send him to Cuba for punishment. Cortés promptly started for the coast with a small force. He found the camp of his enemies unguarded, entered on a dark night, captured Narváez, and the next day induced nearly all the soldiers to join his own standard. Meanwhile, in Mexico, Alvarado, who had been left in command, had learned that the Aztecs intended to attack him at the close of a great religious ceremony which was then being held. To prevent this, Alvarado suddenly surrounded the leaders, who were all busy with the sacrifices in one of the large courtyards of the town, and killed most of them. Cortés, as soon as all danger from Narváez was

past, hastened back to Mexico. He was allowed to enter the city peaceably, with his followers, but was immediately surrounded and attacked. As there was no possibility of maintaining his position in the city, for lack of food or water, and as all hope of persuading the natives to desist vanished when Motecuhzoma died, an immediate retreat was decided on. Selecting a dark, rainy night—the famous *Noche Triste*, on June 30—the Spaniards and their native allies started out of the city. The Mexicans pressed on behind them. The Spaniards were hurried along the causeways or driven into the water, where they were seized by Mexicans in canoes and dragged off to the city for sacrifice. Some 40 Europeans were captured alive, the great object of their enemies. Luckily for their fellows, the prospective sacrifices attracted the larger part of their assailants back into the city. Cortés retreated towards Tlascala. At Otumba he was confronted by an overwhelming force of his enemies. In despair the harassed Spaniards hurled themselves upon the Aztecs and crushed them. They nevertheless continued their retreat to Tlascala, where they recuperated during the summer.

The arrival of several vessels with men and war munitions enabled Cortés to reorganize his army, so that he was prepared to take the field again in October. The outlying Aztec strongholds were captured one by one, and the various subject tribes, ever ready to rebel against their native conquerors, gradually recovered confidence in the white men. Carpenters had been set to work at Tlascala in constructing a fleet of small vessels, which were hauled along a canal dug for the purpose into the Mexican lake, so that it became possible to attack the city by water as well as along the causeways which connected Mexico with the land. By the end of April, 1521, with a force of over 900 Spaniards, and 87 horses, Cortés again approached the capital. The city was attacked by columns along each of the three causeways from the shore, while the fleet of brigantines, with cannon, engaged the vast number of canoes on the lake. For three months the Aztecs defended their homes stubbornly. Street by street was taken by the Spaniards, who were obliged to tear down each house as soon as they had stormed it, to prevent the natives from returning to the attack. At last, on August 13, the chief, Guatemozin, who had been the principal organizer of the defense, was captured while trying to escape in a canoe, and the war ended. Cortés promptly set to work to repair the loss he had caused. The ruins of the city were used to fill in the marshy ground so as to afford a secure foundation for new edifices. Colonists were brought from Spain, and in a very short time the city of Mexico became the principal European city in America. Numerous expeditions were sent off in all directions, to Tampico, across Honduras to the Gulf coast, and to the Pacific, where Cortés established a shipyard in which were built the vessels he used later in his explorations of the Pacific coast.

Meanwhile his enemies in Cuba and Spain were planning Cortés's destruction. Officials were sent to Mexico to investigate his acts and supersede him, but he succeeded in persuading them to return without disturbing him. In 1528, however, when Estrada arrived with explicit orders to take over the government, Cortés yielded without opposition and took ship

for Spain. There he was welcomed with royal honors, was created Marquis of the Valley of Oaxaca, the fairest domain in the New World, and was reappointed captain general, although not restored to the civil governorship of Mexico. He married the daughter of the Count of Aguilar and niece of the Duke of Béjar. In 1530 Cortés returned to Mexico, where he amused himself for the next 10 years with schemes for further conquests. But the civil government being in other hands, he found himself constantly checked in his activity, his property detained from him, his rights interfered with, and his prestige rapidly waning. In 1536 he discovered Lower California and explored the Pacific coasts of Mexico, but no second treasure-trove awaited him. In 1539 Coronado secured the right to seek for the "Seven Cities" of Marcos de Niza, and in disgust Cortés went back to complain to the court. He was received with honor, but could secure no substantial assistance towards recovering his rights or his property. Joining an expedition to Algiers, he was shipwrecked, losing a large part of his fortune. He then retired to a small estate near Seville, where he died, Dec. 2, 1547. Prescott's *Conquest of Mexico* is, so far as Cortés is concerned, little more than an admirer's abstract of the conqueror's official dispatches, which may be consulted in Folsom's translation (New York, 1843). The "Fifth Letter," describing Cortés's adventurous trip across Honduras in 1524, is in the "Hakluyt Society Series" for 1868. Consult: Ober, *Hernando Cortés* (New York, 1905); Antonio de Solís, *Historia de la conquista de México* (Madrid, 1684; and a convenient edition in 5 small vols., Paris, 1827); and especially two recent works by F. A. MacNutt, *Letters of Cortés to Charles V, Translated and Edited, with a Biographical Introduction and Notes* (2 vols., New York, 1908), and *Fernando Cortés and the Conquest of Mexico: 1485-1547*, in "Heroes of the Nation Series" (ib., 1909).

**CORTÉS, JOSÉ DOMINGO** (c.1830-84). A Chilean author, born at Coquimbo. He was successively journalist, member of the Chilean Legation in Belgium, and director general of libraries in Bolivia. He published anthologies, histories, and biographical works, such as *Diccionario biográfico americano* (1876), *Historia de Bolivia*, *Los revolucionarios de la independencia de Chile*, and *República de México* (1872).

**CORTES, SEA OF.** See CALIFORNIA, GULF OF. **CORTEX** (Lat., bark). That region of a stem or root which occurs between the central vascular region (*stele*) and the epidermis. In those stems which increase in diameter each year the cortex becomes very much modified by the development of cork cells, being then usually called "bark." See MORPHOLOGY OF PLANTS.

**CORTEX.** See NERVOUS SYSTEM AND BRAIN. **CORTHELL,** ELMER LAWRENCE (1840-1916).

An American civil engineer, born at South Abington (now Whitman), Mass. From 1861 to 1865 he served in the First Rhode Island Light Artillery in the Civil War, returning to graduate from Brown University in 1867 and take up the practice of civil engineering. He served on railroad surveys and construction in Missouri and Illinois; with James B. Eads was resident engineer in constructing Mississippi jetties, and also cooperated with him in building a ship railroad over the Isthmus of Tehuantepec, Mexico; was chief engineer of the New

York, West Shore, and Buffalo Railroad, of the Merchants Bridge, St. Louis, the Brazos River jetties, Texas, Tampico (Mexico) harbor works, and the port of Pará, and Rio Grande do Sul, Brazil. From 1900 to 1902 he was consulting engineer of the National Public Works of the Argentine government. He is author of *History of the Mississippi Jetties* (1890); *Report on Brussels Navigation Congress* (1898); *Maritime Commerce of the World: Past, Present, and Future* (1898); *Some Ports of the World* (1901); *Argentina: Past, Present, and Future* (1903); *Allowable Pressure on Deep Foundations* (1907); *Engineering and Commercial Conditions and Problems in Latin America* (1911).

**CORTINA**, kôr-tě'ná, JUAN NEPOMUCENO (1830- ). A Mexican soldier and brigand, born in La Higuera, State of Tamaulipas. During the Mexican War he organized a band of cowboy guerrillas, later incorporated in the Mexican army. He fought at Palo Alto, rose to the rank of captain, but at the conclusion of the war was refused a commission in the regular army. Thereupon he turned smuggler. Later he rose to be a general in the liberal-revolutionist forces, but after his defeat by General Hinojosa was forced to escape to the United States. From 1859 to 1863 he held sway on the frontier, devastating the country and making such official appointments as he saw fit. He supported the cause of Maximilian in 1864, in 1867 again joined the Republicans, and in 1869 was appointed, by Juárez, federal chief of Tamaulipas. In 1876 he was arrested by General Canales, but instead of being executed, as General Díaz had directed, was incarcerated without trial in the military prison of Santiago Tlatelolco.

**CORTINA RIUS**. See FUNGI, EDIBLE, and Plate.

**CORTISSOZ**, ROYAL. An American art critic, born in New York City. He became literary and art editor of the *New York Tribune*, lectured on art, edited an edition of *Don Quixote* and *The Autobiography of Benvenuto Cellini*, and, besides contributions to magazines, is author of *Augustus Saint-Gaudens* (1907); *John La Farge* (1911); *Art and Common Sense* (1913). His wife, ELLEN MACKAY HUTCHINSON CORTISSOZ, associated with him in critical work, is author of *Songs and Lyrics*, and acted as associate editor of *The Library of American Literature* (11 vols.).

**CORTLAND**. A city and the county seat of Cortland Co., N. Y., 37 miles by rail south of Syracuse, on the Tiohognoga River, and on the Lakawanna and the Lehigh Valley railroads (Map: New York, D 5). It is the seat of a State normal school and the Cortland County Hospital, and, as a manufacturing centre, produces extensively wire, wire cloth, carriages and wagons, carriage trimmings, drop forgings, corundum wheels, motor trucks, broad silk, flour, piano cases, wall paper, etc. The government, under a charter of 1900, is vested in a mayor, a municipal council, and administrative boards and officials appointed by the executive, the appointments, except the board of education, being subject to the consent of the council. First settled in 1792, Cortland was included in the township of Homer until set off as Cortlandville in 1829. The water works are owned by the city. Pop., 1900, 9014; 1910, 11,504.

**CORTONA**, kôr-tô'ná. A city in the Prov. VOL. VI.—9

ince of Arezzo, central Italy, situated 2170 feet above the sea, 72 miles southeast of Florence and 4 miles north of Lake Trasimeno (ancient Trasimenus) (Map: Italy, F 4). It has well-preserved cyclopean walls, built more than 3000 years ago, 8500 feet in circumference, the ruins of old Roman baths, a museum of Etruscan antiquities, including a remarkable candelabrum with 16 lights, assembled by the Etruscan Academy, founded in 1726; the cathedral of Santa Maria, containing paintings by Luca Signorelli (q.v.), who was born here in 1441, as was Pietro Berrettini, known as Pietro da Cortona (q.v.) in 1596. The fifteenth-century church of San Domenico also contains excellent paintings. The ancient Cortona, called "Kyrtonia" by Polybius, was the strongest of the 12 cities of the Etruscan League. As a Roman colony it lost its importance, but in the eleventh century again prospered. It sided mostly with the Ghibellines, came into the possession of the Casale family in the fourteenth century, in 1409 was given by the last of the house to King Ladislaus of Naples, and by him in 1412 to Florence. Pop. (commune), 1881, 26,353; 1901, 29,343; 1911, 29,659. Consult: G. Dennis, *Cities and Cemeteries of Etruria* (London, 1883), and A. Della Cella, *Cortona Antica* (Cortona, 1900).

**CORTONA**, PIETRO DA, properly PIETRO BERETTINI (1596-1669). An Italian painter and architect, born at Cortona. He studied under Commodi and Ciampi in Rome, where the greater part of his life was passed. He was the most important painter of his day, and was employed by popes, cardinals, and princes. Among the great decorative works intrusted to him were the frescoes of the ceiling in the hall of the Barberini Palace, Rome; decoration of the suite of rooms in the Pitti Palace, Florence, with paintings representing the seven virtues necessary for a sovereign (1640-47), and the frescoes in the church of Santa Maria in Vallicella. He was also superintendent of the mosaics for St. Peter's, and himself designed those of the chapels of the right aisle. Among his oil paintings are "The Battle of Arbela" (Louvre), painted for Louis XIV; a "Nativity" (Prado), painted for the Spanish King; "Daniel in the Lion's Den" (Accademia, Venice). Cortona founded a new style in Rome and did for painting what Bernini did for sculpture, accentuating the personal individual tendency in opposition to the classical trend of his age. He had a remarkable power of heightening the illusion in his frescoes, and the warm golden tones of his later works are admirable. As an architect, he designed the façade of Santa Maria in Via Lata, the portico of Santa Maria della Pace, and the church of Santa Martina, all in Rome. Consult his biographies by Fabbri (Cortona, 1896); Geisenheimer (Florence, 1909); Pollak, in *Kunst-kronik*, Neue Folge, xxiii (1912).

**CORUMBÁ**, kô-rô'm'bá. A town of Brazil, in the State of Mato Grosso, on the west bank of the Paraguay River, about 325 miles southeast of Mato Grosso (Map: Brazil, F 7). The naval arsenal of Brazil is on the east bank of the river. Pop., 10,000.

**CORUÑA**, kô-rô'nyá. A fortified seaport of Spain, capital of the province of the same name, in Galicia, situated on a small headland in the Atlantic, formed by two bays: the Ría de la Coruña and the cove of El Orzán, 315 miles northwest of Madrid (Map: Spain, A 1). It is built partly on the slope and partly at the foot

of a hill and is divided into the upper and lower towns, the former being the more ancient. The lower town, which was formerly an insignificant fishing village, is now more important and is well built, with broad and well paved streets. The ancient section, which is partly surrounded by the old walls, contains the more prominent edifices, though there are comparatively few public buildings of note in Coruña. The churches of Santiago and Santa María del Campo, of the twelfth century; the barracks, the Capitania-General, and the modern military hospital of San Carlos, are worthy of mention. The provincial institute has a considerable library and valuable scientific collections, and the city contains also a meteorological observatory, and various educational institutions, including a marine school. Other features of interest are the grave of Sir John Moore (q.v.), with a monument in the garden of San Carlos, and the so-called Torre de Hércules, of doubtful Phœnician origin, having been built more probably in the time of Trajan, which has served as a lighthouse for more than a century. The harbor, protected by five forts, two of which, San Antón and San Diego, defend the entrance, is safe and commodious. Coruña is the centre of an extensive commerce, the exports comprising live stock, fruits, vegetables, wine, hams, sardines, leather, péat, etc., while the principal imports are sugar, hides, coal, oil, and manufactured articles. There is also an important coastwise trade. The city has a variety of manufactures, including cigars, linen goods, canvas, cordage, lumber, barrels, paper, etc., and many of the inhabitants are employed in the fisheries. Pop., 1897, 40,500; 1900, 43,971; 1910, 45,650.

The chronicle history of Coruña dates from the Roman occupation. In the Middle Ages it was called Caronium. It was part of the emirate of Córdoba for some time, and suffered severely, with the rest of Galicia, in the reconquest. The Portuguese captured the town in 1370. Here John of Gaunt landed in 1386, to urge the claims of his wife, Doña Constanza, to the Castilian crown, and in 1554 Philip II sailed from the port to marry Queen Mary of England. Coruña was the point of departure of the "Invincible Armada" in 1588, and in the following year it was taken by Drake and Norris and nearly destroyed. The harbor was the scene of English naval victories over the French in 1747 and 1805. Coruña is famous for the repulse, on Jan. 16, 1809, of the French under Marshal Soult, by Sir John Moore, who succeeded in withstanding the French attempt to stop the English embarkation, but lost his life in the battle. The engagement took place on the heights of Elviña. In 1823 the city fell into the hands of the French. In 1836 it was captured by the Carlists. The result of the Spanish-American War in 1898 was disastrous to Coruña's trade with Cuba and Porto Rico.

**CORUNDUM** (Neo-Lat., from Hind. *Kurand*, corundum), or ADAMANTINE SPAR. An anhydrous aluminum peroxide that crystallizes in rhombohedral forms of the hexagonal system. Owing to their extreme hardness (in which corundum ranks next to the diamond) and their high specific gravity (from 3.95 to 4.10), the colored varieties are much sought after as gems. According to their colors, they are called sapphire, which is blue; Oriental ruby, which is red; Oriental topaz, which is yellow; Oriental emerald, which is green; and Oriental amethyst,

which is purple. In addition to these there is the *asteriated* or *star* sapphire, which exhibits an opalescent star of six rays. The dark-colored varieties are called *corundum*, and granular corundum is known as *emery*. The colored varieties of corundum are found chiefly in Burma, China, Ceylon, and in the United States, where it occurs in the crystalline rocks along the Appalachian Mountains, at Chester, Mass., in northern Georgia, and in Montana, where sapphires of gem grade have been found. Emery (q.v.), which is used as an abrasive material, is found in Asia Minor, at Chester, Mass., and in Canada. The imports into the United States are about \$100,000 annually, chiefly from Canada. See ABRASIVE.

**CORUNNA**. A city and the county seat of Shiawassee Co., Mich., 30 miles (direct) north-east of Lansing, on the Shiawassee River, and on the Ann Arbor and the Grand Trunk railroads (Map: Michigan, E 5). The public library and McCurdy Park are among the features. It has a trade in coal and manufactures flour, buffalo and astrachan cloths, vitrified brick, and furniture. Pop., 1900, 1510, 1910, 1384.

**CORVALLIS**. A city and the county seat of Benton Co., Ore., 96 miles south by west of Portland, on the Southern Pacific, the Portland, Eugene, and Eastern, the Oregon Electric, and the Corvallis and Eastern railroads, and on the Willamette River (Map Oregon, B 3). Corvallis is the seat of the State Agricultural College and contains a fine courthouse and city hall and a large college armory. River steamboat lines add to the transportation facilities. There is a considerable trade in grain, lumber, flour, live stock, and wool. Dairying, stock raising and the raising of fruit and berries are important occupations. The manufactures include lumber, flour, brick and tile, ice cream, cigars, etc. Pop., 1900, 1819; 1910, 4552.

**CORVÉE**, *korvâ'* (Fr., from ML. *corvata*, demanded, from Lat. *corroga*, demanded, sc. *opera*, work, from *com*, with + *rogare*, to demand). An obligation imposed under the Roman law and continued under feudal law, whereby the inhabitants of a district performed certain services, such as repairs of the highway and bridges, for the sovereign or the feudal lord. Under the feudal lords corvées were greatly increased and diversified, but were usually determined by the local customs. Gradually the people succeeded in escaping from most of the corvées by substituting payments. But in some countries some burdens were long continued; e.g., French peasants were subject to some corvées until the French Revolution. Under the name of *prestation* the corvée system was revived, and was made the subject of various legislative modifications in 1824 and 1871. In some *arrondissements* all able-bodied men may be called upon to give three days' work for the upkeep of the roads. In England the Highways Act of 1837 did away with all statutory labor on the roads, but in Scotland the practice persisted until 1883, when it was abolished by law. The system was enforced by the Dual Control in Egypt, where, in 1882, 234,000 *fellaheen* were called out for 100 days to clean the irrigating canals; but the obligation was gradually abolished until, in 1887, through the efforts of the British, the corvée for this purpose was wholly done away with, and the labor performed by contract. Other corvées were abolished by 1891, except the forced labor to guard against floods.

For the feudal *corvées*, consult Luchaire, *Manuel des institutions françaises* (Paris, 1902).

**CORVEI**, kôr'vi (ML. *Corbeia Nova*, New Corbeia, as it was first occupied by monks from Corbie). A Benedictine abbey of Germany, on the Weser, near Hörter, the oldest and most famous abbey in Saxony. It was founded by Louis the Pious in the beginning of the ninth century, being a colony from the monastery of the same name in Picardy. It received rich endowments and was the centre of great agricultural improvement and prosperity during the earlier part of the Middle Ages, besides being the seat of a famous school. In 1793 it was made a bishopric by Pius VI. Its territory then embraced about 22 square miles, with 10,000 inhabitants. In 1802 it was secularized and annexed to Nassau, from which it was transferred, in 1807, to Westphalia, and in 1815 to Prussia. The church of the abbey is built in Gothic style, magnificently adorned in the interior, and contains a multitude of monuments of successive dynasties. The library and archives of the cloister, which contained most valuable records of the early ages of German history, have all been destroyed, the *Chronicon Corbeense*, an alleged record of this abbey from its foundation to the end of the twelfth century, being a forgery. Certain brief *Annales Corbeenses* from 648 to 1148 are, however, printed in the *Monumenta Germaniae Historica*. Consult Wigand, *Geschichte der Abtei Korvey* (Hörter, 1819).

**CORVETTE**, kôr-vêt' (Fr., from Sp. *corbeta*, *corbeta*, lt. *corietta*, corvette, from Lat. *corbita*, slow ship of burden, from *corbis*, basket). In the days of sailing men-of-war, a corvette was a ship-rigged vessel (i.e., having three masts, all square rigged), carrying all her broadside guns on one covered deck. The upper deck, above the guns, was *flush* (i.e., was continuous from stem to stern, without poop or topgallant forecastle). Corvettes occasionally had a bow or stern chaser on the upper deck.

**CORVIDÆ** (Neo-Lat. nom. pl. from *corvus*, crow). A family of passerine birds which includes the ravens, crows, magpies, jays, etc. See these words, and Plate of JAYS, MAGPIES, ETC.

**CORVINUS**, MATTHIAS. See MATTHIAS CORVINUS.

**CORVIN-WIERSBITSKI**, kôr-vên'-vêrs-bit'ské, Otto von (1812-86). A German author, born at Gumbinnen. He took part in the revolutionary uprising in Baden in 1848 and 1849, and became chief of the general staff of the Republican forces at Rastatt. He was condemned to death, but the sentence was commuted to six years' solitary confinement. In 1855 he went to London, whence in 1861 he proceeded to the United States to act as the war correspondent of the Augsburg *Allgemeine Zeitung*. During the Franco-German War he was the correspondent of the *Vienna Neue Freie Presse*, and his experiences are admirably described in his well-known book, *In France with the Germans* (1872). In his earlier years Corvin devised "Corviniello," a species of metal work inlaid with mother-of-pearl, stones, or other materials. His numerous historical and other writings include: *Historische Denkmale des christlichen Fanatismus* (1845), the second edition of which appeared under the title *Pfaffenspiegel* (1869), and was further supplemented by *Die Geissler* (3d ed., 1892-93). Consult his *Erinnerungen*

*aus meinem Leben* (4th ed., Rudolstadt, 1890-92).

**CORVO** (Sp., crow). The most northerly and the smallest of the Azores (q.v.) (Map: Portugal, A 4).

**CORVUS**, MARCUS VALERIUS (c.370-270 B.C.). A general of the early Roman Republic. He was twice dictator and six times consul, and occupied the curule chair 21 times. He defeated the Gauls, the Volsci, the Samnites, the Etruscans, and the Marsi. He owed his name, tradition said, to the *corvus*, raven, which helped him to defeat a gigantic Gaul.

**CORWIN**, EDWARD TANJORE (1834-1914). An American writer, and historian of the Reformed Dutch church. He was born in New York City, July 12, 1834; graduated at the present College of the City of New York in 1853, and at the Theological Seminary in New Brunswick, N. J., in 1856. He has held various pastorates, but his reputation rests upon his literary work, which has made him the recognized historian of his denomination. His publications include: *Manual of the Reformed Protestant Dutch Church in North America* (1859, 4th ed. 1902), *Millstone Centennial* (1866), *A History of the Reformed Church, Dutch* (1895); *Ecclesiastical Records of New York* (6 vols., Albany, 1901-05). This is a translation and elaborate annotation of the letters which passed between the Classis of Amsterdam and the churches in the New Netherlands and Province of New York, and so are an important historical source. It is published by the New York State Library. He contributed to the first edition of the NEW INTERNATIONAL ENCYCLOPEDIA.

**CORWIN**, THOMAS (1794-1865). An American lawyer and statesman, born in Bourbon Co., Ky. He studied and practiced law in Ohio, where his eloquence soon won him prominence. He was a member of the State Legislature from 1822 to 1823 and in 1829, and of Congress from 1831 to 1840, when he was chosen Governor of Ohio. From 1845 to 1850 he was a member of the United States Senate, and in the latter year he became Secretary of the Treasury in President Fillmore's cabinet. He was again in Congress (1859-61) and was Minister to Mexico from 1861 to 1864. As an orator he won his greatest distinction, his speeches both on the stump and in debate being examples of remarkable eloquence. His arraignment of the administration for the war with Mexico in the Senate, Feb. 11, 1847, was a notable effort, which made him many enemies and damaged his political career. Consult Russell, *Thomas Corwin* (Cincinnati, 1882), and J. Morrow, *Life and Speeches of Thomas Corwin* (Cincinnati, 1896).

**CORRY**, CHARLES BARNEY (1857- ). An American ornithologist, born in Boston. He became professor and honorary curator of zoology in the Field Columbian Museum in Chicago. His publications include: *Birds of the Bahama Islands* (1880); *The Beautiful and Curious Birds of the World* (1880); *Southern Rambles: Florida* (1881); *Montezuma's Castle* (1899), *The Birds of Illinois and Wisconsin* (1909); *Mammals of Illinois and Wisconsin* (1912); *Description of Twenty-eight New Species and Subspecies of Neotropical Birds* (1913).

**CORY**, WILLIAM JOHNSON (1823-92). An English poet, son of Charles Johnson, of Torrington, Devonshire; his mother was a grand-niece of Sir Joshua Reynolds. He was educated at Eton, and at King's College, Cambridge; was

graduated B.A. in 1845, and in the same year became fellow of his college. He was at once appointed assistant master of Eton, where he won great distinction as a tutor. In 1872, having inherited an estate at Halsdon, he retired from Eton and changed his name to Cory. His subsequent home was Hampstead, where he died, June 11, 1892. Cory is mainly known for a volume of verse entitled *Ionica* (1858, republished with additional poems in 1891), containing "Mimnermus in Church" and other poems of great tenderness and beauty. The volume was reissued, with additions, in 1891. He is also author of an agreeable *Guide to Modern English History from 1815 to 1835* (1880-82), of *Lucretius*, a treatise on writing Latin verse (1871), and of *Iophon* (1873), on Greek Iambics. After his death appeared his *Letters and Journals* (Oxford, 1897).

**CORYAT**, kôr'yat, or **CORYATE**, THOMAS (1577-1617). An English traveler and author, born at Odcombe and educated at Oxford. He made an extensive tour of Europe, traveling mostly on foot, and published his experiences in a volume entitled *Coryat's Crudities* (1611; new ed., 1905). It was the first manual of continental travel and was illustrated with engravings. Parts of this work, consisting of mock verse commending the author, were published separately under the title *Odombian Banquet* (1611). Coryat made other voyages through Greece, Asia Minor, north Africa, and India, where he died.

**CORYBANTES**, kôr'i-bân'têz (Gk. *Kopîßarres*, *Korybantes*). Mythical beings, attendant upon the Phrygian Cybele (q.v.), as the Curetes (q.v.) belong to the Cretan cult of Zeus and Rhea. Unlike the Curetes, with whom they were sometimes confused, the Corybantes were not believed to dance in armor, but rather to perform wild and orgiastic dances which frequently ended in ecstasy. The name does not properly denote priests, or human beings at all, since the Corybantes represent rather gods of procreative significance; but, as the priests of Cybele imitated these dances, the name is sometimes extended to them. Consult Frazer, *Adonis, Attis, Osiris* (London, 1907), Part IV of his *Golden Bough*.

**CORYCIA**, kô-rîsh'i-â (Lat., from Gk. *Kôpykia*, *Kôrykia*). The mother of Lycoris, by Apollo. She was a nymph, whose name is preserved in that of the Corycian Cave on Mount Parnassus, and in the appellation Corycides applied to the nymphs of the cave and to the muses, who were worshipped on Parnassus. See CASTALIA.

**CORYDALIS**. See FUMARIACEÆ.

**CORYDALIS** (Neo-Lat., from Gk. *κορυδαλλίς*, *korydallîs*, *korydôs*, crested lark, from *kôpus*, *korys*, helmet) or DOBSON. A genus of large, net-veined insects (true Neuroptera), representing the family Sialididae, and peculiar to America, where its larva, used for bait under the names "crawler," "dobson," "hell devil," and many others, is the largest of our aquatic insects. The single species (*Corydalis cornuta*), often called "hell-grammite," is brownish green in color, about 2 inches in length, and expands its four nearly equal wings fully 6 inches. "In the female the jaws are very large, flat, and toothed at the extremity, but in the male they are remarkably long and slender, not toothed, and the sharp tips crossing each other; their only use is evidently for seizing the soft, somewhat yielding body of the female during the act

of pairing; hence during its short life the male, at least, takes no food." The female lays her eggs in midsummer, in white chalky masses almost an inch wide, on tree leaves, rocks, timbers, etc., overhanging water, into which the young drop as soon as hatched. These sink to the bottom and grow rapidly into large, slate-gray, tough, predatory larvae, which hide under stones, etc., in the rapid streams where they most abound, clinging firmly to some support with their anal hooks, while they seize in their jaws such living creatures as come within their reach. They remain in the water 2 years and 11 months, then creep out upon land, where they wander about at night for a few days, then pupate in some retreat, and speedily emerge as adults. The larvæ (dobsons) are regarded as the most satisfactory bait known for still fishing, and are captured with nets, after overturning stones, etc., and frightening them out into the open water. For the many interesting peculiarities of the structure and economy of this and other species of the Sialididae (called "adder flies" in England), consult: Howard, *The Insect Book* (New York, 1901); Packard, *Standard Natural History*, vol. ii (Boston, 1884); Miall, *The Natural History of Aquatic Insects* (London, 1895); Kellogg, *American Insects* (New York, 1908); Davis, "Sialididae," in *Aquatic Insects in New York State* (Albany, 1903).

**CORYDON**. A town and the county seat of Harrison Co., Ind., 25 miles west by south of Louisville, Ky, on Indian Creek and on the Louisville, New Albany, and Corydon Railroad (Map: Indiana, C 4). It is known as a summer resort, one of its attractions being a sulphur well. Corydon was the capital of the Territory of Indiana from 1813 to 1816, and of the State of Indiana from 1816 to 1825, when the seat of government was removed to Indianapolis. The old capitol is still standing. The Constitutional Convention of 1816 met here. In 1863 the town was the scene of a sharp skirmish between a small force of State militia and a superior force of Confederate raiders under John Morgan. Pop., 1900, 1610; 1910, 1669.

**CORYDON**. A town and the county seat of Wayne Co., Iowa, 81 miles (by rail) south by east of Des Moines, on the Keokuk and Western and the Chicago, Rock Island, and Pacific railroads (Map: Iowa, D 4). Corydon is essentially an agricultural town and exports a large amount of timothy seed. The electric-light plant, sewer, and water works are under municipal ownership and control. Pop., 1900, 1477, 1910, 1703.

**CORYDON**. 1. A shepherd in the *Idyls* of Theocritus, and in the second and the seventh Eclogue of Vergil, and hence a name conventionally used in literature to designate a country swain, as in Spenser's *Faerie Queene* and *Colin Clout*. 2. A shoemaker in Scott's *Count Robert of Paris*. 3. A musical countryman in Walton's *Compleat Angler*, who fraternizes with Piscator.

**COR'YLUS**. See HAZELNUT.

**COR'YMB** (from Lat. *corymbus*, from Gk. *κόρυμβος*, *korymbos*, cluster, from *kôpus*, *korys*, helmet). A flat-topped flower cluster, in which the pedicels arise at different levels upon an elongated axis and the outermost flowers bloom first. See INFLORESCENCE.

**CORYMBUS** (Lat., cluster). That mode of dressing the hair which prevailed among the Greek women and which may be seen in examples of the antique, particularly in the statues representing Venus. This arrangement of

the hair was also adopted by the Romans. It consisted in gathering it upward upon the crown and back of the head in one knot. It may be seen in its simplest form in the statue of the Venus de' Medici, in the Uffizi Gallery, Florence.

**CORYNACTICS.** See SEA ANEMONE.

**CORYPHEA.** See FAN PALM; GERANG PALM.

**CORYPHENE** (Lat. *coryphæna*, from Gk. *κορυφαία*, *koryphaina*, a sort of fish, from *κορυφή*, *koryphê*, summit), DORADO or DOLPHIN. One of a genus of fishes (*Coryphæna*) of the family Coryphenidae, to which the name "dolphin," properly belonging to the Cetacea, has been popularly transferred. The coryphenes are allied to the opahs, and are remarkable for the beauty and metallic brilliancy of their colors, which delight the spectator as the graceful fish are seen gliding with extreme rapidity near the surface of the water, gleaming in the light, and the changes the colors undergo while the fish is dying have acquired a poetic celebrity. They have an elongated compressed body covered with small scales, the head rising in a sharp crest, the mouth large. They are large fishes, attaining a length of 6 feet, and are inhabitants of the high seas of warm climates, where they chase the flying fishes and other surface prey with great speed and voracity. The common, almost cosmopolitan coryphene (*Coryphæna hippurus*) occurs on the coast of the United States as far north as Cape Cod. "They are often caught by sailors at sea and are considered most excellent food. It is an almost universal custom before eating them to test the flesh by putting a piece of silver into the vessel in which they have been cooked, it being a common belief that if the flesh is poisonous the silver will turn dark." (Goode.) See Plate of HORSE MACKEREL.

**CORYPHODON** (Neo-Lat., from Gk. *κορυφή*, *koryphê*, summit + *ὀδούς*, *odous*, tooth). A fossil amblypod mammal of the Lower Eocene beds (Wasatch) of western America, related to *Tinoceras* and the *Uintatheria*. A complete skeleton of *Coryphodon radians* has been found, and is mounted in the American Museum of Natural History in New York City. It shows an animal between 5 and 6 feet in length, with large skull, formidable teeth, short neck, rather long body, and short, strong, bowed legs with spreading toes. The brain cavity is remarkably small. The skeleton indicates a heavy, clumsy animal that lived in the bordering marshes of the Wasatch lakes, feeding on succulent water plants. *Coryphodon* remains have also been found in the Eocene beds of Europe. Consult Osborn, "A Complete Skeleton of *Coryphodon Radians*," *Bulletin of the American Museum of Natural History*, vol. x (New York, 1898), and Knipe, *Evolution in the Past* (London, 1912). See TERTIARY SYSTEM; TINOCERAS; UINTATHERIUM.

**CORYZA.** An inflammation of the nasal and ocular mucous membrane, with discharge of thin mucus. Preceded by a chilly feeling and a slight rise of temperature, it constitutes the invasion of measles, whooping cough, la grippe, and certain fevers, and is constant during hay fever (q.v.). Constipation or uric-acid diathesis is often the underlying cause for its appearance; the exciting cause is nearly always bacterial infection. Relief in the simple forms follows the use of alkaline laxatives, nasal spraying with mild antiseptic solutions, and the correction of any

diathesis such as rheumatism. If neglected, the mucous membrane affords an inviting field for the germs of *grippe*, pneumonia, etc.

**COS**, or **KOS** (Gk. *Κῶς*, *Kōs*, It. *Stanchio*, Turk. *Istankoi*). One of the Dorian Sporades, off the southwest coast of Asia Minor, now belonging to Turkey. Cos is about 23 miles long, and about 74 in circumference. On the southern side of the island a range of hills, called Prion, extends along the coast; the western half of the island is also mountainous, but the eastern portion north of the jagged ridge of Mount Prion is a fertile plain, producing the grapes and the sultana raisins which furnish the chief modern exports. The population is estimated at about 10,000. In ancient times the island was famous for its perfumes, wines, and silk (probably produced from an inferior variety of worm), from which were woven the transparent Coan garments (*Coa vestis*) worn by the courtesans of Greece and Rome. There are many mineral springs on the island, which early became an important seat of the worship of Asclepius (q.v.). The precinct of Asclepius, on Mount Prion, was excavated in 1900-04; it had a continuous history from the sixth century B.C. to 554 A.D. Cos was the birthplace of the great physician Hippocrates (q.v.) and of Apelles (q.v.). The chief town, Cos, is situated on the northeast coast, on the site of the ancient city. In the centre of the main street is a gigantic plane tree, said to have stood there before the Christian era. To the northwest is an old fortress of the Knights of St. John. The harbor is small and so filled with mud as to be available only for small boats. The inhabitants are employed chiefly in agriculture. Cos is mentioned in the *Iliad* among the allies of the Greeks, and the island seems to have been early colonized. Later it was the seat of a Dorian colony, apparently from Epidaurus (q.v.), and became a part of the Dorian Hexapolis. It was a member of the Athenian League, and in the fourth century B.C. enjoyed a prosperity which increased under Alexander and his successors. It was the birthplace of Ptolemy II Philadelphus, and the home of Philetas, the bucolic poet, who founded on the island a school of which Theocritus (q.v.) was the most distinguished member. From the Latin conquest of Constantinople (1204 A.D.) till its capture by the Turks in 1523, Cos shared the vicissitudes of Rhodes and the neighboring islands. In 1912, in the course of the Turco-Italian War (q.v.), it was seized by an Italian fleet, but Italy, by the Treaty of Lausanne (Oct. 15, 1912), engaged to restore to Turkey the *Ægean Islands* on condition that a general amnesty should be granted to the inhabitants and that local autonomy and public liberty should be guaranteed. The contemporaneous outbreak of the Balkan War (q.v.) aroused a vigorous agitation among the Greek islanders of Cos for union with the Greek Kingdom. It was agreed by the Treaty of London (May 30, 1913) that the final disposition of all the *Ægean Islands* should be left to the Powers, in the meanwhile Italian occupation of Cos continued. Consult: Rayet, *Mémoire sur l'île de Cos* (1876), Paton and Hicks, *Inscriptions of Cos* (Oxford, 1891), Herzog, *Koische Forschungen* (Leipzig, 1899); *Archäologische Anzeiger* (1895).

**COSA**, *kō'sá*, JUAN DE LA (c.1460-c.1512). A Spanish navigator and cartographer, born in Santofia (Santander). He accompanied Colum-

bus on his first and second voyages, and after returning to Santaña for a brief period, settled in the Puerto de Santa María (Province of Cádiz), where he became famous as a cartographer. He was the principal pilot of the expeditions sent out under Ojeda (1499) and Rodrigo Bastidas (1500) to explore the coast of Venezuela. After two other successful voyages (1504-07 and 1507-08) he was appointed by Juana hereditary *alguacil mayor* of Urubá. Isabella, in 1503, had appointed him to this position, but had not made the title hereditary. Late in 1509 he fitted out three vessels with which he set sail for Santo Domingo to meet Ojeda, who had been appointed general of Nueva Andalucía. In Santo Domingo he served as arbiter between Ojeda and Nicuesa in a dispute over the boundaries of their respective territories and jurisdiction. In 1510 Cosa had to defend himself from Portuguese accusations that he had made discoveries and explorations beyond the line set for the Spaniards. Later Cosa accompanied Ojeda to South America, where the entire party, with the exception of Ojeda and one other, was massacred by Indians while trying to land in Cartagena Bay, Cosa losing his life in deliberate defense of Ojeda. In 1500 Cosa made a large map of the world, probably the first to be prepared after 1492 and the first, therefore, to include the New World. For this reason it is of the greatest value to cartographers and historians, and many reproductions of the part relating to America have been made. It was accidentally discovered by Humboldt in the library of Baron Valckenaer in Paris in 1832, and since 1856, when it was acquired by the Spanish government, has been in the Naval Museum in Madrid. On several occasions parts of it have been reproduced, but M. Jomard's is the only reproduction of the whole map, on the original scale and with the original colors.

**COSCINOMANCY** (from Gk. *κόσμιον*, *kos-kion*, sieve + *μαντεία*, *mantéia*, divination). A species of divination, practiced from the earliest times by means of a sieve and a pair of shears or forceps. Tylor (*Primitive Culture*, 4th ed., vol. 1, p. 128) says: "The sieve was held hanging by a thread, or by the points of a pair of shears stuck into its rim, and it would turn, or swing, or fall, at the mention of a thief's name, and give similar signs for other purposes." The ordeal of the Bible and key is a survival of the old custom. The fiftieth Psalm is read, and when the verse beginning "When thou sawest a thief" is reached, the apparatus is expected to turn towards the culprit. See **SUPERSTITION**.

**COSE/CANT**. See **TRIGONOMETRY**.

**COSEGÜINA**, *kô'sä-gwë'nä*, or **COSIGÜINA**, *kô'sä-gwë'nä*. A volcano in the extreme northwest corner of Nicaragua, Central America (Map: Central America, D 4). It is situated on a small peninsula which partly separates the Gulf of Fonseca from the Pacific; it has an altitude of over 3000 feet. Its latest eruption, on Jan. 20, 1835, is famous as the most violent in history. The sky was darkened by the ashes during three days for a distance of 100 miles from the crater, and ashes fell as far away as Jamaica and Bogota, Colombia. The explosion was said to have been heard in the city of Mexico, 900 miles away.

**CO'SEL**, or **KOSEL**. The capital of a district of Silesia, Prussia, on the river Oder, at the confluence of the Klodnitz, 25 miles southeast of Oppeln (Map: Prussia, H 3). It is a garrison

town, has a castle, and was formerly surrounded by walls, the site of which has been converted into boulevards. A fine monument commemorates the unsuccessful siege by the French in 1807. The town manufactures celluloid, lumber, flour, malt, beer, bricks, and refined petroleum. It was the capital of a former duchy in the fourteenth century. Pop., 1905, 7085; 1910, 7832.

**COSELEY**, *kôz'li*. A manufacturing town in Staffordshire, England, a suburb of Wolverhampton (Map: England, D 4), with which its industries and public works are identified. It has iron, coal, and cement mines, manufactures of iron goods and stoves. Pop., 1901, 22,219; 1911, 22,834.

**COSENTIA**. See **COSENZA**.

**COSENZ**, *kô'ssanz*, **ENRICO** (1820-98). An Italian soldier, born at Gaeta. He entered the military service of Naples in 1840, participated in the campaign in Upper Italy (1848), and afterward was prominent in the defense of Venice against the Austrians. In 1859 he became a colonel in the "Hunters of the Alps." Garibaldi's corps, and in 1860 took part in the expedition to Sicily. Upon Garibaldi's assumption of the dictatorship of Naples, he was appointed Minister of War. He commanded a division in the attack on Rome in 1870, and from 1881 until his retirement in 1893 was chief of the general staff of the Italian army. He also held civil office as a deputy from 1860, and senator from 1872.

**COSENZA**, *kô-zënt'sä* (Lat. *Cosentia*). The capital of the Province of Cosenza (Calabria Citeriore) at the confluence of the Crati and Busento rivers, in south Italy, situated 120 miles southwest of Taranto, and only a short distance from the Mediterranean (Map: Italy, L 8). It is commanded by a castle, whose walls, 9 feet thick, were shattered in the earthquakes of 1783, 1854, and 1870. The older and lower part of the town is infected with malaria in summer. The cathedral, of the thirteenth century, which has been restored, contains the tombs of Louis III of Anjou, and Isabella, consort of Philip III of France, who died here in 1435. In the attractive public gardens, near the prefecture and the new theatre, are a figure of Liberty by Giuseppe Pacchioni, erected in 1879 to the brothers Bandiera and others who took part in the Calabrian rebellion of 1844, and busts of Garibaldi, Cavour, and Mazzini. There are a seminary, a royal college, a technical school, two academies of science and fine arts, and a chamber of commerce. Cosenza markets silk, oil, wine, manna, hemp, grain, and honey, and manufactures faience, iron and steel ware. Alaric, King of the Visigoths, died here in 410 while on his way to Sicily after the spoliation of Rome. Tradition has it that he and his treasures were buried just below the town in the Busento (ancient Buxentius), where the Crati joins it—a spot now marked by the Ponte Alerico. The city is subject to earthquakes, having suffered many severe shocks. Pop. (commune), 1881, 16,253; 1901, 21,545; 1911, 23,805.

**COSETTE**, *kô'sët'*. The adopted daughter of Jean Valjean in Hugo's *Les Misérables*.

**COSHOCTON**, *kô-shôk'ton*. A city and the county seat of Coshocton Co., Ohio, 69 miles east-northeast of Columbus, on the Pennsylvania, the Pittsburgh, Cincinnati, Chicago, and St. Louis, and the Wheeling and Lake Erie railroads, on the Ohio Canal, and on the Muskingum River (Map: Ohio, G 5). It con-

tains a city hospital, Carnegie library, park and fair grounds, and a fine courthouse. Co-shocton is in the centre of a coal, gas, and oil region, and has several novelty advertising establishments, machine shops, pipe works, automobile, carriage, furniture, and glass factories, potteries, paper and flour mills, etc. Settled in 1811, the city was incorporated in 1833. The water works are owned and operated by the municipality. Here, after a long struggle, Colonel Boquet concluded a treaty with the Delaware Indians in 1765. Pop., 1900, 6473; 1910, 9603.

**COSÌ FAN TUTTE** (It., all women act alike). An opera by Mozart (q.v.), first produced in Vienna, Jan. 26, 1790.

**COSIGUINA.** See COSEGUINA.

**COSIMO,** kō'zè-mō, PIERO DI. See PIERO DI COSIMO.

**COSIMO DE' MEDICI,** dā mā'dé-chē. See MEDICI.

**COSIN,** kūz'n, JOHN (1594-1672). An English prelate. He was born at Norwich and was educated at Cambridge. After holding rectorates at Elwick, Brancepeth, and elsewhere, he assumed charge of St. Peter's College, Cambridge, in 1635. Three years afterward he was made vice chancellor of the university and in 1640 was appointed Dean of Peterborough. He was chaplain to Charles I and subsequently joined the royal family in Paris, where for nearly 20 years he conducted religious services in the household of Queen Henrietta. In 1660 he was appointed Bishop of Durham. Although by no means inclined towards Puritanism, he was an inveterate antagonist of Roman Catholicism, and during his long residence in France was regarded as the champion of the Protestant cause in that country. Many of the finest prayers in the English church were written by him, while his other numerous writings are imbued with the force and brilliancy of his interesting personality. He was celebrated for the remarkable frankness with which he defended his views, even under the most unfavorable conditions, and by his splendid administrative ability in the church. His works include: *Collection of Private Devotions*, prepared at the request of King Charles I and first published in 1627; *Scholastical History of the Canon of Holy Scripture* (1657); *Historia Transubstantiationis Papalis* (1675); *Notes on the Book of Common Prayers* (1710). A collected edition of his works was published (5 vols.) in 1843-55, and his *Correspondence* (2 vols.) in 1868-70.

**CO'SINE.** See TRIGONOMETRY.

**COSMAS** (Lat., from Gk. Κοσμάς, *Kosmas*), surnamed IDICOLEUSTES (i.e., Indian navigator). A merchant of Alexandria, in which city he was probably born, who, after having traveled much in eastern Asia, including India and Ceylon, returned to Egypt and ended his days in monastic retirement about the middle of the sixth century. While a monk he wrote a *Christian Topography* in 12 vols., in the Greek language, containing much information about many countries and particularly about India. An attempt to reconcile everything to his notions of the meaning of the Bible led him into many errors, but though deficient, and even absurd scientifically, as a record of travel and geographical information, the eleventh book, which gives a description of the animals of India and of the island of Ceylon, takes high rank. His other works, which seem to have included a

treatise of the motion of the stars, and commentaries on the Psalms and Canticles, have perished. *The Topography* (which, among other things, gives the first account of the *Monumentum Adulitanum*; see ADULE) was edited by Montfaucon in the *Nova Collectio Patrum Græcorum*, vol. ii (Paris, 1707), reprinted by Migne, *Patrol. Græca*, lxxxviii, translated by Charton in his *Voyageurs* (Paris, 1854), and in English by McCrindle (London, 1897). An edition was edited by Winstedt (Cambridge, 1910).

**COSMAS** (Lat., from Gk. Κοσμάς, *Kosmas*) and **DA'MIANUS** (Lat., from Gk. Δαμιανός). Two Arabian brothers of the third century, Christian martyrs under Diocletian. They practiced medicine without fee (whence they came to be known as "The Silverless") at Ægea in Cilicia, and, having refused to sacrifice on pagan altars, were beheaded in 303. Their day in the calendar of the Roman church is September 27. They are honored as the patron saints of physicians and apothecaries. A short-lived order of knights spiritual, named after them, was instituted during the Crusades. A round temple on the north side of the Roman Forum, built by the Emperor Maxentius to his son Romulus, was converted into a church in their honor in 526. Its mosaics are among the most valuable in Rome.

**COSMAS OF PRAGUE** (c.1039-1125). A Czech historian, dean of the cathedral at Prague. His works, particularly his "Chronica Boemorum," printed in the second volume of the *Fontes Rerum Bohemicarum* (Prague, 1874), constitute a very complete and accurate record of the history of the times.

**COSMATI,** kōs-mā'tē. The popular name of a group of mediæval Roman architects and decorative marble workers, from Cosmas, the name of two important members. The group was composed of two families: one descending from a certain Tebaldo, who was father of Lorenzo, grandfather of Giacomo, and great-grandfather of Cosmas I, and flourished about 1150-1250; the other founded by Pieter Melini, father of Cosmas II, the most prominent of whose sons were Giovanni and Deodato, active from about 1250 to 1350. It dispersed with the departure of the popes for Avignon and the fall of Rome as an artistic centre. The specialty of this school was the use of rich mosaic inlay in geometric patterns in architecture and church interiors and furniture—a style often called *Cosmati work*. But it was not confined to this family, being a style common to all the other family groups of artists of mediæval Rome and its neighborhood, such as the families of Paulus and Vassallettus. The beautiful cloisters of St. John Lateran, St. Paul Without the Walls, and Santa Sabina in Rome are the most familiar of their large works. The choir seats at San Lorenzo, the tabernacles at Santa Cecilia and St. Paul's, the pulpits at the Araceli, the tombs at the Minerva and Santa Maria Maggiore, the paschal candlestick at Santa Cecilia, the pavements of these and many other Roman churches, show the versatility and universal use of this style. But most of the finest works are scattered throughout the province, at Civita Castellana, Subiaco, Corneto, Alatri, Anagni, Alba, Ferentino, Terracina, and other cities. The architectural as well as the decorative work was probably designed and executed by these artists. That the style was Roman is shown by the in-

scription of 1229 in the charming cloister of Sassovivo in Umbria, where the artist calls it *Roman work*. However, there were two other contemporary Italian schools which produced similar work: that of Campania, with centres at Salerno, Sessa, and Gaeta; and that of Sicily, in the churches of Palermo, Monreale, Cefalù, and others.

Consult: Boito, *Architettura Cosmatesca* (Milan); Frothingham, "Notes on Roman Artists of the Middle Ages," in early volumes of *American Journal of Archaeology*; G. Clausse, "Les Cosmati," in *Revue de l'art chrétien* (1897), *Les marbriers romains* (Paris, 1897); Tommasetti, *Bollettino della Commissione Architettura Comunale* (Rome, 1906); Filippini, *La Scultura nel trecento in Roma* (Turin, 1908).

**COSMETICS** (Gk. *kosmêos, kosmôê, I adorn*). The term is used to indicate (1) all the mixtures and preparations employed for the purpose of beautifying and improving the appearance of the hair or skin; (2) the art which serves to adorn, beautify, and improve a person's looks and appearance.

The preparations used are liquids, ointments, creams, and powders. Liquids are used chiefly for the hair in order to produce a more luxurious growth, or to impart to it a strong gloss, or to effect a change in its color, as by means of hair dyes and hair bleaches. The liquids used usually contain alcohol and oil in dilution; some containing also medicinal substances, such as quinine and cantharides, intended to act as a stimulant to hair growth. These preparations are all applied to the hair and scalp, followed by brisk rubbing or massage. It is the massage chiefly, if not wholly, that brings about the desired result, since the friction improves the circulation of the scalp and thus by nourishing the hair roots causes a more healthful condition and rapid growth of the hair. The cleanliness imparted to the scalp by the liquid preparation used and the rubbing likewise enhances hair growth. The ordinary hair tonic is not injurious, but hair dyes and hair bleaches frequently contain poisonous ingredients and are apt to be injurious both to the hair and to the general health.

For the face and hands various massage creams, vanishing creams, ointments, and powders are prepared. Some of the creams have carmine red incorporated into them to act as a rouge and to give a pink color to the skin of the face. The massage creams are made of casein, glycerine, fat, and water with some perfume added thereto. There are other preparations made of starch or chalk; and still others, like the pearl white, contain a white bismuth powder which is deposited as a fine white flour upon the skin. All these preparations for the skin are more or less harmful, because they clog up the skin's pores, thus interfering with its proper physiological functions and with its nutrition.

The cosmetic art includes a variety of procedures and manipulations by means of the hand and by the assistance of certain electrical appliances and vibrators. Manicuring and artistic hair dressing properly belong to the cosmetic art. Facial massage and the removal of wrinkles manually and by the vibrator are likewise cosmetic procedures. Cosmetic surgery is that branch of the surgical art practiced expressly for the purpose of improving a person's looks and not to cure disease. The procedures are

various, ranging from the removal of superfluous hairs by means of the electric needle to the removal of naevi, or birthmarks and moles. The correction of harelip and certain nasal deformities, as the hammer nose, are procedures of cosmetic surgery. See **PERFUMERY**; **ROUGE**.

**COSMIC DUST.** See **DUST**.

**COSMOGONY** (Gk. *kosmogonia, kosmogonia*, from *kosmos, kosmos*, order, world, universe + *gonê, gonê*, birth, origin). A name used by astronomers to designate theories concerning the origin and development of the solar system, stellar systems, or the universe in general. Many remarkable facts connected with our solar system tend to show that its present condition cannot be the result of a purely accidental action of natural forces. Thus, the orbits of all the important planets are very nearly circular and are situated nearly in the same plane; the directions of the planets' motions in their orbits are the same for all; all the planets, with the probable exception of Uranus and Neptune, rotate in the same direction on their own axes, and that direction is the same as the direction of their orbital revolutions, etc. Even the planetary satellites share in these peculiarities of the solar system; the planes of their orbital revolutions about the primary planets are always very near the corresponding planes of the planets' own axial rotations, and the directions of the satellites' revolutions also coincide with the directions of the planets' axial rotations.

**The Nebular Hypothesis.** Kant and Laplace have given us the well-known "Nebular Hypothesis," later developed by Sir W. Herschel, to account for the state of affairs existing in the solar system. According to this hypothesis, the material composing the system was originally a mass of intensely hot nebulous or gaseous matter that tended to assume a rotating globular form under the action of gravitational forces. Gradually the mass contracted, and successive rotating rings of matter were from time to time, as it were, left behind. These rings, in turn, broke up, and the matter of each formed a planetary system in which again rings and satellites could form just as in the parent nebular mass.

**Darwin's Hypothesis.** In 1885 Sir George Howard Darwin showed mathematically that the present condition of our earth and moon (the revolution of the moon and its axial rotation being synchronous) might have been brought about by the action of the tidal friction working continuously through successive ages of cosmic time. Indeed, it is quite reasonable to suppose that, when earth and moon were nearer together, and as yet in a more or less plastic condition, very gigantic tides must have been set up—tides involving the earth's semisolid matter, as well as the oceans of water and air. Darwin's researches have brought out the fact that such tides must produce important modifications in any system of celestial bodies.

**The Meteoric Hypothesis.** Sir Norman Lockyer's so-called Meteoritic Hypothesis assumes that space was originally occupied by swarms of meteors (q.v.), and that collisions between these swarms gave rise to condensations from which the stars have been gradually built up by accretion.

**The Planetesimal Hypothesis.** Modern research has shown that the nebular hypothesis is unable to explain all the phenomena presented by planetary systems, and, in order to overcome

the difficulties which arise, Professors Chamberlin and Moulton, of the University of Chicago, have recently put forward a theory which the former calls the "Planetesimal Hypothesis." It may be regarded as a combination of the nebular and meteoritic hypotheses. Led to the conclusion by the large number of spiral nebulae which have been brought to light by modern telescopes, the propounders of this theory suppose the solar system to have developed from such a nebula. This they imagine to have had its origin at a time when another sun passed near our own. This nebulous mass was composed of a great number of small masses, but throughout it there were primitive nuclei of considerable dimensions around which have gathered accretions of the scattered material, thus giving rise to the planets. See NEBULÆ; SOLAR SYSTEM; SUN; ETC.

**Ancient Cosmogonies.** Scarcely any people, either ancient or modern, has been without some theory concerning the creation of the world. The cosmogonies of chief interest in connection with our own views are those of Babylonia, India, Iran, Greece, and ancient Germany. The Babylonian system resembles in many respects the cosmogony of the Bible. There was darkness and water, with strange monsters. Into this chaos the god Bel entered, and clove the cosmic sea, and parted the darkness. Animals took the place of the former monsters, and man himself was created, as well as the sun and moon and five planets. In some of the latest hymns of the Rigveda (q.v.) water was the source of all, whence came fire and wind—the breath of divinity. Or, again, the world arose from the sacrifice of Man (Skt. *parusha*), whose head became the sky, his feet the earth, his eye the sun, his breath the wind, while from his mouth, arms, thighs, and feet the four castes sprang. These ideas, developed more fully in the pseudoepical Sanskrit *Purāṇas* (q.v.), exhibit clearly the pantheistic trend of Hindu thought. The rôle of Kāma or Love in Indian cosmogony bears some resemblance to that of the Greek Eros. Iranian cosmogony, as we find it in the *Avesta* and the writings in Pahlavi (q.v.), corresponds to the dualistic character of the Zoroastrian religion. Ormazd, the god of everlasting light, created the good in opposition to Ahriman, the devil, who dwells in eternal darkness. In the course of a period of 3000 years Ormazd created the heaven, water, earth, plants, animals, and man. In the following 3000 years Ahriman produced evils to combat these creations of Ormazd; but, despite some temporary success, he was finally forced to yield to the powers of good.

Greek cosmogony is more varied. The Homeric poems regard Ocean as the source of the world, while the Hesiodic account ascribes the first beginnings to Chaos. Thales followed the first theory, and Anaximander the second, which has its parallel also in India. Anaximenes considered air to be the source of all, while Heraclitus postulated fire as the primal element, and supposed a constant flux of all things, where only the divine law (Zeus) was immutable. The notion of Eros or Love as a cosmic force was introduced into Greek philosophy by Parmenides and Empedocles, for which Anaxagoras substituted Mind (Gk. *noûs*). Of special interest in this connection is the atomic theory of Democritus, according to whose view the world is permeated by a soul which is composed of atoms in continual motion, and which partakes of the nature of fire. Later Greek philosophy

did hardly anything towards the development of cosmogenic ideas.

For Germanic beliefs on this subject, the most comprehensive source is the *Voluspá*, an Icelandic poem of the twelfth century of our era.

**Bibliography.** For the cosmogenic ideas of the Egyptians consult the studies of Naville. The cosmological views of the American Indian and Eskimo tribes, of the African races, and of the peoples of Farther Asia and the islands of the Eastern seas, may be gathered from the writings of Brinton, Grey, Tylor, and others. The Hindu theories will be found in Hopkins, *Religions of India* (Boston, 1895), and the Persian in Jackson, "Iranische Religion," in Geiger und Kuhn, *Grundriss der iranischen Philologie* (Strassburg, 1900). Consult also: Lukas, *Grundbegriffe in der Kosmogonie der alten Völker* (Leipzig, 1893); Jensen, *Kosmologie der Babylonier* (Strassburg, 1890); Meyer, *Eddische Kosmogonie* (Freiburg, 1891); Faye, *Sur l'origine du monde . . . théories cosmogoniques des anciens et des modernes* (2d ed., Paris, 1885); Plunket, *Ancient Calendars and Constellations* (London, 1903); Chamberlin, "Fundamental Problems in Geology," in *Year Book No. 3 of the Carnegie Institution*; Clerke, *Modern Cosmogonies* (London, 1905); La-grange, *Études sur les religions sémitiques* (Paris, 1905); Moulton, "On the Evolution of the Solar System," in *Astrophysical Journal* for October, 1905; Hale, *Study of Stellar Evolution* (Chicago, 1908); Lowell, *The Evolution of Worlds* (New York, 1910).

**COSMOPOLIS** (from Gk. *kósmos*, *kosmos*, order, world, universe + *pólis*, *polis*, city). A French novel by Paul Bourget (1892). The characters come to Paris from all quarters of the earth, forming an international society. The theme of the action is the persistence of ethnical differences even where a complete cosmopolitanism has apparently been reached.

**COSMOPOLITE** (Gk. *κοσμοπολίτης*, *kosmopolitēs*, citizen of the world, from *kósmos*, *kosmos*, order, world, universe + *πολίτης*, *politēs*, citizen, from *pólis*, *polis*, city). A plant which grows spontaneously in every climate. Not to be confused with ubiquitous (q.v.).

**COSMORAMA**, *kōz'mō-rá'má* (from Gk. *kósmos*, *kosmos*, order, world, universe + *δράμα*, *hōrama*, sight, from *ὁράν*, *horan*, to see). An arrangement of lenses and mirrors for viewing pictures, so that they appear as natural as possible. The name was applied to exhibitions where representations of landscapes, buildings, and other features of places in different parts of the world could be seen. By properly arranging the lenses, mirrors, and illumination, the pictures were produced not only enlarged, but with the effect of perspective. Cosmoramas were first introduced in France at the beginning of the nineteenth century.

**COSMOS** (Neo-Lat., from Gk. *kósmos*, *kosmos*, order, world, universe). A genus of annual and perennial herbs of the family Compositae. The 20 or so species comprised in this genus are natives of tropical America, mostly Mexico. A few annual species are cultivated in flower gardens and have within recent years come into increased prominence and popularity, especially in the United States. (For illustration, see Plate of CRANBERRY, ETC.) The plants branch freely and are sometimes 10 feet high, leaves pinnately cut, flowers mostly rose, crimson,

purple, yellow, or white; generally solitary on a long peduncle. A sandy soil not too rich is preferred. The seeds are sown indoors, and the plants when large enough are set in the garden, after danger of frost is past. *Cosmos bipinnatus* and *Cosmos sulphureus* are the species most commonly grown. The former grows 7 to 10 feet high, blooms in the late fall, and has many different forms. A dwarf variety about 4½ feet high blooms in July. *Cosmos sulphureus* grows 2½ to 4 feet high, with sulphur or rich orange-yellow flowers 1 to 3¼ inches in diameter. It comes into blossom in some of the more southern States in late spring and continues to bloom without cessation until killed by fall frosts. The black cosmos (*Cosmos ducisfolius*) is a tender annual, growing only 12 to 16 inches high.

**COSMOS.** A great scientific work in four volumes, by Alexander von Humboldt, which appeared at intervals from 1845 to 1858. It is a physical description of the universe, setting forth physical laws in logical order, though modern science shows it faulty in some of its matter.

**COSQUIN**, kô'skân', EMMANUEL (1841- ). A French writer on folklore. He was born at Vitry-le-François, Marne. In his *Contes populaires de Lorraine* (1887) he follows Benfey in an attempt to show that the folklore of Europe has been derived from India. He also wrote on ecclesiastical subjects, chiefly for the paper *Le Français*, and translated into French the works of Joseph Fessler (q.v.) on papal infallibility (1873) and the Vatican Council (1877).

**COSS.** See ALGEBRA.

**COS'SA**, FRANCESCO (c.1435-c.77). An Italian painter of the Renaissance. He was a pupil of Tura of Ferrara and was also influenced by Piero della Francesca, worked at Ferrara and Bologna, and is considered, with Ercole Roberti, to have been the founder of the Bolognese school. He and his contemporary, Cosimo Tura, are the most important representatives of Ferrarese art. In the Palazzo Schifanoja at Ferrara there is a curious fresco by him, "The Glorification of March, April, and May," the other months having been done by lesser artists. In this composition there are a number of portraits of his contemporaries, remarkable for their fidelity to nature and for the valuable studies of costume. Indignant at the slight compensation he received from Duke Borso d'Este, he left Ferrara and settled at Bologna. Among his finest works are a Madonna in the Pinacoteca, Bologna; a Madonna in the Johnston collection, Philadelphia (attributed to Tura), and "Autumn" in the Berlin Museum. A distinguishing characteristic of his art is his command of movement and of line. Consult Berenson, *North Italian Painters of the Renaissance* (New York, 1907).

**COSSA**, LUIGI (1831-96). An Italian economist. He was born in Milan, studied at the universities of Pavia, Vienna, and Leipzig, and in 1858 was appointed professor of political economy in Pavia. His most important work is the *Primi elementi di economia politica* (8th ed., 1889), which has been translated into English and several other languages. Among his other publications may be mentioned: *Scienza della finanze* (1875; Eng. trans., 1888, under title *Taxation, its Principles and Methods*); *Guida allo studio dell' economia politica* (1876;

Eng. trans., 1880); and *Saggi di economia politica* (1878).

**COSSA**, PIETRO (1830-81). An Italian romantic dramatist, born in Rome. He fought in the campaign of 1849, going thereafter into brief exile in South America. His first dramatic success was the *Nerone* (1870), followed by *Plauto e il suo secolo* (1876), *Messalina* (1876), *Cleopatra*, and other plays of classic subject matter. In his best work Cossa frees the classic drama from Alferian imitation and the aridity of the classic tradition, attaining great excellence of historical coloring, reducing his characters from abstractions to concrete vital human beings, combining beauty of lyric movement with delicate humor, sound psychology, and realistic truth. Consult: Mazzoni, *L'Ottocento* (Milan); Franchetti, in *Nuova Antologia* (1881); *Works* (Turin, 1887).

**COS'SACK ASPARAGUS.** See TYPHA.

**COSSACK POSTS.** The name of an observation group of four men sent out from the support of an outpost. The *cossack post* is now included in the general term *outguards*, which vary in size from four men to a platoon. Consult *Field Service Regulations*, U. S. A. (1913). Each post consists of four men—three reliefs of one sentinel each and a non-commissioned officer as commander, or, failing such, an old and experienced soldier. They are a substitute for the usual line of pickets and sentinels. They are sufficient in number to cover the front of the support and to connect with the outguards of adjoining supports. The interval between posts and their distances from the support depends upon the situation and terrain. The sentinels are seldom posted more than 30 to 40 yards in front of the Cossack posts and are kept under constant observation by the other members of their post. They are relieved every hour, and the posts every three hours. The advantages claimed for the Cossack system are that it is more economical in point of men required than is the usual method and is besides less fatiguing and consequently more effective, and that, above all else, it enables the sentries to be more resolute in the performance of their duties, because, backed up by the nearness of their post, they are freed from any timidity of loneliness. See OUTPOST.

**COSSACKS** (Russ. *kozákî*, *kazakû*, from Turk. *kazâk*, robber: the same word in Tatar designating a light-armed warrior). A name borne by a people living under a peculiar military organization, who for several centuries have constituted an important element in the population of southern Russia. Their principal homes are the steppes of the Don and of Ciscaucasia and a region at the southern end of the Ural Mountains, on the borders of European Russia and Siberia. They are a mixed race, of Russian, Polish, Tatar, and other elements, with the Russian predominating. In fact, they are distinguished from the other Russians by their unsettled mode of life rather than by any difference of race or fundamental character. The Cossacks make their appearance in history about the close of the Middle Ages as a frontier people, on the border of Slavdom (Russia and Poland) on the one hand and the Tatar regions to the southeast on the other. A free, wild people, accustomed to live in the saddle and in constant warfare, they acquired by inheritance the qualities of courage, endurance, self-reliance, and good horsemanship which gave them high

rank among the irregular cavalry of the world. Long unaccustomed to the restraints of civilized government, they distinguished themselves by their predatory habits. The Don Cossacks, who at the present time constitute the principal body of the Cossacks, became powerful about the close of the sixteenth century. The town of Teherkask became the seat of their government. At the head of their democratic organization was the Ataman (Hetman). In 1773 the Don Cossacks joined the pretender Pugatcheff against Catharine II, for which they were deprived of all of their liberties and their democratic institutions. Yermak Timofeyeff, a Don Cossack, belonging to a lawless band, the Good Companions of the Don, entered the service of the Stroganoffs, a wealthy family living in the Ural region and holding special trading privileges, crossed the Urals with a few hundred followers in 1581, and in a few years conquered and brought into a rude kind of subjection all of western Siberia. From this time the history of the Cossacks is closely connected with that of the Russian progress eastward through Siberia. With wonderful persistence and endurance, and a spirit of enterprise that would have been impossible in the stolid Russian village peasant, they explored and subdued this vast addition to Russia's territory. The Malorussian (Little Russian) Cossacks, or Cossacks of the Ukraine (Border Land), were organized in the second half of the sixteenth century by Stephen Báthory, King of Poland, into a defensive bulwark on the southeastern frontiers of the realm. In the middle of the seventeenth century, harassed by Polish oppression, they revolted under the lead of their Ataman, Chmielnicki (q.v.), and placed themselves under the protection of Russia. Under the lead of Mazepa they joined Charles XII against Peter the Great, whose victory at Poltava sealed their fate. Their liberties were abolished, and they were treated with great harshness. The Zaporogian Cossacks (Russ. *Zaporog*, beyond the rapids), on the Dneiper, were one of the most notable of the tribes down to the middle of the seventeenth century, when they submitted to Russia. Their predatory incursions were not confined to the land, but included naval expeditions against the Turkish towns of Asia Minor. Among their peculiar tribal institutions was the celibacy imposed upon the ruling class.

The Cossacks are regarded by the Russian government as a military division of the population. They are organized in 11 *voiskos*, or *corps* (Don, Kuban, Terek, Astrakhan, Orenburg, Ural, Siberia, Semiryetchensk, Transbaikalia, Amur, Ussuri). Their military training begins in boyhood, compulsory service in the *stamtsa*, or Cossack post, begins at 18; field service begins at 20, 12 years being spent in active service and five years in the reserve. This service is divided into three classes—active, on furlough with arms and horses, and on furlough with arms but without horses. Each *voisko* equips and clothes its soldiers and receives an allowance of land from the crown. The Cossacks wear a distinctive uniform of dark green. Part of them, in addition to other arms, still carry a long lance. The Kuban *voisko* enrolls six battalions of Cossack infantry, and there are also 15 batteries (44 on a war footing) of Cossack field artillery. The title of Ataman, or chief of the Cossacks, is now vested in the Imperial family. The Cossacks probably num-

ber nearly 3,000,000, and it is estimated that over 300,000 could take the field within a comparatively short space of time. The Cossack regiments are armed with a short magazine rifle of 0.299 inch calibre, sighted to 3000 paces. Every cossack up to any age can be called out in time of emergency to assist in the national defense. Consult Erckert, *Der Ursprung der Kosaken* (Berlin, 1882), and Tettau, *Die Kosakenheere* (ib., 1892). A realistic picture of Cossack life may be found in Gogol's celebrated novel *Taras Bulba*.

**COSSACKS, THE.** A novel by Count Tolstoy (1852). It was translated into English in 1878.

**COSSON, kô'sôn', ERNEST** (1819-89). A French botanist, born in Paris. He carried on extensive botanical studies in Algeria and explored the flora in the suburbs of Paris. His published works include the following: *Flore descriptive et analytique des environs de Paris*, jointly with Saint-Pierre (1845); *Synopsis analytique de la flore des environs de Paris* (1845); *Atlas de la flore des environs de Paris* (1882); *Compendium Floræ Atlanticæ, ou Flore des états barbaresques: Algérie, Tunisie, Maroc* (1881-87); *Conspectus Floræ Atlanticæ* (1881); *Illustrationes Floræ Atlanticæ* (1883-92).

**COSSUTTIUS, kôs-sû'shi-ûs.** A Roman architect noted for his selection by King Antiochus Epiphanes (175-164 B.C.) to rebuild the great temple of the Olympian Zeus at Athens in the Corinthian style. He did not live to complete the temple, which was finished by Hadrian in the early second century A.D.

**COST.** See **COTISE.**

**COSTA, kô'sta, ALFONSO AUGUSTO DE** (1871-1915). A Portuguese statesman, born in Ceia, Guarda, Portugal. He studied at Coimbra, receiving his doctor's degree in 1895, and in the following year became professor of law. Known as an eloquent speaker, he affiliated himself with the Republican party and was elected by a great majority deputy to the Cortes, in spite of the machinations of government agents (Nov. 26, 1899). The ministry annulled his election on a futile pretext, but in the new elections, on Feb. 18, 1900, he was again triumphantly elected. In the Cortes he was received as a recognized enemy of the monarchical régime, and he soon gave more than ample proof of his enmity by introducing, amid great protest, a resolution in the Cortes in which he proposed the abolition of the monarchy. After the fall of the ministry he failed to be reelected, but threw himself enthusiastically into the preparations for the revolution which resulted in 1910 in establishing the Republic. Under the new régime he became Minister of Justice, and in January, 1913, Minister of Finance and Premier. The exiled Royalists in July, 1913, made an attempt on his life, but he escaped with slight injuries; another plot to kill him in September, 1913, was also frustrated. Dr. Costa, more than any other one man, typifies the spirit of the new Republic of Portugal. His publications include: *A Egreje e a questão social*; *O serviço de peritos no processo criminal: legislação portuguesa, critica e reforma*; *Direito civil* (1896); *Economia política* (1896-98); *Organização judiciária* (1897-1901).

**COSTA, kô'stá, CLAUDIO MANUEL DA** (1729-1901). A Brazilian poet, statesman, and jurist-consult. He was born at Mariano (Province

of Minas Geraes). He studied law at the University of Coimbra, and on his return to Brazil in 1751 devoted himself to his profession and to political economy. From 1780 to 1788 he was second Secretary of State. His works, which are numerous, are highly valued by the Portuguese, who consider them classics. The best of them is *Villarica*, composed about 1773, but not published until 1841.

**COSTA, ISAAC DA.** See **DA COSTA, ISAAC.**

**COSTA, LORENZO (1460-1535).** An Italian painter of the Renaissance. He was a pupil of Cosimo Tura in his birthplace, Ferrara, and was influenced at first by Ercole Roberti and Francesco Cossa. Of his supposed early paintings only the St. Sebastian (Dresden Museum) is authentic. In 1483 he went to Bologna, where he remained almost constantly until the fall of his patrons, the Bentivoglio family, in 1506, and there he began his connection with Francia. The artists had a joint school and worked as copainters. Costa first influenced Francia, and was in turn influenced by him. His landscape backgrounds are among the best of his day. He was a master of linear composition, and in his best pictures the color is clear and refulgent, the figures dignified, and the whole effect pleasing. Among his best paintings in Bolognese churches are: "A Madonna with Members of the Bentivoglio Family" (1488) in San Giacomo Maggiore, a characteristic example, admirable in its fresh, simple, sincere treatment and masterly drawing, "The Triumph of Life and Death," in the same church, a Madonna (1497), in San Giovanni in Monti; a "Santa Conversation," in San Petronio; and frescoes in the Misericordia and Santa Cecilia. After leaving Bologna he was appointed court painter in Mantua, where his chief work was the decoration of Palazzo San Sebastiano. Other works include "Isabella d'Este Crowned by the Muse" (Louvre) and the "Dead Christ" (1504, Berlin Museum). Costa played an important part in the history of the schools of Bologna and Ferrara. The young Correggio, who accompanied him to Mantua, was his principal pupil.

Consult: Morelli, *Italian Painters: Critical Studies of their Works*, translated by Constance Jocelyn Ffoulkes (London, 1892-93); Berenson, *North Italian Painters of the Renaissance* (New York, 1907); Gardner, *The Painters of Ferrara* (London, 1911).

**COSTA, SIR MICHAEL**, really **MICHELE** (1808-84). An Italian composer and conductor, born in Naples. He was taught by his father and Zingarelli (q.v.). When the latter's psalm was to be performed at the Birmingham Festival (1828), he sent Costa, then only 18 years old, to conduct it. Owing to a misunderstanding, Costa had, instead, to sing the tenor part, but acquitted himself of the task brilliantly, and his reception induced him to settle in England. He became conductor of Italian opera in 1830 and in 1847 assumed the same post in the Covent Garden Opera. In addition he was appointed conductor of the Philharmonic Society (1846), Sacred Harmonic Society (1848), Birmingham Festivals (1849), and Handel Festivals (1857). His principal work, the oratorio *Eli*, was successfully produced at the Birmingham Festival of 1855 and *Naaman* in 1864. In 1869 he was knighted by Queen Victoria and also received the royal order of Frederick from the King of Württemberg. Costa wrote several

ballets and operas, of which the most successful were *Don Carlos* and *Malek Adel*. He died at Brighton, England.

**COSTA, PAOLO (1771-1836).** An Italian author, born in Ravenna, educated at Padua, and a teacher successively at Treviso, Bologna, and Corfu. He published a commentary on Dante, a revision of the Dictionary of the Crusca, and translations of the *Batrachomyomachia* and of Schiller's *Don Carlos*. Works (Florence, 1839-40): biography by Mordani (Forlì, 1840).

**COSTA CABRAL, kô'stá ká-brál',** ANTONIO BERNARDO DA, COUNT DE THOMAR (1803-89). A Portuguese statesman. He became judge of the Supreme Court in Oporto and in Lisbon, and in 1835 was elected to the Chamber of Deputies, where at first he was one of the leaders of the Radicals, but soon joined the Conservative party. He was appointed Governor of Lisbon in 1838 and Minister of Justice in 1839. For the purpose of setting aside the constitution of 1820 with its restrictions of the royal power, he fomented, in 1842, an insurrection in Oporto, assumed control of the army, established a censorship of the public schools, suppressed the universities, and so oppressed the people with taxes that he was driven from power in 1846. Once more appointed Prime Minister, in 1849, he again played the dictator, to the detriment especially of the state finances, but was compelled to resign. The Queen refused to accept his resignation, and a revolution was started against him under the leadership of Saldanha, which overthrew his administration in April, 1851. He fled to England, but returned the next year, and from 1859 to 1861 was Ambassador to Brazil. In 1862 he became a member of the Council of State and president of the Superior Administrative Court.

**COSTANEOAN.** A linguistic family of Indians, formerly occupying territory north of San Francisco Bay. In 1910 there were but 17 passing under the name "Santa Cruz."

**COSTA RICA, kô'stá rê'ká** (Sp., rich coast). The most southern of the Central American States, bounded by Nicaragua on the north, the Caribbean Sea on the east, Panama on the southeast, and the Pacific on the southwest (Map: Central America, E 5). Its area is estimated at 18,700 square miles. Lake Nicaragua forms part of the northern boundary.

**Topography.** The interior of the country is taken up partly by the Talamanca Range of mountains (a continuation of the Cordillera of Chiriquí), which runs from the southeast to the northwest as far as lat. 10° N. The Talamanca is of volcanic origin and reaches in its highest peaks an altitude of over 12,700 feet. North of the Cartago highland commences the second mountain range, which extends in the same (northwesterly) direction to the northern boundary of the Republic. There are several volcanoes in this range. Of them, however, but two—the Irazú (11,500 feet) and Turrialba (11,350 feet)—show any signs of activity. Since 1841, when the town of Cartago was almost completely destroyed, no serious eruption has occurred. Earthquakes are of frequent occurrence. The last serious shock occurred in 1910, when the Peace Palace and other buildings at Cartago were destroyed, and 1000 lives were lost. The Atlantic coast, which, according to the adjustment of the southern boundary in 1900, reaches only to a point a little north of the mouth of the river Teliri or Sixola, is gen-

erally low, and, with the exception of Port Limón, without any inlet. The Pacific coast, on the contrary, has a more elevated surface and forms the two spacious gulfs of Nicoya and Dulce, which are protected by two mountainous peninsulas. There are a number of smaller inlets in the northern part. The rivers of Costa Rica are short and, although abundant in water, unnavigable. Most of them flow into the Atlantic or the Pacific, while some join the San Juan, which forms the eastern half of the northern boundary.

**Geology.** The interior highland region is composed of Paleozoic and Mesozoic strata, in places broken through by ancient eruptives and overlain by more recent lava flows. Many districts are known to be mineralized; the deposits of gold are especially important and have attracted the attention of foreign capitalists, who are now engaged in developing this branch of the mining industry. The east coast of Costa Rica is an alluvial plain.

**Climate.** In regard to its climate Costa Rica may be divided into three zones. The torrid zone, below 3000 feet, comprising the coast lands, has an average temperature ranging from 72° to 82° F. The temperate zone, lying between 3000 and 7500 feet, has the most salubrious climate and a mean temperature ranging from 57° to 68° F. Above 7500 feet the temperature is much lower, and frosts are frequent, but snows rare. On the table-lands of San José, lying at an elevation of 3000 to 4000 feet, the climate is very agreeable, the temperature having a range of only about 5°, the mean for the year being 67° F. The average yearly rainfall is about 100 inches, but occasionally it reaches 130 inches. The dry season lasts from December to May, while the months of December, January, and February are the coldest of the year. Owing to the proximity of the two oceans, winds blow almost continually and occasion considerable discomfort during the dry season. On the whole, the climate of Costa Rica is healthful and fevers occur only in regions below an elevation of 150 feet.

**Flora.** The vegetation of Costa Rica is characteristically tropical in its nature. In the forests are found mahogany, brazilwood, cedar, evergreen oak, and ebony. Coffee and banana are the principal cultivated plants.

**Fauna.** Animal life is abundant and varied. The tapir and other South American animals are found. Bird life is represented by about 700 species, including parrots, toucans, humming birds, and members of the gallinaceous family. There are over 130 species of reptiles and batrachians. The most important life in the surrounding waters are the pearl and mother-of-pearl oysters.

**Agriculture.** Costa Rica is essentially an agricultural country and is chiefly dependent on the cultivation of coffee and bananas. Notwithstanding the sparse population of the country and the lack of transportation facilities, agriculture is in a flourishing condition, as evidenced by the constantly increasing exports of agricultural products. This is due partly to the fertility of the soil and favorable climatic conditions, and partly to the fact that more than two-thirds of the inhabitants belong to a class of peasant proprietors. The state domain is sold or leased on advantageous terms in lots of not over 500 hectares. The presence of so large a proportion of working landowners makes

not only for the development of agriculture but for the political stability of the country. Coffee cultivation was retarded during the first decade of the century by the prevailing low prices. In 1894 the export amounted to 23,129,000 pounds; it increased to over 43,000,000 in 1898, decreased to about 24,000,000 in 1904, advanced to about 35,000,000 pounds in 1905, and in 1911 was 27,150,000 pounds. This latter figure represents the approximate annual export from 1909 to 1912. Banana growing has developed rapidly, chiefly under American management; over three-fourths of the export goes to the United States. In 1881 about 3500 bunches were exported; by 1890 the exports had increased to 1,034,765 bunches, while in 1905 they amounted to 7,283,000, in 1910 to 9,097,285, and in 1912 to 10,647,702 bunches. Besides coffee and bananas, there are raised sugar, cacao, rice, corn, and beans, but none of them is exported to any extent. Stock raising, though relatively unimportant, is developing. The forests are exploited on a steadily increasing scale.

**Mining and Manufactures.** The precious metals, particularly gold, are mined to some extent, principally with the aid of American capital. Their export, which was valued at about \$283,000 in 1905, increased to over \$1,184,000 in 1911 and then declined to about \$764,000 in 1912. Of manufacturing establishments Costa Rica has very few, the largest being the national liquor factory and the national foundry at San José.

**Transportation and Communication.** The transcontinental railway connects the Caribbean port Limón with the Pacific port Puntarenas, by way of San José. There are branches to the north and the south of the main line, and these it is planned to extend to various parts of the country and ultimately to connect with railways in Nicaragua and Panama. The railways aggregate over 430 miles. There are over 130 telegraph offices, with upward of 1520 miles of wire.

**Commerce.** The chief ports are Limón and Puntarenas. In 1912 there entered at the former 538 vessels, of 1,129,606 tons, and at the latter 87 vessels, of 178,904 tons. Imports increased from \$6,175,637 in 1909 to \$10,187,686 in 1912, and exports from \$8,264,174 to \$10,071,144. Of the imports in 1912, the value of \$5,865,908 represented the United States, \$1,503,944 Germany, and \$1,391,003 the United Kingdom. The coffee export in 1912 was valued at about \$4,950,000, about five-sixths of it going to the United Kingdom; the banana export, about \$3,503,000, over three-fourths to the United States. Other exports are gold bars, woods, hides, rubber, and cacao. About 46 per cent of the imports are drawn from the United States, and about 55 per cent of the exports are to that country. Costa Rica is economically one of the more promising Latin-American countries. Its favorable climate and soil and its comparative freedom from political disturbances have attracted foreign capital.

**Government.** In its form of government Costa Rica is a republic. It is governed under a constitution adopted in 1871; but this did not come into force until 1882, and it has been repeatedly modified. The executive power is vested in the president, elected indirectly for four years; he is ineligible for the next succeeding term. He is assisted by a cabinet of four members. The congress consists of a

single chamber of 43 representatives elected indirectly for four years. For administrative purposes the republic is divided into seven provinces, administered by governors appointed by the president. Justice is administered by a supreme court, two courts of appeals, a court of cassation, and also provincial courts. Capital punishment is prohibited. The constitution provides for compulsory military service in time of war. On a peace footing the standing army has a maximum strength of 1000 men and the militia about 5000. See **ARMIES AND NAVIES**. For national colors see **Colored Plate of FLAGS**.

**Finance.** The standard of value is gold, the monetary unit, the colon, par value 46.536 cents. The budget for 1914 showed estimated revenue of 9,200,000 colones and estimated expenditure of 9,013,635 colones. The estimated receipts from customs were 5,500,000 and from liquor excise 2,200,000 colones. Public debt, as converted at the end of 1911: foreign, £1,617,200; internal, \$6,553,950. The metric system is legally established in the country, but Spanish weights and measures are generally used.

**Banks.** There are 5 banks in Costa Rica, with a combined capital of 6,365,000 colones. At the end of 1911 notes in circulation amounted to 4,097,405 colones. Foreign gold is legal, but not foreign silver.

**Population.** Although there are many mixed bloods in Costa Rica, the percentage of Spanish blood is greater than in the other Central American republics. The majority of the inhabitants claim descent from the Spanish colonists, chiefly Galicians, who arrived in the sixteenth century and subsequently. Through the industry and peaceful disposition of the people, Costa Rica presents a favorable contrast to the rest of Central and much of South America. The population in 1904 was reported at 331,340. The enumeration of Dec. 31, 1911, showed 388,266 inhabitants, but it was not complete, several districts being omitted. The largest town is the capital, San José (31,688). In 1910 and 1911 immigrants numbered 11,233 and 9537; emigrants, 7236 and 8170; births, 15,847 and 16,839; deaths, 9723 and 9483.

Elementary instruction is free and compulsory, but the majority of the inhabitants are still illiterate. In 1911 about 30,000 pupils were enrolled in the elementary schools. There are several institutions for secondary and professional education. The Roman Catholic church is recognized and supported by the state, but other religions are tolerated.

**History.** Costa Rica was first visited, and probably named, by Columbus in 1502 and settled permanently about 1530. It formed a part of the audiencia and captaincy-general of Guatemala till 1821. With other Central American States, Costa Rica was a part of Mexico till 1823, when the proclamation of a Mexican republic caused them to withdraw from a connection which had always been distasteful and which in effect had been merely nominal. A federal republic of the seceding states was first tried. It lasted until 1839, but its authority does not seem to have extended over the Costa Ricans, who busied themselves with commerce and took little interest in public matters. Affairs remained in an unsettled condition, however, and Costa Rica's exact status was not definitely determined until 1848, when she successfully declared herself an independent republic.

In 1856 Costa Rica was involved in war against the filibuster William Walker (q.v.). The country has been free from revolution than its neighbors. The present constitution dates from 1871. In 1897 Costa Rica became a member of the short-lived Greater Republic of Central America, established in 1895 by Honduras, Nicaragua, and Salvador for the purpose of common defense and the harmonious adjustment of foreign relations. Since then nothing more serious than boundary disputes has disturbed the government of Costa Rica. The most important of these, with Colombia, was adjusted in 1900, in favor of Costa Rica, by the award of President Loubet of France. But as Loubet in making that award had been guilty of extralimitation, the award was rejected, and after many attempts to reach a settlement (made somewhat more complicated by the fact that Panama had become independent and had to be dealt with instead of Colombia), the whole matter was again submitted to arbitration, with the Chief Justice of the United States Supreme Court as arbitrator, by a protocol signed at Washington March 17, 1910. Besides the general works on Central America, of which Squier, *States of Central America* (New York, 1858), is the best, and Bancroft, *Central America*, vol. iii (San Francisco, 1890), is the most copious, consult the English translation of Calvo, *Republic of Costa Rica* (Chicago, 1890). This is a popular and patriotic work, authorized by the Costa Rican Government, and gives the version of political and commercial events most acceptable to the men in power in 1890.

Consult: Barrantes, *Geografía de Costa Rica* (Barcelona, 1892); Villafranca, *Costa Rica, the Gem of American Republics: The Land, its Resources and its People* (New York, 1895); Biolley, *Costa Rica and her Future* (Washington, 1889); Schroeder, *Costa Rica State Immigration* (San José, 1894); *Revista de Costa Rica, en el Siglo XIX* (ib., 1902); Barrantes, *Elementos de Historia de Costa Rica* (ib., 1892). For detailed bibliography, consult D. J. Maluquer, *República de Costa Rica* (Madrid, 1890). Maps are published by the Bureau of American Republics (Washington, 1903), and the Royal Geographical Society (London, 1897), the latter being physical.

**COSTE**, kōst, JEAN VICTOR (1807-73). A French naturalist, noted for researches in embryology and for efforts towards the cultivation of fishes in his country. In 1841 he became professor of embryogeny at the Collège de France. Mainly through his influence 600,000 salmon and trout were placed in the Rhône. In 1862 he was appointed inspector general of the river and coast fisheries. He published: *Cours d'embryogénie comparée* (1837); *Instructions pratiques sur la pisciculture* (1853); *Ovologie du Kangaroo* (1838); *Histoire générale et particulière du développement des corps organisés* (1847-59); *Voyage d'exploration sur le littoral de la France et de l'Italie* (1855).

**COSTEANING** (kōs-tē'ning) **DITCH** (from *costean*, from Corn. *cothas*, dropped + *steann*, tin, Welsh, *ystaen*, Gael. *staon*, Manx *stainny*, Lat. *stannum*, tin). A ditch dug through the surface soil to bed rock, at right angles to the strike of the formation, for the purpose of prospecting for or locating the outcrop of the continuation of a mineral deposit, the presence of which is suspected. In the United States,

this method is known as *trenching*. In the Cobalt District of Ontario many miles of such trenches were dug in prospecting for silver veins in the ore-bearing formation. The same method was adopted in the Porcupine District of Ontario in the search for gold veins. It is the usual method followed in preliminary prospecting when the presence of mineral is suspected or known from surface float, and the overlying soil is not too deep.

**COSTELLO, LOUISA STUART** (1799-1870). An English author and miniature painter. For a time she occupied herself entirely with painting miniatures and copying illuminated manuscripts, but having attracted the attention of Scott and Moore, she adopted literature as her profession and produced many works which attained popularity. Some of them are: *Songs of a Stranger* (1825); *The Maid of the Cypress Isle and Other Poems* (1815); *Specimens of the Early Poetry of France* (1835); *The Rose Garden of Persia* (1845), with illuminations by herself and her brother Dudley; and a number of semihistorical novels, of which the most prominent is *Memoirs of Mary, the Young Duchess of Burgundy* (1853).

**COSTER, KÖST'ER, LOURENS JANSZON.** A native of Haarlem, Holland, reputed inventor of printing (about 1440). He is said to have printed sentences from beech-bark blocks, to have discovered a suitable ink, and to have substituted types of lead and later of pewter for beech wood. As he is alleged to have endeavored to counterfeit manuscript, he is supposed to have worked in secret, but to have taken apprentices, one of whom, Johann Gensfleisch, a member of the Gutenberg family, is said in 1441 after Coster's death to have stolen types and matrices and fled to Mainz, where he might have revealed the secret to Gutenberg (q.v.). Coster's claim, vigorously maintained by many Dutch scholars, was disproved by Van der Linde (1870), who showed that Coster was a tallow chandler and tavern keeper, that he was confused with Lourens Janszoon, a wine merchant and town officer, and that the claim for him as inventor was first made by Gerrit Thomaszoon in 1550. Consult Morley, *English Writers*, vol. vi (London, 1890), also Wysz, *Zentralblatt für Bibliotheksvesen* (1888).

**COSTER, SAMUEL.** See KOSTER, SAMUEL.

**COSTIGAN, CAPTAIN.** A retired shabby-genteel Irish officer in Thackeray's *Pendennis*.

**COSTIGAN, JOHN** (1835-1916). A Canadian statesman. He was born at St. Nicholas, Quebec Province, and was educated at St. Anne's College. He became a judge of the Inferior Common Pleas Court, was in 1861-66 a Conservative member of the New Brunswick Legislature, and after confederation in 1867 was elected to the Dominion House of Commons, of which he remained a member until 1896. During the earlier part of his parliamentary career he took a prominent part in amending the school law of New Brunswick, which contained a provision obnoxious to Roman Catholics. In 1882-92 he was Minister of Inland Revenue, from 1892 to 1894 was Secretary of State, and in 1894-96 was Minister of Marine and Fisheries. In 1882 he procured the adoption by the House of Commons of a notable series of resolutions praying the British government to concede home rule to Ireland. The resolutions were politely disregarded in London. In 1896 he was a delegate to the National Convention, Dublin, in the interest of

Irish home rule. In the same year he left the Conservative party and became a supporter of the Laurier administration. In 1907 he was appointed to the Dominion Senate.

**COSTMARY** (from *cost*, Lat. *costum*, an Oriental aromatic plant, from Gk. *kóros*, *kostos*, spice root + *-mary*, Fr. *marine*, Lat. *marinus*, pertaining to the sea, from *marc*, sea, but confused by popular etymology with *Mary*). The rayless form of *Chrysanthemum balsamita*, a perennial plant of the family Compositae, a native of western Asia, long cultivated in gardens for the agreeable fragrance of the leaves. The root leaves are ovate, of a grayish color, on long footstalks: the stem is 2 to 3 feet high; it has small heads of deep yellow flowers in loose corymbs.

**COSTS** (from *cost*, OF. *cofter*, *couster*, Fr. *coûter*, ML. *costare*, to cost, from Lat. *constare*, to cost, stand together, from *com*, together + *stare*, Gk. *istárai*, *histanai*, Skt. *sthā*, to stand). In a litigated case, the sum of money which the successful party is allowed to recover from his opponent, as a partial compensation for the expenses of the litigation. In actions at common law costs are the creation of statute, but in equity and admiralty suits they are fixed by the court, except where this power has been taken away or modified by legislation. Even in common-law actions discretion is often vested in the court to grant an allowance to the prevailing party in addition to the ordinary costs, and in some jurisdictions paupers and seamen may be relieved from costs altogether.

Costs are either (a) *interlocutory*, i.e., such as are awarded upon motions or similar proceedings during the pendency of the action, or (b) *final*, i.e., such as follow upon the determination of the action. Upon the decision of a motion, or upon a judgment on appeal reversing the judgment appealed from and awarding a new trial, costs are often ordered to *abide the event*. In such a case, if the final judgment is in favor of the party who succeeded on the motion or appeal, he gets his costs of those proceedings, otherwise he loses them.

The *taxation of costs* is the official adjustment, on notice, of the various items to which the successful party is entitled. For details relating to costs, consult the authorities referred to under PRACTICE.

**COSTUME** (Fr. *costume*, from It. *costume*, from ML. *costuma*, from Lat. *consuetudinem*, custom or habit).

Costume is dress (q.v.) regarded from the point of view of style, the distinctive garments worn at different periods by different human groups, and including not only gowns, shirts, drawers, coats, vests, trousers, petticoats, skirts, hoop skirts, waists, corsets, stockings, hats, boots, shoes, collars, belts, fans, garters, gloves, but also jewelry, modes of dressing the hair and beard, military and naval uniforms, ecclesiastical vestments, university robes, armor and coats of arms. See HERALDRY, ARMOR, COSTUME, ECCLESIASTICAL; HAIR DRESSING; BEARD; UNIFORMS, MILITARY AND NAVAL; JEWELRY; DRESS; FASHION; CROWN, CORONET; UMBRELLA; PARASOL; SHOES; CORSET; CRINOLINE; TATTOOING; ETC.

Once it was the generally accepted opinion that the primary object of clothing is to conceal nakedness and satisfy innate feelings of modesty. This view was perhaps based to some extent on the third chapter of Genesis, where,

after Adam and Eve ate of the fruit, "the eyes of them both were opened, and they knew they were naked; and they sewed fig leaves together and made themselves aprons . . . and hid themselves from the presence of the Lord God amongst the trees in the garden." During the past few years, however, anthropologists have accumulated and arranged facts about primitive peoples which, in the works of Westermarck, "appear to prove that the feeling of shame, far from being the cause of man's covering his body, is, on the contrary, the result of it; and that the covering . . . owes its origin, at least in a great many cases, to the desire of men and women to make themselves mutually attractive.

Certainly, when we turn from primitive to modern civilized humans, it is obvious that the primary object of costume, which is merely clothing that has style, is to increase the attractiveness of the individual or class of individuals and to enhance the curiosity and desire of the sexes for each other by exaggerating the difference between them and the mystery of it. Structurally as well as decoratively the difference between "pants and petticoats," "trousers and skirts," is fundamental—so thoroughly fundamental that when women "wear the trousers" we are said to have "petticoat government."

Climatically, clothing may be divided into two classes (with apologies to Dr. Stratz)—one tropical, based on skirts; the other arctic, based on trousers—both developed from the girdle or waist cloth. In the arctic regions both men and women wear trousers, in the tropics both wear skirts; while in between, the men adhere to the arctic costume, the women to the tropical one, apparently because most of the women lead an inactive and house-sheltered life, while the men are active out-of-doors. It is noteworthy that when women work as laborers they are apt to don trousers, e.g., in the Belgian mines or the Swiss fields. The ancient Greeks and Romans were much impressed by the fact that the barbarians to the north wore trousers. Cicero speaks of the Transalpine tribes as the "panted people" (*nationes braccatae*), while Pliny's term for what was afterward called *Gallia Narbonensis*, is *Gallia braccata* (Breeches Gaul). However, it will not do to push the geographical division too far, for trousers were the national costume not only of the peoples to the north of the Greeks and Romans—Gauls, Belgians, Franks, Britons, Germans, Scythians—but also of those to the east—Medes, Persians, and Parthians, as well as Armenians and Phrygians.

To judge from the artistic remains of ancient Egypt and Assyria, the use of rich stuffs was the primary thought of those Egyptians who sought to be splendid in appearance. Beauty of material and of pattern at least held an even place in their minds with jewelry. Thus, from the earliest era known to us by the painted monuments down to a period later than the Macedonian conquest, the little-changing adornment of the Egyptian official or court lady was something very magnificent indeed, in the way of broad necklaces made up apparently of ring within ring of carved gems, mounted in gold with exquisite handling and taste, and covering the shoulders and the junction of the throat with the breast, as completely as the steel gorget of the sixteenth century. The full significance of these collars is not entirely certain.

It may be that in some cases the jewelry was sewn upon a collar-shaped piece of stuff, which has fallen away from those jewels which are found in the ancient tombs. Armlets worn on the upper arm and also on the wrist, like the modern bracelet, are as common as the necklaces, and there are evidences of a jewelled girdle as rich and as broad as the combination of necklaces, although this, being worn, as the necklaces are, directly upon the skin, is only in part seen, being often covered by the folds of the skirt, which is sometimes secured to the belt and falls below it. The stuffs themselves are found of still greater splendor in the representations of upholstered furniture; but this appears to be in part because a larger surface could be presented there than in the garment worn by man or woman. The patterns are so similar to the earlier painted designs of the tomb interiors that there becomes evident a close connection in the mind of the Egyptian designer between one surface and another, the beautifying of which was to be intrusted to color. There are, however, stuffs of the eighteenth dynasty, and perhaps earlier, usually of linen, which have been found in a more or less fragmentary condition in the tombs, and many of these are of the most exquisite beauty, equaling in the perfect intelligence of the design adapted to textile fabrics the finest work of the Byzantines or Persians 2000 years later. In the warm climate of Egypt the clothes even of persons of rank were very slight and rather for ceremonial purposes than for utility. In the Assyrian monuments, on the other hand, there is a marked tendency towards covering the whole person with what seem to be heavy draperies, whereas in the Egyptian bas-reliefs the lines of the body are often made visible through the opening which represents the outer garments, suggesting either a partly transparent material or at least a material so little adjusted to the person and so slight that the body itself was never forgotten. The monuments of the Assyrian tombs, on the contrary, show wrappings apparently opaque and stiff. It is evident, however, that embroidery was much used; for parts of the garments, as of a king, are sculptured in low relief upon relief, and in a way which resembles closely the representation of the embroideries upon priestly robes in the sculpture of the Italian Renaissance. As for jewelry, it was as rich and splendid in Assyria as in Egypt, though the forms differ.

Among the peoples of western Asia even partial nudity was considered dishonorable, or at least the badge of inferiority. Accordingly, the heavy garments shown in the works of art of Mesopotamia are easy of explanation, for where only slaves are wholly or partially naked, the tendency is strong towards the association of high rank with complete clothing. But then another tendency appears, that of making the garments of plainer stuff when the body is covered by them from shoulders to ankles, and using the richer stuffs, as above explained, for borders and the like. The Egyptian, with body, arms, and feet bare, might make his kilt of the most splendid piece of weaving obtainable, but the Assyrian, using yards of material for his garment, would naturally employ a simpler stuff: not to avoid expense, but because people of such refined taste as those of Mesopotamia would shun the use of large surfaces, of uniform

patterns, or the contrast, side by side, of differing patterns, of about equal size and brilliancy.

This tendency is not maintained, however, in that other ancient civilization in a sense equal in antiquity as in importance to the civilization of western Asia. The Chinese, from the oldest times of which we have any knowledge, have been among the greatest artists in textile fabrics, as in other industrial arts, and history does not tell us of the time when the population, whether of true Chinese origin or of conquering Tatar dynasties and their followers, have not been more and more clothed in proportion to their rank and station. Porters may go barelegged and barearmed, and, in warm weather, with the body naked above the belt, but as one ascends in the orders of rank, the clothing becomes more and more complete. This tendency is not, however, accompanied by any objection to brilliant and rich stuffs. The more abundant the means of the wearer, the richer his costume—that seems to have been the rule from all time; and this is partly explained by the beauty of the floral and foliated designs. Embroidery, too, is used to heighten and complete the splendid weaves, and at least from the tenth century of our era until the present day, the most magnificent stuffs in texture and in color are those used by the ladies and gentlemen of the court. On the other hand, personal jewelry, that which is worn apart from the garments, is not very rich nor very costly, though it may be effective. Strings of pearls are known, and many stones that we in the West ignorantly despise because they are inexpensive, are made much of by the Chinese, who will use a rough turquoise, a piece of veined or spotted agate, or even a beautiful piece of glass accidentally rich in its veining and cut deliberately from the vessel to which it belonged—setting them in bronze or silver gilt, and making a very decorative clasp, or buckle, or pommel of a sword hilt. Chinese costume should be most carefully studied, because it has been maintained in its traditional character even to our own time. The blue cotton blouse of the workman, and the garment of delicate blue and gold silk, woven in very elaborate patterns expressly for this garment, with gold or gilt buttons spherical in shape and working in loops, are mainly the same garments as those of a century ago.

The people of India are even more divided among themselves in details of costume than are the people of Europe. The general character of the different races, north and south, leads towards a great distinction between classes of the population. The simple piece of stuff, 4 feet wide by thrice as long, worn by the women, is most gracefully draped about the shoulders and breast; in very recent times it is often a piece made in Europe of three large handkerchiefs, with their several borders complete. This is worn over a petticoat; arms and legs are bare, and the feet, except for occasional use of sandals; but the dark skin is barred and spotted with many and large jewels. Necklaces, broad armlets and wristlets, rings for toes and fingers, earrings, and nose rings, are all made of silver wire for the poorer women, who often put their whole savings into these adornments. The necessity of providing for a very warm summer climate, and in the south for a wholly tropical year, has caused the making of muslins of a fineness and perfection of weave never approached in Europe, though these native manu-

factures have been destroyed by the competition of British cottons. A few of the native princes alone encourage the making of these exquisite weaves. Besides these there are figured cottons of such perfect make and so beautiful in design that they are worn even by princes, as if of equal importance with silk. The gold-flowered and silver-flowered textiles of silk and cotton, or even of fine cotton alone, are famous in Europe, under the name "kinkab" or "kincob." The costume of India in general is mainly an affair of beautiful stuffs, very little shaped to the body and usually worn loosely, and of jewels in great abundance.

Among the people of the tropical islands, the Malays, and the black and brown inhabitants of Polynesia, the art of weaving has never reached sufficient perfection to allow the stuffs to be sought for their own sake. Very beautiful patterns are printed upon cotton by the women of the larger islands, wood blocks being used for the purpose in a way almost exactly like that employed in the printing of cretonnes and wall papers among the Western nations; but these stuffs, however attractive to our eyes, however superior in design, are yet inexpensive—they could be produced by any one who has a little skill in the use of the hands, and are therefore not a part of ceremonial or decorative costume. A few very beautiful weaves exist, as in the Solomon Islands, and especially in New Zealand, but still they are not of rare material, nor is the elaboration of the design very great. The skill in the working of metals, which is great among the Indians of the continent, is much smaller among the islanders, and so it happens that personal jewelry also is but little sought for by the chiefs. The result of all this is seen in the simple and tasteful use of natural productions, brilliant flowers, and richly colored fruits and seeds, which, strung as necklaces or worn as pendants, have especial significance and are attached each in its way to the traditional ceremonies of these curiously civilized peoples.

If now we turn to the race which of all peoples has had the most influence over modern intellectual life, we shall find that the Greeks of antiquity limited their desires in the way of textile fabrics to very simple patterns, as of stars or round spots diapered over the surface of a stuff, with somewhat more elaborate patterns of zigzags and frets in the borders. Their costume, including their jewelry, was, in fact, marked throughout by extreme simplicity, which increases as our studies bring us to a later time. The statues discovered on the Acropolis at Athens since 1833 are certainly of the century before the Persian invasion of 480 B.C. They show a number of garments, certainly as many as three, worn one over the other by the priestesses represented in the statue; and each of these garments is made of a different stuff, all the stuffs, or all but the craped undershirt (the *chiton* of later dress), covered with elaborate patterns in several colors. There is nowhere a more interesting study of brilliant coloring in costume than were these statues when first discovered, and fortunately the finest of them have been reproduced in water-color painting, and these water colors often multiplied in chromolithography, and published by the archaeological societies. It is clear that, immediately after the Persian War, during the period of the Athenian hegemony in Greece, beginning with 477 B.C., the use of these striped and spotted

stuffs becomes much less common, at least in the mainland of Greece, and the use of plain materials, white, bordered with stripes, or of one rather subdued color perhaps striped at the edge, becomes the rule. Those admirable bronze statues which were discovered in the famous villa at Herculaneum and now stand in the Museum of Naples (the Room of the Greater Bronzes) show perfectly well—better than any bas-reliefs, however elaborately detailed—the true Greek sense of what was beauty in costume. The long *chiton*, which, left ungirdled, would sweep the floor, is belted up so far as to allow a foot or more of its length to hang over the girdle outside of the skirt or lower part, forming a sort of pocket, known as the *kolpos*. Outside of this is seen hanging what looks like a cape, and which generally reaches just the line of the girdle or may fall a little below it. This, however, is not a cape nor a separate garment at all: it is the reverse or turning over of the *chiton* at the top. Of the *chiton* there were several forms. The earliest was not sewn at all, and therefore left the right side, thigh and leg, exposed on the slightest movement. A later form was a sewn-up cylinder, a long shirt in the modern sense. The stately maidens of the reliefs and the vase paintings often wear one of these two forms of *chiton*, and nothing else. To such a dress, even on occasions of great ceremony, there is nothing to be added, except perhaps a more splendid brooch on the shoulder, a broader and more brightly colored border to the *chiton*, perhaps an armlet, perhaps richer and more glittering earrings. Splendor in the more modern sense was hardly desired, and beauty was shown in the perfect taste with which these simple appliances were disposed. Other garments, however, are seen in the sculptures and vase paintings: the *himation* and a variety of it, the *chlamys*, were square or oblong pieces of woolen cloth, draped about the left shoulder and covering the body more or less as it might be adjusted; it was held sometimes by brooches. Statues show a garment arranged nearly as the Scotch plaid is, at times folded long and narrow, falling over one shoulder and passing around the waist; and this is thought to be a long and narrow *himation*. It is impossible to distinguish these garments from the *epiblemata*. The essential fact is that the Greeks, both women and men, wore a long shirt and a loose, square shawl over it, and nothing else on body or limbs.

The Etruscans were quite as simply clothed as the Greeks. The later Etruscan work passes by insensible gradations into that Italian work of the centuries during which the Roman Republic and the early Empire controlled the whole peninsula, and introduced insensibly its own strongly Hellenic tendencies into the arts of the subject countries. The effect of this on the art of northern Italy was altogether fortunate, except in so far as the lover of strongly accentuated national peculiarities found reason to regret their partial disappearance. The terracotta sarcophagi, with high reliefs and with what are almost statues wrought upon the covers; the bronze statues and groups, and the jewelry of the fourth century B.C., and the following epoch, are almost Greek in their charm, while preserving a certain attractive local color. It is probably because of this constantly increasing influence of the Grecian artistic sense upon all the nations of Italy that the Roman dress from the earliest times known to us remains

Greek in its simplicity, although very different in form. There were different ways of wearing the *toga*, some of which were connected with ceremonial occasions. Thus, when a statue or a bas-relief shows a Roman draped in a large and elaborately folded *toga*, one fold of which is brought over the head, he is assumed by modern students to be a person who is performing a sacrifice. The *toga*, as ordinarily worn, showed the *tunica* in front, from the throat nearly to the waist, but the long end could be thrown over the right shoulder so as to cover the *tunica* entirely, and in this way the *toga* would cover the whole person, from the neck to the ankles. Here, as among the Greeks, good taste dictated the utmost simplicity of effect, except in the mere arrangement and careful disposition of the folds. There was no other garment of the men while in the city which in any way concerned their appearance, as the only leg coverings known were bandages or wrappers, not unlike those worn to-day by the peasantry in some parts of Europe. On the other hand, the *toga prætexta*, which was worn by certain officials and even by some priests, had a "purple," i.e., a dark crimson border, and the *trabea* seems to have been a sort of cloak with still more elaborate stripes, including perhaps one made entirely of red cloth, which generals were allowed to wear on the day of their triumph. It is probable, however, that in this last usage the military cloak of red was worn during the triumphal procession, that being the one occasion when the soldiers of the Republic were allowed to appear within the walls with their arms and military trappings. The women were dressed as simply as the men, wearing over the *tunica* merely a garment called the *stola*, which replaces for them the *toga* of the men, and when the woman of rank went abroad, usually in a litter, a shawl-like garment called the *palla* might also be added. That which makes the peculiar stateliness of the dress seen in female statues of the early Empire is the contrast of the folds of the long *tunica*, reaching the floor, nearly covering the feet, and forming a strongly marked base, as it were, for the whole figure, while the more loosely folded *stola* above it seems to reinforce the lines of the undergarment. A veil of more or less thin and floating material covered the head and could be brought around to the front to hide the face at pleasure. It must be constantly kept in mind that the idea of beauty in dress was simply uniform whiteness and many skillfully contrived folds; the whiteness was kept up by the use for woolen garments of the most elaborate system of cleansing applied by the *fullones*, or cleansers, and, for the folds of the drapery, highly trained experts—body servants who knew their business—were employed. It is evident that these peculiarities of dress had much influence upon the art of sculpture.

In all the above discussion of costume one thing is very noticeable—the absence of anything like tailoring, except, perhaps, among the Chinese. The clothes of the Greeks and the Romans, like those of the people of the Pacific islands, always approximated to the ideal of an uncut, unsewed, unaltered piece of textile fabric; square or oblong, as in the *himation*, *chlamys*, *sagum*, or *paludamentum*; semicircular or semioval in shape, or approximately so, as in the *toga*, or simply sewn down one side so as to make a tubular garment of one piece of stuff, as in the

2. ROMAN.

later chiton, and in the tunica. A curious reproduction of this characteristic of ancient costume exists among the wilder Arabs, the Bedouins of the desert, and the horsemen of the uplands. They wear a shirt, indeed, and this is of thicker stuff and covers the body more completely than what we know by that name, but apart from this their covering is almost wholly a matter of unaltered or scarcely altered pieces of woollen. Perhaps two breadths of the narrower stuff are sewn together to make the *haïck*, or, as in the north of Africa, a square of striped woollen stuff is caught up in the middle of one side so as to form a sort of hood, as in the *burnous*; or, as in the *aba* or *abayeh*, the square of stuff may have its two outer edges folded over towards the middle, so that the two edges meet or nearly meet, and then two openings are made in the two outer folds where the stuff is actually creased, which serve as armholes, so that the square blanket resembles an overcoat. But in all this there is absolutely no fitting of the piece of stuff to the body. It is a heavy woollen blanket, which is adapted more or less to the shoulders so as not to slip off, but is not otherwise altered in any way, and might cover a man or a woman, and a person of any stature. What is curious about this costume is the enormously heavy woollen dress worn in the desert and under the semitropical sun. It is evident that nothing but a heavy material is expected to keep off the heat of the sun or the burning wind of the desert; and therefore a man who wears only the long shirt, and has the legs and feet, arms and neck, absolutely naked, will pile two or three of these heavy woollen things upon his shoulders and head. The result of this arrangement is that the only decoration sought for is in the beauty of two or three colors arranged in stripes of different widths, and broken more or less by the carrying of threads of different colors across the stripes, like the countercharging of heraldry. A much greater development of design by stripes alone is in the cotton *dhurries* of India. The *aba* may indeed be further adorned by very simple embroidery in woollen thread.

The first appearance of any tendency to fit the garments to the person among nations more western than the Chinese is probably in the leg coverings of the Persians and Syrians, as represented in Grecian and Greco-Roman art, and yet these garments are of extreme simplicity and there is no appearance of tailoring in any modern sense in connection with them. They are merely loose trousers, gathered at the ankles, or sleeved tunics; and their use seems to have come from the mountain regions of Asia Minor and the shores of the Caspian Sea. The barbarians of Europe, Gauls, Scandinavians, and Germans, made up suits of clothes in a not dissimilar way; but it does not seem that their example affected the Greco-Roman world very much.

The beginning of change is to be looked for in the Byzantine Imperial epoch. From a time as early as the seventh century A.D. there is a constant increase in the number of garments worn, and in the elaboration of their shape and their combination, while at the same time the costliness and splendor of the stuffs are in no way diminished, and the custom begins which was destined to have so much effect on the costume of later times in Europe, the sewing of jewels, mounted in slender rings, or *chatons*, of gold or silver gilt, to the material. Sometimes smaller fragments of glittering material of no value were

used in this way, as in a later time pieces of mirror were used throughout the lands influenced by Persian decorative ideas. In the Byzantine Empire the dress of the officials shows a certain disposition to follow early Roman traditions, but only in the general shape of outer garments and to a certain extent in their names. The general aspect of a member of the Imperial family, or an officer of the court, as it is seen in the mosaics of Ravenna, or in the illuminated manuscripts of the time, is altogether different from that of higher antiquity. The robes reached to the feet; they were closely sewed up and not very loose or flowing, not greatly tending towards elaboration of folds or to what we commonly call "drapery"; and over them are worn dalmatics, maniples, and stoles, not merely by the clergy, but by the laity as well, and showing plainly where the peculiar clerical dress took its origin. See COSTUME, ECCLESIASTICAL.

The Eastern influence was still strong, and all costume which was at all splendid was a matter of long and ample robes, made of stuffs of almost incredible richness, and more or less richly decorated by embroidery. Western dress was at this early time very different from anything in common use in the Byzantine Empire, except in so far as that the poorer people, and those engaged in out-of-door work, would naturally dress in almost the same careless fashion East and West. For one thing, it was more nearly classical Roman in character. If the costume of the eleventh and twelfth centuries, in the lands which are now France and Germany and England, be studied in the sculptures of Romanesque and Gothic buildings, or in the rare illuminations of manuscripts of that time, it will be seen that a certain antique or early Roman character obtains in the garments worn by persons presented as kings and princes, which had already been lost in the Eastern Empire. The robed figures of the porch of Chartres, or the doorways of Le Mans, do not seem to record much that was splendid in the way of stuffs or of jewelry, loose or applied to the garment. Their robes are still simply falling in loose folds, girded at the waist and differing from the garments of antiquity mainly in this, that the arms are always covered by sleeves. Men and women alike wore a gown, that garment which in the French archaeological vocabulary is called the *robe*. This garment, which is treated under DRESS, served for people of every rank and of both sexes, but its fashion changed very much, and in like manner the resulting appearance of the clothed figure in the sculptures changed greatly between the twelfth and the fourteenth centuries. In the fourteenth century it grew more and more into that stately but most inconvenient garment, well known to us from the paintings in manuscripts of the time of Richard II of England and his immediate successor, and Charles VI of France. This garment swept the floor. It was girded around the waist with the military belt, or some modification of it; it had sleeves, which also reached the floor, and were of fullness equal to that of the skirts, covering the hands also when the arms hung down. The collar covered the neck completely in a solid cylinder, and rose on the sides nearly to the ears. How this rich and grandiose dress could be used at all in summer, and how it could be girded and shortened in any way, in time of necessity, does not appear, nor is it

known whether the men wore complete leg coverings of some kind beneath this long and completely closed skirt. The dress of elegant women of the same epoch was less elaborately conceived; the same habit of long sleeves prevailed, but the upper part of the sleeve was pierced with a slit through which the forearm could be extended. The result of this was that the robe, as a garment for women, hardly changed during the next two centuries, whereas the use of it for men went out very soon, and while there are still representations of gentlemen of the first half of the fifteenth century dressed in robes reaching the ground, those robes are far more convenient than before; they are evidently capable of being tucked up, and the man is dressed beneath his skirt, which can either be removed or shortened up to nothing when the occasion of ceremony is passed. Finally, as early as the second decade of the fifteenth century, it disappears from the dress of men, and from that time on the short-skirted garment, called *rochet*, or corset, became the dress of business, while the name *cotte* was then and thereafter given to a very tight-fitting garment, laced or buttoned close to the body and having a skirt reaching only to mid thigh. This last-named garment existed under the name of *cotte d'armes* as long as the complete suit of armor was worn by gentlemen, and in this case it was embroidered with the armorial bearings of the wearer. The French terms were commonly used in England as well, as Chaucer lets us know; and in modern study we can hardly find English equivalents. Under all these garments were worn the long, close-fitting stockings, serving as the only covering from the waist to the toes, except as the skirt covered the upper part of the thigh. These changes involved the complete establishment of tailoring as the main thing in elegant costume. From the middle of the fifteenth century on, the dress of nobles and courtiers, and of men who affected elegance, was a matter of cutting out and shaping, fitting in gores and gussets, and, in fact, adapting garments closely to the body in the first place, and then covering them with elaborate adornment. This might be applied in the way of *passementerie*, or by modifying the whole surface of the stuff by what we now call quilting and the like. A piece of brocade used for a doublet or the body of a gown would be gathered up into puffs and projecting rounded surfaces, the lines of sewing between those projections being themselves decorated and even including the setting of a pearl or of a jewel of some other kind set in a gold *chaton* at the junction of these two lines of stitching. The stockings were the only part of the dress that was not elaborately decorated; and these stockings were half concealed in the sixteenth century by the enormous *hauts de chausses*, which, in 1530 and the following years, are sometimes in two or three rings of puffs like rounded ridges, passing horizontally around the thigh, and which, in the closing years of Elizabeth's reign and the corresponding times in France, the reigns of Henry III and Henry IV, are closer in their fit and resemble not distantly the knee breeches of the eighteenth century. They are, however, made of costly stuff, and elaborately adorned almost in the style of the body garment. Still again, in the time of James I of England, the *hauts de chausses* were stuffed (bombasted), or held with springs in a single rounded projection, as if the man had been

thrust feet foremost through a rather flat, oblate spheroid. This projected so much all around the hips that the sword had to be hung in a horizontal position and great pains taken to prevent its being entirely dislodged by the monstrous garment.

At no time during the Middle Ages and the epoch of the Renaissance was the tailoring and mantuamaking more rich and fantastic than during the French religious wars and the succeeding reign of Henry IV. Painted portraits, prints from famous engravings, carved ivories, medallions, and painted enamels of the time, exist in some quantity; and they agree in telling the most extraordinary tale of splendid extravagance in the dress of both sexes. Embroidery was loaded upon bodice and doublet, or was dispensed with only when a very rich brocade was employed; and lace, or its earlier forms of cut work and drawn work, and needle embroidery in pierced patterns like filigree, were used with freedom. The circular ruff, projecting like a dish on which the head seems to lie, appears, but is not yet so popular as the broad and flat laced collar, sometimes lying on the shoulders, sometimes standing stiffly out horizontally, or for women in steep, upward slope behind the head and neck. The fashion of bombasted thigh coverings for the men is identified in artistic history with the reign of Henry IV of France, but it did not last very long, being replaced by the loose, short trousers of about 1625 and after. No costume in the modern sense is perhaps more graceful and spirited at once than the dress of the gentlemen of the time of Louis XIII, which, with its short trousers, the stocking below covering the calf of the leg, which was concealed by the boots commonly worn out of doors, the doublet, reaching a little below the waist, and worn loose, generally unbuttoned in front and showing the shirt in its full folds, the short cloak, worn on the left shoulder, except when it was gathered around the body, the flat hat, with very broad brim, and soft falling feather, and the broad, loose collar, is a complete and graceful translation into form of those ideas which the modern world has conceived—ideas absolutely contrary to those of antiquity. Simplicity and grace have given place to picturesque combination of small details; and here is the new theory, perfectly put into practice. The reign of Louis XIV had but little influence on this dress of men, except to stiffen it and make it rigid and hard, but the dress of women improved, on the whole, in tastefulness throughout the seventeenth century, and as late as 1670 was introduced that admirable costume which we identify with Madame de Sévigné—a skirt not very full, over which was worn a short upper skirt, open in front; a bodice fitting snugly, but not involving very tight lacing; a stomacher, but not excessive in its length; sleeves reaching the elbow, and accompanied by lace ruffles, which partly shroud the lower arm; the bodice cut low, but not to excess, and a cape worn over the neck and shoulders on occasion of going out-of-doors. The same thing, in simpler stuffs and in graver colors, was worn by the wives of the wealthier *bourgeois*, and this is the dress which we identify with the women of Holland and the English Puritans. It is preserved for us in a great number of paintings, and in the prints from Hollar's engravings; and it has impressed itself upon modern designers as the most complete type of womanly costume which we know;

but that is because the richer dress of the time is impossible to realize nowadays—it seems non-human, as if of fairyland. The eighteenth-century dress in England, which was at times popular and acceptable in decorative design, is a modification of it, not for the better. The fop of 1750 is less beautifully dressed than the *musquet* of 1650, and the ladies of 1775, with their enormous hoops, far less charming in appearance than Madame de Sévigné 100 years earlier.

The French Revolution in 1789 brought in a number of strange vagaries in dress—red and white striped waistcoats, stockings striped blue and white in horizontal rings, white cravats wound round and round the neck until they reached the point of the chin, while at the same time the women wore the lightest and thinnest costume possible, in fancied imitation of the Romans. Cocked hats of exaggerated shape for the men alternated with steeple-crowned hats with curly brims; while the female costume was finished by the most elaborate pile of curls and crimps, crowned by an enormous cap, either simply of muslin and lace, or with these combined with a sort of hat half concealed with feathers, flowers, and ruffles of lace. The momentary prohibition of elegances of this sort under the Revolution led to a change in the dress of both sexes, which was not to be temporary, except in details. Thus the dress which we call that of the "Empire," the famous "pink nightgown," girded immediately below the breasts and hanging thence to the ankles, but so close that a woman could hardly walk and was utterly unable to step across a gutter, was worn with low shoes and with an unprotected neck, while the cold of winter was met by a *pelasse*, generally worn open in front and affording merely shelter for the shoulders and back, however richly it might be furred. The men fell immediately into the simple and not impressive dress of a time when the civilian was of little account, and any man who was elegant in his aspirations found some excuse to wear a military or official uniform. The civilian dress was then merely a waistcoat, over which was worn a long-skirted coat, and the *pantalon*, or tight-fitting breeches reaching to the ankle instead of the knee. The large and loose white cravat still continued. From these dresses all our modern fashions have followed. See FASHION.

**Bibliography.** Valuable for bibliography are: *Katalog der Freiherrlich von Lippheudeschen Kostümbibliothek zu Berlin* (2 vols., Bielefeld, 1897); and *Reading and Reference List on Costume* (Brooklyn Public Library, 1909). General works are: Racinet, *Le costume historique* (6 vols., Paris, 1888), with 500 plates, of which 300 are colored, and with extensive bibliography; Weiss, *Kostümkunde* (3 vols. in 4, 1872-83), with 1239 woodcuts and 16 color plates; Rosenberg, *Geschichte des Kostüms* (Berlin, 1905); Ferrario, *Il costume antico e moderno* (22 vols., Milano, 1815-34); Countess of Wilton, *Book of Costume* (London, 1847).

There is also a wealth of material available in the form of prints, paintings, and photographs, as well as in books about engravings and paintings.

**COSTUME, ACADEMIC.** See DEGREE.

**COSTUME, ECCLESIASTICAL.** The dress worn by ministers of religion acting in their official capacity, in distinction from the dress of ordinary life in different lands and periods. While practically all such officials do wear such distinctive dress, even though in certain cases it is very simple, it is necessary, in view of many and often bitter controversies on the subject of the relation between such costume and religious doctrine, to emphasize the fact that costume belongs to the discipline, not the doctrine, of religion, more especially Christian, bodies. The competence of any such body acting in its corporate and legislative capacity to prescribe a uniform dress for purposes of edification, indication of functions, or liturgical propriety, is undoubted, and is analogous to the requirement of distinctive uniform, e.g., in the army or the law courts. An association of such dress with

official powers or as essentially doctrinal in itself is erroneous, though often popularly assumed. The Christian era has witnessed the development of ecclesiastical costume in so marked a way as to make the subject one of importance more than archaeological.

**History of Development.** Under the Jewish dispensation the costumes of the officiating priests and Levites, like everything else pertaining to the divine worship, was minutely prescribed and rigidly observed. The purpose seems to have been, as with other parts of the Jewish system, to distinguish the Jews as a people from all other nations, and their religion from all other religions as one of special revelation and positive injunctions rather than natural religion accompanied by a system of human origin. The attempt to trace the vestments used in the Christian Church to the Jewish vestments has been made at different times. The theory breaks down historically and when applied carefully in detail. Certain features which are found in common are accidental, not fundamental. Underlying the prescribed Jewish system of vestments, however, is the principle that the divine sanction is given to the use of such costume for such purposes as are mentioned above. This principle, rather than any special application of it, is characteristic of both the Jewish and Christian development of costume.

In all probability the Christian clergy at first used no distinctive dress, and so long as the garb of daily life continued unaltered in the higher ranks of society, a celebrating or officiating bishop, priest, or deacon differed only possibly in a few slight variations from a well-dressed layman. This very absence of distinctive costume, however, was really an indication that the Christian clergy differed from the Jewish orders and from the non-Christian *sacerdos* or other minister. From this early stage two principles entered into the development of a more or less characteristic dress for the clergy—the principle of fixity as opposed to changing fashions in lay costume, and the principle of putting on the best apparel when employed in the service and worship of God. The former resulted in the style and articles of vestments becoming permanent and subject to authoritative prescription; the latter introduced the element of refinement, beauty, and dignity in the dress of the clergy. The recognition of Christianity by the Roman Empire under Constantine gave an impetus to external splendor in all parts of Christian worship. Canonical legislation prescribed as a rule many things which had been heretofore hallowed by custom and religious association and also put a check upon the discretion or caprice of individuals. The growth of such regulation was slow and local rather than general from the third to the eighth century. In the revival of interest in the details of the Christian religion which characterized the age of Charlemagne in the eighth and ninth centuries is to be found explicitly the teaching that the vestments of the Christian clergy are a matter of great importance, and also in this period there is found the custom of giving a mystical interpretation to these vestments in relation to the services and functions where they were worn. The process in development was practically the same throughout the Church. The gradual tendency of the East and the West to diverge in matters political and social also worked out in the externals of religion, and the breaking off of intercommunion

between the Eastern and Western parts of the Church, which reached a crisis in 1054, emphasized this tendency. Although the principles are the same throughout the Church, it is convenient to consider the specific developments of vestments under different heads.

**Vestments in the Western Church.** In the West the use of ecclesiastical vestments developed with considerable uniformity so far as the employment of certain articles of dress for certain liturgical offices was concerned, but with latitude so far as specific shape, material, and rigidity of use were concerned. There grew up a variety of uses, largely coterminous with national or diocesan subdivisions, e.g., Gallican, Italian, Sarum (Salisbury), Milanese. Not until the sixteenth century and the Reformation movement do we find divergences relating to the authoritative employment of certain vestments. Since the sixteenth century the Roman Catholic discipline on the subject of vestments has tended strongly towards absolute uniformity, while the Anglican discipline has tended more towards specifying what is legal and what is allowable. In general, the same vestments are legal in all parts of the Western church—Roman, Anglican, American, and Canadian. Hence they may be described as belonging to all and not confined to any one section. Specific variations will be mentioned. The laws governing the use of costume are set forth for the Roman communion in the *rubricæ generales* of the missal and are in form historical and descriptive, not imperative (e.g., *celebrans semper utitur*, etc.), while the Council of Trent merely mentions *vestes* as part of the Apostolic traditions of the Church. The Anglican communion sets forth the use of vestments in canons and in rubrics of the Book of Common Prayer and in statements of general adherence to the customs of the Western church.

**Vestments, Sacrificial.** The *chasuble* is the principal vestment regarded as strictly sacerdotal

CHASUBLE, MODERN FORM.

or sacrificial. It was originally an ample round mantle falling over the arms, and was an outdoor garment gradually introduced inside the

Church. From its shape and fullness it was found an inconvenient garment to wear in ministrations at the altar, and it was gradually modified by cutting it away so as to leave the arms

CHASUBLE, OLDER FORM

free until, from the older form, or the Gothic chasuble, it assumed after the seventeenth century in the West very commonly the extreme modern, or fiddle-back style, as seen in the accompanying illustrations. The older shape has been retained in the Spanish and Anglican uses and is to some extent being revived elsewhere. Traces of the use of the chasuble as a distinctively ecclesiastical vestment are found as early as the first half of the sixth century, and the Fourth Council of Toledo (633) expressly mentions it as such. Its use seems to have been confined at first to priests, and even at the present time, in Advent, Lent, and other penitential seasons, the chasuble is worn at solemn mass in the Roman communion by the deacon and subdeacon, but laid aside when they sing the Epistle and Gospel. Chasubles are sometimes worn in the Roman rite by canons and other dignitaries simply present at a pontifical mass. In most Western countries a large cross, either in the Latin or in the Y form, is embroidered on the back, while on the front is either a cross or a long, straight piece of embroidery. The *stole* is a narrow strip of the same material as the chasuble, with more or less elaborate embroidery. The usual decoration consists of a cross where it will be in the middle at the back of the neck and a cross on each end as it hangs down. It is considered a symbol of priestly jurisdiction, in which sense the Pope may wear it constantly, even when not officiating; and this is also the use of priests in the Roman and other communions when present at certain offices without officiating. It is worn, as a rule, in the ministration of all the sacraments. At the altar the priest wears it crossed over the breast and the deacon over the left shoulder; at other times, and also by a bishop, it is worn hanging straight down. The earliest traces of its use in the West as a sacerdotal vestment are found in Spain, where the Council of Braga (563) speaks of the *orarium* as worn by deacons, and the Fourth Council of Toledo mentions it as a vestment of bishops, priests, and deacons. The name "*stole*" (Gk. *στολή*, *stolē*) may indicate that a Western piece of apparel, adopted into Eastern use, came back to the West later and passed into ecclesiastical use. The earlier use of the term "*stole*" in Greek ecclesiastical writers is not consistent with the article later called by the same name. It seems to have been at first a

linen handkerchief longer and narrower than our modern handkerchief. The *maniple* is like a short stole and is worn hanging from the left wrist by the celebrant, deacon, and subdeacon at the altar. Its origin seems to have been in the napkin with which the consul gave the signal for the start in a chariot race. The *alb* (Latin, *albus*, white) is a close-fitting garment with sleeves, of plain white linen, reaching to the feet, though the lower part may be made of lace. It sometimes has pieces of embroidery, called "apparels," sewn on it in four places. Originally it was probably nothing more than the ordinary tunic of Greek and Roman costume. It is confined around the waist by a linen girdle. The *amice* is a piece of fine linen, oblong in shape, which the priest rests for a moment on his head and then spreads on his shoulders, tying it by strings in front. It originally covered the head, and to this day, in the rites of certain monastic orders which have preserved some traditional peculiarities, the priest wears it in that position until he reaches the altar to begin the service. These vestments are put on in the following order: *amice*, *alb*, *girdle*, *maniple*, *stole*, *chasuble*. The special vestments of the deacon and subdeacon are the *dalmatic* and *tunicle*, respectively, which differ very slightly, both being close-fitting vestments of the same material as the chasuble, reaching to the knees and having sleeves.

The color of all vestments seems to have been white at the first. The introduction of colors was very gradual and not without opposition. To Innocent III (1198-1216) is traced the setting forth of the simple sequence of colors which has largely prevailed in the West. The customary modern use prescribes *white* for the feasts of our Lord, for feasts of the Blessed Virgin, and for other virgins who were not martyrs, and for confessors; *red* (the color of fire and of blood) for the Feast of Whitsunday and of all martyrs except the Holy Innocents; *violet*, the color of mourning and of penitence for the season of Advent, from Septuagesima to Easter, the Ember days, except in Whitsuntide, and the Rogation days; *green*, the color of hope, for ferial or ordinary days. White is also used at confirmations, ordinations, consecration of churches, baptisms, and weddings. *Black* is worn on Good Friday and in services for the dead. Vestments of cloth of gold or very rich and costly material are considered festal and allowed to be used in place of white, red, or green. This sequence was adopted generally on the Continent and in England in the important churches of Canterbury, York, London, and Exeter, while the diocese of Salisbury developed a use of its own confining the colors almost exclusively to white and red.

**Vestments, Episcopal.** The vestments officially worn by a bishop in the exercise of his functions are numerous. In part they indicate his position as including all the powers of the Christian ministry, in part they are peculiar to his episcopal office. The full vestments of a bishop when at the altar include (over a purple or black cassock) the *amice*, *alb*, *girdle*, *stole*, *maniple*, *tunicle*, *dalmatic*, *chasuble*, and *mitre*, while the *pastoral staff* is carried in the hand. At this and at other times the bishop wears a ring and pectoral cross. Sandals and gloves are included in the Roman use. The *gremial veil* is an embroidered cloth which is spread over his knees when he sits during the service. In other functions, such as confirmation, he wears cope

and mitre with a stole for the administration of the sacraments. In ministrations of certain functions of less solemn kind he may wear simply the rochet. The *mitre* is the ornament worn in solemn services by bishops and abbots of certain monasteries which carry with them a quasi-episcopal jurisdiction. The mitre may be described as a tall, tongue-shaped cap, terminating in a twofold point, which is supposed to symbolize the cloven tongues in the which form the Holy Ghost came upon the Apostles. The *pastoral staff*, or *crozier*, in the case of bishops resembles a shepherd's crook, and is given at their consecration as a symbol of the authority with which they are to rule their flocks. An archbishop's pastoral staff does not differ from a bishop's, but he sometimes has carried in front of him a staff surmounted by a cross or crucifix—that of a patriarch having two cross bars. The *pallium* is a circular band of white woollen stuff surrounding the neck, with a pendent strip before and behind. It is generally richly embroidered and marked with several crosses. There is much controversy among historical and archaeological scholars as to the origin and significance of the pallium. The two main theories are that it represents a vestment used in the Imperial court and sent at first to certain ecclesiastics as a mark of Imperial favor, whence it passed into similar use by certain bishops of patriarchal rank to confer upon archbishops in the patriarchate; or that it is a symbol of jurisdiction and is worn by the Pope to indicate universal jurisdiction, and conferred by him upon archbishops who acknowledge his supremacy. It is worn by such only within their own territorial jurisdiction, at high mass on solemn days. The sandals were not originally confined to bishops; the earliest authors who mention them allude to a special shape worn by deacons and subdeacons. The *pectoral cross* is a small gold cross adorned with jewels which is worn by bishops and mitred abbots as a mark of their office. The *episcopal ring*, worn on the middle finger of the right hand and generally set with a large amethyst, is supposed to symbolize that the bishop is wedded to his diocese. Among less formal vestments the *rochet* alluded to above is a close-fitting vestment of linen, somewhat like a shorter alb or surplice with tight sleeves. It is confined to bishops and abbots, also sometimes worn as a special privilege in the Roman use by canons. The *mozetta* is a short cape covering the shoulders, a part of the state dress of the bishop when not officiating, and is worn with the rochet. The *mantelletta* is a sleeveless garment of silk or woollen stuff reaching to the knees, worn according to Roman use by cardinals, bishops, and other prelates. It is used to cover the rochet, so that bishops wear it when out of their own dioceses, the uncovered rochet being a symbol of jurisdiction. A bishop when wearing a pectoral cross does not cross the stole when preparing to celebrate.

**Vestments, general.** The most important vestment to be mentioned under this head is the *cope*, a wide cloak of silk or other costly material reaching nearly to the feet and fastened in front by a clasp called the *moose*, and having a semicircular hood at the back. While it is worn by the officiating priest in benediction and other solemn rites, it is not distinctly a sacerdotal vestment, and is worn by cantors at solemn vespers and by other laymen. The *humeral veil* is an oblong scarf of the same ma-

terial as the chasuble, worn by the subdeacon at high mass when he holds the paten from the offertory to the Paternoster, and by the priest when giving benediction or carrying the blessed sacrament in procession. It is worn over the shoulders, the paten, pyx, or monstrance being wrapped in it. The Levites (Num. iv.) were allowed to bear the sacred vessels only when wrapped in coverings; and although those in holy orders (and they alone) are allowed to touch the eucharistic vessels with the bare hands, the use of the veil is probably an expression of the feeling of reverence inculcated by the Jewish rule. The *surplice* (called also *cotta* at first in Italy, now generally) is a garment of linen worn by all clerics and assistants in choir and by priests in the administration of the sacraments. As late as the twelfth century it was supposed to reach to the ankles, but in modern times it has been very much curtailed, and since the seventeenth century commonly ornamented with lace. Under all the other vestments is worn the cassock, a close-fitting garment reaching to the feet, which is the distinctive dress of clerics, in church and out. The color varies, being black for a simple priest, purple for a bishop, and red for a cardinal; the Pope alone wears a white cassock. The *berretta* (or *biretta*), which is also a part of the priest's street or house dress, must be mentioned under official costume, as the rubrics prescribe it for the sacred ministers going to the altar and for ecclesiastics in choir. It is a square cap with three ridges extending outward from the centre of the top—four in the case of doctors of divinity. "At Rome," says Benedict XIV., "and in most churches the berretta was unknown as late as the ninth century. Its ecclesiastical use began when priests gave up the ancient custom of covering their heads with the amice till the actual beginning of the mass." The *zucchetto* is a small, round skullcap, of color suited to the wearer's rank, which, if worn in church, is removed only at the most solemn parts of the services.

**Eastern Vestments.** The influence which between the eighth and twelfth centuries in the West bore so strongly upon the development of ecclesiastical costume, that of the numerous liturgical writers, was almost wholly lacking in the East, where between the Patriarch Germanus of Constantinople in the eighth century and Simeon, Archbishop of Thessalonica, in the fifteenth, scarcely one of importance is to be named. The natural conservatism of the Oriental mind has also militated against change in the ecclesiastical usages. The Western maniple, amice, and cope are unknown in the Greek and Russian churches; in place of the first named, somewhat similar bands (*epimanikia*) are worn around both arms by bishops, priests, and deacons, those of the bishop being richly ornamented. The lector and readers wear an ample white or reddish vestment, called *phelonion*, but differing from the priestly chasuble in reaching only to the waist. The subdeacon wears the *sticharion*, a sort of dalmatic, narrower and shorter than that of the deacon, who wears in addition the *orarion*, or stole, hanging before and behind over the left shoulder. The sticharion has undoubtedly developed from the alb, but more closely resembles the dalmatic both in shape and material. The priest wears the sticharion, the *epitrachelion* (a long narrow stole something like an archiepiscopal pallium in the West), the *zone*, or girdle, and the *phelonion*, or

chasuble, which in Russia is much abbreviated in front, but hangs down to the ankles behind. The episcopal vestments are in the main similar to those of the priests, but more richly decorated; the bishop's phelonion is adorned with many small crosses. Instead of this vestment the Greek metropolitans, and in Russia all bishops since the time of Peter the Great, wear the *sakkos*, a tight-fitting garment supposed to symbolize the seamless robe of Christ. The episcopal gloves, sandals, and ring are not in use. The head covering resembles a crown more than the Western mitre.

**Anglican Usage.** The Anglican communion, as a part of the Western church, has the same history in regard to vestments, subject to the same constitutional right to regulate vestments as a part of discipline. In the Reformation movement of the sixteenth century in England, which differs in essential features from the contemporaneous movement in Germany and France, an element of confusion was introduced by the influence of Lutheran and Calvinistic reformers. The continental reformers had assumed that vestments might be identified with doctrine and hence had reacted from Western custom. The disciplinarian Puritanism in the reign of Elizabeth concentrated itself against externals in liturgy and worship. Two parties accordingly sprang up—one holding to the general use of the Western church, the other desiring to abandon absolutely that use. The tendency of Queen Elizabeth in aiding the action of the Church was in favor of the Western system. The vagueness and indefinite character of legislation in the reign of Edward VI and the resulting doubt led to the setting forth of the so-called "Ornaments Rubric," which authorizes the "ornaments of the Church and of the ministers thereof as used by the authority of Parliament in the second year of King Edward VI." The contest, however, for the principle of distinctive dress for the clergy was at first, in the latter part of the sixteenth and the seventeenth centuries, fought out on the minimum of the surplice, and again, in the middle of the nineteenth century, in the Surplice Riots, principally in London. The principle of vestments being thus established, the character of such vestments was not pressed. The limited use of most of the Western vestments, and the more rapid restoration of the elaborate eucharistic and other vestments in connection with the Oxford movement of the nineteenth century, have illustrated the position in general of the Anglican communion as a national church and belonging to the Western Catholic church as distinguished from such sections as pay obedience to the Bishop of Rome. A simpler use, however, sprang up during these troubled centuries which has remained to a large extent. This use provides, for the general dress of the clergy, the surplice. With it are worn at certain offices the stole, while dignitaries—e.g., chaplains to bishops, canons in cathedrals, and members of university colleges of clergy—wear for choir offices the broad black scarf, and over it the hood indicating the academic degree of the wearer. The cope has in English cathedrals become an altar vestment, and is also worn by bishops at great state functions, such as the coronation of the sovereign. The more usual dress for a bishop of the Anglican communion in ordinary ministrations consists of a rochet with black or scarlet chimere, a development of the street dress or convocation

robes of earlier times in England, analogous to the original development of ordinary costume into ecclesiastical use. At present both the Western and local Anglican uses are followed, as one finds in other countries to some extent, e.g., in Spain, where the Spanish use prevails, but the Italian use is also found.

**Protestant Usage.** The universal tendency of the Reformers was naturally to dissociate themselves from the older Church by abandoning to a greater or less extent the ceremonies and vestments used by it. The Lutherans, however, showed a more conservative spirit than the others. Luther himself considered the matter one of indifference, and his followers for a long time retained most of the old vestments, even the chasuble being worn in Sweden and Denmark, where the Lutheran bishops also wear copes and pectoral crosses. But the Calvinists and other more extreme Reformers on the Continent abolished the older vestments completely and adopted the black Geneva gown, or *robe de Calvin*. This, which is nothing more than the ordinary dress of a scholar in the sixteenth century, with the white bands at the neck, has become a distinctive costume of Protestant ministers for officiating. In recent years there has been a notable tendency, especially among the Scottish Presbyterians, towards the restoration or adaptation of ancient customs, and surpliced choirs have been introduced among other "ritualistic" usages. The semimilitary costume of the Salvation Army officers may be referred to as in some degree illustrating the same tendency.

**Monastic Costume.** The principle of uniformity of dress to mark those who lived a common life was adopted even among the early monks of the Egyptian deserts. The character of the Eastern religious costumes was usually, as far as can be determined from the vague descriptions of early writers, such as to express a spirit of penitence and differentiate their wearers from the gayly dressed worldlings. The early Western founders, St. Benedict and even St. Francis, prescribed the general char-

FATHER ADAM SCHALL, S. J., IN MANDARIN COSTUME.

acter, but not the exact shape and color, of the garments to be worn by their followers. Custom gradually, in a community life, crystallized into rule. But since the thirteenth century the

founders of orders have usually laid down the exact details of the habit to be worn, as a sort of regimental uniform. The notable exceptions are St. Ignatius, St. Philip Neri, and St. Vincent de Paul, whose followers have never worn anything but the ordinary dress of secular priests. The wearing of the habit at all times is most strictly enjoined upon members of religious orders, except when it is sometimes dispensed with in non-Catholic countries; the early Jesuits in China, in pursuance of their policy of adapting themselves to the customs of the country, wore the native costume. (See illustration of Father Adam Schall in the dress of a mandarin.) Normally, however, the habit is always worn, taking the place for preaching (and in some places for administering the sacrament of penance) of the surplice and stole. For specific details of the costume of the various orders, see the articles under their titles.

**COSWAY, RICHARD** (1742-1821). The most celebrated English miniature painter. He was born at Okeford near Bampton (Devonshire) and studied under Thomas Hudson, at several London drawing schools, and at the Royal Academy. He was the greatest miniature painter of his age and raised this art, which had fallen into disrepute, into universal favor. In 1785 he was appointed principal painter to the Prince of Wales and numbered the members of the fashionable world of London and Paris among his sitters. He amassed a large fortune and acquired a valuable collection of pictures and curios, but with his success he developed many eccentricities, which caused him to be often caricatured. He was the first to bring out the beauties of the ivory background in miniature painting; his color is brilliant, his brushwork of extraordinary delicacy and skill, and he expressed with consummate skill the rather artificial grace and charm which characterized the age. He made use occasionally of parchment and enamel as backgrounds. The largest collections of his miniatures are in Windsor Castle and in the J. Pierpont Morgan collection. Among the most celebrated are Lady Beechy (sold in Paris, 1912, for 18,000 francs); Mrs. Fitzherbert (Wallace collection, London); "The Prince of Wales as St. George" (Grimthorpe Castle); the artist's wife and daughter Angelica; Madame du Barry (Morgan collection); Lady Diana Sinclair; and the heads of the

so-called "Ancester Box," owned by the Earl of Ancester. His oil portraits and religious pictures are greatly inferior to his miniatures. In 1781 Cosway married Maria Hadfield, a well-known painter and etcher. Consult his biography by G. C. Williamson (London, 1905).

**COT, kôt, PIERRE AUGUSTE** (1837-83). A French painter. He was born at Bedarioux (Harault) and studied under Cogniet, Cabanel, and Bouguereau. He painted at first historical subjects in the academic style of his masters, later also portraits, and acquired great reputation, especially by his female heads. Among his most noteworthy works are: "Spring Time" (Brooklyn Museum); "Day of the Dead at the Campo Santo of Pisa"; "Dionisia"; "The Storm" (Metropolitan Museum, New York); "Prometheus"; "Mireille" (Museum, Montpeller).

**COTA DE MAGUAQUE**, ko'tá dá má-gwá'ká, RODRIGO (died c.1498). A Spanish poet of the fifteenth century, born at Toledo. His reputation rests upon the dainty, witty *Diálogo entre el Amor y un caballero viejo*, which appeared first in the *Canconero general* in 1511. The authorship of this poem has been much disputed, but it seems quite safe to attribute it to Cota. He was less certainly the author of *Las Coplas de Mingo Revulgo* (c.1472), and the attribution to him of the first act of the comedy *Celestina* (first known edition, Burgos, 1499, but certainly not the first edition) has been made on wholly unacceptable grounds. He also produced some satiric poems. Consult Foulché-Delbos's ed. of the "Epithalame burlesque," in *Revue Hispanique*, vol. i, pp. 69-72 (Paris, 1894), and remarks by Bonilla y San Martín in his *Anales de la literatura española*, pp. 164-167 (Madrid, 1904).

**COTAN'GENT**. See TRIGONOMETRY.

**COTÉ, kôtá', AURELE SUZOR** (1870- ). A Canadian painter. He was born at Arthabaska, P. Q., and was educated at the Commercial Academy there. After some experience as a church decorator, he went to Paris in 1891 and studied under Bonnat and Lefebvre. He exhibited at the Salon in 1894, where his pictures "Pastourelle" and "Retour des Champs" were much admired, the former being admitted to the reward list. In 1898 his picture "The Death of Archimedes" won the grand prize. He was appointed an officer of the Academy by the French government in 1901, and in 1908 he was commissioned by the Dominion government to execute panel decorations and illustrations for the Parliament buildings, Ottawa. Among his best-known works are a portrait of Sir Wilfrid Laurier, for the Dominion Parliament buildings; "The Landing of Champlain at Quebec"; and "The Discovery of Canada by Jacques Cartier."

**CÔTE-D'OR, kôt'dôr'** (Fr., golden hill). A department in the east of France (q.v.), formerly part of the Province of Burgundy (Map. France, N., K 5). Area, 3393 square miles, pop., 1896, 368,168; 1901, 361,626; 1911, 350,044. The surface is in general elevated and is traversed by the Côte-d'Or ("golden hill"), which gives its name to the department and is so called on account of the excellence of the wines produced on its slopes. A great part of the department is covered with forests; there are mines of iron, coal, marble, and gypsum; stone is quarried; the valleys and plains are fertile, producing wheat, oats, barley, potatoes, and tobacco, and there is good pasture land, but the

peasants are not skilled in agriculture. Manufactures include iron, steel, machinery, bricks, leather goods, oil, and beer. Côte-d'Or is watered by the Seine, which rises in the northwest, and by several of its affluents; by the Saône; by the Arroux, a tributary of the Loire; and the Armançon. Capital, Dijon.

**COTELIER**, kô't'yâ', or **COTELEARIUS**, JEAN BAPTISTE (1627-86). A French Hellenist. He was born in Nîmes, studied theology and philosophy in Paris, and in 1654 became counselor of the Archbishop of Embrun. He was appointed assistant librarian in the Royal Library in 1667, and in 1676 he became professor of Greek at the Collège de France. His principal publication, and one which made him widely famous, was his edition of the *Sanctorum Patrum qui Temporebus Apostolicis Floruerunt Opera Græce et Latine* (Paris, 1672).

**COTENTIN**, ANNE HILARION DE. See TOURVILLE, COUNT DE.

**COTES**, kôts, ROGER (1682-1716). An English mathematician and physicist. He was born at Burbage, in Leicestershire; was graduated at Trinity College, Cambridge; became a fellow in 1705; and in 1706, on the recommendation of Newton, Whiston, and Bentley, was made Plumian professor of astronomy. Cotes was editor of the second edition of Newton's *Principia* (1713). Various mathematical papers of his own, bearing on logarithms, trigonometry, and geometry, were published posthumously under the title *Harmonia Mensurarum* (Cambridge, 1722). The only independent publication of his own, during his lifetime, was his essay entitled *Logometria*. This treated of methods of constructing the Briggs logarithms (q.v.) and applied the theory laid down to the quadrature of the hyperbola and other problems. Several theorems are known by his name, e.g., to determine the harmonic mean between the segments of a secant to a curve of the  $n$ th order reckoned from a fixed point (see CURVE, CIRCLE); and also the well-known theorem of trigonometry: If  $A$  is any point on the radius  $OB$  of circle  $O$ , and if the circumference is divided into  $n$  equal parts  $BP_1, P_1P_2, P_2P_3, \dots$  and into  $2n$  equal parts  $BQ_1, Q_1P_1, P_1Q_2, \dots$ , the product  $AP_1 \cdot 4P_2 \cdot AP_3 \cdot \dots$  ( $n$  factors)  $= \pm (OA^n - OB^n)$ , and  $AQ_1 \cdot AQ_2 \cdot AQ_3 \cdot \dots$  ( $n$  factors)  $= OA^n + OB^n$ .

Cotes was held in the highest esteem by the scholars and scientific men of his time. Newton remarked of him: "If Cotes had lived, we might have known something."

**COTES**, SARA JEANNETTE DUNCAN (1861-). An English novelist. She was born at Brantford, Ontario, Canada, and was educated at the Collegiate School there. She found her way to the novel through letters and sketches contributed to newspapers and periodicals and made a brilliant success in *A Social Departure*, the observations of a tour round the world in 1889-90 with Mrs. Lilian Rood. In 1891 Miss Duncan married Everard C. Cotes, a press correspondent of Simla, India. Among her novels are: *An American Girl in London* (1891); *A Daughter of To-Day* (1894); *Vernon's Aunt* (1894); *The Simple Adventures of a Mem-Sahib* (1893); *The Story of Sonny Sahib* (1894); *His Honour and a Lady* (1896); *A Voyage of Consolation* (1898); *The Path of a Star* (1899); *The Other Side of the Latch*, the diary of an invalid in Simla (1901); *Those Delightful Americans* (1902); *The Pool in the Desert*

(1903); *The Imperialist* (1904); *Burnt Offering* (1910); *The Consort* (1912).

**CÔTES-DU-NORD**, kô't-dy-nôr'. A department in northwest France (q.v.), formerly a part of Brittany, bounded on the north by the English Channel (Map: France, N. C 4). Area, 2787 square miles. Pop., 1896, 616,074; 1901, 609,349; 1911, 605,523. The Armoric hills, called also the Montagne Noire, and the Mene Mountains cross the department from east to west, giving a rude and broken aspect to the coasts. The chief rivers, which are short but navigable, are the Rance, Gouët, Trieux, and Arguenon. The cultivation of flax and hemp, with the pasturing of cattle, and iron, coal, and lead mining, supply employment in the mountainous districts; while in the sheltered valleys and on the coast levels grain, potatoes, flax, with pears and apples and other fruits, are produced. It builds ships, makes linen and paper, and is a noted horse market. Along the sea-coast are many large fisheries, and sardines are canned. Capital, Saint Brieuc.

**COTGRAVE**, RANDLE (?-c.1634). An English lexicographer, born in Cheshire and educated at St. John's College, Cambridge. It was while secretary to William Cecil, Lord Burghley, that he compiled his French-English dictionary (1611, 1632, 1650, 1660, and 1673). The work contains many absurd errors, but is still much used by philologists.

**CÔTHEN**, or **KÖTHEN**, kô'ten. An ancient town of the German Duchy of Anhalt, situated on the Ziethe, about 22 miles north of Halle (Map: Germany, D 3). It is surrounded by high and ancient walls. Among its notable public buildings are the Jakobskirche, a Lutheran church of the Götline order, the church of St. James, with some fine old stained glass and a handsome organ, and the former palace of the dukes of Anhalt-Cöthen, now used as a museum and containing a library of about 20,000 volumes. Cöthen boasts a technical institute, a school of gardening, and a school of forestry. The chief industry is the manufacture of beet sugar; there are also iron foundries, machine works, boiler shops, and malting works; it also manufactures cigars, vehicles, and leather. Pop., 1890, 18,215; 1900, 22,100; 1905, 22,978. Cöthen was an old Slavic settlement, and received municipal privileges in the twelfth century. In 1547 it joined the Schmalkaldic League and was taken by Charles V. Until 1853 it was the capital of the Principality of Anhalt-Cöthen. A monument has been erected to Sebastian Bach, who was music director here 1717-23.

**COTHUR'NUS**. See BUSKIN.

**COTIDAL LINES**. A system of lines on a globe or chart which show the movement of the ocean tidal waves. The lines join the places where high water occurs at the same moment.

**COTILLON**, kô-tîl'yôn, Fr. pron. kô'tê'yôn'. A dance of French origin and performed to quadrille music. It was a fashionable dance at the court of Charles X, where it had been adapted from a peasant dance. At first for one, then for two performers, it soon became a *ronde* dance, in which form it was introduced into England. There are hundreds of possible figures in the modern dance, and the accessories are most elaborate. The cotillon is begun by a small number of couples, who occupy the floor while the rest of the guests sit about the ball-room. These couples select others from among

those seated, and after going through a figure all take seats and are replaced by other couples until the whole company has danced that particular figure. Another method is for each set of couples to dance a different figure. For some account of the dance and descriptions of many of the figures, consult Grove, *Dancing*, "The Badminton Library" (London and Boston, 1895).

**COTIN**, kô'tân', CHARLES (1604-82). A French poetaster, born in Paris. He was royal counselor and almoner to the King under Louis XIV, and in 1655 was admitted to the Académie Française. His knowledge of Oriental and classic languages was extensive, and he was a member of the literary circle of the Hôtel Rambouillet. He was an abbé and a successful preacher. His verse, of which the *Poésies chrétiennes* (1657) are the most creditable, is of no importance. He is famous as the object of Boileau's ridicule (*Satires*, 3, 8, 9) and the original of Trissotin in Molière's *Femmes savantes*.

**COTINGA**, kô-tên'gá, or CHATTERER (native South American). A bird of the family Cotinidae, allied to the waxwings and manakins. Cotingas are numerous, both in species and individuals, inhabit tropical America exclusively, feeding on insects and fruit, and are remarkable for the splendor of the nuptial plumage worn by the males in many cases, or for eccentricities of ornament. The bell bird and umbrella bird, elsewhere described, are cotingas exemplifying such peculiarities, and the cocks-of-the-rock are included by some systemists. They have been specially studied by Dr. Leonard Stejneger, who refers to the group as follows in the *Standard Natural History*, vol. iv (Boston, 1885): "The greater number of the species of cotinga are plain-colored, gray, rufous, or greenish . . . though even among these rather modest forms there are some which are more or less highly adorned. Among these is the rose-breasted 'flycatcher,' or Xantus's Becard (*Platyparis aglaia albiventris*), with a beautiful crimson rosy patch on the breast, which just enters our fauna across the southern frontier. Nevertheless, the cotingas are, generally considered, especially bright-colored and curiously adorned birds. . . . From Central America we have the exquisite *Carpodectes*, white all over, with a delicate tinge of bluish gray washed over the upper surface; from Guiana to Brazil are found the deep purplish-carmine *Xipholana*, with white remiges, and the great wing coverts singularly lengthened, narrow and stiffened, like a woodpecker's tail feathers; the glorious cotinga, shining azure blue, with purple throat, from the same countries; the greenish, fork-tailed *Phibalura* from Brazil, and the small, pipra-like *Iodopleura*, curious on account of the rare lilac color of the sides of the body hidden under the wings." Of all these the females are plainly colored, mostly gray, and are therefore inconspicuous when making their nests or brooding—an important precaution against the extinction of the race; and the gaudy hues of the males are molted to a great extent during the off season, when their dress is much plainer than in the season of courtship. None of these birds are notable as singers, though several utter loud and singular cries. See Plate of COTINGAS.

**COTISE**, kô'tis, or **COST** (Fr. *côte*, side). In heraldry (q.v.), one of the diminutives of the bend.

**COTMAN**, JOHN SELL (1782-1842). An

English landscape painter and etcher. He was born at Norwich, the son of wealthy parents, and in 1798 was sent to London. There he joined the group of water-color painters led by Girtin and Turner, but without adopting their naturalistic tendencies. Cotman is now more appreciated than when he was alive and is considered the most gifted artist, after Crome, of the Norwich school. In versatility he is equaled only by Turner, his draftsmanship is excellent, and his color is of unusual breadth and often very beautiful. The British Museum possesses nearly 300 of his water colors and drawings, including "Greta Bridge" and the famous India-ink drawing, "Breaking the Clod." Among his much rarer oil paintings are: "Wherries on Breydon" (National Gallery); "Fishing Boats off Yarmouth" (Norwich Museum); the "Waterfall," a fantastic landscape in classical style; an "English Village" and "Worcester Cathedral" in the Metropolitan Museum, New York. He is widely known through his architectural etchings: such as his *Etchings of Architectural and Picturesque Remains* (1838) and *Architectural Antiquities of Normandy* (1822). His sons Miles Edmund and Joseph John were able landscape painters, and his nephew Frederick George Cotman was an able painter in water color. Consult Binyon, *John Crome and John Sell Cotman* (London, 1906).

**COTONEASTER** (Neo-Lat., from Neo-Lat. *cotonea*, quince, Lat. *cotonea*, wallwort). A genus of plants of the family Rosaceæ, allied to the apple and quince. The species are shrubs or small trees, some of them evergreen, with simple, undivided leaves, more or less woolly beneath, small flowers in lateral cymes, and small fruit not agreeable to the palate, but the bright color of which, and its remaining on the tree in winter, make them very ornamental. These plants, while common in Europe, seem little known in the United States. Most of the species are natives of mountainous parts of Asia; they are sufficiently hardy for the climate of Great Britain, where they are among the most common ornamental shrubs.

**COTOPAXI**, kô'tô-pâk'sé, *Sp. pron.* kô'tô-pâ'né. The loftiest active volcano in the world. It is in Ecuador, in the eastern chain of the Andes, about 40 miles nearly south of Quito, and about 50 miles south of the equator, in long. 78° 42' W. (Map: Ecuador, B 4). La Condamine estimated the height at 18,860 feet; Reiss, the first to ascend it (in 1872), found it to be 19,500 feet; and Whymper (in 1880), 19,613 feet. The valley at its foot, however, is itself over 9000 feet above the sea. The upper part of Cotopaxi, a perfect cone for a distance of 4400 feet, is entirely covered with snow, with the exception of the immediate margin of the crater, which is a bare parapet of rock. The snow line on the northern exposure is 15,600 feet, and on the southern exposure 15,200 feet, above sea level. Reiss, whose measurements are largely accordant with the more recent ones of Whymper, estimated that the crater, which is elliptical, has a depth of 1500 feet and a maximum diameter of about 2600 feet. Below the snow line is a well-marked barren belt covered with lichens and shrubs, below which again is forest. Smoke issues from the summit; sounds as of explosions are occasionally heard; and, also, a fiery glow is often visible by night. Lava rarely flows even during eruptions, but flame, smoke, and immense volumes of ashes are

# COTINGAS, ETC.

1. BAND-TAILED PLANT CUTTER (*Phytotoma rara*).

2. INDIAN PITTA (*Pitta brachyma*).

3. AMAZONIAN COCK-OF-THE-ROCK (*Rupicola rupicola*).

4. GOLDEN-CAPPED MANAKIN (*Pipra auricapilla*).

5. ECUADORIAN UMBRELLA-BIRD (*Cephalopterus penduliger*).

then ejected; and when the heat melts large masses of the snow lying on the sides, destructive floods are occasioned in the valleys beneath. The first eruption recorded was in 1532, and tradition makes a secondary cone, "the Luca's head" on the slope of Cotopaxi, the peak of the volcano blown off at this time. Others followed in 1698 and 1743, since which date numerous eruptions have occurred. One of the most violent was that of 1768, during which ashes, thrown high into the air, were transported by the winds and thickly strewn over an area of about 250 miles in diameter. The more recent violent eruptions were in 1877 and 1903.

**COTRONE**, kô-trô'nâ. An episcopal city (since the sixth century) on the Gulf of Taranto, southern Italy, 146 miles, by the winding railway, south of Taranto (Map: Italy, M 8). It has a castle of the time of Charles V, a cathedral, and an excellent, though small, harbor. Of the temple of Hera on Cape Colonne, sometimes called Cape Nau, 7 miles to the southeast, which was the most magnificent structure of the kind in Magna Græcia, only one solitary Doric column remains. The worship of Hera has been replaced by that of the Madonna del Capo, to whose church, near the temple, the young girls of Cotrone go in barefoot procession every Saturday. The town markets oranges and other semitropical fruit, oil, licorice, wine, olives, grain, and turpentine. Cotrone is the modern name for the ancient Crotona, founded by the Achæans about 710 B.C. About 530 B.C. Pythagoras, after being banished by Polycrates of Samos, established his brotherhood here and acquired such influence in the oligarchical council that the people rebelled, and expelled the Pythagoreans and established a democracy. Crotona suffered severely during the Pyrrhic wars (see PYRRHUS) and in the later years of the Second Punic War was Hannibal's headquarters for three successive winters. It did not appear again in history until the wars of Narses and Belisarius (q.v.) against the Goths. In the days of Herodotus, and long after, the medical school of Crotona was the most famous in the Greek world. This city has given many famous champions to the Olympian games of the Greeks, among them Milo. Pop. (commune), 1881, 9649; 1901, 9610; 1911, 10,162. See CROTONA.

**COTS/WOLD**. See SHEEP.

**COTSWOLD**, or **COTESWOLD HILLS** (village meadow, from *cot*, hut + *wold*, meadow). A range of hills, running through the middle of Gloucestershire, England, from Chipping Camden in the northeast to near Bath in the southwest, and forming the inner ridge of the English coastal plain (Map: England, D 5). They are 54 miles long, in some parts 8 miles broad, and cover 312 square miles, with an average height of 500 to 600 feet. The highest points are Cleave Hill (1134 feet) and Broadway Hill (1086 feet). The surface is generally bare, but corn, turnips, and sainfoin, a perennial herb cultivated as a forage plant for sheep, are grown, and coarse-wooled sheep are raised less for the wool than for their value in crosses with less hardy breeds. Consult Evans, *Highways and Byways in Oxford and the Cotswolds* (New York, 1905).

**COTTA**. The name of a family of German publishers, whose establishment was founded in Tübingen in 1659. It included the eminent theologian, JOHANNES FRIEDRICH COTTA (1701-79), and his grandnephew, JOHANN FRIEDRICH,

FRIEDRICH COTTA VON COTTENDORF (1764-1832), the most eminent publisher in German history. Educated for the law, he entered the book business at Tübingen in 1787 and in 1795 began to publish Schiller's *Horen*, the *Politische Annalen*, and an architectural annual. In 1798 he issued *Die Allgemeine Zeitung* (q.v.), the *Damenalmanach*, and other such publications. The *Litteraturblatt* and the *Kunstblatt* followed. Cotta was publisher for nearly all the distinguished literary men of the classical epoch. In 1810 he moved his printing house to Stuttgart; in 1824 at Augsburg he introduced the first steam printing press into Bavaria. In politics Cotta was a moderate but steadfast Liberal. He was a practical social reformer, abolishing serfdom on his estates, building model farms, and making them in effect neighborhood experiment stations. The house of Cotta is still among the greatest publishing firms in Germany, since 1899 a stock company in Stuttgart.

**COTTA**, BERNHARD VON (1808-79). A German geologist, born at Zielbach, near Eisenach. After studying at the School of Mines at Freiberg and at the University of Heidelberg, he was associated with Naumann in the publication of a geological map of Saxony (12 sections, 1833-42), and from 1841 to 1874 was professor of geology at Freiberg. His publications, many of which have been translated into English, include: *Geognostische Wanderungen* (1836-38); *Anleitung zum Studium der Geognosie und Geologie* (3d ed., 1849); *Deutschlands Boden* (1854); *Die Lehre von Erzlagern* (1854-61). *Die Geologie der Gegenwart* (5th ed., 1878). In the latter work he proved himself an evolutionist and an adherent of Darwin's theory of the origin of species. He was one of the first geologists to accept this theory and apply it to organic remains in sedimentary rocks. His treatise on ore deposits contributed greatly to the development of that branch of geology.

**COTTA**, GAIUS AURELIUS (c.124-73 B.C.). A Roman, distinguished as statesman and orator. He was an intimate friend of M. Livius Drusus, the champion of the people. (See DRUSUS, 2; SOCIAL WAR.) In 91 he sought unsuccessfully the tribuneship of the people. Soon afterward, by the terms of the Lex Varia, a law aimed at all who had supported the Italians against Rome, he was accused, and went into voluntary exile. He returned in 82. As consul in 75, he championed the popular cause by carrying a law freeing the tribunes of the people from legislation by which Sulla had disqualified them from holding higher magistracies. He died suddenly, in 74, from the breaking out of an old wound. Cicero praises him highly as an orator and makes him a participant in the dialogue of his *De Oratore* and his *De Natura Deorum*. Consult the introduction to Wilkins's edition of the *De Oratore* (2d ed., Oxford, 1888).

**COTTA**, HEINRICH (1763-1844). A German forester of distinction, born near Wasungen. He studied at Jena, in 1801 became a master forester and a member of the Eisenach College of Forestry, and from 1795 to 1811 conducted at Zillbach a school of silviculture founded by himself. In 1811 he was summoned to Saxony as counselor of forestry, and thither removed his school, which in 1816 received the title of "Royal Academy of Forestry." He wrote a number of volumes, including: *Systematische Anleitung zur Taxation der Waldungen* (1804); *Anweisung zum Waldbau* (1817-

9th ed., 1865); *Die Verbindung des Feldbaues mit dem Waldbau* (1819-22); *Hilfsatafeln für Forstwirte und Forsttaafeloren* (1821; 2d ed., 1841); *Grundriss der Forstwirtschaft* (1832; 6th ed., 1872).

**COTTABUS** (Gk. *κότταβος*, *cottabos*). A game said to have originated in ancient Sicily, widely popular in Greece at dinner parties, in the fifth and fourth centuries B.C., especially at Athens. The purpose of the game was to throw wine at a mark, so that the wine should make a clear noise as it struck. In its simplest form a number of saucers were set floating in a crater or mixing bowl filled with water; the guests in turn, without rising from their places, flung wine at the saucers, seeking to sink them; the player who sank most saucers was the winner. Other more intricate forms of the game, in spite of many descriptions in Greek writers, most of which, however, were written when the game was no longer played, and the discovery, near Perugia, of two sets of apparatus used in playing the game, are not clearly understood. The game was much used as a love augury; the player, as he threw, named his beloved or thought of her and augured success or failure in his suit from the nature of his throw. Consult: Becq de Fouquières, *Les jeux des anciens* (1873); Helbig, *Mittheilungen des Kaiserlich Deutschen Archäologischen Instituts, Römische Abteilung* (1886); Sartori, *Das Kottabos-Spiel der alten Griechen* (1893); Higgins, "Recent Discoveries of the Apparatus Used in Playing the Game of Kottabos," in *Archæologia* (1888).

**COTTAGE** (OF. *cotage*, ML. *cotagium*, from AS. *cot*, Icel. *kot*, hut). Formerly a term used in Great Britain for a small dwelling house of a poor family, especially in the country, detached from other buildings. It had no second story (though sometimes garret rooms) and was built usually of stone or brick and thus distinguished from wooden cabins or huts, though wood was not excluded. Recently the term has been extended to mean country houses of moderate extent, especially summer residences for well-to-do families; and finally it is often but improperly applied, in the United States, to the most sumptuous summer residences at places like Newport and Bar Harbor.

**COT'TAR'S SATURDAY NIGHT**, THE. A poem by Robert Burns, published with a volume of other verse in 1786.

**COTTBUS**, or **KOTTBUS**, *kõt'bus*. A town of the Prussian Province of Brandenburg, situated on the Spree, about 70 miles southeast of Berlin. It has been noted since mediæval days for the manufacture of cloth, and to this has been added linen, wool, yarn, jute, carpets, tobacco, machinery, and beer. (Map of Germany, F 3.) A government tuberculosis sanitarium is just outside the town. Pop., 1890, 34,910; 1900, 39,327; 1905, 46,269. Cottbus was founded in the tenth century by Henry I. In 1445 it was sold to the Elector of Brandenburg. It belonged to Saxony from 1807 till 1813, when it passed to Prussia.

**COTTE**, *kõt*, ROBERT DE (1656-1735). A French architect. He was born in Paris and was a pupil and brother-in-law of J. H. Mansard. As assistant to, and later as superintendent for, his master, he collaborated in the erection of the chapel of Versailles, the dome of the Invalides, and the Hôtel de la Vrillière (now the Bank of France). He appears to have designed the colonnade of the Trianon, and left

designs for the portal of Saint-Roch and for many buildings outside of his own country. De Cotte was made director of the Academy for Architecture in 1699, and first architect to the King (1708), after the death of Mansard.

**COTTENHAM**, *kõt'en-am*, EARL OF. See PEPPYS, (CHARLES CHRISTOPHER.

**COTTER**, JOSEPH B. (1844-1909). An American Roman Catholic bishop, born in Liverpool. He came to America in his youth and was educated at St. John's University. After holding a pastorate at Winona, Minn., for 18 years, he was in 1889 consecrated first bishop of that diocese. He was active in the temperance movement and thrice president of the Total Abstinence Union of America.

**COTTEBEAU**, *kõt'rô'*, JEAN. See CHOUANS.

**COTTET**, *kõt'â'*, (CHARLES (1863- ). A French landscape and genre painter and etcher. He was born in Puy (Haute Loire) and studied under Maillart at the Académie Julian and under Roll. He at first joined the Impressionists and later helped to found the Société Nationale des Beaux-Arts. He is known chiefly as a painter of Breton subjects. A cycle of 10 landscapes, entitled "The Country of the Sea" (1905), several of which are now in the Luxembourg, attracted wide attention. He also painted many Venetian and Spanish subjects. In his early impressionistic work his color is light and delicate; later it grew darker and heavier, and an element of pathos was introduced. His paintings include "The Port of Camaret" and others, in the Luxembourg Museum; "Going to Church in Brittany" (Vienna); "A Moonlight Night" (Philadelphia); "Breton Women in Mourning" (Cincinnati).

**COTTIDE** (Neo-Lat. nom. pl., from Neo-Lat. *cottus*, Gk. *κόττος*, *kottos*, a sort of river fish, probably the bullhead). A family of small, ugly-looking, spiny-rayed fishes, having a large depressed head, usually armed with spines or tubercles, and a tapering body, which may be naked or irregularly armed with scales or bony plates. There are about 60 genera and 250 species. The typical genus is *Cottus*. Nearly all are small. They inhabit the rocky shores and pools of the northern regions, some of the species descending to great depths. Many inhabit fresh waters, occupying the clear, cool streams of northern regions. The family includes the sculpins, miller's-thumb, grubby, father-lasher, etc. Very few are used as food. See SCULPIN.

**COTTIERS**, *kõt'ti-êr-z*. A term originally indicating tenants who rented cots or cottages, or at the most a plot of land too small to be designated a farm; but later the term had a more general application to peasant farmers whose rent was determined not by custom, but by competition. The most notable case of this system of land tenure was in Ireland, where the capitalist farmer was scarcely represented in the population. The same class in the western parts of Scotland are called "crofters." Among both the lack of capital and the competition for land, including rack rent, has provoked much misery. It has been partially alleviated in Ireland by the gradual diminution of the population, and still more by the acts of Parliament known as the "Land Laws." See IRISH LAND LAWS.

**COTTIN**, *kõt'tân'*, SOPHIE RISTEAU (1770-1807). A French novelist, born at Tonneins, and generally known to a now past generation as the author of *Elisabeth ou les exilés de Suède*, which

won the praise of imitation from Xavier de Maistre in *La jeune Sibérienne* (1825). Its translation in English by G. R. Lockwood (New York, 1869) is still popular among old-fashioned English readers. In France her vogue was not lasting. Her *Mathilde* (1805), a tale of an intense love between a Christian Crusader and a Saracen, may be considered as the precursor of the Romanticist novels of the Châteaubriand school, especially by reason of its very creditable local color. She died in Paris, Aug. 25, 1807, too early to fulfill the promises of an interesting and sympathetic genius. Consult Sainte-Beuve, *Causeries du Lundi*, vol. xi, and Julia Kavanagh, *French Women of Letters* (Leipzig, 1862).

**COTTLE**, JOSEPH (1770-1853). An English publisher, born probably in Gloucestershire. He opened a bookshop in Bristol and was instrumental in publishing some of the first poems of Southey, Coleridge, and Wordsworth. He remained in business from 1791 to 1799. After his retirement he produced several volumes of poetry, such as *Malvern Hills* (1798), *John the Baptist* (1801), *Messiah* (1815), which awoke the satire of Byron. His *Early Recollections, Chiefly Relating to Samuel Taylor Coleridge* (1837), with a second edition under the title *Reminiscences of Coleridge and Southey* (1847), contains interesting information on the early lives of Coleridge and Southey, but is disfigured by many details that show Cottle himself in an unpleasant light.

**COTTON** (Fr., *Sp. coton*, from Ar. *qutun*, *qutn*, cotton, from *qatana*, to inhabit). An important vegetable fibre, distinguished from all other fibres by the peculiar twist it possesses, which makes it exceedingly valuable for spinning. It is cultivated in those parts of the globe between the two thirty-fifth parallels of latitude (a region which contains the largest portion of the land surface of the globe), although its most profitable cultivation is between the twentieth and thirty-fifth parallels north of the equator. Within this belt lie the cotton districts of the United States, northern Mexico, Egypt, northern Africa, and Asia, except the extreme southern parts of India and the Malay Peninsula. South of the equator cotton is grown in Brazil, nearly all of which country is said to be favorably adapted to its cultivation, in Argentina; in Australia, though not to any great extent; in Africa, where efforts to extend its production are being made; and in the islands of the Pacific. Cotton is grown under wider range of climatic conditions, over a greater area, and by a greater variety and number of people, and is useful for a larger number of purposes, than any other fibre. Its cheapness and the extent of its production preclude the demand ever exceeding the supply except locally and temporarily. Although cotton is grown mainly for the fibre surrounding its seeds, its by-products, the seeds as a source of oil and cake, and also the fibre of the stalks, are of great importance. The cottonseed products of the United States in 1912 were valued at \$132,230,000. See COTTONSEED AND ITS PRODUCTS, and Colored Plate of FIBRE PLANTS in article HEMP.

**Botanical and Commercial Classifications.** The cotton of commerce is the product of a few species of *Gossypium*, a genus of the family Malvaceæ, to which also belong the hollyhock, mallow, hibiscus, etc., as may be readily seen

by a comparison of their flowers. (For illustration, see Plate with article HEMP.) There are numerous species of *Gossypium*, only three or four of which are economically important. They are small trees, shrubs, or herbaceous plants, and in their duration are perennials, biennials, or annuals. The leaves of the cultivated species are three to seven, or even nine, lobed, and are more or less sprinkled with small black or pellucid dots. The flowers vary in color, are white or light yellow, with purple spots at base, and are usually borne singly in the axils of the leaves except in the "cluster" type, where a number occur together. At their bases the flowers are surrounded by three or more green heart-shaped bracts, which constitute the "squares." The fruit, known as the boll, is a three to five celled capsule, containing the numerous seeds, more or less covered with lint, which is white or tawny. All of the species are of tropical origin, yet their most successful cultivation is in temperate climates where there is a period of six months free from frosts and where there is an abundant and well-distributed rainfall throughout the growing season.

The botanical origin of plants that have long been in cultivation is always a source of perplexity, and the exact species to which the different varieties of cotton belong has been the subject of much controversy. By almost common consent it is now agreed that most of the cotton of commerce is the product of three or four species and their hybrids. These species are *Gossypium arboreum* and *Gossypium peruvianum*, arborescent species grown only in the tropics, *Gossypium barbadense*, the source of the celebrated Sea Island and Egyptian cottons, and *Gossypium herbaceum*, the species from which most of the crop of India is grown. The American upland cotton is believed to have originated from *Gossypium hirsutum*. There is perhaps no other plant that responds so quickly to changes in environment and improved cultivation, and to this are doubtless due the many varieties and species.

The Sea Island and Egyptian cottons, *Gossypium barbadense*, with their beautiful, long, and silky staple, are among the most valuable of the races or species of cotton. The flower is of a rich cream color, and its seeds are black, small, and easily separable from the lint. This species attains the highest perfection along the coast region of South Carolina, Georgia, and Florida, with well-known varieties grown under irrigation in Egypt from American seed. The fibre of Sea Island cotton averages about 1½ inches in length, with 1½ to 2½ as the extremes. It is adapted to the finest thread and lace work, and other products for which the short staple is not suited. The Egyptian varieties are usually a little shorter in staple and are of a tawny color. These are often used for the natural-colored balbriggan underwear, hosiery, etc., where a smooth finish and silky lustre are desired. The cultivation of Sea Island cotton is highly developed, and the United States crop of 1912 was 73,777 bales of 382 pounds each. The value of the Sea Island cotton crop is about 5½ million dollars annually. The Department of Agriculture has in recent years imported a quantity of seed of the Egyptian cotton and by a series of experiments demonstrated the feasibility of its production. The quantity of Egyptian cotton imported in 1913

was approximately 100 million pounds, valued at about \$20,000,000. Most of this comes direct from Egypt, but a small part from England.

The upland cotton of the United States is mostly derived from *Gossypium hirsutum*. In this country the varieties of this species have white flowers, which turn red the second day after opening. The fibre of this series is shorter, but the plant can be cultivated over a much greater extent of territory than the others. The seed of the upland varieties is usually of a greenish color and has a closely adherent gray fuzz in addition to the longer lint, making the process of ginning more difficult. There are doubtless many hybrids between these series, as may be seen in the character of some upland cottons. In 1896 descriptions were published in the United States Department of Agriculture, Office of Experiment Stations, *Bulletin 33*, of more than 130 varieties of cotton in cultivation in the United States at that time, together with about an equal number of so-called varieties which were only old ones renamed. Most of these varieties were upland cottons, and they varied widely in their production and character of lint. *Gossypium arboreum* is a small tree rather common about the temples of India and China, and also grows wild in Abyssinia and Senegal, but it is said never to be cultivated as a regular crop. The trees are rather short-lived, and they yield a fine, silky fibre an inch or more in length. This is called Nurma or Deo cotton and is little used except by the priestly class. It is probable that its value has been overrated. It will not mature in the United States. The origin of the cottons supposed to be derived from *Gossypium peruvianum* is somewhat in doubt. They are South American, as their name would indicate, and their smooth black seeds adhere in a reniform mass, hence the name "kidney cotton," which is usually applied to them. Their fibre is strong, rather coarse and woolly,  $1\frac{1}{2}$  inches or less in length, and from its great resemblance to wool is frequently used in combination with that staple. About  $4\frac{1}{2}$  million pounds, valued at nearly \$1,000,000, are annually imported into the United States, and it is claimed that most of it is used by woolen manufacturers to mix in making underwear, hosiery, etc., much of the material being sold as all-woolen goods.

In commercial usage, to fibres under 0.98 inch, or 25 millimeters, in length there has been given the name "short staple"; "medium" means from 0.98 to 1.17 inches (25 to 30 millimeters), and "long," 1.18 to 1.57 inches (30 to 40 millimeters); "extra," including those which are 1.58 inches (40 millimeters) or more. The extra and the long in the United States seem to come from Sea Island cotton or some of its hybrids; the short and medium from *Gossypium hirsutum*.

The commercial classification of cotton in New York is as follows: The "full grades" are fair, middling fair, good middling, middling, low middling, good ordinary, and ordinary. Half grades are designated by the prefix "strict," quarter grades by prefixes "barely," meaning the point above half grade and the next full grade above, and "fully," meaning the mean point between the half grade and the next full grade below. Liverpool high grades are lower, and low grades higher, than New York. Acting under authorization from Congress, the United States Department of Agriculture established

nine grades of cotton based on middling cotton. They are: middling fair, strict middling, good middling, strict good middling, middling, strict low middling, low middling, strict good ordinary, and good ordinary. Standard sets of these grades have been prepared, and they have been officially adopted by the leading cotton exchanges of this country.

**Cultivation.** The plant requires for its best development a peculiar soil and climate. While the method of cultivation is about the same in the various countries where it is grown, that in the United States is the most perfect. Although the plant is not really an annual, and in the tropics it can be grown as a perennial, yet it is treated as an annual in its cultivation in most countries. The land is prepared in winter or early spring, the time of beginning varying with the locality. After thorough plowing, and after all frost has gone, the ground is bedded into rows from 3 to 4 feet wide, according to situation and the quality of the soil, the seed is sown along the centre of these beds, either in a straight furrow made with a small plow or opener, or in holes 12 to 18 inches apart. Flat culture is also used. Where artificial fertilizers or cottonseed meal is drilled in, this method of preparation is indispensable. The usual date to begin preparing land is from January 15 in southern Texas to March 5 in South Carolina. Sowing usually commences March 10 to April 15 and continues to May 15; but late spring frosts may delay it longer. The young shoots, which appear in from 10 to 15 days, are weeded and thinned when they have attained a height of 2 to 6 inches, say, when the third or first true leaf appears. The average date of bloom is June 5. As a general rule, cotton is a dry-weather plant, heavy rainfall interfering with both the culture and the stand, although an extremely dry spring interferes with the growth. For plowing it is best to have just enough rain to make the soil moist and spongy. When young, the crop flourishes best with warm steamy weather, with an occasional shower until blooming. An excess of rain produces weeds and wood; severe drought stunts the plant, matures it too early, and causes a small light-stapled crop. Early frost causes the plant to turn brown; cold nights cause many of the plants to die. Lands in hilly or upland districts require more moisture than those lying in the plains and river bottoms. Overflowing often causes injury on bottom and flat prairie lands, but replanting or recuperation often redeems the most hopeless cases. Where, however, overflowing causes "sanding," the land is rendered utterly useless for cotton culture that year. The experiment stations in the Southern States have aided in introducing improved methods of cultivating, fertilizing, and handling the crop. Rotation of crops and green manuring have been shown to be of great advantage. From the date of bloom, warm, dry weather is needful, until picking time, which usually commences from July 10 in southern Texas up to September 10 in Tennessee, and continues until frost puts a stop to further growth. During the harvest all available hands are called into full employment. The cotton is gathered into baskets or bags hung from the shoulders of the pickers, and as the crop is secured it is either sent directly to the gin or dried, and then the fibre separated from the seeds. Recent investigations have

shown the quality of the fibre is improved by storing cotton for a time before ginning. For long-staple or Sea Island cotton in South Carolina the usual date to begin preparing land is February 1; planting begins April 1 and ends May 1; picking is from August 25 to December 10.

The occurrence of the cotton-boll weevil over much of the cotton area has caused some modification in the growing of the crop. Clean cultivation, earlier planting, wider spacing, and the use of early maturing varieties are recommended for infested regions.

**Insect Enemies of the Cotton Plant.** See COTTON INSECTS.

**Cotton Diseases.** There are a number of well-characterized diseases of the cotton plant, some of which are due to disturbances in the nutrition of the plant, others are caused by fungus attacks, while still others are attributed to the presence of minute worms, called "nematodes," in the roots. Attention to the requirements of the plants will correct the first class of diseases. For the fungus troubles but little in the way of prevention is known. Among the most important diseases due to physiological causes are those known as the "mosaic disease," or "yellow leaf blight," and the shedding of bolls. In the first, small areas of the leaves become yellow, giving to the leaf a peculiar checkered appearance. Later these areas turn brown and dry up, leaving the leaf in a more or less ragged condition. At this stage the disease is usually referred to as the "black rust." Heavy applications of kamite or similar fertilizer are said to correct this evil. The shedding of the bolls, or their drying up while still attached to the plant, is often a serious trouble. Extreme dry or wet weather causes this disease by interfering with the proper supply of moisture and nutriment furnished the plant through its roots. Among the diseases due to parasitic fungi a few of the most serious and widely distributed may be mentioned. Damping off, sore shin, or seedling rot is caused by *Pythium debaryanum* and a number of other fungi. They attack the young plants at or near the surface of the ground, producing ulcer-like spots, and later rot the plant off. The sunken, ulcer-like spots can be readily seen on the affected stems. Another common disease is anthracnose (q.v.), due to *Glomerella*, or *Colletotrichum gossypii*. It is a widely distributed fungus that attacks the bolls, stems, and leaves, and is probably the most destructive of cotton diseases. Upon the bolls small reddish spots appear which later become black. The centre then becomes gray or pink, and the spots enlarge in a concentric manner with well-marked zones of color. The boll is killed outright or has its development checked so that the lint is worthless. Upon the stems the fungus is somewhat similar in its behavior, although the spots are not quite so definitely marked. Upon the leaves the disease is not very well characterized. Cotton anthracnose is carried with the seed, and it may be prevented by the use of good seed and rotation of crops. A root rot is very destructive in some places. Its behavior is so marked as to need no description. It is due to a rather widely distributed fungus that has been called *Oomium auricuum*. It attacks a number of plants in addition to cotton. Rotation of crops is about the only method of relief known. A leaf blight (*Sphaerella gossypina*) and a mil-

dew (*Ramularia areola*) are common diseases in the cotton field, but they seldom occasion much injury.

Another of the serious fungus diseases to which the cotton plant is subject is the wilt disease. It makes its appearance usually in May, when the plants are 6 or 8 inches high. The plants are dwarfed, have an unhealthy appearance, the leaves turn yellow between the veins, and their margins dry up. Sometimes plants wilt and die at once, while at other times the progress of the disease is slower and the plant may partly recover. A plant attacked by this disease will show a brownish stained color in the wood when cut across. The cause of the trouble is a fungus, *Fusarium vasinfectum*, and the same or a closely related form occurs on the okra and watermelon. Some varieties and individual plants seem less liable to this disease, which attacks the plants through the soil, and it is thought the means for overcoming this trouble lies in resistant plants. This disease, as well as some others, is very much complicated by the presence in the roots of the cotton of nematodes (*Heterodera radicola*), minute worms that enter the roots of cotton and a number of other plants, causing a large number of galls to be formed. The plant is injured by the nourishment being taken from other parts of the plant to make the galls. This weakens the plant so that it is more liable to fungus attack. When nematodes occur in abundance in the field, no entirely efficient means of eradication is known as yet.

**Production and Distribution.** The oldest-known cotton-producing country is India, where for 30 centuries the plant has been grown and its fibre manufactured. For 400 years before the Christian era cotton was well known in what was then the civilized world, the writings of the Greeks and Egyptians plainly indicating the knowledge of the value of this fibre. Columbus found it in the Western world, although not so extensively cultivated as in the East; but during the past 50 years its culture here has distanced in quantity and in quality the produce of the Old World. Down to 1800 the cotton consumers of Europe depended upon the Indies and the Levant for their raw material; but by 1860, so far had the inventive genius, the superior farming, and the greater energy of the planters of our Southern States pushed the production of the fibre, that they furnished the greater part of the cotton used by Great Britain and the continent of Europe. From 1858 to 1860 America furnished 79 per cent of the cotton imported into Great Britain. During our Civil War this dropped to 3½ per cent, rising to 58 per cent in 1871, and amounting to 80 per cent in 1900 and 62.8 per cent in 1912. During the Civil War, when the price of cotton was abnormally high, attempts were made to grow cotton in many countries. The industry flourished there for a while, but it has ceased to be profitable in Europe, Australia, etc. Russia in her Asiatic possessions has developed cotton growing greatly in recent years, so that the imports into the Empire have fallen off 50 per cent in the past decade. Great Britain, Germany, and France are making especial efforts to develop cotton growing in Africa, and in 1912 nearly 60,000 bales were produced in their colonies, mostly in Africa.

**Cotton Production of the World.** This is difficult to state except approximately, as a large

proportion and amount consumed is produced in uncivilized or in semicivilized countries, where no accurate record is kept; and in many countries and districts absolutely no data are available—as in China, where soil and climate are favorable and the clothing of the population is largely of cotton, yet the extent of its cultivation is a close secret; and in some parts of India, where the production can be estimated only by the amount in sight and the known or assumed requirements for dress. The amount produced in the vast unknown continent of Africa is even more of a mystery, although native cottons form there a large proportion of the dress.

The world's production of cotton has increased more rapidly in recent years than that of any other of the chief materials of clothing, wool, silk, or flax, and the growth in world consumption has been far greater than that of population. The total cotton production of the world in 1850 was approximately 3 million bales, in 1900, 12½ million, and in the cotton year 1911-12, 25 million, the production of 1912 being practically double that of 1900 and fully eight times that of 1850. As the world population increased but about 50 per cent from 1850 to 1912, while cotton production increased 700 per cent and that of wool about 200 per cent, it is apparent that the popularity of cotton as an article of clothing has greatly increased.

**Cotton in the United States.** The first authentic record of cotton cultivation in the United States was at Jamestown, Va., in 1607. The first exportation was in 1747, when eight bags were sent to England, the first shipment of any importance being 2000 pounds in 1770. In 1791, 189,316 pounds were exported; Whitney's invention of the saw gin in 1793 raised this amount to 17,789,803 pounds by 1800. The production reached 1,920,000,000 pounds in 1860; 3,178,000,000 in 1880; 5,133,000,000 in 1900; 6,840,000,000 in 1904, and 7,157,000,000 in 1912. Cheapening the processes of cultivation and cleaning, and increase of acreage, have so lowered the cost of the fibre that while the average price in Liverpool was 1s. 6d. (say,

of a million in 1864, against 4½ millions in 1861. In 1867 there was a decline from the high prices consequent upon the Civil War to 7½d. (14½ cents), but in a few months it reached 1s. 1d. (26 cents). In 1890 it ranged from 5½d. to 6½d. in Liverpool, and from 10¼ cents to 12¼ cents in New York. From 1891 to 1901 prices were low, falling to an annual average of 5.94 cents per pound in New York in 1898, advancing to 11.18 cents per pound in 1911 and an annual average of 15.11 cents per pound in 1910—the highest record since 1875. In 1912 the average price of middling cotton in New York was 11.52 cents and in 1914 about 12.4 cents.

The acreage and yield of cotton, including linters, for the season of 1912, as reported by the United States Bureau of the Census, were as follows:

STATE	Acrea	Running Bales
Alabama . .	3,730,000	1,367,136
Arkansas	1,991,000	805,021
Florida	224,000	60,248
Georgia	5,335,000	1,888,963
Louisiana	929,000	392,720
Mississippi	2,889,000	1,049,604
North Carolina	1,545,000	935,080
Oklahoma	2,665,000	1,057,125
South Carolina	2,695,000	1,259,672
Tennessee	783,000	289,731
Texas	11,338,000	4,888,623
All others	159,000	96,550
Total	34,283,000	14,090,863

The accompanying Table No. 1, taken from *Bulletin No. 116, United States Census Bureau*, gives the cotton crop in the United States by States, according to censuses of 1870, 1880, 1890, 1900, and 1910 for the crops of the preceding year. The bale measurement of 1910 was 502.6 pounds; in 1890 it was 477 pounds; in 1880 it was 433 pounds; in 1870 it was 440 pounds. The early settlers north of the Ohio River planted cotton for domestic uses between 1749 and 1780. The census for 1860 gave for Illinois 1482 bales, or 659,490 pounds, of cotton.

TABLE I

COTTON GROWN IN THE UNITED STATES IN THE YEARS 1869, 1879, 1889, 1899, AND 1909 IN BALES

STATE	1869	1879	1889	1899	1909
Alabama	429,482	699,654	915,210	1,095,329	1,065,377
Arkansas	247,968	608,256	691,494	711,739	718,117
Florida	39,789	54,997	57,928	56,875	62,936
Georgia	473,934	814,441	1,191,846	1,300,164	1,901,830
Louisiana	350,832	508,569	659,180	718,929	760,573
Mississippi	564,938	963,111	1,154,725	1,257,772	1,109,580
North Carolina	144,935	389,598	336,261	477,070	649,886
Oklahoma*		17,000	34,540	212,010	573,786
South Carolina	224,500	522,548	747,190	881,192	1,164,309
Tennessee	181,842	330,621	190,579	215,068	253,397
Texas	350,628	805,284	1,471,242	2,556,413	2,554,820
All others	3,148	41,280	22,326	29,605	62,898
Total . .	3,011,996	5,755,359	7,472,511	9,507,786	10,386,209

\* Includes Indian Territory.

36 cents) per pound in 1793, it was 5½d. (say, 11½ cents) in 1851; averaging 7d. (14 cents) for the five years ending 1861. During the period of the Civil War in the United States the prices were very high owing to the small production, the quantity produced being less than half a million bales in 1863 and but about one-fourth

Among the States classed as "all others" are Missouri, Virginia, California, Kansas, Arizona, all of which are producing cotton in commercial amounts, and a number of other States where its cultivation as a crop has been abandoned. Stimulated by the high prices following the Civil War, the cultivation of cotton was con-

ducted to a limited extent in California, Illinois, Indiana, Nevada, Utah, and West Virginia. With the coming of low prices cotton culture gradually disappeared from those sections not peculiarly adapted to it, and censuses after 1870 credited none to Illinois, Indiana, Nevada, Utah, or West Virginia. Natural selection continues to eliminate the industry from sections less favored by climatic conditions. To illustrate: Kentucky is credited by the censuses of 1880 and 1890 with 1367 and 873 bales respectively, but the census of 1900 finds in this State only 84 commercial bales. The loss in those States lying along the northern border of the cotton belt is more than offset by the increase found in the territory west and southwest of the Mississippi River. According to the eleventh census 2,872,524 bales, or 38 per cent of the entire American crop of 1889, was grown in that region, while in the census of 1900, in the same territory, the production reached 4,250,940 bales, or 45 per cent of the whole crop. In 1912 the States of Arkansas, Louisiana, Oklahoma, and Texas, all west of the Mississippi River, produced 7,169,604 bales, or 62.3 per cent of the entire crop.

The exports of cotton from the United States averaged less than 2 billion pounds per annum in the decade ending with 1880, and between 2 and 3 billions per year up to 1895. During the next decade the exports averaged over 3 billion pounds per annum, and from 1907 to 1914 averaged over 4 billion pounds per annum, the quantity exported in the fiscal year 1911 being 5,535,125,000 pounds, the high record up to that date, and in 1913 was 4,562,926,000 pounds. The high record in value of exports was in 1911, being \$585,318,869, that of 1913 being \$547,357,195. The exports to the principal countries in 1913 were to Great Britain, \$224,783,457; Germany, \$144,175,157, France, \$64,137,024; Italy, \$30,169,663, and Japan, \$25,022,050. The imports of cotton for 1913 were valued at \$22,987,318, of which \$18,753,197 was imported direct from Egypt, and between one and two million dollars' worth of Egyptian cotton from England. For the same fiscal year the exports of cotton goods were valued at \$53,743,977, and the imports at \$66,065,857, of which \$35,776,301 was laces, embroideries, and other articles of this character.

The amount of cotton consumed by all the mills in the world for the year ending Aug. 31, 1913, was approximately 21,000,000 bales. At the same date there were 30,590,553 active spindles in the United States, 11,971,092 of which were in the cotton-producing States and 18,619,461 in all other States. The consumption of domestic cotton in the United States for the above period was 5,786,061 bales. About one-third of the cotton grown in the United States is consumed in domestic manufactures, and about two-thirds is exported, chiefly to Europe.

**Manufacture.** The process of transforming cotton from its raw condition into the thread or cloth that is such an essential of daily life is one which involves many different operations. It must first be cleaned to remove sand, dust, and other foreign substances. It then contains about two-thirds of its weight in seeds, which must be removed.

**Cotton Ginning.**—Before Eli Whitney's invention of the cotton gin, the removal of the seeds by hand was so difficult a task that very little cotton was raised. It would take one person

two years to turn out an average bale of cotton, 3 to 15 of which are produced by one machine in one day. Before the Civil War the gins were run chiefly by mule power, which, when operated in connection with slave labor, was cheaper than steam. Whitney's cotton gin, known as the saw gin, may be briefly described as a series of circular saws with fine teeth, revolving with an arc of their circumference projecting through a guide into a receptacle for seed cotton. These saws tear the lint from the seed and carry it through the guide. It is removed from the saws by a brush and carried to a condenser. Great care must be exercised not to injure the cotton (1) by having the saws too close to the bars of the grate, so as to rub, (2) by having them revolve too fast, or (3) by having the teeth too sharp. The roller gin is growing in favor among cotton producers, especially for the long-staple or Sea Island cotton, and in the United States and Egypt all long-staple cotton is ginned in this way. It removes the seed with only one-fifth the rapidity of the saw gin, but it does not injure the fibre. In a primitive form it has been used in Egypt and India for many centuries. It consists of two rollers, revolving in opposite directions, between which the cotton is passed and the smooth, hard seeds thrown off. Both the saw gin and roller gin have been much modified and their effectiveness increased by successive improvements.

In 1912 there were 28,358 ginneries in the United States, 25,279 of which were reported as active by the Census Bureau. The average output was 535 bales, a somewhat lower average than that of 1911, but a decided increase over the average for the preceding five years. The number of idle ginneries was 3079, or 203 more than in 1911. While the crop of 1912 was somewhat less than that of 1911, yet it would seem from the steady increase in the number of idle gins that the process of ginning is being gradually concentrated in the larger establishments.

In *Bulletin No. 58*, on Cotton Ginning, Twelfth United States Census, Daniel C. Roper divides cotton ginneries into three general classes: Those conducted exclusively for the public, those conducted exclusively for the plantation, and those conducted for both the public and plantation. The *Bulletin* states that "the rapidity with which the private or plantation ginneries have been supplanted by public and more modern equipments is noteworthy. Through inquiries of the census of 1880, covering the power and machinery of cotton-ginning establishments, it was ascertained that a large percentage of the crop of 1879 was handled by ginneries of a private character. The motive power of these ginning and baling plants consisted of horses or mules, and each had a daily capacity of from three to five bales. The general introduction of steam power brought economic methods that have crowded out primitive horse ginneries to such an extent that they are now curiosities."

**Baling.**—The cotton having been separated from the seed, the next step is to pack it in bales for shipment. Different methods of baling prevail among the cotton-producing countries. The American product, as put up in the old-fashioned tortoise-back bales, has the reputation of being the worst-baled cotton in the world. East Indian cotton is shipped in cubical

bales, weighing about 400 pounds, covered with thick Indian hemp and held together with strong iron bands. The Egyptian bale weighs about 700 pounds, is a little thicker and not so long as the American, and has 11, instead of 7 or 8, bands around it. Brazilian cotton comes in very light bales, weighing only 200 pounds, which are tied with trailing vines. In the cotton States of America the cotton which is not consumed by the Southern mills is shipped to the exporting city by rail, steamboat, or wagon. It is there graded by the exporter, who fastens a tag to each bale and also to a sample taken from it. It is from these labeled samples that the foreign manufacturer makes his purchases. The bales are then subjected to enormous pressure, usually by the transportation company, to reduce the size of the export bale, a standard bale weighing 500 pounds. During its progress from the farm to the factory a bale of cotton is given a series of brands, by the farmer and the ginnery, as well as the exporter, so that fraud can easily be traced. One of the objections to the American baling methods, however, is that the covering becomes so torn that the marks on it cannot be deciphered.

The manner in which American cotton is generally baled and pressed for transportation to the markets and mills is not only needlessly expensive and wasteful, but fails to protect the cotton from damage and theft. The bales are covered with jute cloth, made of thread so coarse and loosely woven that, while it adds unnecessarily to the weight of the bale, it does not protect the cotton. The bales are held together by steel bands, which still further increase the weight. The weight of the bagging and ties on a bale weighing 500 pounds is about 23 pounds. Besides the increased freight rates due to this bulky method of baling, the necessity of a second pressing, and the bad condition in which the cotton reaches the factory, a more grave defect is its excessive inflammability, resulting in high insurance charges. So great is this risk that on some passenger steamers cotton is not carried, on account of the danger of fire. An illustration of this danger was afforded by the terrible fire which occurred on the docks of the North German Lloyd Steamship Company at Hoboken, N. J., on June 30, 1900. The fire started in some unknown manner in a lot of cotton bales and spread with such rapidity that efforts to check it were unavailing. The loss of property caused by this cotton fire has been estimated variously at from \$4,000,000 to \$6,000,000, and the loss of life was about 200 persons.

Some years ago a cylindrical bale was devised that is made directly from the gin. This seemed to meet with favor for a time, but the census reports show a diminishing number of round bales, only 99,916 such bales being reported for the crop of 1913. The American Cotton Company makes a bale 4 feet long and 2 feet in diameter, weighing over 35 pounds per cubic foot. The cotton is pressed gradually, so as not to injure the fibre, and is in the form of a continuous lap or roll. Since the air is pressed out of the cotton, it has no tendency to expand, and the covering is only sufficient to keep the cotton clean. The heavy bagging and ties are entirely dispensed with. The cotton is compressed as fast as ginned and is shipped direct from the ginhouse to the warehouse or mill. The cylin-

dric bale of the Planters' Compress Company is 36 inches long, 18 inches in diameter, and weighs 250 pounds. This bale is held together by wires passing from end to end through a small opening in the centre. It is covered with cotton duck, and the weight of the cloth and wire is about three pounds per bale. Most satisfactory tests have been made with each of these types of bales, showing that they are both fire and water proof. The other objections to the old-fashioned methods of baling are also met by the cylindrical bales described. The reason for the failure of the round bale to be more widely adopted is not evident.

**Spinning.**—When the cotton bales are received at the factory, the cotton from the different bales is first mixed in order that the yarn produced may be of uniform quality. It is next submitted to a process of opening and picking that loosens the fibres which became closely packed together when the bale was pressed. Then follow the processes of *carding*, *drawing*, *slubbing*, *roving*, *spinning*, and *doubling*, by which the cotton fibre is reduced by successive stages from a web or sheet into cotton yarn. The process of carding is described under that title. Its object, besides cleaning the cotton of any foreign substances still adhering, is to reduce the lap into a thin fleece and then contract it into a ribbon or sliver. The sliver, after being doubled so that inequalities in the single slivers are counterbalanced, is put through a drawing machine, consisting of successive pairs of rollers, each of which revolves more rapidly than the preceding one, and which reduces the sliver to a finer and finer thread. By slubbing and roving, the process of attenuation is continued, the thread in each case taking the name of the machine through which it has just passed. The thread is also twisted, and when it leaves the roving machine it is strong enough to be wound on a bobbin. Spinning is the concluding process, and in this the thread is given the requisite firmness and twist. Doubling is the combining of two or more threads into a single cord. Every step in the manufacture of cotton yarn has for its object (1) the removal of finer and finer impurities, (2) the attenuation and strengthening of the thread, (3) correcting the mistakes of the preceding process. The whole process is described in more detail in the article **SPINNING**.

The thread may be subjected to the additional processes of *gassing* and *polishing*. The object of gassing is to singe off all the loose fibres and so produce a very smooth yarn. This is accomplished by passing the thread through a very fine jet of gas, as it is wound from one bobbin to another. The yarn is polished by applying a sizing made of starch, beeswax, or other materials. This not only gives the yarn a gloss, but increases its strength and weight. The process of weaving cotton into cloth does not differ materially from that of silk and wool and is treated in the article **WEAVING**.

The bulk of the world's cotton is shipped into foreign countries and often across the ocean twice—once to the factories to be transformed into yarn and cloth, and again, perhaps, back to the very region where it was first raised, in the form of cotton goods. The best example of this fact is offered by the United States, which raises nearly three-fourths of the world's cotton, yet in 1911 exported less cotton goods, measured by values, than the Republic of Swit-

zerland, which raises not a pound of cotton and has not even a seaport. Of course the United States is an enormous consumer of cotton, one-third of its large crop being consumed by its own mills, and this fact must be remembered in considering the extent of her export trade. Obviously the amount of cotton goods imported,

TABLE II

VALUE OF THE WORLD'S EXPORTS OF COTTON GOODS BY COUNTRIES

(From Bureau of Census Bulletins, 106, 110, 115, and 116)

COUNTRY	1909	1910	1911
Austria-Hungary	\$13,257,962	.	\$18,153,373
Belgium	54,004,530	.	62,367,303
France	64,619,295	\$63,768,744	67,789,127
Germany	95,524,870	103,466,692	114,108,624
Great Britain	558,269,108	515,222,235	595,584,160
Italy	25,646,333	.	42,003,541
Netherlands	16,116,466	26,369,009	.
Russia	10,689,328	13,155,995	.
Switzerland	52,967,250	.	52,206,307
United States	31,878,566	33,398,672	40,851,918
British India	37,428,252	40,216,450	48,478,362
Japan	29,260,177	38,446,485	34,049,000

and the amount produced and consumed at home, are also important factors.

Table II gives the value of the world's export trade in cotton, by countries, for 1909, 1910, and 1911. The table is compiled from *Bureau of Census Bulletins*. Of more value, however, as showing the actual extent of the cotton

It is interesting to note that this enormous industry is concentrated about Lancashire, in a district whose area is about 50 per cent greater than that of the State of Rhode Island. In the United States the most marked development is the relative importance of Southern factories, situated in the very locality where cotton is produced. Since 1890 the number of spindles has greatly increased and now more than one-third of the whole number in the country are in the cotton-producing States. The number in the Southern States grew from 4,368,000 in 1900 to 11,583,000 in 1912, while those in the Northern States only increased from 15,104,000 to 18,996,000 in 1912. Other industrial conditions besides the nearness to the cotton crop produced this growth, chief of which has been the general industrial awakening experienced by the South. Capital, however, in this section, has shown greater progress than labor, so that the latter is still cheap; a working day is long, and there are comparatively few labor laws restricting the age, sex, and other conditions of labor.

In 1909, according to the census report, there were in the United States 1324 establishments engaged in the manufacture of cotton goods. The materials used cost \$371,009,000 and the manufactured products were valued at \$628,392,000. There were 387,771 persons engaged in these industries and the wages paid in 1909 were \$132,859,000 against \$66,025,000 in 1889, having thus doubled in 20 years.

During the closing years of the nineteenth

TABLE III  
NUMBER OF SPINDLES IN COTTON MILLS

SEASON OF	Great Britain	Continental Europe	Northern United States	Southern United States	Total United States	India
1889-90	43,750,000	25,460,000	12,800,000	1,605,000	14,405,000	3,274,000
1899-1900	45,500,000	33,000,000	14,400,000	4,700,000	19,100,000	4,945,000
1909-10	53,729,000	40,190,000	17,770,000	10,490,000	28,226,000	6,053,000
1912-13	55,576,000	43,400,000	18,700,000	11,700,000	30,500,000	6,400,000

industry, including both home and foreign consumption, and its geographical tendencies as well, are the Tables III and IV, showing the number of cotton mills and spindles, the amount consumed, and the value of the output. By studying these tables certain facts and tendencies in the cotton trade are apparent. Great Britain is and for many years has been at the head of the cotton-goods trade, both in the amount exported and in the actual amount produced.

century the manufacture of cotton was much advanced in China and Japan. In China cotton has been made into cloth since 1260, and for four centuries it usurped the place of silk. Steam power was introduced into Chinese cotton factories in 1865-67 and into Japan in 1889. Great difficulty has been experienced in both China and Japan in getting laborers. There is no factory legislation in either country limiting the hours of labor, and in China children

TABLE IV  
COTTON CONSUMPTION OF THE WORLD, IN 500-POUND BALES

YEAR	Great Britain	Continent of Europe	United States	India	All Others	Total World
1889-90	3,227,000	3,432,000	2,185,000	791,000	.	9,635,000
1899-1900	3,334,000	4,576,000	3,856,000	980,000	789,000	13,535,000
1900-1	3,289,000	4,576,000	3,727,000	1,060,000	784,000	13,416,000
1901-2	3,253,000	4,536,000	4,037,000	1,384,000	905,000	14,415,000
1902-3	3,185,000	5,143,000	4,015,000	1,364,000	766,000	14,475,000
1903-4	3,017,000	5,148,000	3,908,000	1,368,000	869,000	14,310,000
1904-5	3,620,000	5,148,000	4,310,000	1,474,000	1,060,000	15,612,000
1905-6	3,774,000	5,252,000	4,728,000	1,586,000	1,097,000	16,435,000
1906-7	3,892,000	5,460,000	4,950,000	1,552,000	1,145,000	16,999,000
1907-8	3,690,000	5,720,000	4,297,000	1,561,000	1,083,000	16,351,000
1908-9	3,720,000	5,720,000	4,912,000	1,653,000	1,159,000	17,164,000
1909-10	3,175,000	5,460,000	4,533,000	1,517,000	1,304,000	15,989,000
1910-11	3,776,000	5,460,000	4,485,000	1,494,000	1,400,000	16,615,000
1911-12	4,160,000	5,720,000	5,211,000	1,600,000	1,788,000	18,479,000

begin to work at a very early age. The working day is 11 or more hours long, and the factories run seven days in the week. Labor is also very cheap, as estimated by the amount of money paid for a day's work, which averages from 10 to 15 cents, but the standard of intelligence and faithfulness among operatives is so low that, measured by the amount and quality of the product, the real cost of labor is high. In Japan it is particularly hard to keep steady employees. The girls are used to the freedom and out-of-door life of the country and will not stay long at their situations, so that mill operators are constantly hampered with green hands. In Japan the weaving of cotton and other fabrics is still largely a household industry. In 1896, according to the French Consul at Yokohama, 660,408 dwellings or establishments contained 949,123 looms, at which 1,043,866 persons were engaged in weaving. The yarn used in this household art is largely factory spun, thus increasing rather than diminishing the demand for cotton factories.

The preceding Table IV, compiled from various sources, shows the cotton consumption of the world for a number of years. In China most of the cotton cloth made is produced by hand labor, in part from yarns made by the Chinese mills, and in part from yarns imported from India and Japan. The cotton mills of China up to 1905 produced only yarn, but since that time have begun the manufacture of cloth.

Japan had 200,000 spindles in operation in 1889; 1,358,125 spindles in 1899, and 2,192,000 in 1912. Japan consumed 99,375 bales of cotton in 1890; 644,818 bales in 1898; and 1,190,000 bales in 1912. China had 570,000 spindles in operation in 1899 and 831,000 in 1912. It is estimated that on July 1, 1900, the world's working spindles numbered 105,000,000, and 140,996,000 in 1912.

**Bibliography. DESCRIPTION AND CULTIVATION:** True, "The Cotton Plant," in *United States Department of Agriculture, Office of Experiment Stations, Bulletin 33* (Washington, 1896); Wilkinson, *Story of the Cotton Plant* (New York, 1899); Lecompte, *Le coton: monographie, culture, histoire économique* (Paris, 1900); Hohnel, *Ueber die Baumwolle* (Vienna, 1893); Todaro, *Relazione sulla cultura dei cotone in Italia* . . . (Rome, 1878); Mallet, *Cotton: The Chemical, Geological, and Meteorological Conditions for its Successful Cultivation* (London, 1862); Monie, *The Cotton Fibre: Its Structure* (Manchester, 1890); Tompkins, *Cotton, Cotton Oil, Cotton Planting, Harvesting* . . . (New York, 1898); Hammond, *The Cotton Industry* (ib., 1897); Latham, Alexander, & Co., *Cotton Movement and Fluctuations* (ib., 1899); Royle, *Culture and Commerce of Cotton in India* (London, 1851); Marsden, *History of Cotton Manufacture* (ib., 1895); Lamborn, *Cottonseed Products* (New York, 1904); Taylor, *Cotton Weaving and Designing* (ib., 1906); Chapman, *Cotton Industry and Trade* (London, 1906); Peake, *Cotton from the Raw Material to the Finished Product* (New York, 1911).

**STATISTICS:** Shepperson, *Cotton Facts* (New York, annually); *Statistical Abstract of the United States* (published annually); *United States Department of Agriculture, Office of Experiment Stations, Bulletin 33*, and Publications of the Bureau of Statistics, *Thirteenth Census* (Washington, 1913); *Bulletins of the Bureau of the Census*. See COTTONSEED AND ITS PRODUCTS; SPINNING; WEAVING; MUSLIN.

**COTTON, ARTIFICIAL.** Artificial cotton is the term sometimes applied to the products obtained by treating wood pulp or other forms of cellulose in various ways in order to make filaments capable of being woven into textile material. These filaments are also called artificial silk, or, from their source, wood-pulp yarns. See WOOD-PULP YARNS.

**COTTON, MERCERIZED.** See MERCERIZED COTTON.

**COTTON, CHARLES** (1630-87). An English translator and poet. He was a friend of Izaak Walton, to whom he addressed several poems, and to the fifth edition (1676) of whose *Compleat Angler* he contributed as the "second part" an essay on fly fishing. His works, nearly all in verse, include a translation of *Cornell's Horace* (1671); *the Life of the Duke d'Espernon* (1670); *The Fair One of Tums*, published anonymously (1674); *The Scarronides, or Virgil Travestie* (1664), a coarse burlesque of the *Æneid* that ran through 15 editions; *The Voyage to Ireland in Burlesque* (1670); *The Wonders of the Peak* (1681). Cotton was a famous angler and was horticulturalist enough to write an excellent *Planters' Manual* (1675). Some of his poems have been much admired for their sweetness and directness of style, and a volume of his *Lyrical Poems* was edited by J. R. Tutin in 1903. Wordsworth and Lamb particularly praised his "Ode to Winter." His best work, the English version of Montaigne's *Essays* (1665 and frequently since), places him among the greatest of translators.

**COTTON, CHARLES STANHOPE** (1843-1909). An American naval officer, born in Milwaukee, Wis., and educated at the Naval Academy. In 1861 he entered active service and participated in several of the principal naval engagements of the Civil War. He was on the frigate *St. Lawrence* when that vessel captured the *Petrel* (July 28, 1861) and took part in the fight between the *Merrimac* and the *Monitor* (March, 1862). Soon after the close of the war he was appointed lieutenant commander. During the Spanish-American War he was in command of the auxiliary cruiser *Harvard*, and after the war he became commandant of the navy yard at Norfolk, Va. He was made a rear admiral in 1900 and was placed in command of the European squadron in 1903.

**COTTON, GEORGE EDWARD LYNCH** (1813-66). An English divine and educator. He was born

at Chester and was educated at Trinity College, Cambridge. From 1837 to 1852 he taught at Rugby, being the "young master" mentioned in *Tom Brown's School Days*. He was for six years principal of Marlborough College and in 1858 was made Bishop of Calcutta. He founded many schools and effected great improvement in the education of the poorer classes of the Anglo-Indian population. He was drowned in the Ganges. Consult the *Memoir* (London, 1871) by his wife.

**COTTON, JOHN** (1585-1632). An eminent Puritan divine, known as "The Patriarch of New England." He was born in Derby, England, and was educated at Trinity College and Emmanuel College, Cambridge, at the latter of which he was successively a fellow, head lecturer, dean, and catechist. Inclining towards Puritanism, he left Cambridge about 1612, and for the next 21 years, with one short intermission, he had charge of the church of St. Botolph's, at Boston, in Lincolnshire, where he had an extraordinary influence over his congregation, gained a wide reputation for learning and godliness, and trained many young men for the ministry. When Archbishop Laud became Primate of England (in 1633), Cotton was summoned to appear before the Court of High Commission, but escaped the pursuivants sent to apprehend him and, after lying in concealment for some time in London, embarked for Boston, New England (which had been named in compliment to him), where he landed in September, 1633. Almost immediately thereafter he was chosen as teacher of the First Church in Boston, of which the Rev. John Wilson was then pastor, and he continued to act in this capacity until his death. Here, as in England, he had a wide reputation for learning and piety and soon came to wield a powerful influence over affairs both ecclesiastical and secular in New England and especially in Massachusetts. According to William Hubbard (q.v.), a contemporary historian, whatever he "delivered in the pulpit was soon put into an order of court . . . or set up as a practice in the Church," and the enthusiastic Cotton Mather, speaking of his learning, says that he was "a most universal scholar, and a living system of the liberal arts, and a walking library." "He was," says Tyler, "the unmitigated pope of a pope-hating commonwealth." He took an active part in the Antinomian controversy, first supporting and afterward opposing Anne Hutchinson (q.v.), and conducted an extended controversy with Roger Williams, whose expulsion from Massachusetts he approved. He was a voluminous writer and published as many as 50 volumes, the most important of which are: *Set Forms of Prayer* (1642); *The Keys to the Kingdom of Heaven and the Power Thereof* (1664); *The Bloody Tenent Washed and Made White in the Blood of the Lamb* (1647), written in answer to a letter from Roger Williams, *A Brief Exposition upon Ecclesiastes; A Brief Exposition upon Canticles; A Treatise of the Covenant of Grace as It Is Dispensed to the Elect Seed; A Treatise Concerning Predestination*; and the famous catechism, entitled *Spiritual Milk for Babes, Drawn Out of the Breasts of Both Testaments, Chiefly for the Spiritual Nourishment of Boston Babes in Either England* (1646). A part of the controversy between him and Roger Williams may be found in the *Publications of Narragansett Club*, vols. i and

ii (Providence, 1866-67). Consult: McClure, *The Life of John Cotton* (Boston, 1846); Norton, *Abel Being Dead, Yet Speareth: or, the Life and Death of That Derservedly Famous Man of God, Mr. John Cotton* (London, 1658; republished, Boston, 1834); an interesting sketch in Mather, *Magnalia* (London, 1702); *John Cotton: Memorial Exercises, Boston First Church* (Boston, 1908); and a critique of Cotton's writings in Tyler, *A History of American Literature* (New York, 1878).

**COTTON, NATHANIEL** (1705-88). An English physician and poet, the friend of Young, author of *Night Thoughts*, and of the poet Cowper, whom he cared for in 1763-65 in his sanitarium, or, as he rather grandiloquently styled it, "Collegium Insanorum," at St. Albans, Hertfordshire, where he treated mental diseases with success. His *Visions in Verse* (1751) is his best-known volume, and among his shorter poems, "The Fireside" and "To a Child Five Years Old" are still found in anthologies. Consult *Select Poems of Dr. Cotton: with a Life of the Author*, in the series "The Works of the British Poets" (Philadelphia, 1819-23).

**COTTON, SIR ROBERT BRUCE** (1571-1631). A distinguished English antiquarian, founder of the Cottonian Library, now in the British Museum. After his education at Westminster School under the famous Camden, and at Cambridge, where he took a B.A. degree in his sixteenth year, he began those archaeological pursuits which made his name famous, and which proved of immense value to historians. As the dissolution of the monasteries, about half a century before, had dispersed many valuable collections of manuscripts among private persons, Cotton sought out and purchased these documents wherever practicable. On account of his ability and knowledge he was frequently consulted by ministers of state on difficult constitutional points and international questions. In 1600, at the request of Queen Elizabeth, who desired antiquarian authority on the matter, he wrote *A Brief Abstract of the Question of Precedency Between England and Spain*. King James, who knighted him in 1603 and gave him a baronetcy in 1611, employed him to vindicate the conduct of his mother, Mary, Queen of Scots, and also to examine whether the Roman Catholics, on account of whom some alarm was then felt, should be imprisoned or put to death. Cotton advocated tolerance. His intimacy with the Earl of Somerset led him to be suspected of complicity in the death of Sir Thomas Overbury, and in consequence he was imprisoned for about eight months. In 1629 a tract entitled *A Project How a Prince May Make Himself an Absolute Tyrant* was obtained from his library, the tendency of which Charles I and the Star Chamber considered dangerous to the liberty of the state. His library was accordingly declared unfit for public inspection, and he himself was denied all use of it. Depression at this edict caused his death, less than two years afterward. His son, Sir Thomas (1594-1662), regained possession of the library, and his grandson, Sir John (1621-1701), and great-grandson, Sir John (1679-1731), added to it considerably. The latter bequeathed it in public trust to the nation in 1700. In 1730 the library was lodged with the royal collection in Ashburnham House, Westminster. The following year a fire occurred in which 114 out of 958 manuscript volumes were reported as "lost, burned, or entirely destroyed;

and 98 damaged so as to be defective." Fortunately a great number of these injured volumes were skillfully restored, so that the library now consists of nearly 900 volumes, of which, says Mr. Edwards in his *Memoirs of Libraries*, "nearly 200 are state papers of the highest value. They include a vast series relating to the diplomatic intercourse between England and almost every state of Europe, extending from the reign of Edward III to that of James I. A large proportion of these documents consist of the original letters of sovereigns and of statesmen. Even those papers which are not original have a high degree of authority as coeval transcripts." The Cottonian Library was transferred to the British Museum (q.v.) in 1757. In addition to the manuscripts, the collection includes many valuable coins and antiquities. Among Cotton's works may be mentioned, in addition to those referred to above: *Poover of the Peeres and Comons of Parliament in point of Judicature* (1640); *Cottoni Postuma—Choice Prooes of that Renowned Antiquary* (1672); *Divers Short Pieces Exposed to Publiok Light by J. Howell* (1679); "Speech before the Privy Council touching the Alteration of Coyn," in Shaw, *Select Tracts and Documents* (1896). Consult also: *Calendars of State Papers* (London, 1591-1631); *Parliamentary Journals* (ib.); *Planta, Catalogue of the Manuscripts in the Cottonian Library* (ib., 1802); Smith, *Catalogue* (Oxford, 1896), containing a memoir; Kippis, "Robert Bruce Cotton," in *Biog. Brit.* (London, 1797); D'Ewes, *Autobiography* (2 vols., ib., 1845); Nichols, *Progresses of James I* (4 vols., ib., 1828); id., *Leicestershire* (ib., 1795-1811); Gardiner, *History of England* (ib., 1883-84).

**COTTON BIRD.** A small South African titmouse (*Agithalus capensis*), called *kapok vogel* (i.e., 'cotton bird') by the Cape Colony Dutch on account of its wonderful nest, made of cottony materials, which closely resemble the nest of its congener, the penduline titmouse of Europe, illustrated on the Plate of PENSILE NESTS OF BIRDS with the article NIDIFICATION. (See also TITMOUSE.) This nest, first figured by Le Vailant (*Oiseaux d'Afrique*, Paris, 1806), whose picture has been widely copied, is usually wrongly assigned to an entirely different bird. Consult Shelley, *Birds of Africa* (London, 1900).

**COTTON FAMINE.** The name given to an industrial crisis in the manufacturing towns of northern England, occasioned by the almost complete disappearance of cotton imports from the United States during the last three years of the Civil War. As a result of the blockade of the Southern ports by the Federal government, the importation of cotton from the United States into Great Britain sank from more than 1,000,000,000 pounds in 1860 to 816,000,000 pounds in 1861, 13,000,000 pounds in 1862, and 6,000,000 pounds in 1863, and as the imports from the United States constituted more than three-fourths of the total supply, the blow to the cotton industry in Lancashire was a stunning one. The suffering fell most heavily on the mill operatives, who, as a body, were brought to the verge of starvation by the partial or complete suspension of production. In November, 1862, it was estimated that more than 350,000 persons in Lancashire were subsisting on parochial relief or private charity. It is a notable fact that, in spite of their great privations, the factory population of Lancashire was in thorough sympathy with the Northern cause,

which they regarded as a crusade against slavery. Consult Arnold, *History of the Cotton Famine* (London, 1865).

**COTTON GIN.** A machine for separating the cotton fibre from the seed, invented by Eli Whitney of Massachusetts and patented March 14, 1794. Previously the work had been done by hand, a slow and tedious process. Two types of gin are now in use—the saw gin of the Whitney type, which does very rapid work, and is generally used, and the roller gin, which is much slower, but is less likely to injure the fibre and is therefore preferred for the long staple Sea Island and Egyptian cottons. See COTTON, *Manufacture*.

**COTTON GRASS** (from its cottony spike), *Eriophorum*. A genus of plants of the family Cyperaceæ, having the fruit accompanied with long, silky hairs which spring from the base of the ovary. The species, which are about a dozen, are natives chiefly of the colder regions of the Northern Hemisphere. Several are found in America, and their white, cottony fruit-bearing spikes are well known in our swamps and bogs. The cottony substance is used for stuffing pillows, etc., and it is claimed that cloth may be made from it. The fibre lacks the twist of the cotton fibre and cannot be spun as readily. The stems of a Himalayan species, *Eriophorum cannabinum*, called *bhabhur*, yield a very strong fibre and are much employed for making cordage, being simply twisted into cables, of which rope bridges are usually made; but they are not durable and require much repairing every year. Cotton grass is said to be valuable for sheep pasture.

**COTTON INSECTS.** One of the most important insects injurious to the American cotton culture is the cotton worm, the larva of a noctuid moth (*Aletia xylinia*), which sometimes defoliates whole districts. It is believed to be South American, and first became strikingly harmful in the Southern States in 1804. It is now known all over the Union, but its Northern food plant is unknown. A government commission reported in 1879 that the average loss to the cotton-growing States due to its ravages was then from \$15,000,000 to \$20,000,000 annually. The moth is 1½ inches in spread of wings, the fore wings and body reddish brown, with delicate zigzag markings, and the hinder wings pale gray-brown. It flies at night and deposits eggs singly or sparsely on the underside of the leaves of the cotton plant, where they hatch in midsummer in about 50 to 60 hours. The caterpillars begin at once to devour the leaves, and so many are they, sometimes, that whole fields have been defoliated in three days, when the caterpillars swarm elsewhere in search of more food. In midsummer the caterpillars remain about 13 days, then fold a leaf about themselves and spin a cocoon in which they pupate. In two to four days after issuing from the chrysalis the female moth begins to lay—her average product being 400 eggs in the season. The natural food is the juice exuding from the glands on the leaf's midrib and at the base of blooms and bolls; but it will feed on any kind of fruit as it ripens. Until the worms are numerous enough to riddle the leaves badly, the moths continue to lay near their birthplace; then they migrate to considerable distances—seldom, however, until after the third generation of worms, say July 1, in southern Texas. Migrations are most common in the fall months, the moths flying at night and on

cloudy days. In the Southern States only the moths hibernate (the worms never, nor anywhere), hibernation being more frequent in the Southwestern than in the Atlantic States. The moths hibernate under bark, in logs and timbers, etc., and mild winters are more severe on them than cold ones, which keep them torpid.

In some districts there are as many as seven generations in a season. The average time from the egg of one generation to that of the next is a month.

The caterpillars visit earliest low alluvial lands where the plants are luxurious and thrifty. Moisture is favorable to their development; hot, dry weather unfavorable. The damages to the crop may reach 25 per cent in the Southern districts; but in the Northern the worms may do

similar insects, viz., *Prodenia littoralis* and *Earias insulana*.

The cotton stainer, or red bug (*Dysdercus suturellus*), is a small suctorial bug, "which drains the sap from the bolls by its puncture, causing them to become diminutive or abortive; but the principal injury it does is by voiding an excrementitious liquid which stains the cotton fibre yellow or reddish and very much depreciates its value in the market, the stains being indelible." It is also troublesome to orange growers in cotton-growing districts. See *Insect Life*, vol. i (Washington, 1888), illustrated. Several plant bugs, such as the capsid (*Psallus delicatus*), known in Texas as the cotton flea, and certain small beetles, are also injurious to cotton. For a description of the weevil, see WEEVIL.

THE COTTON BOLLWORM.

1. Adult moth (*Heliothis armigera*). 2. Destructive larva (the "bollworm" or "bud worm"), with a small boll pierced by a young caterpillar. 3. Vertical section of a newly expanded cotton flower, showing a young bollworm at work. 4. Section of a large green boll, which contains a caterpillar that has devoured the contents of the cell. 5. A pupa within its earthen case.

more good than harm, by removing superabundant leaves, thus facilitating the ripening of the bolls.

For further and extensive information and preventive measures, consult: Comstock, "Report on Cotton Insects," in *United States Department of Agriculture* (Washington, 1879), illustrated; Riley, *United States Entomological Commission, 4th Report* (ib., 1885); *Bulletin No. 18, n.s.* (ib., 1898).

The bud worm is scarcely second in its evil effects. (See BOLLWORM.) It is hatched from eggs deposited singly on all parts of the plant, taking only three to five days to hatch in summer. The worm is much like the cotton caterpillar, but larger. Its principal food is the flowers and bolls. The chrysalis is found a few inches underground. The chrysalis state lasts 7 to 10 days in midsummer, double that in cooler weather. The moth is in appearance and habits much like the *Aletia*, but seldom appears before July or August. Hibernation is in the chrysalis state only and underground. Breeding continues until cold weather; but the first three generations of each year generally feed in the cornfields, the first lot seen on cotton being the fourth brood.

Other injurious moths infesting cotton and eating the foliage include the yellow bear (*Spilosoma virginica*), the io (*Saturnia io*), the basket worm, or bagworm (q.v.), and several others. Cotton culture in Egypt is afflicted by two very

The natural enemies of the cotton worm and of the bollworm are domestic fowls, birds, spiders, beetles, wasps, ants, parasites, etc. As preventive measures, the free use of poisons is good for both, and fall plowing, which upturns the chrysalids of the bollworm, exposes these to the attacks of fowls and the fatal influences of cold.

Consult: "Mexican Cotton Boll Weevil," *Senate Document No. 305* (Washington, 1912); "Control of the Boll Weevil," *Farmers Bulletin No. 500* (ib., 1912); "The Boll Weevil Problem," *Farmers Bulletin No. 512* (ib., 1912); "The Cotton Boll," *United States Department of Agriculture, Bureau Entomology, Bulletin No. 50* (ib., 1905).

**COTTON MOUSE.** A field mouse (*Peromyscus gossypinus*), dark brown, with grayish feet, prevalent in the southern United States and injurious to cotton plants. Its habits are similar to those of the common white-footed mouse of the North. See Mouse.

**COTTONMOUTH** (so named from the white, cotton-like streak about its mouth). Properly, the moccasin snake (q.v.), but also a name in the southern United States of the copperhead.

**COTTONSEED AND ITS PRODUCTS.**  
*Cottonseed Oil.*—Cotton, which is described in the article bearing that title, when it is picked consists of the seeds and the lint or fibre adhering to and covering the seeds. The seeds constitute about two-thirds of this product. The

census of 1910 estimated the production of seed at 5,324,634 tons, valued at \$121,076,984. It constitutes a very valuable part of the product and is used for manufacturing cottonseed oil, for feeding animals, and for fertilizer. The cottonseed, after the removal of the fibre "linters" and hulls, yields, upon pressure, a large amount of yellow oil, with a bland, nut-like taste. Even before the invention of the cotton gin in 1794, the utilization of cottonseed was attempted, and in 1770 samples of the oil were exhibited by the Moravians in Bethlehem, Pa. Previous to that time the seed had been allowed to rot on the ground by many of the planters, while others more intelligent had utilized it as food for cattle, sheep, and horses. Others dug furrow trenches and buried it in the rows on which the next crop of cotton would be planted. Some fed it raw to their stock, while others boiled or roasted it to make it possibly more palatable. In 1820 a patent was granted for a process for extracting the oil, but the construction of the mills was so slow that at the end of 50 years only 26 cotton-oil mills had been erected. Towards the close of the nineteenth century the value of the cottonseed began to be more generally appreciated. In 1909 there were in the United States 817 cotton-oil mills, which crushed a total of 3,798,549 tons of cottonseed, yielding 157,145,689 gallons of crude oil, 1,661,734 tons of cottonseed meal, and 1,258,612 tons of hulls. The product of these mills had a combined value of \$147,867,894 against total of \$58,727,000 in 1899.

In addition to the oil extracted from the cottonseed, it yields the following by-products: *Linters*, or short bits of lint that adhere to the seed in the ordinary process of ginning, and are stripped by a specially constructed gin. These short fibres are used for the manufacture of batting and wadding. *Hulls*, the outer casings of the seed, used extensively for cattle food, whose properties are discussed below. *Cottonseed meal*, the residue left after the oil is expressed from the meats. This is extensively used as a cattle food and as a fertilizer. *Sludge*, which settles at the bottom of the oil tanks and is used in the making of soap, stearin, etc.

The process of manufacture is briefly as follows: The seed is shoveled from the cars into conveyors, which are spiral screens revolving in troughs with perforated bottoms through which any loose soil, sand, and stones are shaken. This process of cleaning is continued in a separator, where by means of different-sized screens all dirt and impurities are removed. A strong magnet is also used to draw out bits of nails and other iron. The seed being sifted and cleansed, it is now passed through the linter, a specially constructed gin for removing these short fibres. The lint is ginned twice, the second process removing the shorter fibres, so that two brands or qualities are thus obtained. The next process is to crack the hulls in a machine between revolving blades and bars, and then the meats and hulls are separated, the latter being sold either loose or in 100-pound bales. The meats are now ready to be passed through heavy calender rolls to crush the oil cells. There are two processes of making cottonseed oil. It may be expressed directly from the cold meats, this process making a high-grade oil; or the meats may first be heated in cookers. These cookers are steam-heated metal pans, covered with nonheat-conducting material and holding 700 pounds. The

seeds are cooked from one-quarter to three-quarters of an hour, according to their condition as determined by the judgment of the operator, too little or too much cooking giving a smaller yield of oil. The cooked meats are dropped into a camel's-hair sheet, spread out on a steel plate. Wrapped in this sheet the meats are subjected to pressure, which is gradually increased till it reaches 3500 pounds per square inch. Under this pressure a dark, murky oil flows out in streams and is received in reservoirs beneath the presses, whence it is pumped into settling tanks. The cakes are now taken from their wrappings of camel's-hair, cooled, and dried. They are then cracked and ground into meal, which is shipped directly in sacks or pressed again into cakes. After the crude oil has settled, it is drawn off and refined by treating it to a 10 or 15 per cent solution of caustic soda and then allowed again to settle. As it settles, the mucilaginous, albuminous coloring matters and other impurities sink to the bottom, leaving a clear yellow oil, which may be still further filtered and purified if desired. The white oil of commerce is produced by shaking up the oil with a 2 or 3 per cent mixture of fuller's earth and then allowing it to settle.

The commercial cottonseed oils are classified as crude, summer yellow, summer white, winter yellow, and winter white. The winter oils are made by cooling the summer oils to the freezing point, when the palmitin crystallizes and the oil is pressed out of the remaining solidified material. Cottonseed oil consists chiefly of palmitin and olein, the winter oils being almost entirely olein. It stands midway between the drying and nondrying oils, its drying properties being inferior to those of linseed oil. (See OILS.) It solidifies at from 32° to 38° F., is almost odorless, and has a slight nutty taste. Its uses are constantly increasing. It is employed extensively in cooking and, prior to the passage of pure-food laws, was also used as an adulterant of lard, olive oil, and other staples. Large quantities are used in making oleomargarine (q.v.). It is used in pharmacy, in making soap and paint, as a lubricator and an illuminant. Consult Brooks, *Cotton and its Uses* (New York, 1898).

*Feeding and Fertilizing Value.*—Brief mention has already been made of the use of cottonseed products for feeding cattle and for fertilizer. Whole cottonseed has been shown by a large number of analyses to range in composition as follows:

PERCENTAGE COMPOSITION OF WHOLE COTTONSEED

	Water	Ash	Protein	Fibre	Nitrogen-free extract	Fat
Maximum	17.51	8.00	29.70	32.40	36.70	29.34
Minimum	8.00	2.89	13.62	17.60	7.58	10.40
Average	9.92	4.74	19.38	22.57	23.94	19.45

This material was used in the past to considerable extent as a feeding stuff for cattle, hogs, and sheep, and was fed either raw, cooked, or roasted, but, with the advent of oil mills, its use for this purpose is much less in the vicinity of these, because the seed is disposed of to better advantage to the millers or can be exchanged for cottonseed meal. There are also the further reasons that the lint on the seed and the dust it collects are likely to be injurious, while at the

same time it is not easy to mix the seed itself thoroughly with other coarse feeds. It is a very rich feeding stuff, and animals must be accustomed to it gradually. The whole seed is sometimes used for fertilizer, and then it is partially rolled.

*Cottonseed meal* is the ground residue left in the manufacture of oil from the seed. It is sometimes called cottonseed cake and belongs to the class of feeding stuffs known as oil cakes. Cottonseed cake is of two kinds—undecorticated, or that from the whole seed, and decorticated, or made from the kernels after the hulls have been removed. Undecorticated cake was formerly largely used, but most of the mills now remove the hulls before expressing the oil. Cottonseed meal is bright yellow in color, with a sweet, nutty flavor. It deteriorates and becomes discolored with age. The following summary of over 400 analyses shows its range in composition, which is due to differences in the composition of the seed and the completeness with which the hulls are separated and the oil expressed.

PERCENTAGE COMPOSITION OF COTTONSEED MEAL (DECORTICATED)

	Water	Ash	Protein	Fibre	Nitrogen-free extract	Fat
Maximum	18.52	10.60	52.88	15.15	38.68	20.66
Minimum	5.29	1.72	23.27	1.88	9.13	2.18
Average	8.52	7.02	43.26	5.44	22.31	13.45

This material is one of the richest feeding stuffs in use, considerably exceeding in protein and fat such materials as linseed meal, but, in spite of this, it is quite well digested when fed in moderation. On an average, 88.8 per cent of the protein, 57 per cent of the fibre, 77.6 per cent of the nitrogen-free extract, and 88.6 per cent of the fat has been found to be digested by ruminants. It is fed extensively in the United States to cows, cattle, sheep, and nearly all kinds of farm stock. Pigs do not seem, for some reason, to be able to eat the meal for any considerable length of time without danger of injurious effects. An apparent antidote for cottonseed-meal poisoning has been found by Withers in iron salts. Young animals, like calves, have also often been injured by cottonseed meal, and its use with them is attended with danger. All experience goes to show that the fresh meal can be fed to other kinds of animals without danger and in large quantities after they become accustomed to it. Six, 8, and even 10 pounds of cottonseed meal per head is often fed to steers for short periods with good results, using no other kind of grain except the hulls. It is undoubtedly best to mix some material like corn meal with it. For cows about two pounds a day seem to be a safe limit for continued feeding, although three and often four pounds are often fed. It tends to give a firmer, harder butter, which will stand shipment better, but large rations injure the quality. Larger quantities can be fed with safety in winter than in summer. The meal was formerly adulterated with finely ground hulls, but the foodstuff laws now require the composition to be stated.

Cottonseed meal is rich in fertilizing materials, as shown by the following average of over 200 analyses: water, 7.8; ash, 7; nitrogen, 6.8; phosphoric acid, 2.9; and potash, 1.8 per cent.

It is chiefly used as a source of nitrogen, and finds quite extensive use for that purpose through the southern portion of the United States. It has given excellent results with sugar cane, cotton, and corn, and has been successfully substituted for barnyard manure in the culture of tobacco. But its use as a fertilizer is of course wasteful, as the food constituents are not utilized in that case. A more rational practice in many cases is to feed the meal and apply the resulting manure to the soil, since from 80 to 90 per cent of the fertilizing materials would be recovered in the manure, and additional benefit would be secured in the production of meat, milk, etc.

*Cottonseed hulls*, which are removed at the mills by means of crushers, screens, and shakers, also possess some feeding value and are much used with the meal. They constitute nearly one-half of the weight of the ginned seed. They contain about 11 per cent of water, 4 of protein, 46 of fibre, 33 of nitrogen-free extract, and 2 per cent of fat. Their digestibility is low, less than 40 per cent of the total dry matter being assimilated. They are hard and dry, usually covered with a fuzzy lint, and very bulky. They are used principally as a cheap substitute for hay and for the purpose of giving bulk to the ration. Large numbers of cattle are fattened in the Southern States of the United States on cottonseed meal and hulls exclusively, in proportions varying from two to six pounds of hulls to one pound of meal. The practice is claimed to be economical and profitable. Cottonseed hulls were formerly burned at the oil mills as fuel, the resulting cotton-hull ashes being rich in potash and much used as a fertilizer. (See ASHES.) Consult Roper, "Cottonseed Products," in *Twelfth United States Census*, vol. ix, part iii (Washington, 1902); *Thirteenth Census*, vol. viii (Washington, 1913). Tompkins, *Cotton and Cotton Oil* (Charlotte, N. C., 1901). Tamborn, *Cottonseed Products* (New York, 1905).

**COTTON STATE.** Alabama. See STATES, POPULAR NAMES OF.

**COT'TONTAIL'.** Any of the smaller American hares, especially the common wood hare, or gray rabbit. The name refers to the fluffy white scut and is often personified as "Molly Cotton-tail." See HARE, and Plate of HARES AND PIKA.

**COTTON WHIGS.** See CONSCIENCE WHIGS.

**COT'TONWOOD'.** A name applied to a number of species of *Populus* on account of the abundant white cottony hairs surrounding the seed. The trees are widely distributed. Some attain large size and are valuable for many purposes. See POPLAR.

**COTTRELL, FREDERICK GARDNER** (1877- ). An American chemist, born at Oakland, Cal. He was educated at the universities of California, Berlin, and Leipzig, from 1897 to 1900 taught chemistry at the Oakland High School, and between 1902 and 1911 was instructor and assistant professor in the department of physical chemistry at the University of California. In 1911 he became chief physical chemist of the United States Bureau of Mines. He is author of *Der Restrom bei galvanischer Polarisation betrachtet als Diffusionsproblem* (1903).

**COT'YLEDON** (Gk. κοτύληδών, *kotylēdōn*, cup-shaped hollow socket, from κοτύλη, *kotylē*, hollow cup). The first leaf or leaves of an embryo. In seed plants the cotyledons are usually formed within the seed, and in most cases they escape during germination, but are usually

very different in appearance from the later leaves. See SEED.

**COTYLOSAURIA** (Neo-Lat. nom. pl., from Gk. *κοτύλη*, *kotylē*, hollow cup + *σαῦρος*, *sauros*, lizard). The order which includes the most ancient reptiles, fossil in rocks of the Carboniferous and Permian ages. The Cotylosauria are generally agreed to be the ancestors of all later reptilian types and are most nearly allied to the turtles among living reptiles, though they are much more primitive and show no evidences of a carapace. The cotylosaurians are thus characterized by Cope: "Quadrato bone united with adjacent elements by suture; temporal regions with roof of a few symmetrical segments. No distinct postorbital bars; vertebrae ambicæloous; ilium narrow, vertical; feet ambulatory."—*Report United States National Museum, 1898* (Washington, 1900). Consult Case, "A Review of the Cotylosauria of North America," *Carnegie Institution Publication* (Washington, 1911).

**COTYS**, or **COTYTTO** (Lat., from Gk. *Κόρυς*, *Kórys*, *Korurrá*, *Kotyttō*). A Thracian goddess, whose festival, the Cotytia, was held at night and was notorious for its debaucheries. Her worship was adopted by some of the Greek states.

**COTYTIA**. See COTYS.

**COUCAL**, *kō'kal* (probably an African word, although according to Cuvier it was coined in 1796 by Le Vaillant in his *Oiseaux d'Afrique*, from Fr. *coucou*, cuckoo + *al-ouette*, sparrow). A kind of cuckoo, many species of which are widely distributed throughout Africa and south-eastern Asia to Australia, constituting the subfamily Centropodinae, especially characterized by having the hind toe terminated by a straight, spinelike claw, whence they have been called "lark-heeled." They are large, ground-keeping birds, generally red and black, more or less glossed, and sometimes banded with brown, and are known generally as "ground cuckoos." A species of the Philippines has a rounded crest and black, horny appendages to the feathers of the head and throat. Some other Asiatic species mimic pheasants in appearance and gait and are called "pheasant cuckoos." The best-known one, the very common Indian "crow pheasant" (*Centropus sinensis*), is nearly 2 feet long, black, with the mantle and wings chestnut, and utters a curious howling cry, followed by a series of rattling exclamations. All these birds make their own nests, sometimes elaborate roofed structures in thorny bushes, and lay white eggs incrustated like those of an. They are closely allied to the American road runner. See CUCKOO.

**COUCE**, DARIUS NASH (1822-97). An American soldier. He was born at South East, N. Y., graduated at West Point in 1846, served in the Mexican War (1846-47), and was brevetted first lieutenant in 1847 for services at Buena Vista. In 1849-50 he served against the Seminoles and in 1853 made an important exploring expedition into northern Mexico. In 1855 he resigned from the army to become a merchant in New York, but in June, 1861, reentered the service as a colonel of volunteers, and in August became brigadier general. He served in 1861-62 with the Army of the Potomac, rendering valuable services at Fair Oaks, Williamsburg, and Malvern Hill; was promoted to be major general in July, 1862; commanded the Second Army Corps at Fredericksburg and Chancellorsville; was in command of the Department of Susquehanna in 1863 and 1864; and was at the head of a division at the battle of Nashville. He resigned in

1865, and in the same year was an unsuccessful candidate on the Democratic ticket for the governorship of Massachusetts. He was subsequently collector of the port of Boston in 1866-67, was quartermaster-general of Connecticut in 1877-78, and was adjutant general of that State in 1883-84.

**COUCHANT**, *kou'chant* (Fr., pres. part. of *coucher*, to lie down). In heraldry, a beast lying down, with his head up, is couchant. If the head is down, he is dormant. See HERALDRY.

**COUCH GRASS** (corrupted from *quitch grass*, *quich grass*; so called from its rapid growth), *Agropyron repens*. Also called wheat grass, dog grass, quickens, and squich or quitch. A grass chiefly known as a troublesome weed. It is common in most parts of Europe and North America. See AGROPYRON.

**COUCY**, *kō'sé'*, **THE CHÂTELAIN DE**. A French troubadour, whose name was Guy—although he has sometimes been identified with Renaud, Guy's successor, as Châtelain of Coucy. Guy became Châtelain of Coucy in 1186, took part in the Third Crusade (1189-91), and was killed by the Saracens about 1203. His work consists of about 16 songs, in the troubadour style, but with more sincerity and originality than the usual *chansons courtoises* of the time. They were published by Fath as *Die Lieder des Castellan von Coucy* (Heidelberg, 1883). The legend connected with his name is found in the literature of many countries, though it is most likely of Breton origin. About the end of the thirteenth century there appeared a story, or *roman*, in verse by Jakemon Sakesep, of whom nothing is known, and whose name is taken from an acrostic given in his work, *Roman d'aventure*. He tells of the loves of the Châtelain de Coucy and the Dame de Fayel. Falling ill on his way from the Holy Land, the Châtelain ordered that after his death his heart be taken to his lady. But her husband intercepted the messenger, took the sacred souvenir, and forced his wife to eat it. Thereupon the Dame starved herself to death. The story was published with a modern version by Crapelet (Paris, 1829) and an English romance on the same subject is printed in vol. iii of Ritson's *English Metrical Romances* (1835). See CARESTAING, GUILLAUME DE.

**COUCY-LE-CHÂTEAU**, *kō'sé'le-shá'tô'*. A small village and cantonal seat in the Department of Aisne, France, 10 miles north of Soissons (Map: France, N., J 3). It is celebrated for the remains of its mediæval castle of the thirteenth century, standing on an acclivity, accessible on one side alone, and one of the most formidable fortresses of its period. The castle covers an area of 10,000 square yards and is surrounded by lofty walls and a moat. Four towers flank the donjon, which is 210 feet high, 100 feet in diameter, and has walls 34 feet thick. Pop., 1901, 683; 1911, 657. Built by Enguerrand III, a pretender to the throne of France, it was purchased in 1396 by Louis of Orléans and in 1498 became crown property. It was dismantled by Mazarin's order in 1652.

**COUDEUR**, *kō'dâr'*, **LOUIS CHARLES AUGUSTE** (1790-1873). A French historical, religious, and decorative painter. He was born in Paris and studied at the Beaux-Arts under David and Regnault. He first attracted favorable attention in the Salon of 1817 with "The Levite of Ephraim" (Luxembourg), which was followed by several historical and religious pictures. His frescoes in the Rotunda of the Louvre (1820)

were severely criticized, but he was more successful with his decorations of several Parisian churches and with his series of large historical compositions in the gallery at Versailles, beginning with the "Battle of Lawfield" and including the "Siege of Yorktown." Couder was one of the most important representatives of the Classical school in France. He was a member of the *conseil supérieur* of the Ecole des Beaux-Arts and wrote some critical works on art. Consult, Jules Breton, *Nos peintres du siècle* (Paris, n. d.).

**COUDERSPORT**, kou'dêr-z-pôrt. A borough and the county seat of Potter Co., Pa., 110 miles (direct) east by south of Erie, on the Allegheny River, and on the Coudersport and Port Allegany Railroad (Map: Pennsylvania, F 2). It contains a public library and a hospital. The borough has flour mills, a foundry, a tannery, and manufactures of furniture, rubber goods, mangle rollers, condensed milk, barrel headings, etc. Pop., 1890, 1530. 1900, 3217; 1910, 3100.

**COUDERT**, koo'dêr, FREDERIC RENE (1832-1903). An American lawyer, born of French parents in New York. He graduated at Columbia College in 1850 and was admitted to the New York bar three years later. In 1877 he was a delegate to the New York Chamber of Commerce to the Antwerp Congress, which was held for the purpose of establishing a universal system of general average. He was counsel for the United States before the International Bering Sea Commission (Paris, 1893-95), a member of President Cleveland's Venezuela Boundary Commission (1896-98). He received the Cross of the Legion of Honor and also decorations from Italy and Venezuela. His publications include *International Law, the Rights of Ships* (1895), and *Addresses, Historical-Political-Sociological* (1905).

**COUDEs**, or **COUDIÈRES**. See ELBOw PIECES

**COUDREAU**, koo'drô', HENRI ANATOLE (1859-1899). A French explorer, born in the Department of Charente-Inférieure and educated at Cluny. In 1881 he explored French Guiana and the adjacent territory, and in 1895 he was commissioned by the government of Pará to explore the Tapajos, Xingu, and other branches of the Amazon. These explorations are described in several interesting volumes published in 1897. His other publications include: *Voyage au rio Branco et aux Montagnes de la Lune* (1886); *Etudes sur les Guyanes et l'Amazonie* (1887); *Chez nos Indiens* (1892); *Quatre années dans la Guyanne française* (1893); *L'Etat de Para* (1897); *Voyage au Tapajoz* (1897); *Voyage au Tocantins-Araguaya* (1897); *Voyage au Xingu* (1897); *Voyage à Itaboca et à l'Ilacayuna* (1898); *Voyage entre Tocantins et Xingu* (1899); *Voyage au Yumunda* (1899).

**COUES**, kouz, ELIOTT (1842-99). An American naturalist, particularly known for his researches in ornithology. He was born at Portsmouth, N. H., graduated at Columbian (now George Washington) University in 1861, from the medical department of that institution in 1863, became an assistant surgeon in the United States army, and made extensive studies of the flora and fauna in the vicinity of the various posts at which he chanced to be stationed. In 1873-76 he was attached as surgeon and naturalist to the United States Northern Boundary Commission, and from 1876 to 1880 as secretary and naturalist to the United States Geological and Geographical Survey of the Territories, di-

rected by Dr. F. V. Hayden. He resigned his commission in 1881, and thenceforth was occupied wholly with scientific pursuits. From 1877 to 1887 he was professor of anatomy at the National Medical College at Washington, D. C. He was elected to the National Academy of Sciences in 1877, was a founder of the American Ornithologists' Union, and an editor of the *Auk*, the journal of that society. About 1880 he became interested in spiritualism, theosophy, and allied matters, and for a time was affiliated with the Theosophical Society. He was known as a student of comparative anatomy and general biology, and for seven years was connected with the *Century Dictionary* as editor and contributor in the departments of general zoology, biology, and comparative anatomy. But while his field of activity was wide, he was prominent chiefly as a writer on ornithology and in particular on that of North American birds. His *Key to North American Birds* (1872; rewritten 1884; again, 1901; 5th ed., 1903) has perhaps had a greater influence on American ornithology than any other work. With this should be named his *Field Ornithology* (1874); *Birds of the Northwest* (1874); *Fur-Bearing Animals* (1877); *Birds of the Colorado Valley* (1878); an incomplete *Bibliography of Ornithology* (1878-80); *New England Bird-Life* (1881; with W. A. Stearns); *Dictionary and Check-List of North American Birds* (1882); *Bogen* (1882; 4th ed., 1884); *The Demon of Darwin* (1884). He also made investigations regarding the early exploration of the trans-Mississippi region, and edited (1893) the *Journals* of Lewis and Clark. As a contributor to the technical advance of ornithology in America he ranked as not greatly inferior to Spencer Baird (q.v.), and as a popular expositor of the subject probably had no equal.

**COUGAR**, koo'gêr (Fr. *cougar*, Sp. *cuguar*, from native South American *cuguacuar*, *cuguacuarana*). One of the names of the American panther (*Felis concolor*), described in this work under PUMA (q.v.). Although widely in use, the name should be abandoned because it perpetuates an error of identification. Cuvier explained its origin in his *Règne animal* (Griffith's version, *The Animal Kingdom*, vol. ii, London, 1827) as follows, speaking of the puma: "It is called by the Mexicans *Mistli*; in Peru, *Puma*; in Brazil, *Cuguacuarana* (the word *Cougoua* is contracted by Buffon from this latter barbarous appellation); and in Paraguay *Gua-zuara*. . . . The name *Cougoua*, by which it is most commonly known in Europe, particularly in France, appears, probably, to have been borrowed from that proper to another animal; . . . but puma is its native name." Elsewhere it appears that the "other animal" was the *eyra* (q.v.). A drawing of this cat brought to Europe by John Maurice, Count of Nassau, when Governor of Dutch Guiana in the seventeenth century, was labeled "*cuguacuarana*" and "*cuguacuarana*." This was copied by Maregrave and Piso and applied by Buffon, in the contracted form above noted, probably under the belief that the *eyra* (which is *concolor*) was the same animal as the puma.

**COUGHING** (AS, *cohhetan*, Dutch *kugchen*, to cough, MHG. *küchen*, *kiöhen*, Ger. *keuchen*, *keichen*, to gasp; imitative of the sound). Considered physiologically, coughing consists, first, in a long inspiration which fills the lungs to a greater extent than usual; second, in a closure of the glottis, or narrow opening in the organ of

voice (see LARYNX), at the commencement of the act of expiration, and third, in a sudden forcing open of the glottis by the violence of the expiratory movement. In this way a blast of air is driven upward from the lungs through the mouth, which carries with it anything that may be present and cause irritation in the air passages. Coughing may occur from irritation in the back of the throat, in the larynx, trachea, or bronchial tubes, and may be excited by irritant gases, or by articles of food or drink—such as even a drop of water or a crumb of bread—making their way into the air passages instead of into the esophagus, or by excessive or morbid secretion from the walls of the air tubes, or even by the entrance of cold air, when the lining membrane of the air passages is abnormally irritable, or by the tickling due to an elongated uvula. Reflex cough is often set up by irritation of the external ear canal, as by the presence of cerumen. Cough is reflex and involuntary generally, and is due to irritation of the terminal fibres of the pneumogastric nerves, which are distributed to the mucous membrane of the respiratory tract. The object of coughing in the animal organism is unquestionably to guard against the danger of the entrance of mechanical and chemical irritants into the air passages; and accordingly the mucous membrane, especially of their upper part, is endowed with a most exquisite sensibility, which, when aroused by mechanical irritation or by disease, provokes incessant coughing until the cause of the irritation is removed. Cough is a common symptom of all diseases of the organs of respiration, as well as of inflammatory affections of the throat, tonsils, and nose. The treatment of cough depends upon the cause. See PNEUMONIA; BRONCHITIS; PLEURISY; TUBERCULOSIS.

**COUIY**, *kō'ui*. A tree porcupine. See PORCUPINE.

**COULANGES**, *kō'lanzh'*, FUSTEL DE. See FUSTEL DE COULANGES.

**COULANGES**, PHILIPPE EMMANUEL, MARQUIS DE (1633–1716). A French courtier, famous for his correspondence with his cousin, Madame de Sévigné (q.v.). His writings include: *Recueil des chansons* (1698); *Lettres* (published with those of Madame de Sévigné); and *Mémoires*, edited by Monmerqué (Paris, 1820).

**COULIN**, *kō'lin*. In Spenser's *Faerie Queene*, a British giant killed by falling into a chasm when pursued by Debon.

**COULMIERS**, *kō'lymyā'*. A village in the Department of Loiret, France, 13 miles northwest of Orleans. Population, 1901, 368; 1911, 404. On Nov. 9, 1870, the German and French forces, under Von der Tann and Aurelle de Paladines respectively, met here in a seven hours' battle, the former suffering a loss of 1166 and being compelled to retreat to Artenay, the French losing 1500 and taking prisoners 1000 sick and wounded Germans. Consult Lehaut-cour, *Coulmiers et Orleans* (Paris, 1893).

**COULOMB**, *kō'lon'* (named after the physicist Coulomb). The practical unit of quantity of electricity. In the United States the legal unit is the international coulomb, "which is the quantity of electricity transferred by a current of one international ampere in one second." Therefore, if in the ordinary form of silver voltameter, *m* grams of silver are deposited,  $m \div 0.001118$  is the number of coulombs which have passed, assuming that an ampere deposits 0.001118 gram of silver per second. See AMPERE; ELECTRICAL UNITS.

**COULOMB**, CHARLES AUGUSTIN (1736–1806). A French physicist, celebrated for his researches particularly in electricity and magnetism. He was born at Angoulême in 1736 and in early life became an officer of engineers. In 1777 he gained a prize by an essay on the construction of magnetic needles (*Sur les aiguilles aimantées*). In 1779 his *Théorie des machines simples* gained the prize offered by the Academy, and in 1781 he was a third time successful in an essay on the friction and resistance of cordage, etc., used in machines. In the same year he was elected a member of the Academy, and his services were employed on all the most difficult problems in mechanics. He is known as the inventor of the torsion balance (q.v.), by which the attraction of electricity and magnetism can be measured, while his memory has been perpetuated by the use of his name for the unit of electric quantity. Having offended certain influential persons by reporting unfavorably on a project for a navigable canal in Bretagne, Coulomb was for some time imprisoned, but received from the states of Brittany a present of a handsome watch, as a reward of his firm opposition to an expensive and unprofitable scheme. He lived in retirement during the Revolution, but took part in the investigations attending the introduction of the metric system of weights and measures by the new government, being a member of the commission of 12 appointed under the provisions of the Law of April 7, 1795.

**COULOMMIERS**, *kō'ly'myā'*. The capital of an arrondissement and a garrison town in the Department of Seine-et-Marne, France, on the Grand-Morin, 38 miles east of Paris (Map: France, N., J 4). Its parish church of St. Denis dates from the thirteenth century, and it has remains of a castle built in 1613. There is a monument to the heroic Beaurépaire, who killed himself in 1792 rather than surrender the town of Verdun. It boasts a college, library, and museum of antiquities. Printing is the chief industry. It has woolen mills, tanneries, flour and sugar mills, and manufactories of starch and cheese. Market gardening is largely carried on. Jean de Boullonge or Le Valentin, the artist, was a native of Coulommiers. Pop., 1901, 6505; 1911, 7224.

**COULTER**, *kō'ltēr*, JOHN LEE (1881– ). An American statistician, born at Mallory, Minn. He was educated at the universities of North Dakota, Wisconsin, and Minnesota, and at Iowa State College. Between 1907 and 1909 he was an instructor at Iowa State College, the University of Wisconsin, and the University of Minnesota, where he also served for two years as assistant professor of rural economics. From 1910 to 1912 he was expert special agent of the United States Census Bureau, and during the same period he also lectured at George Washington University. He is author of *Economic History of the Red River Valley of the North* (1910); *Co-operation among Farmers* (1911); *The Problem of Rural Credit, or Farm Finance in the United States* (1913).

**COULTER**, *kō'ltēr*, JOHN MERLE (1851– ). An American botanist and educator, brother of Stanley Coulter, born at Ningpo, China. He received his education at Hanover College, Ind., and subsequently studied at Harvard. After serving for two years (1872–73) as botanist to the United States Geological Survey in the Rocky Mountains, he was made professor of natural science at Hanover College, where he

remained for five years. He was appointed professor of biology at Wabash College in 1879; from 1891 to 1893 he was president of Indiana State University, and from 1893 to 1896 he presided over Lake Forest University. In 1896 he became head of the department of botany in the University of Chicago. His works include: *Manual of Rocky Mountain Botany* (1885; rev. ed., 1909); *Manual of Texan Botany* (1892-93); *Plant Relations* (1899; 3d ed. rev., 1910); *Plant Structures* (1899; 2d ed., 1904); *Morphology of Spermatophytes* (1901) and *Morphology of Angiosperms* (1903), with Charles J. Chamberlain; *Plant Studies* (1902; rev. ed., 1905); *A Text-Book of Botany* (1906); *Elementary Agriculture* (1909); *Morphology of Gymnosperms* (1910); *A Text-Book of Botany for Colleges and Universities* (2 vols., 1910-11); *Elementary Studies in Botany* (1913); *Plant Breeding* (1914). In 1875 he founded the *Botanical Gazette* and thereafter continued to be its editor. He had charge of the department of botany in the first (1903) and second (1914) editions of the *NEW INTERNATIONAL ENCYCLOPÆDIA*.

**COULTER**, STANLEY (1853- ). An American biologist, brother of John M. Coulter, born at Ningpo, China. He was educated at Hanover College. In 1887 he was appointed professor of biology and director of the biological laboratory at Purdue University and in 1907 dean of the School of Science. In 1902 he became a member of the State Board of Forestry. His publications include more than 125 pamphlets on nature study, scientific researches, sketches, and also *Flora of Indiana* (1899), and *A Key to the Genera of the Native Forest Trees and Shrubs of Indiana* (1907).

**COUMARIN**, kōō-mā-rin. See CUMARIN.

**COUMOUNDUROS**, kōō-mōōn-dy-rōs. ALEXANDROS. See KUMUNDUROS.

**COUNCIL** (OF, concile, *council*, Lat. *concilium*, from *com-*, together + *calare*, Gk. *kaleiv*, *kalein*, to call). In Church usage, an assembly of ecclesiastical dignitaries held for the purpose of regulating the doctrine or discipline of the Church. As early as the second century Church councils were convened in which only one or two provinces took part, the bishops and presbyters binding themselves to carry out the decisions arrived at in their own communities. These assemblies were commonly held in the chief town or metropolis of the province, and the bishops of such capitals—who, after the third century, bore the title of *metropolitan*—were wont to preside over the meetings and to consider questions of doctrine and discipline which had arisen within the territory. Over these metropolitan councils were established, at a later period, the provincial synods, exercising authority over several united provinces, and, finally, the national councils. After the fourth century, when the Christian religion was established in the Roman Empire, we read of *ecumenical*, i.e., universal councils, so called because all the bishops of Christendom were invited or summoned by the Emperor. In some early synods we find bishops, presbyters, and others taking part in the deliberations; but after the opening of the fourth century only the bishops were convened. According to the doctrine of the Roman Catholic church, the Pope alone, or, by way of exception, in some cases the College of Cardinals, had the power of convening ecumenical councils, which, in the Catholic view, represent the universal Church under the guidance of the Holy Ghost.

Questions were determined by the majority of votes, and the Pope or his proxy presided and confirmed the resolutions carried in the council. In matters of faith the Holy Scriptures and the traditions of the Church were the guide, while in lighter matters human reason and expediency were consulted. In the former, ecumenical councils are held to be infallible, but in other matters of discipline, etc., the latest council decides questions. The question of the Pope's subordination to the decrees of the ecumenical councils was long and warmly debated during the Middle Ages, but is not asserted by any Roman Catholic theologian to-day.

Twenty ecumenical councils are recognized by the Roman Catholic church. 1. The first Council of Nicea, held 325 A.D., in the height of the Arian controversy to define the doctrine of the Godhead of Christ, and to settle the proper time of keeping Easter (q.v.) against the Quartodecimans. 2. The first Council of Constantinople (381) completed the Nicene symbol by the definition of the Godhead of the Holy Ghost. 3. The Council of Ephesus (431) defined the unity of person in God the Son, against Nestorius, and guarded the definition by applying the term *θεωτόκος*, *theotokos*, to His mother. 4. The Council of Chalcedon (451), against the opposite heresy of Eutyches, asserted the twofold nature of Christ. 5. The second Council of Constantinople (553) condemned some survivals of Nestorianism. 6. The third Council of Constantinople (680-681) condemned the Monothelites. 7. The second Council of Nicea (787) was directed against the iconoclasts and defined the respect to be paid to images. 8. The fourth Council of Constantinople (869-870) was called to secure the peace of the Eastern and Western churches, by the deposition of Photius, who had unjustly intruded into the see of Constantinople. The following councils, all held in the West, were subsequent to the schism between the Eastern and Western churches, and are consequently not recognized as ecumenical by Easterns or by Anglicans. Over the next seven councils, four held in Rome and three in southern France, the popes presided in person, without Imperial co-operation; they were held now, not so much to condemn heresy as to deal with other pressing needs of the Church, such as the encroachments of the Imperial power and reform in ecclesiastical discipline. 9. The first Lateran Council (1123) was called to settle the dispute between the spiritual and temporal powers on the question of investiture. 10. The second Lateran Council (1139) condemned the errors of Arnold of Brescia and others. 11. The third Lateran Council (1179) condemned the Albigenses and Waldenses and passed a number of reforming decrees. 12. The fourth Lateran Council (1215), the most important ecclesiastical gathering of the Middle Ages, formulated a more detailed confession of faith in opposition to the Albigenses and other innovators, and passed 70 reforming decrees. 13. The first Council of Lyons (1245) threatened the Emperor Frederick II with excommunication and deposition and called on Christendom to take up arms against the Mohammedans. 14. The second Council of Lyons (1274) strove for the reunion of the Greek and Latin churches and regulated papal elections. 15. The Council of Vienne (1311-12) suppressed the Knights Templars and condemned various sects of the time, such as the Fraticelli and Beghards. 16. The Council of Constance

(1414-18) was called to restore the unity of the Church by the recognition of a legitimate pope and condemned the doctrine of Wiclif and Hus. 17. The Council of Basel, convoked in 1431 and later removed to Ferrara and Florence, discussed ecclesiastical reformation and made a determined attempt, in consultation with Greek deputies who came to Florence, to bring about a union with the East. 18. The fifth Lateran Council (1512-17) annulled the Pragmatic Sanction and confirmed the bull *Unam Sanctam*, besides occupying itself with ecclesiastical discipline. 19. The Council of Trent (1545-63, with some interruptions), called to meet the problems presented by the Reformation, was very rich in consequences both for the confirmation of doctrine and the establishment of discipline. 20. The Vatican Council (1870) decreed the infallibility of the Pope. For further details of important councils, see NICEÆA; BASEL; CONSTANCE; TRENT; CHALCEDON; CONSTANTINOPLE; EPHESUS; LATERAN; LYONS; VATICAN.

Among Congregationalists and Baptists the term "council" is applied to an assembly of ministers and delegates from neighboring churches, called by a local church, as occasion arises, to act or assist in ordaining a minister, or give advice on matters referred to it, beyond which its power does not extend. They have also a national council, composed of delegates from all parts of the denomination and meeting for conference concerning its work. The Pan-Presbyterian Alliance, as the association of the reformed churches holding the Presbyterian system is called, holds a council every four years for conference on matters of general interest to the allied churches. So the Evangelical Alliance, a loose, undenominational body, holds councils, and the Methodists throughout the world held one in 1901.

In England, the convocations of the Church of England are practically councils, while the dissenting bodies are represented in the Free Church Council, meeting annually.

The great history of the councils of all kinds from the Apostolic age to the Council of Trent is by C. J. Hefele, assisted in the latter part by A. Knofer and Cardinal Hergenröther (9 vols., Freiburg, 1855-90): there is an English translation by Clark and Oxenham of the first two volumes, and up to the eighteenth book of the original (4 vols., Edinburgh, 1871 et seq.). Consult also the great collection of canons and other acts of the councils, by G. D. Mansi (31 vols., Florence and Venice, 1759-98). A study of the first seven ecumenical councils from a doctrinal standpoint is presented by W. P. du Bose (New York, 1897), and their *Canons and Dogmatic Decrees*, annotated with much additional matter, all in English, by H. R. Percival (ib., 1900). See SYNOD.

**COUNCIL, PRIVY.** See PRIVY COUNCIL.

**COUNCIL BLUFFS.** A city and the county seat of Pottawattamie Co., Iowa, 5 miles east of Omaha, Neb., near the Missouri River, and on the Union Pacific, the Chicago and Northwestern, the Chicago, Burlington, and Quincy, the Chicago, Rock Island, and Pacific, the Illinois Central, the Chicago, Milwaukee, and St. Paul, the Chicago Great Western, and the Wabash railroads (Map. Iowa, B 3). The city is well laid out, with brick-paved streets, and lies to a great extent on a plain underlying high bluffs. Electric lines connect Council Bluffs with Lake Manawa, a beautiful summer resort 3

miles south of the city, and with Fairmount and other parks. Council Bluffs is the seat of the Iowa School for the Deaf, and has a fine public-library building. Railroad and wagon bridges over the Missouri, and electric lines, afford communication with Omaha, with which city there is extensive traffic. The exceptional railroad facilities of Council Bluffs make it an important manufacturing and transportation point. It is one of the great agricultural-implement trade centres of the world and also has a large trade in fruit and produce. There are eight large grain elevators. The city government, under a general State incorporation law, revised in 1897, is vested in a mayor, elected for two years, and a city council, composed of representatives from the six wards of the city and two members at large. The water works are owned and operated by the municipality. In 1804, on the site of Fort Calhoun near by, Lewis and Clark conferred with the Indians—hence the name. Here, in 1846, the Mormons established a settlement, called "Kanessville," which, however, they soon abandoned for Salt Lake City. The city was chartered in 1850. Pop., 1900, 25,802; 1910, 29,292.

**COUNCIL GROVE.** A city and the county seat of Morris Co., Kans., 24 miles northwest of Emporia, on the Missouri, Kansas, and Texas, and the Missouri Pacific railroads, and on the Neosho River (Map: Kansas, F 3). It is in a fertile agricultural and stock-raising region, and has important dairying interests. The city is situated on the old Santa Fe trail. It contains a public library. Council Grove was settled in 1847 and is one of the oldest towns in the State. It adopted the commission form of government in 1911. Pop., 1900, 2265; 1910, 2545.

**COUNCILMAN, WILLIAM THOMAS** (1854- ). An American pathologist, born at Pikeville, Md. He was educated at St. John's College (Annapolis, Md.) and at the universities of Maryland, Vienna, and Leipzig. From 1886 to 1891 he was associate and associate professor of pathology at Johns Hopkins University. In 1892 he became Shattuck professor of pathological anatomy at Harvard University. In 1904 he was president of the Association of American Physicians. His publications include: *A Study of the Bacteriology and Pathology of Two Hundred and Twenty Fatal Cases of Diphtheria* (1901); *Pathology* (1902); *Pathology: A Manual for Teachers and Students* (1912); *Disease and its Causes* (1913).

**COUNCIL OF ANCIENTS.** See DIRECTORY.

**COUNCIL OF BLOOD.** See ALVA.

**COUNCIL OF FIVE HUNDRED.** See DIRECTORY.

**COUNCIL OF TEN** (*Consiglio di dieci*). The supreme body in the Venetian government from the beginning of the fourteenth century till the overthrow of the republic in 1797. The creation of the Council of Ten was but the final step in the process by which the oligarchic party succeeded in obtaining sole control of the government, beginning with the so-called "Closing of the Grand Council" in 1297. Its immediate cause was a popular uprising in 1310 headed by the noble families of Tiepolo and Querini. After the suppression of the revolt the Council of Ten was constituted as a secret body for the purpose of discovering and punishing all the participants in the conspiracy. Created at first for a few days, its existence was prolonged from time to time until, in 1335, it was

made permanent. In times of great emergency the council was augmented by a *giunta* of 20 or more of the noblest citizens, so that until 1595 it was officially known as the *Consiglio di dieci e giunta*. The powers exercised by the council were unlimited and touched upon every affair of public and private life. Its decisions, from which there was no appeal, were arrived at in secret, and its sentences were often carried out in the same manner. It employed assassins and used poison to remove dangerous individuals. In spite, however, of its arbitrary acts and the relentlessness with which it visited punishment upon those who offended it, the Council of Ten insured internal tranquillity and the administration of justice and preserved the state against the ambition of powerful nobles. In 1539 the discovery of treasonable behavior on the part of certain of the Ten led to the creation of the *Inquisitori di stato*, or Council of Three, to whom the council delegated its police functions and the trial of offenders. From 1527, possibly earlier, the council exercised a censorship over the press. The archives of the council, extending from 1315 to the end of the republic, are of great importance, as they deal with political, ecclesiastical, and criminal subjects. "There we find such papers as still survive in connection with the cases of the Carrarresi, of Carmagnola, of Foscari, of Caterina (Carnaro, and of Foscari." Consult Brown, *Studies in Venetian History* (2 vols., London, 1907).

**COUNCIL OF THE INDIES.** THE. A governing council formed in 1511 by King Ferdinand for the regulation of Spanish colonial affairs.

**COUNCIL OF WAR.** A conference of officers in war time, whom the commander voluntarily calls together to discuss matters of moment. It is an unwritten but generally understood rule that the commandant of a garrison will accept, or at least solicit, the opinion of a council of war before surrendering to an enemy.

**COUNCILS, COUNTY.** See COUNTY COUNCILS.

**COUNSEL** (OF. *conseil*, *counsel*, *consel*, from Lat. *consilium*, consultation, from *consulere*, to consult). A term applied to attorneys and counselors who become associated together in the conduct of a cause at any stage of the proceedings, or who jointly act as legal advisers in any matter, whether litigated or not. It is less frequently used in speaking of a single lawyer acting in any of the above capacities. The term "of counsel" is employed to designate a lawyer who assists the attorney of record in the management, trial, and conduct of a case. See ADVOCATE. ATTORNEY; LAWYER.

**COUNSEL, BOOK OF GOOD.** See HITTAPADESA.

**COUNSELOR.** In law, a person admitted to practice law in any capacity, and who is by reason of that fact an officer of the court. The term was formerly used to distinguish those lawyers who were licensed to appear in court, corresponding to the barrister in England and the advocate in Scotland. The distinction has, however, been abolished in most, if not all, of the United States, and the term "counselor" is now used synonymously with "attorney." See ATTORNEY; LAWYER.

**COUNT** (OF. *conte*, *comte*, Fr. *comte*, from Lat. *comes*, companions, from *com-*, together + *ire*, Gk. *leuai*, *venai*, Skt. *i*, to go). In classical writers down to the end of the fourth century the meanings attached to the word *comes* were comparatively few and simple. At first the word signified merely an "attendant," and differed

from *socius* chiefly in expressing a less intimate and equal relation to the persons accompanied. A little later, in Horace's time, it was applied to those young men of family whom it had become customary to send out as pupils under the eye of a governor of a province or the commander of an army. Very soon the fashion of having attendants at home was introduced. The Emperor had many *comites* in this sense, and to these, as he gradually became the centre of power, he transferred the various offices of his household and of the state. The example of the emperors of the West was followed by the emperors of the East. Most of the titles at present applied to court officials are translations of the names applied to similar offices in the Byzantine Empire. The *comes sacrarum largitionum* was grand almoner and practically chancellor of the exchequer; the *comes curie* was the grand master of ceremonies; the *comes equestrum*, the grand equerry. The *comes marcarum*, or count of the marches, was the original of the later marquis.

In France the count of the palace (*comes palatii*) was the highest dignity in the state after the mayor of the palace, and in the eleventh century had already acquired a rank apart from that of the other counts. He presided in the court of the sovereign in his absence and possessed sovereign jurisdiction. The habit of instituting counts palatine was adopted by Spain and England. The counts of (Chartres, Champagne, Blois, and Toulouse arrogated to themselves the authority to appoint palatine counts, and the ancient houses of Chartres and of Blois continued to claim in perpetuity the title of count palatine as that of their eldest sons. Counts of this sovereign class owed their origin to the feebleness of the later Carolingian kings, under whom they contrived gradually to convert the provinces and towns which they had governed as royal officers into principalities hereditary in their families. It was then that the counts came to be known by the names of their counties. The title was never used in England, though its Latin equivalent has always been the common translation for "earl," and the wife of an earl from a very early period has been styled "countess." For the history of the office in Germany, where it was of great importance, see GRAF. Consult: Rambaud, *L'Empire grec au X<sup>e</sup> siècle* (Paris, 1870); Luchaire, *Histoire des institutions monarchiques de la France sous les premiers Capétiens* (ib., 1883); Maury, "La noblesse et les titres nobiliaires en France," in *Revue des Deux Mondes* (December, 1882); Pfaff, *Geschichte des Pfalzgrafenamtes* (Halle, 1847); Luchaire, *Essai sur l'origine de la noblesse en France au moyen âge* (Paris, 1902).

**COUNTERCHANGED.** A term in heraldry (qv). When several metals and colors are interchanged, one being set against another, they are said to be counterchanged.

**COUNTERCLAIM.** In the law of pleading, an affirmative cause of action asserted by the defendant against the plaintiff and introduced in connection with his answer or defense proper. The counterclaim is a modern statutory device for enabling a person who is sued on a claim against him to procure an adjudication, at the same time, of a legal claim which he has against the party suing him. Its purpose is to consolidate the causes of action which two parties may have against one another, reducing the amount and cost of litigation and compelling the adjudi-

cation, so far as possible, of all open controversies between them. No such practice existed at common law, but every claim, no matter how closely related to another and opposing claim, constituted a separate cause of action and had to be separately prosecuted. As early as the year 1729, however, an act of the British Parliament introduced the principle of the set-off (q.v.), whereby, in case of mutual indebtedness growing out of the same transaction, the defendant was enabled to set off his claim against that of the plaintiff and have it allowed on the judgment. It was not until the Judicature Acts in 1875, however, that the defendant acquired the right of setting up a counterclaim, constituting a distinct cause of action.

Both the set-off and the counterclaim exist in the United States, the former generally, but the latter only in the so-called "code States," which have adopted the reformed procedure. These differ among themselves, however, as to the nature of the actions which can be pleaded by way of counterclaim—some following the modern English practice, under which any cause of action, however divergent from that alleged in the complaint, may be set up, and others, like New York, limiting the right of counterclaim to a matter arising out of the same transaction as that on which the action is based, or, in an action on contract, any other cause of action on contract (New York Code of Civil Procedure, § 501). See PLEA, PLEADING; RECOURSEMENT; and consult the authorities referred to under PLEADING.

**COUNTERFEITING** (from *counterfeit*, from OF, Fr. *contrefait*, counterfeit, from ML. *contrafacere*, to imitate, from Lat. *contra*, against + *facere*, to make). The criminal offense of falsely and fraudulently making an article in the semblance of another with the intent to induce the acceptance and use of such spurious article for the genuine one. The term "counterfeit" is used most frequently of imitations of coined money or of the paper currency of the government or of a bank, but is applied also to other cases of fraudulent imitation, as spurious trade-marks or dies. The most important British statute on this topic is the Coinage Offense Act, 1861 (24 and 25 Vict., c. 99). In this country the subject is dealt with in the Revised Statutes of the United States (§§ 5413 et seq.), especially so far as it relates to Federal coinage and securities and the money or securities of foreign nations; and other forms of counterfeiting are made punishable by State legislation. See COINAGE; FORGERY.

**COUNTERIRRITANTS.** Medical agents applied to the skin so as to reddens (rube-facients), to vesiculate (blisters or vesicants), or to produce pustules, purulent issues, or even sloughs of skin and of the subcutaneous textures (pustulants). Counterirritants act by reflex influence upon central nerve centres which control the blood supply to diseased internal organs or deep-seated structures. The milder counterirritants are mustard, turpentine applied on hot cloths, and tincture of capsicum. The stronger are blisters of cantharides or of ammonia; croton oil or tartar emetic in ointment; and the actual cautery or hot iron. Setons, moxæ, and caustics are rarely, if ever, employed. None of the stronger counterirritants should be used without medical advice, great mischief being done by their improper use. Counterirritants relieve internal pain and tend to promote the absorption of effusions. They should be applied at a distance from the site of

the inflammation. Counterirritants are much used for strains and diseases of the joints in horses, but should never be applied, as they too often are, in recent cases, or while the part is hot or inflamed. Preparations of cantharides (q.v.) and ointment of mercuric biniodide (red iodide of mercury) are the most convenient. For cows, use hot fomentations, followed by the smart infraction of mustard paste; for dogs, soap liniment, strengthened, if required, by ammonia or turpentine. See MOXA.

**COUNTERMINE.** See MINES AND MINING, MILITARY.

**COUNTERPASSANT** (Fr. *contre-passant*, passing opposite, from *contre*, Lat. *contra*, against + *passer*, ML. *passare*, to pace, from Lat. *passus*, step, from *pedere*, to stretch). In heraldry (q.v.), a term denoting two beasts bound in opposite directions passing each other.

**COUNTERPOINT.** In music, the setting of one or more parts against a given melody, so that all the voices are of equal importance and independence. The name was first used in the fourteenth century. It suggested itself from the fact that one note (*punctus*) was set against another, *punctus contra punctum*. A counterpoint may be written in various ways against a given melody, as one, two, four, or even more notes against one of the cantus. The counterpoint most useful in practical composition is one where the different parts are variously constructed, as in the following (Handel):

When two voices are used the counterpoint is called two-part; when three, three-part, etc. When the counterpoint lies uniformly above or below the cantus, it is single. If the parts be constructed in regard to one another so that they can be changed or transposed over or under each other, without alteration in the movement, or injury to the harmony, it is then called double counterpoint, e.g.:

The intervals most frequently used for transposition in double counterpoint are the octave, decima, and duodecima. The following admits of different transpositions:

When three voices are constructed so that they can be exchanged one against the other, the counterpoint is triple; when four, quadruple. The first indications of counterpoint we find in the thirteenth century in the works of Adam de la Hale. The development of the art of contrapuntal writing was then very rapid, and in the school of the Netherlands (in the fifteenth and sixteenth centuries) the acme of technical skill was reached. But counterpoint was then less a genuine musical art than an exhibition of astounding technical tricks. The great Italian schools (see **PALESTRINA**) returned to a simpler and artistic style. As a genuine art counterpoint culminated in the form of the fugue (q v). The latest and best treatises on counterpoint are those of Dehn, Richter, Marx, Lobe, Prout, Jadassohn, and Riemann.

**COUNTERPOISE CARRIAGE.** See **ORDNANCE**.

**COUNTERPO'TENT.** A fur used in heraldry (q v).

**COUNTERPROOF.** An impression which is obtained from a freshly printed proof of an engraving, by laying it, before the ink is dry, upon plain paper and passing it through the press. By this means the ink is transferred from the wet proof to the plain paper, and a reversed impression is obtained, which is often of use in enabling the engraver to judge of the success of his work. See **ENGRAVING**.

**COUNTER-REFORMATION.** The term used to describe the period of Catholic revival between about 1560 and 1648. The Catholic church undertook (1) to reform abuses, (2) to counteract the Protestant movement in those lands where it threatened to succeed, and (3) to uproot it where it had entirely or very considerably succeeded. Long before the Protestant revolt took place there had been a demand upon the part of faithful sons of the Church for a reform in "head and members," from the Pope down to the humblest Christian. Efforts had accomplished something, as in the Council of Basel (1431), but not enough to stay the tide of unrest. At last the Council of Trent was assembled, which, lasting with interruptions from 1545 to 1563, solemnly reaffirmed and defined Catholic doctrine and enacted disciplinary measures to rectify widespread and prevalent abuses. Of the agents most active in raising the tone of

the Church, animating its pulpit and its schools, and inspiring self-sacrifice and ardent piety, the chief have been the Jesuits—so much so, indeed, that the counter-reformation is frequently spoken of as their work. The other measures spoken of have naturally incurred more censure. The check or extirpation of Protestantism has been accomplished necessarily with violence, though it must be said that the intolerance of the Roman Catholic ruler or prelate was matched, when opportunity served, by that of Protestants in similar positions. In Bavaria the nobility which had favored Protestantism were expelled in 1564. At Treves the Elector, James of Eltz, in 1572, forbade Protestants his court. In other ecclesiastical states of the Empire, as Bamberg and Salzburg, the rulers drove out the evangelical clergy and gave the laity the alternative of conformity to the Catholic church or exile. Austria attempted to uproot religious liberty in Hungary, but was forced to restore it. In Bohemia Protestantism was extirpated during the Thirty Years' War. As far as the German Empire was concerned, the arbitrary exercise of power to repress Protestantism ended with the Peace of Westphalia in 1648. In such countries as Spain and Italy Protestantism never had more than a feeble existence and so was rather easily suppressed by the Inquisition. In France there was never more than a possibility of Protestantism gaining an ascendancy, but in the sixteenth and seventeenth centuries it had many influential adherents. Civil wars, the result of political intrigue, and the acceptance from personal ambition of Romanism by Henry IV, ruined whatever prospects the Protestants had; and with the revocation of the Edict of Nantes in 1685, all semblance of state favor to Protestantism was removed and the faith outlawed. In the Netherlands persecution and war wrested the southern provinces from Protestant domination, but it remained in the northern. Scandinavia was not seriously shaken in her acceptance of Protestantism. In England, after tireless, ingenious, and heroic attempts of seminary priests, upon whose head a price was fixed, to effect a return to Catholicism, with the secret cooperation of many nobles and other prominent men, the scheme had to be abandoned, mainly because the invasion of England by the Spanish Armada in 1588 welded the nation into a whole against foreign political or religious dominion. This was also the period of greatest heroism and success in Catholic missions.

Consult: Ranke, *History of the Popes* (Eng. trans., London, 1867); A. Ward, *History of the Counter-Reformation* (New York, 1889); A. R. Pennington, *History of the Counter-Reformation* (London, 1900).

**COUNTERSCARP.** The side of the ditch of a fortification opposite to the parapet. The slopes of the scarp, which is the side of the ditch next to the parapet, and of the counterscarp will depend on the nature of the soil, and the action on it of frost and rain. The scarp, or outside slope of the parapet, is less steep than the counterscarp, because it has to sustain the weight of the parapet. See **FORTIFICATION**.

**COUNTERSIGN.** A watchword or sign disclosed only to persons authorized to pass a line of sentinels. The countersign may be changed at any moment, or any number of times, but is usually altered each 24 hours. It is given primarily to commanders of guards, and outposts and their sentries, to reconnoitring and visiting

patrols, and to the field and regimental officers of the day. All others desiring to pass through the lines must first be supplied with the countersign, which is thus a guard against spies, strangers, and surprise.

**COUNTERSUBJECT.** A musical term. See **FUGUE**.

**COUNTERTENOR.** The highest adult male voice; most commonly the male alto (q.v.).

**COUNTERTVAIR.** A fur used in heraldry (q.v.).

**COUNTRESS'S POWDER.** See **CINCHONA**.

**COUNTIES CORPORATE.** In England, cities and towns which possessed the privilege of being governed by their own sheriff and magistrates independently of the county in which they are situated.

**COUNTING-OUT' RHYMES.** See **NURSERY RHYMES**.

**COUNT ROBERT OF PARIS.** A late novel of Sir Walter Scott (1833), the scene of which is laid at Constantinople in the eleventh century.

**COUNTRY-DANCE.** An old English dance of rustic origin, in lively movement, usually in 2-4 time (occasionally 6-8). It was performed by several pairs dancing against one another. Originally the music was performed on a bagpipe or fiddle or a pipe and tabor. When introduced into refined society, the music became more refined and was written for orchestral instruments. The oldest collection of country-dances was published in 1651 under the title, "The English Dancing Master." In the eighteenth century it was introduced into France, where it was first known as *Anglaise*. From the fact that the couples danced against one another it also was called *contredance*. From France it soon spread to Germany, where it became exceedingly popular, and was known under its French name. The etymology regarding *contredance* as a corruption of *country-dance*, or vice versa, is wrong.

**COUNTRY LASSES, or THE CUSTOM OF THE MANOR.** The title of a play by Charles Johnson (1715), based on Fletcher and Massinger's *Custom of the Country* and Middleton's *A Mad World, My Masters*.

**COUNTRY PARTY, THE.** The anti-Royalist party in England in Charles II's time, which opposed the court party. It finally developed into the "Whig" party.

**COUNTRY WIFE, THE.** A comedy by Wycherley (1673), drawn largely from Molière's *L'Ecole des maris* and *L'Ecole des femmes*.

**COUNTY** (OF. *countee*, *contee*, Fr. *comté*, It. *contado*, from Lat. *comitatus*, county, escort, from *comes*, count, companion) Either (a) one of the civil divisions of a country, for judicial and political purposes; or (b) a local subdivision of a state created by the sovereign power of its own will; or (c) a "local organization which, for the purpose of civil administration, is invested with the functions of a corporate existence." The Saxon term was "shire," a name still preserved in England. In the United States counties are divided into a number of townships or towns. Cities and incorporated towns and villages are, generally speaking, subdivisions of counties and townships, but in some instances a city may be geographically coterminous with a county, as is the case with St. Louis and Philadelphia, while "the city of New York" includes within its municipal limits five distinct counties. In Louisiana the similar division is called a "parish." For purposes of

local government, each county has at least one court and one prison and usually an almshouse. The smaller divisions are townships, or precincts, according to the system of local government, each of which by popular suffrage chooses supervisors or commissioners, who form an administrative board to conduct the financial and other county affairs. Counties are the creatures of the legislative will. They are vested with certain corporate powers in order to enable them to perform the duties required of them as part of the machinery of the state; and, inasmuch as all their powers are derived from the legislature, the latter may enlarge, modify, or diminish them at any time. Counties are generally invested with the following corporate powers: to sue and be sued by a corporate name; to have a county seat, a courthouse, and prison; to acquire and hold title to real estate; to levy taxes and to make such contracts as may be necessary for their corporate existence. For an historical sketch of the English county, consult Pollock and Maitland, *History of English Law* (2d ed., Boston, 1899). See **SHIRE**; **MUNICIPAL LAW**, and consult authorities there referred to.

**COUNTY COUNCILS.** Until 1888 the county government of England was conducted in the quarter sessions, held by justices of the peace. As these magistrates were appointed by the crown to attend to all administration and the minor judicial business of the county, there was practically no local self-government. To remedy this, the first Local Government Act was passed in 1888 by a Conservative ministry. It established representative county councils elected every three years by all ratepayers, male and female, of the shire, besides other nonresident property holders, under certain conditions. Practically the same qualifications are necessary for membership in the council, except that women are not eligible. The elected councilors choose additional members called "aldermen," one-third of the council in number, and also a mayor, who may or may not be of their number. The council controls all the administrative functions of the county, such as the management of the roads, insane asylums, county jails, and the issue of liquor licenses; it shares the police control with the justices of the peace.

Mr. Henry Fowler's second Local Government Act, passed by the Liberals in 1894, perfected the first by transforming the ancient vestries of a population of 300 and over into parish councils, for the management of local business. Smaller parishes, if they so desire, may, with the consent of the county council, have the same privilege. The system closely resembles the American township organization. In Scotland and Ireland counties have since been organized along similar lines, except that there are no coopted aldermen in the former country.

Previous to 1885 all London lying within the ancient city had no local government except the church vestries. It was brought under the operation of the Act of 1888 and given a county government. In 1899 the administrative functions of the vestries not ecclesiastical were turned over by the county council to subordinate boroughs having mayors, aldermen, and councilors of their own. The old city, though represented in the county council, retains most of its antiquated constitution. The personnel of the London County Council is very high, and the amount of work it has accomplished is remarkable. It has successfully provided public baths

and libraries, parks and playgrounds, better dwellings for the poor, besides giving large sums for technical education. Consult Macmorran and Dill, *The Local Government Act of 1894* (London, 1896).

**COUNTY COURT.** In English and American law, a judicial tribunal of considerable dignity and importance, whose jurisdiction is co-extensive with the limits of a county (q.v.). The county courts are among the most ancient institutions in England, dating back to the popular tribunals of the Anglo-Saxon period. We find provisions regulating their procedure as far back as the laws of Edward the Elder (901-925) and of Canute (1014-35). Under the system of local self-government which was characteristic of that period, the county courts (*shire gemots*) were the chief ordinary tribunals of the English people, their judicial authority being superseded by that of the *Witenagemot*, or Great Council of the Kingdom, only for particular purposes and on rare occasions.

It will be remembered that in England the county, or shire, is not merely a political subdivision of the state for administrative purposes, as it is in most cases in the United States, and as are the departments into which the territory of France is divided; but it is a separate and distinct political division, in many cases antedating, in organization and in its functions, the state itself. As the supreme judicial tribunal, therefore, of such an ancient political organization, the county court was not only the fountain of justice for the people of England, high and low, but a court of great dignity and authority as well. It was presided over by the sheriff (*shire reeve*), who was the high judicial officer of the county, and, like the court baron and other popular tribunals, was composed of the freeholders of the county who should be summoned by the sheriff for that purpose. Its original jurisdiction extended to all civil and criminal matters, and it was the common court of appeal from all the minor courts of the county. Under the Saxon régime there was no regular tribunal of appeal from the judgments of the county court, but after the Conquest the superior authority of the new national tribunal, the *Curia Regis*, or King's Court, drew to it appeals from the county courts. The rapid growth in power and importance of the King's courts, especially of the so-called common-law courts—the King's Bench, Common Pleas, and Exchequer—tended to reduce the authority of the more ancient tribunals, and their jurisdiction was impaired by successive acts of Parliament. They still exist, however, with a limited though considerable authority. See County Courts Act, 1888 (51 and 52 Vict., c. 43).

County courts in the United States exercise both civil and criminal jurisdiction, and in some of the States the functions of probate, or surrogates, courts as well. They are held by a county judge, usually at the county seat or principal town of the county. The county judge is usually elected by popular vote for a specified term. See COURT. See also CURIA REGIS; SHERIFF. Consult *Encyclopedia of the Laws of England* (London, 1897), and Raikes, *Admiralty Jurisdiction and Practice in County Courts* (ib., 1896).

**COUP**, *koo* (Fr., stroke). A word often used in a figurative sense. *Coup d'état*, 'stroke of state,' means an arbitrary encroachment suddenly effected by the governing authorities upon the constitution of the state, altering or setting

aside the prerogatives of other parts of the body politic. The *coup d'état* which is usually understood by this term is that effected by Louis Napoleon in making himself practically dictator (Dec. 2, 1851). *Coup de main*, a 'stroke of the hand,' is applied, in the language of war, to a sudden and successful attack. *Coup de foudre*, a 'thunderbolt,' applied figuratively to any astonishing occurrence. *Coup d'œil*, a 'stroke (or glance) of the eye,' is applied in speaking of persons who have the faculty of comprehending all the relations of a complicated matter at one survey; or, in art, it expresses the general effect of a picture or group at first sight. *Coup de théâtre* means properly a trick of the stage to produce a shock by surprise, and is hence applied to any analogous dramatic effect.

The word is also used in Canada to designate a war custom of the Plains Indians. Among many of these tribes the first warrior to touch an enemy or his body was credited with a "coup," or deed of honor. The social rank of an individual was largely dependent upon the number of coups to his credit. Thus Red Cloud (q.v.) claimed 80 coups—an unusual number, since 4 coups were generally considered sufficient to give distinction. Consult Grinnell, "The Coup," in *American Anthropologist* (1911).

**COUPÉ**, *koo'pá'* (Fr., literally, section, cut, from *couper*, to cut). A four-wheeled, one-horse, closed carriage, holding two persons, with separate seat for the driver. (See CARRIAGE; MOTOR VEHICLE.) The name is also given to a compartment of a railway carriage in continental Europe.

**COUPED**, *koopt* (hybrid Eng., p.p. of Fr. *couper*, to cut). In heraldry, a term used to describe the head or any limb of an animal, or a part of a plant, represented as cut off smoothly from the trunk. It is distinguished from *erased*—i.e., forcibly torn off. A distinction is made also between *couped* and *couped close*, the latter signifying that the head or limb is cut off close, leaving no part of the neck or trunk attached to it. When crosses, bars, and bends are cut so as not to touch the sides of the escutcheon, they are also said to be coupéd.

**COUPER**, *koo'pér*, WILLIAM (1853- ). An American sculptor. He was born in Norfolk, Va., and studied at the Cooper Institute, New York, and the Royal Academy at Munich. In 1875 he removed to Florence and entered the studio of Thomas Ball. In 1897 he returned to America and established himself in New York. His art is modern Italian in manner, but its beauty and technique are somewhat marred by overelaborate detail and neglect of powerful lines and planes. His management of drapery is especially good. Among his works are "Mother's Love," "The Falconer," "Beauty's Wreath for Valor's Brow," the marble statue of "Moses" on the Appellate Courthouse, New York City, "Te Deum Laudamus," and several peculiarly sympathetic and exquisitely executed angels for funeral monuments. His portraits include the heroic bronze bust of Prof. Thomas Eggleston, Columbia University, New York, and that of President McKinley. He won the competition for the monument to Colonel Hawkins, at Pittsburgh, Pa. Consult Lorado Taft, *History of American Sculpture* (New York, 1903).

**COUPERIN**, *koo'p'-rān'*. The name of a family of famous French musicians.—The first members who became famous were three brothers, LOUIS (1630-65), FRANÇOIS (1631-

98), and CHARLES (1638-69). The latter's son, also called FRANÇOIS (1668-1733), was the greatest of all the Couperins, and is generally spoken of as *François le Grand*. He studied under J. Thomelin. In 1693 he was appointed court cembalist and teacher of the princes; and in 1698 he succeeded his uncle François as organist of Saint-Gervais, in Paris. As a composer Couperin occupies an important position in the history of piano music. His works for the harpsichord were not only the first of their kind, but also developed a new style of music, characteristic of the instrument, whereas his predecessors had cultivated the organ style. His compositions are not very profound, are overloaded with embellishments, but exerted a decided influence upon the style of his younger contemporaries, Händel and Bach.

**COUPLE** (OF. *cuple*, *cople*, Fr. *couple*, Sp. *cópula*, from Lat. *copula*, bond, from *co-*, together + *apere*, Gk. *ἀρρεν*, *haptēin*, to join). A couple is the name given in statics to a pair of equal parallel forces acting in opposite directions and at different points of a body. It is shown in the article MECHANICS (q.v.) that, when two parallel forces act in opposite directions on a body, they may be replaced by one equal to their difference, acting parallel to them and in the same plane with them, the point of application of this resultant being *beyond* the points where they are applied. This point recedes farther from the points of application of the original forces the nearer they approach equality, getting to an infinite distance when they become equal and when their resultant accordingly is zero. In this limiting case the forces constitute a couple. They have no tendency to translate the body; their action goes wholly to make it rotate about an axis passing through its centre of inertia and perpendicular to the plane in which the couple acts. Such being the case, a couple cannot be replaced or counteracted by any single force, for such a force would produce translation; it can only be replaced or balanced by other couples. The length of the straight line which meets the lines of action of the forces at right angles is called the "arm" of the couple, and the product of the arm and either force is called the "strength" or the "moment" of the couple. It is evident that a couple can be replaced by one of equal strength. Consult Routh, *Treatise on Analytical Statics* (Cambridge, Eng., 1892); Minchin, *Statics* (New York, 1892); Johnson, *Theoretical Mechanics* (ib., 1901); Ziwett and Field, *Introduction to Analytical Mechanics* (ib., 1912). See MECHANICS.

**COUPLET** (Fr., dim. of *couple*, pair, from Lat. *copula*, bond). Any two lines which rhyme together. They usually contain the expression of a complete idea. The poetic wits of the age of Queen Anne excelled in this kind of aphoristic versification. Pope, it has been said, reasons in couplets. For example:

"'Tis with our judgments as our watches, none  
Go just alike, yet each believes his own."

**COUPON**, kōō'pōn (Fr. *coupon*, from *couper*, to cut, from *coup*, it. *colpo*, Lat. *colpa*, from Gk. *κόλαφος*, *kolaphos*, blow with the fist, from *κόλαπτειν*, *kolaptein*, to strike). An undertaking on the part of an obligor on a money bond or other interest or dividend bearing obligation to pay a definite amount of accrued interest or dividends to the holder thereof at a specified date. It is usually so attached to the bond, debenture,

or other principal instrument that it can conveniently be cut off (whence the name) and presented for payment. Each interest or dividend coupon constitutes in law a separate claim or demand and may be separately enforced. Corporate bonds and similar securities are usually issued in this form, and so, sometimes, are shares of preferred stock, in which case the coupons represent the guaranteed dividend payments. Of course the coupon does not, in any of these forms, confer any additional legal rights on the holder of the security against the person bound thereby nor increase the liability of the latter. A general agreement to pay interest or dividends at such a rate would be equally valid and efficacious. The advantage of the coupon lies in the convenience to the holder of furnishing him with a separate undertaking for each interest or dividend payment for presentment and collection, and in the fact that corporate coupons are usually of a negotiable or quasi-negotiable character, facilitating their transfer from hand to hand. See NEGOTIABLE INSTRUMENTS.

**COURANT**, kōō-rānt' (Fr., pres. part. of *courir*, to run). In heraldry, a term used for running.

**COURANTE**. An old French dance, originated about the middle of the sixteenth century. The oldest specimens are rather rapid, in 3-2 time, beginning on the beat. Later, the dance became confused with other dance forms of similar character, especially the 3-2 time (three beats) was frequently confused with 6-4 time (two beats). At the beginning of the eighteenth century it became one of the movements of the Suite (q.v.), where it usually follows the Allemande (q.v.), and is contrasted with it. At the same time the tempo became slower and, instead of proceeding mainly in notes of even value, dotted notes became the usual movement. The Italian form (*corrente*) always preserved the rapid tempo and even movement.

**COURAYER**, kōō'rā'yā', PIERRE FRANÇOIS LE (1681-1776). A French Catholic theologian. He is chiefly known for the part which he took in the discussion, which so interested Leibnitz and others at the time, on the possibility of the reunion of Christendom, and especially of uniting the Church of England with the Roman Catholic communion at the Reformation. In 1723 he published anonymously a *Dissertation sur la validité des ordinations des Anglais* (Eng. trans., London, 1725; new ed., Oxford, 1844), in which he endeavored to prove that there had been no break in the line of ordination from the Apostles to the English clergy. This was naturally received with enthusiasm in England, and Oxford conferred the degree of D.D. on him; but it subjected him to so much criticism and unpopularity in France that he presently fled to England, where he remained until his death. In 1736 he published a French translation of Sarpi's *History of the Council of Trent*, and in 1767 a translation of Sleidan's *History of the Reformation*.

**COURBET**, kōō'r'bā', AMÉDÉE ANATOLE PROSER (1827-85). A French admiral, born at Abbeville. He was educated at the Ecole Polytechnique and entered the navy in 1849. In 1880 he was made rear admiral and, after being Governor of New Caledonia, in 1883 commanded the French fleet in the campaign of Tongking. After the violation of the Treaty of Tientsin by the Chinese, Courbet, in a naval engagement (1884),

destroyed the entire Chinese fleet without losing a vessel. In 1885 he started to return to France, but his strength had given out and he died at sea. Consult the biographies by Julien (1888) and De la Faye (1891); Loir, *L'Escadre de l'amiral Courbet* (Nancy, 1886); Cahu, *Courbet en Extrême-Orient* (Paris, 1896).

**COURBET, GUSTAVE** (1819-77). A French landscape, figure, and portrait painter, founder of the modern Realist school. He was born at Ornans (Franche-Comté) on June 10, 1819, of wealthy peasant parents. His first instruction in art was acquired at his home under Flageolet, a pupil of David. In his twentieth year he went to Paris, where he worked in different studios, but he was in the main self-taught. He speedily found recognition, and soon became the chief leader of the Realists, in opposition to both Classicists and Romanticists. Courbet was of a very independent character, and had so little regard for the opinions of the judges of the Salon that he returned for six successive years a picture rejected in 1841. When in the Exposition of 1855 his pictures were refused, he held a separate exposition, which attracted wide attention. In 1870 he returned the cross of the Legion of Honor to Napoleon with a protest. He was Radical and Socialist in politics, and under the Commune he was made director of the fine arts. As such he saved the collections of Thiers and of the Luxembourg from the infuriated populace, but he sacrificed the Vendôme Column in order to appease the crowd. For this act he was imprisoned after the downfall of the Commune, and all of his paintings were sold at public auction. In order to avoid the payment of further damages he went into voluntary exile, and died broken-hearted near Vevey, in Switzerland, Dec. 31, 1877. He was a strong but rather coarse character, blustering but good-natured—a healthy animal without the least spirituality.

His paintings portray nature exactly as it is, without the least addition of sentiment or idealism, for he conceived realism to be possible only through the absolute negation of idealism. As he confined himself to the reproduction of nature, there could be no refined composition or real action in his work, for these depend on the painter himself. His figures were no more than models in the positions painted, his landscapes mere patches of forest or country taken at random. In figure painting he was partial to the coarse types preferred by the Flemish school, and he always painted them life-size. His coloring was excellent, and in his figure subjects, which are chiefly brushworks, it was pure, strong, and mellow. In his landscapes he used the palette knife very freely, obtaining brilliant and sparkling effects of color. His chief defect is his lack of strength in drawing.

The volume of Courbet's work was enormous, and his activity extends over a variety of subjects. Among the best of his figure paintings are the "Man with a Leather Belt", (Louvre); the "Stone Breakers" (Dresden), representing two workmen breaking stones, as one can see them in the street; the "Demoiselles des bords de la Seine" (Petit Palais), two typical grisettes reclining in ungraceful attitudes on the grass, yet a picture of great beauty of color. The most ambitious of all is his "Burial at Ornans" (1850, Louvre), a village funeral. This picture is composed of 39 life-size figures, admirably balanced. On the one hand are the perfunctory

mourners, such as the priest, beadles, pallbearers, gravediggers; on the other, the real mourners. The Louvre also possesses two of his landscapes—the "Combat of the Stags" and the "Retreat of the Deer"—a marine painting, "The Wave," the portrait of Champfleury, and other of his works. In the Petit Palais are "The Father of the Artist," "Prudhon and his Children," and several others. In the Metropolitan Museum, New York, are "The Woman with a Parrot," a marine, and a landscape. Courbet is also represented in the chief provincial museums in France and in the galleries of Berlin, Frankfort, Cologne, Munich, Vienna, Amsterdam, The Hague, Copenhagen, and Chicago, and in many private collections, including the Widener and Johnson collections, Philadelphia, and the Allston Club, Boston.

**Bibliography.** Monographs on the art and life of Courbet have been written by Estignard (Paris, 1874), D'ideville (ib., 1878), Silvestro in *Les artistes français* (ib., 1878), Isham in Van Dyke's *Modern French Masters* (New York, 1896), Meier-Graefe, *Corot and Courbet* (Leipzig, 1905), Cazier (Paris, 1906), Riat (ib., 1906), Muther (Berlin, 1906), Robin (Paris, 1909), Benedite (ib., 1911), and Lazár Béla (ib., 1911). Consult also Muther, *History of Modern Painting*, vol. ii (London, 1896, 1907); Patoux, "Courbet," in *Les artistes célèbres* and *La cūrte sur Courbet* (Paris, 1879).

**COURCEVOIE**, kōōr'vōi' (Fr., crooked way). A town in the Department of Seine, France, on the left bank of the Seine, opposite Neuilly, 5 miles northwest of Paris. Courbevoie has well-built houses and large barracks erected by Louis XV for the Swiss Guards. In 1883 a bronze group, the *Monument de la défense de Paris*, by E. Barrias, was erected here. Its principal manufactures are white lead, brandy, carriage bodies, and drugs. Pop., 1890, 20,105; 1901, 23,765, (commune) 25,330; 1911, 38,138.

**COURCEL**, kōōr'sēl', BARON ALPHONSE CHIRON DE (1835- ). A French diplomatist. He was educated in France and Germany, and entered political and diplomatic life in 1859. From 1881 to 1886 he was Ambassador to Germany. In 1884-85 he was joint reporter with Baron Lambermont of the Berlin Conference. Courcel was an arbitrator appointed by the French President on the Bering Sea Arbitration Commission in 1892, and was elected president of that body by his associates. He became Senator in 1892, and was made Ambassador to Great Britain in 1894, but resigned in 1898. With Lair and others he edited for the Société de l'Histoire de France the *Mémoires de Richelieu* (2 vols., 1907-09).

**COURCELLE**, kōōr'sēl', DANIEL DE RÉMY, SIEUR DE French Governor of Canada from 1665 to 1672. He succeeded Mézy and preceded Frontenac. In 1666, in the depth of winter, he led a force of 300 men by way of Lakes Champlain and George to the country of the Mohawks, who had persisted in attacks upon the colony. He returned, having accomplished nothing, and having lost a large number of his troops through the severity of the weather. Not long after, with Tracy, the lieutenant general, and an army of 1300, he undertook a second expedition, which resulted in the complete destruction of the five Mohawk forts. The English were considerably alarmed at this invasion of territory claimed for the British crown, and there ensued a correspondence between Tracy

and Governor Nicolls of New York. Courcelle projected the post at Kingston (Katarakoui), afterward established by Frontenac.

**COURCELLE-SENEUIL**, kōō'r-sēl' se-nē'y', JEAN GUSTAVE (1813-92). A French political economist, born at Seneuil (Dordogne). He occupied the chair of political economy at the University of Santiago de Chile from 1853 to 1863 and became a member of the French Academy of Moral and Political Sciences in 1882. Among his principal publications are the following: *Traité théorique et pratique des opérations de banque* (1853; 6th ed., 1876); *Manuel des affaires* (4th ed., 1883); *Traité d'économie politique* (1858; 3d ed., 1890); and *Liberté et socialisme* (1868), in which, as in several others of his writings, he defends the principle of individualism. He translated into French the *Principles* of J. S. Mill and some of the writings of W. G. Sumner.

**COURCILLON**, PHILIPPE DE. See DANGEAU.

**COURDE DE MONTAIGLON**, A. DE. See MONTAIGLON, A. DE 'COURDE DE.

**COUREURS DE BOIS**, kōō'r-ēr' de bwā (Fr., wood runners). Canadian bushrangers of the seventeenth century who forsook their families and homes and took to the woods to engage in the beaver trade. The movement became so general that whole communities were virtually deprived of their male support, and much destitution ensued. Stringent measures to restrain the movement were taken by the French King, but without much result. The rangers, declared outlaws, built palisade forts at Detroit, on Lake Superior, and at various points in the West and Northwest.

**COURIER**, kōō'r-i-ēr (OF., Fr. *courrier*, runner, from *courir*, Lat. *currere*, to run). A bearer of dispatches or letters, usually sent on public business. Such messengers were extensively used up to comparatively recent years—indeed, until the establishment of the postal and telegraph systems. Organized courier service existed among the Medes, Assyrians, and Egyptians from very early times, and relays of runners were employed by the ancient Greeks until the system of mounted couriers was introduced by the Persians. Among the Romans the change from runners to mounted men took place in the time of Augustus. During the Middle Ages, besides the staff of couriers in the service of sovereigns, the English and French nobility employed professional runners, called in France *laquais* and in England "running footmen." They wore an elaborate costume, and carried a long cane topped with a large, hollow silver apple containing provisions for the journey. Towards the middle of the fifteenth century formal permission was given to the government couriers of Germany and Spain to carry unofficial letters.

In modern times correspondence between diplomatic representatives and their home government is sometimes conducted by means of special couriers, who, unless they happen to fall into the hands of a hostile power in time of war, are considered inviolable messengers. The office of King's messenger in the English diplomatic service used to be an honorable and coveted position, but is now practically obsolete. The word "courier" also signifies a hired attendant who accompanies travelers abroad, and whose special duty consists in making arrangements for the journey, attending to passports, settling hotel bills, and the like. An important qualifica-

tion for a courier in the latter capacity is the ability to speak several foreign languages.

**COUBIER DE MÉRÉ**, kōō'ryā' de mā'rā', PAUL LOUIS (1772-1825). A French Liberal politician and classical scholar. He was born in Paris, Jan. 4, 1772, entered the army in 1792, and served without distinction until 1809, pursuing his studies as he found opportunity, and publishing unimportant critical articles and translations. He from his youth cherished a bitter aversion to the nobility and a passionate love of Greek literature. On resigning from the army he went to Florence and discovered there a complete manuscript of the Greek pastoral *Daphnis and Chloe* (see LONGUS), which he edited (1810) and translated into exquisite French. At the Restoration (1815) he became active as a political pamphleteer, writing letters for *Le Censeur*, comparable to *Les provinciales* of Pascal or the satires of Junius. Fined and imprisoned for his *Simple Discours* (1821) ridiculing a plan to endow the royal family, he published a report of his trial that had a sensational success throughout France. His last political satire, *Le pamphlet des pamphlets* (1824), is among the bitterest and best: witty, classical in form and scholarly allusion, epigrammatic in its common sense. A few months after, he was assassinated (April 10, 1825), by whom the government could or would never discover. His rare style has saved his writings from oblivion. Through communication with the classics he acquired a poetic grace, a vividness of description, and a Socratic irony which transformed vituperation into literature. Courier's *Œuvres complètes* were published in 4 vols., with an essay on his life by Armand Carrel (Paris, 1830; new ed., 1890). Consult: Gachet, *La jeunesse de Paul-Louis Courier, étude sur sa vie et ses œuvres de 1772 à 1812* (ib., 1911), and the same author's *Les pastorales de Longus, édition critique, suivie d'une étude sur l'essai de style vicil de Courier* (ib., 1911); Schwab, *Vie politique de P.-L. Courier (Mercure de France, 1909)*; Sainte-Beuve, *Causeries du Lundi*, vol. vi (1857-72).

**COURLAN**, kōō'r-lān (Fr., probably from native South American). The French book name for a limpkin (*Aramidae*), called also "crying bird" and "mad widow" (*ciuda loca*) by Spanish Americans. See LIMPKIN.

**COURLAND**, kōō'r-lānd, or **KURLAND** (trans. of Lett. *Kursemne*, from *Kur*, Finnish tribe inhabiting the region in mediæval times + *semne*, land, OCh. Slav. *zemlya*, OPruss. *same*, land, Gk. *χαμαί, chamai*, on the ground, Lat. *humus*, soil). One of the "Baltic provinces"; a government of European Russia, bounded by the Gulf of Riga and the Government of Livonia on the north, Vitebsk on the east, Kovno on the south, and the Baltic Sea on the west (Map: Russia, B 3). Area, 10,435 square miles. The surface is undulating, broken only by isolated hills, while the coasts are very low. There are a number of lakes, and a large portion of the area is covered with forests. The climate is damp, with very cold winters. The chief occupations are agriculture, cattle raising, and fishing. There are also a number of breweries, distilleries, and textile mills, but the manufacturing industries are very little developed. The commerce, on the other hand, is considerable. The seaport of Libau is the commercial centre. Courland had a population, Jan. 1, 1911, of 749,100. Letts form the bulk of the population, a few owning farms, but the majority working

as agricultural laborers. Large estates are scientifically conducted under German management, and produce cereals, flax, potatoes, etc. The majority of the population are Lutherans. Capital, Mitau.

Courland came under the rule of the Teutonic Order in the thirteenth century. In the second half of the sixteenth century it became an hereditary duchy under the sovereignty of Poland. After a long internal struggle between the Russian and the Polish parties the duchy came under Russian influence with the appointment of Biron as Duke of Courland in 1737. It was annexed to Russia in 1795. In 1905 it was the scene of a violent revolutionary uprising. See RUSSIA.

**COURLAND, DUKE OF.** See BIRON, ERNST JOHN.

**COURNOT,** kōōr'nō', ANTOINE AUGUSTIN (1801-77). A French mathematician, philosopher, and economist. His work in philosophy was important, anticipating in some particulars the doctrines of Bergson relating to the adjustment of rational processes to inanimate physical nature and their consequent inadequacy for the analysis of vital phenomena. But his fame rests chiefly upon his application of mathematical methods to the investigation of problems of economic theory. The chief results of Cournot's studies were the simplification of the theory of the equilibrium of demand and supply, the discovery of the theory of monopoly price now generally accepted in its essentials by economists, and a theory of the incidence of excise and customs taxes levied under conditions of monopoly and of competition which, as further elaborated by Marshall, Bastable, and Seligman, is generally accepted in public finance. Perhaps the most important service of Cournot to economic and social science was his demonstration of the applicability of the mathematical theory of probabilities to the problems of statistics. His most important works are: *Recherches sur les principes mathématiques de la théorie des richesses* (1838); *Exposition de la théorie des chances et des probabilités* (1843); *Traité de l'enchaînement des idées fondamentales dans les sciences et dans l'histoire* (1861); *Principes de la théorie des richesses* (1863; revised under the title *Revue sommaire des doctrines économiques* 1877); *Considérations sur la marche des idées et des événements dans les temps modernes* (1872).

**COURSE OF TIME, THE.** A religious epic in blank verse by Robert Pollok (1827).

**COURSEER** (Fr., *coursier*, from OF., Fr. *course*, Lat. *cursor*, *course*, from *currere*, to run). The French name of 8 or 10 species of plovers of various genera inhabiting desert regions of Africa and Asia. The best known is the cream-colored courser (*Cursorius gallicus*), common on arid plains from the western Sahara to northern India. All are sand-colored above, swift-footed, and wary, and conceal themselves by simply squatting and remaining motionless and so practically invisible; their food consists of insects, mainly locusts. The name "black-backed courser" is frequently given to the crocodile bird (q.v.).

**COURSING** (from *course*, OF., Fr. *course*). The pursuit of a hare by greyhounds, who follow it by sight and not by scent, is one of the most ancient of field sports. Arrian (150 A.D.) made its history the subject of much research. There are two kinds of coursing—"open," which

may be described as the haphazard pursuit of any hare that can be discovered, without regard to any set rules or regulations; and "close" coursing, in which the course is determined by fixed boundaries, or otherwise fenced in. In the latter case the hares, which have been previously secured, are released, and after sufficient law (time or distance) has been allowed them, the dogs are slipped, and the pursuit begins. Both these kinds of coursing are practiced under similar rules in Great Britain and America. The oldest coursing club in England was that established at Swaffham in Norfolk in 1776, and of existing organizations the most important is the Altcar Club, established in 1825. In America the sport has been in existence since the middle of the nineteenth century, but open meetings, in which competitors from regular organizations take part, are of comparatively recent date. The supervising and controlling body of the sport is "The American Coursing Board," and the principal meets, or meetings, are in the two Dakotas, Kansas, Nebraska, Iowa, and Minnesota. The open coursing of the coyote (prairie wolf) is frequently practiced (especially by stockmen and cowboys) in this country and is an exciting and somewhat dangerous sport, often involving a long chase on horseback over a rough country.

In England the sport is conducted under the laws and rules of the National Coursing Club, and the principal meet is that held every February over the Altcar Course near Liverpool, for the Waterloo cup, a prize instituted in 1836. It was originally an 8-dog course, increased the next year to 10, the year after to 32, at which it stood until 1857, when it became a 64-dog stake, and as such it remains. The best dogs of the world compete. In competitions the judge follows the dogs throughout the course, noting every movement from the moment they are slipped until the "kill," or conclusion of the course—his decision being based on the following general rules: I. For *speed*, according to the degree of superiority shown, 1, 2, or 3. II. For the *go-by*—the starting of a greyhound a clear length behind its opponent, passing it in a straight run and obtaining a clear length ahead—2 points or, if gained on the outer circle, 3 points. III. The *turn*—a sharp turn of not less than a right angle in the hare's course when pressed by a dog, 1 point. IV. The *wrench*—a change of less than a right angle in a hare's course when pressed, one-half point. V. The *kill*, 2 points, or in a descending scale in proportion to the merit displayed, which may be of no value. VI. The *trip*—an unsuccessful effort which threw the hare off its legs, or the getting so close as to snatch it and lose hold, 1 point. Consult *The Encyclopedia of Sports and Games*, ed. by the Earl of Suffolk (London, 1911).

**COURT** (Fr. *cour*, It. *courte*, from Lat. *cohors*, inclosure, from *co*, together + *hōrs*, connected with Lat. *hortus*, garden, Gk. *χῆρος*, *choros*, hay, OIr. *gort*, sedge, Goth. *gardis*, court, OHG. *garto*, Ger. *Garten*, AS. *geard*, Eng. *yard*). Courts, in the legal sense—i.e., authorities empowered to try and punish persons charged with offenses against the public or state, and to settle disputes regarding the rights and duties of individuals—have existed among all peoples that have emerged from savagery. There is no single root from which early judicial authority springs; nor is there, even among the Aryan peoples,

any single typical form of primitive court. The right of the community to punish offenses against the community—a right which expresses itself originally in lynch law—may beget a popular jurisdiction in criminal cases; and the interest of the community in preventing feuds may make the popular assembly competent to decide civil cases. The belief that flagrant breaches of the social order are offenses against the gods may vest criminal jurisdiction in the priests, and the duty of the priests to see that vows and promises under oath are performed may be expanded into a fairly broad civil jurisdiction. The attribution to the king of disciplinary powers over the popular army, and the concentration in his hands of the power of preserving internal peace, may create an extensive royal jurisdiction over crimes and also over torts; and the king's civil jurisdiction may be widened by ascribing to him a patriarchal authority analogous to that exercised by the heads of houses and of clans. Private disputes may be referred, voluntarily at first, to the decision of king or priest or assembly, and when such references have become customary the duty of decision may be transformed into judicial authority. Traces of all these ideas and influences are discernible in the early judicial systems of the Aryan peoples.

**Roman Courts.** Among the ancient Romans criminal jurisdiction was exercised by the King or by officials appointed by the King. From the decisions of such officials appeal to the popular assembly was sometimes granted. In the Republican period such an appeal (*provocatio*) lay against all sentences condemning a citizen to death, or scourging, or exile, and also against fines beyond a certain amount; and this appeal became the real trial. The forms observed were substantially the same as in legislation. A proposal to condemn the accused to a certain punishment was submitted to the people, debated before them in informal assembly (*comito*), and accepted or rejected by them in formal assembly (*comitia*). (See *COMITIA*.) During the last century of the Republic criminal courts of a different type, the *questiones*, gradually absorbed the jurisdiction previously exercised by the assembly. The *questio* was a body of select jurors sitting under the presidency of a special magistrate, usually a prætor. The jurors were drawn from a small panel, which included only the most distinguished and wealthy citizens.

Civil jurisdiction, also, is said to have been exercised by the Roman kings. It is probable, however, that the King did not decide the controversies submitted to him; but, like the prætor in later times, heard the pleadings only and then sent the parties to a *judez*, or referee, nominated (or at least accepted) by the parties themselves. It also seems probable that, in the royal period, the referees were usually priests (*pontifices*). In the Republican period there were elected boards of *judices* (*decemviri, centumviri*), to which cases were sent by the prætor; but reference to a single *judez*, regularly a senator, seems to have been customary in actions on tort or on contract, and was admissible, during the last century of the Republic, in all cases.

The fundamental principle which controlled the administration of civil and criminal justice, and the composition of the courts, in the Republican period, was the separation of jurisdiction (*jus*) and judgment (*judicium*). Pleas were

made and the case was formulated before a magistrate, but the decision was rendered by a private citizen or by a body of private citizens. In the Imperial period this system (*ordo judiciorum*) was gradually supplanted by the *cognitio extraordinaria*, in which an Imperial official conducted the trial and rendered the decision. Under this system the administration of justice was taken out of the hands of the people and became a part of the general administration created and controlled by the Emperor. As in the general administration, so in the administration of justice, there were courts of lower and higher instance, and appeals could be taken from the former to the latter.

**Teutonic and Mediæval Courts.** The primitive Teutonic court was a folkmoet, or popular court, in which the decision was proposed by the presiding dignitary (king or prince or hundredman), or by a law speaker appointed by the presiding dignitary, and was approved or disapproved by the assembled freemen. In the later Frankish (Carolingian) Empire, special judgment finders (*scabini, Schoffen, échevins*) gradually took the place of the body of freemen. These judges or assessors were at first appointed by the count; but, after the dissolution of the Empire, their office, like most offices, became hereditary.

The early Teutonic courts were those of the hundred, of the county, and of the tribe. In the Frankish Empire the court of the tribe was replaced by the royal court, held by the count palatine; and in the Carolingian period circuit courts were held by Imperial missi. Even in the Carolingian period the courts of the hundred and of the county were being supplanted by manorial courts, held by the bailiffs of the seigneurs, and after the dissolution of the Empire the popular free courts disappeared in many parts of Europe. During the Middle Ages appeared special feudal courts and independent city courts. Nearly all the mediæval courts were courts at once of first and last instance; there was no system of appeals, the King's court was usually nothing but a feudal court for great vassals. In all of these courts, from the King's court down to the manorial court, the decision was usually rendered (or at least approved) by a limited number of judges or assessors, who were regularly the  *pares* of the defendant—i.e., persons of the same class and rank. Throughout the Middle Ages there were also special ecclesiastical courts (see *CANON LAW*), with jurisdiction not only over church matters, but over the persons of the clergy and over many matters to-day regarded as civil. In these courts the judicial organization and procedure of the late Roman Empire were perpetuated. From the ordinary (bishop's) courts appeals ran to Rome, and the Pope could appoint legates to hold special courts.

**Modern European Courts.** When the administration of justice was reorganized by the absolute monarchy, the new royal courts were modeled on the ecclesiastical courts of the Middle Ages. Professional or "learned" judges replaced the mediæval lay judges: the judge or bench of judges rendered decision both upon the law and the facts; appeals ran from the courts of lower instance to those of higher, and finally to the King's court. The modern European courts are still, essentially, courts of this Roman-Imperial ecclesiastical type, except that the court of last instance has usually cassational jurisdiction

only, not reformatory jurisdiction. The only important modification which has been introduced is jury trial in criminal cases. Lay assessors have been retained or reintroduced, in some countries, in the police courts and in the commercial courts. These latter courts, with special jurisdiction over merchants and commercial cases, are survivals of the independent city courts of the Middle Ages. The number of judges in a European court is usually proportional to the amount of business with which the court has to deal. In the larger courts the judicial force is divided into sections (sometimes termed "senates"), and the judicial business is distributed according to its character—criminal cases going to one section, commercial cases to another, etc. When a doubtful question of general importance comes before such a section, a session of the entire court may be called. In all the leading European states the independence of the judge is safeguarded by life tenure and fixed salary, and in the German Empire by the rule that a transfer, even when it is technically a promotion, cannot be made without the consent of the judge concerned.

**English and American Courts.** Originally of wider signification, the term "court" has come to represent a permanent organization or tribunal for the public administration of justice, composed of one or more judges, who, when engaged in the transaction of business, are attended ordinarily by attorneys and counselors, who represent the litigants; by clerks, who keep records of what is done, and by marshals, sheriffs, constables, or like officers, who enforce judicial mandates and preserve order.

In primitive communities courts perform legislative and executive as well as judicial functions. The *scyregemot*, county court, or sheriff's turn of Anglo-Saxon England was not simply a judicial tribunal presided over by a bishop and sheriff, but was an assemblage of freemen for the discussion and transaction of local affairs generally. The *Aula Regis*, or Great Council of the Kingdom, in early English history performed legislative as well as judicial duties; and so did the stated assemblages of the ruling class in some of the English colonies in this country. In Massachusetts the present names of the legislative and the judicial bodies—the General Court and the Supreme Judicial Court respectively—bear testimony to the fact that the primitive court of the colony performed both legislative and judicial functions.

I. English courts may be classified in various ways. One basis of classification is their relative authority; and this divides them into superior and inferior courts. (a) The latter class includes those tribunals over which courts of the former class may exercise a supervisory jurisdiction by writs of mandamus (q.v.), certiorari (q.v.), or prohibition. They are of four kinds:

1. Local courts of criminal or quasi-criminal jurisdiction, such as *borough sessions*, held by a recorder or the justices of a municipal borough; *licensing sessions*, held by borough justices for granting or withdrawing liquor licenses; *petty sessions* and *special sessions*, or courts held by two justices or a borough police magistrate in the exercise of a summary jurisdiction over minor offenses; *general or quarter sessions* of the borough and of the county, for the trial of felonies and misdemeanors within the borough or county jurisdiction, and for appeals from petty and special sessions.

2. *Local civil courts of record*, such as borough civil courts and county courts. The latter are lineal descendants of the *scyregemots* of King Alfred; but their present constitution, jurisdiction, and practice are regulated by the County Courts Act, 1888 (51 and 52 Vict. c. 43). Under this statute, England, with the exception of London, is divided into 491 county-court districts, each court having a judge who must be a barrister of at least seven years' standing, and who is appointed by the Lord Chancellor, is allowed traveling expenses (except the judge within the Duchy of Lancaster, who is paid by salary), is addressed as "His Honor Judge —," and ranks next after knights bachelors. Some of these judges have a high professional reputation. From the decisions of these courts an appeal lies in many cases to the High Court, and the latter possesses the power of supervising the proceedings of the former by writs of certiorari and prohibition, and by orders to show cause, which have been substituted for the old writ of mandamus.

3. The *university courts* of Oxford and Cambridge, which exercise civil jurisdiction in some cases in which members of the university are concerned.

4. *Manorial courts*, having a limited jurisdiction in some parts of the kingdom. See MANOR; COURT BARON.

(b) The *superior courts* of England, prior to the Judicature Act of 1873, embraced those of Common Law and of Equity, the Probate and Divorce Court, the Admiralty Court, and the London Court of Bankruptcy. The superior courts of common law and of equity were evolved from the *Aula Regis*, or Great Council of the Kingdom. It was provided by Magna Charta that "common pleas shall not follow one court, but shall be holden in some certain place." Accordingly new justices were appointed, and the *Court of Common Pleas* was established at Westminster Hall, with jurisdiction over all civil actions between individual litigants, i.e., over all common pleas or suits, as distinguished from pleas of the crown or criminal actions. A century later Edward I detached from the *Aula Regis* the *Court of King's Bench*, the *Court of Exchequer*, and the *Court of Chancery*, thus settling the superior courts of law and equity upon the basis which they occupied until recently.

Originally the *King's Bench* (or *Queen's Bench* during the reign of a queen) was a criminal court and the conservator of the public peace. By a series of fictions, however, its jurisdiction was extended to civil actions.

So the *Exchequer*, which at first was a court of revenue only, extended its jurisdiction by a series of legal fictions to a variety of suits between individual litigants.

Under Edward I the *Court of Chancery* (q.v.) became an established judicial tribunal. It was presided over by the Chancellor, who had the custody of the Great Seal, and with it the power to issue writs returnable in chancery, and thus to act as a check upon the common-law courts. Later the Lord Chancellor was assisted in the performance of his judicial functions by the Master of the Rolls and by vice chancellors. For the influence of this court upon the development of English law, see CHANCEERY; EQUITY.

(c) Reference has been made already to the fact that one of the presiding officers of the Anglo-Saxon local courts was a bishop. After

the Norman Conquest the bishops ceased to take part in those assemblies and were accorded exclusive cognizance of spiritual matters. This jurisdiction was steadily extended until it embraced not simply the discipline of the clergy and the regulation of ecclesiastical affairs, but also the control of marriage and divorce, and the disposition of the estates of deceased persons. At present, however, *ecclesiastical courts* in England are confined to the decision of ecclesiastical questions, while divorce and matrimonial causes, as well as the probate (q.v.) of wills and testaments, and the administration of decedents' estates, are within the jurisdiction of secular courts.

(d) The *Court of Admiralty* is one of great antiquity, having its origin, undoubtedly, in the period when the King was in truth the source of all judicial power. After the courts of common law, described above, acquired a degree of independence of the sovereign, they did not hesitate to issue writs of prohibition to the Court of Admiralty and to treat it as an inferior tribunal. Its present jurisdiction is mainly statutory.

The *London Court of Bankruptcy* was created and regulated by modern bankruptcy (q.v.) statutes.

(e) By a series of judicature acts, beginning with that of 1873, all of the foregoing secular courts were consolidated into one *Supreme Court*. This consists, at present, of two permanent divisions, one of which, styled *His Majesty's High Court of Justice*, has original jurisdiction of all actions formerly brought in either of the superior courts of common law or of equity, or in the admiralty, or probate, or divorce, or bankruptcy courts, and an appellate jurisdiction over various cases brought up from inferior courts. The other division is styled *His Majesty's Court of Appeal*, its jurisdiction being almost exclusively appellate. The High Court is separated into three parts, known respectively as the *Chancery Division*, with the Lord Chancellor as president and five judges; the *King's Bench Division*, with the Lord Chief Justice as president and 14 judges; and the *Probate, Divorce, and Admiralty Division*, with a president and a judge; the general character of the subjects of which each division has cognizance being indicated by its name.

The Court of Appeal consists of the Lord Chancellor, every living person who has held the office of Lord Chancellor, the Lord Chief Justice, the Master of the Rolls, the president of the Probate, Divorce, and Admiralty Division, and five judges, with the title of Lords Justices of Appeal. It is an august tribunal, whose decisions of appeals from the various branches of the High Court command great respect.

In addition to this permanent and impressive Appellate Division of the Supreme Court, there are divisional courts, in the King's Bench Division and in the Probate, Divorce, and Admiralty Division, composed of two judges, ordinarily, for the disposition of appeals from the petty or quarter sessions, from the county court, and from divers other inferior tribunals.

(f) Above the Supreme Court, as a final court of appeal, is the *House of Lords*, whose appellate jurisdiction dates back to the thirteenth century. At present, however, only a few of its members take any part in the performance of its judicial functions. They are known as *Lords of Appeal*. The Lord Chancellor presides over

them. (See *LORDS, HOUSE OF*.) The final court of appeal for cases arising in India and the colonies is the Privy Council (q.v.), which has also final appellate jurisdiction over judgments of the ecclesiastical courts and of the Naval Prize Court.

From the foregoing sketch of the English courts it is apparent that a litigated case may be passed upon by four successive tribunals. It may be instituted, e.g., in a county court, thence appealed to a divisional court, thence to the Court of Appeals, and finally to the House of Lords. A similar series of appeals may terminate in the Privy Council.

II. In the United States distinct systems of courts exist—one organized under the Federal Constitution and statutes, the others under the constitutions and statutes of the several States.

1. **Federal Courts.** (a) Sec. 1 of Art. III of the Federal Constitution declares that "the judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as Congress may from time to time establish." By the second section of the same article, as modified by the Eleventh Amendment to the Constitution, the judicial power of these courts is extended to all cases in law and equity arising under the Federal Constitution, laws, and treaties, to all cases affecting foreign ambassadors, ministers, or consuls, to all admiralty and maritime cases; to controversies to which the United States shall be a party; to controversies between two or more States, between citizens of different States, between citizens of the same State claiming lands under grants of different States, between a State or the citizens thereof and foreign States, citizens, or subjects; and to suits by a State against a citizen of another State.

(b) Under the power conferred upon it to establish judicial tribunals inferior to the Supreme Court, Congress has established a Court of Claims, district courts, and circuit courts, the latter having formerly an extensive original jurisdiction, but now, by a recent Act of Congress (Judicial Code, 1911), only an appellate jurisdiction. Besides these it has provided for various courts in the Territories. The latter are not, however, United States courts under Article III of the Constitution, but are rather congressional courts. They are called into being as an incident to the congressional authority to make all needful rules and regulations respecting the territory of the United States. Their judges are not entitled to hold office during good behavior, but may be appointed for a term of years, and may be subject to suspension or removal from office by the President.

(c) The *Court of Claims* was established in 1855 to hear and determine certain classes of claims against the United States, thus permitting citizens in many cases to sue the government. See *CLAIMS, COURT OF*.

(d) The *Commerce Court*, instituted by Act of Congress for the enforcement of orders and decrees of the Interstate Commerce Commission (q.v.), with power to set aside, modify, or annul such orders, consisted of five circuit judges of the United States. After a brief existence it was abolished by Act of Congress, 1914.

(e) By the Act of 1789 the States were divided into 13 districts, which have increased to 76 (1906), each district usually having a judge, a clerk, a marshal, and an attorney appointed by the Federal government. The dis-

trict courts have an extensive jurisdiction, embracing jurisdiction over admiralty (q.v.) and maritime causes; suits arising under the revenue laws, the civil-rights statutes, and various other legislation; prosecutions for crimes against the United States or for the recovery of penalties under Federal laws; proceedings in bankruptcy, and many other subjects of litigation. See DISTRICT COURT.

(f) By an Act of Congress passed in 1911 (the Judiciary Code), the appellate jurisdiction formerly exercised by circuit courts of appeal, of which there are nine—one in each circuit. Each of these courts consists of three judges, any two of whom constitute a quorum. Its members are selected from the following list: the Supreme Court justice assigned to the circuit in question, the circuit judges and the district judges of that circuit; but no justice or judge is allowed to sit in this tribunal in a case which was tried before him while holding a circuit or district court. It is apparent, therefore, that the *personnel* of these courts changes frequently.

(g) The final appellate tribunal of the Federal judiciary is the *Supreme Court*, which is unique and probably the most influential judicial body in the world. See SUPREME COURT OF THE UNITED STATES.

2. The State courts are modeled after those of England. It is true they do not include admiralty nor ecclesiastical tribunals; but this is because admiralty and maritime jurisdiction is confined exclusively to the Federal courts by the Federal Constitution, and because there is no state church in any of the various States. That part of the powers of the English ecclesiastical courts relating to the estates of deceased persons and kindred subjects has been devolved in many States upon tribunals bearing various names, such as surrogates', probate, or orphans' courts. Most of the local or inferior courts, however, as well as the superior courts of law and of equity, were copied by State constitutions and statutes from English originals. In many of the States courts of chancery (q.v.) and of common law (q.v.) have been united into a single supreme court. It is impossible in this article to describe the judiciary system of each of the States, for in matters of detail they differ not a little, but a brief sketch of the New York courts will give the reader an idea of those existing in other States.

(a) To some extent these courts correspond to the territorial subdivisions of the State. For example, each town (q.v.)—the territorial unit in New York—is required to elect *justices of the peace* (q.v.), who are empowered to hold courts and to exercise a limited criminal as well as civil jurisdiction. In each county a *county court* is provided for, and also a *surrogate's court*, although in some counties these courts are held by the same judge. Other local courts, with a limited jurisdiction, have been erected by the Legislature, especially in cities and large villages. The *Supreme Court* possesses a general jurisdiction in law and equity throughout the State. It is composed (1914) of 100 justices, each of which is empowered to hold court in any county, although they are not elected by the State at large, but each is chosen by the electors in one of the nine judicial districts into which the State is divided. Some of these justices hold courts for the trial of cases or the determination of motions; while

others, upon the selection of the Governor, constitute four courts of appeal, called *appellate divisions*, the State being divided into four departments, in each of which one of these courts has appellate jurisdiction. From determination by an appellate division an appeal may be taken in many cases (see Art. VI, § 9, of New York Constitution) to the *Court of Appeals*, the highest regular judicial tribunal of the State, from whose decision there is no appeal. It consists of a chief judge and six associate judges. A *Court of Impeachments* is also provided for by the State constitution. This, however, is not a regular, but an extraordinary, tribunal, which rarely assembles.

(b) In some States the Supreme Court possesses original jurisdiction and is also the final court of appeals. That is the case in Massachusetts, where an action brought in the Supreme Court may be tried and decided by a single justice, and from his decision an appeal may be taken to the full court. In that State the Supreme Court is the final tribunal for appeals from the decisions of a single justice; also from the Probate Court, the Insolvency Court, and the Superior Court—the Superior Court, in turn, possessing both original and appellate jurisdiction, appeals running to it from municipal, district, police, and justice courts.

The United States Constitution and Revised Statutes; the constitutions and statutes of the several States. For a separate treatment of special courts, see individual titles such as COMMON PLEAS, COURT OF, SURROGATE; COURTS, MILITARY, PROBATE COURT; ARCHES, COURT OF, SUPREME COURT OF THE UNITED STATES, ETC. Consult also the authorities referred to under such titles as CIVIL LAW; ADMIRALTY LAW; PLEADING; ETC.

**COURT.** 1. A name originally applied to the square or space inclosed by the buildings of a feudal castle. In time it came to denote the persons immediately surrounding a feudal chief or superior. Its application is now confined to the residence and surroundings of sovereign princes, together with such persons of distinction as are in the habit of approaching the monarch and of associating with the other members of the royal family, both in a public and a private capacity. In this sense its use is sometimes extended to the government of which the sovereign is the titular head, as when an ambassador is said to be appointed to (or "near") the court of St. James, i.e., of Great Britain.

2. In architecture, an open space around which a building is constructed. The term is commonly used even where the space is not entirely surrounded, as in many modern public and commercial buildings which inclose three sides of a reserved space left open on the fourth. An inclosed space is still called a "court" when roofed with glass, but not when covered with an opaque roof or vault: it is then called a "hall."

In ancient times, before the invention of glazed windows, light and air for dwellings, as for temples, was obtained through unprotected openings. For greater safety and privacy such

windows, as well as the doors to the various rooms, were made to open upon a common area, walled in from the street or public land. In order to economize footsteps as well as space, it early became the custom to build the house entirely around one or more such courts, as in Babylonian and Assyrian palaces, and the great Minoan palace group at Cnossus (q.v.) in Crete. This arrangement of the house plan has persisted in various forms to the present day in the subtropical and warmer temperate climes. It is seen in a highly developed form in Pompeiian houses, in which different types of court were called "atrium," "cavædium," "peristyle," etc. Except in the closer-built quarters of the cities, the houses in Spain and Spanish-American cities are still commonly built around a court called a *patio*. In France, also, the larger city houses are built at the back of a court, of which the other three sides are occupied by the dependencies, the entrance from the street being through an imposing doorway and passage called the *porte-cochère*, or carriage door.

All the great palaces of Europe erected since the fifteenth century are built around courtyards (this term is synonymous with "court"). In this they follow the precedents set by the later feudal fortresses and castles, as at Chambord and Saint-Germain in France, the Louvre, Heidelberg Castle, and many others, sometimes following the very outline of the mediæval bailey. The Alhambra and several other Moorish buildings in Spain preserve for us the rich decoration of the Moslem courtyards of the twelfth to the fifteenth centuries. In Italy the Renaissance architects developed several types of court architecture, and made of the courts of their palaces structures of extraordinary beauty and dignity. Three main types are recognizable: the Florentine, in which the upper walls of the court are borne on an arcade of arches carried by columns; the Lombard, in which the court arcade is in two superposed stories; and the Roman, in which the arcade in one or more stories does not carry the court walls, and is designed after the Roman fashion, with arches borne on piers fronted by columns or pilasters. The Riccardi and Strozzi palaces and the Palazzo Vecchio at Florence illustrate the first; the Bevilacqua Palace at Bologna and the Brera at Milan, the second; the Farnese Palace at Rome, the third of these types. Incomparably the finest of French courtyards is that of the Louvre at Paris. Perhaps the most famous of European courts is the lesser Belvedere Court of the Vatican at Rome, which has given its name to two celebrated sculptures exposed in or near it—the Apollo and the Hercules torso; next to it in artistic fame is the court of San Damaso, with its beautiful arcades called the Loggie, decorated by Raphael and his successors. In England and the United States and other northern countries the court is usually less an architectural than a utilitarian feature to provide light and air, and as such its minimum dimensions are prescribed by the laws of many cities in the case of dwellings and tenements. The Public Library of Boston is a fine example among the few modern public buildings in the United States which are built around an architecturally imposing court.

Closely related to the courts of houses and palaces are the cloisters (q.v.) or cloister

garths of monasteries and cathedral chapters; the forecourts or atria of ancient basilicas, surrounded by arcades, as at San Ambrogio, Milan (see ATRIUM); the courts of ablution of Mohammedan mosques (see MOSQUE); and the great pillared courts of Egyptian temples. See HOUSE; PALACE.

**COURT, CONTEMPT OF.** See CONTEMPT.

**COURT, PRESENTATION AT.** What in monarchical countries is considered the honor of being presented at court or formally introduced to the sovereign, is valued not only for the éclat of the ceremonial, but also for its service as a credential. Having been received by his *own* sovereign, a person may expect to be received anywhere else, and may claim to be presented by the representative of his country at any foreign court. The privilege is therefore carefully guarded from abuse. Thus Queen Victoria, during her long reign, exercised the most scrupulous personal supervision over the names of those who sought the honor, excluding all whose reputation was in the least tarnished. In England the names of those desiring to be presented and of their presenters must be sent to the Lord Chamberlain's office several days previously for approbation. Those who are not British subjects may be presented by their own Ambassador. An elaborate ceremonial, including the wearing of full court dress, is connected with the ceremony. For fuller information as to court dress, etc., consult *Armtyage, Old Customs and Modern Court Rules* (London, 1883); *Trendell, Dress Worn at His Majesty's Court, Issued with the Authority of the Lord Chamberlain* (ib., 1908), *Hodgetts, The House of Hohenzollern: Two Centuries of Berlin Court Life* (ib., 1911).

**COURT, TERM OF.** See TERM OF COURT.

**COURT, KÖÖR, ANTOINE** (1696-1760). A French Reformer, called the "Restorer of Protestantism in France." He was born at Villeneuve de Berg, in Languedoc, March 27, 1696. His parents were peasants, adherents of the Reformed church, which was then undergoing cruel persecution. When but 17 years old, Court began to speak at the secret meetings of the Protestants, held literally "in dens and caves of the earth," and often in darkness, with no pastor present to teach or counsel. He entertained a great desire to build up the church so ruthlessly persecuted, and to this end he proposed four things: (1) regular religious meetings for teaching and worship; (2) suppression of the fanaticism of those who professed to be inspired, and of the consequent disorders; (3) restoration of discipline by the establishment of consistories, conferences, and synods; (4) the careful training of a body of pastors. To the performance of this great task he devoted his life. From audiences of half a dozen meeting in secret, he came to address openly 10,000 at one time. In 1715 he convoked the first Synod of the Desert. In 1724 further fury was hurled at the Protestants in a decree which assumed that there were no Protestants in France and prohibited the most secret exercise of the Reformed religion. A price was set on Court's head, and in 1730 he fled to Lausanne. There, after great exertion, he founded a college for the education of the clergy, of which, during the remaining 30 years of his life, he was the chief director. This college sent forth all the pastors of the Reformed church of France until the close of the

eighteenth century. He died at Lausanne, June 13, 1760. Court intended to write a history of Protestantism and made extensive collections for the purpose, but he did not live to do the work. He wrote, however, *An Historical Memorial of the Most Remarkable Proceedings Against the Protestants in France from 1744-51* (Eng. trans., London, 1732); *Histoire des troubles des Cévennes ou de la guerre des Camisards* (1760; new ed., 3 vols., Alais, 1819). Consult his *Autobiography*, ed. by E. Hugues (Toulouse, 1885); his *Letters*, from 1739, ed. by C. Dardier (Paris, 1885, 1891), E. Hugues, *Antoine Court* (ib., 1872); id., *Les synodes du désert* (3 vols., ib., 1885-86); H. M. Baird, *The Huguenots and the Revocation of the Edict of Nantes* (New York, 1895); *Bulletin de la Société de l'Histoire du protestantisme français* (Paris, 1893-1906)—His only son, ANTOINE COURT DE GÉBELIN (born at Nîmes Jan. 25, 1725, died in Paris May 10, 1784), who took the name of his grandmother, was a literary man of recognized rank, and rendered excellent service, first as his father's amanuensis and assistant and afterward as a scholar at the capital. He is remembered in connection with the famous case of Jean Calas (q.v.) by his work *Les Toulousaines, ou lettres historiques et apologetiques en faveur de la religion réformée* (Lausanne, 1763).

**COURT BARON** (Lat. *Curia Baronis*). In mediæval England, the local court of a manor. Such courts were incident to every manor, barony, or lordship of land, in the Norman and Angevin period of English history, and in subsequent ages came to be regarded as the characteristic and essential quality of a manor, inasmuch that Coke declares that "a court baron is the chief prop and pillar of a manor, which no sooner faileth, but the manor falleth to the ground." Being of customary origin, and custom being a matter of immemorial usage, no new courts baron, and consequently no new manors, can be created, and it is asserted by Blackstone that all manors existing in his time "must have existed as early as King Edward the First." However this may be, the manorial courts of which we have any knowledge are of great antiquity, though those that remain have by successive acts of Parliament and social changes been reduced to mere shadows of their former authority and importance, most of them having to-day only a nominal existence.

The court baron was and is the court of the freeholders of the manor. The lord, or his steward, is the presiding officer of the court, which is composed of those freehold tenants of the manor who owe, as one of the services or incidents of their tenure, the service of "suit," or attendance, at the court. While the judicial functions of the court varied considerably, according to the customs of the manor, in general it exercised an ordinary jurisdiction in civil suits among the tenants of the manor, determined proprietary rights of land, regulated rights of common, sanctioned grants of the waste, etc. Until the reform of legal procedure in England in 1833, the great proprietary action for the recovery of land, known as the "writ of right," was properly instituted in the court baron, though the great authority of the regular tribunals of the kingdom had long since brought safer and more convenient processes within the reach of persons asserting claims to land. Many of the manorial courts have died

out from the lack of a competent number of "suitors," i.e., freemen subject to attendance at court.

A species of court baron existed in the manors created by royal patent in the Province of New York in the seventeenth and eighteenth centuries. These were modeled after the historic courts baron of the mother country and for a time enjoyed considerable authority. They were abolished with the manors to which they were incident in the revolutionary legislation of 1787. Consult: Bolton, *History of the Several Towns, Manors, and Patents of the County of Westchester*, New York; Digby, *History of the Law of Real Property* (5th ed., Oxford, 1898); Pollock and Maitland, *History of English Law* (2d ed., London, 1899); Maitland, *Select Pleas in Manorial Courts* (Selden Society, 1889); Introduction: Gurdon, *History . . . of Court Baron and Court Leet* (ib., 1731). See COURT LEET, CUSTOMARY LAW; MANOR.

**COURT BEGGAR**, THE. A play by Richard Brome (1632).

**COURT CEREMONIAL**. See CEREMONIAL COURT.

**COURTEILLE**, ABEL PAVET DE. See PAVET DE COURTEILLE.

**COURTENAY**, kôrt'nâ, EDWARD HENRY (1803-53). An American mathematician, born in Maryland. He graduated in 1821 at the United States Military Academy, where until 1824 he was an assistant professor. In 1829-34 he was professor of natural and experimental philosophy there, in 1834-36 professor of mathematics at the University of Pennsylvania, and in 1842-53 professor of mathematics at the University of Virginia. He was an engineer in the construction, in 1837-41, of Fort Independence in Boston harbor, and in 1841-42 was chief engineer of the dry-dock work in the Brooklyn Navy Yard. He translated and edited the *Elementary Treatise on Mechanics* of Boucharlat (1833), and prepared a *Treatise on the Differential and Integral Calculus*, and on the *Calculus of Variations* (1855).

**COURTESY TITLES**. See TITLES OF HONOR.

**COURT FOOL**. From very ancient times there existed a class of persons whose business it was to while away the time of the noble and the wealthy, particularly at table, by jests and witty sayings. The custom is so old that it is mentioned in the great Sanskrit epic *Ramâyana* (q.v.). Plutarch speaks of a jester owned by the King of Persia. Philip of Macedon, Attila, Harun al-Rashid, and even Montezuma employed them. Only in the Middle Ages, however, did the office of court fool become a regular and indispensable function. At the end of the fourteenth century the fashion developed rapidly. Queens, dauphins, dukes, and wealthy barons all maintained their fools. The symbols of such a personage were: the shaven head, the fool's cap of gay colors with ass's ears and cock's comb; the fool's sceptre, which was variously formed; the bells, which were mostly attached to the cap, but in some cases to other parts of the dress; and a large collar. The rest of the costume was regulated by the taste of the master. Of these professional fools, some obtained an historical reputation, as Triboulet, jester of King Francis I of France, and his successor, Brusquet; Klaus Narr, at the court of the Elector Frederick the Wise of Prussia; and Scogan, court fool to Edward IV of England. The kings and regents of Scotland had

their jesters; and the sarcastic sayings of some of these privileged personages—such as those of Patric Bonny, jester to the Regent Morton—are still remembered. English court jesters died out with the Stuarts, one of the last of the race being the famous Archie Armstrong (died 1672). Besides the regular fools recognized and dressed as such, there was a higher class, called "merry counselors," generally men of talent, who availed themselves of the privilege of free speech to ridicule the follies and vices of their contemporaries. Of these, Kunz von der Rosen, jester to the Emperor Maximilian I; John Heywood, a prolific dramatic poet and epigrammatist at the court of Henry VII; and Angeli, a French courtier, were particularly distinguished for talent and wit. In all times there have existed at courts persons who, without becoming jesters by profession, were allowed the privilege of castigating the company by their witty and satirical attacks, or who served as an object for the wit of others. Among these were the Saxon general Kyaw, celebrated for his blunt jests, and the learned Jacob Paul, Baron Gundling, whom Frederick William I of Prussia, to show his contempt for science and the artificial court system, loaded with titles. Often imbecile or weak-minded persons were kept for the entertainment of the company. The custom survived long in Russia, where Peter the Great had so many fools that he divided them into distinct classes, and kept them with him wherever he went. As late as the nineteenth century the Czar of Russia kept a jester at court, and in France just before the Revolution Marie Antoinette had her fool. Consult: Nick, *Die Hof und Volksnarren* (Stuttgart, 1861); Flögel, *Geschichte der komischen Litteratur* (Leipzig, 1784); Doran, *History of Court Fools* (London, 1858).

**COURTHOPE**, WILLIAM JOHN (1842– ). An English scholar and author, educated at Harrow and at New College, Oxford, where his career was most distinguished. He was professor of poetry at Oxford (1895–1901) and was appointed honorary fellow of New College in 1896. He gave promise of distinction in the kind of poetry exemplified in his *Ludibria Lunæ* (1869) and *The Paradise of Birds* (1870), but scholarship and criticism of a distinctively academic stripe came to occupy him almost exclusively. Among his more important works are: *Addison* ("English Men of Letters Series," New York and London, 1882); *The Liberal Movement in English Literature* (1885); *Life in Poetry* (London, 1901); *History of English Poetry* (6 vols., 1b., 1895–1909). He was made C.B. in 1892, and received the degrees of D. Litt. and LL.D. respectively from Durham (1895) and Edinburgh University (1898). He also edited, with biography, the last five volumes of the standard edition of Pope (10 vols., 1871–89), which was begun with Whitwell as editor.

**COURT LEET** (from *court* + *leet*, AS. *læde*, OHG. *lînt*, Ger. *Leute*, people; connected with OCh. Slav. *Gudŭ*, Lett. *laudis*, people, and ultimately with Skt. *ruh*, to grow). In English law, a local customary court of great antiquity and of a popular character, having a limited criminal jurisdiction. It has been declared to be "the most ancient court in the land for criminal matters, the court baron being of no less antiquity in civil," and it is supposed to have been derived from the Anglo-Saxon "folk-mote,"

in contradistinction, perhaps, to the "hall-mote," or court baron, which consisted of the freeholders, sitting in the hall of the manor.

Though usually found in connection with manors, the leet was not, properly speaking, a manorial court. There were town leets, borough leets, and hundred leets. But it was in connection with the manor, to whose internal organization it was peculiarly adapted, that the court leet reached its highest development. Though held by the steward, with the aid of the freemen of the manor (they were not required to be freeholders, as in the court baron), it was still regarded as belonging to the King. It was, in effect, a royal magistrate's or police court, having complete jurisdiction only of minor offenses (misdemeanors) and the jurisdiction of a committing magistrate in cases of felony and treason. These latter it referred to the superior tribunals of the country for trial and punishment. The court has now completely lost its importance, having been superseded by the police and county courts, though it still has a nominal existence in some manors. See **COURT BARON**; **MANOR**; and consult the authorities referred to under **MANOR**, also Jacob, *Law Dictionary*, title "Court Leet" (London, 1809); Pollock and Maitland, *History of English Law* (2d ed., London and Boston, 1899); Gurdon, *History . . . of Court Baron and Court Leet* (London, 1731).

**COURTLEIGH**, WILLIAM LOUIS (1869– ). An American actor, born at Guelph, Ontario, Canada. In 1889 he made his first appearance on the stage in *Brother and Sister* under John Dillon. He appeared in more than 50 plays: in *Northern Lights* (1896) as John Swiftwind, in *The Great Northrest* (1897) as Donelli, and in *Hedda Gabler* (1898); *A Rich Man's Son* (1899); *Lost River* (1900); *The Merchant of Venice* (1901); *Sherlock Holmes* (1905); *What Ails You* (1912), and *Divorçons* (1913).

**COURTLY**, SIR HARCOURT. An old beau in Dion Boucicault's *London Assurance*. His son Charles wins away from him the heiress he was to marry.

**COURTLY NICE**, SIR. An insignificant fop, the principal character of Crowne's comedy *Sir Courtly Nice*.

**COURTMANS-BERCHMANS**, kōort'māns bĕrk'māns, JOANNA DESIDERIA (1811–90). A Flemish author, born (Joanna Berchmans) at Oudegend, East Flanders. After the death of her husband, in 1856, she conducted a school at Maldegem. She was closely identified with the movement aiming at the advancement of Flemish literature. Several of her poems and even more of her stories enjoy great popularity. They include: *Het geschenk van den jaeger* (1864), which won the Flemish literature prize in 1864; *De zwarte Hoeve* (2d ed., 1866); *De Koewachter* (1873). *De Hoogmoedige* (1882).

**COURT-MARTIAL**. See **COURTS**, **MILITARY**.

**COURTNEY**, kōrt'nĭ, LEONARD HENRY COURTNEY, BARON (1832– ). An English Liberal-Unionist statesman, born at Penzance. He graduated at Cambridge in 1855 and was called to the bar three years later. From 1872 to 1875 he occupied the chair of political economy at University College, London. He was a member of Parliament in 1876–1900, and became Undersecretary of State for the Home Department in 1880, and for the Colonies in 1881; Governor of Madras in 1882; and Privy Coun-

cilor in 1889. He served on the Labor Commission in 1893-94, and became known as a strong advocate of proportional representation. In 1906 he was raised to the peerage as Baron Courtney of Penwith. He favored the woman's movement. He wrote *The Working Constitution of the United Kingdom* (1901) and contributed to the *Times* and *Nineteenth Century*.

**COURTNEY, WILLIAM LEONARD** (1850- ). An English author, born at Poona, India, and educated at Oxford. In 1873 he became headmaster of Somersetshire College, Bath, and in 1894 editor of the *Fortnightly Review*. Among his works are: *Studies on Philosophy* (1882); *Constructive Ethics* (1886); *Studies New and Old* (1888); *Life of John Stuart Mill* (1889); *The Idea of Tragedy* (1900); *The Development of Maeterlinck* (1904); *The Feminine Note in Fiction* (1904); *Rosemary's Letter Book* (1909); *In Search of Egeria* (1911).

**COURTNEY, WILLIAM PRIDEAUX** (1845-1913). An English retired official and writer, brother of Baron Courtney. He was born at Penzance and early (1865) entered the office of the Ecclesiastical Commissioners, from which he was retired in 1892. He wrote on political biography and history and published *Register of National Bibliography* (3 vols., 1905-12), and, with G. C. Boase, *Bibliotheca Cornubiensis* (3 vols., 1874-82), and contributed to the *Encyclopædia Britannica* and the *Dictionary of National Biography*.

**COURT OF CHIVALRY.** See CHIVALRY, COURT OF.

**COURT OF CLAIMS.** See CLAIMS, COURT OF.

**COURT OF COMMERCE.** See COMMERCE COURT.

**COURT OF COMMON PLEAS.** See COMMON PLEAS, COURT OF.

**COURT OF INQUIRY.** See COURTS, MILITARY.

**COURT OF LIONS.** The most famous court of the Alhambra, taking its name from 12 white marble lions from whose mouths streams of water flowed into a central alabaster basin. The tiled court is surrounded by 124 columns delicately ornamented in filigree and colors, supporting a low gallery. For illustration, see ALHAMBRA.

**COURT OF LOVE** (Fr. *Cour d'Amour*). The name applied in the later Middle Ages to groups of noble ladies who often, while assembled to listen to the declamations of the troubadours, took occasion to decide upon questions of courtesy and etiquette, particularly in affairs of love. According to some authorities these courts formed regular institutions during the twelfth century, the custom flourishing especially in Provence. There was a code (still preserved) of 31 articles called *De Arte Amatoria et Reprobatione Amoris*, by André, a royal chaplain, who lived in the middle of the twelfth century. Decisions are said to have been based upon this code. A typical example of the questions submitted to such tribunals is the following: If a lady listened to one admirer, pressed the hand of another, and touched with her toe the foot of a third, which of these three was the favored suitor? Among the eminent ladies who presided over these "courts" were Queen Eleanor of Guienne and her daughter Marie de France, Countess of Champagne. René of Anjou, in the fifteenth century, made an ineffectual effort to resuscitate these "courts." Consult: Meray, *La vie au temps des cours d'amour* (Paris, 1876),

and Reynouard, *Choix de poésies originales des troubadours*, vol. ii (ib., 1817).

**COURT OF LOVE, THE.** A poem assigned to Chaucer, but possibly of later origin. It appears in the edition of 1561.

**COURT OF REQUESTS.** An inferior court of equity jurisdiction, instituted in the reign of Henry VIII for the purpose of affording relief to the Lord Chancellor. Its authority was limited to cases coming within the jurisdiction of the High Court of Chancery, but deemed of too small importance to engage the attention of that august tribunal. It was presided over by the Lord Privy Seal, assisted by judges known as Masters of Requests. It never attained great importance, and was abolished by Act of Parliament in 1641 (Stat. 16 and 17 Car. I, c. 10).

The courts of conscience were also known as courts of requests. See CONSCIENCE, COURTS OF.

**COURT OF SESSION.** The highest civil tribunal in Scotland, instituted in the reign of King James V. The object of its institution was to discharge the judicial functions which originally belonged to the King and his council, and which, since 1425, had in a great measure devolved on a committee of Parliament, as the great council of the nation. The Court of Session consisted at first of 14 ordinary judges and a president. One-half of these judges and the president were churchmen, and the practice of appointing ecclesiastics to the bench did not cease for some time even after the Reformation. The King had the privilege of appointing, in addition to the ordinary judges, three or four peers or members of his great council to sit and vote with the Lords of Session. The president of the court was the Lord Chancellor. His office was abolished at the union, and the practice of appointing peers to sit as members of the court gradually fell into disuse.

From its foundation, till 1808, the Court of Session consisted of one court; in that year it was divided into what are known as the first and second divisions, constituting ordinarily two separate courts possessing coordinate jurisdiction. The Lord President is still president of the whole court when called together for consultation, but on ordinary occasions he officiates simply as president of the first division. In 1830 the number of judges in the Court of Session was reduced to 13, and that is still the full number. Of the five lords ordinary, only four sit daily. The judgments of the outer house, with a few statutory exceptions, are appealable to the inner house. The youngest judge, or junior lord ordinary, officiates in a separate department of the outer house, called the "bill chamber," where summary petitions and other branches of business peculiarly requiring dispatch are disposed of. This department alone is open during the vacations of the court, the judges, with the exception of the Lord President and Lord Justice Clerk, officiating in it in rotation. Either division of the Court of Session may call in the aid of three judges of the other, when equally divided in opinion. In cases of still greater difficulty, the lords ordinary are also called in, and a hearing before the whole court, or *in presence*, as it is called, takes place.

Since the Act 31-32 Vict., c. 100, no hearings before the whole court have taken place; the cases being decided on written arguments submitted to the judges. The judges of the Court of Session are appointed by the crown and hold their offices for life. No one is eligible to the

office unless he has served as an advocate or principal clerk of session for five years or as a writer to the signet for 10 years. See COURT.

**COURTOIS**, kōōr'twā', GUSTAVE CLAUDE ETIENNE (1852- ). A French figure and portrait painter, born at Pusey, Haute-Saône. He studied with Gérôme in Paris and in 1889 won the gold medal at the Paris Exposition. His genre and historical pictures include "Narcisse" (Marseilles) and "Dante and Virgil in Hell" (Besançon). Among his recent works, exhibited at St. Louis in 1904, are "Adam and Eve in Eden," "Cupid Feasting," and a portrait of Mme. G. From 1880 to 1890 he was the most fashionable portrait painter in Paris.

**COURTOIS**, JACQUES (1621-76), called Le Bourignon (the Burgundian) and known in Italy as Giacomo Cortese and Il Borgognone. A Roman battle and historical painter and etcher. He was born in St. Hippolyte (Franche-Comté) and was a pupil of his father, Jean Courtois, but went to Italy at the age of 15 and spent three years with the Spanish army in Lombardy. He then worked in Bologna, Florence, Siena, and Rome, influenced successively by Guido Reni and Francesco Albani in Bologna, and by Cerquozzi and Pieter de Laar in Rome. Cerquozzi encouraged him to make battle scenes his specialty. His compositions, which usually represent cavalry combats, are remarkable for their fresh and spirited conception and their masterly treatment of light and atmosphere. They excited great admiration and found many imitators, and are to be seen in most of the principal galleries of Europe. At the age of 36 he entered a Jesuit convent and thereafter devoted himself to religious pictures. His brother GUILLAUME, or Guglielmo, also called Il Borgognone, painted frescoes in the Quirinal Palace and in several Roman churches, among others the Lateran Basilica and San Marco.

**COURT PARTY**, THE. A term applied as early as 1620 to the supporters of the political policy of the Stuart dynasty as opposed to the *Country party*, during the disputes of King and Commons. At the end of the century the party represented high Toryism, Jacobitism, and High Church principles.

**COURTRAI**, kōōr'trā' (Flemish *Kortryk*). A town in the Province of West-Flanders, Belgium, on the Lys, 28 miles southwest of Ghent (Map: Belgium, B 4). Courtrai is built on both sides of the river, surrounded by walls, has a castle, a citadel, a fine old bridge flanked with Flemish towers, a noble town hall, and a beautiful Gothic church, founded in 1238 by Baldwin, Count of Flanders. The town hall, dating from the sixteenth century and now restored, contains fine chimney pieces, frescoes, and statues. Behind it is the museum of antiquities. In the church of Notre Dame is one of Van Dyck's most celebrated paintings, "Raising of the Cross." An old belfry is an interesting antique. Table damask, cotton, woolen, and bleached goods, sugar, tobacco, and oils are the articles of manufacture for which Courtrai is celebrated, as well as its Valenciennes lace and the excellent flax grown near by. The city boasts a college, an academy of painting and architecture, and an industrial school. Pop., 1890, 30,400; 1905, 34,760; 1910, 35,872. Courtrai dates back to Roman times, when it was called Cortoriacum. During the Middle Ages it was an important industrial centre. On July 11, 1302, the Flemings, citizens of Ghent and

Bruges chiefly, numbering 20,000, won a splendid victory over 47,000 French beneath the walls of Courtrai. More than 700 pairs of golden spurs, worn by the French nobility, were gathered by the Flemings, and the battle was henceforth called the "Battle of the Spurs." The town suffered greatly in the French wars of the seventeenth and eighteenth centuries.

**COURTS**, CHILDREN'S or JUVENILE. See JUVENILE OFFENDERS.

**COURTS**, MILITARY. Military courts are distinguished from civil courts both in their organization and procedure. They are divided into courts-martial and courts of inquiry, which in their various forms are described below.

**Courts-Martial** (Fr., military courts) are statutory institutions for the enforcement of order and discipline in armies and navies. The American army is governed by a military code mainly derived from that of England. The military tribunals instituted in America and England for the administration of this code do not differ materially in composition, power, or procedure. The court of the constable and marshal recognized in the Statute of Richard II, c. 2, appears to have been the first in England to administer military justice. The office of high constable was abolished in the reign of Henry VIII, and with it lapsed all the criminal jurisdiction of this court. From this time until 1689, when military courts were recognized by statute, military law was administered by means of commissioners, by the general in command of troops, or by means of deputies appointed by him. These commissioners or deputies were usually officers of the army and constituted courts or councils of war. Some time prior to the passing of the Mutiny Act these councils of war were called courts-martial, and with few modifications are now the existing military tribunals.

American courts-martial are instituted by authority of Congress, in pursuance of a power, conferred by the Constitution, to try offenses committed while the party is in the military service. These courts are (1) the general court-martial; (2) the special courts-martial; (3) the summary courts-martial. The jurisdiction of the general court-martial extends to every person subject to military law for any offense within the cognizance of a military court. It is the only military court that can try a commissioned officer, and it takes cognizance of the serious offenses committed by enlisted men. The power to assemble a general court-martial is given by statute to the President of the United States, the commanding officer of a territorial division or department, the superintendent of the military academy, the commanding officer of an army, a field army, an army corps, a division, or a separate brigade, and, when empowered by the President, the commanding officer of any district or of any force or body of troops. The statute provides that a general court-martial may consist of any number of officers from 5 to 13 inclusive, and that it shall not consist of less than 13 when that number can be convened without manifest injury to the service. The officers who are competent to appoint a court-martial are competent to appoint a judge advocate for the same. The judge advocate prosecutes in the name of the United States and is, under certain circumstances, counsel for the prisoner. He summons witnesses for prosecution and defense. The original charges are sent to this officer, and if he considers any amendment necessary he communi-

cases with the officer appointing the court. When the convening officer has satisfied himself that the charge preferred discloses an offense under the Articles of War (q.v.), and that the evidence forthcoming is sufficient to justify the trial of the accused, he issues an order defining the place and time of the meeting of the court, and naming, in the order of their rank in the service, the officers who are to compose it.

When a commissioned officer is to be tried, the officer appointing the court details, if he can, without prejudice to the service, officers of rank equal or superior to that of the accused. He also avoids detailing the officer who has investigated the charges against the accused, or one who will be a principal witness against him, or the immediate commanding officer of the accused. A member of a court of inquiry respecting the matter on which the charges are founded, or an officer who has a personal interest in the case, is not detailed. An officer who is the accuser or is a witness for the prosecution is forbidden by statute from sitting as a member of the court-martial for the trial of the case in which he is such witness or accuser. Court-martial procedure does not differ materially from that of the ordinary criminal courts of the country. This court is, however, a judge of the law as well as of the facts of the case it tries. Before it proceeds upon any trial the judge advocate administers an oath to each member which requires him, as a juror, to well and truly try and determine, according to evidence, the matter . . . before him, etc., and as a judge to duly administer justice without partiality, favor, or affection, etc. This oath includes also one of secrecy as to the votes of members, and of the sentence of the court, until approved. The judge advocate is also required to take a similar oath of secrecy. Congress has power to prescribe not only the organization and jurisdiction of courts-martial, but also their practice, and the mode of executing their sentences. It has secured to the accused a right of challenge to a member of his court, and immunity from a second trial for the same offense. It has fixed the period of time within which the accused must be prosecuted. The form of procedure for a general court-martial is laid down in works treating of the subject of military law and in the "Manual for Courts-Martial," a government publication issued generally to the service.

**Special Courts-Martial** were established by the Act of March 3, 1913, which became effective July 1, 1913. By the operation of this act the garrison and regimental courts formerly provided for cases not capital were abolished. Special courts-martial may consist of any number of officers, from three to five inclusive, and a judge advocate. The same eligibility rules as in general courts-martial apply. Special courts-martial may be appointed by the commanding officer of a district, garrison, fort, camp, or other place where troops are on duty, and the commanding officer of a brigade, regiment, detached battalion, or other detached command, may appoint special courts-martial for his command, but such special courts-martial may in any case be appointed by superior authority when by the latter deemed desirable. Special courts-martial may try any person subject to military law, except an officer, for any crime or offense not capital made punishable by the Articles of War. These courts have power to adjudge punishment not to exceed confinement at hard labor for six

months or forfeiture of pay for six months, or both, and in addition thereto reduction to the ranks in cases of noncommissioned officers. The procedure and record are the same as for general courts-martial, except that testimony is not ordinarily recorded.

**Summary Courts-Martial** consist of one officer and may be appointed by the commanding officer of any fort, garrison, or other place where troops are on duty or of any regiment, battalion, or detachment. Its proceedings are summary in character, and its record is meagre. It may try any soldier, except one holding a certificate of eligibility to promotion, for any offense not capital and may adjudge punishment not to exceed confinement at hard labor for three months or forfeiture of three months' pay, or both, and in addition thereto reduction to the ranks in cases of noncommissioned officers. The authority appointing a summary court approves or disapproves its action. This court, as instituted in the United States, has no power to try capital cases or commissioned officers. In England this court has been instituted for the purpose of trying offenses committed in active service, which, with due regard to the public service, could not be tried by the ordinary courts. It is competent to try any officers, soldiers, or other persons subject to military law for any offense, and, if composed of three officers, can award all the punishments of a general court-martial.

**A Court of Inquiry** is, in its function, analogous to a grand jury in civil procedure. It is convened to examine into the nature of any transaction of, or accusation or imputation against, any officer or soldier in the service. Unless specially ordered to do so, it does not give an opinion on the merits of the case it investigates. A dissenting opinion is authorized. A court of inquiry may be ordered by the President or by any commanding officer, but shall never be ordered by a commanding officer, except upon a demand by the officer or soldier whose conduct is to be inquired into. It consists of one or more officers, not exceeding three, and a recorder. The order convening a court of inquiry details the members and recorder by name, specifies the subject matter of inquiry, and directs a report of the facts, or of the facts with opinion. Under the military laws of the United States a court of inquiry and the recorder thereof have the power to summon witnesses and to take evidence on oath. This is not so in the English service, where it has no judicial power, and is simply a board directed to collect evidence with respect to a transaction into which the commanding officer himself cannot conveniently inquire. A court of inquiry, wrote Sir Charles Napier, "ought generally to be a closed court, no one allowed to enter but such individuals as are called for, and who, being privately examined, are sent out. . . . It is generally objectionable to make a court of inquiry an open court."

**Military Courts of Other Countries.** In the army of Germany there are general and regimental courts. In trials of enlisted men a certain proportion of the members of the court are of the rank of the accused. In the Russian army there is a supreme tribunal at St. Petersburg, and district and regimental courts-martial. In the French army individual officers have large powers of imprisonment, and there are regiments and courts of discipline for hard characters. In the Austrian army there are courts of first instance, and courts of appeal from the former.

Military lawyers are also attached to each regiment to help in the administration of military justice.

**Bibliography.** A *Manual for Courts-Martial* was prepared by direction of the Secretary of War for the use of the army of the United States in 1910 and has been amended to contain all changes up to August, 1910. For the English practice, Simmons, *Courts-Martial* (London, 1873), may be consulted. See MILITARY LAW.

**COURTSHIP OF MILES STANDISH, THE.** A hexametric poem by Longfellow (1858).

**COURT TENNIS.** Indoor tennis (see diagram). Usually the court occupies an entire

near it (in the penthouse) is the *grille*. The *chases* are numbered on the floor (from 1 to 6) and are employed to divide part of the court into the number of spaces required by the game. In playing the game the server must stand in the service court and serve the ball over the penthouse, it being required to strike on the penthouse roof and then roll off into the receiving court. The player on the hazard side strikes it on the bound wherever he chooses, if only it first strikes the ground on the opposite side of the net; e.g., he may strike it against the nearest wall, so that it rebounds across the net. A "chase" is called when the player fails to strike the ball before the second bound, unless he is on the hazard side and beyond the service line. Further, a record is made of the cross lines at which the ball bounds, which, however, does not affect the score unless the game stands at 40, in which event sides are changed and the contestants play for the "chase." The player responsible for the "chase," by permitting the same to be made, will attempt to return the ball nearer to the end wall than the point at which it was marked, to insure its bounding a second time, making the attempt as often as his opponent returns the ball until he either succeeds or misses. In the former event he is credited with the "strike"; while in the latter his opponent scores. For more detailed information regarding the game, its scoring, and its history, see TENNIS.

**COURT THEATRE, THE.** A playhouse for comedies and farces, situated in Sloane Square, London. Originally a chapel built in 1818, it was turned into a theatre.

**COUSA, JOHN.** See ALEXANDER JOHN I.

**COUSE, E(ANGE) IRVING (1866- ).** An American painter. He was born in Saginaw, Mich., and studied at the Art Institute, Chicago, the National Academy of Design, New York, and in Paris at the Ecole des Beaux-Arts and Académie Julian under Bouguereau and Robert Fleury. He lived 10 years in France, where he painted charming scenes of the Normandy coast. After his return to America he devoted himself to depicting the life and habits of the Taos Indians, a Pueblo tribe in New Mexico. He reveals the poetical and philosophical rather than the savage and warlike side of the Indians, and his skillfully executed pictures are full of sentiment. Among those in public galleries are: "Elkfoot" (National Gallery, Washington); "The Forest Camp" (Brooklyn Museum); "The Tom-Tom Maker" (Lotos Club, New York); "Medicine Fires" (Montclair Gallery, New Jersey); "Shapanagons, a Chippewa Chief" (Detroit Museum). He was elected to the National Academy of Design in 1911. Among his more recent works are: "Mending the War Bonnet"; "Making Pottery" (awarded the Carnegie prize); "Rushing Water" (1912); "Twilight, Taos Pueblo" (1913).

**COUSIN, koo'zăn'.** The name of two prominent French artists of the sixteenth century.—JEAN the elder (1490-1560), sculptor, painter, and wood engraver, was probably born at Sens, where he passed most of his life, and is said to have designed some of the stained-glass windows in the cathedral. In 1540 he was occupied in Paris with the festive decorations for the entry of Emperor Charles V. His only authentic painting is "The Last Judgment" (Louvre), although many others have been ascribed to him. As a sculptor he modeled the fine tomb of

COURT TENNIS.

building and is lighted from the roof. The playing space is usually about 96 by 32 feet, surrounded on three sides by a corridor about 6 feet wide (the penthouse), which has a sloping roof about 7 feet high. The spectators occupy the *dedans*, or the part of the penthouse situated in the rear of the court, and separated from the same by an open grating. The most complete courts have floors of asphalt, and cement walls painted black to a height of 18 feet. The nets divide the court, and also the *service* and *hazard* sides of the game. The *tambour* is a projection on the hazard side, resembling a chimney, and

Admiral Chabot, now in the Louvre, and the sculptures formerly in the chapel of Pagny (Burgundy). A large number of wood engravings have also been credited to him. Shortly before his death he published *Livre de Perspective de Jean Cousin, Senonois* (1560).—His son and pupil, JEAN the younger (c.1522-94), was born in Sens. He certainly designed the glass windows and probably the sculptures of the castle of Fleurigny (Sens), and probably the glasses in the church of Saint-Gervais, Paris, but not those of the Sainte-Chapelle at Vincennes. He painted five portraits of the Bouvyer family, and was the author of a book on *The True Science of Portraiture*, and also probably a *Book of Fortune*, containing 200 drawings. He is said to have illustrated many other works, including Ovid and Æsop. Consult: Roy, "Les deux Jehan Cousin," in *Mem. de la Société Archéol. de Sens*, vol. xxiv (1909); Dimier, *French Painting in the Sixteenth Century* (1904), id., *Bulletin de l'Art ancien et moderne* (1909).

**COUSIN, VICTOR** (1792-1867). A French philosopher and historian. He was born in Paris and studied with such brilliant success at the Ecole Normale that in 1815 he was appointed assistant to Royer-Collard in the chair of philosophy at the Sorbonne. He threw himself heartily into the reaction against the sensationalistic philosophy and literature of the eighteenth century, which was then in possession of the field. (See SENSATIONALISM.) In 1817 he visited Germany, where he was introduced to bolder and more speculative systems of philosophy than any he had yet known, becoming acquainted with Jacobi, Schelling, Hegel, and Goethe. During a later visit to Germany, in 1824-25, he was suspected of revolutionary tendencies, and imprisoned in Berlin, where he was detained for six months. He took advantage of his compulsory detention in Prussia to study the philosophy of Hegel, which had no small influence on his susceptible intellect. On his return to France he took a decided stand against the reactionary policy of Charles X, and in 1828, when the comparatively liberal ministry of Martignac came into office, Cousin, who had for some years been suspended from his professorial functions, was reinstated in his chair. Meanwhile he had become known as an author by his editions of Proclus and Descartes (1820-26), and by the earlier volumes of his celebrated translation of Plato, which was finished in 1840. Cousin reached the height of his popularity and influence as a philosophic teacher in the years 1828-30, when often as many as 2000 enthusiastic hearers gathered around him. He was young, simple, and pure in his habits, his doctrines were for the most part new to his audience, bold, and in harmony with the spirit of the time. The finest qualities of the national genius appeared in his lectures—a wonderful lucidity of exposition, an exquisite beauty of style, such as few philosophers have equaled, a brilliancy of generalization and criticism, and a power of coordinating the facts of history and philosophy so as to make each illustrate the other and reveal their most intricate relations. At this period Cousin was one of the most influential leaders of opinion among the educated classes in Paris. After the revolution of 1830, when his friend Guizot became Prime Minister, he was made a member of the Council of Public Instruction, in 1832 a peer of France, and later director of the Ecole Normale and virtual head

of the University. His efforts for the organization of primary instruction are to be seen in the valuable reports which he drew up from personal observation on the state of public education in Germany and Holland. His influence shows itself in this sphere even to the present day. In 1840 he was elected a member of the Académie des Sciences Morales et Politiques, and in the same year became Minister of Public Instruction in the cabinet of Thiers. After the revolution of 1848 Cousin aided the government of Cavaignac, and published an antisocialistic brochure called *Justice et charité*. After 1849 he disappeared from public life.

Cousin was greater as an expounder of historical systems of philosophy than as an original thinker. At first a disciple of Royer-Collard and the Scottish school, he was attached to the psychological method of investigating, afterward a keen student of the German school, he expounded the views of Schelling and Hegel with such enthusiasm that he might legitimately enough have been considered a "German idealist." But he endeavored to mediate between the German standpoint of an impersonal reason and that of empirical psychology. In the later years of his life his views carried him to a modified Cartesianism. See DESCARTES.

Cousin's chief works, besides those already mentioned, are: *Fragments philosophiques* (1826); *Du vrai, du beau, et du bien* (1837; Eng. trans., 1854); *Cours d'histoire de la philosophie morale au XVIIIe siècle* (1839-42, containing discussions of the Sensationalistic school, the Scottish school, and Kant); *Cours de philosophie* (1828, containing an introduction to the history of philosophy, and lectures on the philosophy of the seventeenth and eighteenth centuries). He also contributed a great variety of papers to the French reviews. Besides his philosophical work he rendered a very real service to the history of the seventeenth century in France by his luminous and stimulating sketches of Mesdames de Longueville, de Haute-foir, de Sahlé, and a number of other great personages of the period. Consult: Hamilton, *Discussions on Philosophy, Literature, Education, and University Reform* (London, 1852); Taine, in *Les philosophes français du XIXe siècle*. (Paris, 1857); Janet, *Victor Cousin et son œuvre* (ib., 1885); Barthélemy Saint-Hilaire, *Victor Cousin, sa vie et sa correspondance* (3 vols., ib., 1895); Jules Simon, *Victor Cousin* (ib., 1887); Charles Waddington, "Un grand homme et son secrétaire," in *Séances et travaux de l'académie des sciences morales et politiques*, vol. clxxx (ib., 1908). Babbitt, *The Masters of Modern Criticism* (Boston, 1912).

**COUSINE BETTE**, kō'szēn' bêt, LA. A novel by Balzac (1846) dealing with the love of an aunt and a niece for the same youth.

**COUSIN MICHEL**, mē'kel. A humorous appellation for the German native, corresponding to Brother Jonathan as applied to the American.

**COUSIN-MONTAUBAN**, kō'szēn' mōn'tō'-bān', CHARLES GUILLAUME MARIE. See PALIKAO, COUNT OF.

**COUSIN PONS**, kō'szēn' pōn, LE. A novel by Balzac (1847), dealing with the last moments and death of an old bachelor whose invaluable collection of paintings made him an object of solicitude and intrigue to relatives and strangers.

**COUSINS**, kōz'nz, SAMUEL (1801-87). An English mezzotint engraver. He was born in

Exeter and was early apprenticed to the mezzotint engraver S. W. Reynolds. The famous plates of Lady Acland and children, and of Master Lambton (after Lawrence) are among his first independent works. These were followed by many portraits and pictures after Reynolds, Lawrence, Gainsborough, J. E. Millais, Wilkie, Landseer, and others. His work is characterized by extreme delicacy and versatility of treatment and interprets the originals in a truthful and graphic manner. The British Museum contains a large collection of his mezzotints. Cousins was the first to receive the rank of Academician Engraver (1855). Consult his biography by A. Whitman (London, 1904).

**COUSSEMAKER**, kōōs'mā'kār', CHARLES EDMOND HENRI DE (1805-76). A French historian of music, born at Bailleul (Nord). He studied at the Douai Lycée and completed his musical education under Moreau and Lefebvre. He devoted himself principally to researches on mediæval music and published *Histoire de l'harmonie au moyen-âge* (1852); *Drames liturgiques du moyen-âge* (1861); *Les harmonistes des XIIème et XIIIème siècles* (1864); *Les harmonistes du XIVème siècle* (1869). and *Scriptores de Musica Medii Aevi* (1866-75), his principal work, reprinted by Moser in 1908.

**COUSTOU**, kōō'stōō'. A family of French sculptors.—NICOLAS (1658-1733), born in Lyons, studied first with his father, François, a wood carver, and later with his uncle Antoine Coyzevox in Paris. After three years in Rome he returned to Paris, where he was appointed rector of the Academy in 1720, and chancellor in 1733. His extremely numerous works include decorations for the palaces of Versailles, Trianon, and Marly, in which he was assisted by his brother Guillaume: they include: "Union of the Seine and the Marne" and "Daphne Pursued by Apollo," in the Garden of the Tuileries, statues of Julius Cæsar and of Louis XIV, in the Louvre, and "The Descent from the Cross," in the choir of Notre Dame. His younger brother, GUILLAUME THE ELDER (1677-1746), studied under his father and Antoine Coyzevox and spent several years in Rome, where he assisted Pierre Legros. Besides work done in collaboration with his brother, and many portrait busts and mythological statues, he modeled the kneeling statue of Louis XIII in Notre Dame, the fine group of "Ocean and Mediterranean," and the vigorous and spirited marble groups of the "Horses of Marly" at the entrance to the Champs Elysées, which inaugurated a new and more natural era of French sculpture. He was appointed director of the Academy in 1735.—GUILLAUME THE YOUNGER (1716-77), son and pupil of the former, won the Prix de Rome in 1735. His works include religious and mythological statues, such as "Apotheosis of St. François Xavier" in the Eglise Saint-Paul, Bordeaux, and "Mars and Venus" in the castle of Sans Souci, Potsdam, and the tomb of the Dauphin, father of Louis XVI, in the cathedral of Sens. Consult Lady Dilke, *French Architects and Sculptors of the Eighteenth Century* (1900), and "Les Coustou," *Gazette des Beaux-Arts*, vol. i (1901).

**COUTANCES**, kōō'tāns'. A picturesque town in the Department of La Manche, France, on the Soule, 41 miles south of Cherbourg (Map: France, N., D 3). An old city, it is built on a conical hill 7 miles from the English Channel, and is the seat of a bishopric. Its cathedral of Notre Dame is one of the finest specimens

of ecclesiastical architecture in the early Pointed style of Normandy. Other noteworthy features are the Gothic church of Saint-Pierre, the public gardens and museum, and the ruins of an ancient aqueduct. Coutances has manufactures of muslins, lace, yarns, cotton goods, pianos and organs, and a trade in grain. Marble is quarried, and there is a good market for horses and cattle. Pop., 1891, 8145; 1901, 6991; 1911, 6599. The town is the Constantia of the Romans. For a history and description, consult *Annuaire guide de Coutances* (Coutances, 1897); U. Chevalier, *Repertoire des sources et topobibliographie* (Montbéliard, 1894-99).

**COUTHON**, kōō'tōn', GEORGES (1755-94). A French politician and revolutionary leader, born at Orsay, in Auvergne, Dec. 22, 1755. He practiced law successfully at Clermont, where he acquired great popularity on account of his fine intellectual powers and grave gentleness of character. At first a moderate Republican, he was elected to municipal office and later, in 1791, was sent by the electors of Puy-de-Dôme to represent them in the Legislative Assembly. He became more and more radical with the progress of the Revolution, and, though a chronic invalid, he poured forth invectives against royalty and the Church from the tribune. He voted for the death of the French monarch without delay or appeal to the country. Elected to the Convention, Couthon attached himself to Robespierre, was appointed a member of the Committee of Public Safety in 1793, and sent against the insurgent city of Lyons. After the entrance of the Republican army Couthon showed comparative moderation and controlled the soldiery. Only 24 of the insurgents were put to death, and though property was ruthlessly destroyed, the lives of the citizens were respected until the arrival of Collot d'Herbois (q.v.). Couthon returned to Paris, formed with Robespierre and Saint-Just a supreme tribunal, and made himself conspicuous by his extreme virulence against England. He assisted Robespierre in destroying the partisans of Hébert and Danton, but was himself involved in the ruin which overtook his chief. After a vain attempt at suicide Couthon was borne to the guillotine, July 28, 1794, together with Saint-Just and Robespierre. Consult: Mège, *Correspondance de Couthon* (Paris, 1872); Aulard, *Les orateurs de la législative et de la convention* (Paris, 1885-86); Morse-Stephens, *The French Revolution* (New York, 1891).

**COUTRAS**, kōō'trā'. A town in the Department of Gironde, France, on the left bank of the Dronne, 26 miles northeast of Bordeaux (Map: France, S., D 3). Coutras has a trade in flour, and the district produces red wine and brandy. The place is noteworthy on account of the bloody victory gained here in 1587 by Henry of Navarre over the forces of the Catholic League. Pop., 1891, 4231; 1901, 4062, 1911, 4807.

**COUTTS**, kōōts. See BURETT-COUTTS.

**COUTURE**, GUILLAUME (1851- ). A Canadian musician and composer, born and educated in Montreal. He early manifested an unusual talent for music and, when 13 years old, became organist of St. Bridget's Church, Montreal, and, when 16, organist of the church of St. James. Later he studied for five years in Paris, where he was admitted to the National Society of Music and the Paris Conservatory of Music and was appointed organist of Sainte-Clothilde's Church. He returned to Canada in

1878, founded the *Société des symphonistes*, and in 1880 became director of the Montreal Philharmonic Society. He was appointed professor of musical theory in several educational institutions in Montreal, including the McGill Conservatory of Music, and became director of the Amateur Operatic Club and of the Montreal Symphony Orchestra. He published many musical compositions, some of which were accepted and performed by the National Society of Music, Paris—the only Canadian compositions thus honored. In 1900 he was named, by the French government, Officier d'Institut Public.

**COUTURE**, koo'tur', THOMAS (1815-79). A French historical and genre painter. He was born at Senlis, Dec. 21, 1815. He studied under Gros and Delaroche without being a follower of either. In 1837 he obtained the Prix de Rome, and in 1845 his picture, "The Thirst for Gold" (Toulouse Museum, replica in Amsterdam), brought him a wide reputation. His "Romans of the Decadence" (1847) obtained a first-class medal and created a great and lasting sensation and is now in the Louvre. Among his other works are the "Falconer" (1855), "Damocles" (1872), and "Day Dreams" (1855, in the Metropolitan Museum). Under Napoleon III he became court painter, but he was not enough of a courtier to please the Emperor and resigned his position. In 1869 he retired to Villiers-le-Bel, near Paris, where he died. He was neglected in France, but his pictures were purchased by foreigners, especially by Americans. He also painted the frescoes in the chapel of the Virgin, Saint-Eustache, Paris, and during his last period many portraits, of which there are frequent examples in the museums of southern France. The chief beauty of his art is its rich, glowing color, and it is also good in line. He was very important as a teacher, counting Fuerbach, Victor Muller, Puvis de Chavannes, Manet, and many Americans, Russians, and Germans among his pupils. His book, *Conversations on Art Methods*, was translated by Stewart and published in New York in 1879. Consult: Healey, "Couture," in Van Dyck's *Modern French Masters* (New York, 1896); Claretie, *Peintres et sculpteurs contemporains* (Paris, 1873); Flat, "Un peintre assimileur," in *Revue Politique et Littéraire* (Paris, 1913).

**COUVADE**, koo'vad' (Fr., a brooding, from *couver*, to hatch, from Lat. *cubare*, to lie down). A custom of certain primitive peoples in accordance with which the father of a new-born babe adopts the rôle of invalid while the mother goes about her ordinary occupations. The custom was well developed on both hemispheres. On the authority of Strabo and later writers it was ascribed to the Basques of Europe, a theory which has been much discussed, while Ripley is skeptical as to the present existence of the custom among the Basques. Traces of it are found in Asia and in North America, and it has been well observed in South America by Rodway (*In the Guana Forest*, 1895) and others. Indeed, South America and the West Indies are the areas in which the couvade has been developed to the highest degree. Tylor was at first inclined to explain the usage as implying a physical bond between parent and child, so that the father's actions are believed to affect the child's condition. Later Tylor adopted Bachofen's theory that the couvade was the signpost of a change from maternal to paternal descent; the motive he originally assigned to the practice

remains valid, but the "sympathetic prohibitions" may be interpreted as originally practiced by the mother only, and afterward adopted by the father also." This later explanation was in accord with the theory, until recently current among anthropologists, that maternal descent invariably preceded paternal descent. This position, however, has been so vigorously assailed that Tylor's original interpretation of the couvade as simply a result of belief in sympathetic magic seems preferable. Consult further: Ripley, *The Races of Europe* (1899); McGee, "The Seri Indians," 17th Rep. Bur. Am. Ethnology; Tylor, *Researches into the Early History of Mankind*, pp. 291 ff.; id., "On a Method of Investigating the Development of Institutions," *Journal of the Anthropological Institute*, vol. xviii, pp. 254 ff. (1889). Ploss, *Das Weib* (1897); etc. See MAN, SCIENCE or.

**COUXIA**, koo'shé-a, or **COUXIO**, koo'shé-ô. A South American monkey. See SAKI.

**COVA'RIANTS**. See FORMS.

**COVE** (AS. *cofa*, chamber, Icel. *kofi*, hut, MHG. *köbe*, Ger. *Koben*, stall). In architecture, a long concave surface approximately a quarter circle in section, interposed in place of a cornice between the wall and ceiling, or employed to support a projecting story or balcony, or even to form a crowning feature to a structure, as on the gateway of the Certosa at Pavia, or the front of San Lorenzo fuori at Rome. The coves (or coving) of many splendid Italian and French ceilings of the sixteenth to the eighteenth centuries were intersected by vaulted lunettes called *penetrations*, and both coves and penetrations were richly decorated with paintings, stucco relief, and gilding. Famous examples are in the library of Siena Cathedral and the Loggia of the Farnesina at Rome, decorated by Raphael and his pupils.

**COVENANT** (OF. *covenant*, Fr. *convenant*, It. *conveniente*, from Lat. *convenire*, to agree, from *com-*, together + *venire*, to come). A term much used in theology, derived from the Hebrew *berith* of the Old Testament and the Greek *diathékē* of the New, both meaning "covenant." It was emphasized in the federal theology during the constructive Protestant period (by Cocceius, 1603-69 (q.v.)), and was incorporated in the Westminster Confession. God is represented as making successively, with Adam, Noah, Abraham, and all Israel, covenants, which are substantially the same covenant, under which Israel is adopted as God's special and chosen people and is bound to Him in close and mutual obligations. The covenants of the Old Testament are all substantially "covenants of works," putting blessing upon the basis of obedience, the one covenant of the New Testament, which replaces the others, conditions blessing upon faith in Jesus Christ. See FEDERAL THEOLOGY.

**COVENANT**. In English law, a contract by deed or specialty, i.e., one in which the validity of the promise does not depend upon consideration (q.v.) as in the case of simple contracts, but upon the formality of execution of the contract by sealing and delivery. The essential characteristic of covenants distinguishing them from other specialties is the express promise to pay a sum of money or to perform a certain act. Thus a bond differs from a covenant only in that it is a mere acknowledgment of indebtedness without an express promise to pay the amount of the bond.

The term "covenant" is also used in a nar-

rower sense to indicate the promise or stipulation contained in a specialty or deed which is incidental to its main purpose, as, e.g., the covenants of warranty contained in a deed of conveyance. Although consideration was not required to render a covenant valid and enforceable at law, courts of equity deemed the seal to be presumptive evidence of consideration only, and would not compel the covenantor to perform his promise if it appeared that no consideration was given for it. This is probably the effect of modern statutes providing that the seal on sealed instruments is only presumptive evidence of consideration.

In general, covenants, from their nature, are required to be expressed in the instrument by which they are created, but in certain exceptional cases they are implied from the character of the instrument itself, as, e.g., the covenants implied in a lease (q.v.).

At common law the form of action used to recover damages for breach of covenant was also known as covenant. Under modern codes of procedure and practice acts, the action of covenant has become obsolete, the same office being performed by the various statutory forms of contract action. Covenants contained in the same instrument are said to be *mutual, concurrent, or dependent*. Covenants are said to be *mutual* when performance by each of the parties entering into the covenant is a condition of performance by the other, so that no action for breach of covenant will lie unless the party suing has performed or tendered performance of his covenant before bringing his action. An *independent covenant* is one which must be performed by the covenantor, irrespective of the performance of the covenantee's covenant in the same instrument.

*Real covenants*, or covenants which at early common law bound the covenantor's heirs to the extent to which they inherited real estate, are now of slight importance, since all of the property of a deceased person, real as well as personal, may be subjected to the payment of his debts. See ADMINISTRATION.

*Covenants running with the land* are real covenants which relate to the use of real estate or require the covenantor to do something with reference to it. Their peculiarity is that any subsequent transferee of the real estate is entitled to the benefit of the covenant, and may sue upon it, and that, in certain exceptional instances, when the covenant imposes a burden upon the owner of the real estate, the liability to perform the covenant passes to the transferee of the real estate. Strictly speaking, at common law, the burden of a covenant will run with the land only where the relation of landlord and tenant subsists between the parties or, in some of the United States, where the covenant relates to a subordinate interest, as an easement, which the covenantee has in the land of the covenantor. In equity, however, land may be subjected to certain restrictions by covenant of the owner which are enforceable against a subsequent purchaser with notice. See ASSIGNMENT; EASEMENT.

*Covenants for title* are particular forms of covenant which run with the land and are made by the grantor in a deed or instrument conveying real estate. The usual covenants for title are: "The covenant of seisin (i.e., that the grantor is seised of the estate which he undertakes to convey); the covenant that the grantor has the right to convey; the covenant for quiet enjoyment (i.e., that the grantor will not inter-

fere with the use or enjoyment of the real estate by his grantee); the covenant for further assurance (i.e., that the grantor will make any further necessary conveyance to perfect his grantee's title); and the covenant of warranty, which binds the covenantor to warrant and defend the title against any one claiming under paramount title or interest in the real estate conveyed.

Formerly the effect of the covenant of warranty was to require the covenantor or his heirs to give the grantee other lands in case the title proved to be defective. In modern practice the effect of breach of any covenant for title is to entitle the covenantor or his grantee to recover damages. Covenants for quiet enjoyment and warranty, however, are not deemed to be broken until the grantee is actually disturbed in his possession. An important effect of certain covenants for title is to estop the grantor, and all claiming under or through him, from claiming any interest in the property conveyed, thus conferring upon his grantee a title by estoppel. See ESTOPPEL; WARRANTY.

*Covenants to stand seised*, formerly of great importance, were covenants by the owner of real estate to hold it to the use of, or in trust for, a relative. See USES; TRUST.

Consult Sims, *Treatise on Covenants* (Chicago, 1901), and Rawle, *Treatise on the Law of Covenants for Title* (5th ed., Boston, 1887). See BOND; CONTRACT; SPECIALTY; RESTRAINT OF TRADE; ETC.; and consult the authorities there referred to.

**COVENANTERS.** See COVENANTS, THE; PRESBYTERIANISM.

**COVENANTS, THE.** A term by which the Scottish people denoted association of "bands" under oath to support each other in times of danger or to maintain some principle. The most famous ones are the *National Covenant* of 1638, and the *Solemn League and Covenant* of 1643, which are often referred to simply as the Covenant, though they should be clearly distinguished. The *National Covenant* was an agreement signed by all classes in Scotland to resist by force the introduction into Scotland by Charles I of a modified form of the English *Book of Common Prayer*, and a new body of canons increasing the nominal power of the Scottish bishops. The nobles disliked the increased power of the bishops because they were beginning to look upon them as rivals, and because they feared that Charles would proceed to a recovery of the church lands; while the commons disliked the Prayer Book, not only because it was English, but also because they looked upon it as a popish innovation. The Covenant was based upon a previous one of 1581, whose object was to maintain the Scottish Presbyterian church against a Catholic conspiracy, but it added numerous citations of parliamentary acts bearing upon the subject of religion, and a mutual oath "to labor by all means lawful to recover the purity and liberty of the gospel as it was established and professed before the aforesaid innovations." It became the basis of the Scotch resistance to the King, which culminated in the two Bishops' wars and the termination of Charles's arbitrary rule.

The *Solemn League and Covenant* was an agreement between the English and Scottish parliaments by which the Scotch came with an army to the assistance of the English Parliament in the war against Charles I on condition

that Presbyterianism should be introduced into England and Ireland. The Parliament accepted the condition somewhat unwillingly, but in view of the Royalist successes in 1643, Scottish aid seemed indispensable. The Covenant was generally signed by the members of the House of Commons and the Assembly of Divines. It was imposed by ordinance upon all persons over 18 years of age, upon members of the universities, and upon officers and soldiers of the New Model, although the ordinances could not be strictly enforced. It was not only the bond of union between England and Scotland during the war, but was used as a test against the rising Independents and, as such, encountered lively opposition. The signers took oath to labor for "the preservation of the reformed religion in the Church of Scotland, in doctrine, worship, discipline, and government, . . . the reformation of religion in the kingdoms of England and Ireland, in doctrine, worship, discipline, and government, according to the Word of God, and the example of the best reformed churches," and to endeavor "to bring the churches of God in the three kingdoms to the nearest conjunction and uniformity in religion, confession of faith, form of church government, direction for worship, and catechizing." The force of the Solemn League and Covenant of 1643 was greatly hampered in England by the success of Cromwell and the Independents, who desired a wider form of toleration, but the final blow did not come until the Restoration, when both covenants were abolished and their adherents severely persecuted. That the idea of the Covenant has not died out among the Scotch is seen by the Covenant drawn up in 1912 by the Scottish Presbyterians of Ulster in their resistance to the Irish Home Rule Bill introduced by the Liberal government of Mr. Asquith. This solemn covenant was first signed by Sir E. Carson on September 28. In its general phases it follows the earlier covenants, viz., in its declaration of resistance to religious change or anything that might endanger Protestantism. This new Covenant proves how deep-seated is this method of procedure with Scottish Presbyterianism.

The covenants of 1638 and of 1643 are printed in Gardiner, *Constitutional Documents of the Puritan Revolution* (London, 1897). Consult also: Gardiner, *History of England* (ib., 1883-84), id., *Great Civil War*, vol. i (ib., 1886); Smellie, *Men of the Covenant* (New York, 1904).

**COVENT** (kūv'ənt) **GARDEN** (properly *Convent Garden*, from having been originally the garden of Westminster Abbey). A square in London, chiefly notable for its celebrated history and for its great market of fruit, vegetables, and flowers. As the kitchen garden of the Westminster monks it was a walled inclosure, which extended from the Strand to Longacre. It came, as a crown gift, into the possession of the Bedford family in 1552, and remained in the same hands until sold by the Duke of Bedford Dec. 16, 1913. The price paid was from \$25,000,000 to \$50,000,000 and closed the largest real estate deal ever made in London. The square was laid out by Inigo Jones in 1632, and the ancient garden was perpetuated by the continued sale of vegetables. (See **COVENT GARDEN MARKET**.) Here also is the famous opera house (See **COVENT GARDEN THEATRE**.) In the seventeenth century the neighborhood of Covent Garden was a very fashionable quarter of the town, and frequent allusions are made to the

place in plays of Charles II's time. It has artistic associations of Marvell, Dryden, Fielding, Steele, Otway, Foote, Garrick, Hogarth, Voltaire, De Quincey, Charles and Mary Lamb, Turner, and other celebrities.

**COVENT GARDEN JOURNAL**. A short-lived bi-weekly periodical first issued in January, 1752, by Henry Fielding, under the name of "Sir Alexander Drawcansir, Knight of the Censor of Great Britain." It soon involved Fielding in literary quarrels.

**COVENT GARDEN MARKET**. A great London vegetable, fruit, and flower market, established in the first half of the seventeenth century by small gardeners from the suburbs. In 1829 the rough sheds were succeeded by a market house, covering about three acres of ground, from designs by Mr. Fowler. In 1850 a flower market, covered with glass, was built on the south side of the Opera House.

**COVENT GARDEN THEATRE**. A famous London theatre on Bow Street, the home of grand opera. It was built in 1731 by the harlequin Rich, under a patent from Charles II to Sir William Davenant, 1662. It has been several times rebuilt. It was burned in 1808, and rebuilt in 1809 at great cost. The increased prices of admission, intended to defray part of the expenses, gave rise to the Old Prices Riots. In 1847 it was called the Royal Italian Opera House. On March 4, 1856, it was burned again, and the present structure was erected in 1858.

**COVENTRY**, kūv'en-trī (OE. *Coventre*, AS. *cofatrio*, cove tree, from *cofa*, cove + *tréo*, tree, or tree of Cofa; popularly etymologized as Convent Town, from the convent established there by Leofric). A manufacturing city, parliamentary and municipal borough in Warwickshire, England, on the Sherbourne, 18½ miles east-southeast of Birmingham (Map: England, E 4). It stands on a gentle eminence in a valley with a ridge of hills on the south, and contains many old houses with timbered fronts projecting into narrow streets and belonging to the fifteenth and sixteenth centuries. The modern part of Coventry, however, is well, though not regularly, built. Its most interesting public buildings are the three churches composing the "three tall spires" of Coventry. St. Michael's, built of red sandstone, in the Perpendicular style, about the fourteenth century, is said to be the largest parish church in England; Trinity Church, another Perpendicular structure, has a spire over 230 feet high; the third of the spires is that of the old Gray Friars' church. St. Mary's Guildhall, built in 1450, for the united guilds, is one of the finest examples of ornamental architecture in England. The rapid industrial growth of Coventry is responsible for the recent extension of its boundaries and the widening of many of the old streets. The municipality owns its water supply, on which it nets a substantial annual profit. It also supplies gas and electricity and maintains public baths, libraries, a technical institute, markets, crematory, and cemeteries. The city has an excellent modern sewerage system, with which is connected a sewage farm. The chief manufactures are ribbons, artificial silk, watches, sewing machines, and naval ordnance. It is the centre of the cycle and motor-car industries. The town sends one member to Parliament. Pop., 1891, 58,500; 1901, 69,900; 1905 (est.), 75,134; 1911, 106,377.

**History**. Coventry is a very ancient place. In 1044 Earl Leofric and his wife, Lady Godiva,

founded here a magnificent Benedictine monastery. For many years the traditional deed of Godiva (q.v.) was celebrated by a procession. In 1344 the town was incorporated. In the fifteenth century religious mysteries or plays were often acted here by the members of the various guilds before kings. Henry VIII demolished the beautiful cathedral of Coventry, as well as the ancient walls which formerly surrounded it. Here occurred the famous meeting for the intended trial by battle between the Dukes of Norfolk and Hereford, immortalized in Shakespeare's *Richard II.* Two memorable parliaments were held in the monastery of Coventry in the fifteenth century. The one contained no lawyers, while the other passed many attainers against the Duke of York, etc. In the fifteenth and sixteenth and seventeenth centuries Coventry was famous for woollens, broadcloths, caps, and blue thread bonnets. Consult Fretton, "Antiquarian Losses in Coventry," in *Archæological Journal*, vol. xxxvi (London, 1880), and Dormer, *History of Coventry* (New York, 1898).

**COVENTRY.** A town in Kent Co., R. I., 13 miles (direct) southwest of Providence, on the Pawtuxet River, and on the New York, New Haven, and Hartford Railroad (Map: Rhode Island, B 3). The chief industries are agriculture and the manufacture of cotton and woolen goods, and dyeing, bleaching, and mercerizing. The government is administered by town meetings. Coventry, taken from Warwick and incorporated in 1741, was the home of Gen. Nathanael Greene (q.v.) after 1770. Pop., 1900, 5279, 1910, 5848.

**COVENTRY PLAYS.** A set of 42 plays, combining the "Morality" and the "Mystery," acted during the sixteenth century at Coventry or thereabouts on Corpus Christi Day and probably written by the clergy. They were extremely popular and widely attended. The following reference is made to them by the elder Heywood:

"Thys devyll and I were of olde acquaintance,  
For oft in the play of Corpus Christi  
He hath played the devyll at Coventry"

For further information, consult Morley, *English Writers*, iv (London, 1887 et seq.).

**COVE OF CORK.** See QUEENSTOWN.

**COVERDALE, MILES** (1488-1568). An English Bible translator. He was born at Coverdale, in Yorkshire, was educated at Cambridge, was ordained in 1514 at Norwich, and became the same year an Augustinian at Cambridge. By 1526, however, his religious opinions had so far changed that he left his convent and devoted himself earnestly to the work of the Reformation. Dressed like a secular priest, he preached against confession and image worship. Shortly after that he went abroad. In 1535 he brought out his first translation of the Bible "out of Douche (German) and Latyn into Englishe," with a dedication by himself to Henry VIII. This was the first complete translation of the Bible printed in the English language. The Psalms of this translation are those still used in the Book of Common Prayer. The vexed question as to the printer of the volume has been settled, probably, by recent discoveries in favor of Christopher Froschouer, the famous Zurich printer. It also seems probable that Jacob Van Meteren, the Antwerp printer, employed Coverdale to make the translation, which was done in Antwerp. The basis was the Zurich Swiss-German Bible and Tyndale's New Testa-

ment, along with the Vulgate. It was reprinted in London in 1537, with the royal license. In 1538 Coverdale, with the consent of King Henry VIII and with the permission of Francis I, went to Paris to superintend another English edition of the Scriptures, his reason for going to Paris being that paper and workmanship were there cheaper and better than in England. The Inquisition, however, notwithstanding the royal license of Francis, interfered, seized the whole impression, consisting of 2500 copies, and condemned them to the flames. But through the cupidity of one of their executive officers, who sold a considerable number of the heretical books to a haberdasher as waste paper, some copies were saved and brought to London, along with the presses, types, etc., which had been employed in printing them. Several of the workmen also came over to London, and Grafton and Whitchurch, the noted printers of that day, were thus enabled to bring out in 1539, under Coverdale's superintendence, the "Great Bible," as it is called on account of its size. Coverdale also in 1540 edited a second edition, commonly called Cranmer's Bible, because that prelate wrote a preface to it. From 1540 to 1548 Coverdale was on the Continent. He married in the former year. On his return he became a royal chaplain and in 1551 was appointed to the see of Exeter, the duties of which office he discharged with great zeal, until the accession of Mary in 1553, when he was ejected and thrown into prison, from which he was only released after a year's confinement, on the earnest intercession of the King of Denmark, whose interest was evoked by his chaplain, Coverdale's brother-in-law, and on the condition that he should leave the country. Coverdale went to Denmark and subsequently to Westphalia, Deux Ponts, and Geneva. In 1558 he was in Geneva and is said to have had some part in the preparation of the Geneva Bible. In 1559, after the accession of Elizabeth, he returned to England, but certain notions concerning ecclesiastical ceremonies, imbibed at Geneva, operated against his restoration to the see of Exeter, and made him refuse an appointment as Bishop of Llandaff. In 1564 he was collated to the rectory of St. Magnus, London, but, owing to age and infirmities, he resigned it in 1566 and died about two years afterward. He was buried Feb. 19, 1568. Coverdale was the author of several tracts designed to promote the Reformation and made various translations from the works of the continental reformers. His works and letters were published with a memoir, by the Parker Society (Cambridge, 1844-46). Consult also *Memorials of Miles Coverdale* (London, 1838), and F. Fry, *The Bible by Coverdale* (ib., 1867). For his work on the English Bible, consult Hoare, *The Evolution of the English Bible* (ib., 2d ed., 1902), and Pollard, *Records of the English Bible* (Oxford, 1911).

**COVERED WAY, or COVERT WAY.** A term used in fortification to describe a passage constructed on the side of the ditch towards the enemy. As its name indicates, this passage affords covered communication along the ditch for sentinels and small bodies of men posted therein. See FORTIFICATION.

**COVERLEY**, kūv'ēr-lī, SER ROGER DE. An old English dance, so called from the tune used during its performance. Neither the author of the tune nor the date of its composition is known, but the editor of the Skene Manuscript

claims the tune as Scotch, on the authority of a manuscript dated 1706, and says that north of the Tweed it is known as the "Mautman comes on Monday." The tune is variously called "Old Roger of Coverly for evermore, a Lancashire Hornpipe"; "Roger of Coverly"; "Roger a Coverly," in Gay's opera *Polly*; and "Roger de Coverly," in *Robin Hood*; and "Sir Roger de Coverly" in Fielding's *Tom Jones*. A song, "O Brave Roger de Coverly," is contained in *Pills to Purge Melancholy*. The dance is an old-fashioned country dance (or *contredanse*) and is known in the United States as the "Virginia reel." Addison took the name for his Sir Roger de Coverly in the *Spectator*.

**COVERLEY**, SIR ROGER DE. A quaint and amiable country gentleman who makes repeated appearances in Addison's *Spectator*. The portrayal of Sir Roger and his friends, by its completeness, vitality, and literary deftness, and by the ingenious selection of incident and situation as vehicles for expressing character, had a marked effect upon the development of English fiction. The papers concerning Sir Roger have been many times collected and published and now are accepted as English classics. See ADDISON, JOSEPH.

**COVERSED** (kô-věrs't) **SINE**. See TRIGONOMETRY.

**COVERTURE** (OF. *coverture*, Fr. *couverture*, covering, from ML. *coopura*, from Lat. *coopervire*, to cover, from *co-*, together + *opervire*, to cover, for *opervire*, Lith. *uzh-veru*, I shut). Under the common law, the legal condition or status of a married woman. By that law an unmarried woman, whether spinster or widow, is a "complete juristic person," having the same standing before the law as a man. Upon marrying, however, i.e., coming under the protection of a man, her legal position is radically altered, and in many respects completely merged in that of her husband. This is especially true of her property rights. Her goods and chattels at once become his property. He acquires custody of her claims against others (*choses in action*) and may collect them for his own benefit. Her land passes under his control, and he acquires a joint seisin with her therein and may take the rents and profits to his own use during the continuance of the marriage relation. On the other hand, he becomes liable to pay her debts, those contracted before as well as those contracted after marriage, and under some circumstances he is responsible for her torts and crimes. The modern legislation which has almost restored to the married woman her lost personality will be described under the titles HUSBAND AND WIFE and MARRIED WOMAN. Consult the authorities referred to under these titles, and also those under COMMON LAW.

**COVIELLO**, kô'vyô'lô. The clown of old Italian popular comedy.

**COVILHÃO**, kô've-lyôun'. A town of Portugal, in the modern District of Castelo Branco (but formerly included in the Province of Beira), situated on the southeastern slope of the Serra da Estrela at an altitude of 2180 feet (Map: Portugal, B 2). It is commanded by a castle and is one of the chief centres of cloth manufacturing in Portugal. Pop., 1890, 17,562; 1900, 15,469.

**COVILLE**, FREDERICK VERNON (1867- ). An American botanist, born at Preston, N. Y. He received his education at Cornell University and was instructor in botany there from 1887

to 1888. In the latter year he became connected with the United States Department of Agriculture, and after serving five years as assistant in botany, was made botanist and also curator of the United States National Herbarium. In 1899 he was elected president of the Biological Society of Washington. His publications include a monograph on the *Botany of the Death Valley Expedition* (1893), the author having taken part in the expedition during 1890-91. He also prepared a number of reports, including: *Botany of Yakutat Bay, Alaska* (1896); *Crimson Clover Hay Balls* (1896); *Experiments in Blueberry Culture* (1910); *The Agriculture Utilization of Acid Land* (1913).

**COVINGTON**, kô'ving-ton. A city and the county seat of Newton Co., Ga., 41 miles east-southeast of Atlanta, on the Georgia and the Central of Georgia railroads (Map: Georgia, C 2). The city has a public library, and Emory College (Methodist) is situated 1 mile to the north. Covington is in a fertile cotton-growing region and has cotton and oil mills, marble works, and manufactories of ice and fertilizer. The water works and electric-light plant are owned by the municipality. Pop., 1890, 1823; 1900, 2062; 1910, 2697.

**COVINGTON**. A city and the county seat of Fountain Co., Ind., 72 miles west by north of Indianapolis, on the Cleveland, Cincinnati, Chicago, and St. Louis, and the Wabash railroads, and on the Wabash River (Map: Indiana, B 2). There is a canning factory, and the city has a Carnegie library and municipal water works and electric-light plant. Pop., 1900, 2213; 1910, 2069.

**COVINGTON**. A city and one of the county seats of Kenton Co., Ky., at the junction of the Ohio and Licking rivers, opposite Cincinnati, of which it is practically a suburb (Map: Kentucky, F 1). It is on the Louisville and Nashville and the Chesapeake and Ohio railroads, and electric railroads also connect it with the neighboring towns. Bridges to Cincinnati and to Newport, Ky., add to the facilities for communication, the great suspension bridge to the former city being a noteworthy specimen of engineering. (See CINCINNATI.) Covington occupies an area of about 5¼ square miles on a beautiful plain partly surrounded by hills, and resembles Cincinnati in its general arrangement. The city has many fine residences, a public library, city hall, race track, and a Federal building noteworthy as a specimen of modern Gothic, and among charitable institutions, a hospital for contagious diseases, Catholic and Protestant orphan asylums, and a home for aged women. Covington is an important centre of Roman Catholic influence, the cathedral, a type of flamboyant Gothic, being one of the finest ecclesiastical structures in the State. Connected with this denomination there are also a Benedictine priory, a convent, a hospital and founding asylum, Notre Dame Academy, and La Sallette Academy. The facilities for transportation, both by rail and by water, placing the city in communication with a wide territory possessing valuable natural advantages, have contributed to the city's commercial importance. Its industrial interests are also important, and include extensive pork-packing establishments, distilleries, breweries, steam-engine factories, tobacco factories, cotton factory, ironworks, and manufactories of vinegar, furniture, stoves, tinware, bricks, tile, pottery, rope, contractors' machinery,

metal signs, automobile trucks, X-ray machines, circus tents, pianos, cordage, etc. Covington has adopted the commission form of government. There are municipal water works, built in 1887, furnishing an abundant supply of water drawn from the Ohio River at a distance of about 13 miles above the city. Covington's annual budget approximates \$660,000, the main items of expense being \$108,000 for schools, \$111,000 for interest on debt, \$47,000 for police department, \$35,000 for the fire department, \$55,000 for street expenditures, and \$15,000 for public library fund. Settled in 1812 and laid out three years later, Covington was chartered as a city in 1834. Pop., 1860, 16,471; 1880, 29,720; 1890, 37,371; 1900, 42,938; 1910, 53,270.

**COVINGTON.** A city and the parish seat of St. Tammany Parish, La., 66 miles by rail north of New Orleans, with which it has steamboat connection on the Bogue Falaya River; on the New Orleans Great Northern and the Yazoo and Mississippi Valley railroads (Map: Louisiana, E 3). It contains St. Paul's College, St. Scholastica's Academy, a fine public park, and high school. There are lumber, turpentine, bottling, and canning interests. Pop., 1900, 1205; 1910, 2601.

**COVINGTON.** A city and the county seat of Tipton Co., Tenn., 37 miles northeast of Memphis, on the Illinois Central Railroad (Map: Tennessee, A 3). It is a shipping point for cotton and oil, and has flour and saw mills, cotton and cottonseed-oil mills, cotton compress, etc. The water works and electric light plant are owned by the city. Pop., 1900, 2787; 1910, 2900.

**COVINGTON.** A town and the county seat of Alleghany Co., Va., about 50 miles (direct) northwest of Lynchburg, on the Chesapeake and Ohio Railroad, and on the Jackson River (Map: Virginia, D 4). It has several manufacturing plants including a large pulp and paper mill, iron-furnace, tannery, foundry, ice, extract and fertilizer plants, and planing and flouring mills. The town contains a home for homeless boys and owns its water works. Pop., 1900, 2950; 1910, 4234.

**COVODE, JOHN** (1808-71). An American legislator, born in Westmoreland Co., Pa. He worked for several years on a farm, was apprenticed to a blacksmith, and afterward attained considerable wealth as a woolen manufacturer. He served for two terms in the Pennsylvania Legislature and was a member of Congress, first as an anti-Masonic Whig and then as a Republican, from 1855 to 1863, and again from 1867 to 1870. In politics he took a leading part as a supporter of Lincoln and as an opponent of Johnson, but is chiefly remembered for his connection as chairman with the special congressional committee appointed in 1860 to investigate the charges brought against President Buchanan in connection with the passage of the Lecompton Bill. See COVODE INVESTIGATION.

**COVODE INVESTIGATION.** An investigation (1860) by a congressional committee of five, headed by Covode of Pennsylvania, into the charge made by two anti-Lecompton Democrats that the administration had endeavored to persuade them corruptly to support the Lecompton Bill. (See LECOMPTON CONSTITUTION.) President Buchanan vigorously protested against the appointment of a committee for such a purpose, on the ground that it would detract from the

dignity and independence of the executive office, but his protests were unheeded, and in June the committee made its report, the Republican majority supporting the charge and the Democratic minority denouncing it. The committee, however, was considered to have brought forward sufficient evidence to prove Buchanan's favoritism and his questionable use of patronage. The report was printed in a bulky volume. For a defense of Buchanan, consult Curtis, *Life of Buchanan* (New York, 1883).

**COW.** See CATTLE; DAIRYING.

**COW'AGE, COW'HAGE, or COWITCH** (from Hind. *Kawāch, Koāch*). Short, slender, brittle hairs, which grow on the outside of the pods of plants of the genus *Mucuna*, natives of the tropical parts of America and Asia. The genus belongs to the family Leguminosae and has a knotted, two-valved pod, divided by transverse partitions. The species, about 25 in number, are twining plants, shrubby or herbaceous, with leaves of three leaflets. That which yields most of the cowage brought to market is *Mucuna pruriens*, a native of the East Indies, with racemes of fine purple flowers, which have a disagreeable alliaceous smell, and pods about 4 inches long. *Mucuna urens*, the oxeeye bean of the West Indies, yields cowage of similar quality. The hairs readily stick in the skin and cause intolerable itching. Cowage is sometimes used in medicine, acting mechanically in killing and expelling worms, particularly the species of *Ascaris* (q.v.). That it does not act on the inner surface of the intestinal canal is supposed to be owing to the mucous secretion. It is generally administered in syrup or honey. Before the pods of cowage plants are ripe, they are used as a vegetable, like kidney beans, and are very palatable. *Mucuna utilis*, velvet bean, is usually considered specifically the same as *Mucuna pruriens*, but velvet-bean pods are without the stinging hair of the other. The velvet bean has lately attracted much attention as a forage crop. It is well adapted to Florida and the Gulf States, having about the same value as the better varieties of cowpeas. As a green manure and mulch crop for orchards, it is highly considered.

**COW ANT.** See HORSE ANT.

**COWARD, EDWARD FALES** (1862- ). An American playwright, born in New York City and educated at Lyons Collegiate Institute and at Columbia College. During a long period of active interest in amateur dramatics he played more than 150 parts. For two years he was dramatic editor and critic of the *New York Evening Sun*, and for more than six years, of the *New York World*. He also wrote for *The Theatre*; adapted *The Belle's Stratagem*; collaborated on *The Lady from Chicago*, and *Around New York in 80 Minutes* (musical comedies); and wrote *Hearts Are Trumps*, a comedy, and *King Stephen: An Historical Drama in Seven Tableaux Completed from John Keats' Fragment* (1912).

**COWBERRY.** See CRANBERRY.

**COW'BIRD.** A small North American blackbird (*Molothrus ater*), closely related to the redwing, remarkable for its parasitic habits, and frequenting in small flocks fields where cattle pasture, often alighting upon them to eat parasites, or clustering about their feet to snap up the insects disturbed by their movements; to this habit it owes its names, cow blackbird, cowpen bird or bunting, buffalo bird, etc. This

common species (see Plate of BLACKBIRDS) is about 8 inches long; the adult male is rich glossy black, with greenish reflections, except the head, which is chocolate brown, the female and young are simply brownish gray, paler beneath. The cowbird is found throughout the United States, from Texas northward nearly to Hudson Bay. In the north it is migratory, but south of the Ohio it is a permanent resident. It is to be seen in small bands frequenting fields and pastures, where its principal food is vegetable (mainly seeds of weeds), with insects caught upon the ground and about cattle. There are usually several more males than females in each band, for these birds do not pair, and the antics and spluttering and guttural squeaks with which the males try to attract the females are most queer and amusing. In the autumn they gather in large flocks and associate with other blackbirds. Other species are found in the southwestern United States, in Mexico and Central America, and several in various parts of South America.

The parasitism of the cowbirds is their most striking characteristic, their behavior resembling that of the European cuckoo. None, except one, takes a mate, or makes a nest, or incubates its eggs. Instead of this, when the breeding season (May and June) is at hand, the female ready to lay an egg quietly leaves the flock and stealthily seeks the home of some bird, from which the mother is temporarily absent, incubation not having begun. There she deposits her egg (see Colored Plate of EGGS of AMERICAN SONG BIRDS), to which she pays no more attention. It matters not whether the nest she visits has already its full supply of eggs, or even whether it already contains one or several eggs of her own species, she will sometimes throw out eggs of the owner to make room for her own. The egg of the cowbird usually hatches in less time than do the eggs of the bird on which it is imposed, whereupon the rightful eggs may be abandoned or thrown out, or, if some of them hatch, the young are speedily starved or smothered or elbowed out of the nest, while the foster parents devote themselves to the care of the greedy stranger. He remains in the nest until it is really outgrown, but even after he has left it he is cared for, for a time, by the birds that brought him up. But at last, when well able to fly, he seeks out others of his own kind, and the birds that have devoted themselves to him so assiduously have nothing to reward their pains. Over 100 species of birds are thus burdened with more or less frequency, but some will desert the nest rather than incubate the strange egg; others build a second story on the nest, leaving the cowbird's egg to perish below, while they raise their own brood in the superstructure.

The egg of the cowbird is a rather blunt oval, measuring, on the average, .84 by .65 of an inch, and is white or grayish, profusely speckled with browns, the general effect of which is indistinct and pale; it is not easily mistaken for any other bird's egg of its size. Several species of cowbirds inhabit Central and South America, and have similar habits, except in one instance, the bay-winged cowbird (*Molothrus badius*) of Argentina and Bolivia, which differs from the ordinary type in several ways, among others in having a low and pleasing song, which it delivers more or less all the year around. It does not abandon its eggs to the care of other nurses, but

forms conjugal ties and occasionally makes a nest of its own; more often, however, it seizes upon the nests of other birds and in their despoiled property lays its eggs and rears its own young. A circumstantial history of this interesting group and a discussion of bird parasitism may be found in Slater and Hudson; *Argentine Ornithology* (London, 1888-89), largely reprinted by Bendire, in "The Cowbirds," in *Report of the National Museum for 1893* (illustrated, Washington, 1895).

**COWBOYS.** 1. The name applied during the Revolutionary War to robbers, usually of cattle and sometimes of other property, who infested the roads east of the Hudson River between the British and American lines. They professed to be Tories. A similar band, professing to be Whigs, called "Skinners," plundered wayfarers at the same period and in the same places. See Cooper's romance *The Spy*.

2. The name given to the mounted herdsmen hired by the owners of cattle in the United States to look after their stock. In the great herding districts of the West, where cattle roam over vast areas without fences or roads and with only scattered and irregular places for water and shelter, the cowboys occupy an important place. It is their business to keep the cattle together, to guide them to pasture, to prevent their being mixed with other droves, to protect them from Indian and other thieves, to brand them at the proper seasons, and to drive them to the shipping point when they are "beef."

**COW CREEK INDIANS.** An Athapaskan tribe in Oregon and also a division of the Seminoles in Florida.

**COWDRAY, OF MIDHURST, WEETMAN DICKINSON PEARSON, BARON** (1856- ). A British capitalist. He became president of the contracting firm of S. Pearson and Son, Ltd., and in this connection he superintended the construction of the Dover Harbor Works, the tunnels under the East River, New York, and the Blackwall Tunnel, London. In 1894 he was made a baronet and in 1910 a baron. He was a member of the House of Commons for Colchester from 1895 to 1910, when he took his seat in the House of Lords and also became high steward for Colchester. The Pearson syndicate acquired extensive oil concessions in Ecuador and in Mexico. Its interests in the latter country, which were obtained from the Porfirio Diaz government, covered an area of more than 500,000 acres and represented a capitalization of \$50,000,000 (Mexican currency; \$25,000,000 American). It is considered by many that the rival grant oil interests of Mexico, the Pearson syndicate and the Standard Oil Company represented by the Waters-Pierce Oil Company, had an important if not a leading part in the revolutions of that country. It is known that Francisco Madero, the leader of the successful revolt (1913) against the Diaz régime, was favorable to the interests of the Standard Oil Company, and, although Lord Cowdray denied the charge, it was asserted that the Pearson interests aided Huerta and Felix Diaz in the counter revolution against Madero. In November, 1913, Lord Cowdray formally requested the United States government to protect his oil properties in Mexico. See *MEXICO, History*.

**COWELL, EDWARD BYLES** (1826-1903). An English Sanskrit scholar. Born at Ipswich, he was educated at Oxford. He went to Calcutta in 1856, where he was professor of history in

the Presidency College and later (1858) principal of the Sanskrit College. He left India in 1864, and in 1867 he was made professor of Sanskrit in the University of Cambridge. His contributions to advancing the knowledge of India were made not only through his writings, but also through the inspiration he gave to his pupils, whose numbers were large. His association with Edward FitzGerald of Omar Khayyam fame is of interest in English literary history. Among Cowell's more important works may be mentioned: *The Prākṛit Grammar of Vararuci* (1854, 2d ed., 1868); *The Black Yajur Veda*, books 1, II, edited in collaboration with Roer (1858-64); the *Kusumāñjali* (1864); *The Hindu Law* (1871); *The Hindu Digest* (1873); *The Aphorisms of Sāṅkhya* (1878); *The Sarvadarśana-Samgraha*, translated conjointly with Gough (1882); *The Harsa-Carita of Bāna Bhaṭṭa* (1897); and *The Buddha-Carita of Āśvaghoṣa*, in Sanskrit and English (1892-94). At the time of his death he was editing the translations of *The Jātaka*; or, *Stories of the Buddha's Former Births* (7 vols., 1895-1913), of which the sixth volume, published in 1907, was translated by him in conjunction with Rouse. His *Life and Letters* were edited by George Cowell, his kinsman (Oxford, 1904).

**COWEN**, kou'en, SIR FREDERIC HYMEN (1852-). An English musician, born at Kingston, Jamaica. His parents took him to London when four years old, and he became a pupil of Benedict and Goss in that city. In 1865 he went to Leipzig, where he studied under Hauptmann, Moscheles, Reinecke, Richter, and Plaiddy. In 1882 he became director of the Edinburgh Academy of Music, and in 1887 succeeded Sir Arthur Sullivan as conductor of the London Philharmonic. He was musical director of the Melbourne Centennial Exhibition (1888-89), and in 1896 was chosen conductor of the Liverpool Philharmonic and of the Manchester Concerts. In 1900-10 he was conductor of the Scottish Orchestra at Glasgow. In 1903, 1906, 1909, and 1912 he directed the Crystal Palace Handel festivals. He was knighted in 1911. His compositions include the operas *Pauline* (1876), *Thorgrim* (1890), *Signa* (1893), and *Harold, or the Norman Conquest* (1895); *A Phantasy of Life and Love* (1901); *Coronation Ode* (1902); *Indian Rhapsody* (1903), four oratorios, *The Deluge* (1878), *St. Urusla* (1881), *Ruth* (1887), *The Veil* (1910); and a number of cantatas, including *The Corsair* (1876) and *John Gilpin* (1904), six symphonies; four overtures, three suites for orchestra; a piano concerto; a string quartet; a trio; and over 300 songs. He published his memoirs under the title *My Art and my Friends* (London, 1913).

**COWES**, kouz. A seaport and watering place on the north coast of the Isle of Wight 12 miles southeast of Southampton (Map: England, E 6). It consists of East and West Cowes, lying on opposite sides of the Medina. West Cowes is the headquarters of the Royal Yacht Squadron, located since 1856 in an old castle once used as a fort. Over 2000 of the pick of English sailors are employed as crews of the numerous yachts of the members. Several regattas are held annually, the one held in the month of August attracting crowds of visitors. Near East Cowes are several fine countryseats, Whippingham Church, East Cowes Castle, and Osborne House, the former royal

seaside residence of Queen Victoria, now, with its grounds, a public memorial and park, donated to the nation by Edward VII. Cowes is famous for its yacht-building yards and engineering works, and has a considerable trade as the port of the island. Pop., 1901, 11,834; 1911, 14,294.

**COW/FISH** (so named from the shape of its head). 1. A trunkfish (*Lactophrys tricornis*) of the tropical Atlantic, varicolored in bright hues, and also called "cuckold." (See Cow Pilot and Plate of PLECTOGNATH FISHES.) 2. A grampus (q.v.). 3. A cow shark (q.v.).

**COW/GATE**, THE. A well-known street in the Old Town, Edinburgh. It was once a fashionable place of residence, but is now given over to the poorer classes.

**COW/HAGE**. See COWAGE.

**COW/HEEN**. The local name in eastern Canada of the long-tailed duck, or old squaw (q.v.) *Harelda*, or *Clangula, hyemalis*).

**COWICHAN**. See SALISHAN STOCK.

**COWIE**, kou'i, FREDERICK WILLIAM (1863-). A Canadian civil engineer. He was born in Haldimand Co., Ontario, and graduated at McGill University in 1886. For three years (until 1889) he was a member of the engineering staff of the Montreal Harbor Commission, organized to increase the capacity of Montreal as a great shipping port, and in 1907 he was appointed chief superintending engineer of this commission. Meanwhile, in 1889-97, he had been chief assistant engineer of the Department of Public Works, Ottawa, and in charge of the St. Lawrence channel between Quebec and Montreal; chief superintending engineer of the channel from 1897 to 1907, and in 1892-97 engaged in making surveys and reports on most of the harbors of the Great Lakes. When a Royal Commission was appointed in 1903 to inquire into the St. Lawrence route and winter navigation, Cowie became its consulting engineer. He invented a contrivance for facilitating the loading and discharging of ships' cargoes; and he published: *Report on British and Continental Ports, with a View to the Development of the Port of Montreal and Canadian Transportation*, with G. W. Stephens (1908); *Winter Navigation* (1908), designed to show that the Hudson Bay route is not practicable; and *Navigaton on the St. Lawrence River* (1910).

**COW/TITCH**. See COWAGE.

**COWL** (AS. *cūle*, *cuhle*, *cugle*, Icel. *kuf*, OHG. *cugela*, Ger. *Kugel*, *Kogel*, OF. *coule*, It. *cuccolla*, *cocolla*, from Lat. *cucullus*, cap). A hood, varying in length in different ages, generally attached to a loose cloak and worn on the head. It was common in England in the Middle Ages, but has come to be used chiefly by monks or members of some religious order, such as the Benedictines and Franciscans. See COSTUME, ECCLESIASTICAL.

**COWLES**, kōlz, HENRY CHANDLER (1869-). An American botanist, born at Kensington, Conn. He was educated at Oberlin College and at the University of Chicago, and in 1894-95 was professor of natural sciences at Gates College (Neb.) and a special field assistant of the United States Geological Survey. At the University of Chicago he was instructor in botany in 1902-07, assistant professor in 1907-11, and in 1911 became associate professor. He contributed to the first edition of the NEW INTERNATIONAL ENCYCLOPÆDIA. His publications in-

clude: *Vegetation of Sand Dunes of Lake Michigan* (1899); *Text-Book of Plant Ecology* (1911); *Plant Societies of Chicago and Vicinity* (1913).

**COWLES**, kölz, WILLIAM LYMAN (1856- ). An American scholar and educator, born at Belchertown, Mass. He graduated at Amherst College in 1878, was instructor in Latin there from 1880 to 1883, studied at the universities of Berlin, Göttingen, and Leipzig in 1883-84, and became associate professor of Latin at Amherst in 1884. In 1894 he was appointed a professor. From 1886 to 1894 he was lecturer in Latin literature at Smith College, where he was also acting professor of Latin in 1899-1900. In the study of classical archaeology he traveled extensively throughout the Italian peninsula. His publications include, besides articles for periodicals, an annotated edition of the *Adelphæ* of Terence (1896); *Selections from Catullus* (1900); and *Selections from Ennius, Catullus, Tibullus, and Propertius, with Parallel Passages from Horace, Ovid, and Martial* (1909).

**COWLES**, kölz, WILLIAM SHEFFIELD (1846- ). An American naval officer, born at Farmington, Conn. After graduating from the United States Naval Academy in 1867, he was promoted through the various grades to be captain in 1902 and rear admiral in 1908. Besides serving at the Mediterranean, North Atlantic, Pacific, and Asiatic stations he was on duty at the Isthmus of Panama in 1884 to guard the property of American citizens. He was naval attaché at London in 1893-97, assistant to the Bureau of Navigation and aid to the President in 1899, commanded the Missouri in 1903-05, and became chief of the Bureau of Equipment and a member of the Board of Construction in 1906. He was in Mexican waters on the cruiser *Pittsburgh* in 1913-14, looking after American interests during the Mexican troubles.

**COWLEY**, kou'li, ABRAHAM (1618-67). An English poet and essayist. He was born in London and was educated at Westminster School and Trinity College, Cambridge. According to his own statement, he received his poetical inspiration from Spenser's *Fæerie Queene*, a copy of which lay in his mother's parlor. A volume of poems, entitled *Poetical Blossoms*, was published by him at the age of 15, and one of the pieces contained therein was written when he was only 10 years old. At Cambridge he obtained distinction for the elegance of his translations; and while there he composed the greater part of the *Davideis*, an epic in four books on the life of David—a work which he never completed. He was attached to the court party, and, in consequence, was ejected from his college in 1643, after he had taken his degree of M.A. In 1646 he followed the Queen to Paris, where he remained 10 years, and on his return to England, being under suspicion, he was seized and bound in heavy securities for his future behavior. In the same year (1656) he published an important collection of his poems, including his elegies on Harvey and Crashaw, Pindaric odes, *The Mistress*, and the *Davideis*. He now studied medicine, receiving his degree the following year. After the Restoration he obtained a lease of the Queen's Lands at Chertsey in Surrey, whither he retired in 1665. He was buried in Westminster Abbey, near Chaucer and Spenser. Cowley belongs to what Dr. Johnson called the "metaphysical" school of poets.

He abounds in subtleties of thought and expression, enjoyed in his own day, but long since out of fashion. To us his fanciful love poems, displaying no emotion, seem very strange. Of his longer poems, the elegies cited above are the best. His most natural verse is scattered through his essays, which are graceful and beautiful. Convenient modern editions are: *Complete Works* (ed. Grosart, London, 1880-81); *Poems* (ed. A. R. Waller, Cambridge, 1905); *Essays, Plays, etc.* (ed. A. R. Waller, ib., 1906). Johnson's *Lives of the Poets* may be consulted.

**COWLEY**, ARTHUR ERNEST (1861- ). An English Hebrew scholar. He was educated at St. Paul's School and at Trinity College, Oxford. He was assistant master at Sherborne School in 1885-89, became fellow of Magdalen College, and, in 1906, sublibrarian of the Bodleian Library. He wrote for reviews and reference works on Hebrew language and literature and cognate topics, and published: *The Original Hebrew of a Portion of Ecclesiasticus* (1897, with Neubauer); an English version of Gesenius' *Hebrew Grammar* (1898; 2d ed., 1910); *Aramaic Papyri* (1906, with Sayce); the second volume (1906) of a *Catalogue of Hebrew MSS. in the Bodleian Library*; *The Samaritan Liturgy* (1909).

**COWLEY**, HANNAH (1743-1809). An English poet and playwright. She was born at Tiverton, Devonshire, where her father, Philip Parkhouse, was a bookseller. It was not until several years after her marriage to Cowley, a captain in the East Indian service, that she began to write plays. Her first production, *The Runaways*, she wrote in less than a fortnight. It was presented by Garrick at the Drury Lane in 1776, and was instantly successful. Her other comedies include the following, played at Drury Lane, *Who's the Dupet* (1779), and at Covent Garden: *The Belle's Stratagem*, which is still popular (1780, pub., 1782); *Which Is the Man?* (1782); *More Ways than One* (1783); and *A Bold Stroke for a Husband* (1783).

**COWLEY**, HENRY RICHARD CHARLES WELLESLEY, first EARL (1804-84). An English diplomatist, nephew of the Duke of Wellington and of Marquis Wellesley. He was an attaché at Vienna in 1824 and was promoted to be Secretary to the Legation at Stuttgart and to the Embassy at Constantinople. He became Minister Plenipotentiary to Switzerland (1848) and to the Germanic Confederation (1851), and in 1852 succeeded the Marquis of Normanby as Ambassador at Paris, and he held the appointment, whether his party was in or out of office, through a particularly trying period, till 1867, when he resigned. With the Earl of Clarendon he represented Great Britain at the Paris Congress of 1856. He was created Viscount Dangan and Earl Cowley in 1857.

**COWLITZ**. See SALISHAN STOCK.

**COW PARSNIP** (*Heracleum*). A genus of plants of the family Umbelliferae. One species, *Heracleum spondylium*, is a native of Great Britain, the common cow parsnip, or hog weed, called *kiesh* in Scotland; a common and rank weed, with coarsely hairy leaves, and stem about 3 to 5 feet high. It is gathered in some parts of England for fattening hogs and is said to afford wholesome food for cattle. Some Siberian species are much larger and have been recommended for cultivation on account of the great quantity of herbage which they yield very early in the season, particularly *Heracleum*

*panacea*, which sometimes attains a height of 10 feet, and whose root leaves are 3 to 5 feet long. *Heracleum lanatum*, a tall, stout, wooly perennial with grooved stems and large compound leaves, is known as cow parsnip in the United States and Canada, being quite widely distributed. In Alaska the leafstalks are peeled and eaten. It is there sometimes called "wild celery." The stalks when drying exude a sweet substance, and they are said to be fermented and a liquor distilled from them in Siberia.

**COWPEA** (*Vigna sinensis*). A leguminous plant closely related to the asparagus bean (*V. sesquipedalis*) and the catjang (*V. catjang*), the other cultivated species of the genus. All readily hybridize, and intermediate forms exist. The cowpea, by far the most important of the group, was cultivated in prehistoric times in India, China, and the Malayan region, and was known in southern Europe at the beginning of the Christian era.\* It is now widely distributed in the torrid and temperate zones. It was introduced into the United States early in the eighteenth century. At present it is a very common forage crop in the South, and is also grown to some extent in the Northern States. The tendency of the cowpea to vary in habit of growth, color of leaf, stem, and pod, and in the shape and color of the seed, gives rise to numerous varieties. These include prostrate, procumbent, bushy, and tall and erect forms. (For illustration, see Plate of LEGUMES.) In addition to being a very important forage plant, it is especially valuable as a soil renovator, having the power of gathering the free nitrogen of the air in common with the clover (q.v.). Consult *United States Department of Agriculture, Farmers' Bulletin 318*, and *Bureau of Plant Industry, Bulletin 229*.

**Food and Feeding Value.**—The green fodder has the following average percentage composition: water, 83.6; protein, 2.4; fat, 0.4; nitrogen-free extract, 7.1; crude fibre, 4.8; and ash, 1.7; the cowpea hay the following: water, 10.7; protein, 16.6; fat, 2.9; nitrogen-free extract, 42.2; crude fibre, 20.1, and ash, 7.5. The silage resembles the green crop in composition, containing some 80 per cent of water, 3 per cent of protein, and 8 per cent of nitrogen-free extract, in addition to small amounts of the other constituents. Young pigs thrive on the cowpea forage and well-filled pods, and it is a custom to turn them into the fields planted for green manuring about the time the first pods are ripening. An acre will pasture 15 or 20 pigs for several weeks. The manure more than compensates for the vines eaten. Turkeys and chickens eat the ripe peas and do well on them. Cattle, sheep, and horses are sometimes pastured on cowpea, but the safest and most economical method is to cut or pull the vines and feed them partially wilted. Cattle and sheep are liable to bloat if they are allowed to eat too ravenously of cowpea vines, as is the case with other succulent crops. Cowpea hay compares favorably with other leguminous hays in digestibility; 59 per cent of the total dry matter, 65 per cent of the protein, 71 per cent of the nitrogen-free extract, and 42 per cent of the crude fibre being digested on an average. Like other leguminous seeds, the cowpea seed is rich in protein. It contains on an average: water, 14.8; protein, 20.8; fat, 1.4; nitrogen-free extract, 55.7; crude fibre, 4.1; and ash, 3.2 per cent. Cowpeas, whole or ground, are

sometimes fed to farm animals, but it is usual to harvest only enough for seed.

As a food for man, some varieties of cowpeas are much relished. The shelled peas are cooked in the same way as shell beans or garden peas. The whole pod when young is also eaten like string beans. For winter use the dry cowpeas are cooked like other dry beans and have a very agreeable flavor. In composition and digestibility cowpeas closely resemble navy beans and are an important foodstuff. The plant is injured by a weevil (*Bruchis chinensis*), to be recognized by two elevated, ivorylike lobes on the thorax; and by the September brood of the bollworm (q.v.).

**COWPEN.** A town in Northumberland, England, on the south shore of the Blyth Estuary, 6½ miles east-southeast of Morpeth. The town owns its markets and water works. Its industries are coal mining, glass manufacture, and shipbuilding. Pop., 1891, 13,000; 1901, 17,879; 1911, 21,295.

**COWPENS.** A town in Spartanburg Co., S. C. (pop., 1909, 1101), noted chiefly for the battle which took place there on Jan. 17, 1781, between 1100 British under Colonel Tarleton and about 1000 Americans under General Morgan. This engagement, sometimes called the "Bennington of the South," for its decisiveness, was won for the Americans, partly by the rashness of the impetuous Tarleton, but especially by the daring position assumed by the American commander and the tactical skill he displayed in defending it. Losses—British, 800 killed, wounded, and captured, American, 12 killed, 60 wounded.

**COWPER**, kōŭp'ēr or kou'p'ēr, FRANCIS THOMAS DE GREY, EARL (1834-1905). An English statesman. He was educated at Christ Church, Oxford, and succeeded to the hereditary title in 1856. His grandmother's death (1869) and his mother's (1880) greatly enlarged his estates. He was a Liberal in politics and would have entered Parliament as a career, had he not so early succeeded his father. He was Lord Lieutenant of Ireland, with W. E. Forster as Chief Secretary, from 1880 to 1882, when he was succeeded by Lord Spencer, and proved an able administrator during the critical period of the Land League. He opposed Gladstone's Home Rule policy. He was one of the founders of the Unionist party and presided as chairman at the so-called "Opera House Meeting" to oppose the first Home Rule Bill. Upon the installation of Lord Salisbury he was appointed chairman of the commission in the Irish Land Act of October, 1881. He was also a member of the Gresham University Commission of 1892.

**COWPER**, FRANK CADOGAN (1877- ). An English genre and historical painter. He was born at Wicken (Northamptonshire) and studied at St. John's Wood School, the Royal Academy, and under Abbey and Sargent. He began as a portrait painter, then turned to imaginative genre in the English Pre-Raphaelite style, which quickly brought him into prominence. Among the best known of his paintings are: "The Churchyard Scene from Hamlet" (1902, National Gallery, Brisbane); "St. Agnes in Prison" (1904, National Gallery, London); "The Devil and the Nuns" (1907); "Venetian Ladies Listening to the Serenade" (1909). His water colors, which are usually illustrations of fairy tales and fanciful stories, are brilliant in color and charming in conception. Good ex-

amples are: "Molly, Duchess of Nona" (1905); "Patient Griselda" (1807); "Rapunzel Sings from the Tower" (1908). In 1910-12 he painted, in a cleverly archaic style, a series of mural decorations in the east corridor of the London Houses of Parliament. He was elected associate of the Royal Academy and a member of the Water Color Society.

**COWPER, WILLIAM, EARL** (c.1664-1723). An English judge, the first Lord Chancellor of Great Britain. He was called to the bar in 1688, joined the Prince of Orange as soon as he landed, and was made King's Counsel in 1694. In the following year he entered Parliament, where he became known as an excellent debater, and was made Lord Keeper of the Great Seal. In 1706 he was one of the commissioners to negotiate the union of Scotland with England and was made a peer. In 1707 he was made Lord Chancellor, in 1716 Lord High Steward, and in 1718 became an earl. He was a great orator, but neither a logical nor well-trained lawyer. Consult his *Private Diary*, edited (1833) by Hawtrey, covering 1705-14; and Lady Cowper's *Diary* for the next two years, edited (1864) by Spencer Cowper.

**COWPER, WILLIAM** (1666-1709). An English surgeon, born at Petersfield in Sussex. He was made a barber surgeon in 1691 and became known not only as a skillful practitioner, but also as a thorough anatomist and pathologist. Among his permanent contributions to anatomical science the discovery of the now so-called Cowper's glands (q.v.) will preserve his name. In 1696 he was made a fellow of the Royal Society. His published works include the following: *Myotomia Reformata* (1694; 2d ed., rev. by Jurin, Pemberton, and Tanner, 1724); *The Anatomy of Human Bodies* (1698; 2d ed., 1737), the best English work on anatomy up to that date; *Glandularum Quorundam nuper Detectarum Ductuumque earum Excretionum Descriptio cum Figuris* (1702).

**COWPER, koo'pēr or kou'pēr, WILLIAM** (1731-1800). An English poet, son of John Cowper, D.D. He was born at his father's rectory at Great Berkhamstead, Hertfordshire. Losing his mother when he was only six years old, Cowper, who was naturally a delicate and sensitive child, became, as a boy, very deeply melancholy and depressed. Just after his mother's death he was placed in the school of a Dr. Pitman, in Market Street, Hertfordshire. Removed because of cruel treatment by another boy, he was sent, at the age of 10, to Westminster School. The period he spent here was very miserable and laid the foundation of that settled gloom which oppressed him till death. It is to the remembrance of these wretched days that we are indebted for the fierce invective that burns in the *Tirocinium, or a Review of Schools* (1784). Shortly after leaving Westminster Cowper was articled to a Mr. Chapman, an attorney in London. Upon leaving Chapman's office he entered the Middle Temple. In 1754 he was called to the bar, but never practiced. His father died in 1756 and left him a small patrimony. In 1759 he removed to the Inner Temple, but his hatred of the law was so great that he seldom opened a book that bore on his profession. Yet he was industrious enough; he scribbled poetry, read Homer, and, in conjunction with his brother, translated some of the books of Voltaire's *Henriade*. In 1763 his cousin Major Cowper offered him the office of

clerk of the journals of the House of Lords, which he accepted, but having to undergo an examination at the bar of the House, he was seized with nervousness and could not appear. He even attempted suicide, but fortunately failed for want of courage. In December, 1763, he was removed to the private asylum of Dr. Cotton at St. Albans, a prey to the deepest remorse. After his removal from St. Albans (1765) he went to reside in the town of Huntingdon. Here he met Mrs. Unwin—the Mary of his poems—an acquaintance which ripened into the deepest friendship and continued till death. After a few months in lodgings he resided with the Unwins and enjoyed much tranquil happiness under that religious roof. Soon after the death of Mr. Unwin (1767) Mrs. Unwin and Cowper removed to Olney in Buckinghamshire. Here Cowper's malady returned. At this time he was engaged to marry Mrs. Unwin. She carefully tended him through his long and slow recovery. He found amusement in gardening, writing playful poems, and in building the famous summer house. Mrs. Unwin also suggested, as a subject suited to his genius, *The Progress of Error*. During the winter of 1780-81 he wrote *Truth, Table Talk, The Progress of Error, and Expostulation*, published in 1782. In 1781 Cowper made the acquaintance of Lady Austen, who suggested to him *The Task*, urged him to translate Homer, and—what the world is perhaps still more grateful for—she related to him the history of John Gilpin. *The Task* was begun in the summer of 1783 and published in 1785. Its success was great, and Cowper began to be considered the first poet of his day. In 1784 he began the translation of Homer, which appeared in 1791. It was received with great applause. Though Cowper wrote after this the beautiful and tender poem *To Mary*, his powers rapidly declined. He died at East Dereham, Norfolk. The centenary of his death was appropriately observed at Olney. Cowper's poetry is eminently healthy, natural, and unaffected. He and Burns brought back nature to English poetry. Besides being a poet, he was perhaps the most delightful letter writer in the English language. Nothing can surpass the charm of his epistles—full of humor, gentle sarcasm, anecdote, acute remark, and a tender shadow of melancholy thrown over and toning down the whole. See Southey, *Life and Letters*, etc. (15 vols., London, 1834-37, and reprinted in Bohn Library); *Poems of William Cowper* (1905, ed. J. C. Bailey); the Globe Edition of *Poetical Works*, ed. Benham (London, 1870); the Aldine Edition, by Bruce (ib., 1896); *The Unpublished and Uncollected Poems*, ed. Wright (ib., 1900); *Correspondence*, id. (New York, 1904); J. Neave, *A Concordance to the Poetic Works of William Cowper* (1887); S. A. Brooke, *Theology in the English Poets* (New York, 1910); and the lives by Smith (London, 1880) and by Wright (ib., 1892).

**COWPER'S GLANDS** (discovered by the English anatomist William Cowper). Two small yellow glands, which are situated beneath the anterior portion of the membranous urethra in the male. The glands are of the racemose variety (see GLANDS), each one being made up of a number of small lobes, which are again subdivided into lobules. The acini are lined with columnar epithelium. The gland secretes mucus, which is carried by a small duct, nearly an inch in length, to the posterior part of the

bulbous urethra. These glands diminish in size as age advances. The vulvovaginal glands, or glands of Bartholin of the female, are the analogues of Cowper's glands.

**COW-PILOT.** A small fish (*Pomacentrus saxatilis*), so called in Bermuda because it is believed always to accompany the cowfish (*Ostracium*). It is one of the demoiselles and is also called "mojarra."

**COWPLANT.** See GYMNEMA.

**COWPOX.** *Variola vaccina*, or "cowpox," as it is more commonly known, is a contagious disease of cattle characterized by an elevation of temperature, a shrinkage in milk production, and characteristic pustular eruptions, especially upon the teats and udders of dairy cows. The disease, which is benign in its course, is quite common in the United States, especially in the Eastern States. The cowpox virus, which appears to be ultramicroscopic, is usually transmitted from one animal to another by the hands of milkers, by calves, or by direct contact. In about a week after a cow becomes infected small pimples appear on the skin, which at first contain a watery fluid and later turn to pus. After the pustule is broken a thick dark scab forms, which later comes off, leaving a small pock mark.

Cowpox can be transmitted to man by direct inoculation as by sores on the hands, the fluid from the pustules being used to vaccinate persons against smallpox.

Treatment consists in the application of softening and disinfecting agents, such as carbolized vaseline and zinc oxide ointment. In more persistent cases a milking tube may be used in order to prevent opening of the pustules during milking.

Milk from affected cows should not be used for food, since it may become contaminated from the pustules and ulcers on the teats and in the sinuses of the udder, and produce infection by the alimentary canal of young children if it is consumed in a raw state.

Consult Hutyra and Marek, *Pathology and Therapeutics of Diseases of Domestic Animals*, vol. 1, and E. W. Hoare, *A System of Veterinary Medicine*, vol. 1. See also VACCINATION; SMALLPOX.

**COWRY.** (Hind. *kauri*, Beng. *kari*, from Skt. *kapardika*, shell). A gastropod mollusk of the family Cypræide, whose shells are shaped somewhat like coffee beans, richly enameled and often beautifully marked. They are most abundant and attain their largest size in the seas of warm

as broad; is found on the Indian coasts, and in particular abundance on those of the Maldiv Islands, and has been one of their principal exports. In Bengal 3200 cowries were reckoned (in 1900) equal to a rupee, so that a cowry was then about equal in value to  $\frac{1}{3200}$  of a cent. Yet cowries to the value of 200,000 rupees are said to have been at one time imported annually into Bengal. Many tons of cowries are annually used in trade with west-central Africa, but their circulation is fast disappearing. Consult Stearns, "Ethno-conchology: A Study of Primitive Money," in *Smithsonian Reports for 1897*, part ii (Washington, 1899). See SHELL MONEY; also Colored Plate of MARINE GASTROPODS with the article GASTROPODA.

**COW SHARK.** A large shark of the tropical family Hexanchidæ. See Plate of LAMPREYS AND DOGFISH.

**COWSLIP** (AS. *cūslippe*, *cūsloppe*, from *cū*, cow + *slyppe*, *sloppe*, sloppy droppings, from *slūpan*, to dissolve, Eng. *slop*, alluding to the pastures where it is usually found; according to a euphemistic popular etymology *cow's-tip*) (*Primula officinalis* or *Primula vulgaris*). A common native of pastures in Europe; a delicate and modest little flower, a universal favorite, both for its beauty and its fragrance. (For illustration, see Plate of CRANBERRY, ETC.) The flowers have sedative properties and are sometimes used as an anodyne and antispasmodic. They are fermented with sugar to make cowslip wine, an agreeable and favorite soporific domestic medicine. The name "American cowslip," or "shooting star," is given to *Dodecatheon meadia*, a perennial plant, also of the family Primulaceæ, a native of North America, with a stalk about 8 inches high, bearing an umbel of gracefully pendant lilac, rose-color, or white flowers, the petals reflexed over the calyx, the stamens and pistil long, and the anthers of a golden color. It is very ornamental in the flower border, resembling a cyclamen. There are a dozen or more additional species and numerous varieties in the United States. See PRIMULA.

**COWTREE.** See GALACTODENDRON

**COX, DAVID** (1783-1859). An English painter in water colors and oils, the greatest English water-colorist. He was born at Deritend, near Birmingham, April 29, 1783, the son of a blacksmith. He studied drawing under Joseph Barber of Birmingham, and water color under John Varley in London. He was at first a scene painter in theatres, and for a long time supported himself by teaching drawing and selling water-color sketches, until at length there came patronage sufficient for his moderate desires. In 1805 he traveled in Wales, the scenery of which from this time became the favorite subject of his paintings. In 1813 he was made a member of the Society of Painters and Water-Colorists, and in 1814 he published his *Treatise on Landscape Painting and Effect in Water Colors*. He did not begin the study of oil painting until his fifty-sixth year, under Müller in London, but he attained great proficiency. Indeed, there is some reason to believe that had he practiced it from the beginning he might have equaled Constable. In 1841 he retired to Harbourn, near Birmingham, where he resided until his death on June 7, 1859. Although his true greatness was never recognized during his lifetime, Cox is certainly the most important of the successors of Constable. His work

A LIVING COWRY.

The animal is shown in the attitude of creeping (towards the left). The mantle is, however, withdrawn somewhat, revealing the normally clothed and protected shell. The short siphons and long tentacles appear, the last bearing the eyes, one of which appears as a black dot.

climates. The money cowry (*Cypræa moneta*) has long been in general use as a substitute for coin in many parts of Asia and Africa. It is yellow or white, about an inch long and nearly

is bold and aims at a general effect, disregarding small and conflicting details. His colors are those of nature, pure, fresh, and rich, and he handles light with consummate skill. His treatment of atmosphere and atmospheric mood is of the highest order. His small productions are usually better than the larger. He is the great painter of Welsh scenery, of which he was particularly fond. The British Museum and the South Kensington Museum possess some of his water colors and drawings, but the best of his work is in the Birmingham Art Gallery and in private possession. Several general exhibitions of his work have been held, the best of which was that of Manchester in 1887. Among his best water colors are the "Hay Field" (1843), "Bolton Abbey" (1847), and the "Welsh Funeral" (1850); among his oils, the "Vale of Clwyd" and "Peace and War." His son DAVID COX, the younger (1809-85), was also a water-colorist of repute, but not of the same ability as his father. Consult: Hall, *Biography of David Cox* (London, 1881); Solly, *Memoir of David Cox* (ib., 1875); Baldry, in *Masters of English Landscape Painting*, ed. by Charles Holmes (New York, 1903).

**COX, GEORGE ALBERTUS** (1840-1914). A Canadian capitalist and financier. He was born at Colborne, Ontario, and was educated at the Colborne grammar school. In early life he became an employee of the Montreal Telegraph Company, but removed to Peterboro in 1858, where he entered municipal life and lived for thirty years. He was mayor during seven terms. He engaged in many and various business enterprises with much success and rapidly amassed a considerable fortune, which was greatly increased after his removal to Toronto in 1888. In 1890-1907 he was president of the Canadian Bank of Commerce. He was also president of the Canada Life Assurance Company, and either president of, or a prominent director in, a large number of financial, manufacturing, and industrial concerns. In 1872 he was an unsuccessful Liberal candidate for the Ontario Legislature, and in 1887 he was again an unsuccessful Liberal candidate for the House of Commons. In 1896 he was appointed to the Senate.

**COX, SIR GEORGE WILLIAM** (1827-1902). A British divine and author. He was born at Benares, India, but was taken to England when eight years old. He studied at Rugby and Oxford, took orders in 1850, was appointed curate of Salcombe Regis, near Sidmouth, and later was rector of Scrayingham, York, from 1881 to 1897. He was a leading exponent of the sun-myth theory in comparative mythology, and published. *Poems, Legendary and Historical* (1850), with E. A. Freeman; *Life of St. Boniface* (1853); *Tales of Ancient Greece* (1868); *Latin and Teutonic Christianity* (1870); *Mythology of the Aryan Nations* (1870); *History of Greece* (1874); *The Crusades* (1874); *The Athenian Empire* (1876); *British Rule in India* (1881); *Lives of Greek Statesmen* (1885-86); *Life of Bishop Colenso* (1888); *The Church of England and the Teaching of Bishop Colenso* (1888). In 1891 he was chosen Bishop of Natal by the friends of Bishop Colenso (q.v.), but the archbishops and bishops of England refused him consecration.

**COX, HAROLD** (1859- ). A British editor and economist, educated at Jesus College, Cambridge. He lectured on political economy for

the Cambridge University Extension Society, made special investigation of farm-labor conditions in Kent and Surrey, and taught mathematics for two years in the Mohammedan College at Aligarh, India. After his return to England in 1887 he studied for the bar, but eventually gave up law for journalism as a profession. He was secretary of the Cobden Club (1899-1904), a member of Parliament (1906-09), alderman in the London County Council (1910-12), and published *Land Nationalization* (1892); *American Progress and British Commerce* (1902), and pamphlets on free trade and economics. In 1912 he became editor of the *Edinburgh Review*.

**COX, ISAAC JOSLIN** (1873- ). An American professor of history, born at West Creek, Ocean Co., N. Y., and educated at Dartmouth College and at the universities of Texas, Chicago, Wisconsin, and Pennsylvania. Between 1896 and 1906 he was instructor and vice principal at San Antonio (Tex.) Academy and instructor in history at the University of Cincinnati, where he was afterward assistant professor. In 1911-12 he was Shaw lecturer at Johns Hopkins University. Besides writing articles for the first edition (1903) of the NEW INTERNATIONAL ENCYCLOPEDIA, he published: *The Journeys of La Salle and his Companions* (2 vols., 1905); *The Early Exploration of Louisiana* (1906); *The Indian as a Diplomatic Factor in the History of the Old Northwest* (1910).

**COX, JACOB DOLSON** (1828-1900). An American soldier, politician, educator, and military historian. He was born in Montreal, Canada, was taken by his parents to New York City in 1829, graduated at Oberlin College in 1851, taught school at Warren, Ohio, in 1852, and there in the following year began the practice of law. From 1859 to 1861 he was a member of the State Senate, and in April, 1861, upon the outbreak of the Civil War, was appointed brigadier general of Ohio volunteers. He took an important part in the Kanawha Valley campaign under McClellan in the summer of 1861; commanded the Ninth Corps of the Army of the Potomac in the battles of South Mountain and Antietam in 1862; was promoted major general of volunteers, Oct. 6, 1862; commanded the Federal forces in West Virginia in the winter of 1862-63 and the military district of Ohio from April to December, 1863; was occasionally commander of the Twenty-third Army Corps during General Sherman's Atlanta campaign; was re-commissioned major general of volunteers in December, 1864, having been reduced from this rank in April, 1863, on account of the number of appointments being in excess of those provided for by law, and early in 1865 was sent to North Carolina to open communications with General Sherman, with whom he effected a junction at Goldsboro soon afterward. In 1866 he resigned from the service. After the close of the war he served as Governor of Ohio in 1866 and 1867, attracting attention by his opposition to the policy of his party (the Republican) on the question of negro suffrage; and from March, 1869, until December, 1870, when he resigned, was Secretary of the Interior in the cabinet of President Grant. He then again practiced law, was president of the Wabash Railroad for several years, was a Republican member of Congress from 1877 to 1879, was dean of the Cincinnati Law School from 1881 to 1897, and from 1895 to 1899 was

also president of the University of Cincinnati. He wrote many magazine articles, mostly on subjects connected with the Civil War and with microscopy, in which he attained considerable eminence, and published the following works on the military history of the Civil War: *Atlanta* (1882); *The March to the Sea: Franklin and Nashville* (1882); *The Second Battle of Bull Run as Connected with the Fitz-John Porter Case* (1882); *The Battle of Franklin* (1897). His *Military Reminiscences of the Civil War* (2 vols.) were published posthumously in 1900. Consult J. R. Ewing, *Public Services of Jacob Dolson Cox* (Washington, 1902).

**COX, JAMES M.** (1870- ). An American newspaper proprietor and public official, born at Jacksonburg, Ohio. After a public-school education he worked in a printer's office, taught a country school, then became a newspaper reporter, and was for a time on the editorial staff of the Cincinnati *Enquirer*. In 1898 he became proprietor of the Dayton *Daily News* and in 1903 also of the Springfield *Press-Republic*, thus forming the News League of Ohio. From 1909 to 1913 he was a member of Congress. He became Governor of Ohio for the term of 1913-15.

**COX, KENYON** (1856- ). One of the foremost American mural and figure painters, also a writer on art. He was born in Warren, Ohio, the son of Gen. J. D. Cox, who later became Governor of Ohio. He studied at the academies of Cincinnati and Philadelphia and for five years in Paris under Carolus Duran and chiefly under Gérôme. On his return to America he settled in New York, becoming a prominent leader of the younger element which founded the Society of American Artists; and for years he was an influential teacher in the Art Students' League (q.v.). He soon became known for his figure subjects and especially, among his fellow artists, for his nudes, painted in conservative academic manner. But his great reputation rests upon his mural paintings, which rank among the finest in America. Important examples of the latter are: "Venice," Bowdoin College, Me.; "Art and Science," in the Library of Congress, Washington; eight lunettes illustrating "The Progress of Civilization," in the State House, Des Moines, Iowa; "The Beneficence of the Law," in the Essex County Courthouse at Newark, N. J.; and paintings in the Appellate Court, New York, the State Capitol at St. Paul, the Citizens Bank and Federal Building in Cleveland, the Luzerne County Courthouse at Wilkes-Barre, Pa., and the Public Library at Winona, Minn. Among the best of his pictures are: "Hope and Memory," in the collection of J. D. Cox, Cleveland; "The Hunting Nymph," in the Lotus Club, New York; "A Book of Pictures" (1910, awarded the Isidor medal); "A Vision of Moonrise" (1911); "October Afternoon" (1913). In the Metropolitan Museum, New York, are his "Harp Player" and the portrait of Saint-Gaudens (1887), awarded a medal at the Paris Exposition. Cox is one of the most prominent representatives of the academic tendencies in American painting. His line is strong and vigorous, yet rhythmic, the figures show sound knowledge of anatomy, his composition is dignified, but the color is sometimes harsh. He received medals at various expositions, and was awarded the medal of honor for mural painting by the Architectural League in 1909. He was elected a member of the National Academy of Design

in 1903. His sound and scholarly writings on art subjects include: *Mixed Beasts* (1904); *Old Masters and New* (1905); *Painters and Sculptors* (1907); *The Classic Point of View* (1911).

**COX, LOUISE HOWLAND KING** (1865- ). An American painter, born in San Francisco. She studied at the New York Academy and Art Students' League under Kenyon Cox, the well-known figure painter, whom she married in 1892. Mrs. Cox ranks amongst the foremost American women artists. Her decorative work is similar to that of her husband and, if less robust, is more graceful. Good examples are her mural painting of "The Fates" (1894) and the decorative canvases "Psyche" (1893), "The Annunciation" (1895), and "Pomona" (1896, third Hallgarten prize). She is at her best, however, in her charming portraits of children, whom she portrays with a delightful naturalism. Good examples are "Master Austin Smithers" and "Lucile" (1910); "My Children" and "Goldilocks" (1911); "The Wonder Book" and "Mrs. Homer Saint-Gaudens and Child" (1913). She was elected a member of the National Academy of Design, and won, besides the third Hallgarten prize in 1896, a bronze medal at the Paris Exposition of 1900.

**COX, PALMER** (1840- ). An American illustrator and author, born in Granby, Province of Quebec. He lived for a time in California and began his career by writing for the *Golden Era* and other Western papers, but in 1875 went to New York City, where he still lives. Mr. Cox's productions are almost exclusively in the field of humorous fancy, the most widely known being his sprightly verses and drawings of the *Brownies*, whose experiences fill several volumes.

**COX, RICHARD** (1500-81). An English bishop born in Buckinghamshire. He was educated at Eton and Cambridge and was tutor to Prince Edward, who, when he became King, made Cox one of the Privy Council and King's almoner. In 1537 he had been made chaplain to Archbishop Cranmer and in 1542 to Henry VIII, and a member of the commission that nullified the marriage of Anne of Cleves. In 1549 he was made Dean of Westminster and one of the seven royal visitors who led Edward's attack on religious, educational, and charitable establishments. Mary put him in prison, but he escaped to Frankfurt, where he became the bitter opponent of John Knox. Elizabeth restored him to the see of Ely (1559), from which he resigned in 1580 after a quarrel with Elizabeth over a grant to Sir Christopher Hatton. He translated the Gospels, the Acts, and the Epistle to the Romans, for the Bishop's Bible, and helped compile the Book of Common Prayer.

**COX, SAMUEL** (1826-93). An English Baptist biblical expositor, born in London. He graduated at Stepney Baptist Theological College, London, in 1851; was pastor at Southsea (1852-54) and at Ryde, Isle of Wight (1854-59). He was compelled by throat trouble to stop preaching for a while, but was pastor in Nottingham from 1863 till 1888, when failing health compelled his resignation. He died at Hastings, March 27, 1893. His fame rests upon his biblical exposition and his connection with *The Expositor*, a monthly devoted to biblical topics, which he originated and whose first 20 volumes he edited (1875-84). Having become an advocate of Universalist views, he was obliged

to resign his position. His publications were very popular and merited their wide sale. Of them may be mentioned: *The Private Letters of St. Paul and St. John* (London, 1867); *The Quest of the Chief Good* (1868; rewritten as *The Book of Ecclesiastes, with a New Translation*, 1890); *An Expositor's Note-Book* (1872); *The Pilgrim Psalms* (1874); *Salvator Mundi* (1877) and *The Larger Hope* (1880), which two books on eschatology stirred up much controversy; *A Commentary on the Book of Job, with a Translation* (1880); *Expositions* (4 vols., 1885-99); *The Bird's Nest and Other Sermons for Children of All Ages* (1886); *The Hebrew Twins: A Vindication of God's Ways with Jacob and Esau* (London, 1894). Consult the prefatory memoir by his wife in the last-mentioned work.

**COX, SAMUEL HANSON** (1793-1880). An American clergyman, born at Rahway, N. J., of Quaker ancestry. He began to study law, but left it for theology, and was ordained a Presbyterian minister in 1817. Four years later he took charge of a church in New York City, where he was mobbed for his antislavery sentiments, his house and church being sacked. He was one of the founders of what is now New York University. In 1834 he became professor of sacred rhetoric in the theological seminary at Auburn, N. Y., and in 1837 pastor of the First Presbyterian Church in Brooklyn, where he remained until 1854, being professor of ecclesiastical history in Union Theological Seminary, and a leader of the "New School" Presbyterians. In 1854 his voice failed, and he resigned his pastorate. He wrote *Quakerism not Christianity* (1833) and *Interviews, Memorable and Useful* (1853).

**COX, SAMUEL SULLIVAN** (1824-89). An American politician and author, born in Zanesville, Ohio. He graduated at Brown University in 1846 and was later admitted to the bar, but forsook the law in 1853 to become editor of the *Ohio Statesman* at Columbus. For one year he was Secretary of Legation in Peru. He represented Ohio in Congress for eight years (1857-65), and New York, whither he removed in 1866, for 20 years (1869-85, and 1886-89). In 1885-86 he was Minister to Turkey. He was popularly known as the "letter-carriers' friend" in reference to legislation proposed by him for increase in their salary and the concession to them of a vacation with pay. A statue of him was erected by the letter carriers in New York City. Mr. Cox wrote and lectured a great deal, some of his works being: *Eight Years in Congress* (1865); *The Buckeye Abroad* (1851); *Why We Laugh* (1876); *Arctic Sunbeams* (1882); *Orient Sunbeams* (1882); *Three Decades of Federal Legislation* (1885); *Diversions of a Diplomat in Turkey* (1887). A glowing piece of descriptive writing published in the *Statesman* during his editorship won him the nickname "Sunset," which clung to him through life.

**COXAL/GIA** (Neo-Lat., from Lat. *coxa*, hip, Gk. *ἀλγος*, *algos*, pain), or **COXITIS**. An obsolete name of hip-joint disease. Inflammation, with or without suppuration, occurs in the joint, with the result that its usefulness is destroyed either from stiffness or necrosis.

**COXCIE**, kök'sé, or **COXIE**, MICHEL (1499-1592). A Flemish painter. He was born in Mecklin and studied with Barend von Orley in Brussels, spent many years in Italy, and

though probably not a pupil of Raphael, imitated him closely. He was the first Fleming to attempt life-size frescoes in the style of the Roman school, which gives historical importance to his decoration of the Santa Barbara Chapel in Santa Maria dell' Anima. He was appointed court painter by Philip II of Spain and commissioned to copy the altarpiece of the brothers Van Eyck (q.v.) in Ghent. Although his art is cold and rather unpleasing, he was something of an innovator, and his style is clearly defined. Good examples of his painting are in the Escorial and the Museums of Brussels, Antwerp, Madrid, Vienna, and Prague.

**COXCOMB**, köks'kôm, THE. A comedy by Beaumont, Fletcher, Rowley, and others (1612).

**COX'COX'**. The legendary Noah of the Mexican tribes, who with his wife escaped the Deluge. In its present form the legend shows probable Christian influence from early Spanish missionaries.

**COXE, ARTHUR CLEVELAND** (1818-96). An American prelate, second Protestant Episcopal Bishop of Western New York, son of Samuel Hanson Cox. He was born at Mendham, N. J., graduated at the University of New York in 1838, and at the General Theological Seminary in 1841, and in 1842 was ordained priest. Rector in Hartford, Conn. (1842-54), Baltimore, Md. (1854-63), and New York City (1863-65), he was in 1865 appointed Bishop of Western New York. In 1872 he visited Haiti, to establish churches and ordain clergy. He also founded the Christian Literature Company, of whose publications he edited a series of the Ante-Nicene Fathers. His writings include several volumes of verse, of which the *Christian Ballads* (1840; rev. ed., 1887) is the best known; and several theological works, such as *The Criterion* (1866), in opposition to the Tractarians, though he had been in sympathy with the earlier Oxford movement, *Apollo*, or *the Way of God* (1873); *The Institutes of Christian History* (1887).

**COXE, HENRY OCTAVIUS** (1811-81). An English scholar. He was born at Bucklebury and was educated at Oxford. From his appointment as underlibrarian at the Bodleian Library in 1838 until his death he devoted himself to the compilation of the colossal catalogue, comprising 723 folio volumes. In 1857 he was sent by the British government to inspect the libraries in the monasteries of the Levant, and in 1860 he became chief librarian of the Bodleian Library. His other important publications include Roger de Wendover's *Chronica sive Flores Historiarum* (5 vols., 1841-44); *Metrical Life of Edward the Black Prince* (written in French, by Chandos Herald), with a translation and notes (1842); Gower's *Vox Clamantis* (1850).

**COXE, TENCH** (1755-1824). An American economist, born in Philadelphia. He served in the Continental Congress (1788) and was appointed Assistant Secretary of the Treasury in 1789. In the same year he proposed the introduction of Sir Richard Arkwright's cotton-spinning frame into the United States. The extensive planting of cotton in the South was due chiefly to his initiative; for this reason he is frequently called the "father of the American cotton industry." Among his works on economic subjects are: *An Inquiry into the Principles for a Commercial System for the United States* (1787); *View of the United States*

(1787-94); *On the Navigation Act* (1809); *Statement of the Arts and Manufactures of the United States for the Year 1810* (1814).

**COXE, WILLIAM** (1747-1828). An English historian. He was born in London and was educated at King's College, Cambridge. In 1771 he took the curacy of Denham, but soon resigned to become the tutor of several young noblemen. With them he spent many years in travel, and with great industry collected information of all kinds, which appears in many volumes of travels and history, all of which are characterized by close observation, care, and research. In 1786 he became a vicar again. He was made prebend of Salisbury in 1791 and archdeacon of Wiltshire in 1804. One of his best-known works is his *History of the House of Austria from 1218 to 1792* (1807). He also wrote: *Memoirs of the Bourbon Kings of Spain from 1700 to 1788* (1813); *Memoirs of John, Duke of Marlborough* (1818-19); a *Life of Ouy*, published separately from his *Fables* (1897); *Memoirs of Sir Robert Walpole* (1798); *Memoirs of Horatio, Lord Walpole* (1802).

**COXIE, MICHAEL.** See COXCIE, MICHAEL.

**COXSWAIN** (also *cockswain*, from *cock*, from *OL*, Fr. *coque*, boat, probably from *ML concha*, small boat, from Lat. *concha*, Gk. *κόρυς*, *konché*, Skt. *śaṅkha*, shell + *swain*, AS. *sveinn*, from Icel. *sveinn*, OHG. *svein*, herdsman). A petty officer in the navy who has charge of a boat and crew in the absence of officers. In double-banked boats he steers, and has a small seat in the *coxswain's box*, or after part of the boat abaft the stern sheets. The coxswain of a steam launch or large motor launch always stands while steering. The steering station is forward, aft, or on deck, depending upon the size and type of boat. In single-banked boats the coxswain usually pulls the stroke oar. The steersman of a racing or other crew is also known as a coxswain.

**COXWELL, HENRY TRACEY** (1819-1900). An English aeronaut. He was born at Wouldham, near Rochester Castle, and was educated at the Chatham Military School. He invented a balloon from which aerial torpedoes could be discharged, and made hundreds of ascensions, the most important being that undertaken with Glaisher in 1862, when the balloon sailed to a height of seven miles. (See AERONAUTICS) During the Franco-German War he joined the aeronautic corps of the German Army. In 1845 he established the *Acrostatic Magazine*. Consult his *Life and Balloon Experiences* (1887-89).

**COYLE, ROBERT FRANCIS** (1850- ). An American Presbyterian clergyman, born in Rose-neath, Ontario. He got his early education in Canada, graduated at Wabash College in 1877, studied theology at Auburn Seminary, and was ordained to the Presbyterian ministry in 1879. He held pastorates at Fort Dodge, Chicago (1885-91), Oakland, Cal. (1891-1900), and Denver, and in 1903 was moderator of the General Assembly. He wrote: *Foundation Stones* (1887); *Workmen and the Church* (1896); a volume of sermons called *The Church and the Times* (1905).

**COYOTE**, *kl-ō'tē* or *kl'ōt* (Sp., from Mex. *coyotl*). The modified native Mexican name of the prairie wolf (*Canis latrans*), now universally adopted throughout the western United States. The coyote in several varieties is abundant almost everywhere from the Plains to the Pacific, south of central British Columbia, and

is famous for its monotonous and reiterated yelping at night. This more resembles the barking of a dog than the howl of the ordinary wolf, and an early name was "barking wolf." One thinks half a dozen are yelping in chorus as he listens to it. It generally travels in packs, like other wolves, but, unlike them, it never attacks human beings. It is of rather small size, about as big as a setter dog, of a light-reddish or yellowish-gray color, the longer hairs of the back tipped with black. The pelage is rather full and soft, the tail is bushy, the ears are upright, and the muzzle is slender and pointed. About 12 species are recognized by naturalists, while there are a number of subspecies or well-marked geographical races. Coyotes live in hollows among rocks, or take possession of old burrows in the ground, and usually produce four puppies in late spring, although the number varies from three to ten. They hunt chiefly in the dusk. They are very fleet of foot, and two or three by acting in concert will run down a pronghorn; they seek to detach and seize the fawns, however, rather than to pull down adults. Their food consists mainly of gophers, ground squirrels, mice, ground-nesting birds, and similar small animals; and they have become a great nuisance in the neighborhood of ranches and isolated settlements, especially in winter, by attacking sheep, poultry, calves, etc. To such an extent do they destroy sheep that many of the Western States offer a bounty for the scalp and forepaws. Adapting themselves thus readily to circumstances, and having extreme cunning in avoiding traps and poison, they survive among the sparser settlements of the West and in some regions increase rather than diminish. They will cross with the domestic dog, producing fertile hybrids; and the Indians were accustomed to induce such mixture of blood. This animal entered more largely than almost any other into the mythology and folklore of the aborigines, especially west of the Rockies. Consult: Ingersoll, *Wild Neighbors* (New York, 1897); Elliot, *Synopsis of Mammals* (Chicago, 1901); and especially Seton, *Life Histories of Northern Animals* (New York, 1909). See WOLF; and illustrations on Colored Plate of CANIDÆ and on Plate of WOLVES AND WILD DOGS with the article WOLF.

**COYPEL**, *kwä'pél'*. A family of French painters.—NOËL (1628-1707), the eldest, was a follower of LeBrun, in whose theatrical style he painted, though with more individuality and greater regard to color than most of his contemporaries. He was employed by Louis XIV on decorative work in Versailles, the Trianon, the Tuileries, and the Hôtel des Invalides; he also painted religious pictures and published several works on art. In 1672 he was appointed director of the French Academy in Rome, and in 1695 director of the Academy in Paris.—His son and pupil ANTOINE (1661-1722) became a member of the Academy at 20, enjoyed high protection at court, and was charged with important commissions by the King. He furnished many cartoons for tapestries, and his paintings are found in most French museums. His art marks the transition from the style of LeBrun to that of Watteau. His color is cold and hard, especially in his later works, and his manner artificial.—His half brother, NOËL NICOLAS (1690-1734), painted mythological and religious pictures and portraits in pastel.—CHARLES ANTOINE (1694-1752), son and pupil of Antoine

Coype, was the most celebrated of the family. He was admitted to the Academy at 21 and was appointed director in 1747. He painted religious pictures in many churches, and decorations for Versailles and the Trianon, but was most successful in his genre pieces. Modern critics reproach him with lack of originality, power, or charm. His discourses at the Academy, published in 1721, and theatrical pieces written for the court, procured him quite a literary reputation. Consult Caylus, *Œuvres des peintres* (Paris, 1910).

**COYPU**, koi-pōō' (native South American name), or NUTRIA. An aquatic rodent (*Myopotamus coypu*, or *Myocastor coypus*), widely common in South America. Its name in Chile is "coypu," and on the Pampas "quiya," but it is always called by Spanish-speaking people of education "nutria" ("otter"), by which name its fur is known in commerce. It is not an otter, however, but is nearly allied to the beaver, yet somewhat smaller, and with a ratlike tail. It is dull brown, with a grayish muzzle and bright red incisors; the nostrils are very high, allowing it to breathe with only the tip of the nose above water; and the teats are high on the flanks. When the beaver became scarce, the fur (nutria) of this animal was in great demand for making hats, etc., and the coypus were nearly exterminated, but with less demand and the protection of local laws they have again become numerous. It is thoroughly aquatic, dwelling preferably in the permanent ponds (lagunas) of the La Plata valley, and inhabiting burrows in the banks, where there are banks, or making a platform nest among the rushes. "Of an evening they are all out swimming and playing in the water, conversing together in their strange tones, which sound like the moans and cries of wounded and suffering men, and among them the mother coypu is seen with her progeny, numbering eight or nine, with as many on her back as she can accommodate, while the others swim after her, crying for a ride." For further interesting facts, consult Hudson, *The Naturalist on the La Plata* (London, 1875), *Proceedings Zoological Society* (ib., 1894). Semper, *Animal Life* (London and New York, 1881). See Plate of BEAVER, ETC.

**COYZEVOX**, kwā'z-vōks', ANTOINE (CHARLES ANTOINE) (1640-1720). A French sculptor. He was born in Lyons, studied with Lerambert, and also trained himself by careful study of the antique. He was admitted to the Royal Academy in 1676 and was employed by Louis XIV in decorating Versailles and the palace at Marly. His most notable works are many portrait busts and statues of the most famous men of the day. They include Richelieu, Mazarin, Bossuet, Condé the Great, Fénelon, Racine, Charles LeBrun, also Louis XIV, Louis XV, and Maria Theresa of Spain. Coyzevox also carved a number of memorials.

**COZENERS**, kūz'n-ērz, THE. A comedy by Samuel Foote (1774).

**COZENS**, kūz'nz, JOHN ROBERT (1752-99). An English landscape painter in water color. His father was one of the two natural sons of Peter the Great of Russia by a woman of Deptford. He traveled in Italy and the Tirol and left valuable drawings made on that tour. Towards the end of his life he became insane. In his day water-color landscapes were very conventional in drawing and dry in color. Cozens was one of the first to show the value of this medium in the poetical quality of his work,

and attained hitherto unseen atmosphere effects. His conception of nature ranks him as a precursor of the Impressionists. Turner and Constable owe much to Cozens and have spoken in terms of admiration of his landscapes. There are a number of them in the British and South Kensington museums, but the most famous in his day was "Hannibal Crossing the Alps" (1776), which cannot now be located.

**COZUMEL**, kō'sōō-māl'. An island off the east coast of the Mexican Province of Yucatan, in lat. 20° N. and extending east of long. 87° W. (Map: Mexico, P 7). It is about 40 miles long and about 15 miles wide. Its surface is low, and the coasts are bordered by reefs. There is a small Indian settlement at San Miguel. The chief industry is cattle raising. The island was discovered in 1518, and here in 1519 Cortés first landed.

**COZZENS**, kūz'nz, FREDERICK SWARTWOUT (1818-69). An American humorist, born in New York City. He became in early life a wine merchant, and later editor of the *Wine Press*. He had previously contributed humorous poems and articles to magazines, and in 1853 he issued his first volume, *Prismatics*, under the pen name "Richard Haywarde." Then came the *Sparrowgrass Papers*, his best performance, first published in the *Knickerbocker Magazine*, and in 1856 as a widely read volume. They dealt with the trials of a city man who undertakes to run a country home (near Yonkers), and although their humor is mild, they are still fairly readable. Three years later (1859) he published a volume of travel sketches, *Acadia; or, A Sojourn among the Blue Notches*. Soon after the war he failed in a business for which he had labored earnestly, especially by promoting the sale of native wines, and retired from Yonkers to Rahway, N. J. Of his other works only *Poems* (1867) and a *Memorial of Fitz-Greene Halleck* (1868) need be named.

**CRAB** (AS, *krabba*, lecl. *krabbi*, Ger. *Krabbe*). A crustacean of the order Decapoda and suborder Brachyura, characterized by the small size of the abdomen, which resembles a short tail curved under the thorax, all important viscera being included in the thorax. The term extends also to some of the suborder Anomura (purse crabs, hermit crabs, etc.), characterized by a condition of abdomen intermediate between that of the Brachyura and that of the Macrura, or long-tailed decapod crustaceans, such as the lobster, crayfish, etc. All the crabs, besides many other crustaceans, were comprehended in the Linnæan genus *Cancer*; but the number of species is very great, considerably more than 1000, and the Brachyura alone are now arranged in many genera and families.

These various crabs differ very much in the form of the carapace (the back), which in some is orbicular or nearly so; in some, much broader than it is long; in others, longer than broad; in some, prolonged in front into a kind of beak, etc.; also in its smoothness, or roughness with hairs, tubercles, or spines; in the length of the legs, etc. The eyes are compound, with hexagonal facets, and are elevated on stalks, which are generally short, but sometimes considerably lengthened, and which have the power of motion, so as to turn the eye in different directions. The first pair of limbs are not used for locomotion, but exhibit in great perfection the characteristic claws or pincers (*chelæ*) of the decapod crustaceans. Crabs are inhabitants of

almost all seas; most of them, however, are found chiefly near the coast. Some crabs inhabit fresh water, particularly in the warmer parts of the world; and others, known as land crabs, live among moist herbage, or burrow in sand or earth. Crabs are generally flesh or carrion eaters, though some forms seem to prefer a vegetarian diet. They are always active and are noted for running sideways rather than straight ahead. Some have the last pair of limbs expanded at the extremity into a broad blade for swimming, and some have even all the four pairs of limbs intended for locomotion thus expanded, and sometimes occur far out at sea.

LARVAL STAGES OF CRABS  
a, zoea stage, b, megalops stage.

Their development is accomplished by metamorphosis through succeeding stages. "In the crabs the nauplius stage (see CRUSTACEA) is passed through in the egg, and the young is hatched in the form of a peculiarly modified zoea, with an immense cephalothorax produced into spines, large stalked eyes, and a slender abdomen. This passes by successive molts into the megalops stage, which resembles an adult macruran [and] . . . passes by successive molts into the adult form."

Crabs, like all arthropods (see ARTHROPODA), molt or change their shell, not at fixed intervals or seasons, but according to the exigencies of their growth, the change being made with great frequency when they are very young, but rarely in advanced age; indeed, from the mollusks and other animals sometimes found adhering to the carapace, it is inferred that the same covering is sometimes worn for a number of years.

Crabs become interesting in the aquarium, from their readiness in seizing food, their activity in tearing and eating it, and their pugnacity. The number of specimens is apt, however, to be soon diminished by the stronger killing and eating the weaker. Crabs vary greatly in size and color, as might be expected from the great number of species and their wide distribution. The giant crab of Japan (*Macrocheira kæmpferi*), although only a foot across the disk, which is 18 inches long, has such long legs as occasionally to be 15 to 19 feet from tip to tip of the first pair. The great stone crab of Tasmania, which has short and very thick legs, has been known to reach a weight of over 30 pounds. On the other hand, many species of crab are only a fraction of an inch across. In color crabs vary from black to white, through all the colors of the rainbow. Shades of green, blue, and gray are perhaps the most common, but the brightest shades of red and yellow are by no means rare. The sexes of crabs are easily distinguished, as the females are usually larger, and their abdomens broader and more oval,

while males have the chelæ more powerfully developed—notably so in the fiddlers.

**Economic Importance of Crabs.**—These animals supply food for food fishes, are of great service as scavengers, and are used as human food in various parts of the world. In the United States the principal crab so used is the blue crab (*Callinectes hastatus*), hundreds of thousands of which are sent to market every year from the waters of Chesapeake Bay alone. The little pea crabs (*Pinnotheres*) often found in oysters (see COMMENSALISM) are regarded as a great luxury. In Europe the species most frequently used are those of the genus *Cancer*, especially the great *Cancer pagurus*, and there is no reason why the two eastern American species of this genus, the "rock" and "Jonah" crabs (qq.v.), should not be far more utilized as food than they are. To this group belong the principal edible crab of the American Pacific coast (*Cancer magister*), and others smaller which are eaten by the Chinese, etc. This species usually measures 7 to 9 inches in breadth of body and abounds from Alaska to Mexico, usually below low-tide level on sandy bottom. Crabs which have just shed their shell, and are covered only by a soft skin, are regarded as best and are called "shedders" or "soft-shelled."

The ways of fishing are various. Many are taken in wicker traps or "pots," baited with meat or offal; another common method is to sink shallow hoop nets of coarse material and mesh, which are baited and hauled up rapidly at intervals, bringing the crabs with them. Hand-line fishing, with bundles of meat to which the crabs cling until lifted out of water, is more a sport than a method of market fishing; but in the Gulf of Mexico trawls or "trot-lines" are set in several ways, and vast quantities of crabs are thus taken. They are kept for market in floating pens or "cars," and shipped alive packed in wet seaweed. They are also preserved by canning, etc. Consult Calman, "Crustacea" in Lankester's *Treatise on Zoology* (London, 1909) and Calman, *The Life of Crustacea* (New York, 1911).

**Fossil Forms.** With the exception of some doubtful genera (*Gitocragnon*, etc.) from later Paleozoic rocks, no unmistakable fossil crabs are known from deposits antedating those of Mesozoic age. Fossil crabs first appear in the Jurassic, where occur members of the family Dromiacea, much smaller than the modern species, such as the genus *Prosonop*, which continues into the Cretaceous. In the Upper Cretaceous *Dromiopsis* is the ancestor of *Dromia*, which latter appears in the Eocene and continues to modern time. Several other small genera of this same family are found in Cretaceous rocks, in which the family enjoyed its greatest expansion. The Raninoidea, with elongated carapaces, broadly truncated in front, began in the Upper Cretaceous, had its maximum in the Eocene, and has since then declined to the present. Large numbers of the Oxystomata, or round crabs, are found fossil in the Upper Cretaceous and Eocene rocks. The Oxyrhyncha, which at present are very abundant, have few fossil ancestors, and these are of small size. The arcuate crabs, of the family Cyclometopa, contain the largest number of fossil genera. They appeared in the Cretaceous, attained a great expansion in the Eocene, declined during the later Tertiary, and in modern times seem to be again on the increase. This family con

# TYPICAL CRABS

1. FIDDLER CRAB (*Gelasimus pugnax*).
2. HERMIT CRAB (*Eupagurus longicarpus*) in a shell of *Natica heros*.
3. HERMIT, out of its borrowed shell, showing reduced and defenseless posterior parts.
4. EASTERN EDIBLE or BLUE CRAB (*Callinectes hastatus*).
5. A DEEP-SEA CRAB (North Atlantic) its arms closed into a defensive box.
6. COCONUT CRAB (*Birgus latro*).
7. COMMON CRAB OF PACIFIC COAST (*Cancer magister*).
8. SPIDER CRAB (*Libinia emarginata*).

tains most of the modern genera, such as *Cancer*, *Carcinus*, *Portunus*, *Xantho*, *Neptunus*, *Panopæus*. Certain of these are of old age. *Xantho* began in the Cretaceous, had a representative (*Xanthopsis*) that is very common in the Eocene of England, France and Germany, and continued with little change to the present day. *Lobocarcinus*, with its broad, nodose carapace, deeply denticulate on the front margin, is a common and often beautifully preserved fossil crab from the Eocene rocks of Württemberg, Germany, and Cairo, Egypt. The Catometopa, or quadrangular crabs, have many ancestors of Eocene age. The first land crab of the modern genus *Gecarcinus*, and the first fresh-water crab, also of a modern genus, *Telphusa*, both members of this family, are found in the Miocene deposits of Oeningen, Germany.

From the above remarks it will be seen that all the families of modern crabs, with the single exception of the Oxyrhyncha, were initiated during Cretaceous time; that they expanded rapidly so that their periods of maximum evolution were during the Eocene, when indeed crabs formed the dominant feature of the fauna in certain seas; that during the Miocene the general expansion was less than before, although certain genera were extremely abundant in particular localities; and that those of the Pliocene are mostly of recent species. During the present time the crabs seem to be enjoying another period of expansion, but along different lines from those of the Eocene evolution. The best collecting grounds are found in the Eocene deposits of the south of England; the nummulitic limestones of southern France, Switzerland, southern Germany, and of northern Italy, and those of central India; and the Miocene beds of Italy, Austria, Hungary, and Germany.

Consult: Zittel and Eastman, *Textbook of Paleontology*, vol. i (London and New York, 1900); Zittel and Barrois, *Traité de paléontologie*, vol. i (Paris, Leipzig, and Munich, 1887); Bell, "Monograph of the Fossil Malacostracous Crustacea of Great Britain," *Paleontographical Society Monographs* (London, 1857-62); Ortmann, "Das System der Decapodenkrebsen," *Zoologische Jahrbücher*, vol. ix (Jena, 1896); Lorenthey, "Ueber die Brachiuren der palaologischen Sammlung des Bayerischen Staates," *Természettudományi Füzetek*, vol. xxi (Budapest, 1898). See CRUSTACEA, and special articles under names of various crabs, as KING CRAB; SPIDER CRAB; ETC.

**CRAB APPLE.** See APPLE.

**CRABB, GEORGE** (1778-1851). An English lawyer and author, born at Palgrave (Suffolk). He was educated at Oxford, admitted to the bar at the Inner Temple (1829), and practiced his profession in London. For a time, also, he was instructor in the classics in a Yorkshire school. His best-known work is the *Dictionary of English Synonyms* (1816; 10th ed., 1849), a careful, if not always scholarly, reference book, which has appeared in numerous editions. Others of his publications are a *History of English Law* (1829); a laborious *Digest and Index of All the Statutes at Large* (4 vols., 1841-47); *Mythology of All Nations* (1847).

**CRABBE, GEORGE** (1754-1832). An English poet. He was born, Dec. 24, 1754, at Aldeburgh, Suffolk, where his father was collector of salt duties. Crabbe showed early a love for books, with a bias towards poetry. After some schooling he was apprenticed first to a village doctor

and then to a surgeon. By 1772 he was contributing verses to *Whoe's Magazine*, and two years later he published at Ipswich a moral poem entitled *Inebriety*. At this time he was in love with Sarah Elmy, whom he addressed in his poems as "Mira" and whom he afterward married. Continuing his studies in London, he began the practice of medicine in the place of his birth. Disliking a profession in which he was not succeeding, he went to London in 1780 to begin a literary career. In that year appeared a poem called *The Candidate*, which was received coldly. Much distressed, he called upon Burke, who after reading some of Crabbe's verses took him under his protection, getting Dodsley to publish *The Library* (1781). While staying with Burke at Beaconsfield, he began his best-known poem, *The Village* (published 1783). At Burke's suggestion Crabbe took orders. After a short period as rector of Aldeburgh, he was appointed chaplain to the Duke of Rutland (1782) and thus made Belvoir, Leicestershire, his home. After occupying several other church livings, he was given that of Trovbridge, Wiltshire (1814), where he remained till his death (Feb. 3, 1832). Besides the poems already cited, Crabbe wrote: *The Newspaper* (1785); *The Parish-Register* (1807); *The Borough* (1810); *Tales in Verse* (1812); *Tales of the Hall* (1819). Crabbe was a popular poet in his own time, numbering friends among the greatest. He was lavishly praised by Dr. Johnson, Scott, Wordsworth, and Byron. Jane Austen, charmed with humor akin to her own, declared that, were she ever to marry, she could fancy herself Mrs. Crabbe. Though his reputation has declined, he nevertheless occupies an important place in the progress of English poetry. Crabbe's stern descriptions of English life in old East Anglia were in marked contrast to Goldsmith's idyllic scenes and led the way to the realism of Wordsworth. What he lacked was the imagination necessary to give lasting interest to his subject. His great excellence is the directness with which he portrays the tragic life of men and women whom he knew and the scenes in which they lived. Consult: *Works*, with memoir, by his son G. Crabbe (8 vols., London, 1834-35; 1 vol., 1901); selections from poems, by Lamplough (ib., 1888), and by Holland (ib., 1899); Stephen's essay in *Hours in a Library* (London, 1876); *Readings in Crabbe* (selected by Edward Fitzgerald, London, 1882); Courthope's essay in *Ward, English Poets* (ib., 1884); the *Life*, by Keble (ib., 1888); Ainger, *Crabbe*, in "English Men of Letters Series" (New York, 1902); René Huchon, *George Crabbe and his Times* (1907), trans. from the French by F. Clarke. An excellent recent edition of the *Works* is that of Ward (1906) in *Cambridge Press Classics*.

**CRAB-EATER**, or COBIA. See SERGEANT FISH.

**CRAB-EATING DOG, RACCOON', ETC.** See DOG; RACCOON; ETC.

**CRABETH**, krá'bét, DIRK and WOUTER. Dutch painters on glass. They were brothers, born at Gouda, in South Holland, and they flourished in the latter half of the sixteenth century. As the brothers worked together and were the most famous glass painters of their time, they cannot be separated in biography. Very little is known of their lives, but they executed a number of excellent works in the churches of Belgium, France, and Italy. Their chief works are

13 of the 46 colossal windows of the great church at Gouda. Among the best of these are the "Baptism of Christ" and "John the Baptist Preaching," by Dirk, and the "Nativity" and the "Sacrilege of Heliodorus," by Wouter. The latter is superior in drawing and composition but Dirk excels in brilliancy of color. The works of both show a somewhat mannered imitation of the Italian, but they still retain much of the brightness of the mediæval coloring. Dirk died in 1577; his brother about 1590. Consult Westlake, *History of Design in Painted Glass*, vol. iv (London, 1894).

**CRAB GRASS.** A name applied to *Panicum sanguinale*, also known as *Digitaria sanguinalis*, an annual grass common throughout many parts of the United States. It is frequently seen to spring up in fields after the period of cultivation has passed. It grows to a height of 2 to 3 feet, bearing at the top 3 to 12 spreading purplish spikes which carry the flowers and seed. In many places it is considered a weed, but in the South it is valued for the hay it yields as well as for pasturage. The hay must be cured without rain falling upon it or its value is greatly impaired. It ranks close to Bermuda grass in value and in the cheapness with which a crop may be produced. *Eleusine indica* is sometimes called crab grass.

**CRABIER**, krá'byá' (Fr., crab-eater). The name in the French West Indies and Jamaica for several herons, especially the common night herons (*Nycticorax*). See NIGHT HERON.

**CRAB'S EYES.** See ABBR'S; CONCRETION.

**CRAB SPIDER.** A spider of the family Thomisidae, so named on account of the short, broad body and the fact that, like a crab, it runs more successfully sideways or backward than forward. These spiders spin no web, but await their prey hidden among foliage, and are colored in harmony with their background; but a few species are bright-colored and hide in flowers. The most common American form (*Uzumena rufa*) is milk white, occasionally with light-crimson markings. Another species (*Philodromus vulgaris*) eats house flies almost exclusively. Consult Emerton, *The Common Spiders of the United States* (Boston, 1902), and Fabre, *The Life of the Spider*, trans. by De Mattos (New York, 1913). Compare BIRD SPIDER.

**CRAB'S PLOVER.** A singular shore bird (*Dromas ardola*) nearly related to the oyster catchers, but set apart in a family, Dromadidae, of its own, which is to be found sparingly on the coasts and islands of the Indian Ocean. "Its habits remind us both of the plovers and the terns, and so do the unusually large eggs," but in India, according to Hume, it nests in burrows in sand hills.

**CRABTREE, CHARLOTTE** (1847- ). An American actress, known as Lotta. She was born in New York and when a child of six began her career in California. After starring for a time in the West, she came again to New York about 1860. In 1867, as Little Nell and the Marchioness in a dramatization of *Old Curiosity Shop*, she made her first great impression there and became a popular favorite. Her success was entirely due to her personal charm. Critics found little to approve in the pieces in which she appeared, such as *The Little Detective*, *Zip*, *Musette*, and *The Firefly*, but her stage appearance was characterized by a naturalness and grace which won the hearts of the

audience. She retired from the stage, still unmarried, in 1891, having acquired a fortune. Consult Welch, in McKay and Wingate's *Famous American Actors of To-Day* (New York, 1896), and Clapp and Edgett, *Players of the Present*, Dunlap Society Publications (ib., 1899).

**CRACKED HEELS.** See HORSE.

**CRACKER.** See BISCUIT.

**CRACKERS.** A name given in the southern part of the United States to the poor and ignorant whites, probably because of their usual diet, which is cracked corn ground into a coarse meal. The term "corn-crackers" is employed in the same sense.

**CRACKER STATE.** Georgia. See STATES, POPULAR NAMES OF.

**CRACK'LIN**, or **CRACKLE WARE.** A kind of china ware, the glazing of which is purposely cracked in the kiln, as an ornament, the effect being produced by a glaze which tends to contract in the burning more rapidly than the vessel itself. This ware is produced for the most part in China and Japan, but it has also been made at a pottery at Dedham, Mass., where two varieties of crackle ware are made. Both have a gray body, resembling true porcelain and are fired at a high temperature. To one of these various colored glazes are applied, ranging through various shades of red, green, and olive, while the other, the gray crackle ware, differs only in color and is usually decorated in blue. Consult "American Art Pottery" in *Special Reports of the Census Office: Manufactures, part iii*, 1905 (Washington, 1908).

**CRACOW**, krá'kó (Pol. *Kraków*, Ger. *Krakau*, Fr. *Cracovie*, Lat. *Cracovia*, *Carodunum*; said to be named after its founder, *Krakus*, a legendary Slavic chief). The ancient capital of the Kingdom of Poland and residence of the Polish kings, now a fortified city of the Austrian Crown-land of Galicia (Map: Austria, F 1). It is situated on the left bank of the Vistula, at its confluence with the Rudowa, about 10 miles from the frontier of Russian Poland and 200 miles north-east of Vienna. Cracow, with its numerous churches, towers, and old castle, presents an imposing aspect from without. It consists of the inner town and a number of suburbs. The old walls surrounding the inner town have been demolished, and promenades laid out on their site. Cracow is one of the oldest cities of Poland (according to tradition, a stronghold was built here about 700 A.D.), and it bears the marks of its age in its imposing buildings as well as in its general appearance. The city has about 40 churches, scarcely more than half the number it formerly had, and about 25 convents. The most important church is the Stanslaus Cathedral, a Gothic structure, situated near the castle. It was erected under Casimir the Great, being consecrated in 1359. Here the Polish kings were crowned and here are they buried, together with many national heroes, including Sobieski, Poniatowski, and Kosciuszko. Also the remains of St. Stanislaus, the patron saint of the Poles, are said to rest here. The church is also adorned with numerous monuments, several of them by Thorwaldsen, and with notable paintings and other objects of art. The church of St. Mary, a Gothic basilica, was founded early in the thirteenth century and has been rebuilt several times. It contains a magnificent high altar by Veit Stoss and a number of monuments. Besides these churches there are a number of other very interesting mediæval ones. Among the

interesting secular buildings is the former royal castle, situated on a broad hill at the southwestern end of the town; it was built in the thirteenth century (and subsequently enlarged) and suffered greatly from conflagrations. Until 1610 it was the residence of the Polish kings; from 1846 it was used as a barracks and military hospital, but it is now restored. The old cloth hall, dating from the thirteenth century, is now used as an art museum, and contains paintings by Polish artists, such as Matejko, Siemiradzki, and others. In front of the cloth hall is a bronze statue of Mickiewicz, one of Poland's greatest poets. Among other notable buildings and historical monuments are the old and new theatres and the Rondell, a relic of the old fortifications. The chief educational institution is the famous university, styled the Jagellonian University, founded by Casimir the Great in 1364. It developed very rapidly and eventually became the intellectual centre of Poland. It has faculties of jurisprudence, medicine, philosophy, and theology, with an attendance (1911) of 2805 students. The university library contains over 300,000 volumes, besides numerous manuscripts, engravings, ancient documents, etc. Attached to the university are also an observatory, a botanical garden, a natural-history museum, and a number of other institutions. The university occupies a splendid Gothic building erected in 1881-87; the library is housed in the old fifteenth-century buildings. Among other prominent educational establishments are the Royal Academy of Sciences, and the art school (until 1893 under the supervision of Matejko), several seminaries, and a number of artistic and literary societies. The Czartoryski Museum contains a collection of sculptures and antiquities and a fine picture gallery, with examples of the Italian and Dutch schools. Cracow remains the intellectual centre of the Polish nation.

There are manufactures of machinery, textiles, leather, chemicals, etc., but industrially Cracow has not greatly developed. It is more important for its trade in grain, timber, salt, textiles, and cattle. In the vicinity of the city is situated Kosciuszko Hill, a mound 65 feet high, erected in 1820-23 by the residents of Cracow, in honor of Kosciuszko, and since converted into a fort. The fortifications of Cracow are very extensive. Eight miles southeast of Cracow is Wieheczka, famous for its salt mines. Across the Vistula from Cracow is the town of Podgórze, with 22,232 inhabitants. In 1900 the city had 91,323 inhabitants, the census of Dec. 31, 1910, returned 151,886. Of the latter, the vernacular of 133,158 was Polish; Roman Catholics numbered 116,656; Jews, 32,321. In 1912 Plaszów (pop., 2255) was annexed to Cracow.

Cracow rose into importance in the Middle Ages as the seat of a bishopric and a centre of commerce and trade, its prosperity being enhanced by the influx of German immigrants. It suffered terribly at the hands of the Tatars in the thirteenth century. It became the capital of Poland early in the fourteenth century, and after having been superseded by Warsaw in 1610, it still remained, until 1764, the place where the Polish kings were crowned and buried. It later became exceedingly impoverished, so that at the end of the eighteenth century its population was only about 10,000. In 1655 and 1702 the town was taken by the Swedes. It was the starting point of the rising of the Poles for

independence under Kosciuszko in 1794, and came into the possession of Austria at the third partition of Poland, in 1795. From 1809 to 1815 Cracow formed a part of the Duchy of Warsaw. The short-lived Republic of Cracow, established at the Congress of Vienna in 1815, under the protectorate of Russia, Prussia, and Austria, was the last remnant of an independent Poland. It consisted of the city of Cracow and some adjacent territory, with a total population of about 140,000. The participation of a portion of the population in the Polish uprising of 1830 gave Russia an opportunity for military occupation. After that Cracow was repeatedly occupied by foreign troops. The little republic took a leading part in the Polish insurrection of 1846. The patriots were at first successful, but their overthrow soon ensued, and Cracow was annexed to Austria in the same year. In 1849 it was incorporated with Galicia. Cracow remains to the present day a great focus of Polish national life.

**CRACOW, UNIVERSITY OF.** See CRACOW.

**CRADDOCK, CHARLES EGBERT.** The nom de plume of Mary N. Murfree (q.v.), the Southern novelist.

**CRADLE OF LIBERTY, THE.** The name popularly given to Faneuil Hall, Boston, as the scene of early popular protests against British rule.

**CRADOCK, krád'ok, SIR.** See CARADOC.

**CRAFTON.** A borough in Allegheny Co., Pa., 4 miles west of Pittsburgh, on the Pittsburgh, Cincinnati, Chicago, and St. Louis Railroad (Map: Pennsylvania, B 6). It is in a coal-mining and oil district. Pop., 1900, 1927, 1910, 4583.

**CRAFTS, JAMES MASON (1839- ).** An American chemist. He was born in Boston and received his education at the Lawrence Scientific School of Harvard. In 1859 he went to Germany and studied at the Academy of Mines of Freiberg and at the University of Heidelberg. At the latter institution he acted for some time as private assistant to Bunsen. In 1861 he went to Paris, and there, in Wurtz's laboratory, he first met Charles Friedel, in conjunction with whom he later carried out some of his most brilliant researches. In 1865 he returned to the United States, and, after devoting some time to mining, accepted the position of head professor of chemistry and dean of the faculty at Cornell University, where he remained until 1870. During the following four years he acted as professor of chemistry at the Massachusetts Institute of Technology, but in 1874 took leave of absence, joined Friedel in Paris, and devoted himself exclusively to scientific research. His investigations were mainly in the field of organic chemistry, but his name is connected also with many interesting achievements in physics and in physical chemistry. He invented a new hydrogen thermometer; measured the densities of iodine at very high temperatures; demonstrated an interesting regularity in the variation of the boiling points of chemically allied substances with the external pressure; prepared a number of new compounds of the element silicon, which are interesting because of their chemical resemblance to the corresponding compounds of carbon; and also prepared new compounds of arsenic. But his most important achievement was the discovery, jointly with Friedel, of one of the most fruitful synthetic methods in organic chemistry. Hundreds of new carbon compounds

have been brought into existence by this method, which is based on the catalytic action of the chloride of aluminum.

In recognition of Crafts's services to science, the French government made him a chevalier of the Legion of Honor (1885), and the British Association for the Advancement of Science made him one of its corresponding members. In 1891 he again returned to this country, and from 1892 to 1897 acted as professor of organic chemistry at the Massachusetts Institute of Technology. In 1898 he became the president of the institute, and in the same year Harvard University conferred upon him the honorary degree of Doctor of Laws. In 1900, however, he resigned the presidency of the Institute of Technology, and again turned to the investigation of problems in organic and physical chemistry. The numerous results of Dr. Crafts's researches were published in various scientific periodicals, mainly foreign. He also wrote a textbook of *Qualitative Analysis* (1869, and several later editions).

**CRAFTS, WILBUR FISK** (1850- ). An American clergyman. He was born in Fryeburg, Me.; graduated at Wesleyan University in 1869 and at the Boston University School of Theology in 1872; held various positions in the Methodist Episcopal church, and in 1880 became a Congregational minister. From 1883 to 1888, however, he was the pastor of the First Union Presbyterian Church of New York. He conducted an International Sunday-School Parliament at the Thousand Islands in 1876-77, wrote many books for the Sunday school, and founded the American Sabbath Union in 1889 and the International Reform Bureau in 1895. He also published: *Must the Old Testament Go?* (1883); *Successful Men of To-Day* (1883); *The Sabbath for Man* (1885); *The March of Christ down the Centuries* (1902); *That Boy and Girl of Yours* (1905); *Internationalism* (1908); *World Book of Temperance* (1908); *Prohibition Hand Book* (1911).

**CRAFTSMAN, THE.** A powerful journal organized in 1726 by Bolingbroke and Pulteney, with Nicholas Amhurst, who conducted it under the name of "Caleb D'Anvers of Gray's Inn." It was the organ of the Opposition against Sir Robert Walpole.

**CRAIG MARTIN**, or **ROCK SWALLOW.** A swallow (*Hirundo rupestris*), closely allied to the bank swallow (*q v*), which is found from Portugal eastward to China in the breeding season, migrating to the tropics for the winter. It frequents mountains and rocky river banks among hills, but does not ascend to Alpine regions. It builds in niches of the rocks a large, open-topped nest of mud, occasionally (as in the villages of the Pyrenees) placing this on the timbers of buildings or among ruins, and lays profusely speckled eggs. "The general color of the adult bird is a light ashy brown above, the lower parts being creamy buff, and the tail feathers are dark brown, the central and outer pairs being conspicuously spotted with white." Consult Sharpe and Wyatt, *Monograph of the Hirundinidae* (London, 1885-94).

**CRAIG, KRIG, CHARLES FRANKLIN** (1872- ). An American army officer and bacteriologist. He was born in Danbury, Conn., graduated from the Yale Medical School in 1894, was appointed acting assistant surgeon in the United States army in 1898, and in 1908 became captain and assistant surgeon. Thereafter as biologist and bacteriologist he served in army hospitals at

Chickamauga Park, Ga., Fortress Monroe, Havana, the Presidio, Cal., and Manila. In 1896-97 he was a member of the Army Board for the Study of Tropical Diseases; after 1909 he was assistant curator of the Army Medical Museum in Washington, at the same time acting as instructor in clinical microscopy and bacteriology at the Army Medical School in Washington; and in 1910-11 he was also assistant professor of bacteriology in the medical department of George Washington University. He published: *The Estivo-Autumnal Malarial Fevers* (1901); *The Malarial Fevers and the Blood of Protozoa of Man* (1909); *The Parasitic Amœbæ of Man* (1911); also "Malarial Fevers," in Osler's *Modern Medicine* (1907); "Parasitic Disease," in Hare's *Modern Treatment* (1911).

**CRAIG, EDWARD GORDON** (1872- ). An English actor, producing manager, and writer on the theatre, the son of Ellen Terry. He was born near London, played his first part in a London theatre when only six years old, and appeared again in Chicago when he was 13; but his regular début was made in 1889 under Sir Henry Irving, his mother appearing in the same performance. He continued with Irving till 1897, when he left the stage and devoted himself to the study of drawing and wood engraving. In 1900 he began a series of operatic and theatrical productions in which he put in practice some novel ideas in regard to scenery and the mechanical details of stage management. His success with these innovations led him to devote his time wholly to the art of production, and in 1913 he founded a school in Florence, Italy, for the dissemination of his theories of theatrical art. He published, besides numerous magazine articles: *The Art of the Theatre* (1905); *On the Art of the Theatre* (1911); *Towards a New Theatre* (1913).

**CRAIG, FRANK** (1874- ). An English painter and illustrator. He was born in 1874 in Abbey Wood (Kent), and studied at the Royal Academy under Edwin Abbey. He began as a painter of modern English life and contemporary history, such as the Boer War, and as an illustrator for Kipling's poems and for the *London Graphic* and other magazines. In 1905 he joined the new Pre-Raphaelite movement, and thereafter painted historical pictures full of expressive figures and quaint costumes, in their general color scheme often resembling Gobelin tapestries. Good examples are: "The Heretic" (1906, National Gallery, London); "The Maid" (1907, Luxembourg); and "The Meeting House of Nonconformists" (1908). Among his more recent work the curiously characteristic portraits of Sir John Jardine and Major General Douglas Scott (1910) deserve mention. A good example of his early style is the "Communion on the Velt" (1900, Durban Museum, South Africa).

**CRAIG, JAMES ALEXANDER** (1855- ). An American Semitic scholar, born at Fitzroy Harbor, Ontario. He was educated at McGill, Yale, and Leipzig universities, was instructor and adjunct professor at Lane Theological Seminary (1886-90), professor of Old Testament literature and exegesis at Oberlin Theological Seminary (1891), and, after 1893, professor of Semitic languages and literatures and Hellenistic Greek at the University of Michigan. In 1904 he was a member of the Congress of Arts and Sciences at St. Louis. Besides editing *The Semitic Series of Handbooks* his publications in-

clude: *Inscriptions of Salmanassar, King of Assyria*, 859-826 B.C. (1887); *Metrical Translation of the Epic of Ishtar*; *Hebrew Word Manual* (1890); *Assyrian and Babylonian Religious Texts* (2 vols., 1895-97); *Astronomical-Astrological Texts of Babylonians* (1899).

**CRAIG, SIR JAMES HENRY** (1748-1812). An English soldier, born in Gibraltar, son of the Judge-Advocate-General there. In 1763 he was gazetted an ensign, and in 1771 was appointed captain in the Forty-seventh Foot. He accompanied his regiment to America, was wounded at Bunker Hill, in 1776 was transferred to Canada, and in 1777 was at the capture of Fort Ticonderoga. General Burgoyne before Saratoga entrusted him with dispatches to England. He was promoted to be major in the Eighty-second, proceeded to Nova Scotia, and in 1781 served under Lord Cornwallis in North Carolina. In 1795, having then risen to the rank of major general, he was placed in command of the expedition to the Cape of Good Hope. Aided by Rear Admiral Elphinstone and Major General Clarke, he obtained the surrender of the colony on September 14. He went in 1797 to India; was promoted lieutenant general in 1801; and in 1805, as a local general in the Mediterranean, landed with 7000 troops at Castellamare, with orders to cooperate with the Russian forces under General Lacy in an attack upon the French. After Austerlitz he withdrew to Sicily. In 1807 he was appointed Governor General of Canada. After a somewhat vexed administration he resigned in 1811, and in 1812 was promoted to be general.

**CRAIG, JOHN** (1512-1600). A preacher of the Scottish Reformation. He was born in Aberdeenshire and educated at St. Andrews. He entered the Dominican Order, but soon fell under the suspicion of heresy and was cast into prison. On his release (1536) he traveled on the Continent, and after some time was, through Cardinal Pole's influence, made novice master in the Dominican convent at Bologna and later was rector. While here Calvin's *Institutes* fell in his way and converted him to Protestant doctrines. He was brought before the Inquisition and sentenced to be burnt—a fate from which he was saved by the mob, on the death of Pope Paul IV, breaking open the prisons of Rome. Craig escaped to Vienna and obtained favor at the court of Maximilian II; but the Pope demanded his surrender as one condemned for heresy. The Emperor, however, instead of complying with the request, gave Craig a safe-conduct out of Germany. He now returned to Scotland (1560) and was appointed the colleague of John Knox in the parish church of Edinburgh. Thinking the marriage of Queen Mary and Bothwell contrary to the Word of God, he boldly refused to proclaim the banns, but afterward yielded under protest. In 1572 Craig was sent "to illuminate the dark places" in Forfarshire until 1579, when he was appointed chaplain to King James VI. He now took a leading part in the affairs of the Church, was the compiler of part of the *Second Book of Discipline*, and the writer of the national covenant signed in 1580 by the King and his household. He was a man of great conscientiousness and was not slow to oppose the proceedings of the court when he deemed them contrary to Scripture and to speak wholesome but unpleasant truths to majesty itself. He died Dec. 12, 1600. Consult the black-letter facsimile reprint of Craig's *Catechisms*

(Edinburgh, 1885), with introduction by T. Graves Law.

**CRAIG, KATHERINE L.** An American educator. She attended Missouri Valley College, was elected superintendent of public instruction of Colorado in 1904 (re-elected 1906), and became field secretary of Colorado Woman's College in 1909. Besides annotating the school laws of Colorado and compiling *Arbor Day*, *Flag Day*, and *Washington and Lincoln Day* books for the public schools, she is author of *Primary Geography* and a novel, *Judge Greyburn and Kathlene Lee* (1902).

**CRAIG, SIR THOMAS** (1538-1608). A Scottish lawyer, author, and poet. Educated at St. Andrews and in Paris, he passed as advocate at the Scottish bar in February, 1563, and was appointed justice depute. He gained the favor of James VI, who, notwithstanding his modest and persistent refusal, created him a knight in 1603. Besides some much-admired Latin verse and prose, he wrote *Jus Fœdiale* (ed. Burnet, 1655; new ed., with notes and corrections by James Baillie, 1766). This learned work is still an authority on feudal law.

**CRAIGENPUTTOCK**, krä'gen-put'tök. A farm in the southwestern part of Dumfriesshire, Scotland, situated 12 miles north of Castle Douglas and celebrated as the residence of Thomas Carlyle. It belonged to Jane Welsh before her marriage to the author. The Carlyles lived there most of the time between 1828 and 1834. Much of Carlyle's writing was done at Craigenputtock, and there are frequent references to it in his published correspondence. Consult "Homes and Haunts of Carlyle," in *Westminster Gazette* (London, 1895).

**CRAIGHILL**, krä'g'il, WILLIAM PRICE (1833-1909). An American military engineer, born at Charlestown, W. Va. He graduated in 1853 at the United States Military Academy; in 1854-55 superintended the building of Fort Sumter, and in 1858 that of Fort Delaware, and was for several years an instructor at the academy. In 1863 he constructed the defenses of Pittsburgh and in 1865 was brevetted a lieutenant colonel for service in the defense of Cumberland Gap. He was promoted to the rank of major, and from 1865 to 1867 was in charge of the defenses of Baltimore harbor. Subsequently he was concerned with several public works, such as the improvement of the Potomac River (1870-74) and the Delaware River (1873). He was chief of engineers of the United States army, with the rank of brigadier general, from 1895 until his retirement at his own request in 1897. In 1894 he was president of the American Society of Civil Engineers. His publications include an *Army Officer's Pocket Companion* (1862) and a translation of Dufour's *Cours de tactique* (1863).

**CRAIGIE**, krä'g'é, PEARL RICHARDS. See HOBBS, JOHN OLIVER.

**CRAIGLEITH** (krä'gléth') **STONE**. A siliceous sandstone belonging to the Carboniferous series, quarried at Craigleith, near Edinburgh. It is largely used in that city for building purposes, for which it is admirably adapted by its purity, durability, and the ease with which it can be wrought.

**CRAIK, KRÄK, DINAH MARIA** (1826-87). An English novelist, better known as Miss MULOCK. She was born at Stoke-upon-Trent, Staffordshire. In 1849 she published *The Ogilvies*, her first novel, and rapidly afterward: *Olive* (1850); *The Head of the Family* (1851); *Alice Lear-*

mount (1852); *Agatha's Husband* (1853; 6th ed., 1865); *John Halifax, Gentleman* (1857); *A Life for a Life* (1859); *Christian's Mistake* (1865); and a great number of short papers. A pension of £50 was granted to her in 1864. In 1865 she married George Lillie Craik. Among her later works is *Sermons Out of Church* (1875). Her literary reputation rests chiefly upon *John Halifax, Gentleman*, a classic picture of middle-class English life, which had a remarkable success and appeared in frequent later editions. Some of her *Poems of Thirty Years, New and Old* (1881), such as "Douglas" and "Philip, my King," have been popular. She wrote several stories for her own children that ran through many editions. These include *The Adventures of a Broseine* (1872; new ed., 1911), and *The Little Lame Prince* (new ed., 1909).

**CRAIK, GEORGE LILLIE** (1798-1866). An English miscellaneous writer. He was born at Kennoway, Fifeshire, and was educated for the Church at St. Andrews University; but, preferring a literary career, he went to London in 1826. His first work of importance was the *Pursuit of Knowledge under Difficulties* (1830-31), forming part of the series of publications issued by the Society for the Diffusion of Useful Knowledge. He also contributed largely to the *Penny Magazine* and the *Penny Cyclopaedia*. In 1837 Craik became editor of the *Pictorial History of England*, some of the most valuable chapters of which were written by himself, and afterward enlarged and republished separately as independent works. Such are his sketches of the *History of Literature and Learning in England from the Norman Conquest to the Present Time* (1844-45), and his *History of British Commerce* (1844). In 1846 he published *Spenser and his Poetry*, and in 1846-47 *Baron and his Writings*. In 1849 Craik was appointed to the chair of history and English literature in Queen's College, Belfast, a situation which he occupied till his death. In 1848-50 appeared his *Romance of the Peerage*; in 1851 his *Outlines of the History of the English Language*, which has passed through various editions, and in 1856 his essays on *The English of Shakespeare*, which passed through several editions. His *Manual of English Literature* was reprinted (1910) in "Everyman's Library."

**CRAIK, JAMES** (1731-1814). The physician of George Washington, who referred to him as "my compatriot in arms, my old and intimate friend." He was born in Scotland. He accompanied Washington in the Braddock expedition and subsequently entered the medical service of the Revolutionary army and was director of the hospital at Yorktown. He was active in the disclosure of the plot to remove Washington from command during the winter at Valley Forge (see CONWAY, THOMAS) and was present at the surrender of Lord Cornwallis at Yorktown. After the war he settled near Mount Vernon and attended Washington in his last illness.

**CRAIK, ROBERT** (1829-1906). A Canadian physician and surgeon. He was born in Montreal and was educated at the public schools and McGill University, where he graduated with the highest honors in 1854. He then became house surgeon to the Montreal General Hospital and in 1856 also entered McGill University as demonstrator of anatomy, becoming professor of clinical surgery in 1860. While in this position he distinguished himself for his work in the respec-

tion of joints and for operations in ovariectomy. In 1867-79 he was professor of chemistry. In 1889 he became dean of the medical faculty and from 1889 to 1901 was also professor of hygiene and public health. In addition to his professional work Craik ably assisted in the organization and extension of the medical department during the 17 years that he was dean. He aided in obtaining additional university endowments, in promoting the building and opening of the Royal Victoria Hospital, and in the remodeling of the Montreal General Hospital. As early as 1854 he wrote on the germ theory of infectious diseases. His other publications include: *Papers on Purpura and Tetanus* (1885); *Medical Education* (1890); *Hospital and District Nursing* (1897).

**CRAILSHEIM, or KRAILSHEIM**, krils'-him. A town of Württemberg, Germany, on the Jagst, 47 miles northeast of Stuttgart (Map. German Empire, D 4). Its municipal offices are situated in the ancient castle of the Hohenlohes; the fifteenth-century church of St. John, a Gothic edifice, contains paintings and other features. It has considerable trade, and manufactures of woollens, cement, leather, lumber, and machinery. It is a centre for agricultural products. Pop., 1900, 5255, 1905, 5747; 1910, 6101.

**CRAIOVA, or KRAJOVA**, krá-yó'vá. The capital of the Province of Dolju, Rumania, on the river Jiu, 112 miles west of Bucharest (Map: Balkan Peninsula, D 2). It is the centre of a rich agricultural and forest region, and trades in timber, agricultural produce, and cattle. Salt is extensively mined in the neighborhood. It is a garrison town and has large governmental industrial establishments for the manufacture of leather, rope, and carriages. Trade in cattle, cereals, fish, linen, pottery, and glue is important. Being headquarters of the First Army Corps, it has a military training school. It has two old ruined monasteries, Obedeanu and Saint-Démètre. The ancient Roman Castra Nova, in the Middle Ages it became the residence of a ban and the capital of Lower Wallachia. Pop., 1899, 45,438; 1905, 45,750.

**CRAIT**. See KRAIT.

**CRAKE, or CORN CRAKE** (from Icel. *kraka*, crow, so named from its cry). An English name for the landrail (*Crex crex*), formed in imitation of its familiar cry, "crek, crek," which is heard from every field of grain in valleys and low grounds in Great Britain in early summer and is associated with all that is pleasant in that pleasant season. It is a very pretty bird, of a reddish-brown color, marked with dark brown in streaks along the middle of the feathers, lighter below. (See Plate of RAILS, etc.) Several other similar short-billed rails of the genera *Crex* and *Porzana* are often termed "crakes," as the spotted crane (*Porzana porzana*), which is smaller than the corn crane and is very similar to the American sora.

**CRAKE, AUGUSTINE DAVID** (1836-90). An English author. He was educated at London University, entered the ministry of the Church of England, and after holding pastorates at Bloxham and in the Isle of Wight, became vicar of Cholesey, near Wallingford, in 1885, where he remained until his death. He was the author of a number of devotional books and of a long series of historical storybooks, illustrating the history of the Church in England. His works include: *Æmilius* (1871); *Evanus* (1872); *Edwy the Fair* (1874; 5th ed., 1885); *Alfgar the Dane*

(1874); *Fairleigh Hall* (1882); *The Last Abbot of Glastonbury* (1884); *Yule-Log Stories* (1887); *Stories from Old English History* (1887). His best-known historical work is a *History of the Church under the Roman Empire* (1873).

**CRAKEBERRY.** See CROWBERRY.

**CRAM,** RALPH ADAMS (1863- ). An American architect and author, born at Hampton Falls, N. H. He began practice as an architect in 1889. As senior member of the firm of Cram, Goodhue, and Ferguson he helped to plan some of the most notable academic and ecclesiastical buildings in the United States. Among these are: Graduate College and Cleveland Tower, Princeton University; Rice Institute, Houston, Tex.; Richmond and Sweet Briar colleges (Virginia); buildings for Williams College and Phillips Exeter Academy; and St. Alban's Cathedral, Toronto, Canada; St. Paul's Cathedral, Detroit, Mich.; St. Thomas's Church, New York; Calvary Church, Pittsburgh, Pa.; Euclid Avenue Presbyterian Church, Cleveland, Ohio; Fourth Presbyterian Church, Chicago, Ill. He became consulting architect for the Cathedral of St. John the Divine, New York City, and, in 1914, professor in Massachusetts Institute of Technology. His writings include: *Church Building* (1901); *The Ruined Abbeys of Great Britain* (1905); *Impressions of Japanese Architecture and the Allied Arts* (1906); *The Gothic Quest* (1907).

**GRAMBE.** See SEA KALE

**CRAMER,** krä'mër, GABRIEL (1704-52). A Swiss mathematician. He was born in Geneva and was subsequently professor of mathematics there. His chief work is a treatise on algebraic curves (Geneva, 1750), but he contributed to the subject of equations (q.v.), revived the study of determinants (q.v.), which had been begun by Leibnitz, and wrote on the physical cause of the spheroidal shape of the planets and the motion of their apsides (Paris, 1730). He also edited the works of Johann Bernoulli (4 vols., Lausanne, 1742) and Jakob Bernoulli (2 vols., Geneva, 1744). In his investigation of curves Cramer generalized the problem of Pappus, to inscribe in a given circle a triangle whose sides produced shall pass through three collinear points; proved Newton's rule for determining the infinite branches of a curve, and completed the classification of cubic curves. Consult Cantor, *Geschichte der Mathematik* (Leipzig, 1898), and Muir, *Theory of Determinants in the Historical Order of its Development* (London, 1890). See CURVE.

**CRAMER,** JOHANN ANDREAS (1723-88). A German preacher and poet, born in Jöhstadt, Saxony. He studied theology in Leipzig, and in 1750 became chief court preacher in Quedlinburg. In 1754 the influence of his friends Klopstock and Bernstorff secured for him an appointment to a similar position in Copenhagen, where he became professor of theology. Owing to the antagonism of Struensee, he was banished, and accepted an appointment as superintendent in Lübeck, whence he was recalled to Denmark after Struensee's execution in 1772, and appointed professor of theology and chancellor at the University of Kiel (1774). As a preacher he was unexcelled in his day, and his odes and hymns were very popular. Many of them, such as "Er ist gekommen her," "Dein bin ich, Herr," and "Der Herr ist Gott und Keiner mehr," are still frequently sung in the Prot-

estant churches of Germany, and some have been translated into English. A hymnal he edited in 1780 remained in use for a century. His collected poems were published under the respective titles, *Sämtliche Gedichte* (1782) and *Hinterlassene Gedichte* (1791). Consult Blumcke, *Beiträge zur Kenntnis der Lyrik Johann Andreas Cramers* (Greifswald, 1910).

**CRAMER,** JOHANN BAPTIST (1771-1858). A German pianist and composer. He was born in Mannheim, but in his infancy went to London with his father, the violinist Wilhelm Cramer, who was also his first teacher. Having completed his studies under Clementi, he appeared in public with great success at the age of 17, and after a concert tour in 1788-91 settled in London as a teacher. He repeatedly traveled on the Continent, and from 1832 lived in Paris, whence he returned to London in 1845. He was much admired as a pianist for his correct technique and sympathetic interpretation, his numerous compositions for the pianoforte are now antiquated, with the exception of the *Eighty-Four Studies*, Op. 50, which in their rare combination of superior technical requirements with the highest musical value have become an accepted classic and are used in the entire musical world as models of fundamental studies for the acquirement of solid and tasteful pianoforte playing.

**CRAMER,** JOHN ANTONY (1793-1848). An English classical scholar, born at Mitlödi, Switzerland, of German parentage, and educated at Christ Church, Oxford. He was professor of modern history at Oxford from 1842 until his death, and during the last four years of his life was also dean of Carlisle. The following are a few of his principal works: *Dissertation on the Passage of Hannibal over the Alps* (in collaboration with H. L. Wickham; 2d ed., 1828), an important work; *Anecdota Græca e Codicibus Manuscriptis Bibliothecarum Ozoniensium Descripta* (4 vols., 1835-37); *Catenæ Græcorum Patrum in Novum Testamentum* (8 vols., 1838-44).

**CRAMER,** krä'mër, KARL EDUARD (1831-1901). A Swiss botanist, born in Zurich. He studied there and in Freiburg, taught for several years at the technological institute of Zurich, and in 1861 was appointed professor of botany at the Polytechnicum. In 1880 he became professor in the university there, and in 1882 was made director of the botanic garden in Zurich. His published works include the following: *Pflanzenphysiologische Untersuchungen*, jointly with Nügel (1855-58); *Untersuchungen über die Ceramiceen* (1863); *Bildungsabweichungen bei einigen wichtigeren Pflanzenfamilien* (1864). He was also the author of a number of important monographs on botanical subjects, published in scientific periodicals.

**CRAMP** (OHG. *ohrampfa*, Ger. *Krampe*, cramp, from OHG. *krampf*, curved, Icel. *krappr*, narrow; connected also with AS., OS. *crumb*, OHG. *krump*, Ger. *krumm*, crooked). An irregular, involuntary, and generally painful contraction of a voluntary muscle, without insensibility or other disturbance of the general system. Cramp is often the effect of cold, and has proved fatal to swimmers by attacking them suddenly when in the water. It is readily removed by warmth and friction, when due to a strained position, to cold, or prolonged contraction of a group of muscles, as in lifting a weight above the

head. A swimmer attacked with cramp in the legs should turn on his back and, while floating, grasp and knead the affected muscles violently. Cramps are a distressing symptom in cholera (q.v.). They occur in colic (q.v.), in tetanus (q.v.), and in some cases of poisoning. Writers' cramp is an "occupation neurosis" (q.v.) consisting of a spasmodic closure of the hand on attempting to write, which turns the pen over and prevents its moving. Telegraphers, brakemen on railroads, ballet dancers, cigar makers, glass blowers, violinists, clarinet and cornet players, and many others suffer from a cramp in the group of muscles which they use constantly in their occupations.

**CRAMP, CHARLES HENRY** (1828-1913). An American shipbuilder, born in Philadelphia. He became a partner in, and later president of, William Cramp & Co., the largest shipbuilding enterprise in the United States, which has built many of the finest naval and merchant vessels afloat. He built ironclads and monitors for the United States government in the Civil War and assisted in the reconstruction of the United States navy and the reestablishment of the United States merchant marine. The destroyed battleship *Maine* was built at the Cramp yards, in whose 31 acres of ground nearly 6000 workmen are employed. Consult Buell, *Memoirs of C. H. Cramp* (New York, 1906).

**CRAMPEL, KRÄN'PEL', PAUL** (1863-91). A French traveler in Africa. He first went to the French Congo in 1886 as secretary to Savorgnan de Brazza, and in 1888-89 conducted most successfully an expedition from the Ogowe River into the Fan country north and back to Corisco Bay. In the following year he was commissioned by the Comité de l'Afrique Française to penetrate to Lake Chad, and started from Stanley Pool with a small force of 30 Senegalese soldiers and 250 carriers and accompanied by three Europeans. Having marched under great difficulties from Bangui on the Ubangi River northward to El Kuti, he was abandoned by his carriers, and, while trying to force their way farther north, he and his remaining companions were surprised and massacred by the Senussi Moslems. Only one European escaped to bring the news to the Congo (July, 1891).

**CRAMP'FISH'** (so called from the temporary paralysis caused by its shock). The electric ray. See TORPEDO.

**CRAMPTON, CHARLES ALBERT** (1858- ). An American chemist, born at Davenport, Iowa. He received his education at the University of Michigan, became assistant chemist in the United States Department of Agriculture in 1883, and, seven years later, was made chemist and in 1893 chief chemist to the Internal Revenue Bureau. In 1910 he became chief of the division of food and drugs products. He carried out a number of investigations in agricultural chemistry and published memoirs and reports on special topics of the chemistry of food and agricultural products, including the composition of plant tissues, the composition of butter and other fats, etc. He contributed to the first edition of the *NEW INTERNATIONAL ENCYCLOPEDIA*.

**CRAMPTON, HENRY EDWARD** (1875- ). An American zoologist, born in New York City. He was educated at the College of the City of New York and at Columbia College, where he was an assistant in biology in 1893-95, and to which, after one year as instructor in the Mas-

sachusetts Institute of Technology, he returned to be fellow, lecturer, and instructor in zoology; adjunct professor in 1901-04, and thereafter professor. He was a member of scientific expeditions to the islands of the South Pacific Ocean in 1906, 1907, 1908, 1909, and to British Guiana and the interior of Brazil in 1911. Besides his monographs in scientific publications he is author of *The Doctrine of Evolution* (1911; 2d ed., 1912).

**CRAMPTON, THOMAS RUSSELL** (1816-88). An English railway engineer. He was born in Kent and was educated by private tutors. Entering the engineering profession, he early turned his attention to locomotive and railway building. In 1843 he designed and patented the locomotive known by his name, which won him the cross of the French Legion of Honor from Napoleon III in 1855. His best-known work was the successful laying of the telegraphic cable from Dover to Calais in 1851. He also constructed the Smyrna Railway, the Varna Railroad in Bulgaria, various lines in England, and the Berlin Water Works.

**CRANACH, KRÄ'NÄG, LUCAS THE ELDER** (1472-1553). A German painter of the Renaissance. He was born at Cronach in Upper Franconia. There is much dispute in regard to his family name; according to Schuchardt, on Cranach's own testimony, it was Müller, others say Sunder. Cranach was a pupil of his father, and in 1504 became court painter to Frederick the Wise, Elector of Saxony, at Wittenberg, by whom he was held in high repute. His office included the duties of master of ceremonies at court, and besides this he found time for different business ventures at Wittenberg. In 1519 he was elected chairman of the town council; he became burgo-master in 1537 and again in 1540. Cranach was in equal favor with the two following Electors of Saxony, and for two years remained with John Frederick during his imprisonment. He died at Weimar, Oct. 16, 1553.

Cranach has been called the painter of the Reformation, because of his active part in spreading its doctrines. This he did by means of paintings and woodcuts ridiculing the Pope and explaining the teachings of the reformers, and by his numerous portraits of Luther (see Plate of LUTHER) and Melancthon, who were both his personal friends. Because of this activity and also on account of his great productiveness he became the controlling influence in the art of middle and northern Germany and founded what may be called the Saxon school. He painted with great facility—in fact, the inscription upon his gravestone gives him the title of "celerimus pictor." His early paintings were carefully executed, but in later life he did much negligent work. He paid great attention to detail, for which reason his smaller pictures were more attractive. His color was bright and clear, but his drawing was deficient, and he failed utterly whenever he attempted to represent the nude on a large scale. His work was always original, and though we see the influence of the Renaissance in his mythological subjects, his art was thoroughly German and national. It was, moreover, naïf and rich in fantasy, being best wherever there was a chance for genre.

Cranach's works survive in large numbers, especially in the German galleries. But he is trusted so much to his large school of pupils that it is difficult to decide how much is actually

# CRANBERRY ETC.

1. COSMOS (*Cosmos tenuifolius*).
2. CRANBERRY (*Vaccinium macrocarpon*).
3. COREOPSIS (*Coreopsis lanceolata*).

4. CORN COCKLE (*Lychnis githago*).
5. COWSLIP (*Primula veris*).
6. SUNN HEMP (*Crotalaria juncea*).

due to him. Among his best works are the "Repose in Egypt" (1504), now in the Berlin Museum; "Christ Blessing the Children," in the Baring collection in London; "Samson and Delilah," in the Museum of Augsburg, and the "Fountain of Youth," in the Berlin Museum. All of these pictures possess a charming naïveté. Of his larger religious paintings, good examples are the "Marriage of St. Catharine," in the cathedral of Erfurt, of his earliest period, and his last great work, the "Crucifixion," in the town church of Weimar. This depicts the object of the Reformation, quaintly introducing the figures of Luther and of Cranach himself. His best works are probably his portraits, for in these the detailed execution is more appropriate. But even here he falls far short of the strength of character of Dürer and Holbein. Among the best are "Cardinal Albrecht of Mainz as St. Jerome," in the Berlin Museum; John Frederick of Saxony, in Dresden; and an "Unknown Female" (No. 291), in the National Gallery, London. Cranach was also an excellent painter of miniatures, as may be seen in the album of the University of Wittenberg, now at Halle, and especially in John Frederick's "Book of Tourneys," now at Coburg, a work of 144 leaves. He also executed a few copperplates and a large number of drawings for woodcuts.

Consult: Schuchardt, *Cranach des älteren Leben und Werke* (Leipzig, 1851-71); Dodgson in *Bibliothèque des bibliographes critiques* (Paris, n. d.); Flechsig, *Tafelbilder Lucas Cranaches des Älteren; Cranach Studien* (Leipzig, 1900); also the monographs by Heller (Bamberg, 1844), Warnecke (Gorlitz, 1879), Lindau (Leipzig, 1883), and Michaelson (ib., 1902).

**CRANACH, LUCAS** (1515-86) THE YOUNGER. A German painter, the second son and pupil of the preceding. His works are hard to distinguish from his father's and are often assigned to him. His coloring is brighter than his father's, and his drawing is worse. A number of his authentic works are in the Dresden Gallery, including "Elijah and the Priests of Baal," "Hercules with the Pygmies," and a portrait of Elector Maurice of Saxony and his wife. A portrait by him of "An Unknown Woman" is in the Boston Art Museum.

**CRANBERRY** (from *crane* + *berry*). A name given to the fruit of a few creeping, vine-like species of the genus *Vaccinium*, family Ericaceæ. The smaller cranberry (*Vaccinium oxycoccos*) grows wild in the peaty bogs and marshlands of the temperate and colder regions of both Europe and America. The larger cranberry (*Vaccinium macrocarpum*) is native in similar situations in the United States and is extensively cultivated for commercial purposes in Massachusetts, New Jersey, Wisconsin, and a few other Northern States. The cranberry is a firm, red, acid berry, of good keeping quality, and is used for sauce, tarts, and the like. In the improved commercial culture of cranberries natural swamps or bogs are selected which can be drained by open ditches and flooded when desired. The native moss and swamp growth are removed, and the peat covered 2 to 4 inches deep with sand. The vines are planted about 14 inches apart, cuttings 6 to 8 inches in length being used. The sand keeps down the weeds, makes cultivation easy, and helps retain the moisture in the soil below. Additional sandings are given every four or five years, which keep the vines short and close. In some localities

sanding is omitted altogether. The object of flooding is to protect the vines in winter and from early fall and late spring frosts, to destroy insects, prevent drought, and protect against fire. The berries are gathered preferably by hand, but often with special rakes and combs. There are three principal types of cultivated varieties, determined by the form of the berries—bell-shaped, bugle-shaped, and cherry-shaped—with many varieties of each. Over 1,000,000 bushels of cranberries are marketed in the United States annually.

The cowberry, or mountain cranberry (*Vaccinium vitis-idaea*) is common in both Europe and America, and, like *Vaccinium oxycoccos*, is gathered and sold in considerable quantities, but is not cultivated. The shrub *Viburnum opulus* is known as the high-bush cranberry. The fruit is tart, but is of little value and is seldom eaten. The Tasmanian cranberry is the fruit of *Astroloma humifusum*, of the family Epacridaceæ. Consult Corbett, "Cranberry Culture," *Farmers' Bulletin*, No. 176, United States Department of Agriculture (Washington, 1903); *Year Book of the Department of Agriculture* (Washington, 1911).

**CRANBERRY DISEASES.** The scald and spot are the most serious fungus troubles of the cranberry, the names being derived from the appearance of the fruit. They are of fungus origin; the scald is due to *Guignardia vaccinii*, and the spot to *Pestalozzia guepinii vaccinii* and may be recognized by the appearance of soft spots on one side of the berry. The skin becomes tense and of a reddish-brown color. Later the berry becomes shriveled and may or may not fall to the ground. Distinct brownish spots may also be seen on the leaves. The diseases are most troublesome in hot moist seasons, and the most satisfactory treatment, where it can be followed, is to cover the bog with a thin layer of sand, which can best be done when the bog is flooded, and spraying with Bordeaux mixture, to which is added a resin-fish oil mixture. These diseases have been known to destroy more than half the berries on a bog in a short time. A gall-producing fungus, *Synchytrium vaccinii*, is common on the cranberry and related plants. The presence of the fungus on the leaves and other parts of the plant causes the formation of red galls. Burning over the bog in autumn is recommended as a preventive means, since the spores are ripened the second year. Common and conspicuous malformations of leaves, flowers, and young shoots of the cranberry are due to *Exobasidium vaccinii*. The parts attacked are swollen and the green color replaced by rose or red. This disease is seldom severe. Consult Shear, "Cranberry Diseases," *United States Department of Agriculture, Bureau of Plant Industry, Bulletin* 110 (Washington, 1907).

**CRANBERRY INSECTS.** The worst enemies of the cranberry are two moth caterpillars—the black-headed fireworm (*Rhopobata vacciniana*), which defoliates the bushes, and a spanworm (*Acrobasis vaccinii*), which attacks the fruit. For the first, Prof. J. B. Smith, author of a treatise on "Insects Injurious Affecting Cranberries," in *Special Bulletin K, New Jersey Agricultural College Experiment Station* (New Brunswick, N. J., 1890), recommends re-flooding the land and application of kerosene or Paris green; for the second, Paris green or London purple applied after the leaves are mostly gone and the berries are set. A scale, a leaf

hopper, and certain locusts and crickets are also harmful. Consult Franklin, "How to Fight Cranberry Insects," *Bulletin 126, Massachusetts Agricultural Experiment Station* (Amherst, 1908).

**CRANBROOK.** A town in the Kootenay valley between the Selkirk and Rocky Mountains, Kootenay District, British Columbia, Canada. It is a divisional point on the Crow's Nest branch of the Canadian Pacific Railway, 35 miles west (direct) of Fernie, and is about 330 miles east (direct) of Vancouver (Map: British Columbia, F 5). It is in a rich fruit-growing, agricultural, and mining region, and is the geographical and distributing centre of the south-east part of Kootenay District. Its growth dates from 1901. The principal public edifices are the provincial buildings, and it contains a high school and a manual training school. The manufacturing industries include sash and door factories, saw and planing mills, brickworks, aerated-water works, and foundries. Pop., 1911, 3090.

**CRANBROOK, GATHORNE-HARDY,** first EARL of (1814-1906). An English statesman, born at Bradford. He was educated at Oxford (B.A., 1836), studied law, and was appointed Undersecretary of State for the Home Department in 1858, two years after his election to Parliament. In 1865 he was again elected to Parliament as the representative of the University of Oxford, defeating Gladstone. In 1867-68 he was Home Secretary and was subsequently Minister of War (1874-78), Secretary of State for India (1878-80) under Lord Beaconsfield, and Lord President of the Council under the Marquis of Salisbury (1885 and 1890-92). He was raised to the peerage in 1878 as Viscount Cranbrook and was created Baron Medway in 1892. He was a strong churchman. Consult the *Memoir* (London, 1910) by A. E. Gathorne-Hardy.

**CRANCH, CHRISTOPHER PEARSE** (1813-92). An American artist and poet, born at Alexandria, Va. He studied theology at Cambridge, Mass., and became a Unitarian clergyman. In 1842 he retired from the ministry. He associated himself with the Transcendentalists, and wrote verse for *The Dial*, but in 1846 went to Europe to study art, remaining there until 1863. He returned to America in 1864, but after 1871 devoted himself wholly to literature, to which he had already contributed *Poems* (1844), two juveniles, *The Last of the Huggermuggers* (1856), and *Koboltazo* (1857). His later works include notably *The Bird and the Bell*, with other poems (1875), and *Ariel and Caliban* (1887). He was a man of genuine culture, who, growing up in the midst of more gifted spirits, failed to make a deep impression upon his generation.

**CRANCH, WILLIAM** (1769-1855). An American judge, born at Weymouth. He graduated at Harvard, and was admitted to the bar in 1790. In 1801 he was appointed a justice of the United States Circuit Court for the District of Columbia and in 1805 was made Chief Justice, and this office he held until his death. He published *Reports of Cases in the United States District Court of the District of Columbia* (1801-41) and the *Supreme Court Reports* (1800-15).

**CRANDALL (PHILLEO), PRUDENCE** (1803-90). An American educator and philanthropist. She was born at Hopkinton, R. I., of Quaker parentage; was educated at the Friends' School in Providence, R. I.; taught for a time at Plainfield, Conn., and in 1831 established a private

school for girls in Canterbury. Early in 1833 she admitted a colored girl into the school and thereby aroused the violent opposition of her neighbors. This led her to abandon her original plan and to open her school unreservedly to "young ladies and little misses of color." Accordingly she issued an announcement to that effect in the *Liberator* of March 2 and early in April received 15 or 20 colored pupils. Her neighbors then began a systematic course of persecution and endeavored by boycott, insult, and abuse, and by enforcement of an obsolete vagrancy law, to break up the school. Public meetings were called, petitions were circulated, and on May 24 the celebrated "Black Law" of Connecticut was passed forbidding any one to "set up or establish in this State any school, academy, or literary institution for the instruction or education of colored persons who are not inhabitants of this State," or to instruct or teach in any such school. For refusing to obey this law Miss Crandall was arrested, was imprisoned in the Canterbury jail, and in October was convicted, though the Court of Errors reversed the decision of the lower court on a technicality, in July, 1834. Soon afterward Miss Crandall's house was assaulted and partially destroyed, and she finally decided to abandon her project. The whole affair attracted much attention throughout the country and served to intensify the conflict between the abolitionist and anti-abolitionist elements among the Northern people. A short time after giving up her school Miss Crandall married the Rev. Calvin Philleo, and passed the rest of her life in New York, Illinois, and Kansas. Consult May, *Recollections of the Anti-Slavery Conflict* (Boston, 1869).

**CRANE.** The largest of the wading birds (Grallæ). They constitute the family Gruidæ, which occupies a very distinctive position between the trumpeters and the rails, being connected with the latter by the limpkins, or Aramidæ. All are tall, long-legged, long-necked birds, with the head more or less naked, but sometimes tufted, rather long, straight, compressed beaks, short but powerful wings, short tails, the feet unwebbed, and the hind toe greatly elevated, they are like herons in appearance, but resemble rails in structure. One remarkable feature is the enormous development of the windpipe within the keel of the breastbone, where it is coiled and twisted before emerging into the neck; the extreme development of this is found in our American whooping crane, where the trachea reaches 4 or 5 feet in length in old age (it is perfectly straight and simple at birth), and the convolutions act like those of a French hunting horn in producing the extraordinary resonance of tone for which the voice of this species (see *IRIS*) is noted. About 18 species of crane are known, representing three genera and all parts of the world except South America and the Malayan and Polynesian archipelagoes. The best known, perhaps, is the European crane, which is about 4 feet high, ashy gray, with a blackish face and throat. The tertial feathers of the wings are so prolonged as to droop over the quills; their webs are fibrous and disconnected; and formerly they were much used as ornamental plumes. This peculiarity characterizes most other species to a greater or less extent, and some species have the power to elevate these plumes at will, forming a striking ornament. All the cranes of the temperate zone migrate,

# CRANES, ETC.

1. SERIEMA (*Seriema cristata*).
2. CROWNED CRANE (*Balearica pavonina*).
3. LIMPKIN (*Aramus vociferus*).
4. WHOOPING CRANE (*Grus americana*).
5. TRUMPETER (*Psophia crepitans*).

some going annually to the far north to breed; and the coming of flocks in the spring, always in a V-formation, and the extraordinary "dances" with which some accompany courtship, have been observed for centuries and have caused a large body of myth and folklore to grow up about the bird during classical and mediæval times. On this point, consult C. de Kay, *Bird Gods* (New York, 1898).

The remote breeding of the European crane (*Grus grus*) in Lapland and along the northern border of Russia was little known until the mystery was solved by J. Wolley in 1853, who discovered among other new facts that the young run about as soon as they leave the egg, and that the sitting bird would not carry away eggs that had been handled, as had been commonly believed. The birds make their nests on the ground in the marshy plains that border the Arctic Sea. The whole account (*Ibis*, London, 1859) is exceedingly interesting, and is largely quoted by Stejneger in the *Standard Natural History*, vol. iv (Boston, 1885). Other cranes of the Old World are the northwest African crowned or Balearic crane (*Balearica pavonina*), which has a topknot like that of a peacock; and the smaller Numidian crane or demoselle (*Grus virgo*), which in summer resides and breeds from Turkey eastward to China, and which is the one most famous for its dancing. The Manchurian crane (*Grus japonensis*, or *viridirostris*) is especially common in winter in Korea, where it is trapped in large numbers and sold to the Chinese and Japanese, who are especially fond of it and endow it with many folklore qualities. The large Australasian crane (*Grus australasiana*) is one of the most conspicuous birds of that region and is known to the Australians as "native companion" because of its friendly disposition. It will sometimes follow the plowman, picking up the insects he turns out of the soil. Consult Blyth, *Natural History of the Cranes* (London, 1881), and Blaauw, *A Monograph of the Cranes* (Leiden and London, 1897).

American cranes are of three species. The greatest is the whooping crane (*Grus americana*, or *Limnogeranus americanus*), which is larger than the European crane and is seldom seen except on the Western plains, where it has become rare. In fact, it may be wholly extinct at present, as none have been seen for several years. There are a few living in zoological gardens. Two others are also species of the Western interior and are diminishing in numbers; one is the sand-hill crane (*Grus mexicana*), and the other the little brown crane (*Grus canadensis*)—both until recently regarded as one species. Consult Coues, *Birds of the Northwest* (Washington, 1874). See Plate of CRANES, ETC.

**CRANE** (AS. *cran*, *cornoch*, OHG. *cranuh*, *cranth*, Ger. *Kranich*, crane; connected with Welsh, Corn., Bret. *garan*, Ochurch Slav. *zheravi*, Lith. *gérice*, GK. *γέρανος*, *geranos*, crane; so called from the resemblance of the arm of the machine to the neck of the bird). A term used in applied mechanics to designate a hoist which can also move the load in a horizontal or lateral direction. Cranes are divided into two classes, as to their motions—viz., rotary and rectilinear—and into four groups as to their motive power—viz., hand, when operated by manual power; power, when driven by power derived from line shafting; steam, electric, hydraulic, or pneumatic, when driven by an engine or motor attached to the crane, and operated by steam, elec-

tricity, water, or air transmitted to the crane from a fixed source of supply; locomotive, when the crane is provided with its own boiler or other generator of power and is self-propelling, usually being capable of both rotary and rectilinear motion. Rotary and rectilinear cranes are thus subdivided: (1) swing cranes, having rotation but no trolley motion; (2) jib cranes, having rotation and a trolley traveling on the horizontal jib; (3) column cranes, identical with the jib crane, but rotating around a fixed column, which usually supports a floor or roof above; (4) derrick cranes, having the head of the mast held in position by guy rods, instead of by attachment to a roof or ceiling, and a boom whose outer end is raised and lowered from the top of the mast to secure the radial motion of the load; (5) pillar cranes, having rotation only, the pillar or column being supported entirely from the foundations; (6) pillar jib cranes, identical with the last, except in having a jib and trolley motion; (7) walking cranes, consisting of a pillar or jib crane mounted on wheels and arranged to travel longitudinally upon one or more rails; (8) locomotive cranes, consisting of a pillar crane mounted on a truck, and provided with a steam engine capable of propelling and rotating the crane and of hoisting and lowering the load; (9) bridge cranes, having a fixed bridge spanning an opening and a trolley moving across the bridge; (10) tram cranes, consisting of a trunk or short bridge, traveling longitudinally on overhead rails and without trolley motion; (11) traveling cranes, consisting of a bridge, traveling longitudinally on overhead tracks, and a trolley moving transversely on the bridge; (12) gantries, consisting of an overhead bridge carried at each end by a trestle traveling on longitudinal tracks on the ground, and having a trolley moving on the bridge; (13) rotary bridge cranes, combining rotary and rectilinear movements and consisting of a bridge pivoted at one end to a central pin or post and supported at the other end on a circular truck, provided with a trolley moving on the bridge.

Cranes are built of wood and iron, but at the present time cast iron and steel are employed nearly exclusively. Hand cranes are employed for handling comparatively light loads, and the manual power is usually applied by means of a crank or cranks operating a windlass, around the drum of which the hoisting rope is wound and unwound. For heavy loads some form of mechanical power is always employed, which is applied through a suitable train of mechanism for performing the various movements of hoisting, rotation, and horizontal travel. A great variety of such mechanisms are in common use for each of the principal kinds of motive power, and for details the reader should consult special treatises on hoisting machinery and the catalogues of manufacturers. Cranes are built with capacities of from a few hundred pounds to as much as 150 tons. The traveling crane in the gun shop at the Washington navy yard has a capacity of 150 tons; the span of the bridge is 59½ feet; the maximum travel of the trolley lengthwise of the bridge is 44 feet 2 inches, and its traveling speed is from 25 to 50 feet per minute; the effective lift is 40 feet, with four speeds of hoist; the speed of travel of the bridge is from 30 to 60 feet per minute.

The Finnisston Quay, at Glasgow, Scotland, is equipped with a pillar crane of 150 tons' capacity. The jib is formed of two steel tubes,

each 39 inches in diameter and 90 feet long; the radius of sweep for heavy lifts is 65 feet; the jib and its load are counterbalanced by a weight of 100 tons; and in a test a 130-ton load was lifted at a rate of 4 feet per minute, and a complete revolution was made with this load in five minutes. The floating crane at Cramp's shipyard, in Philadelphia, Pa., has a steel mast 116 feet high and 3 feet in diameter, carrying a horizontal jib 65 feet long with a counterbalance arm 50 feet long which is stayed to the bottom of the mast and to the hull of the barge. The barge is 69 feet long, 62 feet wide, and 13 feet deep. This crane has a lifting capacity of 125 tons. A floating crane owned by the Chapman Wrecking Company, of New York City, has a mast 92 feet high and a jib 98 feet long, and is capable of lifting a load of 265 tons.

**Shears**, or shear legs, is a type of crane for shipyard use, in which a long boom made of two converging members is pivoted at the bottom on the ground, and carries the pulley or hoisting purchase at its upper end. It has a small horizontal range by reason of the in-and-out swing of the long-legged boom, but considerable vertical range. It is used for placing boilers and engines in the hulls of vessels.

On board ship cranes are fitted for handling cargo, coal, boats, anchor, etc. The boat crane of a large modern man-of-war is built up, box-girder fashion, it rises 20 or 25 feet above the skid beams on which the boats are stowed, and extends 10 or 15 feet beyond the ship's side when turned out for the purpose of lowering or hoisting a boat. The power is either electricity or steam and serves to hoist and lower the boat, run it in or out on the horizontal arm of the crane, or train (i.e., turn horizontally) the latter (consult, Glynn, *Treatise on the Construction of Cranes and Other Hoisting Machinery* (London, 1887); Marks, *Notes on the Construction of Cranes and Lifting Machinery* (ib., 1889); and Towne, *A Treatise on Cranes* (New York, 1883). See DERRICK; ELEVATOR.

**CRANE, BRUCE (ROBERT BRUCE)** (1857- ). An American landscape painter. He was born in New York, Oct. 17, 1857, and studied there under Alexander Wyant and later in Europe. His landscapes are idyllic in character and show the influence of the painters of Barbizon. They are veracious but highly poetical interpretations of commonplace nature, treating such subjects as broad stretches of plowed or snow-covered fields, finely modulated in color and often of a rich golden color. Good examples are, "Autumn Uplands" (Metropolitan Museum, New York), "Autumn" (National Gallery, Washington); "March" (Brooklyn Museum); "Springtime" (Peabody Institute, Baltimore); "The Hills," awarded the Saltus prize (National Academy); "Autumnal Hills" and "Indian Summer" (1912); "Grey Morning" and "Golden Afternoon" (1913). He was elected a member of the National Academy of Design (1901) and of the American Water Color Society and received numerous medals and prizes.

**CRANE, FRANK** (1861- ). An American clergyman and author, born in Urbana, Ill., and educated at Illinois Wesleyan University. He was ordained to the Methodist Episcopal ministry in 1882 and preached in Chicago Methodist churches from 1896 to 1903, when he entered the Congregational ministry. From 1904 to 1909 he was pastor of the Union Congregational Church of Worcester, Mass., and then devoted

himself to authorship. He wrote articles for syndicated newspapers, daily and weekly, and for women's monthlies, on subjects of contemporary interest, and published in book form: *The Religion of Tomorrow* (1899); *Vision* (1907); *The Song of the Infinite* (1909); *Human Confessions* (1911); *God and the Democracy* (1911); *Lame and Lovely* (1912).

**CRANE, ICHABOD**. The hero of the adventure with the Headless Horseman, in Irving's "Legend of Sleepy Hollow," in *The Sketch Book*.

**CRANE, STEPHEN** (1870-1900). An American journalist and novelist, born at Newark, N. J. He was educated at Lafayette College and Syracuse University; began active life as a reporter and newspaper writer, was correspondent for the *New York Journal* in the Greco-Turkish War (1897) and in Cuba, and then removed to England. His first essay in fiction was a story of slum life, *Maggie, a Girl of the Streets* (1891). This was followed by a collection of verses, *The Black Riders and Other Lines* (1895). *The Red Badge of Courage* (1896), a realistic though imaginary presentation of horrors in the Civil War, brought him deserved reputation. Less significant are: *George's Mother* (1896); *The Little Regiment* (1897). *The Open Boat* (1898); *Whilomville Stories* (1900), and other tales, although in such a short story as *The Master* he showed that he still possessed great power. Posthumous manuscripts have been collected by his wife under the title *Wounds in the Ram* (1900) and *Great Battles of the World* (1900). In 1903 appeared *O'Ruddy*, written in collaboration with Robert Barr.

**CRANE, THOMAS FREDERICK** (1844- ). An American folklorist and educator, born in New York. He graduated in 1864 at Princeton, was appointed professor of modern languages at Cornell, and in 1868 professor of the Romance languages. In 1902 he became dean of the general faculty of the university, and in 1909 professor emeritus. His researches in the history of the development of European folklore are especially valuable. His works include: *Italian Popular Tales* (1885); *The Exemplar, or Illustrative Stories from the Sermons Vulgares of Jacques de Vitry* (1890). *Chansons populaires de la France* (1891); *Tableau de la révolution française* (6th ed., 1892). He also edited *Le romantisme français* (1887, 5th ed., 1907).

**CRANE, WALTER** (1845-1915). One of the foremost English illustrators, also a painter, decorator, and writer. He was born in Liverpool, Aug. 15, 1845, received instruction from his father, Thomas Crane, a miniature painter, and afterward studied wood engraving under Linton in London. Although influenced by the Pre-Raphaelite painters, Rossetti, Holman Hunt, and Millais, he was largely self-taught. During his travels in Italy in 1871 and 1888 he was strongly influenced, especially in his painting, by the early Florentines, above all by Botticelli. He is, however, preeminently an illustrator, who has popularized Morris's ideas of bookmaking, and on the Continent he, rather than William Morris, is considered the leader of the Romantic movement in British decorative art. Like Morris, he also seeks to identify art with Socialism and to introduce it into social and domestic life. He is perhaps best known for his illustrations—mostly of juvenile books—published in collaboration with Edmund Evans, contributing largely in reforming the artistic conception of decorative illustration. His drawings, executed

in a kind of antique style, mostly in outlines, are full of imagination, charm, and humor, and show complete mastery of the medium. Among the best are: "The Baby's Opera" (1877); "Pan Pipes" (1882); Grimm's Household Tales (1882); "Echoes from Hellas" (1888); "Flora's Feast"; "Queen Summer" (1889); Shakespeare's Works (1883-94), and Spenser's Faerie Queene. As a painter, he is classed with the Pre-Raphaelites (q.v.). Among his best-known paintings are: "The Birth of Venus" (1877, Tate Gallery); "The Chariot of the Hours" (medal at Munich, 1895); "Mask of the Four Seasons" (1905); "Prometheus Unbound" (1906); portrait of himself in the Uffizi Gallery (1912). He is also known as a designer for glass windows, tapestries, wall paper, and the like, and as a writer, with pedagogical intent, upon subjects of general artistic interest. He received many medals and was chosen president of the Arts and Crafts Society of London. Consult the monographs by Von Berlepsch (Vienna, 1897) and Schleinitz (Bielefeld, 1902), and Konody, *The Art of Walter Crane* (London, 1902).

**CRANE, WILLIAM HENRY** (1845- ). An American comedian. He was born in Leicester, Mass., and was educated in the Boston schools. In 1863, after some amateur experience, he made his debut at Utica, N. Y., with the Holman Opera Company, taking the part of the notary in Donizetti's *Daughter of the Regiment*. In 1870 he became a member of the Alice Oates Company, with which he remained for four years. In 1874 he played at Hooley's Theatre in Chicago, filling the leading comedy rôles, and later he acted in San Francisco for nearly a year. Returning East, he made his first marked success with Stuart Robson (1877), at the Park Theatre, New York City, in Grover's farcical play *Our Boarding House*. Among their other successes were those in the *Comedy of Errors* and *The Henrietta* (1889), after which he separated from Mr Robson. His subsequent plays include: *The Senator, The American Minister; On Probation; A Fool of Fortune; A Virginia Courtship* (1898); *David Harum* (1900); *Business is Business* (1905); *She Stoops to Conquer* (1906-07); *Father and the Boys* (1907); *The Senator Keeps House* (1911); *The New Henrietta*, a revision of *The Henrietta* (1914).

**CRANE, WINTHROP MURRAY** (1853- ). An American politician and a manufacturer, born in Dalton, Mass., and educated in the public schools. In 1897 he was elected Lieutenant Governor of Massachusetts, and in 1900 Governor. From 1892 to 1900 and from 1904 to 1912 he was a member of the Republican National Committee. He was appointed to fill the vacancy in the United States Senate caused by the death of Senator Hoar in 1904 and later was elected for the term ending in 1913, when he retired from public life.

**CRANE FLY** (so called from its long legs). A big, slender-bodied fly of the family Tipulidae, having excessively long, slender legs. These flies appear, often in swarms, in late summer, and about 300 of the 1000 or more known species belong to the United States. Their modes of life and reproduction are not well known. "The larvæ of most species," according to Howard, "live in the earth, but some live in water, in decomposing wood, and even upon the leaves of plants. Some of the earth-inhabiting forms destroy grass and grain by injuring the roots. . . The wings of the crane flies are generally clear,

but are sometimes beautifully marked and spotted." See DADDY LONGLEGS.

**CRANE'S-BILL.** See GERANIUM.

**CRANIAL INDEX.** See ANTHROPOMETRY; INDEX, CEPHALIC.

**CRANIOMETRY** (from Gk. *κρανιον*, *kranion*, skull + *μέτρον*, *metron*, measure) and **CRANTHOLOGY**. Systematic measurement and comparison of human crania. See ANTHROPOMETRY.

**CRANIUM.** See SKULL.

**CRANK.** A mechanical device consisting of a bend or arm on an axle or shaft by which reciprocating motion is converted into rotary motion. The reciprocating motion of the piston rod of a steam engine is converted into rotary motion of the engine shaft by means of a crank. The crank may consist of an arm on the end of a shaft or of a similarly located disk with a crank pin, or of a U-shaped bend in the shaft between the ends. The piston rod transmits its

CRANKS

1, single crank at end of an axle, 2, double crank in the middle of a shaft, 3, bell crank

motion to the crank by means of an intermediate connecting rod. The connecting rod exercises the maximum force on the crank arm when this arm is at right angles to the line of motion of the connecting rod, and it exercises no force tending to produce rotation when the crank arm is parallel to the line of motion of the piston rod. Maximum force occurs at two points in the rotation of the crank, and no force occurs at two points nearly at right angles to the points of maximum force. The two points of no force are called the "dead points"; and in order to carry the crank shaft past these dead points, where only a single crank is used, the shaft is provided with a heavy flywheel, the momentum of which supplies the necessary power to keep up rotation when the connecting rod is not supplying power. When two connecting rods are connected with the shaft by separate cranks, the two crank arms may be set at right angles to each other, so that one rod is exerting its maximum force while the other is at the dead points of the revolution.

**CRANMER, THOMAS** (1480-1556). Reformer of the English church and the first Protestant Archbishop of Canterbury. He was born at Aslacton, in the County of Nottingham, on July 2, 1489. In his fourteenth year he went to Jesus College, Cambridge, of which he was elected a fellow in 1510, but lost his position temporarily by marriage, being reelected on his wife's death. In 1523 he took his degree of D.D. and was appointed lecturer on theology. In 1529, during the prevalence of the sweating sickness in Cambridge, he retired with two pupils to Waltham Abbey; and Henry VIII, in company with Gardiner and Fox, afterward bishops of Winchester and Hereford, happening to be in the neighborhood, the event proved a turning point in the life of Cranmer. The King was then taking steps to secure his divorce from Catharine of Aragon, and in conversation on the subject with Gardiner and Fox, Cranmer suggested that if the

universities could be induced to declare that, in their opinion, the first marriage was unlawful, the King would be free to marry again. Henry was greatly pleased with this idea, and is said to have sworn, "by the Mother of God, that man hath the right sow by the ear." Cranmer was asked to reduce his suggestion to writing and to have it submitted to the European universities. After this he was appointed archdeacon of Taunton and one of the royal chaplains. He was also sent to Rome on a special embassy in the matter of the divorce, but met with little success. Subsequently he was dispatched to the Emperor Charles V on the same errand; and while in Germany he married a second time, a niece of the German divine Osiander. Shortly afterward, on the death of Archbishop Warham, he was recalled to fill the vacant see of Canterbury. He was consecrated Archbishop March 30, 1533. Under his auspices Henry's divorce was speedily carried through the Archbishop's Court at Dunstable, and on May 28 he announced the legality of the King's marriage to Anne Boleyn, which had taken place four months before. In Anne's subsequent disgrace, and again in the affair of Anne of Cleves, the Archbishop took a part not very creditable to him. His position was no doubt a difficult one; but his character was naturally pliable and timid rather than resolved and consistent. The same spirit characterizes the measures of religious reform which were promoted by him. On the one hand he joined actively with Henry in restricting the power of the Pope, though he seems to have had less to do with suppressing the monasteries; but, on the other hand, he was no less active in persecuting men like Frith, Forrest, and others, who on matters of religious faith were disposed to advance further than himself or the King. The key to the dilemma probably lies in Cranmer's idea of the royal supremacy. To his mind the power of the King in ecclesiastical affairs was absolute, and the duty of the Archbishop was to carry out the views of his royal master. Hence his advocacy of the "via media" under Henry, his advanced Protestantism under Edward VI, and, perhaps, his recantations under Mary. He did what he could, however, to resist the reactionary movement which took place in 1539, and which is known by the institution of the *six articles*. He was also instrumental in promoting the translation and circulation of the Scriptures. On Henry VIII's death Cranmer was appointed one of the regents of the kingdom and, along with Latimer and others, largely contributed to the advance of the Protestant cause during the reign of Edward VI. He assisted in the compilation of the service book and the articles of religion. The latter are said to have been chiefly composed by him. He was also the author of four of the homilies.

On the accession of Mary he was committed to the Tower, together with Latimer and Ridley. In March, 1554, they were removed to Oxford and confined there in the common prison, called the "Boardo." Latimer and Ridley bore their cruel fate with magnanimous courage; but the spirit and principles of Cranmer temporarily gave way under the severity of his sufferings. He was induced to sign no fewer than seven recantations, though there is no ground for supposing that a hope of pardon was held out to him. On March 21, 1556, he suffered martyrdom, as his fellow reformers had done, opposite Balliol College. His courage returned at the end,

and he showed an unexpected fortitude in the midst of the flames.

Cranmer's principal writings have been edited by Jenkyns, *Remains of Archbishop Cranmer* (Oxford, 1833), and by Cox, for the Parker Society, under the titles *Writings and Disputations Relative to the Lord's Supper* (Cambridge, 1844) and *Miscellaneous Writings and Letters* (ib., 1846). Additional material is to be found in the appendix of Strype, *Memorials of Thomas Cranmer* (Oxford, 1848-54), and his *Ecclesiastical Memorials* (ib., 1822); in Nichols, *Narratives of the Reformation*, Camden Society, from the papers of John Foxe (London, 1859); but above all in Brewer and Gairdner, *Calendars of Letters and Papers, Foreign and Domestic, of the Reign of Henry VIII* (ib., 1862-80). Among older works, consult: Foxe, *Acts and Monuments* (ib., 1877); Burnet, *History of the Reformation* (New York, 1842); and the *Lives* by Todd (London, 1861) and Le Bas (ib., 1833). More recent works are: Dean Hook, "Thomas Cranmer," in his *Lives of the Archbishops*, N. S. (ib., 1868); Green, *History of the English People*, vol. ii (New York, 1879); Froude, *History of England*, vols. i-vi (ib., 1870); Pollard, *T. Cranmer and the English Reformation, 1489-1856* (London, 1904).

**CRANNOGS, or CRANNOGES** (Ir. *crannog*, Gael. *crannag*, pulpit, top of a mast, from Ir., Gael. *crann*, tree, Welsh *prenn*, Corn. *pren*, tree; probably connected with Gk. *κράνον*, *kranon*, Lat. *cornus*, cornel tree, Lith. *kirna*, OPruss. *kirno*, shrub). Ancient lake dwellings of Ireland and Scotland. Usually the dwellings were extended into villages, often occupying islands, they were analogous to the lake dwellings (q.v.), or palafittes, of Switzerland, and to types of structure still existing in various regions. Commonly they were supported wholly or in part on piles set in the lake bottom and were connected by platforms. The type persisted in Ireland from an early prehistoric period, when stone implements were used, until the present millennium. The later examples were built by means of bronze and even iron tools, which are sometimes found in the ruins. The refuse heaps below the ancient structures are rich sources of relics, indicating the industrial and artistic status of the builders, their food habits, domestic and game animals, etc. Historical references to the structures began with the earliest Irish annals, about the ninth century, and continued until the middle of the seventeenth century. The archæologic survey and excavation of the ruins began in 1839, when Wilde explored a crannog in Lake Lagore, County Meath. Consult: Wilde's *Catalogue of the Museum of the Royal Irish Academy*; Munro's *Lake-Dwellings of Europe: Ancient Scottish Lake-Dwellings, or Crannogs, etc.*; Reeve's "Crannogs in Antrim and Derry," in *Ulster Journal of Archaeology* (Belfast, 1903-04); Arcey's "Account of the Excavations of Two Lake Dwellings," in *Journal of Royal Society of Antiquaries of Ireland* (Dublin, 1900).

**CRANSTON**. A residential city in Providence Co., R. I., including several villages, on the New York, New Haven, and Hartford Railroad, and on Providence River (Map: Rhode Island, C 2). Within the precincts of the town are four village libraries, State reformatories for boys and girls, the State prison, almshouse, insane asylum, and workhouse. The principal industries are market gardening, brewing, dairying, and the manufacture of cotton and print

goods, tubing, and wire. The government is administered by a mayor and city council. Cranston, settled in 1638, was set off from Providence and incorporated as a town in 1754 and as a city in 1910. It receives its water supply from Providence. Pop., 1900, 13,343; 1910, 21,107.

**CRANSTON, EARL** (1840- ). An American Methodist Episcopal bishop, born at Athens, Ohio. After graduating at Ohio University in 1861, he entered the Ohio infantry, served until 1864 in it and the West Virginia cavalry, and was advanced to the rank of captain. He was ordained to the ministry in 1867, held various charges, and was publishing agent of the Methodist Episcopal church from 1884 to 1896, when he was elected bishop. In 1904 he became Resident Bishop of Washington. In 1898-1900 he made a tour through China, Japan, and Korea.

**CRANTOR** (Lat., from Gk. Κράτωρ, *Krator*). A Greek academic philosopher, who flourished about 300 B.C. He was born at Soli, in Cilicia. He was the first commentator on Plato and wrote among other works, *Περὶ Πένθους*, *Peri Penthus*, *On Affliction*, a letter of condolence to a friend on the death of his children, praised by Cicero, *Academica*, ii, 135, as "a book not large, but golden, and to be learned by heart to the last word." Cicero used the treatise in writing his *De Consolatione*; parts of it appear, too, in Plutarch's *Consolatio ad Apollonium*. Consult Kayser, *Dissertatio de Crantore Academic* (1841); Buresch, "Consolationum a Græcis Romanisque scriptarum Historia Critica," in *Leipzig Studen*, ix (1886), Ritter and Preller, *Historia Philosophiæ Græcæ* (9th ed; Gotha, 1913).

**CRANWORTH, ROBERT MONSEY ROLFE, BARON** (1790-1868). An English jurist, born at Cranworth, Norfolk. He was educated at Cambridge, was called to the bar in 1816, and was a member of Parliament and Solicitor-General from 1832 to 1839, when he became a Baron of the Exchequer. In 1851 he was raised to the peerage, and in the following year was chosen Lord Chancellor in Lord Aberdeen's cabinet. He resigned in 1858, but again occupied the post in 1865-66. Consult J. B. Atlay, *Lives of the Chancellors*, vol. ii (London, 1908).

**CRAPAUD**, κρά'π'δ', **JEAN**, or **JOHNNY**. An English nickname for a Frenchman, from the popular belief that all Frenchmen were frog eaters, *crapaud* meaning a 'frog or toad.'

**CRAPE** (Fr. *crêpe*, OF. *craspe*, crinkled, from Lat. *crispus*, crisp). A thin fabric made of raw silk which has been tightly twisted, without removing the viscous matter with which it is covered when spun by the worm. It is simply woven as a thin gauze, then dressed with a thick solution of gum, which in drying causes the threads partially to untwist, and thus gives a wrinkled and rough appearance to the fabric. It is manufactured both in black and colors. Black crape is usually worn as mourning apparel, a use of the material which originated at Bologna, Italy. The Japanese and Chinese crapes are often white or highly colored and sometimes are adorned with ornamental designs. Crape cloth is made to imitate the silk fabric by passing a form of woolen cloth through rollers which impart the crinkled surface.

**CRAPE MYRTLE**. See *LAGERSTROMIA*.

**CRAPPIE** (possibly connected with Fr. *crabe*, crab fish). A sunfish (*Pomoxis annularis*) of the rivers of the Mississippi valley and Alleghanies, a food fish resembling in appear-

ance and habits the calico bass. Also called "bachelor," "new light," "Campbellite," etc. See *Plate of BASS*.

**CRAPS**. A game of chance, played by any number of persons with two dice. The person holding the dice "shoots." Should his first throw be 2, 3, or 12, it is "craps," and he loses; should he shoot 7 or 11, he wins. Should he throw any other number, then he continues to "shoot" until he throws that number again and wins, or 7 and loses.

**CRAPSEY, ALGERNON SIDNEY** (1847- ). A former American Protestant Episcopal clergyman, born in Hamilton Co., Ohio. He prepared for the ministry at St. Stephen's College, Annandale, N. Y., and at the General Theological Seminary, where he graduated in 1872. He was ordained to the priesthood in 1873, and in 1874 was placed on the permanent staff of Trinity Church, New York, from which he resigned in 1879 to accept the rectorship of St. Andrew's Church, in a newly organized parish in Rochester, N. Y. In 1906 Dr. Crapsey was tried by an ecclesiastical court of his diocese, found guilty of heresy, and deposed, for heterodox views in sermons in 1904-05 denying the doctrine of the virgin birth of Christ, and the resurrection and ascension of the literally physical body of Christ, though he had admitted the spiritual verity of the resurrection. In 1907 he founded in Rochester a brotherhood. His publications include: *The Five Sorrowful Mysteries* (1883); *The Five Joyful Mysteries* (1885); *A Voice in the Wilderness* (1897); *Religion and Politics* (1905), containing the "heretical" sermons; *The Rebirth of Religion* (1907).

**CRASHAW, RICHARD** (c.1613-49). An English poet. He was the son of a clergyman in the English church and was educated at the Charterhouse and at Cambridge, where he obtained a fellowship in 1637. In 1643 he was ejected from his fellowship by the Parliament for refusing to take the covenant. He went to France, adopted the Roman Catholic faith, and suffered great pecuniary distress, until, through Cowley's influence, he was introduced to Queen Henrietta Maria, who recommended him to Cardinal Palotta at Rome. The Cardinal made him an attendant, and afterward subcanon in the church of Our Lady of Loretto. Just after this latter appointment Crashaw died, Aug. 25, 1649. In 1634 Crashaw published a volume of Latin poems, in which appeared the famous line on the miracle at Cana, *Nympha pudica Deum vidit et erubuit* ('The modest water saw its God and blushed'). In 1646 appeared a volume of poems in two parts, one containing religious and the other secular poems, under the titles (abbreviated) *Steps to the Temple* and *The Delights of the Muses*. Another (third) edition, with additions, was published in Paris in 1652. This volume is ornamented with 12 vignette engravings, drawn by Crashaw himself. Later editions of Crashaw are by W. D. Turnbull (1858); A. B. Grosart (1872, with supplement in 1888); and A. R. Waller, "Poems," in *Cambridge English Classics* (1908).

**CRASIS**. See *ORTHOGRAPHY, FIGURES OF*.

**CRASSUS, LUCIUS LICINIUS** (140-91 B.C.). A Roman orator, who excelled all others of his time. In 95 B.C. he was elected consul, with Quintus Mucius Scaevola (who had been his colleague in all his previous offices). During their consulship was enacted the *Lex Licinia Mucia de Civibus Redigundis*, banishing from

Rome to their own cities all freemen who had not the full rights of citizens. This embittered the feelings of foreigners towards Rome and partly led to the Social War. As censor (92 B.C.) he closed all the schools of the rhetors, asserting that they exercised a bad influence on the minds of young men. He died in consequence of the excitement attending a debate in the Senate. Crassus is one of the chief speakers in Cicero's *De Oratore*, representing Cicero's own point of view. Consult the Introduction to Wilkins's edition of that work, 8-13 (2d ed., Oxford, 1888).

**CRASSUS, MARCUS LICINIUS** (c.115-53 B.C.). A Roman triumvir. He was a zealous partisan of Sulla, and rendered him efficient service in the battle at the Colline Gate (q.v.), 82 B.C., which sealed the fate of the Marians. As prætor he crushed the revolt of the gladiators under Spartacus in 71 B.C., and in the following year was made consul with Pompeius, a colleague whom he hated. On the other hand, Cæsar valued the friendship of Crassus, the most wealthy of Roman citizens. During his consulate Crassus gave a feast to the people, which was spread on 10,000 tables, and distributed grain for three months. Plutarch estimates the wealth of Crassus at more than 7000 talents, and Pliny states that his lands were worth 8000 talents. In 60 B.C. Cæsar, Pompeius, and Crassus entered into the first triumvirate (See CÆSAR.) In 55 B.C., as consul with Pompeius, he obtained the Province of Syria, and professed to make preparations of war against the Parthians; but the acquisition of more wealth seems to have been his main object, and thus he effected by plundering the towns and temples in Syria. At length, however, he undertook a campaign in 54 B.C., after which he returned to Syria. In the following year he set out again, but was misguided by a treacherous Arab, and utterly defeated at the river Bilechas by the Parthians. Crassus now retreated to the town of Carthæ, intending to pass into Armenia, but was beguiled into a conference with the Parthian general, Surenas, and was slain at the appointed place of meeting. His quaestor, Cassius, with 500 cavalry, escaped into Syria; but the remaining Romans were scattered and made prisoners or put to death.

**CRATEGUS** (Neo-Lat., from Gk. *κράταγος*, *kratagos*, a kind of thorn). A genus of plants of the family Rosaceæ, very nearly allied to *Mespilus* (medlar) and *Pyrus* (pear, apple, etc.). The species, which are difficult of limitation, are natives of the temperate parts of the Northern Hemisphere, being well represented in North America, and in general have flowers in beautiful terminal corymbs. They are all large shrubs or small trees, more or less spiny; hence the name "thorn" has been very generally applied to them. The only native of Great Britain is the common hawthorn (q.v.) (*Cratægus oxyacantha*). Most of the species resemble it in habit, size, form of leaf, etc. A number of species are now frequent in plantations and shrubberies. Of these, perhaps the most common is the cockspur thorn (*Cratægus crus-galli*), a native of North America from Canada to South Carolina. Its leaves are not lobed; its fruit is rather larger than that of the hawthorn. The azarole (*Cratægus azarolus*), and the aronia, a native of the south of Europe and of the Levant, are occasionally cultivated for their fruit, which is about the size of the Siberian crab and is used either for dessert or for pies. *Cratægus*

*orientalis* and *Cratægus tanacetifolia* have also fruit of considerable size. The latter is much eaten in Armenia. *Cratægus mexicana* has a large, but inedible, apple-like fruit. It is, however, very ornamental. After the cockspur thorn, the best known of the American species are probably the scarlet thorn (*Cratægus coccinea*), Washington thorn (*Cratægus cordata*), *Cratægus douglasii*, and *Cratægus punctata*. The wood of most of the species much resembles that of the hawthorn. It is common to graft the rarer species on the hawthorn.

**CRATCH CRADLE** (from OF. *creche*, Ger. *Krippe*, crib), also called CAT'S CRADLE and SCRATCH CRADLE. A childish game played by two persons holding an endless string symmetrically in the fingers of the two hands, and taking it off each other's hands so as to form a new pattern at once.

**CRATCHITT, BOB.** The father of Tiny Tim in Dickens's *Christmas Carol*—a good-hearted little man, the poorly paid clerk of the miserly Scrooge.

**CRATER.** See VASE.

**CRATER** (Lat., from Gk. *κράτηρ*, *kratēr*, mixing bowl, from *κεραύρινα*, *kerannynai*, to mix). The bowl-shaped or conical cavity through which materials are ejected during a volcanic eruption. At the bottom the crater communicates by a pipe or chimney with the heated interior of the earth. When of small size a volcano usually erupts through a single crater at the summit, but, as the mountain mass increases by accumulation of material, the lava may find lines of lesser resistance through fissures in the sides. In this way subsidiary craters are formed, one of which in the course of time may become the principal crater, or they all may be buried beneath the renewed outpourings of the primary crater. The Peak of Teneriffe has a number of minor funnels on its sides and summit. In volcanoes of an explosive type the whole top of the mountain may be blown off during an eruption, forming an immense crater, within which subsequently new cones may arise in concentric arrangement. This structure, called "cone-in-cone," is shown by Vesuvius, whose active crater is partially encircled by a rampart (Monte Somma) many miles in diameter. Volcanello of the Lipari Islands has three craters on the summit. The craters of extinct or dormant volcanoes are sometimes filled with water, and thus are formed crater lakes. Many of the beautiful lakes of Italy and the well-known Crater Lake of Oregon originated in this way. See VOLCANO.

**CRATER, THE.** A novel by James Fenimore Cooper (1847), describing a Utopian settlement on the Pacific coast.

**CRATER LAKE.** See CRATER LAKE NATIONAL PARK.

**CRATER LAKE NATIONAL PARK.** A United States government reservation in the Cascade Mountains, in Klamath Co., Oreg., created by an Act of Congress approved May 22, 1902 (Map: Oregon, C 5). It has an area of 249 square miles. Its principal feature is Crater Lake, lying in the crater of an extinct volcano which destroyed what geologists believe to have been a mountain more than 16,000 feet high, perhaps the loftiest peak on the western coast of what is now the United States. The lake is in about the centre of the park, is approximately 6 miles long by 4 miles wide, and has a water surface of 20½ square miles. The nearly perpendicular walls of the great caldera in which

the lake lies tower from 500 to 2000 feet above its surface, which is 6177 feet above sea level. Soundings have been taken showing a depth of 2001 feet. It was discovered in 1853 by John Hillman, the leader of a party of gold hunters, and was known to United States army officers and enlisted men as early as 1865, but not to the general public until about 1885, since when its remarkable beauty and the majestic grandeur of the surrounding landscape have attracted thousands of tourists to its shores. In 1913 the park contained two hotels (one on the rim of the lake and the other 5 miles distant), and a telephone service connected various buildings within the reserve. Several wagon roads are maintained, and these means of communication are being increased and improved. All hunting is forbidden within the reserve, but fishing is permitted, and the lake contains an abundance of rainbow trout, with which it has been stocked by the government. There are no other fish in the lake, and none in the other waters of the reserve. Consult Diller, *Geological History of Crater Lake, Oregon*, pub. by the Department of the Interior (Washington, 1912).

**CRATERUS** (Lat., from Gk. Κρατῆρος, *Krateros*). A favorite general of Alexander the Great. He commanded a division of the royal bodyguard in the Asiatic campaigns, and was sent to Macedonia as regent in 323 B.C. After the death of Alexander, Craterus received, jointly with Antipater, the government of Macedonia, Greece, Illyria, and Epirus, Antipater taking command of the military forces and Craterus attending to civil affairs. He formed an alliance with Antigonus (q.v.) against Perdiccas and invaded Asia with an army, but was defeated and slain by Eumenes in Cappadocia (321 B.C.).

**CRATES**, krátēs (Lat., from Gk. Κράτης, *Kratēs*). An Athenian comic poet of the fifth century B.C. He began his career as an actor in Cratinus' plays, and won his first victory in 449 B.C. Aristotle says that he was the first Attic poet to give up personal satire in comedy; he likewise made the innovation of introducing a drunken character on the stage. We have the titles of 15 plays and scanty fragments. Consult Kock, *Comicorum Atticorum Fragmenta* (Leipzig, 1880).

**CRATES**. A cynic philosopher of Thebes, of the fourth century B.C. Scorning the large property which he inherited, he moved to Athens and became an eager disciple of Diogenes and one of the most eminent of the Cynics. He was an excellent orator and skillful poet. As the teacher of Zeno, the founder of Stoicism, Crates formed the link between Cynicism and Stoicism. Interesting fragments of his poetry have been edited by Bergk, *Poeta Lyrici Graeci* (Leipzig, 1882). Diogenes Laertius states that he wrote letters and tragedies on philosophic subjects. The 36 letters which bear his name are, however, generally thought to be spurious. They are edited by Hercher, *Epistolographi Graeci* (Paris, 1873). Consult also Zeller, *Philosophie der Griechen*, vol. i (Tübingen, 1892).

**CRATES OF MALLOS**. A Greek grammarian and Stoic of the second century B.C., head of the Pergamene Library and the chief opponent of Aristarchus. He devoted himself to the interpretation of Greek authors, especially of Homer; he likewise defended the grammatical theory of anomaly in opposition to the Alexandrian doctrine of analogy. (See ANOMALISTS AND ANALOGISTS.) He enlarged and catalogued the Per-

gamene Library; his work on the Attic dialect was much employed by later grammarians. About 167 B.C. he was sent by King Attalus on an embassy to Rome, where he introduced the study of formal grammar. Consult: Suetonius, *De Grammaticis*, 2; Wachsmuth, *De Cratete Mallota* (Leipzig, 1860); Susemihl, *Geschichte der griechischen Literatur in der Alexandrinerzeit*, vol. ii (ib., 1892); Sandys, *A History of Classical Scholarship*, vol. i (2d ed., Cambridge, 1906).

**CRATINUS** (Lat., from Gk. Κρατινος, *Kratinos*) (?-c.421 B.C.). An Athenian comic poet. He was born in the latter part of the sixth century B.C., and was one of the seven poets of the Old Comedy named in the Canon Alexandrinus (q.v.). He first presented a comedy in 453; in all he left 21 plays, with which he had won nine victories. He was among the first to give comedy a political turn. By the introduction of a third actor he placed comedy on a level with tragedy. A follower of Cimon and the Conservative party, he sharply attacked Pericles in two plays, in his 'Ἀρχιλόχοι, *Archilochoi*, he represented a contest of poets which may well have been Aristophanes' model in his *Frogs*. Aristophanes defeated Cratinus in 425 with his *Acharnians*, and in 424 with the *Knights*. In the parabasis of the latter play he refers to his elder rival as "an ancient ruin," "a doting drunkard," whereupon Cratinus retorted in 423 with his *Wineflask*, which won the first prize over Aristophanes' *Clouds*. The 400 fragments of his work then known were collected by Kock, *Comicorum Atticorum Fragmenta*, vol. i (Leipzig, 1880). In the *Oxyrhynchus Papyri*, vol. iv (1904), appeared the newly discovered argument of a play, *Dionysalexander*, of which nine fragments had been known, though they did not reveal the plot, on this consult Körte, *Hermes* (1904), and Morgan, *Addresses and Essays*, 25-33 (New York, 1910).

**CRATIPPUS** (Κράτιππος, *Kratippus*). An Athenian historian, of the fourth century B.C., of whom very little is known. He has gained importance in recent times because of an historical fragment discovered by Grenfell and Hunt, and published by them in *Oxyrhynchus Papyri*, v (1907-08). The fragment, which has come to be known as the *Hellenica Oxyrhynchia*, has been ascribed to Cratippus by various scholars. Consult Hunt, in *The Year's Work in Classical Studies* (London, 1908). The present tendency is to ascribe the work rather to some one other than Cratippus. Consult Walker, *The Hellenica Oxyrhynchia: Its Authorship and Authority* (Oxford, 1913). See EPHORUS.

**CRATIPPUS** (Lat., from Gk. Κράτιππος, *Kratippus*). A Peripatetic philosopher. He was a native of Mitylene and a contemporary of Cicero. He appears to have been held in the highest estimation by the great men of his age. Cicero calls him the prince of all the philosophers whom he had known. Cratippus accompanied Pompeius in the latter's flight after the defeat at Pharsalus, and conferred upon him the consolations of philosophy; and Brutus went to Athens, where Cratippus had lately settled, to listen to his lectures even while making preparations to meet Octavius and Antonius. Nothing that Cratippus wrote has survived.

**CRAUK**, krá'uk', GUSTAVE ADOLPHE DÉSIDÈRE (1827-1905). A French sculptor, born in Valenciennes. He was a pupil of Pradier, Ramey, and Dumont, and won the Prix de Rome in 1851. His

works are to be found in many of the public buildings and churches of Paris and the provinces. They include the monument to Admiral Coligny (1889), before the Oratory in the Rue de Rivoli, Paris; the tomb of Cardinal Lavignier in Carthage (1900); and the ideal works "Youth and Love" (Luxembourg) and "Omphale" in the courtyard of the Louvre. He was one of the most popular portrait sculptors of the Second Empire, and among his sitters were the Empress Eugénie (1863), Marshals McMahon and Niel (1861), General Gallifet, and Casimir Périer.

**CRAVEN, ALFRED WINGATE** (1810-79). An American civil engineer, born in Washington, D. C. He was appointed engineer commissioner to the Croton Water Board in New York City in 1849, and his connection with that board was notable for the number and value of the works which he projected and superintended. Among these were the Central Park Reservoir, completed in 1867, the reservoir at Boyd's Corners, and the survey of the Croton valley. The establishment of the sewerage system of New York is largely due to his endeavors. He was president of the American Society of Civil Engineers in 1870-71.

**CRAVEN, ELIJAH RICHARDSON** (1824-1908). An American clergyman, born in Washington, D. C. He graduated at the College of New Jersey (later Princeton University) in 1842 and at Princeton Theological Seminary in 1848 and became a trustee of the former (1859) and a director of the latter (1865). In 1878-84 he was chairman of the committee to revise the Book of Discipline of the Presbyterian church, and he was moderator of the General Assembly in 1885. He was president of the board of directors of the Newark German Theological Seminary, Bloomfield, N. J., in 1889-1902, and for more than 30 years (1854-87) was pastor of the Third Presbyterian Church in Newark, N. J. In 1887-1904 he was secretary of the Presbyterian Board of Publication and Sabbath School Work. He revised (1874) Moore's translation of Lange's *Commentary on Revelation*.

**CRAVEN, ELIZABETH BERKELEY, LADY.** See ANSPACH, MARGRAVINE OF.

**CRAVEN, PAULINE DE LA FERRONAYS, MADAME AUGUSTUS** (1820-91). A French religious romancer, born in Paris. She is best known for her *Histoire d'une sœur* (1866), an idyllic picture of an aristocratic Roman Catholic French family and of the slow passing away, through consumption, of a simple-minded, noble, and deeply religious woman. Madame Craven's father was at one time French Ambassador to Berlin. In 1834 she married an Englishman, Augustus Craven, a descendant of the famous Margravine of Anspach, he is known only through his *Le prince Albert de Saxe-Cobourg, époux de la reine Victoria* (1883). She traveled widely, and after marriage lived much in England, writing articles on English politics, and biographical sketches of *Sister Nathalie Narishkin* and of *Lady Georgiana Fullerton*, as well as *Reminiscences* of England and Italy. She died in Paris, April 1, 1891. Her novels have been as popular perhaps in English translations as in the original. The best are *Anne Scervin*, *The Enigma's Answer*, and *Fleurange*, in all of which she pleads persuasively the cause of Roman Catholicism and seeks in emotional ecstasy the only life that seems to her worth the living. To some her books will seem morbid, to others strong, but her fervid spirit appeals to all.

Consult Mary Bishop, *Memoir of Mrs. Craven* (London, 1894), and J. F. A. Smith, *The Life and Literary Works of Mrs. Augustus Craven, née de la Ferronnays* (Nürnberg, 1910).

**CRAVEN, THOMAS TINGEY** (1808-87). An American naval officer, born in Washington, D. C. He entered the navy in 1822, took part in the capture of the pirate *Federal* in the West Indies in 1828, and commanded Captain Wilkes's flagship in the Antarctic exploring expedition in 1838. He was commissioned captain in 1861, commanded the Potomac flotilla, and in the same year took part in the capture of New Orleans and the operations on the Mississippi. In 1866 he was assigned to the command of the Mare Island Navy Yard and was raised to the rank of rear admiral. He was retired in 1869.

**CRAVEN, TUNIS AUGUSTUS MACDONOUGH** (1813-64). An American naval officer, brother of Thomas Tingey Craven. He was born in Portsmouth, N. H., entered the navy in 1829, took part in the conquest of California, and in 1857 made a survey of the Isthmus of Darien for a prospective ship canal. He saved the fort at Key West for the United States government at the beginning of the Civil War and was promoted to the rank of commander. While chasing the Confederate ram *Tennessee* in the battle of Mobile Bay, his vessel, the monitor, *Tecumseh*, struck a torpedo and sank, with Craven and nearly every one else on board.

**CRAWFISH, or CRAYFISH** (OF. *crevice*, *crevasse*, Fr. *écrevisse*, from OHG. *chrebiz*, Ger. *Krebs*, crawfish). A fresh-water or terrestrial crustacean (*Astacus fluvialis*), nearly allied to the lobster, from which, however, it differs in having the middle plate of the tail fin transversely divided by a suture. It inhabits the rivers and streams of many parts of Europe, making burrows in clayey banks, and coming forth at night in search of food, which consists chiefly of mollusks, small fishes, larvæ of aquatic insects, and animal substances of almost any kind. It is esteemed for the table, and is readily attracted by a bait of decaying flesh or animal garbage inclosed in a net or in a bundle of twigs, by which many crawfish may be captured at a time. The use of the name has been extended until it is now applied to any of the fresh-water species of the family Astacidae. In the United States it is universally applied to any one of several species of *Cambarus*, which agree very closely in structure and habits with the common crawfish of Europe. They are 6 inches or so in length and of a greenish-brown color. They frequently do much damage to dikes and levees by opening water passages, as told in *Proc. Assoc. Econom. Entomologists* for 1895 (United States Department of Agriculture, 1896). For general facts, consult Huxley. *The Crayfish: An Introduction to Zoology* (London, 1887); "Revision of the Astacidae," *Memoirs Museum Comparative Zoology*, vol. x, No. 4 (Cambridge, Mass., 1885); Sterle. *The Crayfish of Missouri* (Cincinnati, 1902); Fisher, "Crayfish as Crop Destroyers," in *Year Book of the United States Department of Agriculture* (Washington, 1912).

**CRAWFORD, ALEXANDER WILLIAM CRAWFORD LINDSAY, EARL OF** (1812-80). An English author. After graduating at Cambridge he traveled extensively in Egypt and Asia Minor. He took a considerable interest in astronomical investigations, and the expedition to the island of Mauritius in 1874, to observe the transit of

Venus, was organized by him. For some inexplicable reason his body was stolen shortly after its burial at Dunecth, and was not discovered until about 14 months later in the woods near by. Among his publications are: *Loves of the Lindsays* (1835); *Letters on Egypt, Edom, and the Holy Land* (1838); *Sketches of the History of Christian Art* (3 vols., 1847; 2d ed., 1885); *Argo, or the Conquest of the Golden Fleece*, an epic in 10 books (1876); *The Earldom of Mar* (1882).

**CRAWFORD, COE ISAAC** (1858- ). An American legislator, born near Volney, Iowa. He graduated in 1882 from the law department of the University of Iowa, practiced law for one year in that State and for 15 years in Pierre, S. Dak., was member of the Dakota Territorial Legislature in 1889, and upon the admission of South Dakota into the Union in that year became a member of the first State Senate; was Attorney-General in 1892-96; and, after removal to Huron, S. Dak. (1897), was attorney for the Chicago and Northwestern Railway Company until 1903. In 1907 he was elected Governor of South Dakota on the Republican ticket and in the following year United States Senator for the term expiring March 3, 1915.

**CRAWFORD, FRANCIS MARION** (1854-1909). An American novelist, chiefly resident in Europe. He was born at Bagni di Lucca, Italy, a son of the sculptor Thomas Crawford. Of cosmopolitan education in America, England, and Germany, his first literary venture was as editor of the *Allahabad Indian Herald* (1879-80). His voluminous fiction was begun by *Mr. Isaacs*, a story of modern India (1882), which promptly brought him a popularity and a fame at home and abroad that its many successors served to widen and make more secure. The more significant of his other works are: *Dr. Claudius* (1883); *A Roman Singer* (1884); *Zoroaster* (1885); *A Tale of a Lonely Parish* (1886); *Saracinesca* (1887); *Paul Potoff* (1887); *Greifenstein* (1889); *Sant' Ilario* (1889); *A Cigarette Maker's Romance* (1890); *The Witch of Prague* (1891); *Don Orsino* (1892); *Pietro Ghisleri* (1893); *The Ralstons* (1894); *Casa Braccio* (1895); *Corteone* (1897); *Via Crucis* (1899); *In the Palace of the King* (1900); *Marietta, a Maid of Venice* (1901); *The Heart of Rome* (1903); *Whosoever Shall Offend* (1904); *Soprano*, a portrait (1905); *Fair Margaret* (1905), and its sequel, *Prima Donna* (1908). The *Saracinesca* series, stories of modern Rome, is generally regarded as his most important performance. His strictly American fiction is less popular. A romantic novelist, Marion Crawford probed no depths of human nature and untangled no complex psychological knots, but he had the beguiling gift of the born story-teller who has also become an accomplished master of the art of fiction. Ingenious plots, a varied company of interesting *dramatis personæ* faithfully studied and freshly portrayed, picturesque settings, and behind all the attractive personality of an intelligent and cultivated man of the world—these and other characteristics explain and fully justify the delight with which, for more than a quarter of a century, an immense audience, American and European, welcomed the annual appearance of one of the long series of his novels. Though his fame rests on his fiction, he showed, in *Ave Roma Immortalis* (1898), *Rulers of the South* (1900), and *Gleanings from Venetian History* (1905), a gift of conjuring up the life of the

Italian past in a manner that makes the spirit and the facts of history as entertaining as a romance.

**CRAWFORD, GEORGE WASHINGTON** (1708-1872). An American lawyer and statesman. He was born in Georgia, graduated at Princeton in 1820, and in 1822 was admitted to the bar. From 1827 to 1831 he was State Attorney-General, and from 1837 to 1842, with the exception of one year, was a member of the State Legislature. In 1843 he was in Congress, in 1843 and 1845 was elected Governor of Georgia, and from 1849 to 1850 was Secretary of War in President Taylor's cabinet.

**CRAWFORD, ISABELLA VALANCY** (1851-87). A Canadian poet. She was born in Dublin, Ireland, went to Ontario as a child, and lived at Peterboro and Toronto. She wrote verse showing marked originality and lyrical power, comprised mostly in *Old Spookses' Pass*, *Malcolm's Katie*, and *Other Poems* (1884). Consult the appreciation prefixed to *Poems* (Toronto, 1905, ed. by Garvin) by E. Wetherald.

**CRAWFORD, JAMES LUDOVIC LINDSAY, EARL OF** (1847-1913). A British astronomer, born at Saint-Germain-en-Laye, France. He was educated at Eton and at Trinity College, Cambridge, and from 1874 to 1880 was a member of Parliament. He was also for a time president of the Astronomical Society. His *Bibliotheca Lindsiana* was published in parts from 1883 to 1913: his philatelic library was bequeathed to the British nation.

**CRAWFORD, JOHN WALLACE (CAPTAIN JACK)** (1847- ). An American author, born in County Donegal, Ireland. He served in the Forty-eighth Pennsylvania Volunteers in the Civil War, and while lying wounded in the hospital at West Philadelphia was taught to read and write by a sister of charity. As a scout he served under General Crook in the Sitting Bull campaign in 1876 and later against the Apaches in New Mexico. In 1886 he retired from the army, was a miner and ranchman in New Mexico, was in the Klondike (1898-1900), and finally became a public lecturer. Besides many poems, several songs, and more than 100 short stories, "Captain Jack" is author of *The Poet Scout—A Book of Song and Story* (1885); *Campfire Sparks* (1888); *Tat*, a drama produced in San Francisco in 1900; *Colonel Bob*, a drama, with Marie Madison (1909); *Whar' the Hand o' God is Seen and Other Poems* (1911).

**CRAWFORD, MARY CAROLINE** (1874- ). An American author, born in Boston. She was educated at Radcliffe College. From 1898 to 1902 she was literary critic of the *Boston Budget* and in 1907-08 was secretary of the Women's Trade Union League; she then became secretary of the Ford Hall meetings. Her publications include: *The Romance of Old New England Roof-trees* (1902); *The Romance of Old New England Churches* (1903); *The College Girl of America* (1905); *Among Old New England Inns* (1907); *St. Botolph's Town* (1908); *Old Boston Days and Ways* (1909); *Romantic Days in Old Boston* (1910); *Goethe and his Woman Friends* (1911; 2d ed., 1913); *Romantic Days in the Early Republic* (1912); *The Romance of the American Theatre* (1913).

**CRAWFORD, THOMAS** (1813-57). An early American sculptor. He was born in New York, March 22, 1814, and in 1834 he went to Rome, where he studied under Thorvaldsen. He passed much of his life in Rome, where his studio was

the resort of travelers and lovers of art. Although his life was comparatively short, he left many interesting examples of his work, and is justly considered one of the most important pioneers of American sculpture. Judged from the pseudoclassic standpoint of his day, his work ranks high, and it always has a distinct literary and poetic flavor. But it is rarely inspired, and in modeling is cold and hard. The figure of "Liberty" on the dome of the Capitol at Washington, the statue of James Otis in Mount Auburn Cemetery, Cambridge, and the statues of Patrick Henry and Jefferson, belonging to the Washington Monument in Richmond, have originality, strength, and nobility. He was less happily inspired in the main figure of the Richmond monument, an equestrian statue of Washington, and in the pediment and bronze doors of the Senate wing of the Capitol. Other interesting works are the bust of Beethoven, now in Symphony Hall, Boston, the casting of which was enthusiastically celebrated in a great festival in Munich; "The Indian" (New York Historical Society); "Orpheus" (Boston Art Museum); "Adam and Eve after the Expulsion" and a bust of Josiah Quincy (Boston Athenæum); "The Dancer," "Dying Indian Maiden," and "Flora" (Metropolitan Museum, New York). Crawford executed many bas-reliefs, and 87 of his plaster casts were presented by his wife to the Commissioners of Central Park, who arranged them in a building for public exhibition. They have since been destroyed by fire. Consult Lorado Taft, *History of American Sculpture* (New York, 1903), and Tuckerman, *Book of the Artist* (ib., 1867).

**CRAWFORD, WILLIAM** (1732-82). An American soldier, born in Berkeley Co., Va. He was for a time assistant surveyor to George Washington, and he served as ensign of Virginia Rifles in the French and Indian War. He accompanied Braddock's luckless expedition against Fort Duquesne in 1755, served through the Pontiac War (1763-64), and in 1776 was appointed lieutenant colonel of the Fifth Virginia Regiment. In 1781 he resigned from the army with the rank of colonel. At the request of Washington and of General Irvine, he assumed command in 1782 of an expedition against the Delaware and Wyandot Indians near the Sandusky River, who had long devastated the frontier. On June 4, on the plains northeast of the present site of Sandusky, he encountered a combined force of about 300 Indians and British soldiers from Detroit. His troops having been discouraged by the accession of reinforcements to the enemy, he ordered a retreat which soon became a confused flight. He was himself separated from the main body, captured by a band of Delawares, and burned at the stake amid fearful torture. Notwithstanding his wholly creditable Revolutionary record, his leadership on this occasion appears scarcely to have been efficient. Consult Butterfield, *Expedition against Sandusky* (Cincinnati, 1873); Roosevelt, *The Winning of the West*, vol. ii (New York, 1896); N. N. Hill, "Crawford's Campaign," in *Magazine of Western History* (Chicago, 1885).

**CRAWFORD, WILLIAM HARRIS** (1772-1834). An American politician. He was born in Amherst Co., Va., Feb. 24, 1772, but removed with his parents to South Carolina in 1779 and to Georgia in 1783, where in 1798 he was admitted to the bar. In 1802 he was chosen a member

of the State Senate and in 1807 was chosen to fill a vacancy in the United States Senate. During the canvass he fought two duels, in the first of which he killed a man, while in the second he was himself wounded. He was elected to the Senate in 1811 and in 1812 was chosen president pro tempore of that body. He at first opposed, but finally supported, the war with England. In 1813 he was appointed Minister to France, where he became a general favorite and in particular was an intimate friend of Lafayette. In 1815 he was made Secretary of War and the next year Secretary of the Treasury, an office which he retained until 1825. Crawford had been a candidate for the presidential nomination in 1816 and in 1824 thought himself entitled to succeed Monroe as President, and was regularly nominated by the congressional caucus which was then controlled by him; but the caucus system was then temporarily superseded (see CAUCUS), and there were four other candidates against him—Calhoun, John Quincy Adams, Jackson, and Clay. Calhoun was pacified with the vice presidency, to which he was chosen by 182 out of 260 votes. There was no choice for President, the vote being: Jackson, 99; Adams, 84; Crawford, 41; Clay, 37. About the time of the election Crawford was stricken with paralysis, from which he never wholly recovered. His condition rendered it impossible to consider him a candidate when the election came to be decided in the House of Representatives, although, even in such a condition, he received four of the 24 votes. From this time Crawford was out of the political field. He served as judge of the northern circuit of Georgia from 1827 until his death, which occurred Sept. 15, 1834.

**CRAWFORD, WILLIAM HENRY** (1832- ). An American educator, born at Wilton Center, Ill. He graduated at the Northwestern University and the Garrett Biblical Institute and became a minister in the Methodist Episcopal church. He was appointed professor of historical theology in the Gammon Theological Seminary, Atlanta, Ga., in 1889, and in 1893 became president of Allegheny College (Meadville, Pa.). His publications include: *Life of Savonarola* (1906); *The Church and the Slaves* (1908); *Thoburn and India* (1909).

**CRAWFORD NOTCH.** A defile in the White Mountains, N. H., at an elevation of 1915 feet, between Mount Webster and Mount Willey, each about 4000 feet high. The Saco River, entering through a narrow passage, traverses the Notch, which is remarkable for its impressive rock scenery.

**CRAWFORDSVILLE.** A city and the county seat of Montgomery Co., Ind., 43 miles west-northwest of Indianapolis, on the Cleveland, Cincinnati, Chicago, and St. Louis, the Vandalia, the New York Central, and the Chicago, Indianapolis, and Louisville railroads (Map: Indiana, C 2). It is the seat of Wabash College, established in 1832, and contains a fine county courthouse, a community house for women, a country club, and a Carnegie library. The city is the home of five insurance companies, has manufactures of matches, paving bricks, burial furnishings, flour, foundry products, lumber, metal polish, barbed wire, etc. Settled in 1822, Crawfordsville was incorporated in 1865 and is governed under a charter of that date, which provides for a mayor, elected every four years, and a city council. The electric-light

plant is owned by the city. Crawfordsville was the home of Gen. Lew Wallace, author of *Ben Hur*, to whom a monument has been erected. Pop., 1900, 6649; 1910, 9371.

**CRAWFURD**, JOHN (1783-1868). A Scottish Orientalist, born in the island of Islay, Hebrides. He went as a physician to India and served for five years in the army of the Northwest Provinces. Transferred to Penang, Malay Peninsula, he acquired a knowledge of the Malay language, which proved valuable on the occasion of Lord Minto's conquest of Java (1811). From 1811 to 1817 he held various posts in Java, in 1821 was sent as envoy to Siam and Cochinchina, from 1823 to 1826 administered the government of Singapore, and in 1827 was sent on a difficult diplomatic mission to the court of Ava. He published, in addition to an account of this mission (1829): *History of the Indian Archipelago* (3 vols., 1820); *Grammar and Dictionary of the Malay Language* (2 vols., 1852); *Descriptive Dictionary of the Indian Islands and Adjacent Countries* (1856); *China and its Trade* (1858); and, finally, the journals of his embassies to the courts of Siam and Cochinchina (London, 1828) and to the court of Ava (1829; 2d ed., 2 vols., 1834).

**CRAWL-A-BOTTOM**. A local name in the Mississippi valley for two small fishes: 1. The largest of the darters (*Hadropterus nigrofasciatus*). See DARTER. 2. The hog sucker, or stone roller (q.v.)

**CRAWSHAW**, WILLIAM HENRY (1861- ). An American educator and author, born at Newburgh, N. Y. He graduated in 1887 at Colgate University, where thereafter he was an instructor (1887-89), associate professor of English (1889-93); professor of English (after 1893) and also (after 1897) dean. He was also acting president during several years. The University of Rochester conferred on him the degree of Litt.D. (1909), and Syracuse University that of LL.D. (1910). He published an edition of Dryden's *Palamon and Arcate* (1898); two excellently suggestive little works in criticism, *The Interpretation of Literature* (1896) and *Literary Interpretation of Life* (1900); and *The Making of English Literature* (1907).

**CRAYER**, kri'ër, Fr. pron. kra'y'ër', GASPAR, or JASPER DE (1584-1669). A Flemish historical and portrait painter, born in Antwerp. He studied under Raphael Coxie (son of Michiel Coxie) in Brussels, where he lived many years, and in 1664 went to Ghent, for the churches of which he painted more than 20 altarpieces. He was appointed court painter to the Cardinal Infant Ferdinand and afterward to King Philip II of Spain. Though perhaps the most prolific of all religious painters and prone to exaggerated sentiment, he yet maintained a certain excellence in composition and execution. He was strongly influenced, especially in color, by his friend Rubens. His works are to be found throughout Flanders and Brabant and in the provincial museums in France, where many were carried during the French invasion. Among the best known are: "The Four Crowned Martyrs" (Lille Museum); six pictures celebrating the entrance of the Cardinal Infant (Ghent); "Alexander and Diogenes" (Metropolitan Museum, New York); "Glorification of St. Catharine" (in St. Michael's, Ghent); "The Miraculous Draught of Fishes," "Adoration of the Shepherds" (Brussels Museum); "Decapitation of St. John the

Baptist" (Ghent Cathedral); "Judgment of Solomon" and "Martyrdom of St. Blasius" (1668), his last work, both in the Ghent Museum. His portraits include those of the Cardinal Infant (Prado) and Philip IV (Uffizi). Jan van Cleve, the most important of his pupils, assisted him in many of his works. Consult his biography by Maeterlinck, in *Bulletin de la Société d'Histoire et d'Archéologie de Gand* (Ghent, 1900).

**GRAYFISH**. See CRAWFISH.

**CRAYON** (Fr. *crayon*, from *craie*, chalk, from Lat. *creta*, chalk). A term usually applied to pencils made of charcoal, pipe clay, or chalk, colored with various pigments and used for drawing on paper, wood, or other materials. Blackboard crayons are made largely of chalk, while black crayons are composed of pipe clay and lampblack. Those used for drawing on lithographic limestone are commonly made of a mixture of wax, lampblack, soap, and resin. *Pastel* is a mixture of chalk and coloring materials, worked into a paste with gum water. The vegetable colors used are turmeric, litmus, saffron, and sap green, but should in every case be free from acid, as the latter reacts on the chalk. *Vienna white*, used by artists, is simply purified chalk. *Red chalk* is made from an ochery clay, i.e., one containing much iron oxide. *Briançon chalk* and *French chalk* are popular names for soapstone, which is very different from chalk in its composition, being a silicate of magnesia. See CHALK; PENCIL.

**CRAYON**, GEOFFREY. The nom de plume adopted by Washington Irving in *The Sketch-Book*, etc.

**CRAZY HORSE**. A distinguished chief of the Oglala Sioux, who was joint leader with the famous Sitting Bull in the War of 1875 and was prominent in Custer's defeat. He was killed while resisting arrest in September, 1877. Consult Miles, *Personal Recollections* (Akron, 1896).

**CREAM** (OF. *creame*, Fr. *crème*, from Lat. *cremor*, thick juice). The thick, light-yellow substance, rich in fat, which rises to the surface of milk on standing. The methods of creaming milks, by setting and by the separator, are described under BUTTER MAKING. The composition of cream is influenced by the method and condition of creaming, and varies within wide limits. Cream contains the same constituents as milk, but in very different proportions. The fat may vary from 10 to 70 per cent; good cream for butter making, or for household use, contains from 18 to 25 per cent of fat, and very rich cream from 35 to 40 per cent. The richness of cream raised by the separator can be regulated at will. Cream is sometimes thickened artificially by adding gelatin, isinglass, etc. Cream which has been pasteurized, or heated to prevent souring, loses some of its thickness or viscosity, and the addition of sucrate of lime has been proposed to make it whip better. The famous clotted or "clouted" cream of Devonshire, England, is prepared by heating milk which has stood for 24 hours in a shallow pan over a slow charcoal fire for a half to three-quarters of an hour, without boiling, allowing it to stand for 24 hours, and then skimming off the cream, which is sprinkled with sugar.

**CREAMERY**. A factory where butter is made by machinery from milk or cream, furnished by the neighborhood. It is an American institution, and originated in New York about

1864, being suggested by the success of the cheese factory (q.v.), which had been in operation for several years. Within the past 15 or 20 years the growth of the creamery system has been very rapid, and creameries are now thickly distributed over the principal dairy regions. They differ in their form of organization and also in the method of operation. Coöperative factories are owned by the farmers ("patrons"), who supply the milk, and who choose from their own number a managing committee, or board. The cost of running the factory, and the proceeds of sales, are divided pro rata according to the milk, cream, or butter fat contributed. This is the oldest and in many respects the most desirable form of organization. In the joint-stock and proprietary creameries the milk or cream is bought of the farmers under a contract, or the factory may make butter and dispose of it for its patrons for a fixed charge per pound. The milk may be delivered at the creamery, where the cream is separated by power, the farmers receiving the skim milk for feeding; or the cream may be raised or separated by the farmers themselves and sent to the factory every two or three days. The latter are called "gathered-cream creameries." The cream-gathering plan originated in Wisconsin, and was the basis upon which creameries were established in New England, where it continues popular. The cream is raised by gravity in deep cans or by means of hand separators, and is paid for by the "space." The "space" has been shown to be an unreliable measure, as the value of a space of cream for butter making varies widely; and payment on the basis of the fat furnished, as determined by test, is now generally adopted.

Where the whole milk is furnished to the creamery, it is delivered daily, which involves a great deal of labor in hauling. In almost all cases, the hauling devolves upon the milk producer, often the farmers living near together cooperate in this, or contract with some person who makes a business of doing the hauling. The milk was formerly paid for by the pound, this being a convenient means of measurement; but the injustice of this to the producers of rich milk, and the introduction of the Babcock milk test, have led to payment on the basis of the butter fat. The milk of each patron is weighed as it is received and a sample taken for testing; usually the samples for a week or so are combined into a composite, to reduce the labor of testing. From the amount of milk delivered, and the fat content, the amount of butter fat furnished by each patron is calculated at the end of the month. In most of the leading creamery districts the separator factory is now the favorite system. In many places these creameries have located "skimming stations" at points convenient for the patrons, where the milk is run through the separator and the cream then taken to the creamery. This reduces the labor of hauling to a minimum. The system of making butter at creameries is, in many respects, a vast improvement over the ordinary farm dairy practice. The use of machinery reduces the cost of butter making, and the milk and cream are handled by experienced butter makers according to the most approved methods. The result is a uniform product, equal to the best of the single dairies, and a great improvement over the average, which sells for a high price. Furthermore, there is less loss of fat in making than at farm dairies, and hence a larger quantity of butter is

produced from the same cows. The labor and expense of making and marketing the butter are removed from the farms and households. Creameries have been of great advantage to the farmers where they are located, and the payment for milk on its fat content has stimulated the farmers to keep better and more profitable cows. Some of the more modern creameries have a very large capacity. The Franklin County Creamery, at St. Albans, Vt., was formerly the largest in the country, having a capacity of five or six tons of butter a day. There are now a considerable number equally as large, and several much larger, running up to 15 tons of butter a day in some cases. A large creamery in Nebraska has over 100 skimming stations connected with it. The thirteenth census reported 4783 creameries in operation in the United States in 1909, which made 624,764,653 pounds of butter, as compared with 420,126,546 pounds in 1899. Wisconsin led all other States in creamery output. The first Danish cooperative creamery was put in operation in Jutland in 1882. The number at present mounts into the thousands. The creamery or factory system of butter making has spread generally throughout European countries, Australia, and South America, wherever butter is made on an extensive scale. In some countries the coöperative plan predominates, and in others the factories are more largely proprietary or operated by private firms. See BUTTER MAKING.

**CREAM NUT.** See BRAZIL NUT.

**CREAM OF TAR/TAR** (OF. *tartre*, from ML. *tartarum*, MGk. *rárapor*, *tartaron*, *tartar*, probably from Lat. *Tartarus*, Gk. *Tárapos*, *Tartaros*; hardly a corruption of Ar. *durá*, dregs, from *darida*, to lose the teeth). A potassium bitartrate that is contained in argol (q.v.) and is prepared by dissolving the argol in hot water and removing any coloring matter by means of clay or egg albumen; the cream of tartar is then separated from the filtered solution by crystallization and may be purified by recrystallization. Cream of tartar is a white crystalline compound that is soluble in water and is used in medicine as a refrigerant and purgative. With sodium bicarbonate it is used as a substitute for yeast in raising bread. It is also the source of tartaric acid and of tartrates.

**CREASE.** See KRIS.

**CREASOTE.** See CREOSOTE.

**CREASY**, kré'sí, SIR EDWARD SHEPHERD (1812-78). An English historian, born at Bexley, Kent. He became fellow of King's College, Cambridge, in 1834 and in 1837 was called to the bar. In 1840 he was appointed professor of modern and ancient history in the University of London, and in 1860, when he was knighted, Chief Justice of Ceylon—a post he held for 10 years. He is most widely known for his *Fifteen Decisive Battles of the World* (1852), a work which has been very favorably received alike by the critic and the general reader. His other works, less known, but in many cases of almost equal merit, include an *Historical and Critical Account of the Several Invasions of England* (1852); *History of the Ottoman Turks* (1854-56); *Imperial and Colonial Constitutions of the British Empire* (1872); and two excellent books on Eton.

**CRE'ATIN.** See KREATIN.

**CREATININ**, kré-át'í-nín. See KREATININ.

**CREATION** (Lat. *creatio*, from *creare*, to create, connected with *erescere*, to grow). The

act or acts by which the world is supposed to have been brought into existence. When man's mind matures sufficiently to reflect upon cause and effect, it is apt to raise a question as to the origin of the objects by which he is immediately surrounded, and this gradually leads to inquiry in regard to the beginnings of the whole scheme of things. Curiosity, which is the mainspring of all scientific progress, suggests the lines of inquiry and credulity, which is the brake preventing excessive speed, has a tendency to be satisfied with the easiest explanation. As man became himself a creator, fashioning things for his purposes, and grew conscious of the value of his achievements, he naturally began to wonder how various objects had been formed. The simplest explanation occurring to him was that some one had made them. Nor was he at a loss for an answer to the question as to who these producers could have been. They must have been in his neighborhood once and then gone away to live somewhere else. They were not gods, since no worship was paid to them, nor ancestors, since the secret of fatherhood had not yet been discovered, but beings conceived of as man, or animals, or partly human and partly animal, possessed of that extraordinary power which makes some things objects of special interest, wonder, and dread. Such are the conceptions of peoples that have lived until recent times in Stone-age conditions in Melanesia, Polynesia, Australia, America, and Africa, and such in all probability were the ideas of Stone-age peoples in the remote past. Studies of the Melanesian *mana*, or power, the Polynesian *tabu*, or danger attaching to objects possessed of *mana*, the American *totem*, or the animal (or other object) increasing and helping the tribe, the Australian *altjiranga-mityna*, or the uncreated totemistic producers of early times, and the mystery cults and exogamy of various tribes, the results of which may be best seen in the recent works of Durkheim, Marett, Frazier, W. Schmidt, and Soderblom, as well as of the notions that come to view in man's earliest pictorial representations of himself in the Magdalenian period of the Paleolithic age (see MAN), have led to a growing appreciation of the importance of these primitive creators. Soderblom has shown in his latest work on the subject (1914) that this crude idea of "makers" possessed of extraordinary power cannot be adduced as evidence of an original monotheism, as has been done by Andrew Lang and W. Schmidt, but reveals one of the roots of the god belief, and may be traced into historic times, e.g., in the case of the Chinese Shang Ti.

The predynastic Egyptians represented Horus as a falcon. His totemistic origin is obvious; but, however probable it may be, it has not yet been proved that he was then considered as a creator. But Khnum, the god of the cataract district, who fashioned on his potter's wheel heaven and earth, gods and men, is always represented with a ram's head, the unmistakable sign of his original character as a totem. Thoth of Hermopolis, who created heaven and earth, had the head of an ibis, probably, before he became the god of the moon; the conception grew up, how early cannot be determined with certainty, that Keb and Nut were created at his command. Ptah, who always appears as a man, formed the sun egg

and the moon egg on his potter's wheel; but the priests of Memphis at an early time emphasized that he thought before he spoke, and that things came into existence when he spoke. Re was a beetle before he became the sun god and may already, before this transformation, have been considered, as he was later, the father of gods and fashioner of men and things. Osiris is always represented as a man and may have been thought of as such before he became the god of the Nile and the vegetation dependent upon it. He made the earth and the creatures upon it. In Babylonia the great Sumerian deities—Ellil of Nippur, Anu of Uruk, Ea of Eridu, and Marduk of Babylon—who act as creators are all thought of as men, though connected with earth, heaven, and sea. The earliest version of the Sumerian story of creation, published by Poebel in 1913, assigns different parts to Ellil, Anu, and Ea, which may indicate a fusion of three stories. Another version in Sumerian with an Akkadian translation was already known, and the longest recension, in which Marduk, after a struggle with the chaos monster Tiamat and her helpers, creates heaven and earth, was found in the palace of Assurbanipal in 1875 and deciphered by George Smith. Before that time only the fragmentary quotations from Berosus (q.v.) were known. The German excavations at Assur (q.v.) have brought to light the fact that Sennacherib ascribed the creation of the world to Assur (see ASSUR). The worshippers of Ahura Mazda in Iran regarded him as the creator. Already Darius Hystaspis, in his inscription at Behistun (q.v.), declares that he has created "this earth and yonder heaven." In the Avesta a distinction is introduced between the good things in the world (light, virtue, love, good spirits, life) that are created by Ahura Mazda, and the evil things (darkness, vice, hatred, demons, death) that are the work of Angra Mainyu. The dualism resulting from this is, however, overcome by the ultimate victory of Ahura Mazda. In India the primitive notions of a heaven father and earth mother who made all things, or the Purusa, the male principle which originated them, gave place to the idea of Brahma, the creator, which in turn yielded to the pantheistic conception of the universe that left no room for an extra-cosmic divinity or a creation (see VEDANTA) among the more thoughtful, while even the popular cults of the Trimurti (q.v.) and Kali, the symbol of the ruthless forces of nature, are based on the assumption of the infinite and eternal character of the world. Early Greek thought, as seen in Homer, Hesiod, and the Orphic hymns, explained the origin of gods and men by a primeval triad—Night, Heaven, and Earth—and did not attempt to go further. The Ionian philosophers endeavored to find the essential nature of things which would explain the forms they assume. Thus, Heraclitus regarded the first principle as on one side Fire, on the other Intelligence. An independent and immaterial world-forming agency, expressing itself in Love and Discord, was assumed by Empedocles, while Anaxagoras found it in Reason. To Plato's thought matter is eternal, and creation means the activity of God by which he impresses upon the shapeless material forms or patterns, conceived of as a system of ideas. "The Creator made the universe because he was good and desired that all things should be as like him-

self as possible" (*Timæus*, iii, 613); but there is something in the intractable material that resists the creator, and in the residue beyond his power evil has its place. Aristotle rejected the system of ideas, but himself retained the essential dualism which Epicureanism sought to overcome by a materialistic, Stoicism by a more idealistic, monism. Ovid's *Metamorphoses* and *Fasts* reveal some of the popular conceptions in the Latin world on the subject of creation, while *De rerum natura* by Lucretius is the grandest and most characteristic effort of the Roman mind to explain the origin of things along Epicurean lines. The Icelandic Gylfaginning and Völuspá have been suspected of showing Christian influence. Such a coloring in transmission is not impossible; but it is likely to have affected the figure of Balder and the eschatology more than the story of the original chaos and the struggle with its powers, the creation of the world by the three Æsir, and the fashioning of the first human pair out of the trees Ask and Embla; and it is difficult to prove anywhere.

In the Hebrew account of creation there seem to be indications of more than one original version. Gen. i. 1-ii. 4a gives a complete description of how the heavens and the earth and all that is in them, including the human race, came into existence during a period of six days at the command of God, who then rested upon the seventh day. On the first day light was produced and day and night divided; on the second day the firmament (q.v.) was created and the waters separated; on the third day the dry land appeared and plant life began; on the fourth day the heavenly luminaries were made, on the fifth day fishes and birds were made, on the sixth day land animals and man were created. The Greek version by its *ἐν ἀρχῇ, ἐν ἀρχῇ*, without the article shows that the first word was read *berēshith* and not *barēshith* already in the third century B.C. The construct relation with what follows, thus demanded by tradition, is of importance as it suggests this translation: "When God began to fashion the heavens and the earth, the earth was in a chaotic state, and darkness lay upon the great abyss, though the spirit of God was brooding over the waters, but God said, 'Let there be light' and light came." The correctness of this rendering seems to be indicated also by the fact that the heavens are created on the second day and provided with luminaries on the fourth, and the earth is made on the third. Chaos, with its darkness and its waters, appears, therefore, to have existed before God began to form it into a Cosmos, and the "brooding" hints at the underlying conception of a world egg. The creation of the human race is preceded by a council in heaven; the words "Let us make men in our image" are understood by many scholars as a remnant of the original polytheistic setting, the image referring to the outward form, while others think of the persons of the Trinity, God and His angels, or a plural of majesty (which, however, is without analogy in Hebrew literature), and of "the image of God" as referring to those godlike qualities that distinguish man from the animals. As there are two works on the third and two on the sixth day, it has been supposed that a division into eight classes preceded the arrangement into a week of six days followed by a sabbath. The practical purpose

of giving a reason for halloving the sabbath day is obvious. That an earlier form of the story has been worked over may be inferred from the fact that Job ix. 13, xxii. 12, 13, Isa. li. 9, Ps. lxxiv. 12 ff., and other passages show how familiar the Jewish mind was with the struggle between Yahwe and the chaos monster (Tahab, Tehom, Leviathan) before creation, while this nature myth seems to have been intentionally suppressed in Gen. i. The statement in Isa. xlv. 7, "I form the light and create darkness: I make peace and create evil," is probably not meant either as an attack upon this myth or a correction of the dualism of Avesta, but only as an assertion that prosperity and adversity alike come from Yahwe, the only living God. As the original Mazdaism and Plato, Gen. i. emphasizes the goodness of all the objects in nature as they came from the hand of the creator. Gen. ii. 4b-25 seems to be an excerpt from another story of creation. It begins by relating how on the day when God made earth and heaven there was no vegetation, because no rain had fallen and man did not exist to till the ground, but that a stream began to rise so as to water the ground, from which God then fashioned a man and blew into his nostrils the breath of life. There follows the description of the planting of a garden, the making of animals which are brought to man to be named, and since none of them proves a "help" to him, the creation of a woman out of a rib taken from him while in a deep hypnotic sleep. There is no account of the creation of heaven such as the introduction leads the reader to expect; and it is probable that this version has also been abbreviated by the suppression of some original features. Many scholars consider it the work of a writer whom they call the Yahwist (see ELOHIST and YAHWIST), but N. Schmidt has shown, in *Journal of Biblical Literature*, xxxiii, 1, pp. 25 ff. (1914), that the original text had "Elohim" everywhere, and not "Yahwe Elohim." As to the age of the two narratives in their earliest form nothing is known with certainty. Babylonian influence, mediated through the Amorites, is not improbable, and may be much older than is generally thought in view of the spread of Babylonian myths in the Tell el-Amarna period (see ADAM), but the native element need not be limited to a gradual elimination of the polytheistic features. A creation out of nothing is first taught in 2 Maccabees vii. 28, though the *ex nihilo* of the Latin version is more unmistakable than the *οὐκ ὄντων, οὐκ ὄντων*, 'things not existing,' of the Greek.

The early Christians adopted the views prevalent among the Jews. Those influenced by Hellenistic thought regarded the things seen as having come from "things not seen" (Heb. xi. 3), and the Logos (John i. 3), or the Son (Col. i. 15 ff.), as the medium of creation. Origen considered the work of creation as without beginning or end, and Augustine looked upon the preservation of the world as a continuous creation. Johannes Scotus Erigena also taught that God's working was equally eternal with His being. Through Descartes, Spinoza, Fichte, Hegel, and Schleiermacher it has become a view very widely adopted among theistic philosophers and theologians that the creative activity of God is as eternal as himself. In the sense of *natura naturans* the word has been used even by thinkers who disavow its pantheistic implications, whether denying all

teleology or simply accepting it as inherent in nature; and Haeckel has published a *Natürliche Schöpfungsgeschichte*. The use of such a term may to some extent be justified by the etymological connection with *crescere*, to grow, but has been criticized, not altogether unjustly, on the ground of its departing from the historic meaning attached to the word, though in a measure this criticism also applies to every attempt made in recent times to square the idea of a creation with what are regarded as the established results of natural science. Consult: Lukas, *Die Grundbegriffe in den Kosmologien der alten Völker* (Leipzig, 1893); Tylor, *Primitive Culture* (2 vols., New York, 1891); Andrew Lang, *Making of Religion* (3d ed., New York, 1910); Marett, *The Threshold of Religion* (London, 1909); Schmidt, "Grundlinien einer Vergleichung der Religionen und Mythologien der austronesischen Völker," in *Denkschriften d. k. **CREATION, THE.** 1. A philosophical poem by Sir Richard Blackmore (1712), which was highly commended by Addison and Johnson. 2. A celebrated oratorio by Haydn, first produced in Vienna in 1798.

**CREATIONISM.** A term applied in the latter half of the nineteenth century to the theory of the origin of man which is opposed to evolution. (See ANTHROPOLOGY, EVOLUTION.) As a theological term, it has long been in use to designate the theory of the origin of man's soul by the special creative act of God in the case of each individual. It is opposed to "traducianism," which is the theory that the soul of the individual is derived by generation from the souls of his parents as truly as is his body. The Scriptures give no decision upon this question. Creationism goes back of the Christian Church and is found in Aristotle. It was the prevailing view in the Church after the fifth century and was held by Jerome and Pelagius and by most of the schoolmen. In modern times it has been frequent in the Reformed (Calvinistic) churches and is generally approved to-day in Catholic teaching. Aquinas distinguished between the sensitive or animal soul, which man has in common with brutes and which is inherited, and the soul which is the basis of the human intellect, which comes directly from God to every individual by creation. This distinction, under the terms of "spirit" and "soul," was often made later by both Catholic and Protestant theologians. Traducianism was advocated by

Tertullian (c.200), by Gregory of Nyssa, and some of the other Greek fathers. In modern theology it has been the prevailing Lutheran theory. Augustine is claimed for both sides. He seems to have been really a creationist, but saw some of the difficulties so clearly that he sometimes expressed ideas which imply traducianism. In a letter to Jerome (iii, 166) he begs to know how, if the soul comes from God by creation, it contracts guilt so that children need baptism, but he does not turn to the refuge of traducianism. The ancient Church found arguments for creationism in those passages of the Bible which represented God as the creator of the individual man, in the simplicity of the soul, which could not be divided and so propagated; in the sinlessness of Christ, reasoning that only if souls come fresh from the hand of God could Christ's soul be truly human and yet sinless; in the marked individuality of persons, and in the immateriality of the soul. The doctrine of original sin constituted the great source of argument for traducianism. How could man be guilty of sin unless he had descended, in soul as well as in body, from the source of human sin in Adam? It was also claimed that the theory was analogous with God's action in nature, and that it best explains the complex facts of human heredity. It accords well with the theory of realism, which Augustine held, that human nature was deposited in Adam, and all men share it from him. Many theologians, both ancient and modern, have regarded the whole subject as a mystery and have been willing to agree with Augustine's modest statement, "When I wrote my former book, I did not know how the soul derives its being, and I do not know now." Modern studies of personality and heredity have shifted discussion from this problem to the scientific consideration of the facts of human life, so that most of the historic theoretical arguments on both sides command little interest now. See TRADUCIANISM, ORIGINAL SIN.

**CREATIVE EVOLUTION** (*L'Évolution créatrice*) A memorable philosophical treatment of evolution by Henri Bergson (1909), presenting a new and stimulating consideration of its processes in nature and man. See BERGSON, HENRI.

**CRÉBILLON**, krá'b'e'yón', CLAUDE PROSPER JOYOT DE (1707-77). A noted French storyteller and wit. He was born in Paris, Feb. 14, 1707, the son of the dramatist Prosper Joyot Crébillon. Except for a five years' exile for political and theological allusions in his novels, especially concerning the papal bull *Unigenitus*, which led also to a brief imprisonment in the Bastille, he passed his life in Paris. Though he occupied at one time the office of literary censor, through the good graces of Madame de Pompadour, his fiction is a byword for its licentious suggestiveness. It shows a graceful talent, however, which was unfortunately wasted, together with a thorough mastery of style and keen powers of observation, in the most trivial manner. His best-known tales are *L'Écumoire ou Tanzaï et Néadarné* (1734), followed in 1736 by the notorious *Les égarements du cœur et de l'esprit*, and in 1745 by *Le sophia*, than which it has not been possible to descend further in the refinements of immorality: not a gross word and not a decent thought. The conversation is witty, the manners refined after their kind. This smirking voluptuousness is only the completest literary expression of the spirit of the time, that

was sapping the foundation of national strength and character and preparing the way for the Revolution. Strange to say, he was irreproachable in his private life and proved to be a model husband to Lady Henrietta Maria Stafford, an Englishwoman, who fell in love with him after reading his works. He died in Paris, April 12, 1777. Consult C. H. Amanton, *Particularités sur les deux Crébillon* (Paris, 1835).

**CRÉBILLON, PROSPER JOLYOT DE** (1674-1762). A noted French tragic poet, born in Dijon, Jan. 13, 1674. He abandoned the law for the stage on the success of *Idoménée* (1705), and with *Atrée et Thyeste* (1707) took first rank among the tragic poets of his time. Among the more noteworthy of his subsequent tragedies are: *Electre* (1708); *Rhadamiste et Zénobie* (1711), his best work, *Pyrrhus* (1726), *Catiline* (1748). Crébillon became an Academician in 1731 and held several minor public offices, among them that of stage censor. Later he became indigent, but died in comfort through the profits of an edition of his *Works* (1750), made at the royal order and charge. He died in Paris, June 17, 1762. Crébillon suffered, as did his fame, from the envy and enmity of Voltaire, himself a tragic poet of greater polish, though less rugged power. He is apt to mistake the horrible for the grandiose, and inflation for energy in diction, as did Corneille, whom among French dramatists he most resembles both in his qualities and his defects. At a time when France no longer possessed a great tragic poet of the calibre of Racine, capable of fathoming the depths of the human soul, Crébillon was most useful to the drama of his day, if only by the example of his rugged genius for inventing tense and tragic situations, in which very far-fetched mistaken identities helped to prolong the suspense. Voltaire himself used four of Crébillon's plots. Crébillon's *Works* have been often edited, best perhaps by Didot (1812). There is a *Life* by the Abbé de la Porte, and a discriminating critical essay on Crébillon's place in the development of French drama in Brunetière's *Epoques du théâtre français*. Consult also Dutrait, *Etude sur Crébillon* (1895), and C. H. Amanton, *Particularités sur les deux Crébillon* (1835).

**CRÈCHE.** See NURSERY, DAY NURSERY.

**CRÉCY**, krá'sé'. A small town of France, in the Department of Somme, on the Maye, about 12 miles north of Abbeville (Map: France, N., G 2). It is celebrated as the scene of a brilliant victory gained Aug. 26, 1346, by Edward III, with about 19,000 English and Welsh soldiers, over a French army amounting to about 60,000 men under the command of Philip VI. In this great battle vast numbers of the French nobility perished as well as King John of Bohemia and 11 other princes, who were fighting on the side of France. Altogether about 30,000 of the French army fell. At Crécy the Black Prince greatly distinguished himself and gained his spurs. Consult George, *Battles of English History* (New York, 1895), and Oman, *History of the Art of War* (London, 1898).

**CRÉDÉ**, krá-dá', KARL SIGISMUND FRANZ (1819-92). A German gynecologist, born in Berlin. He studied medicine in Berlin and in Heidelberg, and in 1852 was made director of the School of Midwifery and of the obstetric department of the Charité in Berlin. Four years later he was made professor of obstetrics and

director of the lying-in hospital in Leipzig. His published works include the following: *Klinische Vorträge über Geburtshilfe* (1853-54); *Die preussischen Hebammen, ihre Stellung zum Staat und zur Geburtshilfe* (1855); *Observationes de Fetus Situ inter Graviditatem* (1862-64); *Die Verhütung der Augenentzündung der Neugeborenen* (1884); *Gesunde und kranke Wöchnerinnen* (1886); *Lehrbuch der Hebammen* (6th ed., revised by Leopold and Zweifel, Leipzig, 1897). From 1853 to 1869 he was coeditor of the *Monatschrift für Geburtskunde und, for many years, of the Archiv für Gynakologie*.

**CRE'DENCE** (It. *credenza*, belief, cupboard, ML. *credentia*, from Lat. *credere*, to believe). A side table, buffet, or sideboard, on which dishes were placed or kept before meals; a cupboard in which stores or household gear were kept. Also, in the ecclesiastical terminology of the Roman Catholic and Episcopal churches, a small table or shelf near the altar or communion table on which the bread and wine are laid before being consecrated; in the Greek church it is called the *trapeza prothesis*. The Oxford movement was largely responsible for its reestablishment in the Episcopal churches of Great Britain and America.

**CREDI**, krá'dá, LORENZO DI (1450-1537). A Florentine painter of the Renaissance. He was born in Florence and was a pupil of Andrea Verocchio, at the same time with Leonardo, and Perugino. His style was at first severe, like that of Verocchio, but in later life his manner became softer. He executed his work with great care—in fact, he paid almost too much attention to detail, and though full of delicate sentiment, his pictures are lacking in originality. Throughout his life he was influenced by the quality of Da Vinci's art. His favorite subject was the Madonna and Child, fine examples of which are in the Louvre, the National Gallery, London, and the galleries of Dresden, Turin, Mainz, and the Holden collection, Cleveland. He also painted the "Adoration of the Shepherds" many times, among the finest examples being those in the Querini Stampaglia Gallery, Venice, and the Florence Academy. Credi is seen at his best in the "Annunciation" and the "Venus" in the Uffizi. He is represented in the Metropolitan Museum, New York, by a "Madonna Adoring the Christ Child" and in the Boston Art Museum by a beautiful boy's head. He was also a sculptor, and was designated by Verocchio to complete his statue of Colleoni.

**CREDIT** (Fr. *crédit*, from Lat. *credium*, a loan, neut. p. p. of *credere*, to trust). In political economy this term indicates broadly the confidence which is reposed in the ability and purpose of men to meet future obligations. It is defined by J. S. Mill as permission to use another's capital, and by H. D. MacLeod as "a right of action." While it rests etymologically upon trust in human nature, the term embraces many operations in which this plays a small part, in which by the establishment of claims to portions of the debtor's estate the creditor assures himself of the repayment. A familiar illustration of such transactions are the loans of bankers upon collateral security.

From an objective point of view the essence of a credit transaction is that on one side the transfer of goods or money is immediate, on the other that the return is deferred. Personal credit resting solely upon the good faith of the creditor is the earliest form in which credit ap-

pears, and is still widely prevalent, as in the book accounts of retail merchants. But in the larger transactions of commerce credit could not have gained its prominent place without the intervention of instruments of credit. These assume various forms, notes, drafts, mortgages, bonds, etc.; but all have a common purpose—to insure the transferability of the claim against the debtor. Without them the lender—for whatever form the credit may assume it is always in the nature of a loan—must await the pleasure of the debtor or the termination of the contract before he can enter into possession of his own. With these instruments of credit he practically has control of his capital whenever he desires to use it. By transferring his claim to others he can secure his capital at any time.

Credit rests ultimately upon the fact that many persons possess wealth who have no present use for it and are willing that it should be employed by others. If circumstances arise, as in times of panic, when each seeks to secure for himself the actual possession of his wealth, then credit cannot be obtained, and those whose transactions require it must either pay exorbitant prices for it or be crushed out. This explanation of credit will serve to indicate the important function which banks play in the world of business. They are reservoirs of credit. In them are gathered claims upon the unemployed wealth of the community, and through them this wealth is directed by loans into channels of usefulness. It is brought together in small and large quantities from all classes of persons who do not immediately need it, and who are unable or unwilling to loan it directly. From the point of view of individuals credit is frequently spoken of as capital, because, like capital, it increases their productive power. But credit from a national point of view is to be regarded as capital only in so far as it diminishes the amount of wealth which would otherwise lie idle and increases that which is devoted to productive purposes. An effective organization of credit does not produce wealth, but draws out wealth and enhances its usefulness. Hence a nation in which credit, as in Anglo-Saxon communities, is highly organized will have a higher productive capacity than one in which a primitive organization prevails. Credit is not without its dangers, and when the credit organization is out of joint the results are disastrous. This is the price of progress. As the disasters to a railroad express train are more severe than those which overtake the lumbering wagons which preceded it, so the commercial disasters of a highly organized nation with a broad development of credit are more serious than those of less advanced peoples. The remedy is not to go back to the wagons, but to apply every device to insure the safety of the modern vehicle. For a clear analysis of credit, consult: MacLeod, *Theory of Credit* (London, 1889-91); Dunbar, *Chapters in the History and Theory of Banking* (New York, 1892); Report of Comptroller of the Currency, 1896; Veblen, *The Theory of Business Enterprise* (New York, 1904); W. C. Mitchell, *Business Cycles* (Berkeley, Cal., 1913); Taylor, *The Credit System* (New York, 1913). See BANK, BANKING; CRISIS, ECONOMIC.

**CREDIT, AGRICULTURAL.** See RURAL CREDIT.  
**CREDIT, LETTER OF.** This term is applied in general to commercial instruments, usually in the form of a letter in which one party addresses a second, requesting him to pay certain sums of

money to a third. It is in effect a draft, except that the amount to be paid is stated, not absolutely, but as a maximum not to be exceeded. It presupposes that arrangements exist by which the party who sends the letter shall reimburse him who makes the payment. Such letters of credit may be drawn on one or on several parties, being in the latter case sometimes called "circular letters of credit." They are much used by travelers, and the leading houses issuing them have correspondents in all parts of the world. Those who issue them are generally so well known to the banking fraternity that any banker, whether a correspondent or not, will, upon proper identification, make payment on the letter. When the letter is issued, the person to whom it is given either pays outright the amount named in the letter, or furnishes acceptable security that the maker shall be reimbursed for the drafts upon him.

The alternative for the letter of credit is the travelers' note. This differs from the letter, in being issued in coupons, sometimes expressed on the face of the coupons for the currencies of other countries. Such travelers' notes were formerly issued extensively by the Cheque Bank of London, but the business in the United States has recently passed largely into the hands of the express companies. Such travelers' notes are sometimes designated "circular notes."

**CRÉDIT FONCIER**, krá'dé' fôn'syá' (Fr., landed credit). The French name for a method of borrowing money on the security of landed property which is widely practiced in France and other continental countries. The borrower takes a loan, in return for which he contracts to make certain annual payments, which are so adjusted as to make provision for the interest and for the gradual extinction of the principal, which is fully paid when the term of the contract has been concluded. These contracts are generally made with companies organized for the purpose of loaning their capital in this fashion. Another variety of this form of credit is found in the *Pfandbrief* institute of the large landowners of Germany. Loans are made in the same way, but in return for the debt the borrower receives the securities of the association. He does not actually contract a debt until he sells these securities, which he may do in whole or in part.

**CRÉDIT MOBILIER**, SOCIÉTÉ GÉNÉRALE DU, krá'dé' móbé'yá'. A financial institution chartered by the French government in 1852, with a capital of 60,000,000 francs. As its name indicates, it was intended to furnish loans on personal property, in contrast to the various *crédit foncier* institutions, which loaned upon real property. The declared object of the new bank was especially to promote industrial enterprises of all kinds, such as the construction of railways and the opening of mines, by placing loans and handling stock. Various privileges were conferred upon it under its charter, among others it was allowed to acquire shares in public companies, and to pay calls made upon it in respect of such shares by its own notes or obligations; also to sell or give in security all shares thus acquired. The operations of the society were conducted upon a very extensive scale. In 1854 it subscribed largely to the government war loan, raised during the Crimean campaign, to the Grand Central Railway Company, to the General Omnibus Company of Paris,

and to various other important undertakings. The dividend declared for 1854 was 12 per cent. In 1855 it loaned two sums to the government—the one of 250,000,000 and the other of 375,000,000 francs, its operations were vast during this year, and the net dividend declared amounted to 40 per cent. The directors then proposed to avail themselves of their privilege of issuing their own obligations under two forms—the one at short dates, the other at long dates, and redeemable by installments. The proposed issue was to amount to 240,000,000 francs; but the public became alarmed at the prospect of so vast an issue, and in March, 1856, the French government prohibited the carrying out of the proposed scheme. This was a severe blow to the institution. In 1856 its dividends did not exceed 22 per cent., in 1857 they were only 5 per cent. Several attempts to resuscitate its credit failed, and finally, in November, 1871, it was reorganized and put under a new board of management. In 1877 its assets were 77,000,000 francs, but its shares, the par value of which was 500 francs, sold for 200 francs only. In 1878-79 the capital was first reduced to 32,000,000 francs and then raised to 40,000,000. In 1884 it was reduced to 30,000,000 francs, but the company never regained its lost ground. The *Crédit Mobilier* was undoubtedly useful in developing the industrial power of France, but its operations were hazardous, and had they not been checked in time, they would in all probability have ended in disaster. See *CRÉDIT MOBILIER OF AMERICA*.

**CRÉDIT MOBILIER OF AMERICA.** A joint-stock company, whose alleged corrupt operations in connection with the building of the Union Pacific Railroad gave rise, in 1872-73, to the greatest congressional scandal in American history. The company was chartered as the "Pennsylvania Fiscal Agency" in 1859, was organized for a general loan and contract business in 1863, and was reorganized under the above name in 1867, for the purpose of building the Union Pacific. This work, completed in 1869, was paid for largely in stock and bonds of the Union Pacific, so that the stockholders of the two companies soon came to be identical. The *Mobilier* stock, at first almost worthless, soon began to pay enormous dividends; suspicions were aroused; and in the presidential campaign of 1872 the company was charged with gross dishonesty, and many prominent Republicans, including the Vice President, the Speaker of the House, three Senators, and a number of well-known Representatives, were freely accused by the Democratic press of having been bribed in 1867-71 to use their influence and votes in favor of the Union Pacific, the alleged bribes having consisted of the sale of *Mobilier* stock to the accused at prices below its actual value. A prolonged investigation, conducted in 1872-73 by special committees in both the Senate and the House, resulted in a recommendation of the expulsion of one Senator, upon which, however, no action was taken, and the censure of two Representatives, Oakes Ames of Massachusetts and James Brooks of New York, respectively, for having sold *Crédit Mobilier* stock to members of Congress "with intent to influence the votes of such members" and for having indirectly received such stock. The scandal caused intense excitement throughout the country, and the *Mobilier* Company met with almost universal execration; but subse-

quent investigation has shown that the charges were greatly exaggerated and were at least never conclusively proved. Consult: Crawford, *The Crédit Mobilier of America: Its Origin and History* (Boston, 1880); and Hazard, *The Crédit Mobilier of America* (Providence, 1881), the latter being a paper read before the Rhode Island Historical Society in February, 1881. For an impartial account of the affair, see Rhodes, *History of the United States from the Compromise of 1850*, vol. vii (New York, 1906).

**CREDITON**, kréd'i-ton; colloquially, kar'ton, or **KIRK'TON**. A market town of Devonshire, England, in a valley on the Creedy, a tributary of the Exe, 8 miles northwest of Exeter (Map: England, C 6). Its chief industry is the manufacture of boots and shoes, also chemicals, tin plate, and confections. In the Middle Ages it was noted for its looms, and the saying "as fine as Kirtton spinning" was proverbial. Crediton was the birthplace of the Anglo-Saxon Winfrid, or St. Boniface. It was the seat of the bishopric of Devonshire until 1050, when the see was removed to Exeter. Pop., 1901, 3974; 1911, 3640.

**CREDITOR** (Lat. *creditor*, one who trusts, from *credere*, to trust). In its broadest sense, any person in whose favor a legal obligation exists, whether that obligation arises from the mutual assent of the parties, as in the case of *contract* (q.v.), or from a rule of law, as in the case of a *tort* (q.v.), or from a judgment or decree of a court of competent jurisdiction. In legal parlance, however, as in ordinary usage, the term is ordinarily restricted to one who has voluntarily given credit to another.

A *general* (simple or unsecured) *creditor* is one who has no *lien* (q.v.) on any property of his debtor, but only a personal claim or right of action. If a lien on property has been given to him by way of collateral security, mortgage, or pledge, he is called a *secured creditor*. If the debtor or the law secures a priority to one creditor, or to a class of creditors over others, such favored ones are said to be *preferred creditors*. In the absence of statutory provision to the contrary, a debtor may pay one creditor in preference to others, or he may make an assignment for the benefit of creditors, and direct that one or more shall be paid in full before anything is paid to the others.

The common law gave certain creditors a priority over others. For example, creditors of a deceased person were to be paid out of his estate in the following order: (1) those having claims for funeral and probate expenses. (2) the State; (3) judgment creditors; (4) landlords having claims for rent, and bond creditors, i.e., those who held bonds or sealed contracts of the deceased; (5) creditors by simple contract. This order has been modified to some extent by statute in the different States, and such legislation must be examined for detailed information on this point. The United States Bankruptcy Law of 1898 secures a preference to workmen, clerks, or servants for wages earned within three months before the commencement of proceedings, not to exceed \$300 to each claimant.

When a person obtains a judgment for money against another, he is called a "judgment creditor"; and if an execution is issued and levied, he becomes an "execution creditor." See **ARREST**; **ATTACHMENT**; **DEBTOR**; **COMPOSITION**; ETC., and consult the authorities there referred to.

**CREDITOR'S BILL.** A proceeding in equity by a creditor to reach assets which could not be levied upon under a common-law execution because of their character or the disposition made of them by the debtor. Thus an interest of a debtor in a trust estate or property conveyed by a debtor in fraud of his creditors, not being legal assets in the hands of the former and therefore not subject to execution on attachment in a common-law proceeding, can be made available for the creditor only by a proceeding in equity. See **BILL IN EQUITY**.

**CREDNER, KRÄDNER, HERMANN (1841-1913).** A German geologist, son of the following, born at Gotha and educated at Clausthal, Breslau, and Göttingen. He made extensive geological investigations in North and Central America (1864-68), the results of which were published in the *Zeitschrift der Deutschen Geologischen Gesellschaft* and the *Neues Jahrbuch für Mineralogie*. In 1870 he became professor of geology at the University of Göttingen, and director of the Geological Commission for the Kingdom of Saxony. In 1895 he became regular professor of geology at the University of Leipzig. In addition to a geological chart of the Kingdom of Saxony (1877 et seq.), and numerous works on the geological formations of that country, his works include: *Elemente der Geologie* (8th ed. 1897); *Die Stegocephalen und Saurier* (1881-93); *Die Urverflüssler des sächsischen Rothliegenden* (1891).

**CREDNER, KARL FRIEDRICH HEINRICH (1809-76).** A German geologist, born at Waltershausen, near Gotha. He studied at the universities of Freiberg and Göttingen, and in 1836 was appointed by the ducal government warden of the mint. In 1839 he became surveyor of mines, in 1850 mining counselor, and in 1854 state and mining counselor. He was in 1858 appointed by the government of Hanover superior mining counselor, and reporting counselor to the Finance Ministry, in which capacity he had under his supervision all the Hanoverian mining works, including the important ones of the Harz. From 1868 until his death he was mining privy counselor and director of mining in the Halle district. As a scientist, he was known for his study of the geology of those regions of Germany connected with his duties in the mining industry. He discovered a compound of oxides of copper and manganese, called in his honor "Crednerite," and published some valuable treatises, including *Versuch einer Bildungsgeschichte der geognostischen Verhältnisse des thüringer Waldes* (1855), and *Ueber die Gliederung der oberen Juraformation und die Walder-Bildung im nordwestlichen Deutschland* (1863).

**CREE, krē** (possibly a corruption of *creek*). One of the largest and most important tribes of Algonquian stock, living chiefly in the British-American territories of Manitoba, Assiniboia, Saskatchewan, about Lake Winnipeg and the Saskatchewan River, and eastward around James Bay. They are on friendly terms with the Assiniboin, but until brought under government control were constantly at war with the Sioux and Blackfeet. They have numerous bands, commonly grouped under two main divisions, viz., Plains and Wood Cree. Soon after obtaining firearms from the traders they began a war of conquest against the weaker Athabaskan tribes, as far even as the Great Slave Lake and the Rocky Mountains, but after-

ward retired to their present position. They number now probably 10,000, on several reservations within the territories mentioned. (Consult Skinner, *Notes on the Eastern Cree and Northern Saulteaux* (American Museum of Natural History, 1911)).

**CREECH, THOMAS (1659-1700).** An English translator. He was educated at Wadham College, Oxford, elected fellow of All Saints College in 1683, and was head master of Sherborne School from 1694 to 1696. He afterward returned to Oxford and in a state of melancholy committed suicide. Creech was a man of solid learning. He translated Lucretius (1682); Horace (1684); elegies of Ovid, two eclogues of Vergil, some of Plutarch's *Lives*, Theocritus, thirteenth satire of Juvenal, etc. The *Lucretius* was long ranked by the side of Dryden's *Tergit* and Pope's *Homer*.

**CREECH, WILLIAM (1745-1815).** A Scottish publisher and author. He was born in Edinburgh, and in 1770 was the traveling companion of Lord Kilmaurs, afterward Earl of Glencairn, on the tour of that nobleman through central and western Europe. His publisher's shop in Edinburgh was much frequented by men interested in literary pursuits. Among the works published by him were those of Burns, Blair, Beattie, Cullen, Mackenzie, and other notables of the time. He made a rather poor translation of Horace, and this led Pope, in the preface to his imitation of Horace, to add the couplet

"Plain truth, dear Murray, needs no flowers of speech,  
So take it in the very words of Creech."

Burns's poem *Willie's Awa'* was addressed to him.

**CREEDE.** A city and the county seat of Mineral Co., Colo., about 165 miles (direct) southwest of Denver, on the Denver and Rio Grande Railroad (Map: Colorado, C 4). It is in a narrow gulch on Willow Creek, high up among the mountains, and is engaged exclusively in mining, having been formerly noted for its highly productive silver mines. Since 1903, however, the mining of lead and zinc has been more profitable. Wagon Wheel Gap, Hot Springs, and Antelope Springs are of scenic interest and make the region attractive for tourists. Creede was founded in 1890 by N. C. Creede, who had established a mining claim there the previous year. It was nearly destroyed by fire in 1892, the year of its incorporation. Pop., 1910, 741.

**CREEDMOOR.** A village on Long Island, in the county of Queens, now included in New York City, 14 miles east of the borough of Brooklyn (Map: Greater New York, G 5). The rifle range located here was founded as a private enterprise by the National Rifle Association and was later acquired by the State of New York. It is now being used by the New York State Armory Commission. Creedmoor is the seat of a State Insane Asylum. Pop., 1914 (est.), 600.

**CREED OF PIUS IV.** See **PIUS IV.**, **CREED OF CREEDS AND CONFESSIONS** (AS, *orēda*, OF., Fr., Prov., Portug., Sp., It. *credo*, creed, from Lat. *credo*, I believe, the first word of the Apostles' and Nicene creeds). The names given to the authorized expressions of the doctrine of the Church at large, or of the several main sections into which it is divided. Such statements of doctrine sprang up naturally in the course

of the Church's progress. As controversy and discussion arose, the final opinion of the Church was expressed in a clear, definite, and compact form. The great creeds mark the climax of successive controversial epochs in the Church and are the varying expressions of the *Christian consciousness and reason*, in their efforts more completely to realize, comprehend, and express the growing thought of the Church. Each creed was evolved to meet a special need.

We find that the creeds of Christendom increase in complexity, in elaborate analysis and precision of doctrinal statement, as they succeed one another. The first are comparatively brief and simple in sense and form; the last are prolix and largely didactic. From the Apostles' Creed to the decrees of the Council of Trent, or the chapters of the Westminster Confession of Faith, there is a wide change, during which the Christian consciousness has grown from a comparatively simple faith to a body of comprehensive critical opinions.

In the Christian Church creeds may be divided into ecumenical creeds, Oriental creeds, the creeds of the Catholic church after the Reformation, and the creeds of the Protestant churches. Ecumenical creeds are those which arose before the great historic divisions of the Church, and which are recognized as being the expression of the faith of the early united Church, at least in the West. The simplest, and in its original form the earliest, is that called the Apostles' Creed. The name is a misnomer, the result of a late tradition. The early form of the creed is known as the Old Roman Symbol and was used as a baptismal confession in the church at Rome. Its earliest preserved form in Latin is given by Rufinus (c.400), who, in commenting on the creed used in his church at Aquileia, Italy, gives the variations between it and the Roman form. A Greek version is given by Marcellus of Ankyra, in Galatia (336-341). These do not agree exactly. Tertullian and Irenæus, at the close of the second century, give such informal quotations as make it possible to reconstruct the creed used in Rome between 150 and 200. In English such reconstructions are available in McGiffert's *The Apostles' Creed* (New York, 1902) and an article by Harnack, *Nineteenth Century*, July, 1893. The following is from McGiffert: "I believe in God the Father Almighty and in Christ Jesus His Son, who was born of Mary the Virgin, was crucified under Pontius Pilate and buried; on the third day rose from the dead, ascended into Heaven, sitteth on the right hand of the Father, from whence He cometh to judge the quick and the dead; and in the Holy Ghost, and resurrection of the flesh." This earliest symbol seems to have been made to guard the Church against the Gnostic (q.v.) heresies, which were rife in Rome in the second century, perhaps especially against the doctrines of Marcion (q.v.), who held that Jesus was not the son of the Creator of the world, but of a higher God; that he was wholly spirit, and so was not born in the flesh, did not die nor rise in the flesh; and that the Christian resurrection is from the flesh, not in the flesh. The creed, with its omission of all mention of the ministry and teaching of Jesus, affirms exactly the points that the Gnostics denied. (In both Greek and Latin forms it states the resurrection of the flesh, not of the body, as in the English translation.) The most

important of the clauses added before the time of Rufinus were "holy church, and forgiveness of sins." These seem to reflect the Novatian controversy, as to whether the Church could remain holy if it forgave and took back those who had lapsed under the stress of persecution. In the sixth century Rome dropped the use of the Apostles' Creed and put the Nicene Creed in its place as a baptismal symbol. Perhaps this was the better to exclude Arians, who near the end of the fifth century took Rome. Meantime the Roman Symbol lived on, with various changes, in the provinces, and at last, in the time of Charlemagne, was brought back to Rome in its final form, probably from southern Gaul. From here it spread, in the ninth and tenth centuries, throughout the Western church. The first quotation of it in its final form is given in a book entitled *Scorapeus*, by Pirminius, a Benedictine missionary in southern Germany (c.730). Consult Harnack, in Herzog, *Apostolisches Symbolum*, also his *Geschichte der altchristlichen Literatur* (Leipzig, 1893).

The Nicene, or rather the Niceno-Constantinopolitan, Creed sprang out of the conflict, which had begun even in the second century, as to the explanation of the Christ. From the beginning Ebionitism had looked upon Christ as merely a Jewish teacher of distinction, Theodotus and Artemon openly taught such a doctrine in Rome towards the close of the second century. Others, on the contrary, taught a doctrine which identified Christ with God absolutely in such a manner as to destroy all distinction of persons in the Godhead. Monarchianism, as it was called, which held rigorously and formally to the unity of God, was the ruling principle of both doctrines, opposite as were the expressions it assumed in the two cases.

The controversy thus begun in the second, perpetuated itself in the third, century under various modifications. The problem was to explain the divine nature of Christ. Arius, a presbyter of Alexandria, brought forward the doctrine that Christ, although in a true sense divine, or the Son of God, was yet not the very God. He denied that He was "of the substance of God," or "without beginning"; He was only the highest created being, "promoted" to divinity, but not the same in substance with the Father, nor equal with Him in power and glory. Athanasius, also an Alexandrian, came forward as the opponent of Arius.

The Council of Nicea was summoned in 325 by Constantine, with the view of settling this controversy, and the Nicene Creed was the result. There were three parties in the council—the Athanasians, or extreme orthodox party; the Eusebians, or middle party, and the Arians, or heretical party. The heretics were few in number and possessed but little influence; but the Eusebians were a strong party, and for some time resisted certain expressions of the orthodox or Athanasians, which seemed to them extreme and unwarranted; but at length the Homousians, as the Athanasians were called, carried the day, and Christ was declared not merely to be of like substance (*homoiousos*), but of the same substance (*homousios*) with the Father.

The creed was formed by extending the Apostles' Creed to include the new definitions. The essential parts are: "And [I believe] in one Lord Jesus Christ, the only-begotten Son of God; begotten of the Father before all worlds,

Light of Light, very God of very God, begotten, not made, consubstantial [of one substance, *homoousios*] with the Father." The Council of Constantinople (381) simply reaffirmed this creed. Later the so-called Niceno-Constantinopolitan Creed arose by the incorporation of the Nicene Creed in the baptismal confession of the Church at Jerusalem, and was erroneously recognized by the Council of Chalcedon (451) as the creed of Constantinople. It adds definitions as to the Holy Spirit. "Lord and Giver of Life, proceeding from the Father [Latin form adds "and the Son" (see *FILIOQUE*)] who with the Father and Son together is worshiped and glorified, who spake by the prophets." It also adds the word "one" to the definitions of the Church and of Baptism, putting the latter, "We confess one baptism for remission of sins." See NICENE CREED.

The Nicene Creed affirmed the full divinity of Christ, but left undefined the relation of His human nature to His divine nature. A series of controversies arose (see *CHRISTOLOGY*) which finally issued in the creed of the Council of Chalcedon (451). This creed affirms that Christ "is consubstantial with the Father according to His Godhead, and consubstantial with us according to His manhood—two natures concurring in one person and one substance." This was the final statement of a full and complete humanity and divinity of Christ.

This series of creeds still leaves a certain subordination of Christ to the Father, which was always congenial to Greek thought. The Athanasian Creed does away with the last vestige of subordination and affirms the perfect equality of Christ and the Father. This creed—often called, from its first words, the *Quicumque Vult*—originated in the Latin church, perhaps in Gaul or Africa, after the fifth century. It is first found in its modern form not earlier than the close of the eighth century and was never given full authority in the Greek church. It seems to rest on expressions from Augustine. It is longer than the earlier creeds, and affirms that belief in the equality of the persons of the Godhead is necessary for salvation. "The Father is God, the Son is God, and the Holy Spirit is God, and yet there are not three Gods, but there is one God." See ATHANASIAN CREED.

The creeds of the Oriental churches are of less importance. The Orthodox Greek churches, priding themselves on their unchanging adherence to the ecumenical creeds, have found little need for new creeds. The most important are the confession or catechism of Peter Mogila (1640), the Decrees of the Synod of Jerusalem (1672), and the Confessions of Gennadius (1453) presented to the Sultan as a statement of the Christian faith. The Russian standards are embodied in the Longer and Shorter Catechism of Philaret (1839, 1840). After the Athanasian Creed no important symbol was produced in the Western church till the Reformation. At that time new creeds and confessions began to spring up. On the one hand, Protestantism had to defend and state its position and its scriptural authority, and, on the other hand, the Church of Rome, after many delays, gave forth at the Council of Trent (1545-63) an extended creed. This creed was the result of patient and long-continued labor, and is an elaborate statement of the position of the Roman Catholic church on all the subjects of the controversy in the Reformation. It is

divided into Decrees and Canons. The Decrees are the full statements of doctrines, and the Canons following the several Decrees are brief statements and condemnations of the opposing positions, ending with anathemas. The creed is one of the greatest, clearest, and most important statements of religious belief that any of the religions of the world possesses. The *Decrees of Trent*, with the additions made in 1854 and 1870, are the fixed authoritative symbol or confession of faith of the Church of Rome. See TRENT, COUNCIL OF.

Of the Protestant churches, the most notable confessions of faith are the Lutheran; the Continental Calvinistic or Reformed; the Anglican, or Thirty-nine Articles of the Church of England, and the Puritan, or Westminster Confession of Faith.

The Lutherans call their standard books of faith and discipline *Libri Symbolici Ecclesiae Evangelicae*, and reckon among them besides the three Catholic creeds, the Augsburg Confession, 1530 (q.v.), the Apology for that confession by Melancthon, the Articles of Smalkald drawn up by Luther, 1537, Luther's catechisms, 1529, and, in some churches, the Formula of Concord, 1576, or the Book of Torgau.

The most important of these is the Augsburg Confession, which is a statement, clear in expression and moderate in tone, of the points on which the German reformers agreed with and differed from the Roman church and also on which they differed from the Zwinglians and the Anabaptists. It touches on practically all the points regarded as important to Christian belief in that period.

The Reformed (Calvinistic) churches produced over 30 creeds. Most of these were either local or were superseded by later creeds. No one has the universal authority among the Reformed churches that the Augsburg Confession has among the Lutherans. The First Helvetic Confession (1536) was the earliest reformed creed of national authority, but was superseded by the Second Helvetic Confession (1566). These represent the Zwinglian theology of the Swiss reformers. The Gallican Confession (1559) is based on a first draft written by Calvin, and was the creed of the French churches. Netherland Calvinism produced the Belgic Confession (1561), the Canons of the Synod of Dort (1619), against the Arminians, whose *Remonstrance* is in the form of a brief creed (1610). Calvinism in Germany issued the Tetrapolitan Confession (1530) and the Heidelberg Catechism (1563). These creeds are authorities in the Dutch and German Reformed churches.

England has produced two important creeds. For the *Thirty-nine Articles* of the Church of England see ARTICLES, THE THIRTY-NINE. They were originally 42 and are supposed to have been chiefly composed by Cranmer. In 1571 they were revised and approved by Convocation and Parliament. The Lambeth Articles, 1595, and the Irish Articles, 1615, became of great importance as affecting essentially the contents of the next great creed, the Westminster Confession of Faith. This was the product of the great Puritan agitation of the seventeenth century. It was produced by the Westminster Assembly (q.v.), was completed in the third year of the Assembly's sessions (1646), and laid before Parliament in the same year. It was approved by the General Assembly of the Church of

Scotland in 1647, and again in 1690, taking the place of the Scottish Confession, a Calvinistic creed which had been the standard from 1560 to 1688.

The Confession of Faith is the latest of the great Protestant creeds, and the creed of the Presbyterian churches throughout the world. It is also one of the most elaborate of all creeds. It extends to 33 chapters, beginning with *Holy Scripture* and ending with *The Last Judgment*. The tone of the doctrinal chapters is that of the later and formal Calvinism which spread from Holland among the English Puritans. The ecclesiastical spirit is Puritan-Presbyterian. "God alone" is declared to be "Lord of the Conscience"; yet the "publishing of opinions contrary to the light of nature, or to the known principles of Christianity," is at the same time declared to be matter of censure by the church and of punishment by the civil magistrate. See COVENANTS.

The work of forming creeds did not, however, cease with Westminster. The great Methodist revival in the eighteenth century led to a revision of the Articles of the Church of England for the use of the newly arisen body; the Unitarian controversy in New England at the beginning of the nineteenth, to the formation of many more or less elaborate church and seminary creeds. The Congregationalists of America put forth a new creed in 1883, the Presbyterians of England one in 1900, and the Northern Presbyterian Church of the United States in the General Assembly of 1902 adopted the revision of certain articles of the Confession of Faith and a declarative statement of 16 articles, which was substantially a new creed. The best work on the subject is. Schaff, *Creeds of Christendom* (3 vols., New York, 1877-78), history and texts. Consult also Winer, *Comparative View of the Doctrines and Confessions of the Various Communities of Christendom* (Edinburgh, 1873); Green, *The Christian Creed and the Creeds of Christendom* (London, 1898); Curtis, *History of Creeds and Confessions* (Edinburgh, 1911).

**CREEK CHUB.** The horned dace. See DACE.

**CREEK FISH.** See CHUB SUCKER.

**CREEKS** (so called from the numerous creeks running through their land), or MUSCOGEE, *mûs-kô'gê* (Algonquin *maskoki*, creeks). An Indian confederacy, formerly holding the greater portions of Alabama and Georgia, and second in importance among the Gulf tribes only to the Cherokee. The ruling tribe was the Muscogee, whose language was the court language, besides which there were the Alabama, Hitchitee, Koa-sati, and others of the same Muskogean stock, with the Uchee and Natchez (q.v.), and a considerable incorporated band of Shawano. The Seminole of Florida were an offshoot from the Muscogee confederacy. They were agricultural, but warlike, living in villages of log houses, plastered on the outside with clay, and arranged in a rectangle about a central space reserved for public ceremonies, chief of which was the annual "buck," or green-corn dance. In the Colonial wars and during the Revolution they generally adhered to the English side. They made a treaty of peace with the United States in 1790, but in 1813, instigated by the English, again took up arms against the Americans, beginning hostilities by the terrible massacre of Fort Mims. They were completely crushed by General Jackson in a brief but bloody campaign,

in three battles in which they lost respectively 200, 300, and 800 warriors killed. Utterly broken, the Creeks were compelled to sue for peace, which was granted only on submission to a peremptory "demand" for the surrender of more than half their ancient territory. Other cessions quickly followed, until in 1832 they sold all their remaining territory and agreed to remove beyond the Mississippi to their present habitat in Oklahoma. A few small groups, however, still reside in Alabama and other States. Like the other Southern tribes, they were divided in sentiment during the Civil War and suffered severely in that struggle. Under the name of the "Creek Nation" they formerly conducted an autonomous government, similar in form to that of the Cherokees (q.v.). In 1910 the Creeks proper numbered 6945. See MUSKOGEAN STOCK.

**CREEKMAN, JAMES** (1859-1915). An American editor and newspaper correspondent, born in Montreal, Canada. He was first associated with the New York *Herald* (1877) and eventually became editor of its London and Paris editions. During the war between China and Japan he was correspondent for the New York *World* in 1894, and in the Turco-Greek War for the New York *Journal* in 1897, and thus paper he also represented at Santiago during the Spanish-American War, where his gallant conduct met with wide and well-deserved recognition. He was a voluntary aid on General Lawton's staff during the Philippine insurrection. From 1900 to 1906 he was a special and editorial writer on the New York *World*, and from 1906 to 1910 was associate editor of *Pearson's Magazine*. He was a member of the New York Board of Education (1911-12) and president of the Municipal Civil Service Commission (1911-13); and during the following year covered important political assignments for the *Evening Mail*. His publications include: *On the Great Highway: Wanderings and Adventures of a Special Correspondent* (1901); *Eagle Blood* (1902); *Why We Love Lincoln* (1908); *Diaz, Master of Mexico* (1911).

**CREEP** (from *creep*, AS. *crēopan*, Icel. *krjapa*, OHG. *chrochan*, Ger. *kriechen*, to creep). A miner's term for the depression which takes place in underground workings from the removal of beds of coal or ore. Masses of the coal seam, like huge pillars, are left by the miners for the support of the superincumbent strata; the pressure, however, of these beds is so great that in course of time the roof gradually sinks, or, as is more frequently the case, because of the roof consisting of hard rock, the softer shale pavement rises up, until the intervening spaces between the pillars, left by the removal of the coal, are filled up. A consequent depression takes place in the beds above, as also an alteration of the surface level. But this, being so gradual, is seldom noticed, except when it is made evident from the accumulation of surface water, or in districts where railways pass over the coal fields. The term is also used in geology to designate the movement of soil or rock outcroppings down a slope.

**CREEPER.** A name very generally applied to any bird, especially if of small size, which seeks its food by running or creeping about upon the trunks of trees. It is more properly applied to the members of the family *Certhiidae* and especially of the genus *Certhia*. They have

# CREEPERS

1. BANANA QUIT (*Cereba bahamensis*).
2. NATAL COLLARED SUNBIRD (*Anothreptes collaris*).
3. HAWAIIAN OÖ (*Acrucercus nobilis*).
4. SLENDER-BILLED HONEYEATER (*Acanthorhynchus tenuirostris*).
5. AMERICAN BROWN CREEPER (*Certhia familiaris americana*).
6. PARSON BIRD (*Prothemadera novae zealandiae*).
7. ALPINE WALL-CREEPER (*Tichodroma muraria*).

a slender, arched, and pointed bill; a long, narrow, sharp-pointed tongue, jagged near its tip; the tail rather long, and the tips of the tail feathers firm and pointed, extending beyond the webs. The feet are rather slender; the hinder toe about as long as the other toes. Of this conformation of feet and tail great use is made in climbing trees, the stiff feathers of the tail being employed for support. Creepers display great agility in clambering, often back down, about the branches, and probe every cranny for hiding insects or insect eggs. They make their nests in crevices in trees, old woodpeckers' holes, etc. Although the family is large, it is doubtful if the genus contains more than one true species, the common streaked-brown creeper (*Certhia familiaris*), a bird found in all temperate parts of the Northern Hemisphere, wherever wood abounds. In the United States the word "creeper" is very generally used as a part of the name of several warblers, as the pine-creeping warbler (*Dendroica pinus*) and the black-and-white creeper (*Mniotilta varia*). In Jamaica the name is given to a small species (*Certhiola bahamensis*), otherwise known as "banana bird," because it frequents and nests in the banana trees. See HONEY CREEPER; TREE CREEPER.

**CREEPING PLANTS.** Plants whose stems run along the surface of the soil and root at intervals. See STEM; VEGETATIVE PROPAGATION.

**CREESE, or CREASE.** See KRIS.

**-KREFELD, krä'fält.** See KREFELD.

**CREIGHTON, krä'ton, JAMES EDWIN** (1861-). An American philosopher. He was born at Pictou, Nova Scotia; graduated from Dalhousie College at Halifax, N. S.; studied in Germany and received the degree of Ph.D. from Cornell University in 1892. He became connected with *The Philosophical Review* in its second year (1893), first as coeditor and subsequently as editor, he was also chosen the American editor of *Kant-Studien*. In 1895 he was appointed professor of logic and metaphysics in Cornell University, after having served in that institution as instructor and associate professor for six years. He helped to organize the American Philosophical Association and was its first president (1902-03). He published *An Introductory Logic* (1898) and some English translations of German philosophical and psychological works, and contributed frequently to philosophical journals. In 1900 he received the honorary degree of LL.D. from Queen's University, Canada.

**CREIGHTON, krä'ton, MANDELL** (1843-1901). An Anglican prelate and historian. He was born at Carlisle, Northumberland, graduated from Merton College, Oxford, in 1866, with the highest honors, and continued there as tutor until 1873. In 1870 he became deacon, in 1873 priest, and in 1875 assumed the college living at Embleton in his native shire. He was appointed rural dean of Alnwick in 1879, honorary canon of Newcastle in 1882, and professor of ecclesiastical history at Cambridge in 1884. In 1891 he became Bishop of Peterborough and remained there until 1897, when he was transferred to the see of London and was made a Privy Councillor. He represented Emmanuel College, Cambridge, at the celebration of the two hundred and fiftieth anniversary of Harvard University (1886) and in 1896 attended the coronation of Czar Nicholas II as delegate of the Church of England. Dr. Creighton will be remembered as

one of the ablest bishops of the see of London. His stanch high-churchmanship, striking and piquant personality, and incessant activity combined to make him the most notable Anglican divine of the nineteenth century. His historical writings are of great importance. Among them are: *The Age of Elizabeth* (1876; 14th ed., 1899); *History of the Papacy during the Period of the Reformation* (4 vols., 1882-87); *Cardinal Wolsey* (1888); *History of the Papacy from the Great Schism to the Back of Rome* (new ed., 6 vols., 1907); *Life of Simon De Montfort* (new ed., 1905); *Historical Essays and Reviews* (1902); *Historical Lectures and Addresses* (1903). Consult his wife's *Life and Letters of Mandell Creighton* (2 vols., London, 1903; new ed., 1913).

**CREIGHTON UNIVERSITY.** An institution for higher learning, founded under the auspices of the Roman Catholic church, in 1873, at Omaha, Neb. The University includes departments of law, medicine, dentistry, pharmacy, and the college. There is also a high-school preparatory department. The total enrollment in these several departments in 1914 was 1110, divided as follows: law, 173; medicine, 187; dentistry, 117; pharmacy, 153; college, 112; high school, 374. The faculty numbered 150. The productive funds of the university amount to about \$2,750,000, and the annual income to about \$210,000. The library contains about 50,000 volumes. The president in 1914 was Rev. E. A. Magevney, S.J.

**CREIL, krä'y.** The capital of a canton in the Department of Oise, France, on the Oise, 32 miles north of Paris by rail (Map: France, N., H 3). The parish church dates from the twelfth century; a ruined twelfth-century church is situated on an island in the river; and there are remains of a royal castle where Charles V was kept during his madness. Hardware, copper, machinery, bricks, tiles, glass, nails, and pottery manufactures are its chief industries. The Northern Railway has large repair shops, and near by are extensive engineering works. Pop., 1901, 9125; 1911, 10,214.

**CREIZENACH, krä'tse-näg, THEODOR ADOLF** (1818-77). A German poet and literary historian. He was born in Mainz, the son of Michael Creizenach, a famous Hebrew scholar, studied at Giessen, Göttingen, and Heidelberg, and was one of the founders of the Jewish Reform Society in Frankfurt-on-the-Main. He embraced Christianity in 1854 and in 1863 was appointed professor at the Frankfort Gymnasium. He was a versatile writer, his poems, *Dichtungen* (1839) and *Gedichte* (1851), being distinguished by simplicity and an elegiac character. His publication of the correspondence between Goethe and Marianne von Willemer (1878) is a valuable contribution to the literature on the great poet.

**CRELINGER, krä'ling-ër, AUGUSTE (DÜRING)** (1795-1865). A German actress, born in Berlin. She made her first appearance at the Court Theatre, Berlin, May 4, 1812, subsequently became one of the most famous actresses of her day, and frequently appeared as a star at the leading theatres of Germany as well as in St. Petersburg. Sappho, Lady Macbeth, Iphigenia, Phädra, and Adelheid in *Götz von Berlichingen* were some of her favorite rôles. She excelled also in comedy parts and was distinguished alike for her beauty, numerous histrionic accomplishments, and consummate

artistic training. Her maiden name was Düring. She was married in 1817 to an actor, Wilhelm Stieh, after whose death in 1824 she became the wife of a Berlin banker, Otto Crelinger.

**CRELL, NIKOLAUS.** See KRELL, NIKOLAUS.

**CRELLE, krél'le, AUGUST LEOPOLD (1780-1855).** A self-educated German mathematician. He was born at Eichwerder, near Wriezen, and was an architect by profession, but is chiefly known as the founder of the *Journal für reine und angewandte Mathematik* (Berlin, 1826). This journal gave expression to many of the greatest mathematical developments of the nineteenth century. Abel's proof of the impossibility of solving the general equation of the fifth degree by algebraic methods appeared in the first volume. Steiner, "the greatest geometer since the time of Euclid," was a leading contributor, and Möbius intrusted to it the publication of his most important researches. Crelle wrote quite extensively on algebra, trigonometry, the theory of numbers, the theory of functions, and various subjects of mathematical physics. His chief works are: *Versuch einer allgemeinen Theorie der analytischen Facultäten* (1825); *Encyclopädische Darstellung der Theorie der Zahlen* (1843); *Sammlung mathematischer Bemerkungen* (1820-22); *Elemente der Geometrie und ebenen und sphärischen Trigonometrie* (1826-27). He was also editor of the *Journal der Baukunst*.

**CREMA, krä'mä.** An episcopal city in the Province of Cremona, north Italy, situated on the right bank of the Serio, 25 miles southeast of Milan (Map: Italy, D 2). The cathedral has a Romanesque façade, and the church of Santa Maria delle Grazie has interesting frescoes. The circular church of Santa Maria della Croce, 1 mile from the city, built in 1490, has an octagonal interior adorned with paintings by Campi. Crema also has a ruined castle and a technical school. The chief products of the district are wine, fruit, flax, hemp, rice, and cheese; lace, silk, and linen goods are manufactured here, which are famous throughout Europe. Crema was founded by the Lombards in the sixth century and suffered much during the wars of the Guelphs and Ghibellines. It was besieged, taken, and destroyed by Frederick Barbarossa in 1159-60. Pop. (commune), 1881, 9111; 1901, 9755. 1911, 11,411.

**CREMATION OF THE DEAD** (Lat. *crematio*, from *cremare* to burn, connected with Goth. *krūri*, coal, Icel. *krurr*, fire). The process of disposing of the bodies of the dead by reducing them to ashes. Three methods of disposing of the bodies of the human dead have prevailed since the earliest times: simple exposure, burial in the earth, in caves, or in artificial tombs; and cremation. Among the factors which have determined which of these methods should be adopted by a nation or race have been physical conditions, such as the character of the soil and climate and the abundance or scarcity of fuel; sanitary considerations, and religious beliefs. Only the most uncivilized tribes have practiced simple exposure, depending on the elements and the wild beasts to dispose of the bodies of their dead. Such was the practice of the early Colchians, who, we are told, hung dead bodies on the limbs of trees while the Syrians abandoned their dead to wild animals.

**Disposal of the Dead among the Ancients and among Uncivilized Tribes.** Of the two methods employed by civilized nations, crema-

tion and burial, the former is the one originally prevalent among the Indo-European races. The graves of north Europe throughout the Bronze age contain, not skeletons, but only urns for the reception of funeral ashes. The Egyptians, on the other hand, embalmed their dead; the Jews laid them away in sepulchres; and the ancient as well as the modern Chinese buried them in the earth. The Chinese, influenced by religious doctrine, now, as of old, insist on properly placed graves in their own land, and for this reason corpses are sent home from abroad. They do not have cemeteries specially set apart for the burial of the dead, but may bury them anywhere, and the frequent occurrence of these hallowed spots, which may not be desecrated, has proved a serious obstacle to railway projects. The dry, hot climate of Egypt made the embalming process possible, and the scarcity of fuel made it less expensive than burning. The same natural cause, lack of fuel, may have led to the practice of burial among the Jews and other tribes. Among the ancient Persians the bodies of the dead were exposed to the elements, as is the practice of the modern Parsis, or followers of Zoroaster. It is, however, probable that in some instances, especially in the case of kings, burial with a coating of wax was allowed. The ancient Greeks practiced both cremation and burial, the former being introduced by the Phrygians, and burial by the Egyptians. In Greece only suicides, untethered infants, and persons struck by lightning were denied the right to be burned. Burial was forbidden within the walls of Athens. Among the Romans cremation was the general practice during the latter days of the Republic and through four centuries of the Empire. Many of the early American Indians burned their dead and disposed of their ashes in various ways. Recent excavations in Guerrero, Mexico, showed that the immense population which once inhabited this region incinerated their dead before burying them. The body was placed on a large slab in the bottom of a deep grave. It was then covered with a glowing mass of coals and embers, on top of which was placed another slab, elaborately carved. Two plain slabs were placed above, and after the body was consumed the grave was filled with earth.

Cremation was once common in England and was but slowly supplanted by inhumation. The same is true of the Gallic and Germanic races. It is said that Charlemagne, in his zeal for Christian burial, punished the act of cremation with the death penalty. Cremation is still practiced in India and among some other Oriental nations. In Japan the Shinto sect practices burial, and the Monto sect cremation.

While natural causes undoubtedly had a great influence in determining the method of disposal, especially in very early times, religious belief in the resurrection of the physical man has usually been the chief factor which has caused the spread of the custom of interment rather than the more sanitary method of disposal by fire. The Egyptians, Jews, Mohammedans, and Christians all believe more or less fully in the physical resurrection of the body; and the question arises, whether cremation does not impair the prospect of a future life. With the spread of Christianity burial was substituted for cremation, both in the heart of the Roman Empire and among the converted pagans on its outskirts.

The Roman Catholic church remains actively opposed to cremation. Decrees of Roman Congregations from 1884 to 1892 prohibit burning the bodies of the dead. In 1300 Boniface VIII condemned analogous practices. Some of the reasons why the Roman Catholic church is rigidly opposed to cremation (though her decision relates not to doctrine but to discipline) are that burial conserves an old tradition, that the rituals of cremationists savor of irreligion, and that it is still an unproved thesis that cremation benefits the race more than burial. Its precise position has been defined by one of its clergy as follows: 1. The church is opposed to cremation. 2. If a dying person declares his resolve to have his body cremated, priests will not give him the sacrament nor bury him with Catholic rites. 3. But if the body is to be cremated against the will of the deceased, it may be brought to the church for mass or blessing, or blessed at the home where the deceased died. After the cremation the ashes without any religious service may be deposited in consecrated ground. The priest, however, may not accompany the body to the crematory for any rites, nor even for social or civil reasons. Consult addresses of the late James R. Chadwick, former president of the Cremation Society, Boston.

Many Protestant clergymen are actively in favor of this method of disposing of the dead.

**Arguments for and against Cremation.** Within the last few decades the conviction has spread that a more rapid and sanitary method of disposal must be substituted for burial, especially in the great centres of population. To find enough land for burial purposes is becoming a more and more difficult matter. If 4000 corpses are crowded into an acre and a mortality rate of 15 per 1000 be assumed, then nearly four acres per 1,000,000 population are required annually to bury the dead. A similar computation of population, death rate, and space required for burial will show that, unless the custom is changed, much of the available space in the vicinity of all large cities will eventually be required for burial purposes.

The sanitary objections to burial are of still greater importance than the economic difficulties. In 1900 Sir Henry Thompson, in an address before the Cremation Society of England, advocated that while cremation remained optional for ordinary cases, it should be made obligatory when death is due to such transmissible diseases as smallpox, diphtheria, scarlet fever, typhoid fever, and tuberculosis. In cases of epidemics and after battles, when there are large numbers of bodies to be disposed of at once, cremation seems especially advisable.

An objection to cremation, in the minds of some, is that trace of the dead is obliterated from the sight of the living. But the condition and ultimate fate of graveyards, especially in the heart of great cities, is a proof that in many cases such memorials are but transitory. In continental Europe an average of 25 years is allowed for the occupancy of a grave, after which, in most cases, the ownership reverts to the municipality and the grave may be opened again. See CEMETERY.

Aside from the sentimental objection to cremation already mentioned, the chief argument against cremation is the medicolegal one, that with the burning of the body possible traces of crime are obliterated. Frederick L. Hoffman,

in a paper on "Cremation as a Life Insurance Problem" (*Sanitarian* for January, 1901), calls attention to this phase of the subject and points out that 64 of the 528 persons cremated at St. Louis, Mo., in 1895-99 died from accidents, violence, or suicide. In view of the number of murders, by poison or otherwise, that are committed to obtain insurance money, it is recommended that very special precautions be taken to ascertain the exact cause of death before issuing a permit for cremation. To meet this difficulty, the Cremation Society of England investigates the conditions of death in the case of every body for whose incineration application is made. It has also secured the services of a distinguished pathologist to make autopsies when necessary.

**History of the Modern Cremation Movement.** In Great Britain the revival of the practice of cremation was discussed as early as 1658, when Sir Thomas Browne published his *Hydriotaphia, or Urn Burial*. During the early part of the nineteenth century, Dr. Lord, health officer for Hemel Hempstead, continued to agitate the subject, but no practical results were achieved. In 1874 Sir Henry Thompson organized the Cremation Society of London, whose object is to introduce some rapid process of disposal which cannot offend the living and shall render the remains absolutely innocuous. A crematory was erected at Woking, near London, and here the first incineration took place in 1885. The first municipally owned crematory was opened for use at Hull in 1901. The *British Medical Journal* of June 14, 1913, states that the yearly numbers of cremations has doubled since 1904, but the numbers are still insignificant.

In France, after much agitation, a law was passed in 1887, legalizing the practice. Soon after the city of Paris erected a crematory, where cremation is compulsory for certain classes, including all unclaimed hospital dead, the remains from dissecting tables, and dead bodies from streets and sewers. Other crematories have been erected.

In Italy the subject was continually agitated by scientific societies after 1852, and finally the incineration of human dead was made legal by a provision to that effect in the National Sanitary Code. The process has rapidly grown in favor, and there are crematories in most of the larger cities.

In Germany the subject was discussed at scientific meetings almost as early as in Italy, but greater legal difficulties were encountered, and at first little was accomplished. At present Germany leads in the movement. Six crematories were built in 1913, making about 40 in the Empire, at which it is estimated that over 10,000 cremations were performed in 1913.

In the other countries of Europe cremation seems to be gaining ground. There were two crematories in Norway in 1912, where 143 were incinerated. The first crematory in the Netherlands was built in 1913, near Amsterdam. The same year a crematory was built in Cairo, Egypt.

The first place in the United States where the subject of cremation was systematically agitated was in New York, in 1873, but it was not until 1881 that a crematory was built for the use of its population. In the meantime a few cremations were made in private furnaces at Washington, Pa., and Salt Lake City. During the last decade of the nineteenth century the movement grew rapidly, and at the close of the cen-

tury 24 crematories were in operation, at which 13,281 bodies had been reduced to ashes. The latest statistics available are for the year 1911, when the total number of cremations (including those in one Canadian city) had risen to 62,465. These were distributed among 38 crematories at the following places: Boston, Cambridge, and Springfield, Mass.; New York City, Buffalo, Troy, and Waterville, N. Y.; Chicago; Cincinnati and Cleveland, Ohio; San Francisco, Los Angeles, Pasadena, Sacramento, and Oakland, Cal.; Milwaukee, Wis.; Davenport, Iowa; Minneapolis and St. Paul, Minn.; Indianapolis and Fort Wayne, Ind.; Denver, Colo.; Baltimore, Md.; Philadelphia, Lancaster, and Pittsburgh, Pa.; Portland, Oreg.; Detroit, Mich.; St. Louis, Mo.; Seattle and Tacoma, Wash.; Washington, D. C.; Montreal, Canada. It appears that the growth of cremation is most rapid on the Pacific coast, and it is stated that in Oakland and Pasadena the number of incinerations has equaled 50 per cent of the number of deaths. Philadelphia operates the first municipally owned crematory in the United States, here the remains of unclaimed dead and those who die in the pest house are incinerated. In 1913 a contract was let by the national government for the erection of a crematory in the canal zone. The same year a national organization was formed, and the First National Cremation Convention met at Detroit. Hugo Erichsen, M.D., was made president.

**Method of Cremation.** In the earlier furnaces body and coffin were burned separately, but in the latest furnaces the remains are incinerated in the casket, without handling, as received. A chapel is connected with the crematorium, where services may be held if desired. The casket is then lowered into the incinerating room, and, after metal handles and name plate are removed, introduced into the retort. The heat is so intense that after a few hours only the ashes of the bones remain, all else, including the structure of the casket, having disappeared in light ash or gaseous products. Screws and nails are removed by a magnet, and about four pounds of pure ash remain. This is placed in a metallic receptacle, labeled, and sealed.

**Bibliography.** A chapter on cremation, treating the subject from the sanitary and economic standpoint, is contained in Baker, *Municipal Engineering and Sanitation* (New York, 1901). Cobb, *Quarter Century of Cremation in North America* (Boston, 1901), includes a complete history and statistics of the movement in the United States, also a bibliography. Consult H. Erichsen, *Cremation of the Dead* (Detroit, 1887); A. G. Cobb, *Earth-Burial and Cremation* (New York, 1892). Freeman, *Crematoria in Great Britain and Abroad* (London, 1906), contains descriptions with diagrams and illustrations of some of the principal crematoria in the world. An introductory chapter contains an historical sketch. The *Sunny Side*, an undertaker's trade publication, contains a department devoted to cremation news and propaganda.

**CREMER**, krá'mër, ÁRGUST HERMANN (1834-1903). A German Protestant theologian. He was born at Unna, Westphalia, Oct. 18, 1834; studied at Halle and Tübingen, and since 1870 has been professor of systematic theology at Greifswald. Two of his publications have been translated. *Biblisch-theologisches Wörterbuch der neutestamentlichen Gräzität* (1866-67; 9th ed., 1902; Eng. trans., 1872, 3d ed., 1886), and

*Ueber den Zustand nach dem Tode* (1883; 6th ed., 1901; Eng. trans., 1885); *Des Wesens des Christentums* (1901; Eng. trans., as *Reply to Harnack on "The Essence of Christianity,"* 1903).

**CREMER**, JACOBUS JAN (1827-80). A Dutch novelist, born at Arnheim. Especially noteworthy are his rural tales in dialect, *Betwische Noellen* (1856). He wrote also the novels: *De Lelie van's Gravenhage* (1851); *Daniel Sits* (1856); *Anna Rooze* (1867); *Dokter Helmond en zijn trouw* (1870). For Cremer's biography, consult J. ten Brink, *Geschiedenis der Noord-Nederlandsche Letteren* (1887-89).

**CREMER**, SIR WILLIAM RANDAL (1838-1908). An English advocate of international peace, born at Fareham. He was prominent in English trade-unions in 1860-70. In 1885, as a Liberal, he entered the House of Commons, to which he was reelected in 1886, 1892, 1900, and 1906. To further the cause of universal peace he founded (1887) the Inter-Parliamentary Conferences which have met since 1888 at frequent intervals. He visited the United States repeatedly in the interest of an Anglo-American treaty of arbitration, and in support of the International Arbitration League, of which he was secretary for 37 years, he journeyed through all Europe. He also edited the *Arbitrator*, a monthly devoted to the cause of peace. The Nobel peace prize, which was awarded to him in 1903, he gave as an endowment to the International Arbitration League. He was knighted in 1907.

**CRÉMIEUX**, krá'myě', ISAAC MOISE (called ADOLF) (1796-1880). A French statesman and philanthropist, born at Nîmes. He studied law, and was admitted to the bar at Aix in 1817. About 1830 he went to Paris, where he soon became famous, particularly in the defense of the political prisoners. He became in 1842 a deputy from Chinon and served till 1848. Under the Republic of 1848 he was elected as deputy to the Constituent Assembly and the Legislative Assembly, and was one of the first seven named by the Chamber on February 24 to form the provisional government, in which he acted as Minister of Justice. On the night of Louis Napoleon's coup d'état Crémieux was arrested and thrown into prison. He was soon released, and voluntarily retired into private life until November, 1869, when he was elected a deputy to the Corps Législatif. On Sept. 4, 1870, he was proclaimed a member of the Government of National Defense, and the following day he was made Minister of Justice. He rendered the famous decree which expelled from their seats the infamous magistrates composing the "mixed commissions" under the Empire. Another decree bearing his name, the Decree Crémieux, naturalized in mass 30,000 of his coreligionists in Algeria. In 1871 he subscribed 100,000 francs towards the payment of the war indemnity for the liberation of the French territory from the Germans. In 1875 he was elected life senator. He was one of the founders of the Alliance Israélite Universelle (qv) and its president from 1863 to 1866 and from 1868 to 1880. Consult Jaquot, *Les contemporains* (Paris, 1867), and Blanc, *Histoire de dix ans* (Brussels, 1846).

**CREMNITZ**. See KREMNITZ.

**CREMONA**, krá-mō'ná. The capital of the province of the same name in Lombardy, north Italy, situated 48 miles southeast of Milan, in a fertile plain on the left bank of the Po (Map: Italy, E 2). It has broad but irregular streets

and attractive public squares, and a bridge 3100 feet long over the Po; it is formed into an oval by old walls that surround it, and a partly covered canal passes through it. The twelfth-century Romanesque Lombard cathedral has a rich main façade of red and white marble and many mural paintings by masters of the Cremona school. Adjacent is an octagonal baptistery, also of the twelfth century. From the Torrazzo (397 feet), the highest clock tower in north Italy, is a view of the entire course of the Po through Lombardy. Others of its 44 (formerly 87) churches are the richly decorated sixteenth-century San Pietro al Po; the fourteenth-century Sant' Agostino e Giacomo in Braida, with paintings by Perugino and others; the sixteenth-century Santa Margherita, built and decorated by Giulio Campi, Sant' Agata, with four large fine frescoes; and in a suburb San Sigismondo, with frescoes and paintings by Cremonese masters. Also noteworthy are the restored thirteenth-century city hall and the thirteenth-century Palazzo de' Gonfalonieri, and the Palazzo Reale, with natural-history and other collections. A memorial tablet marks the house where Antonio Stradivarius (q.v.) made his violins. Cremonese violin makers who preceded him were the two Anati and Guarneri. Cremona was also famous for its painters, Boccaccio Boccacino, the founder of the Cremona school; Melone, Bembo, the three Campis, and Sofonisba d' Angussola, whose five sisters also practiced the art. Cremona has a seminary, a lyceum, a gymnasium, a school of industrial art, a school for voice culture, a technical school, two theatres, a library of 100,000 volumes, and a chamber of commerce. The town has an active trade by rail and water, markets grain, flax, cheese, etc., and manufactures silk, cotton, and wool fabrics, machinery, and earthenware, and is thoroughly modern. Cremona was colonized by the Romans in 218 B.C. and grew to be an important commercial centre. It was destroyed in 70 A.D. by Vespasian, who afterward helped rebuild it, but it was again laid waste by the Lombards in 605. It became important in the tenth century and in the fourteenth century came into the possession of Milan. Pop. (commune), 1881, 31,788; 1901, 37,693; 1911, 40,436. Consult. Holder-Egger, "Die Annales Cremonenses." *Neues Archiv der Gesellschaft für ältere deutsche Geschichtskunde*, vol. xx (Hanover, 1900); Robaloth, *Cremona e sua provincia* (Milan, 1859); *Guida di Cremona* (Cremona, 1904).

**CREMONA, LUIGI** (1830-1903). An Italian mathematician, born in Pavia. He participated in the struggle for independence against Austria in 1848-49, later studied at the University of Pavia, obtained a mathematical professorship in Bologna, and in 1873 became professor of higher mathematics in the University of Rome and director of the engineering school of the institution. In 1879 he became senator of the Kingdom of Italy, and was for a short time in 1898 Deputy Minister. His contributions to the study of projective geometry and of graphical statics are important. He introduced these subjects into the curricula of Italian technical schools. His works include: *Introduzione ad una teoria geometrica delle curve piane* (1862); *Le figure reciproche nella statica grafica* (3d ed., 1879); *Elementi di geometria proiettiva* (1873); *Elementi di calcolo grafico* (1874). He was a contributor after 1856, and for many years joint editor, of the *Annali di matematica*

*pura ed applicata*. Vol. i of an important edition of Cremona's Works was published in 1914 under the title *Opere matematiche, pubblicate sotto gli auspici della R. Accademia dei Lincei* (Milan).

**CREMORNE** (kre-mörn') GARDENS. A famous resort in London, closed in 1877.

**CRENEL**, or **CRENELLE**' (OF. *crenel*, notch, embrasure, from *ML. crnellus*, dim. of *Lat. crena*, notch). Any embrasure or opening in the walls of a fortified place; especially the spaces between merlons (q.v.) on a battlemented parapet, from which missiles could be discharged. Hence it is sometimes used to designate a battlement. "Crenellated" is used of a building supplied with crenels. See **BATTLEMENT**.

**CRENIC ACID** (from Gk. *κρήνη*, *krēnē*, fountain),  $C_{12}H_{22}O_6$ . One of the constituents of vegetable mold, produced wherever leaves and other plant matter are decaying, especially in peat bogs and marshes. Berzelius extracted a mixture of crenic and apocrenic acids from the water of Porla (Sweden). Crenic acid is a pale-yellow amorphous substance of sour taste and somewhat astringent aftertaste. Its salts are soluble in water, in which they are gradually transformed, in part, into salts of apocrenic acid.

**CREODONTA** (Neo-Lat., nom. pl. of Gk. *κρέας*, *kreas*, flesh + *ὀδούς*, *odous*, tooth). A suborder of extinct mammals, ancestral to the true carnivores, and hence sometimes called *Carnivora* primigenia, and found fossil in the Lower Tertiary rocks. The creodonts comprise primitive or synthetic types of animals that vary in size from that of a weasel to that of a grizzly bear, and that combine the characters of the true carnivorous families in such manner as to render determination of the taxonomic rank of any particular species a matter of some difficulty. The members of the suborder present resemblances to the bears, civets, and dogs among the true carnivores, the genus *Patriofelis* seems prophetic of the Pinnipedia, or seals, and *Mesonius* resembles the carnivorous marsupials of Australia. The more primitive forms show characters possessed also by the Insectivora, Tillodontia, and Condylarthra. Creodont remains are found in the Lower Tertiary of Patagonia, and these are of interest because they resemble the carnivorous marsupials of Australia and New Zealand much more closely than do the North American creodonts. The range of the suborder in both North America and Europe is from the base of the Eocene into the Lower Miocene. During Eocene time the creodonts played that important rôle among land animals which subsequently, during later Eocene and Miocene time, was assumed by the true carnivores. Among the more interesting and important genera are *Arctocyon*, *Hyænodon*, *Mesonyx*, *Oxyana*, *Patriofelis*, *Stylolophus*.

**Bibliography.** Matthew, "A Revision of the Puerco Fauna," *Bulletin of the American Museum of Natural History*, vol. ix (New York, 1897); id., "Additional Observations on the 'Creodonts,'" *Bulletin of the American Museum of Natural History*, vol. xiv (ib., 1901); Scott, "A Revision of the North American Creodonts," *Journal of the Academy of Natural Sciences of Philadelphia*, vol. ix (Philadelphia, 1887); Martin, "Revision der Creodonten Europas," *Revue Suisse de Zoologie Genève* (Geneva, 1906); Ameghino, "Les formations sédimentaires

See MESONYX; OXYENA; HYENODON; PATRIOFELIS; MAMMALIA; TRISODON.

**CRE'OLE** (Fr. *cr  ole*, Sp. *criollo*; probably a negro corruption of Sp. \**criadillo*, *criado*, servant, from *cr  ar*, to create, rear). A name properly used in the southern United States and in Latin America to designate the pure-blooded descendants of original French, Spanish, or Portuguese stock. By English writers it has sometimes been incorrectly supposed to mean a mestizo or mulatto; but it cannot properly be applied to any person of mixed race, non-Latin stock, or European birth, neither is it used in speaking of the Canadian French.

**CREOLE CASE, THE.** An incident in American history which caused some friction between the governments of the United States and Great Britain and was the occasion of an animated debate between the proslavery and antislavery elements in Congress. In 1841, 19 of the 135 slaves on board the American brig *Creole* revolted, while being transported coastwise between Hampton Roads and New Orleans, and securing control, after killing the captain and wounding several others, directed the vessel to Nassau, New Providence, where all those who had not been directly concerned in the revolt were immediately liberated by the British authorities, the others being held for trial, on a charge of murder, in the local courts. Daniel Webster, who was then Secretary of State, demanded the return of the slaves, on the ground that they were legally property, and were on American soil and under the jurisdiction of the United States so long as they were under the American flag, even when on board a ship. They were never returned, however, by the British government. The incident caused J. R. Giddings (q.v.) to offer a series of resolutions in the House of Representatives, on March 21, 1842, declaring that slavery could exist only by positive law of the separate States; that these States had delegated no control over slavery to the Federal government, which alone had jurisdiction on the high seas, and, therefore, that slaves on the high seas became free, and the coastwise slave trade was unconstitutional. The House passed a resolution of censure, and Giddings immediately resigned, but was triumphantly reelected. His resolutions expressed the basis of one phase of the constitutional antislavery agitation. They are given in full in Giddings's *History of the Rebellion* (New York, 1864). The Statute of March 2, 1807, regulating the coastwise slave trade, is in 2 U. S. Statutes at Large, 426. See SLAVERY.

**CREOLE STATE.** Louisiana. See STATES, POPULAR NAMES OF.

**CRE'OLIN** (origin uncertain). An unofficial dark-brown, sirupy liquid, of tarry odor, derived from coal tar. It is soluble in alcohol and forms a milky fluid (an emulsion) with water. Different specimens vary considerably in composition and strength, and the careless use of the substance may cause poisoning. It is a good antiseptic, particularly against organisms that bear no spores, and is a powerful deodorizer. In

operative surgery it has the disadvantage that the milky character of the solution makes it difficult to see instruments placed in it. Its chief use is in gynaecological affections. It has been given (in small doses) internally for gastric fermentation, dysentery, and typhoid fever.

**CRE'ON** (Lat., from Gk. *K        *, *Kre  n*). In Greek legend, the son of Men  ceus, and brother of Jocasta, wife of La  us, King of Thebes. After the death of La  us he assumed the government and offered the crown and Jocasta to the man who should free the city from the Sphinx (q.v.).   dipus (q.v.) accomplished the task and thus unconsciously became the husband of his own mother. After   dipus' fall Creon once more assumed the rule as guardian of the sons of   dipus, Eteocles and Polynices (q.v.). After the death of the brothers Creon again became King, and forbade the burial of Polynices and the Argives. Antigone (q.v.), however, defied Creon and buried her brother's body, whereupon Creon sentenced her to be buried alive. Creon's son H  mon, the betrothed of Antigone, killed himself on her body. This is substantially the story as it appears in the plays of Sophocles. Other versions told how Creon sacrificed a son from the walls of Thebes in order to avert the fall of the city, and how later he gave his daughter Megara to Heracles, who succeeded him on the throne of Thebes.

**CRE'OSOTE, or CRE'ASOTE** (Gk. *k        *, *kreas*, flesh + *        *, *s        *, preserver, from *        *, *s        *, to save). An oily liquid produced in the destructive distillation of wood, particularly that of the beech (*Fagus sylvatica* Linn  , natural order Cupulifera). The wood tar obtained at first is subjected to fractional distillation, and the fractions heavier than water are dissolved in caustic potash; the resulting solution is exposed to the air and heated, the resinous matter produced is separated out, and the creosote is set free in the solution by neutralizing with dilute sulphuric acid. To obtain creosote in a state of purity, the process just described of dissolving in potash and liberating with sulphuric acid is repeated several times; as a final step in the purification, the creosote is dried and rectified by distillation. Commercial creosote is liable to contain more or less carbolic acid, whose presence, however, is not very easy to detect; if drops of a sample of creosote do not readily sink in water and do not remain transparent after contact with water for some time, the sample should be considered as suspicious. Pure creosote is almost colorless when freshly obtained, but gradually assumes a darker color if exposed to the action of light. It has a penetrating, smoky odor and a burning taste and is slightly heavier than water, in which it is soluble only to a very limited extent. It is completely soluble in alkalies and mixes readily with alcohol, ether, chloroform, and glacial acetic acid. It is composed mainly of *guaiacol* and *crezol* and has a high refractive power. Creosote acts as an antiseptic and has been used in the preservation of meat—whence its name. At present it is largely used in the treatment of tuberculosis with mixed infection. For this purpose it may be administered in the form of an emulsion with cod-liver oil and other substances; or else a mixture of creosote with alcohol and chloroform may be inhaled by the patient, moderate doses of pure creosote being perfectly harmless and causing no disagreeable symptoms whatever. Creosote was first prepared by Rei-

chenbach in 1832, and Bouchard and Pimbert were the first to apply it to the treatment of tuberculosis. It is also used in bronchitis with profuse expectoration containing the *streptococcus* bacillus, and in fermentative dyspepsia, diarrhoea, and dysentery. The so-called *creosote* oil used for the preservation of timber is derived by the fractional distillation of coal tar, constituting the fraction that distills over between 230° and 270° C., 446° and 518° F. It is composed mainly of phenol (carbolic acid), cresol, naphthalene, and anthracene.

The "creosote plant" (*Larrea mexicana*) produces a substance similar to Indian gum lac and having a strong creosote-like odor; hence the name of the plant.

**CREOSOTE BUSH.** See ZYGOPHYLLACEÆ.

**CREOSOTE OIL.** See COAL TAR.

**CREOSOTOL**, krě'sót-ól' (from *creosote* + -ol), or CARBONATE OF CREOSOTE. A pale-yellow sirupy liquid similar to creosote, but having less odor and taste. It is used in tuberculosis and bronchitis and is better tolerated by the stomach.

**CRÉQUI**, krá'ké, (CHARLES, MARQUIS DE (1578-1638). A French soldier. He was a prominent officer under Henry IV, in 1622 was appointed a marshal of France by Louis XIII, and fought with great bravery against Spaniards and Huguenots. He died in the siege of Crema. His military ability was highly praised by Saint-Simon and Voltaire. Consult Chorier, *Histoire du Maréchal de Créquy de Blanchefort* (Grenoble, 1683).

**CRÉ'RAR**, JOHN (1827-89). An American philanthropist, born in New York City. He was a merchant in New York and from 1862 in Chicago, where he became head of the firm of Crerar, Adams & Co., and an incorporator and one of the directors of the Pullman Palace Car Company. He contributed \$2,500,000 as an endowment fund for a library in Chicago now known by his name, \$100,000 for a statue of Abraham Lincoln, and bequeathed \$1,000,000 to charitable and religious organizations.

**CRÉS'AP'S WAR.** See DUNMORE'S WAR.

**CRESCENDO**, krě-shén'dó or krě-sén'dó (It., increasing, pres. part. of *creocere*, from Lat. *creocere*, to grow). In music, a gradual increase of the volume of sound, or change from *piano* to *forte* and *fortissimo*. It is marked thus,  or with the abbreviation *crce*. The even swell of an organ produces a perfect crescendo.

**CRÉS'CENT** (from Lat. *creescens*, pres. part. of *crecere*, to grow). 1. A representation of the half-moon with the horns turned upward, called a "crescent," is often used as an emblem of progress and success. It is generally spoken of as "the arms" of the Turkish Empire, but is more properly the emblem of the Empire and people. The crescent and star occur in the horoscope of Osman, the founder of the Turkish Empire. The crescent was also a Byzantine emblem, however, and at the present day is frequently to be seen on churches in Russia, generally surmounted with the cross, marking the Byzantine origin of the Russian church.

2. A Turkish musical instrument introduced into the German military bands at the time of the Turkish wars and now in general use in military bands. It consists of a staff surmounted by a cap and supporting several crescent-shaped brass plates upon each of which little bells are hung. The instrument is played by being jingled in time with the music.

3. In heraldry the crescent is used both as

a bearing, or charge, and as a difference, or mark of cadency. In the latter case it designates the second son and those that descend from him. See CADENCY.

**CRESCENT**, ORDER OF THE. A Turkish order of knighthood. It was founded by Selim II in 1799 after the battle of Abukir, to be conferred on Christians for service to the Turkish state. Nelson was the first man to receive the honor. The order became extinct after half a century. An Order of the Crescent was founded by St. Louis of France in 1269, and twice reestablished by the house of Anjou, reigning in Sicily and Naples. This is also extinct. The crescent and the star in white upon a red background constitute the Turkish flag. It is supposed that the appearance of the crescent in the horoscope of the great Othman led to the acceptance of it as the national symbol.

**CRESCENT CITY.** A name applied to New Orleans because of its situation on a bend of the Mississippi River.

**CRESCENTIIS**, krě-sén'shí-is, PÉTRUS DE, or **CRESCENZII**, krá-shén'tsé, PIETRO (c.1230-c.1310). An Italian agricultural writer, the founder of modern agronomics in Europe. He was born in Bologna, but later sojourned in various cities of Italy, where he frequently acted in the capacity of judge lateral to the podestàs. Upon his return to Bologna after an absence of 30 years, during which he made valuable observations on agriculture, he published his famous work, entitled *Ruralium Commodorum Libri XII* (1471). This work has been frequently reprinted and has been translated into Italian, German, and French. His *Scriptores rei rustice* (1735) is famous also. The genus *Crecentia* was named by Linnaeus in honor of the famous author, who was probably the first since the days of the Romans to point out the high value of agricultural science.

**CRESCENTINI**, krá'shén-té'né, GIROLAMO (1766-1846). An Italian singer, born near Urbino, Italy. He studied with Ghibelli at Bologna, made his debut at Rome in 1783, and subsequently sang at Leghorn, Padua, Venice, Turin, London, Milan, and Naples. Napoleon, who first heard him sing in 1805, decorated him with the Iron Crown and was his patron from 1806 to 1812. He left Paris on account of vocal disorders, later (1816) becoming professor of singing at Naples. He published in French and Italian a treatise on vocalization.

**CRESCENTIUS**, krě-sén'shí-ús, JOHN (?-998). Leader (Patricius in 985) of the national party in Rome against the authority of the Emperor in the last quarter of the tenth century. About 991, probably, Crescentius was all-powerful in Rome. With a short intermission, when Otho III visited the city in 996, his rule lasted until 998, when he was beheaded by Otho. In 997 he had driven the Pope, Gregory V, from the city and appointed an antipope. Crescentius was long remembered as the champion of Roman liberty. Consult Gregorovius, *Rome in the Middle Ages*, vol. iii (London, 1895).

**CRESCENZII**, krá-shén-tse, PIETRO. See CRESCENTIIS, PÉTRUS DE.

**CRESCIBENI**, krá'shém-bá'ná, GIOVANNI MARIO (1663-1728). An Italian critic and poet, born at Macerata, and one of the 14 poets associated with Christine of Sweden in founding the Academy of *Arcadia*, of which he was the first president (1690). As *Arcadia* expanded, dur-

ing the 38 years of his presidency, to embrace almost the entire literary set of Italy, Crescimbeni became the high priest of good taste, which was reflected in the pompous ceremonials of the Arcadian branches, the shallow dilettantism of literary production, idealistic sensualism in morals, and arrogant preceptualism in aesthetics. The vast but inaccurate and scattered erudition of Crescimbeni is collected in his *Istoria della volgar poesia* (best ed., Venice, 1730-31, 6 vols.). Though inferior to the best standards of scholarship even in its own time, this work is still of use. Its critical criterion was that of Arcadia: accuracy of imitation, not nobility of substance.

**CRES'CO.** A town and the county seat of Howard Co., Iowa, about 150 miles (direct) northeast of Des Moines, on the Chicago, Milwaukee, and St. Paul Railroad (Map: Iowa, E 1). It maintains a hospital, has extensive dairying and live-stock interests, and manufactures machinery, cupolas, telephone condensers, electrical supplies, steel corn cribs, lighting rods, furniture, stump pullers, tow, flour, and brick and tile. A "Farmers' Alliance" store is successfully operated here, and there is also a hospital. The city is governed by a mayor and council and owns its water works. Pop., 1890, 2018. 1900, 2806. 1910, 2658.

**CRESTLAS** (Lat., from Gk. Κρησλας, *Krēsilas*). A Greek artist of the Attic school, born at Cydonia in Crete, who worked in the latter part of the fifth century B.C. He made a statue of Pericles, of the base of which fragments with the artist's signature have been found on the Acropolis of Athens. This is the earliest Greek portrait statue which has been surely identified. From this work seem to be derived the busts of Pericles in the British Museum, the Vatican, and Munich. He also made a statue of a wounded Amazon, which is probably represented by the Capitoline type. (See **AMAZONS**.) Other statues have been claimed as copies of his works, as the Munich Diomedes, and the Athena of Velletri. Consult Furtwängler, *Masterpieces of Greek Sculpture*, trans. by Sellers (New York, 1895), and E. A. Gardner, *A Handbook of Greek Sculpture* (London, 1911).

**CRESPIN**, krā-spūn', JEAN (c.1520-72). A French Protestant author. He was born in Arras, studied law in Louvain and Paris, became advocate in Parliament, 1540, fled on account of his religious opinions to Strassburg in 1545, removed to Geneva in 1548, and carried on the printer's trade there until his death in 1572. His fame rests upon his *Œuvre des martyrs* (1554), with its continuations or recastings under different names: *Recueil* (1554); *Histoire* (1570); new edition of the whole as *Histoire des martyrs* (3 vols., 1886-89). It was translated into Latin and has been the basis of many similar Protestant martyrologies.

**CRESS** (AS. *cresse*, *carass*, OHG. *cresso*, *cressa*, Ger. *Kresse*; probably from OHG. *chresan*, MHG. *kresen*, to creep). A name given to many plants, of which the foliage has a pungent, mustard-like taste, and is used as a salad. It is sometimes more strictly confined to the genus *Lepidium*, of the family Cruciferae. The common cress, or garden cress (*Lepidium sativum*), is an annual, a native of the East, frequently cultivated in European and American gardens. It is powerfully antiscorbutic. Virginian cress (*Lepidium virginicum*) resembles the garden cress in its properties and is eaten as a salad, and used as a diaphoretic medicine in North

America and the West Indies. *Lepidium piscidium*, a native of the South Sea Islands, is one of the plants used by sailors for prevention or cure of scurvy. The name "winter cress" is given to species of the genus *Barbarea*, also cruciferous biennial or perennial plants. The common winter cress (*Barbarea vulgaris*) is plentiful in moist pastures and hedge banks throughout Europe and North America. It is occasionally cultivated as a winter salad; in Sweden it is used as a boiled vegetable. Its pungency is combined with some degree of bitterness. Very similar to this, and also occasionally cultivated, is the early winter cress, or American cress (*Barbarea praecox*), a native of Great Britain, the continent of Europe, and North America. The common bitter cress, or cuckoo-flower (*Cardamine pratensis*), is also known by the name of lady's-smock. *Cardamine amara* and *Cardamine hirsuta* are cultivated to a considerable extent in Europe and are also found in America. Watercress (*Nasturtium officinale*) is a perennial aquatic plant, much used in the United States and Europe as a cold-weather salad. It is a native of almost all parts of the world. The leaves have a pungent, bitterish taste, with a little saltiness. The plant is of easy cultivation and grows best in clear, shallow, running water, with a bottom of sand or gravel. Mud is injurious both to its growth and to the flavor of its leaves. For Indian cress, or nasturtium, see **TROPÆOLUM**.

**CRESSSET** (OF. *cresset*, Fr. *creuset*, from Oldutch *kruysel*, hanging lamp, dim. of *kruyse*, cup, Icel. *kris*, Ger. *Krause*, Eng. *cruse*). A name given to a great light kindled upon a beacon or watchtower, and also to a lamp or torch, or to a light fixed on a pole. The name owes its origin to the former custom of surmounting beacons by a cross.

**CRESSID**, or **CRESIDE**, TESTAMENT OF, and COMPLAINT OF CRESSEIDE. Poems by Robert Henryson, wrongly included in the earlier editions of Chaucer.

**CRES'SIDA**, or **CRES'SID**. The lover of Troilus in the *Troilus and Cressida* (q.v.) of Chaucer, Shakespeare, Dekker and Chettle, and Dryden, and a type of infidelity. The name is probably a mediæval invention representing Briseis, the daughter of Calchas, the Trojan seer.

**CRES'SON**. A borough and pleasure resort in Cambria Co., Pa., 75 miles east of Pittsburgh, on the Pennsylvania Railroad (Map: Pennsylvania, D 6). It is situated at an elevation of over 2000 feet and is noted for the beauty of its scenery. Mineral springs add to its attractions as a resort. It has an academy and hotel, lumber, coal, and coke yards, and a brewery. Pop., 1910, 1470.

**CRESSON**, ELLIOTT (1796-1854). A Quaker merchant and philanthropist of Philadelphia, Pa., who devoted much attention to the emancipation of the negroes from slavery. He was president for some time of the Colonization Society (q.v.), and subsequently as its agent labored to establish the colony at Bassa Cove, on the Grain Coast, Africa.

**CRESSWELL**, SIR CRESSWELL (1794-1863). An English jurist. He was born at Newcastle, graduated at Emmanuel College, Cambridge, in 1814, and in 1819 was called to the bar. In 1834 he was created King's counsel, in 1842 a puisne judge of the common pleas court, and in 1858 first judge of the newly created probate and divorce court. He was largely employed as an

advocate in important navigation and mercantile cases. Consult E. Manson, *Builders of our Law* (London, 1904).

**CRESSY.** See **CRÉCY**.

**CREST** (OF. *creste*, Fr. *crête*, Sp., Portug., It. *cresta*, crest, from Lat. *crista*, comb, tuft, connected with Lat. *crinis*, hair). Though popularly regarded as the most important feature in heraldic emblems, the crest, in the eyes of heralds, is an external adjunct to the shield, without which the bearing is complete, and which may consequently be altered without materially affecting its significance. Occupying the highest place on the helmet, it is the member of the bearing by which the knight was commonly known in battle. From this circumstance it is to the crest that the term *cognizance* (from *cognosco*, to know) is properly given. Its claim to a classical origin is probably better than that of any other portion of coat armor. The helmet, as represented on ancient statues and gems, was frequently adorned with a crest. Sometimes it was of horsehair; at other times a lion or other animal, erect or couchant, was placed on the helmet.

The first crest to be met with in the monuments of English chivalry is that on the great seal of Richard Cœur de Lion. Crests came into general use about the time of Henry III, and were used as marks of distinction by commanders in the holy wars, as they had formerly been by the Roman centurions. For lightness they were often made of stuffed leather, gilt, silvered, or painted—a circumstance which explains their greater size then than in later times, when they were made either of wood or metal. The earliest example of the wreath on which the crest is now invariably placed is that on the monument of Sir John Harsick. It consisted of two pieces of silk, of the colors of the armorial bearings of the wearer, twisted together by the lady who had chosen him for her knight. It is now represented as consisting of two stripes of gold or silver lace, twisted into a circular cord. Its tinctures are always those of the principal metal and color of the arms. It is a rule in delineating the wreath, which is shown edgewise above the shield, that the first coil shall be of metal, and the second of color. Civic, triumphal, and other crowns were used as wreaths, and this practice is supposed to have given rise to the use of coronets.

Consult Fairbairn, *Book of Crests of the Families of Great Britain and Ireland* (Edinburgh, 1892); and for foreign crests, consult Reistap, *Armorial général* (Gouda, 1884-87). See also **HERALDRY** and the authorities there referred to.

**CREST**, or **CRESTING**. In architecture, an ornamental finishing in stone, tiles, or metal, running along the top of a wall or the ridge of a roof or surmounting a gable. *Crest tiles*, or, as they are corruptly called, cress tiles, or crease tiles, are frequently in the form either of small battlements or Tudor flowers. See **COPING**.

**CRESTED**. A term in heraldry. When a cock or other bird has its comb of a different tincture from its body, it is said to be crested of such a tincture, naming the tincture.

**CRESTED DOG'S-TAIL GRASS**. See **DOG'S TAIL GRASS**.

**CRESTLINE**. A village in Crawford Co., Ohio, 76 miles southwest of Cleveland, on the Cleveland, Cincinnati, Chicago, and St. Louis, and the Pennsylvania railroads (Map: Ohio, E

4). It is chiefly industrial in its interests, having plow, stove and furnace, pump, and buggy factories, a car manufactory, a woodworking establishment, etc. The water works are owned and operated by the village. Pop., 1910, 3807.

**CRESTON**. A city and the county seat of Union Co., Iowa, 55 miles (direct) southwest of Des Moines; on the Chicago, Burlington, and Quincy Railroad (Map: Iowa, C 3). It has a public library and Elks, Moose, and Eagle homes. There are extensive machine shops, car works, planing mills, and a cold-storage plant. Creston was settled in 1868 and incorporated the following year. It is governed at present under a charter of 1870, revised in 1890, which provides for a mayor, chosen biennially, and a city council, elected by wards. Pop., 1890, 7200; 1900, 7752; 1910, 6924.

**CRET**, **PAUL PHILIPPE** (1876- ). A Franco-American architect, born at Lyons, France. He was educated at the Ecole des Beaux-Arts, Lyons, and the Ecole des Beaux-Arts, Paris; in 1903 was an architect of the French government; and became in the same year professor of design at the University of Pennsylvania. He received the Paris prize in 1896, the Rouvevin prize in 1901, grand medal of the Ecole des Beaux-Arts of Paris in 1901, and the gold medal of the Salon des Champs Elysées of Paris in 1903. He was architect of the Pan-American Union building at Washington and of the Valley Forge memorial arch.

**CRETACEOUS** (kré-tá'shūs) **SYSTEM**, or **CHALK FORMATION** (Lat. *cretaceus*, chalky, from *creta*, chalk). A term applied to a series of strata underlying the Tertiary and resting on the Jura-Trias, the name being derived from the chalk beds which form such a prominent member of the Cretaceous in England and France, although such chalk beds are rare in the United States, occurring only in Texas and Arkansas. There exists at times an unconformity between the Upper Cretaceous and the Eocene, or lower member of the Tertiary, especially in the United States. The classification of the Cretaceous presents many difficulties, owing to the variable section which it exhibits in different areas, but European and American geologists are agreed on a division into an upper and a lower member, while for divisions of lesser size local names are employed.

The Lower Cretaceous, designated by some geologists as the Comanchean system, is represented along the Atlantic coast by the Potomac beds, in the northern Gulf States by the Tuscaloosa stage, in Texas and the western Gulf borders by (a) Trinity, (b) Fredericksburg, and (c) Washita stages. The Upper Cretaceous in the Rocky Mountain region has the following subdivisions: (a) Dakota stage, (b) Colorado series, (c) Montana series, (d) Laramie series; while in the Atlantic border States it is divided into (a) Matawan, (b) Monmouth, (c) Rancocas, and (d) Manasquan stages.

The Cretaceous rocks of North America form a belt of increasing width, extending southward along the Atlantic coast from New York, through New Jersey, Maryland, North Carolina, Georgia, and Florida; then around the northern and western shores of the Mexican Gulf, up the Mississippi valley to the mouth of the Ohio, and from Texas northward to the foothills of the Rocky Mountains. They occur also in Nebraska, Kansas, and Iowa. The greatest development of the Cretaceous system is in Wy-

ming, Utah, Colorado, and west of the Sierra Nevada in California. In some portions of these last-named regions it is found at heights of 10,000 and 12,000 feet. It occurs also in Arctic America, near the mouth of the Mackenzie River. The American Cretaceous beds consist of greensand—called also "marl," and much used in New Jersey and elsewhere for fertilizing land—sands of other kinds, clays, shell deposits, and, on the Gulf of Mexico, especially in Texas, limestone or chalk. In New Jersey the formation is 400 or 500 feet thick; in Alabama, 2000 feet, in Texas, over 1000 feet, represented by sands, clays, marls, and chalk; in the upper Missouri basin, more than 4000 feet; and east of the Wasatch, more than 9000 feet.

The rocks of the Cretaceous contain an abundance of both animal and plant remains, for this was a closing period of an era in which reptiles predominated, and, curiously enough, but few or none of the Cretaceous species have continued into the Tertiary. The plants found in the Cretaceous represent angiosperms, which were not found before this era, both dicotyledons and palms, the former including species of the oak, willow, poplar, beech, maple, fig, tulip, sassafras, eucalyptus, and sequoia. Many palms and cycads are found in the Cretaceous of North America. The appearance of the dicotyledons in this formation is rather sudden. The animal remains found include both the smallest and largest forms. There are foraminifera, sponges (which were very common in the chalk), echinoids, many mollusks, especially spirally coiled ammonites, and oysters. The fishes show a continuation of the placoids and ganoids of the former era, but teleosts, or true bony fishes, made their first appearance. There was also an extraordinary abundance of reptiles, including enaliosaurs, dinosaurs, pterosaurs, and crocodiles. Some of the pterosaurs from the Kansas rock measured from 20 to 25 feet in expanse of wing. The sea saurians were from 10 to 50 feet long. Cope describes the clausosaurus as a snakelike form 40 feet long, with an arrow-shaped head on a swanlike neck that rose 20 feet out of the water. Consequently it could swim many feet below the surface and yet have its head extended into the air for breath. The American rocks supply 40 species of sea serpents. More curious still were the birds with teeth, found in New Jersey and Kansas. (See ICHTHYORNIS.) The mammalian remains were mostly those of lower orders, such as marsupials and monotremes.

The geographical developments in North America during the Cretaceous were great. In the closing stages the sea withdrew from the coastal plains of the Atlantic and Gulf of Mexico. The Appalachians were subjected to renewed uplift after having been planed down by erosion. The interior continental sea was shallowed, and finally obliterated by the uplifting of the land, so that the eastern and western portion of the United States were joined into one continent. This uplift became emphasized towards the end of the Cretaceous, when the Rocky Mountains were formed. Violent volcanic eruptions accompanied this uplift, and the lava flows of the Yellowstone and of many other sections of the west of the United States date from this time.

The economic products include most of the coal and lignite deposits of the Western States. As a coal-making period the Cretaceous ranks second only to the Carboniferous period. Pe-

troleum is found in the Cretaceous strata of Wyoming. Many of the gold and silver bearing fissure veins of the Rockies were formed in the Cretaceous, while other products are fire clays, chalk, greensand, and iron ores.

In Europe the Cretaceous rocks assume great importance. According to Geikie, they may be grouped into two fairly distinct areas, of which the northern includes Great Britain, the lowlands of central Europe, with portions of Silesia, Bohemia, and northern France; while the southern embraces the central and southern part of France, the Alps, and the Mediterranean basin. The northern area is characterized by shallow-water deposits—sandstones, conglomerates, and marls—more or less glauconitic, and passing into a loosely textured limestone or chalk. In the southern basin the typical rocks are massive, compact limestones, which indicate conditions of deeper water and freer communication with the open sea. The entire series of rocks is usually grouped by geologists as follows: Lower Cretaceous—(a) Neocomian, (b) Urgonian, (c) Aptian; Upper Cretaceous—(a) Gault or Albian, (b) Cenomanian, (c) Turonian, (d) Senonian, (e) Danian. The dividing line between the Upper and Lower Cretaceous is regarded by the French geologists as occurring at the top of the Albian. The most conspicuous member of the Cretaceous is the white chalk (Upper Cretaceous) which forms the remarkable cliffs of southeastern England and northwestern France.

**Bibliography.** Consult: Dana, *Manual of Geology* (4th ed., New York, 1896); Geikie, *Text-Book of Geology* (London, 1903); White, "Correlation Papers, Cretaceous," *United States Geological Survey, Bulletin* 82 (Washington, 1891). Chamberlin and Salisbury, *Geology*, vol. iii (New York, 1907).

**CRETE** (Lat. *Creta*, Gk. *Κρήνη*, *Krētē*, Ngk. *Kpiti*, *Kriti*, Turk. *Kirit*), or CANDIA. An island in the Mediterranean, situated south of Greece, considered the most southerly part of Europe. It lies between lat. 34° 57' and 35° 41' N. and between long. 23° 30' and 26° 20' E. (Map: Greece, F 6). It is oblong in shape, having a length of about 160 miles, and varying from 6 to 35 miles in width, with an area of 3327 square miles. Its mountainous surface bears some resemblance to that of Greece. The western part of the island is the more elevated, and contains the massive White, or Madaras, Range, rising at Hagios Theodoros to a height of 8104 feet. The central mass of Ida, or Psiloriti, reaches in Stavros 7103 feet. The eastern part is lower, but there are several peaks between 5000 and 7000 feet high. The northern coast is well indented and abounds in good harbors, that of Suda Bay on the northwest coast being one of the best in the Levant. The southern coast is mainly unbroken and inaccessible. There are several rivers, but they run dry during the summer season. There are numerous springs throughout the island. The climate of Crete is one of the most salubrious in Europe. In spite of its mountainous surface, Crete has a soil of remarkable fertility, producing most of the southern fruits and grains. The thick forests which formerly covered the mountains have almost entirely disappeared, but there are still found some trees, such as the cypress, the chestnut, and the olive, cultivated mostly in the lowlands.

The chief products are olive oil, grapes,

oranges, lemons, and other southern fruits. The vine of Crete, which enjoyed such fame in the Middle Ages, has greatly deteriorated. One of the chief manufactured products exported is soap, which is made of olive oil. The commerce is chiefly with Greece, Austria-Hungary, the United Kingdom, Turkey, and Italy. In 1911 imports were valued at 21,359,000 drachmas, and exports at 15,631,000. The chief exports were: olive oil, 5,571,000 drachmas; raisins, 2,395,000; carobs, 1,811,000; southern fruits, 1,516,000; wine, 1,436,000; and soap, 1,138,000 (drachma = 19.3 cents). The principal ports are Canea, Retimo, and Candia. The Bank of Crete was founded in 1899, with a capital of 5,000,000 drachmas, and obtained the privilege of issuing notes for 30 years.

Crete was formerly a Turkish dependency. The inhabitants, in large part Christian, frequently rose against the Turkish authorities, who were supported by a strong Mohammedan minority. A long series of outbreaks culminated in a general rebellion in 1897, which led to the interference of Greece. Thereupon the four Great Powers—Russia, France, Italy, and the United Kingdom—intervened and established an autonomous Cretan government under the suzerainty of the Porte. A constitution, which came into force in 1899, vested the supreme authority in Prince George of Greece as High Commissioner of the Powers. A representative legislative assembly was established, and representatives at Rome of the four Powers were given control of the island's foreign affairs. The constitution as modified in 1907 curtailed the powers of the High Commissioner; under it the Assembly was composed of 65 members elected for three years. In 1906 the Powers gave to the King of the Hellenes the right of naming the High Commissioner in case of vacancy; Prince George resigned, and was succeeded (early in 1907) by Alexander Zaimis, a former Greek premier. In October, 1908, the Assembly declared the union of Crete with Greece, and, in the absence of the High Commissioner, chose a committee of six to govern the island in the name of the Hellenic King. In the following year the Powers decided that a high commissioner be not appointed nor the *status quo* changed. On Oct. 14, 1912, the Prime Minister of Greece declared formally in the Greek Chamber the annexation of Crete.

Revenue is derived chiefly from customs, excise, and monopolies; expenditure is mostly for public works and security, instruction, and finance. In 1910 revenue and expenditure amounted to 6,465,760 and 7,308,632 drachmas, respectively. In 1911, 6,518,594 and 6,792,829. The public debt in 1912 was 4,615,709 drachmas.

Primary instruction is nominally compulsory, but the school enrollment shows only about one pupil for 10 inhabitants. There are a few institutions for secondary education.

Under the Venetians the population of Crete was estimated at about 250,000. A decrease followed the Turkish conquest, but by 1821 the number had risen to an estimated 260,000. Another great decrease resulted from the War of 1821–30, so that an estimate of 1836 placed the population at only 130,000. The census of 1881 showed 279,185 inhabitants (about 205,000 Christians and 73,000 Mohammedans; census of June 17, 1900, 310,056 (269,719 Christians, 33,496 Mohammedans); census of June 17, 1911, 344,001 (307,812 Christians, 27,852 Mohammedans, 487 Jews, and 7850 foreigners). The Christians are almost entirely of the Orthodox Greek faith. It is to be noted that the Mohammedans have rapidly decreased; they, as well as the Christians, are of Greek origin and speak Greek. Of the foreigners about two-thirds were Greeks and about one-sixth Turks. Canea, the capital, had, in 1911, 24,399 inhabitants; Candia (Iraklion), 25,185; Retimo (Rethymmon), 9086.

**History.** Archaeological discoveries tend to show that the island was settled at a very early period by Phenicians and Egyptians, and that it undoubtedly was a stepping-stone for those who brought the culture of the valley of the Nile to the mainland of Greece. These discoveries have shown also that the civilization known sometimes as "Minoan," sometimes as "Ægean," extended back many millennia before Christ, by 2500 or 2000 B.C. Crete was the dominant power in the Ægean world. Traces of this Cretan civilization extend from Canaan to Sicily. Thus the Greek stories about Minos (q.v.), once regarded as wholly mythical, have been in many ways remarkably confirmed.

One of the earliest historical notices of the island is that embodied in the *Odyssey* (xix, 172–179). Here it is spoken of as well populated by various peoples—pure Cretans, Achæans, Dorians, and others. The main element in the population was Greek, but whether Dorian or some other type is uncertain. When the *Odyssey* was composed, Cnosus, Minos's capital, situated in the northern part, was the greatest of the 90 cities of Crete. By the side of Cnosus, the city republics of Gortyna in the south and Cydonia in the northwest rose to great prominence. See *ARCHÆOLOGY*, I, *The Pre-Mycenaean or Minoan Period*, and II, *Mycenaean Period*; CANDIA, MEGALOKASTRON; CNOSSUS; GORTYNA, GOVYNIA. MINOS; PHÆSTUS. For brief summaries of the more important works bearing on the recent discoveries in Crete, see, in addition to the bibliography under *ARCHÆOLOGY*, Shear, "The Discoveries in Crete," in *The Classical Weekly* vol. ii, pp. 242–244 (1909), and id., "Crete and Cretan Archaeology," in *The Classical Weekly*, vol. vii, pp. 82–85 (1914). Consult also *ARCHÆOLOGY* and *CRETE* in *The New International Year Book*, the volumes for 1908–13.

As allies of Mithridates the Great and, later, the Cilician pirates, the inhabitants of Crete came into conflict with Rome, and after a desperate resistance of two years were finally subdued by Metellus, in 66 B.C. On the division of the Empire the island fell to the Byzantine rulers, who held it till the year 823, when it was conquered by an army of Saracens from Andalusia. In 963 the Byzantines drove out the Saracens and reestablished Christianity in the country. Upon the establishment of the Latin Empire of the East, in 1204, Crete was given to Boniface of Montferrat, who sold it to the Venetians. These retained their power till 1669, when the Turks, after a blockade lasting 21 years, took the fortress of Candia. The last vestiges of Venetian authority disappeared in 1715, and Crete remained a part of the Ottoman Empire, in spite of various attempts at revolt, in 1770 and in 1821–24. When Greece became independent in 1830, Crete, through the influence of the Allied Powers—England, Russia, and France—was ceded to Egypt; under Mustafa Pasha (1832–52) the island flourished. In 1840 Crete passed again under Turkish control.

The hostility prevailing between the Christian and the Mussulman inhabitants led to repeated revolts and civil wars throughout the nineteenth century. An insurrection lasting from 1866 to 1868 extorted from the Porte the promise of reforms in the government; the pledge remained unredemmed, however, till 1878, when the Sultan, spurred on by the Congress of Berlin, issued a pact or charter, and appointed a Christian Governor-General of the island. This was offset by a Musulman military governor. In 1889 the Christians rose in arms, but the revolt was suppressed, the pact was abrogated, and the island held under military rule till 1894, when the intervention of the Powers led to the reappointment of a Christian governor.

In 1896 a fresh uprising took place. The Sultan gave his consent to the calling of a national assembly, but the Christian insurgents refused to lay down their arms, in expectation of assistance from Greece. In February, 1897, a Greek force landed in Crete and attacked the Turkish troops. But Greece, which had counted on European sympathy in its struggle with Turkey, found itself alone. Austria, England, France, Germany, Italy, and Russia declared that Crete should be granted complete autonomy, but that annexation to Greece was impossible. Italy, France, Russia, and England then established a peaceful blockade of the island and demanded that Greece recall its troops. The refusal of Greece plunged it into war with Turkey, the outcome of which destroyed all hopes of annexation. From 1897 to near the end of 1898 Crete was the scene of continuous violence. At length the Ottoman forces were withdrawn from the island, and in December, 1898, Prince George of Greece was created High Commissioner of Crete for the Powers for three years. A national assembly met and formed a constitution providing for the creation of a legislature and guaranteeing freedom of religion to all inhabitants. Although order was restored, popular sentiment continued to be increasingly in favor of annexation to Greece, and in 1904 the High Commissioner attempted to gain the consent of the Powers to such a step, but without success. There were revolts against the High Commissioner's arbitrary policy in 1904 and 1905; in the latter year a revolutionary assembly proclaimed the union of the island with Greece, and this was followed by a similar proclamation on the part of the regular Chamber. The Powers intervened, and after some desultory fighting the insurgents laid down their arms in November, 1905.

In 1906 Prince George resigned the High Commissionership of Crete and returned to Athens, but the designation of his successor was accorded by the protecting Powers to King George of Greece as a satisfaction to Greek national sentiment. This arrangement lasted six years, but by no means satisfied any of the parties directly interested. The overwhelming majority of Greeks in the Cretan Assembly persisted in treating their island as an integral part of the Greek Kingdom, while the government at Athens, out of deference to the four protecting Powers, was obliged to respect Crete as a shadowy vassal of Turkey. The six years were marked by almost constant political unrest on the island. A renewed proclamation of union with Greece in 1908, the exclusion of Mohammedan deputies who refused to take an oath of allegiance to King George in 1910, and

the election of delegates to represent Crete in the National Assembly which revised the constitution of the Greek Kingdom in 1912, provoked in each case repeated intervention of the Powers.

It was a Cretan leader, Eleutherios Venezelos (q.v.), who in 1910 became Premier of Greece and organized the Balkan League that prepared to wage war against Turkey. A popular uprising of Cretans in March, 1912, put an end to the government that had been forced upon the island by the protecting Powers, and erected in its stead a provisional government, the reception of whose delegates at Athens in October, 1912, was one of the excuses for the outbreak of the Balkan War (q.v.). In that war the Cretans fought shoulder to shoulder with their fellow Greeks of the Greek Kingdom, and by the Treaty of London (May 31, 1913) Turkey renounced all sovereignty over the island. The union of Crete with Greece was formally recognized by the other Balkan states by the Treaty of Bucharest (Aug. 10, 1913).

Consult Pashley, *Travels in Crete* (Cambridge, 1837); Spratt, *Travels and Researches in Crete* (London, 1865); Stillman, *The Cretan Insurrection of 1866-68* (New York, 1874); Mitchell, *The Greek, the Cretan, and the Turk* (London, 1897); Freese, *Short Popular History of Crete* (ib., 1897); Howes, *Crete the Forerunner of Greece* (ib., 1907); Nevor-Batteje, *Camping in Crete* (ib., 1914). See also ΑΡΧΑΙΟΛΟΓΙΑ.

**CRETE.** A city in Saline Co., Neb., 20 miles southwest of Lincoln, on the Chicago, Burlington, and Quincy and the Missouri Pacific railroads, and on the Blue River (Map Nebraska, H 4). It has a public library and is the seat of Doane College (Congregational), established in 1872, which has a well-equipped observatory. The principal industries comprise flour mills, a creamery, and a voting-booth factory. Settled in 1867, Crete was incorporated as a village in 1871 and is at present governed under a revised charter of 1886. The council is made up of the mayor and representatives from the city wards. The city owns and operates its water works and electric-light plant. Pop., 1900, 2199; 1910, 2404.

**CRÉTIN, krâ-tân', JOSEPH (1800-57).** An American ecclesiastic, first Roman Catholic Bishop of St. Paul, Minn. He was born in Lyons, France, studied there, was ordained a priest, and in 1838 volunteered to assist Bishop Loras, of Dubuque, Iowa, as a worker in the American missions. Vicar-general of Dubuque until 1851, and pastor of the cathedral church of St. Raphael for much of the time, he in that year received episcopal consecration as pioneer Bishop of St. Paul, and entered upon his work with a clergy of nine. He soon established a school, a seminary, a hospital, and an asylum; restored the mission among the Winnebagoes at Long Prairie; founded new missions among the Ojibways; and began a cathedral. In three years he had increased the number of churches from 1 to 29, and to these had added 35 stations.

**CRÉTINEAU-JOLY, krâ'té'nô' zhô'lô' JACQUES (1803-75).** A French author. He was born at Fontenay-le-Comte, Vendée. Of his verse *Les chants romains* (1826) are best known. He wrote for the newspapers and

made special historical studies, particularly of the war of the Vendée. His principal work is *L'Histoire religieuse, politique et littéraire de la Compagnie de Jésus* (6 vols., 1844-46), written from unedited and authentic documents and practically an official history. Consult Maynard's biography (Paris, 1875).

**CRETINISM** (Fr. *crétinisme*, from *crétin*, idiot, possibly from OF. *chrétien*, *christien*, Fr. *chrétien*, an innocent; or from Lat. *creta*, chalk, suggested by the chalky pallor of cretins; or, more probably, from Rhoeto-Romanic *cret*, dwarf; *cretin*, diminutive). A term applied in a general sense to idiocy or defective mental development, depending upon local causes and associated with bodily deformity or arrested growth. Endemic cretinism is found associated with goitre (q.v.) in the lower Alpine valleys, not only of Switzerland and Italy, but of the Pyrenees, Syria, India, and China. Families moving into goitrous districts are apt to develop goitre in the first generation, cretinism in the second and succeeding generations. In Europe it is rarely met with at a higher elevation than 3000 feet, and haunts chiefly the valleys surrounded by high and steep walls of rock, which exclude the light and limit the free circulation of air. Cretins are either imbeciles with intelligence or idiots, their bodies are dwarfed, with curvature of the spine, pendulous belly, distorted legs, small wide-apart eyes, large mouth, with protruding lower lip, sparse harsh hair, dry skin, low forehead, and irregularly large or small skull.

Cretinism is believed to be due to lime in the drinking water of the districts in which these people live: its immediate cause, however, has been proved to be dependent upon disease of the thyroid gland. Treatment of adult cretins with thyroid gland, administered by the mouth, has resulted in some improvement. Treatment of infant cretins with doses of the gland has resulted in a cure, but the thyroid must be taken as food for life, otherwise the patient relapses into an imbecile and the physical changes return. Sporadic cretinism, or infantile myxedema, is related both to endemic cretinism and myxedema (q.v.). Atrophy of the thyroid gland, due to traumatism, infectious disease, alcoholism, or emotional shock in the parents, results in deficient thyroid secretion; but changes in the pituitary body and the thymus gland have also been observed. The physical and mental changes are like those of endemic cretinism. The skin is coarse and thick, the nostrils broad and flattened. Development is exceedingly slow; the teeth appear late, the child is helpless. In this form of cretinism, a cure, if treatment is begun early, is generally brought about by the continuous administration of thyroid extract, which may be considered a specific in this disease. The improvement wrought in a child within a few months is remarkable. See GOITRE, THYROID GLAND; MYXEDEMA.

**CRETONNE**, *kré-tôn'* (so named after its manufacturer). Originally a white cloth of French manufacture. The name is now applied to a printed cotton fabric introduced about 1860 and used for curtains or for covering furniture. Chintz (q.v.), so much employed for the same purpose in former years, is a comparatively thin printed cloth highly glazed. Cretonne, however, is generally thick and strong, and with a twilled, crape, basket, wave, or other figure

produced on the loom. When a pattern is printed on this uneven surface, it has a rich, soft appearance. A cretonne is rarely calendered or glazed. The thick weft threads of inferior qualities are commonly formed of waste cotton, and the patterns upon these, though often bright and showy, are, as a rule, printed in more or less fugitive colors. Some cretonnes are printed on both sides with different patterns.

**CREÛSA**, *kré-á'sá* (Lat., from Gk. *Krēousa*, *Kreousa*). 1. The wife of Jason and daughter of King Creon of Corinth. She was burned to death with her father by the magical poisoned diadem and robe given to her as bridal gifts by Medea. Consult the *Medea* of Euripides. 2. The daughter of Priam and Hecuba and wife of Æneas. She disappeared during the flight from Troy, and when Æneas returned to the burning city to search for her she reappeared, announcing her adoption as a nymph by Cybele, and prophesying his coming good fortune in Italy. Consult Vergil, *Æneid*, ii, 730-794.

**CREUSE**, *kréz* (Fr., hollow). A central department of France, watered by the river Creuse (Map: France, S., F 3). Area, 2164 square miles. Pop., 1896, 279,366; 1901, 277,831, 1911, 266,188. The streams, with the exception of the Creuse, are insignificant. The climate is cold, moist, and variable, and the soil poor except in the infrequent valleys. The products are rye, wheat, buckwheat, oats, and potatoes, but the raising of cattle forms the chief branch of rural industry. Large quantities of chestnuts and fruit are grown. Coal is mined at Ahun and Bourgneuf, while iron, lead, tin, and antimony are found at various places. Carpets, dyestuffs, lumber, shoes, hats, and porcelain are manufactured. The people of Creuse annually migrate in large numbers to find work in various parts of France, making local labor scarce and high-priced. Capital, Guéret.

**CREUSE**. A river of France, rising in the mountains on the southern border of the Department of Creuse, flowing in a generally north-northwest direction through that department, then in a northerly and westerly direction through Indre, then on the borders of the departments of Vienne and Indre-et-Loire, and falling into the Vienne, a tributary of the Loire, about 12 miles north of Châtellerault, after a course of 150 miles.

**CREUTZ**, *kroits*, GUSTAF PHILIP, Count (1731-85). A Swedish politician and poet, born in Finland. In 1763 he was sent as Minister to Madrid, and in 1766 as Minister to Paris, where in 1783 he concluded with Benjamin Franklin a commercial treaty between Sweden and the United States. He is chiefly known for the idyl *Atis och Camella* (*Atys and Camilla*, 1761), which, with 10 other poems, appeared edited by Gyllenberg (1795); a new edition (1862).

**CREUZER**, *kroi'taër*, GEORG FRIEDRICH (1771-1858). A German philologist. He was born at Marburg and studied there and at Jena. In 1802 he was appointed a professor at Marburg and in 1804 obtained the chair of philology and ancient history at Heidelberg, which he occupied, with great credit, for 44 years. In 1848 he retired to private life. He died at Heidelberg, Feb. 15, 1858. His first and probably his greatest work was *Symbolik und Mythologie der alten Völker, besonders der Griechen* (1810-12).

This treatise, which asserted the symbolical character of ancient mythologies, excited a lively controversy, in which Gottfried Hermann and J. H. Voss appeared as the opponents of Creuzer. His next work in importance was a complete edition of the works of Plotinus (3 vols., Oxford, 1835). With G. H. Moser, Creuzer edited several works of Cicero—*De Natura Deorum* (1818); *De Legibus* (1824); *De Re Publica* (1826); and *De Divinatione* (1828). Between 1837 and 1848 he published a partial collection of his writings in 10 vols. (*Deutsche Schriften*, Leipzig and Darmstadt), the last of which contains his autobiography under the title *Aus dem Leben eines alten Professors*. This was supplemented by his *Parallelpomene der Lebensskizze eines alten Professors* (Frankfort, 1858). He was also a prolific writer of essays on archaeological topics. Consult Stark, *Friedrich Creuzer, sein Bildungsgang und seine bleibende Bedeutung* (Heidelberg, 1875), and Sandys, *A History of Classical Scholarship*, vol. iii (Cambridge, 1908).

**CREUZNACH**, kroits'näc. See KREUZNACH.

**CREVALLE** (from Sp. *caballa*, horse mackerel, from *caballo*, horse, from Lat. *caballus*, horse), or **CAVALLY**. A name in Florida and the West Indies for various edible mackerel-like sea fish of the genus *Caranx* (family Carangidae), especially the large horse crevalle, or jack (*Caranx hippos*), which is found on both coasts of the warm parts of America and also in the East Indies. It is olivaceous above; sides and below golden; opercle marked with a large black blotch, canines of the lower jaw very prominent. It frequently exceeds 15 pounds in weight and is common in Florida, where it is regarded as a fine food fish. A closely related species (*Caranx caballus*) of the Pacific coast of Mexico is called "cocinero," or "cocinero dorado." See JUREL; Plate of HORSE MACKEREL.

**CREVASSE**, krá-vás'. See GLACIER.

**CREVAUX**, krá-vó', JULES NICOLAS (1847-82). A French explorer, born at Lorquin, Lorraine. He made four extensive tours through South America. On the first of these (1877) he visited the interior of Guiana and crossed to the Tumuchumac Mountains, the first European to perform that feat. In the following year he visited the valley of the Río Oyapok and, after exploring the Amazon region, returned to Paris. On his next tour, undertaken for the purpose of exploring the left affluents of the Orinoco, he traveled from Bogotá, along the upper Río Negro to the Río Guaviare, which he reached Oct. 20, 1880. In 1882 he journeyed through the valley of the Paraná, explored the Tapajós and several other rivers, and discovered numerous remains of Inca civilization. While endeavoring to ascend the Pilcomayo, in order to visit certain Indian tribes, he was attacked by the Tobas and killed with 19 of his companions; two Bolivians of his escort alone escaped to relate the details of the catastrophe. An account of his explorations has since appeared under the title *Voyages dans l'Amérique du Sud* (1883). A work published by the Geographical Society of Paris, and entitled *Fleuves de l'Amérique du Sud* (1883), is also based upon his researches.

**CRÈVECŒUR**, krév'kër', JEAN HECTOR SAINT JOHN DE (1731-1813). A French agriculturist, traveler, and author. He was born at Caen and was educated in England. He came to

America in 1754, bought an estate near New York, and married the daughter of an American merchant. He suffered much from the Revolutionary War, and in 1780 was imprisoned three months in New York on suspicion of being a spy. He was sent to England as a prisoner, was exchanged, reached France in 1782, and introduced there the culture of the American potato. On his return to New York (November, 1783) as French Consul, he found his wife dead, his house burned; his children, too, had disappeared, but were finally found in the care of a kindly merchant. He had previously published *Letters of an American Farmer* (1782), which he translated into French and published in Paris. They gave such glowing accounts of the climate and fertility of America that 500 families are said to have left France for the Ohio valley on the strength of his statements. He wrote also a volume on *Potato Culture* (in French), and *A Journey in Upper Pennsylvania and in New York State* (2 vols., in French, 1801). In his most important work, the *Letters*, Crèveœur, though a man of much cultivation, writes as a simple-hearted American farmer. Internal evidence in his writings tends to indicate that he was a Quaker, and the likelihood that he was such is strengthened by his refusal to take any part in the military controversies of the Revolution. His idyllic descriptions of life in the New World, with its approximation to Rousseau's state of nature, transformed crudity into an idealistic mirage that fascinated the philosopher. The *Letters* were translated into German and Dutch, and their idealized treatment of American rural life may perhaps be traced in Campbell, Southey, Coleridge, and Byron—possibly in Chateaubriand. After holding his consulship for 10 years Crèveœur returned to France, dying at Sarcelles. Consult Tyler, *Literary History of the Revolution* (New York, 1897).

**CREVILLENTE**, krá-v'lyán'tá. A town of Spain, in the Province of Alicante, about 20 miles west-southwest of the city of that name (Map: Spain, E 3). It is picturesquely situated at the foot of the hills some 10 miles from the boundary of Murcia, and has a pretentious town hall and a castle, formerly the possession of the Count of Altamira. Weaving and agriculture are the principal industries. Crevillente is supposed to have been founded by the Romans. Under the Goths it formed part of the Kingdom of Tadmír; it passed into the hands of the Moors, by whom it was held until 1263, when it was taken by Jaime el Conquistador. Pop., 1900, 10,726; 1910, 10,452.

**CREW** (older form also *crue*, apocopated from *accrue*, OF. *acreue*, *acreue*, increment, from *accreistre*, Fr. *accroître*, to increase, from Lat. *accrescere*, to increase, from *ad* to + *crecere*, to grow). A term used to designate the body of men employed to man a ship, boat, gun, etc. The crew of a full-rigged sailing ship is divided into five parts—forecastlemen, foretopmen, maintopmen, mizentopmen, and afterguard; these are called the *parts of the ship*, and they are again subdivided into port and starboard *watches*, and each watch is again separated into *first* and *second parts port* (or *starboard*). Modern men-of-war without sail power usually have the crew divided according to the arrangement of the battery. It is customary to have as many gun divisions as the arrangement of the battery demands. In ad-

dition to these there are the powder division, engineer's division, and marines.

**CREW, HENRY** (1859- ). An American physicist, born at Richmond, Ohio. He graduated at Princeton in 1882, was fellow in physics at Johns Hopkins University in 1884-87, and instructor in physics at Haverford College in 1888-91. In 1891-92 he was astronomer of Lick Observatory, and in 1892 was appointed professor of physics at Northwestern University (Evanston, Ill.). He was president of the American Physical Society in 1909-10. In 1912 he became president of the Illinois Academy of Science. He also became assistant editor of the *Astrophysical Journal* and published *Elements of Physics* (1899; 3d ed. rev., 1909); *Principles of Mechanics* (1908); *General Physics* (1908; 1911).

**CREWE, krōō.** A town of Cheshire, England, about 34 miles southeast of Liverpool (Map: England, D 3). It is a central station of several railways and owes its importance to the establishment in 1843 of the immense workshops of the London and Northwestern Railway, which employ more than 7000 men. Crewe was incorporated in 1877. Its affairs are administered by a mayor, a municipal council of 21, and a board of aldermen of seven members. (See GREAT BRITAIN, *Local Government*.) In order not to interfere with its immense passenger traffic, many miles of railway have been tunneled under the city to transport freight. It is also a mail-distributing centre. Its supply of gas and water is provided by the London and Northwestern Railway. It has a modern system of sewerage connected with a sewage farm. Two hospitals, a technical school and school of art, a library, public baths, and a large general market are maintained by the corporation. Among its chief industries are the manufacture of locomotives, railway cars, clothing, and fustian. Pop. (municipal borough), 1891, 32,774; 1901, 42,074; 1911, 44,970.

**CREWE, ROBERT OFFLEY ASHBURTON CREWE-MILNES, MARQUIS OF** (1858- ). A British statesman, educated at Trinity College, Cambridge. He was assistant private secretary to the Secretary for Foreign Affairs in 1883-84, Lord in Waiting to the Queen in 1886, and Lord Lieutenant of Ireland in 1892-95. In 1905-08 he was Lord President of the Council, in 1908 Lord Privy Seal, and in 1908-10 Secretary of State for the Colonies. He became Secretary of State for India in 1910, again Lord Privy Seal in 1912, and also His Majesty's Lieutenant for the County of London in the same year. He received the Oxford D.C.L. in 1912. Besides several articles on Ireland, he is author of a volume of *Stray Verses* (1889-90; 2d ed., 1893).

**CREYTON, krā'ton, PAUL.** A pseudonym of J. T. Trowbridge.

**CRIB.** See FOUNDATION.

**CRIB/BAGE** (from *crib*, rack, Ger. *Krippe*, OHG. *krippa*, also *chripfa*; connected with MHG. *krebe*, basket, which is probably related to Lat. *corbis*, basket). A game of cards, which can be played by two, three, or four persons, but is mostly played by two with a pack of 52 cards. When four persons are engaged, they take sides. The value of the cards is: face cards 10, ace one, and the rest as marked. The number of cards dealt is usually five or six. The points are scored on a board, and 61

constitutes game. The players cut for deal; the player who loses the deal takes three points, as a makeweight for the adversary's advantage. Five (or six) cards in alternate succession are then dealt, the rest of the pack being placed face downward on the table. The players gather up their cards, inspect them, and select two to place them on the table face down. These cards are called "the crib" and become the property of the dealer. The nondealer then cuts the remainder of the pack, and the dealer turns up the top card. The play then begins, the player announcing the value of each card as he plays it: thus, suppose it is a king, he calls 10—the next player says, e.g., 8; then another card is played by the first player, and so on until the whole amount reaches 31, or as near it, without exceeding it, as can be accomplished. The details of counting the points made in play are too intricate to exemplify in a general description. After the play of the hand is completed, each player counts all the fifteens he can by any combination make out of the cards he holds in conjunction with the "turn up" card. Then the dealer takes up the four cards thrown out for the "crib" by the two players as already mentioned, and counts them in the same way in conjunction with the turn up or start card. Each player is entitled, in addition to the points made in play or in crib, to count "pairs," "pairs royal," "double pairs royal," and for the knave ("his nobbs") as well as to count sequences—three or more cards following in successive numbers—and flushes, when all the cards in crib are of the same suit. Consult: Cady, *Cribbage* (New York, 1897); "Aquarius," *Piquet and Cribbage* (London, 1883); *Foster's Complete Hoyle* (New York, 1909).

**CRIB'BING, or CRIB BITING.** A bad habit, met with especially in the lighter breeds of horses and those spending a considerable amount of time in the stable. The act consists in the animal seizing with his teeth the manger, rack, or any other such object, and then arching the neck, giving a grunt, and apparently swallowing air, and is technically called "wind sucking." Cribbing springs often from idle play, may be first indulged in during grooming, especially if the operation is conducted in the stall, and the animal be needlessly teased or tickled, is occasionally learned, apparently, by imitation from a neighbor; and in the first instance is frequently a symptom of some form of indigestion. Its indulgence may be suspected where the anterior edge of the front teeth is worn off, and will soon be proved by turning the animal loose where he can find suitable objects to lay hold of. It usually interferes with thriving and condition and leads to attacks of indigestion. It can be prevented only by the use of a muzzle or throat strap, by covering the mangers and other stable fittings with iron, or by using box stalls without any manger or projecting wood.

**CRICHTON, krī'ton, JAMES** (1560-82), called THE ADMIRABLE CRICHTON. A Scotchman famous for his versatility and his universal accomplishments. He was the son of Robert Crichton, of Elicock, Dumfriesshire, who was joint Lord Advocate of Scotland from 1562 to 1573 and from 1573 to 1581. On his mother's side he claimed descent from the old Scottish kings. He was educated at St. Andrews University. Before he reached his twentieth year

he had, it seems, "run through the whole circle of the sciences," mastered 10 different languages, and perfected himself in every knightly accomplishment. In Paris, Rome, Venice, Padua, and Mantua he achieved the most extraordinary victories in disputation on all branches of human knowledge and excited universal amazement and applause. The beauty of his person and the elegance of his manners also made him a great favorite; while, as if to leave no excellence unattained, he vanquished a famous swordsman in a duel at Mantua (1582). The Duke of Mantua appointed him preceptor to his son, Vincenzo di Gonzaga, a dissolute and profligate youth. On July 3, 1582, according to Douglas Crichton, in his *Admirable Crichton: the Real Character*, Crichton was attacked in the streets of Mantua by six masked men. He

(1866- ). A British soldier and explorer, educated at Magdalene College, Cambridge. He became a lieutenant in the British army in 1884. He was a member of Joseph Thomson's exploring expedition to the Atlas Mountains, reached the top of Tizi Likumpt (15,000 feet) in 1888, and after the recall of Thomson had sole charge of the expedition. In 1890 he received a commission in the Bechuanaland Border Police. In 1892 he was taken prisoner by a Matabele impi, and in 1900-02 he served in South Africa. He was promoted lieutenant colonel in 1911. A fellow of the Royal Geographical Society, his writings on exploration include: *In the Heart of the Atlas*, *Two African Cities*; *Across the Veldt to Buluwayo*.

**CRICK'ET** (OF. *crequet*, Fr. *criquet*; ultimately imitative in origin). Any of the salta-

REPRESENTATIVE CRICKETS.

1. Common black cricket (*Gryllus neglectus*). 2. A wingless cricket (*Crotaphilus maculatus*). 3. A tree cricket, the small green or "snowy" cricket (*Eantheus nreus*), female. 4. Same, male. 5. A mole cricket (*Gryllotalpa borealis*).

pushed them so hard that their leader pulled off his mask and disclosed the features of Vincenzo. With an excess of loyalty Crichton threw himself upon his knees and begged the young prince's pardon, at the same time presenting him with his sword, which the heartless youth plunged into the body of his tutor. What degree of truth there may be in the eulogies of his biographers it is impossible to determine, but he is known to have associated himself with the Venetian publisher Aldus Manutius, who is the authority for many otherwise unauthenticated biographical details. W. H. Ainsworth wrote a romance founded on the story of Crichton in 1837. Consult: P. F. Tytler, *The Life of James Crichton* (London, 1819; rev. ed., 1823); Douglas Crichton, *The Admirable Crichton: the Real Character* (ib., 1909); Whibley, *Essays in Biography* (ib., 1913).

**CRICHTON-BROWNE**, HAROLD W. A. F.

torial insects of the orthopterous family Gryllidae, distinguished from the Locustidae by the cylindrical spear-shaped ovipositor of the female. The family contains three very distinct groups: (1) mole crickets (q.v.), with fore legs developed for burrowing; (2) tree crickets (q.v.); (3) true crickets, including the common field and house crickets. Most of them in all parts of the world are black or of some dull color and are mainly nocturnal. They are herbivorous, and the American black field crickets are most abundant in neglected fields, or where layers of old straw, etc., give them warmth and hiding. They dig holes in the ground and sit there during the day, chirping, as if with contented enjoyment, and going abroad at night; but any disturbance near them will produce instant quiet. Their eggs are laid in the loose soil, chiefly in the autumn, and hatch in the spring, few adults surviving the winters

of cold climates. The commonest species in the northeastern United States (*Gryllus neglectus*) occasionally comes into houses; but the house cricket proper is a European one (*Gryllus domesticus*) which habitually domesticates itself, and is especially fond of the crevices about old-fashioned fireplaces, where its merry chirping has woven itself into the romance and poetry of all Western nations, as a sound suggestive of domestic cheer. This species is now acclimatized in Canada and some of the Northeastern States. The wingless crickets are represented in the United States by a species (*Ceuthophilus maculatus*) common in New England.

The chirping of these insects, which begins in midsummer, is produced by rubbing a filelike ridge of one wing over a scraping surface of the other. Only the males have these organs, and it is generally agreed that the sounds serve either to call or excite the mute females. A certain Sicilian species is said to make a noise audible a mile away. The apparatus and the musical characteristics of the sound have been exhaustively studied by S. H. Scudder, who says that the notes of the black field cricket are pitched at E natural, two octaves above middle C. The songs of other sorts of crickets vary from this, each in its own way. To this same group belong some curious forms of the tropics in which "the front of the head is produced into a leaflike projection." Another group are of very diminutive size and resemble minute roaches; one genus (*Myrmecophila*) dwells altogether in the nests of ants, both in Europe and in North America. Several species have been described. Other Gryllids are among the insects inhabiting caves. Consult Howard and Marlatt, "Principal Household Insects of the United States," in *United States Department of Agriculture, Division of Entomology, Bulletin 4*, N. S. (Washington, 1896). See CAVE ANIMALS and SYMBIOSIS, and compare LOCUST; KATYDID, MOLE CRICKET, TREE CRICKET.

**CRICKET** (probably from OF *cricket*, stick used as a marker in the game of bowls). The national game of England is played wherever Englishmen have colonized, and in many of Great Britain's possessions, notably in the West Indies, it has become popular with the natives. In America it is played in certain portions of the United States and in the larger cities of Canada. The rules which govern the game all over the world are those made by the Marylebone Cricket Club of London and from time to time are regulated at meetings of this club. This has always been the custom since the club was founded, about the year 1744. Philadelphia, which is the home of cricket in America, has more clubs than any other place in the United States or Canada, and the four larger clubs—Germantown, Belmont, Merion, and Philadelphia—compete annually for the Halifax cup. Two other cups are also competed for by some 15 minor clubs and second elevens from the principal clubs. Cricket in Philadelphia is controlled by the Associated Cricket Clubs of Philadelphia, in an organization composed of three delegates from each of the four large clubs. This organization publishes a periodical, the *American Cricketer*, founded in 1877. The Metropolitan District Cricket League, and the New York Cricket Association, which has assumed more importance of late years, regulate the matches within 20 miles of the city hall

in New York. The other organizations in the United States are the California Cricket Association, the Northwestern Cricket Association, with headquarters in Chicago, and the Massachusetts Cricket Association. International matches are played annually between the United States and Canada, and on several occasions teams from Philadelphia have visited England. In 1912 the Philadelphia Cricket Club made an excellent showing abroad by winning five matches and drawing one out of nine played. Almost annually, in recent years, either an English, Australian, or Irish eleven has visited Philadelphia, New York, and Toronto. The Intercollegiate Cricket League is composed of teams representing the University of Pennsylvania, Harvard, and Haverford.

The game is played between two teams of 11 men each, on a level grass field, but the exigencies of climate in Australia and the Pacific slope of California sometimes necessitate a cement-based, matted stretch. In the centre of the field a wicket is pitched; i.e., three stumps of wood about 1½ inches in diameter and 27 inches high are placed in a line so that with the space between them they cover 8 inches; on the top of these are two light wooden bails. Twenty-two yards in a direct line from and opposite these, three similar bail-topped stumps are erected. A line from each wicket or set of stumps 8 feet, 8 inches in length, with the stumps in the centre, is drawn. This is the bowling crease, beyond which the bowler must not pass when delivering the ball. In front of the stumps, 4 feet from them and parallel with them, another white line is drawn, called the popping crease, within which is the batsman's domain. The bat used must not be longer than 38 inches or wider than 4½ inches. The ball is 3 inches in diameter and weighs about 5½ ounces. An umpire is appointed by each team, and, before starting a match, they settle what shall be considered boundaries and other conditions of play. Then the captains toss for the right to select which team shall go to the bat first. The team which so elects sends two men in, one to each wicket, the other team sends a bowler to one end and disperses the other 10 men about the field in such positions as the captain's knowledge of the kind of bowler and the kind of batter indicates to him as likely to be most efficacious. The umpire then calls "play," and the bowler bowls, not throws, the ball from the end opposite the batter. If it is a ball which the batsman can reach, he either blocks it or hits it to some part of the field; if he thinks he can run to the opposite wicket and the other batsman change places with him before the ball is returned and either wicket thrown down with it, he runs; and a "run" is scored each time the batsmen cross each other. The bowler bowls four, five, or six balls (four in a three days' match) from one end, and then the ball is handed over to a second bowler, who bowls an equal number of balls from the opposite end. The batsman may be put out in any of the following ways: if he fails to defend his wicket and the bowled ball knocks off the bails ("bowled"); a fielder catches a batted ball before it touches the ground ("caught"); should the batsman fail to have his bat or any part of his person within the popping crease before his wicket is thrown down with the ball ("run out"); if he steps out of his ground to play a ball, misses it, and the

wicket keeper throws his wicket down with it before he can step back ("stumped"); if, when a straight ball has been bowled to him, which in the judgment of the umpire would have hit his wicket had he not prevented it by interposing any part of his body except his hand ("leg before wicket"); if in playing at the ball he knocks down his own wicket ("hit wicket"); or if he willfully obstructs the fielders. When a batsman is put out, another takes his place, and the game proceeds until the tenth man is out. Then, there being no more batsmen to come, the eleventh man's innings comes to an end, he being "not out." The total number of runs made off the bats, with a few penalties added which it is not necessary to detail here, make up that side's score. Then the other side goes in to bat. Each eleven has normally two innings taken alternately, the total score of each side determining the result of the match.

Lillywhite, *Cricketers' Annual*, and Wisden, *Cricket Almanack*, are the standard authorities on the rules for the current years. Consult: Murdoch, *Cricket* (London, 1893); Lyttelton, *Outdoor Games: Cricket and Golf* (ib., 1901); Prince Ranjitsinhji, *The Jubilee Book of Cricket* (Edinburgh, 1897); Read, *Annals of Cricket* (London, 1897); Spalding's *Cricket Guide* (issued annually); Warner, *Cricket in Many Climes* (Philadelphia, 1901), and *Cricket Across the Seas* (New York, 1903).

**CRICKET FROG.** A small frog (*Acris gryllus*; northern specimens are variety *crepitans*), abundant throughout the warmer parts of the United States, east of the plains, and noted for its rattling cricket-like cries in spring. (See Colored Plate with TOAD.) It is about an inch long, brownish, with a blackish triangular patch (apex backward) between the eyes, the borders of which are light-colored, continued as a dorsal band to the rear end of the body; throat in spring yellow, and legs barred; but all these colors change with surroundings, as the species possesses the power of metachrosis in a high degree. "The note of this species," says Cope, "may be exactly imitated by striking two marbles together, first slowly, then faster and faster, for a succession of about 20 or 30 beats. The noise cannot be heard at a very great distance. . . . It keeps on the high grass in and around marshy places, seldom if ever ascending trees or bushes. When pursued, it leaps with prodigious agility and hides under water." Their eggs are deposited in April, in little masses attached to the blades of coarse grass. A short time afterward all the great numbers which make the marshes so noisy in April and May die off, so that until the eggs hatch and the young "peepers" develop late in August, the species is practically extinct. Consult Abbott, "Notes on the Habits of the Savannah Cricket Frog," in *American Naturalist* (Philadelphia, 1882), and Dickerson, *The Frog Book* (New York, 1906).

**CRICKET ON THE HEARTH** (Das Heimchen am Herde). An opera by Goldmark (q.v.), first produced in Vienna, March 21, 1896; in the United States, Nov. 7, 1912 (Philadelphia).

**CRICKET ON THE HEARTH, THE.** A Christmas tale by Charles Dickens (1845).

**CRIEFF**, kréf. A police burgh and health resort in Perthshire, Scotland, on the Earn, 17 miles west of Perth (Map: Scotland, E 3). It is beautifully situated at the foot of the Grampians, near the entrance to the Highlands. It

has a public library and a mechanics' institute. Its healthful climate makes it a summer retreat for invalids, who resort to its hydropathic establishments. There are numerous handsome countryseats in the vicinity. The greatest Scotch cattle market was held here till 1770, when it was removed to Falkirk. Its industries include the manufacture of leather, linen, cotton, and woolen goods. Pop., 1901, 5208; 1911, 5571.

**CRILE**, GEORGE W. (1864- ). An American surgeon, born at Chili, Ohio. He graduated from Ohio Northern University (A.B., 1884) and Wooster (M.D., 1887), and studied also in Vienna, London, and Paris. He was lecturer on the principles and practice of surgery at Wooster from 1893 to 1900, when he became professor of clinical surgery at Western Reserve University. In 1913 he was granted an honorary fellowship in the Royal College of Surgeons. His book, *On the Blood Pressure in Surgery* (1903), is especially important. (See BLOOD PRESSURE.) He published, besides: *Surgical Shock* (1897); *Surgery of the Respiratory System* (1900); *Certain Problems Relating to Surgical Operations* (1901); *Hemorrhage and Transfusion* (1909); *Surgical Anemia and Resuscitation* (1914).

**CRILLON**, kré'yón', LOUIS BALBIS (or DES BALBES) DE BERTON DE (1543-1615). A celebrated French general, surnamed "L'homme sans peur" and "Le brave." He was born at Murs, in Provence, and was trained for war under François de Lorraine, Duke of Guise, then the model of military chivalry. In 1558 he gave proof of his valor at the siege of Calais and soon afterward at the capture of Guines. He fought against the Huguenots and distinguished himself at the battles of Dreux, Jarnac, and Moncontour. He was at the battle of Lepanto, in 1571, and, though wounded, was appointed to carry the news of the victory to the Pope and the French King. He disapproved strongly of the massacre of St. Bartholomew, but in 1573 he took part in the siege of La Rochelle. He accompanied Henry of Anjou to Poland, and after the latter's accession as Henry III continued faithful to him in his struggle with the Catholic League. Henry IV found in him a sincere friend and adviser, and called him "Le Brave des Braves." After the peace with Savoy Crillon retired to Avignon. Consult Montrond, *Histoire du brave Crillon* (Lille, 5th ed., 1874).

**CRIME** (OF, Fr. *crime*, It. *crimine*, from Lat. *crimen*, accusation, from *cernere*, Gk. *kribein*, to decide). In law, an offense against the peace, order, and dignity of the state. *Crime* has been more specifically defined as "disobedience to a command or prohibition made with reference to a matter affecting public peace, order, or good government to which a sanction is attached by way of compensation for the injury which the act or omission may have caused to an individual."

The same wrongful act, e.g., assault and battery, may subject the wrongdoer to a criminal prosecution by the state and to a civil action in tort by the injured individual. Such an act is at once a breach of the public peace and an invasion of the injured person's rights. In England and in each of the States of the United States certain offenses are crimes at common law, while others are made so by statute. Criminal offenses against the United States, however, are all of statutory origin. The common-law classification of crimes was into *treason* (q.v.),

*felony* (q.v.), and *misdemeanor* (q.v.): treason being separated from other high crimes because of its character, its mode of trial, and its punishment, and the chief distinction between a felony and a misdemeanor being that the former occasioned the forfeiture of lands and goods, while the latter did not. The statutory definitions of the various classes of crimes now usually includes treason under the head of felony and makes the distinction between felonies and misdemeanors turn upon the disgraceful or infamous character of the punishment prescribed for the crime, a felony being usually punishable by loss of life or by imprisonment in a State prison for a year at least and by the deprivation of civil rights, while a misdemeanor is punished by fine or by imprisonment in a workhouse or by both.

In order that an act shall amount to a crime, it must be committed with a criminal intent. It is not a crime to take the life of a human being if this is done pursuant to a legal command, as in the case of a sheriff inflicting capital punishment upon a duly convicted and sentenced criminal, nor if it is the result of accident. In neither case does the person causing the other's death intend to commit a wrongful or forbidden act. But criminal intent is not necessarily synonymous with actual intent to become a criminal. A general criminal intent exists when the actor has an intellectual apprehension of the nature of the act which the law pronounces criminal and voluntarily assents to its commission. In most crimes no other intent is required. At times, however, the law requires a specific intent, as in the case of the transfer of one's property with intent to defraud his creditors or sending poison to another with intent to injure him. Here something more than knowingly and voluntarily disposing of the property or sending the poison is necessary to the commission of the crime, viz., the disposition or the sending with the specific intent to defraud or to injure. Insanity (q.v.) relieves its victim from criminal liability when it renders him incapable of forming a criminal intention. Voluntary drunkenness, even when causing temporary insanity, does not so relieve its victim, although it may be taken into account in crimes requiring a specific intent on the part of the actor, in determining whether he did the particular act with the specific intent. Infancy also relieves from criminal liability when the infant is incapable of forming a criminal intent. (See AGE.) Analogous to insanity and infancy, as an excuse for an act otherwise criminal, is coercion or duress (q.v.) when of such a character as to destroy the voluntary nature of the act. See ACCESSORY; PRINCIPAL; PUNISHMENT; also CRIMINAL LAW, CRIMINOLOGY, and the authorities there referred to.

**CRIME AND PUNISHMENT.** A novel by Dostoyevsky, published in 1866. It is a study in abnormal psychology.

**CRIMEA** (Russ. *Krim*, *Krym*, Lat. *Chersonesus Taurica*). A peninsula in the south of Russia, forming part of the government of Taurida, and comprising the districts of Perekop, Eupatoria, Simferopol, Yalta, and Feodosia (Map: Russia, D 5). It is united to the mainland by the very narrow isthmus of Perekop, between the Black Sea and the Sea of Azov, and separated from the peninsula of Taman, on the east, by the narrow Kertch Strait. The Crimea is thus

almost surrounded by water—on three sides by the Black Sea and on the fourth by the Sea of Azov; while a trench 70 feet wide and 25 feet across the isthmus of Perekop cuts it off from the mainland. The Crimea is quadrilateral in shape; but a long, narrow peninsula juts out on the east, which increases the extreme length of the territory from east to west to nearly 200 miles, the breadth being 110 miles. The area is about 9800 square miles. The peninsula is peopled by about 855,000 inhabitants, mostly Turkish-speaking Tatars, Greeks, Russians, Germans, and Jews make up the other constituents of the population. The coast is indented, particularly on the side bordering on the Sea of Azov. It has good harbors and is the seat of a thriving fishing industry throughout its extent. Northern Crimea is a continuation of the southern Russian steppes. The Salgir River divides the peninsula into two distinct regions. Southern Crimea is well watered and fertile. Along the side facing the southeast there is a highland region, the Yaila Mountains, forming the watershed. These mountains rise to a height of over 6000 feet, their most interesting peak being the Tchatir Dagh (Tent Mountain), the *Mons Trapezus* of the ancients. The streams rise in the southeast coast highlands, and while a few very short ones flow towards the east and southeast, most of the drainage goes into the Bay of Kalamita, the Gulf of Perekop, and the Sivash or Putrid Sea, which is a portion of the Sea of Azov almost cut off from it by the tongue-like peninsula of Arabat. The northwest section of the Crimea has but little fluvial drainage. The southern district of the peninsula rises with steep slopes from the sea, while spurs and secondary chains extend northward. These are richly wooded, but the beautiful intermediate valleys gradually sink into the uniform and desolate steppe which forms the northern and much greater part of the peninsula. The southern district of the Crimea is well cultivated, and is a favorite resort for Russian society. Many noblemen maintain in it their country-seats, parks and gardens surpassed by none in Europe. The famous Imperial country-seat of Livadia is situated near the southern extremity of the peninsula. Tatar villages, mosques, and Greek convents are to be seen in most picturesque situations among the woods and rocks, with many ruins of ancient fortresses.

The southeast highland region produces a rich and varied flora. On the northern slopes and valleys grow hardy fruit and various forest trees; in the central mountain region are forests of oak, beech, elm, and other deciduous trees of central Europe; while on the higher southern slope the pine occurs, and at lower altitudes the vegetation is Mediterranean in character, and the vine and the olive flourish. Grain of various kinds is produced abundantly, and silk, wax, and honey. Fruit culture is being rapidly developed in the Crimea, under the favorable climatic and soil conditions found in the peninsula. The Yalta district and parts of the Simferopol and Feodosia districts have a heavy yearly output, among which almonds, apricots, medlars, peaches, pomegranates, and quinces grow in profusion. Some small rodents, hares, and foxes are the chief mammals; reptiles and insects are not numerous. Much attention is bestowed upon horses, oxen, and sheep, in which no small part of the wealth of

the country consists. The climate of the Crimea varies considerably for such a slight extent in latitude. The northern part has cold winters and hot summers, while in the southern part the winters are warm and the heat of the summer is tempered by proximity to the sea and the shelter afforded by the mountainous barrier emerging northward.

The chief industry of the Crimea is agriculture. The raising of cereals is carried on mostly by the Russians and the colonists, chiefly Germans, while the Tatars and Greeks are engaged primarily in gardening. Owing to the scarcity of labor and the prevalence of large holdings, agriculture in the Crimea is based on modern lines. Cereals are raised, fruit abounds, and wine of an excellent quality is produced. Tobacco plantations are numerous. The southeastern littoral enjoys a mild and healthful climate and is rich in flowers, shrubs, and flowering trees; here the olive, the pomegranate, and the fig flourish, and the hills are overgrown with fir and pine, beech, oak, and elm. (On the open steppes beyond the Yailadag the grass is parched by midsummer droughts and bitten by winter frosts. Saline lakes yield quantities of salt; porphyry, limestone, and ironstone exist. The rearing of live stock (which includes camels) is extensively carried on. Beekeeping, sericulture, and fishing are important industries. The manufactures include flour, leather, wool, soap, preserved fruits and vegetables, metals, and ships. In the country districts the bulk of the inhabitants are Tatars, height, 1.644 meters, cephalic index, 80. Cleanliness and morality are proverbial among them. Other elements of the population are Russians, Greeks, Armenians, Germans, Karaites, Jews, and Albanians. The two principal cities of the Crimea are Sebastopol, a great fortress and naval station, and Simferopol, the capital of the government of Taurida. An interesting town is Bakhchisaray, celebrated as the ancient capital of the Tatar khans.

**History.** To the ancients the Crimea was known as *Chersonesus Taurica*, from the Tauri, a mountain tribe of the south, who are supposed to have been the remnants of a Cimmerian people driven out by the Scythians in the seventh century B.C. (See *CHERSONESUS; CIMMERII*.) In the sixth century B.C. the Greeks of Miletus founded flourishing colonies at Nymphaeum, Theodosia, and Panticapæum (the present Kertch, q.v.). About 500 B.C. these cities, together with several other towns, united to form the Kingdom of Bosphorus, which existed till the fifth century A.D. and embraced, at the period of its greatest extent, the entire peninsula and the eastern coast of the Sea of Azov. The Chersonesus stood in close commercial and social relations with the Greeks of Europe and especially with the Athenians, who imported from the country great quantities of grain and hides as well as many slaves. In 114 B.C. Parissades, the ruler of Bosphorus, hard pressed by the Scythians, acknowledged himself the vassal of Mithridates (q.v.) of Pontus. Pharnaces (q.v.), son of Mithridates, who had sided with the Romans against his father, received as a reward from Pompey the Kingdom of Bosphorus. (See *BOSPORUS, KINGDOM OF*.) Subsequently, under the nominal suzerainty of the Romans and later of the Byzantines, the Kingdom of Bosphorus prospered, till about the end, probably, of the fourth century, when it fell before the Huns. The

country, with the exception of the southern coast land, which was held by the Byzantines, was henceforth devastated by a succession of barbarian invasions. About the middle of the seventh century the Khazars, a fierce tribe from the region of the Volga, took possession of the peninsula and established a powerful kingdom there, chiefly remarkable for the fact that the ruler, the entire nobility, and large numbers of the people became zealous adherents of the Jewish faith. In the thirteenth century the country was conquered by the Mongols, and it constituted till about 1430 a part of the Khanate of Kiptchak (q.v.). At the same time the Genoese founded a number of trading colonies on the south coast, which was known as Gothia. Among these were Caffa (Kaffa), on the site of Theodosia, which became a great emporium of the commerce between Europe and Asia. (See *KAFFA*.) After forming a part of the independent Khanate of Krim for about 45 years, the Crimea was conquered in 1475 by the Turks and was ruled by a khan under the suzerainty of the Sultan. In 1571 the Khan raided Moscow and sacked the town. Russian aggressions on the Crimea began in 1735, and in the following year an army under General Munnich laid the country waste. By the Treaty of Kutchuk-Kainardji, in 1774, the Porte was forced to recognize the independence of the Khan. In 1783 the country was incorporated with Russia. In 1854-56 the Crimea was the scene of conflict between the Russian armies and the allied forces of England, France, Sardinia, and Turkey. (See *CRIMEAN WAR*.) Consult: *Antiquités du Bosphore Cimmérien* (St. Petersburg, 1854; reprinted at Paris, 1892), Telfer, *The Crimea and Transcaucasia* (2d ed., London, 1877); Wood, *The Crimea in 1853 and 1894* (ib., 1895); Beauhien, *The Empire of Tsars and the Russians* (New York, 1893); Minns, *Scythians and Greeks* (Cambridge, 1907).

**CRIMEAN WAR.** The name given to the War of 1854-56 between Russia on the one hand, and Turkey with her allies, France, England, and Sardinia, on the other. Its cause was the struggle between Russia and Turkey, which broke out in 1853, over the assertion by Russia of a protectorate over the Greek Christians in the Turkish dominions. Coupled with this was a dispute between Russia and France over the guardianship of the holy places in Palestine. The real ground, however, for the attitude assumed by France and Great Britain was resistance to the aggressive policy of the Russian Emperor, Nicholas I. The latter believed that the other Powers of Europe were not in a position to interfere, and saw an opportunity to continue the Russian advance which had Constantinople for its objective. Accordingly, in the spring of 1853 he submitted to the Porte, through Prince Menshikoff, an ultimatum in regard to the Greek Christians and other matters. England and France prepared to sustain the Sultan against Russia and stationed their fleets in Besika Bay. In July the Russian forces advanced into the Danubian principalities. The Vienna Note, prepared by Austria and signed by the neutral Powers as a basis of settlement, was so modified by Turkey as to be unacceptable to Russia, and on Oct. 4, 1853, Turkey declared war. The English and French fleets thereupon passed through the Dardanelles. Though the Turks were at first victorious upon land, the Russian admiral, Nakhimoff, won an important

naval victory at Sinope, November 30; on March 12, 1854, France and Great Britain concluded an alliance with Turkey, and two weeks later they declared war against Russia. Prussia and Austria remained neutral. The allied Western Powers determined to assist the Sultan by a naval expedition against Kronstadt, in the Baltic, and by a combined attack with land forces in the south. The Baltic expedition proved a complete failure, achieving nothing beyond the capture of Bomarsund on August 16.

Early in the summer 20,000 English troops, under Lord Raglan, and 50,000 French soldiers, under Marshal Saint-Arnaud, assembled at Varna, on the Black Sea. Against the advice of the Turks, who wished to drive Russia out of the Caucasus, Saint-Arnaud and Raglan decided upon the siege of Sebastopol, Russia's stronghold and depot in the Crimea. The war was thus narrowed down to a limited sphere and was fought in a long siege and a series of stubborn engagements. The first of these occurred at the river Alma, on Sept. 20, 1854, six days after the landing of the Allies. Saint-Arnaud died on September 29, and was succeeded by General Canrobert. At the beginning of October the Allies began the regular siege of Sebastopol, the defense of which was directed by Todleben. On October 25 the Russians attacked the British at Balaklava (q.v.). The engagement was marked by bad generalship on the British side and by the gallant but ill-advised charge of the Light Brigade. The Russians followed this up with an unsuccessful attack at Inkermann on November 5. The severe winter caused the suspension of active operations, and the English and Turks endured terrible hardships because of the inadequate commissary arrangements. Indeed, had it not been for the energy and patriotism of Florence Nightingale (q.v.), the famous nurse, the British forces would have succumbed in huge numbers. As it was, the mortality from disease in this war was frightfully above the average. During the winter an international conference attempted to adjust matters, but without avail. Austria entered into an alliance with France and Great Britain: but as Prussia could not be drawn into action unfavorable to Russia, Austria refrained from entering into hostilities. Sardinia, on the other hand, joined the Allies in January, 1855, and sent 10,000 men of her new army, under General La Marmora, to the Crimea. (See *CAVOIR* and *ITALY*.) The Russians resumed activities in February, assailing the Turkish positions at Eupatoria, but without result. After the death of the Emperor Nicholas and the accession of Alexander II, in March, 1855, Prince Michael Gortchakoff succeeded Prince Menshikoff in command of the Russian forces.

Operations were renewed with great vigor in the spring, the Allies having 174,000 men in the field and the Russians about 150,000. General Pellissier succeeded Canrobert in command in May, and General Simpson succeeded Lord Raglan, upon the latter's death in June. A Russian army, advancing to the relief of Sebastopol, was defeated at the Tchernaya on August 16. From the 19th of August to the 8th of September a terrible bombardment of the besieged city was kept up and was followed on the latter day by a general assault, in which the French took the Malakoff Tower and the British took the Little Redan. Gortchakoff now blew up the southern fortifications, evacuated the city, and retired into the hills. All the parties were ready for

peace, which was signed at Paris, where a congress of the Powers had been in session, on March 30, 1856. The integrity of the Ottoman Empire was guaranteed by the Powers, which also renounced all right of intervention in Ottoman affairs; reforms were promised by the Sultan; Russia renounced her protectorate over the Danubian principalities, and ceded a strip of Bessarabia to Moldavia; the navigation of the Danube was declared free to all nations under the supervision of a commission of members from the bordering states; the Black Sea was neutralized. The Congress united in the Declaration of Paris (q.v.), which laid down certain principles of international law. Consult: Hamley, *The War in the Crimea* (London, 1891), the best short treatise in English. **CRIME DE SYLVESTRE BONNARD**, *krém de sél'vès'tr' bôn'ar'*, LE. A graceful romance by Anatole France (1881). The hero, M. Bonnard, is an old member of the Institute, whose "crime" consists in releasing a young girl from a boarding school in which she was unhappy and bringing about a happy marriage for her.

**CRIMINAL CONVERSATION** (usually, in law, abbreviated to *CRIM. CON.*). The technical term for adultery with another man's wife. It is no defense to an action by the husband, in such a case, that the wife freely assented to the defendant's solicitation, for the husband does not sue for a wrong done to her, but to himself. The gist of the action is the shame which has been inflicted upon him, and the hazard to which he is subject of maintaining spurious issue. It is therefore quite distinct from the wrong of enticing the wife away from the husband, although, like seduction (q.v.), it is looked upon as a personal injury to the husband. He may condone the wife's offense, and thus lose his right to secure a divorce, without affecting his right to damages against the paramour. It has been judicially declared that the law will not hold a party remediless for an injury of this kind because, through the exercise of Christian virtue, the influence of family interest, or for any other reason, he forgives an erring wife and trusts in her reformation and promise of future good conduct. He may forgive the wife without forgiving the author of the wrong done him. See *ADULTERY*, and consult the authorities there referred to.

**CRIMINAL LAW**. That branch of public law which defines and prescribes the penalties for crime or public wrongs, i.e., wrongs or injuries by individuals against the state or sovereign as distinguished from injuries by individuals against others, which are dealt with by the private law of wrongs, or torts. All civilized systems of law now agree in drawing this distinction between public and private wrongs. There is no doubt, however, that the law of crime had its origin in the law of tort, and that in primitive society the consequence of the various acts now recognized as crimes

was to give rise exclusively to an obligation to the injured person or his representative which might be satisfied by the payment of money. Under the early Anglo-Saxon law, which corresponded substantially in this particular with other ancient systems of law, "a sum was placed on the life of every free man according to his rank, and a corresponding sum on every wound that could be inflicted on his person, for nearly every injury which could be done to his civil rights, honor, or peace; the sum being aggravated according to adventitious circumstances." (Kemble, *Anglo-Saxons*, vol. 1, p. 177.) (See BLOOD MONEY; WEGGILD; ETC.) The earliest recognition in ancient law of distinct wrongs against the state appears in the isolated acts, legislative in character, by which the state avenged itself for wrongs done in the same manner that private individuals were permitted under sanction of law to avenge or requite themselves for private wrong.

From these occasional legislative acts by which the state avenged itself upon the criminal for the wrong which his criminal act inflicted upon its peace and security, it was a natural transition to a system by which this particular function was delegated to a permanent commission, still legislative rather than judicial in character, whose duty it was to investigate and punish wrongful acts, usually of violence, which, though inflicted on an individual, threatened the peace and public order of the community, and finally to the more modern system under which a permanent tribunal wholly judicial in character defines and applies the law relating to crime. The history of the *Curia Regis*, or King's Court, which was at once the legislative, administrative, and judicial body under the Norman kings, shows these successive stages of development in our own criminal jurisprudence. The Court of King's Bench, which was the criminal branch of the King's Court, was organized in the reign of Edward 1 (1274-90). It follows, from the character of all public wrongs, that the first essential of a crime is some act which, because of its effect upon the community, is deemed an offense to the state. This may happen either: (a) because the act is directly an injury to the state; or (b) because the act is a direct interference with the performance of some duty, as of protecting the life, property, safety, and morals of citizens, which, upon grounds of public policy, the state has assumed.

Crimes may be conveniently classified as follows: (a) offenses against government; (b) offenses against public peace and health; (c) offenses against religion and morality; (d) offenses against personal liberty and security; (e) offenses against the dwelling house; (f) offenses against property; (g) maritime offenses. At common law also crimes were classified as felonies and misdemeanors, and the distinction has been preserved to some extent by the modern law and the various criminal codes. See CRIME; FELONY; MISDEMEANOR.

**Criminal Procedure.** The first step towards placing one charged with crime upon his trial is his arrest. (See ARREST.) After the arrest the prisoner must be brought for examination before the magistrate, who may hold him for the action of the grand jury, or, if an indictment has already been found, may hold him for trial before a petit jury. Pending trial, the prisoner is committed to jail, unless admitted to bail. See BAIL.

The method of finally accusing one with the commission of a crime is by indictment by the grand jury, which may either precede or follow the arrest. (See JURY; GRAND JURY.) The indictment is the final pleading corresponding to the declaration or complaint in a civil action, which sets out all of the essential elements of the crime and all facts necessary to give the court jurisdiction to try the prisoner for the offense charged. (See INDICTMENT.) Upon the trial the indictment must be read to the accused, and he is then given opportunity to plead to it. The prisoner may demur to the indictment on the ground that it is in law insufficient in force or substance. (See DEMURRER.) He may plead in abatement, setting up any facts showing want of jurisdiction in the court or other reason why he should not be placed upon his trial, or he may plead a former conviction or acquittal. See AUTREFOIS ACQUIT; JEOPARDY.

If the prisoner is unsuccessful upon his demurrer or the pleas already referred to, he must plead to the merits by a plea of either guilty or not guilty. A plea of guilty in effect admits the charge and is equivalent to a conviction after trial. A plea of not guilty puts in issue the indictment and places the prisoner upon his trial before a jury. (See JURY; PLEADING; TRIAL.) Upon verdict of the jury of not guilty the prisoner must be discharged. If the jury fails to agree upon a verdict, the prisoner may again be placed upon trial before a new jury, or if the verdict be guilty, he must be sentenced by the court to undergo whatever penalty the law provides for the crime. (See PUNISHMENT.) After conviction, but before sentence, the prisoner or his counsel may move to arrest the judgment because of some material error in the proceedings appearing on the record, or he may move to set aside the verdict because not supported by the evidence, or because of newly discovered evidence. Upon denial of this motion the prisoner must be sentenced, the sentence being the judgment of the court fixing and directing the punishment of the prisoner according to law.

The English common law of crime has been adopted in most of the States of the United States, with some statutory modification and addition. In a few States the criminal law has been codified, and in these jurisdictions it is entirely statutory. The law of procedure, while substantially changed by statute in all of the States in matter of form, varies in no important particular from the substance of the procedure at common law which has here been outlined.

As the several States upon the formation of the Federal Union retained their jurisdiction over crime, the Federal government has no common-law jurisdiction over crime, nor can it have any statutory jurisdiction over crime except over such crimes as in some way interfere with the power delegated to it in the Constitution by the several States, including such as arise in territory subject to its exclusive jurisdiction.

**CRIM/INOLOGY** (from Lat. *crimen*, crime + Gk. *logia*, *logia*, account, from *λέγειν*, *legein*, to say). The science which treats of the nature and causes of crime. As a separate study it is of comparatively recent growth, and the credit for its foundation as an independent branch of knowledge is usually given to Cesare Lombroso, an Italian professor in the University of Turin, who in 1876 published a remarkable book entitled *L'Uomo delinquente* ("Criminal Man"). Since its appearance quite a number of eminent scientists—physicians, jurists, economists, and sociologists—have taken up the study of crime and criminals. There is, however, such a difference of opinion concerning the fundamental causes or factors of crime that criminologists are divided into several groups. These groups may be classified under two large divisions, their difference turning upon the emphasis laid upon the individual causes of crime, on the one hand, or upon its social causes, on the other hand. The criminal, one party asserts, is born, not made; he is a criminal by nature, and the circumstances of education or environment have little or nothing to do with his law-breaking career. The opposing party maintains that social organization, education, environment—causes lying outside the individual—really determine whether or not he will become a criminal. As a rule, those who adhere to the former point of view conceive the study of crime as a part of anthropology, a part of the study of man; while those who believe that social conditions furnish the causes and explanation of crime consider this study a part of sociology. Thus the two terms usually applied to criminology, "criminal anthropology" and "criminal sociology," each indicate a prejudice in favor of one

or the other of the tendencies characterized above.

The subject of criminology is a complicated and difficult one. It is only within the present generation that the possibility has arisen of conducting the study of criminal problems on anything approaching an exact and scientific basis. Before the introduction of a system of criminal statistics it was impossible to ascertain whether crime was increasing or decreasing, what transformation it was passing through in consequence of the social, political, and economic changes constantly taking place in all highly organized societies, and what was the effect of punishment on the criminal population. Statistics, moreover, even when carefully collected, often mislead. Suppose, e.g., that the number of convictions for crimes and misdemeanors has increased in Belgium from 22,359 in 1870 to 40,372 in 1890; this does not necessarily mean that crime has increased, for the total population may have increased more rapidly than the number of offenses, and in such an event criminality has really diminished. The larger number of convictions in 1890 may, perhaps, be due to an increase in the number of punishable offenses because of the enactment of severer laws; certain acts legally permissible in 1870 may have become misdemeanors in 1890. Another possible explanation of a merely apparent increase in criminality is offered by the fact that perhaps the police have become more efficient or more vigilant, and that therefore many offenders who escaped in 1870 are now brought before the courts and condemned. These three possible explanations are sufficient to show how careful we must be in the employment of criminal statistics. Particularly when we go beyond the statistics of a single nation and attempt to compare two or more nations with a view to their relative criminality, we must be even more cautious. In no two countries is the criminal law the same, and an act which is perfectly harmless when committed in one country is considered in another as a contravention of the law. Each country has also a nomenclature of crime and methods of criminal procedure peculiar to itself. In each country the police are organized on a different principle and act on a different code of rules. Great differences of opinion exist also among different nations as to the gravity of certain offenses. Whenever it shall be possible to collect criminal statistics in the several nations according to a uniform system, then criminology will have the necessary inductive basis for fruitful comparisons between nations.

The narrow legal definition of crime as a violation of the law is scarcely of any value for philosophical purposes; and a scientific definition which shall include all acts which at any time have been called crimes, but include none other—which shall, moreover, specify their common characteristics—remains yet to be found. It seems highly probable that the study of primitive religious ideas and primitive social organization will throw considerable light upon the problem of discovering the essential nature of crime. It should be noted, meanwhile, that originally the question whether a certain act was criminal or not, and, if criminal, how the perpetrator should be punished, was answered by the offended party—individual, family, or clan—and not by the political organization of the whole people (the state). That the state should determine these matters and reserve to

itself the right to judge and to punish is a result of quite recent evolution. Even to-day the state is far from being the only coercive institution; duels, and, in a measure, lynching, are survivals of the previous status.

The question whether crime is increasing has been very widely discussed, pro and con. The statistics for England seem to indicate a slight decrease in the ratio of criminals to the general population, and the same thing holds true of the German Empire. In neither country do the more serious forms of crime show a tendency to decrease, and in Germany the number convicted for second and additional offenses—the recidivists, or true criminal class—is steadily on the increase. From 1882 to 1901 first offenders diminished from 736 per 100,000 persons of punishable age to 664. Those convicted for second or other offenses increased from 93 per 100,000 to 135. In the United States there are no statistics that give conclusive evidence as to the relative changes in volume of criminality, but it is the opinion of most statisticians that crime is increasing more rapidly than the general population.

**Causes of Crime.** The factors responsible for crime may conveniently be divided into three great categories—cosmic, social, and individual. The cosmic factors of crime are climate and the variations of temperature; the social factors are the political, economic, and moral conditions in the midst of which man lives as a member of society; the individual factors are those attributes inherent in the individual, such as descent, sex, age, bodily and mental characteristics. It is often extremely difficult to disentangle these factors, many of them, indeed, are indirectly at work where they appear to be absent. Heredity, e.g., seems to belong clearly to the individual factors, but if we trace an inherited characteristic back through a long line of ancestors, it may finally be found to have its origin in the circumstances of environment or education.

**Cosmic Factors.** How profoundly the physical structure, and likewise the mental life of man, is affected by his natural surroundings, by climate, seasons, soil, the configuration of the earth's surface and the nature of its products, is illustrated by the low type of life exhibited by the primitive inhabitants of inhospitable, barren countries. Concerning the influence of climate on crime, statisticians have concluded that crimes against the person, as assault and homicide, are relatively more numerous in warm climates, while crimes against property are more frequent in colder regions. The statistics of homicide in Europe show that the warmer countries, Italy and Spain, head the list in the proportion of murders to the population, while England, Scotland, and Holland stand at the bottom of the list. Prof. Enrico Ferri, after a thorough examination of French judicial statistics for a series of years, concludes that a maximum of crimes against the person is reached in the hot months, while crimes against property come to a climax in the winter. Aschaffenburg, by a study of the criminal statistics for the German Empire for the period 1883-92, established similar conclusions. Crimes against the person reach their maximum in July and August, being more than twice as numerous in those months as in December and January. Crimes against property are more uniformly distributed: they are, however, nearly 33 per

cent more frequent in December, when at their maximum, than in May and September. Crimes against the person are unduly high in the south and west of the United States; but here we have to consider not merely climate, but also race conflicts, pioneer conditions, and uncertain legal control.

**Social Factors.** Concerning the social factors of crime, it must be observed that the action of society upon the individual is so complex that it will here be impossible to discuss, even briefly, all these factors.

Considering, first, the conjugal condition of criminals, it appears that there is a higher ratio of criminality among the unmarried and divorced than among the married. A partial explanation of this fact may lie in the circumstance that married men and women, being subject to the restraining influences of home life, are much less apt to yield to those anti-social tendencies which manifest themselves in crime.

Considering, secondly, occupation, prison statistics show that the higher the character of a man's daily pursuits the greater the unlikelihood of his falling into crime. According to the census *Report on Prisoners and Juvenile Delinquents in 1904*, of male prisoners committed in the year 1904, 50.1 per cent were laborers and servants, 23.7 per cent were from manufacturing and mechanical industry; 17.2 per cent from agriculture. French official statistics summarizing the results of over 50 years indicate the following number of indictments for every 100,000 members of each class: agriculture, 8; liberal professions and proprietors, 9; industry, 14; commerce, 18; domestic service, 29; vagabonds and without trade or regular occupation, 405.

Thirdly, and closely related to occupation, is the influence of rural or city life on crime. In Germany, in cities of 20,000 and over, the delinquents average 134.2 per 100,000 adults; in the smaller towns and the country the average is 96.0. In France the cities, having less than one-third of the population, furnish about one-half the criminals. Nearly the same proportions hold for Italy; and the disproportionate share of the cities in criminality has been observed in the United States, although trustworthy statistics are lacking. The city is the refuge and hiding place of questionable characters; it intensifies the struggle for existence, and by the sharp contrast it offers between rich and poor, between luxury and penury, excites envy and class hatred.

A fourth point of great importance is the influence of poverty. If poverty in itself were a decisive factor, we should expect poor countries to produce the most criminals; but poor countries like Ireland, Spain, and Hungary show a smaller ratio of theft in the population than rich England. It is rather where great poverty exists side by side with great wealth that temptation is greatest and crime most frequent, especially crimes against property. Swift and unexpected industrial and commercial changes and hard times put character to unusual strains and increase the number of lawbreakers. Von Mayr, on the basis of statistics for a part of Bavaria for the period 1835-61, concluded that every half groschen added to the price of grain called forth one additional theft per 100,000 inhabitants. Aschaffenburg has compared the number of thefts per 100,000 of population in the

German Empire, 1880-1909, with fluctuations in the price of bread, and has established a remarkably close correlation. Inventions and progress in industrial processes often make it more difficult for men to support existence in their accustomed ways. There can be no doubt, moreover, that the keen struggle for existence imposed upon the poor classes disorganizes the family and destroys many of the beneficent influences of home life. It may reasonably be maintained, on the other hand, that excessive wealth, with the idleness that it frequently begets in the possessor, is quite as apt as destitution to lead to viciousness and crime. A wealthy criminal has, of course, more numerous and efficient means for escaping detection and punishment than a poor offender.

Among the other factors of crime which may properly be classed as "social" are: the influence of social theories which tend to engender contempt for human life and the institution of private property; the absence of a widespread, deep-seated religious spirit which restrains men from yielding to evil impulses; the corruption of partisan politics which permits the worst elements of the population to become the official guardians of the public peace and prosperity; lynching and public exhibitions of cruelty which debase human character; detailed accounts of crimes in the daily press; the influence of association and suggestion by which gangs of shiftless men or boys form centres of criminal life under the leadership of unscrupulous chiefs; social disturbances like war, crises, revolutions, and exposures, which disturb the even tenor of social progress and relax the social bond.

**Individual Factors.** Finally, the individual factors of crime should be briefly considered. They have been carefully studied by a score of scientists, beginning with Lombroso, the founder of criminology, who was disposed at first to overlook all but the individual factors. *Sex.*—In all civilized nations women are less addicted to crime than men, and girls less than boys. Among most European peoples between five and six males are tried for offenses against the law to every one female. Women are less inclined to acts of violence than men on account of their physical weakness, but when women do become criminals their crimes are frequently characterized by a cruelty and relentlessness not found in male offenders. The crimes of women are mostly infanticide, abortion, poisoning, domestic theft. They are addicted equally with men to the perpetration of parricide, and more frequently convicted than men of parricide. Women are also more hardened criminals than men, probably because a woman may regain her rank in society only with the greatest difficulty. *Age.*—In proportion to the population crime is, as we should expect, at its lowest level from infancy till the age of 16. From that age it goes on steadily increasing in volume till it reaches a maximum between 30 and 40. Females do not enter upon a criminal career so early as males, and the criminal age is earlier in coming to a close for women than in the case of men. *Education.*—The question whether education reduces or increases criminality is far from being conclusively answered. Those states which have the best systems of education have also the most criminals in their jails and prisons. But, as a rule, the proportion of our prison population unable to read or write is considerably higher than in the free population. M. Henri Joly, an emi-

nent French criminologist, maintains that most frequently passions and vices which have nothing to do with instruction are the veritable motives of crime. It seems reasonably certain, however, that the lack of instruction in manual and trade processes and the absence of personal, moral, and spiritual influences account for much of the tendency to crime. *Drunkenness.*—All authorities agree that intemperance is a serious cause of crime. It weakens the will, leads to evil associations, dulls the conscience. Statistical information concerning this point is usually nonofficial and of little scientific value. German statistics for 1902 show that, of 97,376 persons convicted of aggravated assault, 34,652 had committed their offenses on Sundays or holidays, the days of heaviest drinking. *Heredity.*—Individual degeneracy, which Dr. Ferri has shown to be closely connected with crime, is frequently passed on from generation to generation. The diagrammatic history of eight families given by Dr. Strahan in his book on *Marriage and Disease* illustrates the degenerate tendencies transmitted from father to children throughout several generations. Similarly, Dugdale, in his book on the Jukes, has traced the posterity of a criminal and found that the great majority of his descendants possessed vicious or criminal instincts. Lombroso advanced the hypothesis that the criminal is essentially atavistic—a type harking back to remote progenitors and characterized by the psychology of the savage rather than that of the civilized man. Later study led him to admit pathologic qualities not essentially atavistic, and, above all, epilepsy, as an additional cause of criminality. Evidence of atavism is found by Lombroso and his school in anatomical and psychological peculiarities that appear with greater frequency among criminals than in the noncriminal population. The characteristics enumerated by Lombroso as indicative in certain combinations of the criminal type include height and weight above the average; asymmetry of the skull, brain, and face; brain lighter in weight than the normal; light hair; scant beard; retreating forehead; projecting eyebrows and ears; long arms, insensibility to physical pain, pointed skull; heavy lower jaw; defective lungs; tendency to diseases of the heart and of the sexual organs; etc. Criminal anthropologists, however, are far from agreeing upon these anomalies, and often reach conclusions divergent from and sometimes contradictory to those of Lombroso. The weight of opinion among criminologists of the present day is that while criminality is somewhat more common among atavistic types than in the general population, only a small fraction of present-day criminality is attributable to such types. The hereditary criminal exists, but criminality produced by social and economic causes is far more common and of far greater significance. hain, *Crime et anomalies mentales constitutionnelles* (Geneva, 1902); Hall, *Crime in its Relation to Social Progress* (New York, 1902); Boies, *Science of Penology* (ib., 1901); Kellor, *Experimental Sociology* (ib., 1901); MacDonald, *Man and Abnormal Man* (Washington, 1905); United States Census Bureau, *Report on Prisoners and Juvenile Delinquents in 1901*, (ib., 1907); Münsterberg, *On the Witness Stand* (New York, 1908); Sutherland, *Recidivism* (Edinburgh, 1908); De Quiros, *Modern Theories of Criminality* (Boston, 1911); "Reform of the Criminal Law and Procedure," in *Proceedings of the Academy of Political Science* (New York, 1911); Robinson, *History and Organization of Criminal Statistics in the United States* (ib., 1911); Gross, *Criminal Psychology* (Boston, 1911); Aschaffenburg, *Crime and its Repression* (Boston, 1913). See LOMBROSO; PENOLOGY; PRISONS; REFORMATORIES.

**CRIMMITSCHAU**, krim'mit-shou. A town of the Kingdom of Saxony, on the Pleisse, about 39 miles south of Leipzig (Map: Germany, E 3). It has extensive cotton and woolen mills and machine works, and manufactures yarn, wool, dyestuffs, chronometers, and metal ware. Pop., 1900, 22,840, 1905, 23,420; 1910, 28,818.

**CRIMP** (from Dutch *krimpen*, OHG. *chrimp-fan*, *krimfan*, to bend together, from *chrampsa*, Ger. *Krampe*, Eng. *cramp*). The name given to an agent for supplying ships with seamen. They are usually in league with the most disreputable class of lodging-house and saloon keepers and with prostitutes in the endeavor to fleece the sailors as rapidly as possible. The latter can then be forced aboard ship. There are numerous laws for the protection of seamen against the extortion of crimps and their dealings with masters of vessels who need crews, but these laws are unable to reach a very large proportion of cases; and some of the laws, while not greatly injuring the crimp, seriously affect the interests of a sailor who is not in need of legal protection and those of the honest lodging-house keeper.

**CRIMSON**. See RED.

**CRINED**, kind (from archaic Eng. *crine*, from Fr. *crin*, Lat. *crinus*, hair). A term in heraldry. When the hair of a man or an animal differs in tincture from the rest of the charge, the object is said to be *crined* of such a metal or color.

**CRINGLES** (Ger. *Kringel*, Icel. *kringla*, circlet, dim. of *kringr*, pulley, *kring*, round). Short pieces of rope, with each end spliced into the boltrope of a sail, commonly confining an iron or brass ring or thimble. Smaller ropes are passed through them to aid in managing the sails. See KNOTTING and SPLICING.

**CRINOIDEA** (Neo-Lat. nom. pl., from Gk. *krinoideîs*, *krinoideîs*, like a lily, from *krînos*, *krînon*, lily + *êidos*, *eidos*, form). A class of pelmatozoan echinoderms related to the Cystoidea and characterized by the regular pentamerous arrangement of the polygonal plates of the body wall, that form a usually stalked calyx, and by the presence of five generally well-developed flexible arms. The graceful flowerlike appearance of the stalked crinoids has given them the names of "sea lilies" for the living species, and "stone lilies" for the fossil varieties. The group is of great interest both to the zoologist and paleontologist, but the complex modifications of the plates of the calyx, and the usually imperfect conditions of preservation,

make their study a matter of considerable difficulty. At the present time the group is on the decline, and most of the modern species, those free-swimming kinds like *Antedon* and *Actinometra*, are regressive descendants from earlier stalked forms. Although about 300 living species of crinoids are known, the developmental stages of only one genus, *Antedon*, a stemless form, have been worked out, and the habits of the living stalked crinoids are little known.

**Structure and Development.** The crinoid animal consists essentially of two parts—the head,

EXISTING CRINOIDS

Representative species from the Atlantic. 1. *Actinometra pulchella*, 2. *Rhazocrinus lofotensis*. (After A. Agassiz.)

or calyx, and the stem, or column. The calyx bears 5 or 10 generally forked pinnulated arms attached to its sides, has upon its upper ventral surface a central mouth and an eccentric or lateral anal opening, and is itself supported by the column attached to its lower or dorsal surface. The calyx is a spherical or cup-shaped box made up of polygonal stony plates that are arranged in more or less regular horizontal series, and in vertical series according to the plan of pentamerous bilateral symmetry so prominent in the higher Pelmatozoa. The calyx contains the body cavity, in which are the vital organs, consisting of the simply coiled alimentary canal and the central portions of the nervous, generative, and water-vascular systems.

#### EXPLANATION OF PLATE.

1. An encrinurus (Encrinurus), fossil in the Trias.
2. Larva of a feather star (see Figs. 10 and 7).
3. *Batocrinus pyramidalis*, fossil in the Subcarboniferous of Iowa.
4. *Pisocrinus flagellifer*, fossil in the Silurian of Gotland, a posterior view of a perfect calyx; b, calyx seen from one side.
5. Type of calyx with a coraceous skin in which calcareous plates are imbedded.
6. A free-swimming crinoid (*Saccocrinus pedunculatus*), fossil in the Upper Jurassic lithographic slates of Bavaria.
7. Diagram of arrangement of principal pieces in the calyx of a crinoid: b, basals; sb, infra-basals, r, radials; cd, centrodorsal (compare Fig. 2, where the letters are the same, plus o, orals).
8. *Wuodocrinus macrocladus* from the Carboniferous of Yorkshire, England.
9. *Apocrinus*. B, longitudinal section through the uppermost stem joints of *Apocrinus parkinsoni* (Oölitic), showing empty spaces between them; A, restoration of the base of another species (*Apocrinus rossignoli*, Upper Jur.).
10. A feather star (*Antedon roseacea*), now living on European coasts.
- Fig. 2 is the larva of this, showing developing plates (see Fig. 7) of the calyx.
11. An existing deep-sea "stone lily" (*Metacrinus interruptus*).

# CRINOIDS

For description. see article CRINOIDEA.

Prolongations of these latter systems extend into the arms. These are outgrowths of certain vertical rows of the calyx plates, termed the "radials," and are capable of free movement. In many of the earlier, more primitive crinoids, like *Pisocrinus*, the arms are simple; in the more specialized forms, *Pentacrinus*, they are quite complex and fork frequently. In all crinoids the arms bear pinnules and are provided with cilia. The feathery branches of the arms screen food from the water, while the ciliated grooves transport the food to the mouth through the food grooves, which are continued over the ventral surface from the bases of the arms to the mouth opening.

The ventral surface of the calyx in modern genera is usually covered by a tough skin, but in the Paleozoic forms it was often covered by a superficial "vault" or "tegmen" of calcareous plates. The mouth is then underneath the tegmen or ventral covering and communicates with the food grooves of the arms through closed stony tubes. In these genera the plates of the vault are often so arranged as to form an elevated "proboscis" (*Batocrinus*), at the summit of which is the anal opening, which is thus placed above the ends of the arms. The crinoid stem is attached to the base of the calyx, and consists of calcareous plates loosely jointed together to allow of a considerable degree of flexibility. Increase in the length of the stem is accomplished by the growth of new columnar plates between the base of the calyx and the top of the column. In form the columnar plates are discoid and of circular or pentagonal outline, and all are pierced by a central cavity through which passes the neurovascular canal of the column. Most crinoid stems are furnished at their lower ends with rootlike branches that serve to anchor the animal in muddy or sandy bottoms; others, *Apocrinus*, have a disklike expansion that is cemented to rocky surfaces, and one genus (*Scyphocrinus*) was fixed in the mud by large spherical bulbs, described as *Camarocrinus*, and until recently considered as floats of crinoids. Several genera, especially in later geologic and modern times, have columns supplied with lateral branches, called "cirri," which are similar in construction to the stem itself. The pentacrinids have the longest stems known, some of the fossil forms from the Upper Lias rocks of Württemberg having been found with stems ranging from 15 feet to the extraordinary length of 50 feet. Many of the crinoids with stems seem to have been fixed in their early stages only and detached in maturity. Some forms of crinoids, such as *Agasszocrinus* of the Carboniferous, *Uintacrinus* of the Cretaceous, and *Antedon* of recent seas, have no stem and are free-swimming animals, using their arms for locomotive purposes. *Uintacrinus* is the most remarkable of these, for, with a body only 2 or 3 inches in diameter, it has delicate feathery tentacles nearly 6 feet long, that served both as swimming organs and as food screens. Living *Antedon*, without a stem, has a whorl of cirri at the base of the calyx, and by means of these it anchors itself to the bottom. In other stemmed forms, as *Woodocrinus* from the Carboniferous, the base of the stem appears never to have been attached, as it ends in a simple point.

The development of Crinoidea is known for only one genus, *Antedon*, the feather star, and this cannot be considered as typical of the class as a whole, as it presents a case of regressive

development. *Antedon* appears from the egg as an elliptical free-swimming larva that is crossed by four transverse ridges, has a posterior bundle of bristles and a lateral mouth, and resembles in many respects an annelid larva. This larva increases in size, and inside of it develops an animal with the form of a cystoid, with a head of loosely jointed perforated plates, a column, and a basal columnar plate. For a time this stalked larva is attached, and it resembles a primitive crinoid, but soon the stem is absorbed, and the animal assumes the form of the adult free-swimming *Antedon*. Almost nothing is known of the ontogeny of the host of fossil crinoids.

**Habits and Distribution.** The modern Comatulidae, like *Antedon*, *Actinometra*, etc., have a very wide distribution, and are usually found in waters less than 150 fathoms in depth, although one species of the *Antedon* has been dredged from the great depth of 2900 fathoms. The habits of *Antedon* are best known. It is a gregarious animal, and Verrill has obtained 10,000 individuals in a single trawl in the north Atlantic. It lives mostly in the upper layers of the water, but when exposed to the direct rays of the sun, it curls up its arms and sinks. When clinging by its cirri to a coral or rocky point and disturbed, it releases itself immediately and swims away by graceful movements of the arms, or crawls on its arms like a spider over the bottom. Sudden changes of temperature stun it, it sinks to the bottom and soon dies. When these animals find themselves in uncomfortable surroundings, as when taken in the dredge and placed in aquaria, they drop off their arms, which break at specially fused joints, called "syzygies," but the arms are restored through regeneration if the crinoid survives. The stalked crinoids are also gregarious animals, but they are more restricted in their distribution and inhabit deeper waters. The majority of fossil stalked crinoids are found in rocks that were undoubtedly comparatively shallow-water deposits, and because the calcareous plates of the calyx, and to a lesser degree those of the stem, fall readily apart after the death of the animal, perfect specimens are quite rare finds. The food of crinoids has been ascertained to consist of minute crustaceans, diatoms, spores of algae, foraminifera, and radiolarians.

**Fossil Crinoids.** About 175 genera and 2000 species of fossil crinoids are known. They appear first as very simple forms in Ordovician rocks, and they increase rapidly, becoming important elements of the faunas in the Silurian, Devonian, and Carboniferous periods. In some regions they were exceedingly abundant, for their fossil remains form great beds of limestone known as "crinoidal" or "encrinal limestone," which are found in formations of various ages. In the Silurian system alone, about 400 species, distributed among 70 genera, have been obtained from mostly three localities: the island of Gotland, the Wenlock of England, and the Niagara group of North America. Some of the more characteristic genera are *Pisocrinus*, *Crotalocrinus*, *Calceocrinus*, *Callocrinus*, and *Eucalyptocrinus*. In the Devonian system some localities have yielded good material. The Lower Carboniferous rocks of the upper Mississippi valley are the most renowned sources of fossil crinoids. The shaly limestone beds at Burlington, Iowa, and Crawfordsville, Ind., have furnished hosts of finely preserved specimens, which are to be seen in geological collections all over the world.

The Mesozoic rocks of Europe, especially the Liassic and Jurassic, have furnished some fine examples of *Encrinurus*, *Apocrinurus*, and the pentacrinids, but the rocks of this era in America hold only rare occurrences of members of this class. The only find of note—and that was one of great importance—was that of *Uintacrinus* in the Cretaceous chalk of western Kansas. The Tertiary rocks seem to be poor in fossil remains of this group.

**Bibliography.** General descriptions of the class, and notes on the habits of the animals, can be found in: Agassiz, *Three Cruises of the Blake*, vol. II (Boston and New York, 1888); Walther, *Einführung in die Geologie als historische Wissenschaft* (Jena, 1893-94); Neumayr, *Die Stamme des Thierreiches*, vol. XII (Washington, 1911). See also articles on ECHINODERMATA: CYSTOIDEA: PENTREMITES.

**CRINOLINE** (Fr., from Lat. *crinis*, hair + *linum*, flax). A name originally given by French dressmakers to a fabric made of horsehair, capable of great stiffness, and employed to distend women's attire; it is also applied in a general way to those structures of steel wire or hoops by means of which women some years ago were able to wear skirts of extraordinary size at the bottom. The first device for producing an expansion of the dress skirt is the *fardingale*, introduced by Queen Elizabeth. Walpole, in his fancy descriptions of her, speaks of her "enormous ruff and vaster fardingale." The upper part of the body was incased in a cuirass of whalebone, which was united at the waist with the equally stiff fardingale of the same material, descending to the feet, without a single fold, in the form of a great bell. In the end of the reign of James I this fashion gradually declined, and, as a result of the Puritan feeling in the time of

Charles I and Cromwell, it quite disappeared. It is next heard of in 1711 as "that startling novelty the hoop petticoat," which differed from the fardingale in being gathered in at the waist. About the year 1796 hoops were discarded in private life, but were still the mode at court, where they flourished until the time of George IV, when they were abolished by royal command.

The next development of this fashion, about the middle of the nineteenth century, began with crinoline in its original and proper sense, first in the form of the "bustle" in the upper part of the skirt, then the whole petticoat. The hoops were sometimes made with a circumference of four and even five yards. At last, after indignation and ridicule had for years assailed the monstrosity in vain, and when people had ceased speaking about it, the inflation began, about 1866, without any apparent cause, to collapse; and, rushing to the opposite extreme, ladies might be seen walking about as slim as if merely wrapped in a morning gown. At the close of the nineteenth century the name "crinoline" was applied to a cotton gauze stiffened with a dressing of glue and sold by the yard for use by milliners and dressmakers.

**CRINUM** (Neo-Lat., from Gk. *κρίνον*, *krinon*, lily). A genus of bulbous-rooted plants of the family *Amaryllidaceae*, having long tubular flowers. It contains about 80 species, natives of different tropical and subtropical countries, generally with umbels of large and beautiful flowers, some of them among the most admired ornaments of our hothouses. *Crinum amabile*, an Indian species, is much esteemed. The plants are mostly cultivated in greenhouses, although *Crinum longifolium* is semi-hardy and, with slight protection, will endure the winters as far north as Washington. Numerous hybrids have been produced, some of them of exceeding beauty and possessing exquisite perfume. *Crinum americanum* is a native of Florida.

**CRIPPLE CREEK.** A town and the county seat of Teller Co., Colo., about 20 miles (direct) west-southwest of Colorado Springs; on the Midland Terminal and the Florence and Cripple Creek railroads (Map Colorado, D 3). It was founded in 1890 as a mining town, developed rapidly after 1893, and was nearly destroyed by fire in 1896. The district in which it is situated is a complete network of gold-bearing veins, and mining gave rise to the subsequent founding of Victor, Altman, Goldfield, and other near-by towns. The mining district covers an area of about 6 miles, of which only about one-tenth has been developed. The total gold output of this region up to 1914 was more than \$300,000,000. The mines have attracted the attention of metallurgists, owing to the peculiar nature of the ores, which has necessitated new methods of treatment. The completion of the Roosevelt Drainage Tunnel in November, 1910, at a cost of \$750,000, solved the problem of unwatering the mines and made deep mining possible. Cripple Creek, at an elevation of 9800 feet, is known also for its scenery and healthful climate. Pop., 1900, 10,147; 1910, 6206; though the whole district contains about 20,000.

**CRIPPLEGATE.** An ancient London gate, probably dating from the restoration of the walls by King Alfred in 886. It is said to have taken its name from the lame beggars who congregated there, in 1010 A.D., to touch the body of Edmund the Martyr as it was passing

through. It was twice rebuilt, and was pulled down in 1760. The name was also applied to the district round it.

**CRISA, or CRISSA.** See DELPHI.

**CRISFIELD.** A city in Somerset Co., Md., about 100 miles (direct) south-southeast of Baltimore, with which it is connected by a steamship line, on the New York, Philadelphia, and Norfolk Railroad, and on Chesapeake Bay (Map: Maryland, O 9). Oyster and crab packing is the leading industry. Crisfield was incorporated as a city in 1910. It contains a marine hospital. Pop., 1910, 3468.

**CRISIS** (Lat., from Gk. *krisis*, *krisis*, decision, from *kriuein*, *krinein*, Lat. *cernere*, to decide). A name used by the older physicians to denote the rapid or sudden determination of an acute disease in the direction of convalescence or of death. It is opposed in signification to "lysis" (*lueo*, I relax), which denotes the gradual subsidence of the symptoms and improvement in condition in most chronic and in some acute diseases. The doctrine of crises was closely bound up with that of a *materies morbi*, or material of disease, in the blood, which was presumed to be undergoing changes, during the whole course of the malady, tending to an evacuation of some kind from the system in the form of a critical discharge (*apostasis*, or *abscess*), which, when observed, was supposed to contain the matter of disease in a state of *cocction* and to be the direct cause of the sudden relief of the patient. Thus, according to the character and seat of the critical discharge, it was common to speak of a crisis by sweating, by diarrhoea, by expectoration, by urine, by parotid swellings, etc.; and no crisis was considered regular that was not attended by some symptom of this kind. Another curious doctrine associated with that of crises was the belief in certain days as ruling the beneficent or injurious, the complete or incomplete, character of a crisis. The seventh, fourteenth, and twentieth (according to some, the twenty-first) days of the disease were regarded as eminently critical, less so, but still favorably critical, were the third, fifth, eleventh, and seventeenth, the fourth day was the *indicator* of a complete crisis on the seventh; the sixth day was the *tyrant*, notorious for unfavorable crises; the second, eighth, tenth, thirteenth, and the rest were noncritical. Physicians now use the term in diseases which run a certain course, such as typhoid fever and pneumonia, and then chiefly in relation to the temperature. A fever is said to fall by crisis when it reaches the normal in a few hours; by lysis, when it takes three or four days gradually to disappear.

**CRISIS.** A series of patriotic writings, 14 in number, published by Thomas Paine at Philadelphia during the Revolution. They appeared at intervals from 1775 to 1783.

**CRISIS, Economic.** A term employed by economic writers somewhat loosely to designate either the acute phase or the whole course of the disturbances in economic life which have characterized the last century and which have recurred with such frequency as to make them appear inevitable results of the modern industrial order. The phenomena involved are so complex that they must be described rather than defined.

The salient fact in the economic history of recent times is the "business cycle," or the alternation of prosperity and depression, of good

times and bad. A period of prosperity with expanding business, great activity in production and commerce, is followed by a period in which some enterprises, then others, find costs advancing so rapidly as to encroach upon profits. Contraction of operations follows, with decline in demand for materials and labor, and with resulting embarrassment for the industries supplying material, and declining demand for products intended for general consumption. Thus the distress extends in widening circles until it affects eventually the whole business system. The process of readjustment may be gradual, or it may be greatly accelerated by the failure of a great banking house, an event likely to drag down other banking and mercantile firms. Such an event results in widespread uncertainty and suspicion. Creditors demand the payment of claims, debtors, even though solvent, find the banks unwilling to provide means of payment. Panic rules, and for a time the whole mercantile structure threatens to collapse. From such a shock business recovers but slowly, its activity is reduced to the lowest ebb, and some time elapses before the restoration of confidence takes place. This period of depression is much more prolonged than the acuter phase which precedes it. After a time business revives and begins to expand. Prices rise, and activity becomes greater. A wave of prosperity again appears which seems to carry everything before it until it, in turn, is checked suddenly, and a new crisis is at hand. Lord Overstone, in an oft-quoted passage, describes these successive phases as follows: "State of quiescence, improvement, growing confidence, prosperity, excitement, overtrading, convulsions, pressure, stagnation, distress ending again in quiescence."

This related sequence of phenomena is now generally known as a business cycle. The term "crisis" is often employed to cover the whole part of the cycle in which hard times prevail. It is, however, more properly applied to the point in the process when contraction proceeds rapidly and liquidation becomes fairly general. The long period of stagnation that usually follows is properly denominated by the term "depression." The term "panic" is often used interchangeably with "crisis," but it is more properly restricted to an acute phase, not always appearing in crises, when the consciousness of impending disaster is widespread, and leads to more or less unreasoning acts calculated to aggravate the conditions dreaded.

Crises are designated as financial, commercial, and industrial. These qualifying phrases mark the places in the economic organism where the disturbance is felt. In a purely financial crisis the stock market is the storm centre, the disturbance affecting but slightly commercial or productive enterprises. A commercial crisis is of wider area and embraces the trading classes, while an industrial crisis extends its baneful influence to producers in all lines of agriculture, manufactures, and the like. These expressions do not designate so much different classes of crises as crises of different degrees of intensity, inasmuch as an industrial disturbance will always imply disturbance in trade and the money market, while trade upheavals imply commotion in the money market, though a financial panic does not necessarily imply the others.

While crisis and depression are usually associated, this is not always the case. Panic and

crises may occur, and after a brief interval affairs may prosper as before. This is particularly true of the purely financial crises, which are not deep-rooted enough to affect wider areas. The crisis in its larger sense, however, is invariably followed by hard times. It should be observed, moreover, that crises may be local or general, and while they have many points in common, it is particularly the latter with which we have to deal.

General crises affecting the economic situation of an entire country, and extending themselves to other countries which have trade relations with the former, are peculiarly a mark of the modern organization of business. A century ago bad harvests or other calamities might cause local distress, or speculation such as was exhibited in the days of the South Sea Bubble and the Mississippi Scheme might cause a panic, but such occurrences did not show the pertinacity and wide-reaching effects which characterize the modern industrial disturbances. That such crises are inevitable consequences of modern methods of doing business and inseparable from the economic activities of our times, seems to be well established by their frequent recurrence and by their greater severity in the most advanced nations.

Crises more or less pronounced occurred in England in the years 1815, 1825-26, 1836-37, 1847, 1857, 1866, 1873, 1890, 1900, and 1907, while in the United States like disturbances were felt in 1814, 1818-19, 1837, 1857, 1873, 1884, 1889, 1903-04, and 1907. The periodicity of these occurrences is marked, and certain writers have gone so far as to establish a normal interval of 10 or 12 years between crises. The facts as far as we know them do not warrant us in fixing any absolute rule, though the history of these crises reveals many common features.

It will further be observed that the dates given for Great Britain and our own country coincide in several instances, and if space permitted us to draw upon the history of Belgium, Holland, France, and Germany, further coincidences would be obvious. Certain crises, notably that of 1873, were felt quite generally. The actual crash did not occur in the same month, or even in the same year, in all the countries involved, but it is a frequent occurrence that local circumstances may hasten or postpone an event for which the general conditions are preparing.

The concrete manifestations of a crisis can best be studied in an historical instance, and none is better adapted for this purpose than the crisis of 1873 in the United States. With the close of the Civil War an extraordinary activity in all lines of enterprise was manifested. The public lands had been thrown open to settlement, and large tracts had been granted to the Pacific railroads. This, together with the return of the army to the pursuits of peace, and an enormous increase in immigration, was the condition for an era of speculative development in the Western States. The impulse which had been given to manufactures, not only by the highly protective duties which marked the war tariffs, but also by the depreciation of the currency, which acted as a check upon foreign competition, caused a similar activity in the manufacturing States of the East. Business prospered; prices and profits were high. The census of 1870 showed

in every branch of industry a great advance over that of 1860, and the greater part of this advance was in the latter half of the decade. Nowhere was this confidence in the future shown more than in railroad building and in the iron industry. In 1867 there were 2249 miles of railway constructed; in 1869, 4615; in 1871, 7379. A like expansion of railways had marked the approach of the panic of 1857. In like manner, the outlay for constructing railways rose from \$271,310,000 in 1864-68 to \$841,260,000 in 1869-73. The consumption of pig iron, which had been 1,416,000 tons in 1868, rose to 2,910,000 tons in 1873. High prices ruled. The maximum prices in the period following 1860 were, it is true, attained in 1866, but if they fell in the years 1867 and 1868 it was only to rise again to a point nearly equal to that of 1866 in 1871 and 1872. The activity in the commercial centres is reflected in the rise of clearings in the New York Clearing House from \$28,000,000,000 in 1868 to \$35,000,000,000 in 1873. The foreign trade of the United States showed a like activity, the aggregate of exports and imports rising from \$639,000,000 in the fiscal year 1868 to \$1,165,000,000 in 1873. But even more significant of the expansion of activity in the United States was the fact of increased importations from abroad. In 1870 the imports exceeded the exports by \$43,000,000, but in 1872 this excess had become \$182,000,000 and in 1873 \$120,000,000.

The crisis of 1873 is usually dated from the failure of Jay Cooke & Co., September 18. The Stock Exchange of New York was closed on the 20th and was not reopened until the end of the month. Clearing House loan certificates were issued in large quantities. There had been certain premonitory symptoms of the approaching collapse. Railroad building reached its highest point in 1871, pig iron its highest price in September, 1872. The crisis lasted a few months only, the last Clearing House loan certificates being redeemed Jan. 14, 1874. But there followed a long period of depression, which reached its lowest point three years later. The activities which had marked the previous era were not entirely stopped, enterprises begun had to be finished to save what was already invested, the daily needs of the people must be met, but all enterprise was timid and cautious. The buoyancy of the previous years was gone, and new enterprises were not undertaken. Railroad construction fell off, and in 1875 reached a minimum of 1711 miles, while in the period 1874-78 the outlay for construction was only \$357,000,000. Prices fell until 1879, to rise thereafter until 1882. The consumption of pig iron declined until it reached 1,900,000 tons in 1876. Clearings in New York City fell off from \$35,000,000,000 in 1873 to \$23,000,000,000 in 1874, and reached their lowest point since 1863 at \$22,000,000,000 in 1876. In foreign trade the excess of imports disappeared in 1875.

Every crisis, panic, and depression is marked by analogous characteristics. Whatever data are appropriate to show expanding conditions and an inflated condition of business at any particular time and place will exhibit a similar showing. In the United States, particularly since 1840, railroad construction has been a favorite index of conditions, but before the crisis of 1837 similar activity was shown in canal construction. Before the panic of 1825, in England, there were large investments in

manufacturing establishments, while the panic of 1893 was preceded by reckless investments in foreign countries.

As the year 1873 marks the outbreak of the crisis, so the year 1876 serves to mark the lowest point in the subsequent depression. The whole story of the crisis, its antecedents and results, is succinctly told in the statistics of business failures, as reported by R. G. Dun & Co., as follows:

YEAR	Number	Liabilities
1869	2,799	\$75,054,054
1870	3,546	88,242,000
1871	2,915	85,252,000
1872	4,069	121,056,000
1873	5,183	228,499,900
1874	5,830	155,239,000
1875	7,740	201,000,000
1876	9,092	191,117,786
1880	4,735	65,752,000
1882	6,738	101,547,564
1883	9,184	172,874,172
1884	10,968	226,343,427
1885	10,637	124,220,321

A period of depression cuts down the existing stock of goods, and the retrenchment of production, coupled with the constant increase of population, creates a void in the market. To fill this there is a renewed activity; as prices begin to rise, existing plants find it difficult to meet the demand. Plants are remodeled and extended. Preparation for future production on a large scale takes place. Large investments of fixed capital are made in buildings, machinery, and the like, and those branches of industry which chiefly serve the purposes of construction, such as the iron industry, make extraordinary advances. Mills and railroads are built to supply an anticipated demand. This is usually overdone, and the facilities of production increase more rapidly than the effective demand for products. Credit is unduly expanded, and it is natural that the money markets feel the first shock when the inevitable readjustment takes place.

While the phenomena of a crisis and its attendant consequences are generally recognized, the widest variety of opinion exists as to the causes of such economic disturbances. Writers are prone to lay stress upon local or temporary conditions, and to generalize from them. In truth, the phenomena of a crisis are so complex, and the conditions which may aggravate it so numerous, that it is not surprising to see the latter considered as primary causes. Thus, speculation, the currency, the tariff, bad harvests, have all been made responsible for crises. These are frequently concomitant forces impelling a crisis, but crises are so numerous that there must be some deeper underlying cause. It is in the countries that are economically farthest advanced that the successive phases of the business cycle are most clearly marked. Where production is organized on a small scale, and is chiefly dependent on a local market, similar fluctuations do not appear. Students of crises are agreed that an important circumstance in connection with them is the extent to which credit is employed in industry. In a period of prosperity prices rise, and with them, profits. On the basis of high profits credit is expanded to meet the need for new equipment, etc., and the expansion of credit gives

further impetus to the rise in prices. Within the expanding structure of industry and commerce certain stresses appear. The full employment of labor raises wages and reduces the efficiency of labor; the great demand for loans produces a rise in the rate of loan interest. In the period of good times the vigilance of managers is relaxed, and many small wastes accumulate. The existing volume of currency becomes inadequate to effect the exchange of the increasing volume of products at high prices, bank reserves decline, and bank loans are curtailed. The gains of prosperity are not uniformly distributed, some prices are kept from rising by public regulation or custom, others by circumstances peculiar to each. These industries, however, feel the effect of advancing costs and advancing interest rates. They are the first to show signs of weakness. In the end the various stresses become so great that the structure collapses.

Certain features of crises are clearly traceable to local conditions. In recent years the United States alone of the great nations has suffered from panics in time of crisis. This fact is ascribable to the want of an elastic and centrally controlled currency system. With the adoption of an improved system of banking (see BANK, BANKING) it is believed that this distressing feature of the panic will be eliminated.

Whether it will be possible to reduce the frequency and severity of crises through legislative measures is still a disputed point. It has been proposed to manipulate the funds devoted to public improvements in such a way as to create employment and demand for materials in time of crisis and depression. It has also been proposed, by Prof. Irving Fisher, so to regulate the money supply that general prices will remain practically stationary. Many believe that a more thoroughgoing publicity in matters pertaining to industry and finance will reduce the extent of ill-advised investment, and hence check the development of stresses in the industrial structure. At one time it was believed that trusts and similar forms of organization would make for stability in prices and hence prevent the recurrence of crises. Hence it was proposed to give state support to the consolidation movement, instead of attempting to check it, as now. But recent crises in the United States and Germany indicate that trusts and cartels have not perceptibly reduced their severity. Most observers of the phenomena of crises have little faith in any proposed method of checking them by law, so long as enterprise is so completely dominated by motives of private profit as at present.

**Bibliography.** Consult: "Industrial Depressions," *First Annual Report of the United States Commissioner of Labor* (1886); Von Bergmann, *Geschichte der nationalökonomischen Krisentheorien* (Stuttgart, 1895); Veblen, *Theory of Business Enterprise* (New York, 1904); Jones, *Economic Crises* (ib., 1900); Burton, *Financial Crises and Periods of Industrial and Commercial Depression* (ib., 1902); Lescure, *Des crises générales et périodiques de surproduction* (Paris, 1907); Hull, *Industrial Depressions* (New York, 1911); Mitchell, *Business Cycles* (Berkeley, Cal., 1913).

**CRISP, CHARLES FREDERIC** (1845-96). An American jurist and politician. He was born in Sheffield, England, but came to the United States when a child. He served in the Confed-

erate army from 1861 to 1864, when he was made a prisoner. He was admitted to the bar in 1866, and served as Solicitor-General of Georgia from 1872 to 1877, and as judge of the Superior Court from 1877 to 1882. From this time until his death he was a Democratic member of Congress and from 1891 until 1895 was Speaker of the House.

**CRISPI**, krě-spě, **FRANCESCO** (1819-1901). An Italian statesman, born at Ribera, in Sicily, Oct. 4, 1819. He studied law at Palermo and was admitted to the bar there and in 1846 at Naples. He took an active part in the Sicilian uprising of 1848 and after its disastrous issue engaged in journalism in Piedmont. In 1860 he aided Garibaldi in his expedition for the deliverance of the Two Sicilies. He became the first representative of Palermo in the Italian Parliament, began immediately to play a prominent rôle, and, after having been the leader of the radical Left, became an exponent of monarchical constitutionalism. In 1876 he was elected President of the Chamber of Deputies. To promote the interests of his country, he visited the European courts in the following year and soon after was made Minister of the Interior. Denounced by his opponents on a charge of bigamy, he was obliged to resign in 1878 and, although acquitted, did not take office again until 1887, in the cabinet of Depretis, after whose death, in the same year, he became head of the cabinet and Minister of Foreign Affairs. He was an earnest advocate of the Triple Alliance (q.v.) between Germany, Italy, and Austria, and in his endeavor to strengthen it visited Bismarck at Friedrichsruhe in 1887 and accompanied King Humbert to Berlin in 1889, conferring also with Caprivi at Milan in the following year. His policy was approved by an overwhelming majority of the electors in 1890, but his ministry was overthrown on a matter of financial policy in February, 1891. He now resumed his law practice in Rome, and in the Chamber of Deputies led the Opposition against his successor in office, the Marquis di Rudini. In 1893 he resumed the office of Premier, and held it till the defeat of the Italians in Abyssinia in 1896, when he was again succeeded by Rudini (q.v.). In March, 1898, he resigned his seat in the Lower Chamber as a result of the charges brought against him in connection with extensive swindles perpetrated on the Banca d'Italia. Save for a few articles which he published in favor of the Triple Alliance, he took no further active interest in affairs, and he died on Aug. 11, 1901, at Naples. Crispi was the greatest statesman that southern Italy gave to the united kingdom. In his lifetime he was much misunderstood and maligned. Distrusted by the Conservatives as a Radical and Republican, he incurred the hostility of the Republicans by his famous dictum in his letter to Mazzini, March 18, 1865, "Monarchy unites us, while a republic would separate us." From that time he was a firm supporter of the monarchy, but never a friend of the court. Consult: Stillman, *Francesco Crispi, Insurgent, Exile, Revolutionist, and Statesman* (London, 1899); T. Palamenghi Crispi, *Francesco Crispi, questioni internazionali* (Milan, 1913); also the translation of his memoirs into English by Agnetti (London, 1912).

**CRISPIN**. A saint and martyr of the third century, who was descended from a noble Roman family. With his brother Crispinianus,

he fled during a persecution of the Christians from Rome to Gaul, where he worked as a shoemaker in Soissons and distinguished himself by his exertions for the spread of Christianity as well as by his works of charity. According to the legend, his benevolence was so great that he even stole leather to make shoes for the poor! From this, charities done at the expense of others have been called Crispinades. In the year 285 or 286 he and his brother suffered a cruel martyrdom. Both brothers are commemorated on the 25th of October. Crispin is the universally recognized patron saint of shoemakers. Consult Butler, *Lives of the Saints*, for October 25, *The Accurate History of Crispin and Crispinianus, the Royal Shoemakers* (Dublin, 1816); *Saint Crispin and the Gentle Craft* (London, 1868).

**CRISPIN**. 1. The old name for shoemakers, applied to them from the fact that St. Crispin was their patron saint. 2. A conventional character in French comedy.

**CRISPINO E LA COMARE**, krě-spě'nô â lâ kô-mă'râ (It. The Cobbler and the Fairy). An opera by Ricci, first produced in Venice, Feb. 28, 1850, in the United States 1861 (New York).

**CRISS CROSS ROW**. See **CHRIST CROSS ROW**.

**CRISTINOS**, krě-stě'nô (Sp., adherents of Christina). A political party in Spain during the regency of Queen Maria Christina, mother of Isabella II. They were opposed to the Carlists and upheld the Pragmatic Sanction of Ferdinand VII (q.v.), by which the crown of Spain was made inheritable in the female line. They were also known as Isabelinos.

**CRISTOBAL DE LA LAGUNA**. See **LAGUNA**.

**CRISTOFORI**, krě-stô'fô-rě, **BARTOLOMMEO** (1655-1731). An Italian harpsichord maker, and the inventor of the hammer action used in the modern pianoforte. He was born in Padua. After manufacturing instruments in that city until about 1687 he was persuaded by Prince Ferdinand, son of the Grand Duke Cosimo III, to remove to Florence. An authentic grand pianoforte made by the inventor in 1720 is said still to be preserved in Florence. See **PIANOFORTE**.

**CRISTOFORO COLOMBO**. An opera by Franchetti (q.v.) first produced in Genoa, Oct. 6, 1892, in America, Nov. 20, 1913 (Philadelphia).

**CRISTUS**, PETRUS (?-1473). A Flemish painter of the fifteenth century. He was born at Baerle, date unknown, and may have been a pupil of Jan van Eyck, who in any case influenced him strongly. As regards perspective and the treatment of landscape, Cristus is a step in advance of Van Eyck, in all else he is greatly inferior. His work is recognizable by the masklike appearance of the faces. His works include the portrait of Edward Grimston (1446), now in possession of the Earl of Verulam; a Madonna in the Stadel Institute, Frankfurt; "St. Eligius," in the Oppenheim collection at Cologne. Two paintings in the Metropolitan Museum, New York, "A Virgin and Child" and "The Deposition from the Cross," formerly attributed to Jan van Eyck, are now assigned to Cristus.

**CRITCHETT**, R. D. See **CARTON**. R. C.

**CRITIAS**, krish'î-as (Lat., from Gk. Κρίτιας, *Kritias*) (?-403 B.C.). An Athenian orator and

poet, the pupil both of Socrates and of Gorgias of Leontini. He was a leader in the oligarchical party at Athens and was exiled after the downfall of the Four Hundred in 411 B.C. After the subjugation of Athens by the Spartans he returned, and in 404 became head of the Committee of Thirty, known as the Thirty Tyrants, and was notorious for his cruelty. In 403 he was killed in battle, in the general revolt led against the Tyrants by Thrasybulus (q.v.). His activity was varied in the fields of oratory, tragic and elegiac poetry, and historical prose. Fragments of his elegies are in Bergk, *Poeta Lyrici Graeci*, vol. ii (Leipzig, 1900); of his historical work, in Müller, *Fragmenta Historicorum Graecorum*, vol. ii (Paris, 1868-83).

**CRITIC, THE.** A three-act farce by Richard Brinsley Sheridan in imitation of Buckingham's *Rehearsal*, produced at Covent Garden in 1779.

**CRITICAL POINT.** Experience shows that there is for every gas a certain temperature above which it cannot be liquefied, no matter how great the pressure exerted upon it. Thus, above 31.1° C. (87.98° F.) it is impossible to liquefy carbonic-acid gas; water cannot exist in the liquid state above 374° C. (705° F.), etc. Such temperatures are termed the critical points or critical temperatures of substances. The vapor pressure of a liquid at its critical temperature is termed the "critical pressure," and the specific volume of the substance at the critical temperature and under the critical pressure is termed the "critical volume."

The following table gives the critical temperatures and pressures for some of the more common substances (the critical pressures in terms of pounds per square inch may be obtained approximately by multiplying the pressures given in the table by 15):

SUBSTANCE	Critical temperature (centigrade)	Critical pressure (in atmospheres)	By whom and when determined
Acetic acid	+327.11°	57.11	Young (1910)
Acetone	+232.8	52.2	Sajotschewski (1878)
Acetylene	+35.5	61.6	Cardoso (1910)
Alcohol	+243.1	62.96	Young (1910)
Ammonia gas	+130.0	115.0	Dewar (1884)
Amyl acetate	+320.18	..	Brown (1900)
Amyl alcohol	+348.0	..	Guldberg (1882)
Argon	-117.4	52.9	Ramsay and Travers (1901)
Benzene	+288.5	47.89	Young (1910)
Bromine	+302.2	..	Nadejdin (1885)
Carbolic acid	+419.2	..	Radice (1899)
Carbon dioxide	+31.10	73.00	Dorman (1908)
Carbon disulphide	+27.3.05	72.87	Battelli (1890)
Carbon monoxide	-139.5	35.5	Olsewski (1887)
Carbon tetrachloride	+283.15	44.98	Young (1910)
Chlorine	+146.0	93.5	Knetisch (1890)
Chloroform	+290.0	54.9	Sajotschewski (1878)
Cyanogen	+128.1	59.6	Cardoso (1910)
Ethane	+42.1	49.05	Cardoso (1910)
Ether	+193.8	35.61	Young (1910)
Ethyl acetate	+150.1	38.00	Young (1910)
Ethylene	+9.5	50.7	Cardoso (1910)
Fluobenzene	+286.35	44.62	Young (1910)
Helium	-208.°	2.5°	Kamerlingh-Onnes
Hydrobromic-acid gas	+91.3	..	Estrreicher (1896)
Hydrochloric-acid gas	+51.0	81.5	Dorman (1908)
Hydrogen	-240.8	14.2?	Olsewski (1906)
Hydroiodic acid	+150.7	..	Estrreicher (1896)
Iodine	+512.°	..	Radice (1899)
Iron	+3700.°	..	Krechgauer (1907)
Laughing gas	+36.5	71.90	Cardoso (1910)
Marsh gas	-81.8	54.9	Olsewski (1885)
Mercury	+1077.°	456.°	Happel (1904)
Methyl chloride	+143.2	65.85	Bauns (1908)
Naphthalene	+468.2	39.2	Guye and Mallet (1901)
Neon	-205.°	29.0	Ramsay and Travers (1901) and Kamerlingh-Onnes (1909)
Nitron	+104.5	62.4°	Rärdorff (1909)
Nitrogen	-146.0	33.0	Wroblewski (1885)
Oxygen	-118.8	50.8	Olsewski (1885)
Pentane	+197.2	34.04	Young (1910)
Pyridine	+344.27	..	Radice (1899)
Sulphur dioxide	+17.0	78.25	Cardoso (1910)
Sulphureted hydrogen	+100.4	89.35	Cardoso (1910)
Toluene	+320.6	41.6	Altshul (1893)
Turpentine oil	+376.0°	..	Guldberg (1882)
Water	+374.0	217.5	Holborn and Baumann (1910)
Wood alcohol	+240.0	78.50	Young (1910)
Xylene	+245.6	35.8	Altshul (1893)

**CRITICAL ANGLE.** See LIGHT.

**CRITICAL PHILOSOPHY,** or **CRITICISM.** The name applied to Kant's philosophy, because it was not willing to accept all dicta that seemed to have the support of reason (see DOGMATISM), but sought critically to investigate the conditions of the possibility of knowledge and rejected all so-called knowledge that did not conform to these conditions. See KANT.

The critical temperature of a liquid is usually determined by introducing the liquid into a strong-walled glass tube about 3 or 4 millimeters in internal diameter. The tube is sealed at one end and drawn out to a thin capillary at the other end. It is at first filled with the liquid completely, then about one-third of the liquid is allowed to boil away, and the capillary end is sealed off without allowing the air to enter. The two-thirds-full tube is now placed

in an appropriate bath, and the temperature is gradually raised. As the critical point is approached, the liquid meniscus is seen to become fainter and fainter; and when the critical temperature is reached, the meniscus disappears altogether. For a short time the tube looks as if filled with a cloud of bluish smoke in up and down commotion; then this too disappears, and the contents of the tube are perfectly homogeneous: all is vapor. If the temperature is now allowed to fall, a similar phenomenon occurs as the critical point is reached from above, the meniscus reappears, and the contents of the tube are again divided into two layers, liquid and vapor. In this manner, if the liquid is only pure enough, the critical temperature can be determined within a tenth of a degree. A convenient modification of the method has been recommended by Knietzsch, according to whom the glass tube as described may be replaced by a thin glass capillary—which requires, of course, less liquid for a determination and is easier to manipulate.

A simple method for determining the critical pressure was devised in 1893 by Altschul in Ostwald's laboratory. A strong-walled capillary tube of glass is filled, half with the liquid under consideration and half with mercury. The upper end is sealed; the lower (mercury) end is firmly connected with a narrow copper tube filled with paraffin oil and leading to a small pump which is likewise filled with oil. The pump is also connected with a spring gauge indicating pressures within a tenth of an atmosphere. Now the extreme upper end of the glass tube is heated *above* the critical temperature of the liquid, so that the liquid within the tube becomes divided into two portions—an upper which is completely gasified, and a cooler lower one which remains liquid. But, as a general rule, there is no meniscus between the two portions. If, however, the pressure is now gradually raised, a moment arrives at which the meniscus appears at a certain point in the tube, viz., at the point where the temperature is equal to the critical temperature of the liquid. For at that temperature and under the critical pressure liquid and vapor are in equilibrium and therefore normally separated by a meniscus. The critical pressure sought is thus the pressure at which a meniscus appears in the fluid.

The critical temperature, as well as the critical pressure, of *mixtures* is usually intermediate between those of the components, and according to Pawlewski's rule each component contributes its property in proportion to its percentage amount in the mixture. This rule, however, is only a rough approximation to the truth. A similarly crude empirical rule is that of Guldberg, according to which the critical temperature of a single liquid (on the absolute scale, i.e., in centigrade degrees *plus* 273) may be calculated by multiplying the temperature of the boiling point (again on the absolute scale) under normal atmospheric pressure by 1.55. For instance, the boiling point of ether is 35° C., or 35 + 273 = 308° absolute.  $308 \times 1.55 = 477.4$ ;  $477 - 273 = 204^\circ$ , and this should, according to Guldberg's rule, be approximately the critical centigrade temperature of ether. As a matter of fact, that temperature is only about 194° C., or 10° lower. In some cases the agreement between Guldberg's rule and experiment is somewhat better, in other cases it is even worse.

As to the critical volume, the experimental determination is extremely difficult, and critical volumes are usually *calculated* on the basis of a reliable empirical rule found by Caillaet and Mathias and generally referred to under their names. It must be remembered that when a liquid is ordinarily heated it expands as the temperature rises, i.e., its density continuously diminishes; at the same time the density of its vapor continuously increases; with rising temperature, therefore, the densities of liquid and vapor tend to equalize, and finally at the critical point the densities become exactly equal. This is why all difference between liquid and vapor, and with it the separating meniscus, disappear. Caillaet and Mathias discovered that if the *arithmetical means* of the densities of liquid and vapor are plotted against the temperatures, the result is a straight line which at the critical temperature passes through the point indicating the critical density of the substance (and hence reveals also the critical volume). If, therefore, a few points are determined on this line at temperatures considerably below the critical point, where experimentation is still sufficiently convenient, the prolongation of the line to the critical temperature gives the desired density and volume, and the determination may be considered as quite reliable.

If two substances whose critical temperatures are respectively  $\theta_1$  and  $\theta_2$  are at two different temperatures  $T_1$  and  $T_2$  (all on the absolute

scale), such that  $\frac{T_1}{\theta_1} = \frac{T_2}{\theta_2}$ , they are said to be

at the same "reduced temperatures." Similarly, substances are said to be under the same "reduced pressures" when the pressures under which they are placed are equal fractions of their critical pressure  $\pi_1$  and  $\pi_2$ . Finally, they are said to have the same "reduced volumes" when their specific volumes are equal fractions of their critical volumes  $\phi_1$  and  $\phi_2$ . When at the same reduced temperature and under the same reduced pressure, substances are also said to be in *corresponding states*. A number of interesting theorems are connected with these "corresponding states." It can be shown, e.g., that when substances are at the same reduced temperatures and pressures their reduced volumes, too, are the same. Altogether the theory of corresponding states forms an important chapter of modern physical chemistry, even though many exceptions to it have been observed and not yet accounted for.

The critical point of substances can be taken advantage of for passing from the gaseous to the liquid state of aggregation and conversely in a "continuous" way, i.e., without having to deal, at any moment during the process, with a mass consisting partly of liquid, partly of vapor, and hence having two different specific volumes. Thus, remembering that the critical temperature of carbonic acid is 31.1° C. and its critical pressure 73 atmospheres, let it be required to transform continuously a given amount of the gas into liquid. To accomplish this we may first heat the gas, say, to 35° C., raise the pressure, say, to 80 atmospheres, and then, keeping the pressure unchanged, let the temperature fall, say, to 20° C.; we shall then find the substance entirely liquid; for a sudden liquefaction of the entire mass (without separation into a layer of liquid and one of

vapor) will have taken place when, during the process of cooling, the temperature of  $31.1^{\circ}$  is reached. At no moment will liquid have existed simultaneously with gas. Similarly, if it should be required to transform continuously a given amount of liquid carbonic acid into gas, we might proceed as follows: lower the temperature, say, to  $20^{\circ}$  C., raise the pressure, say, to 80 atmospheres, and then allow the temperature to rise, say, to  $35^{\circ}$  C.; we should then find the substance entirely gaseous, without, however, the mass having at any moment during the process consisted partly of liquid, partly of gas. Continuous changes like those just described were at one time expected to break down the barrier between the gaseous and the liquid states of aggregation, and to permit of extending to liquids the simple gas laws. For, at least at the critical point, liquids and their vapors are identical in physicochemical properties and must therefore be governed by the same laws. But the hope has not yet come true.

Consult Van der Waals, *Die Continuität des gasförmigen und flüssigen Zustandes* (2 vols., 2d ed., Leipzig, 1899-1900). Simpler accounts of the subject may be found in the works on physical chemistry recommended in the article CHEMISTRY (q.v.). See also GASES, GENERAL PROPERTIES OF. HEAT.

**CRITICISM** (Fr. *criticisme*, from Lat. *criticus*, Gk. *κριτικός*, *kritikos*, critic, from *κρίνειν*, *krinein*, to judge). Criticism, as the art of judgment, whether favorable or adverse, is applicable in all fields of human accomplishment, and all inventions, all institutions, all life, are, broadly speaking, within its scope. It is, however, with literature and with art that criticism has most significantly busied itself, with the result that the term has come to mean the interpretative study of those greatest expressions of man's nature. The *Poetics* of Aristotle for centuries been regarded as the first important work of criticism, and many of the rules there laid down have maintained their value to this day. Aristotle's manner of approach was the scientific method of induction, and his understanding of the fundamental laws of human nature, his perception of those traits, emotions, and desires which, transcending any one age, belong to the men of all ages, underlaid and formed the firm basis of his criticism. Briefly summarized, Aristotle's chief doctrines were that all art and literature should have as function the pleasure-giving representation or "imitation" of what was universal—appertaining to all human nature, and not particularly or insignificantly individual; and that great art was measured by the high and lasting pleasure it afforded to society. To study the impressive works that have stood the test of time—the Bible, Homer, Vergil, Dante, Shakespeare, Milton, and lesser but well-loved poets—in the light of Aristotle's illuminating laws, is to discover how striking in its essence is the similarity in the greatest art; the sameness of man's soul, its passions and aspirations, remaining the keynote of art as it is of life.

The technical side of criticism—questions of metrical and dramatic construction and minor points of style—was approached by Aristotle, and the systematic nature of the *Poetics* is probably the chief reason for the reaction that has now and again set in against what is sometimes termed purely academic criticism. Yet it is just because Aristotle appreciated and

showed that all art must have laws that the student will find him so useful; more so even than Plato, whose lightning flashes of interpretation must be ranked with the highest creative critical literature. The critical writers after Aristotle are so numerous—Greek, Byzantine, Latin—and for the most part so occupied with the linguistic phase of composition, that one is glad to pass by almost all their rhetorical treatises until there looms up in the third century the figure of Longinus, whose refreshing enthusiasm for the beauty of letters places him above the mechanical student of rules. Notable among his Latin predecessors were Cicero, Horace, and Quintilian, whose observations on style have been of permanent service. From the time of Quintilian to Dante there is no great name in criticism, nor is this to be wondered at when one reflects that the mediæval attitude towards literature was, on the whole, that of distrust and disapprobation. Dante's poetry has so overshadowed his critical treatises that there are probably many lovers of the *Divine Comedy* who have no conception of the interest of the master's reflections on poetic form and beauty, nor any knowledge of his limitations of the subject matter of great poetry to love, war, and virtue, or moral philosophy. Of more service than Dante's treatises were the writings of the poets and critics of the Italian Renaissance. Through them the classical tradition was passed on to England and to the rest of Europe: in art and literature, as in science and in politics, the Italy of the Renaissance was the great rejuvenator and originator in the realm of the intellect.

In more modern times the names of Corneille, Boileau, Voltaire, Diderot, Hugo, and Sainte-Beuve in France, of Kant, Schiller, and Lessing in Germany, of Sidney, Pope, Addison, Dryden, Wordsworth, and Shelley in England, represent differing views and opinions. Boileau's *Art poétique*, reminiscent of Horace's *Ars Poetica*, and Pope's *Essay on Criticism* have their distinct value as volumes of often authoritative formal instruction, furnishing useful analyses of the different kinds of verse compositions. Of far more worth is Sir Philip Sidney's *Defense of Poesie* (an essay richly reminiscent of the Italian Renaissance), wherein he quaintly reminds us that "though the poet cometh to you with words set in delightful proportion," yet "it is not rhyming and versing that maketh a poet." Lessing's great achievement was to disperse the fog that Corneille had raised around the dramatic principles of Aristotle, and by clarifying the classic doctrines, to make possible their application to all art under modern conditions. And here, without going into any details concerning any present-day doctrines, even though they be so interesting as the evolutionary theories with which we readily connect the name of M. Brunetière, it may be well to suggest the wider paths open to criticism through modern conditions. The Greek and Roman critics had only their own work to study. We of to-day have the dramas, the epics, the novels of many nations and ages. The study of comparative literature, now possible, opens up opportunities for tracing those influences which affected the literatures of all Europe, and affords the student the chance of building up from varying yet interrelated sources a standard of criticism. The differences due to national character and individual genius

will teach him the limitations of hard and fast formal rules, while his faith in the fundamental canons of great art can only be made firmer by such comparative study. He will learn that criticism is of use as a method of judgment for the reader, rather than an inspiring guide to the poet, whose highest achievements are never the result of the rules whose vitality they attest. The critic who disregards the universal message of great art and, maintaining that there is no disputing concerning taste, claims for his personal opinion as much value as can attach to any judgment, rejects for his impressionistic mess of pottage the birthright of many ages of culture. The subjective element of criticism is not, however, precluded by the positive laws revealed through the inductive method applied to works of art. As Lowell pointed out in his essay on *Don Quixote*, a book is great in proportion to what can be gotten from it, and many an artist has builded better than he knew. The individual critic can be so keen and yet true in his interpretations and so inspiring in his expression as to make his criticism itself creative literature. The qualities which are necessary to the ideal critic are, therefore, not alone knowledge of human nature and of the characteristics of the literature which has endured; he must himself have true power of intuition, sympathy combined with impartiality in judgment, a rational appreciation of the relative importance of form and content, the sense of beauty which will enable him to judge style, and the capacity for making others see what he sees. Method and technique are always valuable, and Americans have much reason to be grateful to Child and Ticknor and Longfellow for their contribution to America's scholarship, for criticism is to be thought of, first of all, not as a formidable and narrowing system, but indeed as a broad viewpoint, occupying the same relation to literature that literature holds to life; and as law is the condition of true liberty in life, so criticism is the bar to anarchy in literature. "We do not possess what we do not understand," said Goethe. The true critic, like the rhapsodist of old, can be the connecting link between the artist and the public, leading his readers to understand the beauty of a work and so to possess it. The technical beauty may well be a matter of formal development, but the emotional beauty and appeal rest on the basis of the essential oneness of human nature, whether in the days of Athens, of Rome, of London, or of New York.

Criticism thus understood is freed from the charges to which certain critics have exposed it. It is not, on the side of form, a narrowing method of petty rules, but a rational study of fitting construction and adequate expression; on the side of content, its most lasting dicta are opposed to the contention of those who, like Ruskin, would make art a handmaiden of morality. It does not restrict genius, because genius precedes it, and genius connotes the sense of form and beauty, and can but be aided by reference to the simple laws of formal beauty. As the art of judgment concerning the fairest flowering of the human spirit, criticism has one of the highest of judicial functions; as the art of interpretation, admitting individual intuition and inspiring teaching, it has a creative function of wide and lofty worth.

Spingarn, *Literary Criticism in the Renaissance* (New York and London, 1899); C. M. Gayley and F. N. Scott, *Introduction to the Methods and Materials of Literary Criticism* (2 vols., Boston, 1899); G. E. Woodberry, *A New Defence of Poetry* (New York, 1900); George Santasbury, *History of Criticism* (3 vols., London, 1902-04); Théry, *Histoire des opinions littéraires* (Paris, 1849); Bourgoing, *Les maîtres de la critique au XVIIIe siècle* (Paris, 1889); P. Hamelius, *Die Kritik in der englischen Litteratur* (Berlin, 1897).

**CRITICISM, BIBLICAL.** See EXEGESIS.

**CRITICISM, TEXTUAL.** See TEXTUAL CRITICISM.

**CRITIQUE DE L'ÉCOLE DES FEMMES**, kré'ték' de la'kól' dá fam (Fr., criticism of the School for Wives). An amusing comedy by Molière, produced June 1, 1663, written in defense of his earlier comedy, *L'École des femmes*, which had been attacked by Le Visé, editor of *Le Mercure galant*, in the third series of his *Nouvelles nouvelles*. It consists of a discussion of the merits of the former piece, chiefly carried on between a hypercritical marquis and an amiable chevalier.

**CRITIQUE OF PURE REASON**, kri-ték' (Ger. *Kritik der reinen Vernunft*). A philosophical work by Immanuel Kant (1781), the basis of modern German philosophy.

**CRITIUS**, A Greek sculptor. See HARMONIUS AND ARISTOGITON.

**CRITO** (Lat., from Gk. Κρίτων, *Kritôn*). A wealthy friend and disciple of Socrates. He arranged for his master's escape from prison, but Socrates refused to take advantage of the plan. Plato's dialogue representing the last conversation between Socrates and Crito bears the latter's name.

**CRITOLAUS** (Lat., from Gk. Κρίτολαος, *Kritolaos*). A Greek philosopher, born at Phaselis, in Lycia, in the second century B.C. He succeeded Aristotle of Ceos as the head of the Peripatetic school at Athens and acquired a high reputation as a philosopher and orator. About 155 B.C. he went to Rome, and, with Carneades and Diogenes, obtained a remission of the fine of 500 talents which the Romans had

imposed upon Athens for the destruction of Oropus. See CAENEADES.

**CRITTENDEN, GEORGE BIBB** (1812-80). An American soldier, the son of J. J. Crittenden (q.v.). He was born at Russellville, Ky., graduated at the United States Military Academy in 1832, served with distinction in the Mexican War and was promoted to be lieutenant colonel (1856). He resigned and joined the Confederate army in 1861, was appointed major general, and was placed in command of southeastern Kentucky and a part of Tennessee. For his defeat at Mill Spring (1862), however, he was censured. He subsequently served as a volunteer, and from 1867 to 1871 was State Librarian of Kentucky.

**CRITTENDEN, JOHN JORDAN** (1787-1863). An American statesman, born near Versailles, Ky. He graduated at William and Mary College in 1807, served in the War of 1812, was a United States Senator from 1817 to 1819, United States District Attorney from 1827 to 1829, and a United States Senator again from 1835 to 1841. In 1841 he was appointed Attorney-General by President Harrison, but resigned when Tyler became President, and was again in the Senate from 1842 to 1848, after which he was Governor of Kentucky from 1848 to 1850. He was again Attorney-General under President Fillmore and in 1855 was a fourth time sent to the Senate. Although a Southerner, Crittenden consistently devoted his energy and eloquence to the preservation of the Union, and he exerted every effort, first, to avert the impending Civil War, and later to assist the Administration in its prosecution. In the Senate (1860-61) he urged unsuccessfully his famous compromise (See CRITTENDEN COMPROMISE.) Retiring from the Senate in 1861, he served one term in the House, and in that body also strove for the supremacy of the Constitution. Consult *The Life of John J. Crittenden*, by his daughter, Mrs. Chapman Coleman (2 vols., Philadelphia, 1871).

**CRITTENDEN, THOMAS LEONIDAS** (1815-93). An American soldier, the son of John Jordan Crittenden, born in Russellville, Ky. He was a private in the Kentucky Volunteers in 1836, studied law, and in 1842 became commonwealth's attorney. During the Mexican War he served as lieutenant colonel under both General Taylor and General Scott and, when the former became President, was appointed United States Consul at Liverpool. He entered the Federal army at the beginning of the Civil War, became a brigadier general of volunteers in October, 1861, and for his services at Shiloh, where he commanded a division, was raised to the rank of major general (July 17, 1862). He afterward commanded a division under General Buell and took an important part in the battles of Murfreesboro and Chickamauga, but resigned from the service in December, 1864. He entered the regular army as colonel of the Thirty-second Infantry in 1866, was brevetted brigadier general in 1867, and served on the frontier until his retirement in 1881.

**CRITTENDEN COMPROMISE.** In American history, a measure proposed in Congress in 1860 by Senator J. J. Crittenden (q.v.) as a means of preventing the secession of the Southern States, through the adoption of certain constitutional amendments. These amendments were five in number, and provided: (1) that the right to property in slaves was to be recognized, and

that slavery was to be permitted and protected in all the common territory south of 36° 30' and prohibited north of that line, while the land remained in its territorial status; (2) that Congress was not to have power to abolish slavery in the places under its exclusive jurisdiction which lay within a State where slavery existed; (3) that Congress was to have no power to abolish slavery in the District of Columbia so long as it existed in either Maryland or Virginia, and then only after the owners of the slaves had been compensated; (4) that Congress was to have no power to prohibit or hinder the transportation of slaves from one State to another, or to a Territory where slavery was legal; (5) that Congress might provide that in cases where escaped slaves were rescued, or their arrest prevented by mobs, the owners should be compensated by the United States, which in turn might recover damages from the county in which the illegal act occurred. All of these amendments were to be permanent and "unamendable." The compromise was defeated in a committee of the Senate and failed of consideration in the House.

**CRITTENTON, CHARLES NELSON** (1833-1909). An American philanthropist, born in Adams, Jefferson Co., N. Y. He went into the drug business in New York City in 1861; but after 1882, when his five-year-old daughter Florence died, he devoted his time and wealth to the establishment of Florence Crittenton Homes for homeless and unfortunate girls and their infant children. In 1895 the National Florence Crittenton Mission was incorporated to carry on this work. Of these mission homes more than 70 were organized in Mr. Crittenton's lifetime in all the larger cities of the United States and in Marseilles, Tokio, Shanghai, the city of Mexico, etc. The drug-manufacturing company which bore his name was one of the first profit-sharing concerns in the United States. He was an active member of the Prohibition party.

**CRITTENTON MISSION.** See FLORENCE CRITTENTON MISSION; CRITTENTON, C. N.

**CRIVELLI, KRIVĒLLA, CARLO** (c.1430-c.1495). A Venetian painter of the early Renaissance. He was born in Venice, probably the son of Jacopo Crivelli, a painter, and studied with Antonio and Bartolommeo da Murano, and was later influenced by the schools of Padua and Ferrara. Of his life in Venice nothing is recorded except that he was convicted of adultery in 1457, and this was probably the cause of his leaving Venice, never to return. In 1468 he began his work in the Marches, where he practiced the remainder of his life, residing after 1473 in Ascoli. In 1490 he was named "Miles," and shortly before his death "Equus Laureatus" by Ferdinand II of Capua, as the signatures of his later paintings proudly record. Among his early works are a "Madonna" in the Verona Museum, and a "Pieta with Saints" in the Berlin Gallery, which show the influence of Negroponte and Squarcione. After he left Venice in 1457, his works, owing to Mantegna's influence, increased in earnestness and pathos and improved in color and technique, as is shown in the altarpiece in five compartments with predella in the cathedral of Ascoli (1473) and "St. George on Horseback" in the Gardner collection, Boston. In the so-called "Demidoff Altarpiece" (1476), in 13 compartments (National Gallery, London), he has fully developed an individual style, and between 1480 and 1490

he reached the height of his power. At this time he painted the "Madonna" in the Vatican Gallery, the triptych "Madonna" in the Brera, the "Pieta" in the Boston Art Museum, the same subject in the Johnson collection, Philadelphia, the "Madonna with St. Peter and six Saints" in the Berlin Gallery, and "The Annunciation" in the National Gallery. Such works combine grace, charm, and elaborate idyllic accessories with intense pathos and fervid religious feeling. They are characterized by wonderful strength of line and a metallic lustre of color. Both in technique and sentiment Crivelli was a conservative and stood apart from the general development of Venetian painting. He painted only in tempera and maintained the early scheme of division of his altars into separate panels. He excelled in the treatment of such isolated figures, which, although stiff and archaic, are in expression calm and deep as the sea. After 1490 his work shows less originality and intensity but more perfect technique and increasing, almost riotous, ornamentation. "The Coronation of the Virgin" (1493) and the "Madonna della (andeletta)," both in the Brera, are good examples of his latest style. Consult Berenson, *Venetian Painters of the Renaissance* (New York, 1909), and Rushforth, *Carlo Crivelli* (London, 1909).

**CROAKER.** See DRUM; GRUNT; QUEENFISH.

**CROAKER AND CO.** The pseudonym adopted by Joseph Rodman Drake and Fitz-Greene Halleck in the *Croaker Pieces*, in the *New York Evening Post* (1819).

**CROATAN,** kró'tán'. An island off the coast of North Carolina, south of Roanoke Island, at the time of the first English attempt at colonization, about 1585. By the shifting of the sands it is now probably a part of Hatteras or Ocracoke Island. A colony of 117 persons who were landed by Sir Walter Raleigh upon Roanoke Island in 1587, and of whose ultimate fate nothing definite was ever afterward learned, is supposed to have taken refuge with friendly Indians upon Croatan Island and to have eventually become absorbed into that tribe. Recently new interest has been given to the story through the claim of descent from these colonists, asserted by a considerable body of mixed-blood stock in Robeson County, in the southern part of the State. Although their claim has probably no sound historical basis, they have been officially recognized by the State as a separate people under the name of "Croatan Indians." According to the census of 1910 they numbered 5865.

**CROATIA** (kró-á'shí-á) AND **SLAVONIA** (Slav. *Hrvatska i Slavonija*, Hung. *Horvát-Slavonország*, from Croat. *Hrvat*, OChurch Slav. *Khrovatīnā*, Slov. *Khrvat*, Pol. *Karwat*, Russ. *Khrovate*, Croat. and OChurch Slav. *Slavieninā*, Russ. *Slavyaninā*, MGk. *Ἑσκαβηνός*, *Esklabēnos*, a Slav, whence Ger. *Sklave*, Eng. *slave*). A kingdom of Austria-Hungary, constituting one of the lands of the Hungarian crown (Map: Hungary, D 4). It is separated by the Drave and the Danube from Hungary proper on the northeast, by the Save from Serbia and Bosnia on the south, has Dalmatia and the Adriatic on the southwest, and Styria, Carniola, and Istria on the west. Croatia constitutes the southwest portion; Slavonia, the northeastern part. Its area is 16,425 square miles.

A large part of the surface consists of mountain chains ranging in height from about 2000

to 4000 feet, principally spurs of the Julian and Styrian Alps. In Croatia are the Agram highlands, the Croatian Karst (see KARST), with an elevation of about 500 feet, the two ranges of Great and Little Kapella, the former reaching a height of about 500 feet, and the Velebit Range, whose highest summit is about 5750 feet. On the borders of Carniola are the Uskok Mountains. The beautiful mountain region on the northwest is called "Croatian Switzerland." The interior along the Save consists of an extensive and fruitful valley. The eastern part contains fertile, well-cultivated valleys, while the western part is covered with forests. There are several small rivers flowing into the Save and Drave, and a number of lakes on the coast. The Kulpa River, a tributary of the Save rising in Carniola and flowing across Croatia, is generally considered the northern boundary of the Balkan Peninsula.

The climate is not uniform throughout the kingdom. Along the coast of Croatia the summers are dry and the winters long with considerable precipitation, but the annual range of temperature is less than in Slavonia. In this western portion the winters are very raw, and the land is subject to the bora, a cold, fierce northeastern wind, which renders navigation dangerous and brings heavy snows to the highlands. In the interior the continental type of climate prevails, with winter temperatures frequently below zero and excessive summer heat. In parts of Slavonia the climate is very insalubrious on account of numerous swamps. The soil is fairly fertile, and the range of vegetation very wide. About 32 per cent of the productive area is arable land, 23 per cent is in meadows and pastures, 38 per cent is under forests, and 1 per cent is covered with vineyards. The common European cereals are raised extensively, especially wheat and corn. The yield of potatoes is considerable. Fruits are grown in abundance, notably apples, plums, nuts, and grapes in the southern part of the country. Agram in Croatia is the capital and railroad centre. A number of railroads under government control cross the kingdom, and over 2000 miles of highways have been constructed.

The mineral production of Croatia and Slavonia is unimportant. Some coal, iron, marble, copper, and sulphur figure in the exports. There are but few modern industrial establishments, the bulk of the manufactures originating in the domestic industry of the peasant families. There are some silk mills, glass and sugar mills, a few shipbuilding, milling, paper, and leather establishments in the coast districts, and a number of distilleries and breweries. The plum brandy of Slavonia is famous under the name of "Slivowitz." There is a considerable transit trade, largely carried on through the ports of Fiume, Zengg, and Porto Ré. The chief articles of export are grain, fruits, wine, lumber, flour, horses, and swine. The crownland had, in 1911, 11,997 miles of public roads and 1329 miles of railway. Of the railway, 541 miles were owned by the state, and 536 were also operated by the state though privately owned. Agram (Zágráb) is the principal railway centre. There is water transportation on the Danube, Save, Drave, and Una.

Croatia and Slavonia, a titular kingdom, is autonomous in its internal affairs. Its executive head, or governor, is the Ban, responsible to the Provincial Diet and to the Hungarian Pre-

mier, who appoints him with the approval of the King (the sovereign of Austria-Hungary). There are three ministries—Interior, Public Instruction and Worship, and Justice. The Diet, or National Assembly, is a single chamber of 88 elected deputies and certain privileged members, as the heads of the nobility and high ecclesiastics and officials. The privileged members, who must not exceed in number half the deputies, usually sympathize with Hungarian policy. The crownland is represented by three members in the Upper House and 40 in the Lower House of the Hungarian Parliament and is entitled to a minister in the Hungarian cabinet, who countersigns all important acts affecting it. In 1908 the revenue of the autonomous government was 25,619,000 kronen, and the expenditure 24,710,000 kronen. The crownland is divided into eight counties and four municipal towns.

The facilities for both elementary and secondary education are improving. In 1910, 52.6 per cent of the population over six years of age could read and write, as compared with 44.4 per cent in 1900. Agram (q.v.), the capital, has a university. The population in 1890 was 2,201,927; in 1900, 2,416,304 (9.7 per cent increase); in 1910 (census of December 31), 2,621,954 (8.5 per cent increase). The last census returned by language 62.5 per cent of the people as Croats, 24.6 per cent Serbs, 5.1 per cent Germans, and 4.1 per cent Hungarians. The percentage of Roman Catholics in 1910 was 71.6, and Greek Orthodox 24.9. Agram had 79,038 inhabitants; Eszék (Eseeg, Osjek), 31,388; Zimony (Semlin), 17,131; Károlyváros (Karlstadt, Karlovac), 16,112; Varasd (Varasdin), 13,398. Average birth rate, 1906-10, 40.4; 1911, 36.8; death rate, 25.0 and 25.1, illegitimacy, 7.3 and 7.9 (for Hungary proper, 9.7 and 9.5).

**History.** Croatia and Slavonia were included in the Roman Province of Pannonia. The Croats are a southern Slavic people, speaking a language which differs but slightly from that of their neighbors the Serbs. They came down in the seventh century from the Carpathians. In the ninth century the Croats adopted Latin Christianity, while the Serbs received Christianity from Constantinople. About the year 910 Croatia asserted its political independence of the Byzantine emperors and under its own king extended its power over Bosnia and Dalmatia. A great part of Croatia was annexed to Hungary towards the close of the eleventh century, and in 1102 Koloman of Hungary had himself crowned King of Croatia and Dalmatia. The country was involved in the dynastic struggles and wars for self-preservation which were the lot of Hungary for centuries. In the great democratic and nationalistic uprising throughout Europe in 1848 Croatia played a prominent rôle. By stirring up the race prejudice of the Croats against the Hungarians the reactionary Austrian government was enabled to subdue the great Hungarian rebellion in that year, Jellachich, Ban of Croatia, acting as the ready tool of Austria and the Hapsburg dynasty. After the revolution Croatia was ruled by the Hapsburgs in a purely despotic fashion for 10 years. It was then incorporated again in Hungary by a compromise treaty which gave the Croats representation in the Hungarian Diet. Hungary, however, annexed Fiume outright, and the Croats, far from satisfied with the compromise, have never ceased to demand complete autonomy. The occupation and subsequent annexation of Bosnia

and Herzegovina by Austria-Hungary, with their large Croatian population, has given additional fervor to this desire, and it has been made a constant issue, throughout the last 40 years, by a succession of riots. The more serious of these occurred in 1883 and 1903. The recent Balkan War (q.v.) fanned the flame still further, and the Croats, aroused by the success of their neighbors, the Servians, took occasion to renew their demands with unusual vehemence. Consult: Matkovich, *Kroatien und Slavonien nach seinen physischen und geistigen Verhältnissen* (Agram, 1873); Kreuss, *Die vereinigten Königreiche Kroatien und Slavonien* (Vienna, 1889); Lukšić, *Führer durch Ungarn, durch Kroatien und Slavonien* (Vienna, 1902). See AUSTRIA-HUNGARY.

**CROCE**, kr'čhâ, BENEDETTO (1866- ). An Italian philosopher and critic. He was born at Pescasseroli (Avezzano), but early made Naples his residence. His contributions to literary history are of the first importance, both for bulk and for rigorous method coupled with enormous erudition. Typical of his specialization on Spanish influences in Italy and on the writers and general intellectual history of Naples, are *Studi letterari del seicento* (Bari, 1910), *I teatri di Napoli* (Naples, 1890), and the critical editions in his monumental series, *I scrittori d'Italia* (Bari, 1911), which, now continued by F. Nicolini, will reach 600 volumes. At the same time he stimulated a great revival of philosophical studies in Italy, collaborating with G. Gentile on the Bari series of *Classici della filosofia moderna* (24 vols.), to which he contributed important works on Vico and Hegel. A world-wide influence has been exerted by Croce's *Filosofia dello spirito*, a work in three parts: *Estetica* (new ed., Bari, 1908), *Logica* (1909), *Etica* (1909), available in English translations by Ainslie (*Æsthetic*, London, 1909, *Ethics*, 1913; consult Ainslie in the *North American Review*, vol. 198 (1913), "Introduction to Croce's Philosophy of the Practical"). The *Estetica* is of the three most influential and, in spite of the animated criticism aroused by it, remains a classic. Proceeding from the criticism of Vico, whom he calls the "discoverer of the science of æsthetics," Croce sets himself against the Aristotelian and classic schools of æsthetics as well as against Lessing, Kant, Hegel, and other moderns. The cardinal point in his theory is the entire distinction of logic from intuition, logic dealing with the apprehension of *relationships*, of *universals*, intuition with the apprehension of the *particular*, the *individual*. The act of intuition is the act of *expression*: all expression is "art," and all art is expression. The creative act in art is the act of expression in the mind of the artist; the material execution of the work of art is posterior to this creative act, of which it is only a copy. Croce thus excludes from æsthetics the idea of "beauty" as it is commonly understood; questions of artistic "technique" become irrelevant to æsthetic criticism; while his insistence on the intuitive nature of art destroys the critical value of rhetorical categories, and the terminology of literary genres and artistic classification becomes devoid of sense, since each production is a work *sui generis*, representing a moment, a mental state, that has intrinsically nothing to do with any other mental state. The function of criticism becomes primarily interpretative, its object being to reconstruct the mental

state in its causal and final elements. The æsthetic judgment is possible only with reference to the intention of the artist and the extent to which that purpose has been realized.

Croce's methods are applied extensively, especially to Italian literature of the nineteenth century, in his journal *La Critica* (Bari, 1902-). Selected essays are given in *Problemi di estetica* (Bari, 1910) and the *Breviario di estetica* (Bari, 1913). A comprehensive application of the theory to grammar appears in Trabalza's *Storia della grammatica italiana* (Milan, 1908), and its influence appears in Germany in Karl Vossler's studies on the *Divine Comedy* of Dante. Croce's chief American interpreter is Spingarn, *The New Criticism* (New York, 1909). As an ethical teacher, Croce represents and leads in Italy the revolt against the attempt to treat the spirit in a materialistic or naturalistic manner, and therefore he is to be classed with Bergson and Eucken (qq.v.), in spite of the fact that he represents none of their anti-intellectual tendencies. The honorary senatorship of the kingdom was conferred on Croce in 1909, and he was chosen secretary of the Società Napolitana di Storia Patria and awarded an honorary doctorate by the University of Freiburg.

**CROCE, GIULIO CESARE DELLA** (1550-1609). An Italian story-teller, born at Persiceto, near Bologna. He wrote a number of romances and plays and created the world-famous types of Bertoldo, Bertoldino, and Cacasenno in the often translated *Astuzie di Bertoldo* and the *Simplicità di Bertoldino* (1620). Consult biography and bibliography by Guerrini (Bologna, 1879).

**CROCHET**, krō-shā' (Fr. *crochet*, hook, dim. of *croc*, hook, from Icel. *krókr*, hook, perhaps from Gael. *crocan*, Welsh *croeg*, hook, and connected with Lat. *cruz*, cross). A form of fancy-work where threads of linen, cotton, worsted, or silk are looped with hooks called *crochet* needles to form various decorative and useful articles. Endless varieties of patterns may be formed, and lightness and elegance attained, by twisting the thread one or more times in taking up the loop, while openwork is formed by passing one or more loops.

**CROCIDOLITE** (from Gk. *κροκίς*, *crokis*, nap on cloth; connected with *κροκή*, *crokē*, thread, from *κρέκειν*, *krekein*, to weave + *λίθος*, *lithos*, stone). A sodium iron silicate of the amphibole group that occurs in fibrous or a-bestos-like filaments, and also sometimes massive or earthy. It has a silky lustre and is indigo blue to green in color. The best specimens are found in Griqualand, in the Orange River country, South Africa. This mineral frequently contains a siliceous base, such as ferruginous quartz, which imparts to it a golden yellow to yellowish-brown color, often handsomely mottled with the blue or green of the original mineral. This, when cut *en cabochon*, with a high summit and the longer diameter of the oval at right angles to the direction of the fibres of which the mineral is made up, yields the cat's-eye ray, in consequence of which the mineral is popularly known as *tiger-eye*, and has some value as a gem stone, being used when polished for umbrella handles, charms, etc. In the United States specimens are found in North Carolina, Pennsylvania, and Rhode Island, but these are of no value for ornamental purposes.

**CROCKETT, FRANCIS BACON** (1861-). An American electrical engineer. He was born

in New York City, received from Columbia University the E.M. in 1882 and the Ph.D. in 1894, and at Columbia was instructor in electrical engineering (1889-92), adjunct professor (1892-93), and professor thereafter. In 1892-95 he was president of the New York Electrical Society and in 1897-98 of the American Institute of Electrical Engineers. He published *The Practical Management of Dynamos and Motors* (1892), revised under the title *Management of Electrical Machinery* (7th ed., 1907); *Electric Lighting* (2 vols., 1896-1901; 8th ed., 1908); *Electric Motors* (1910). In 1914 he received an honorary M.S. from Columbia.

**CROCKERY**. See POTTERY.

**CROCKET** (from OF. *croquet*, variant of *crochet*, hook). An ornamental knob or leaf projecting boldly from a plane surface, or from the edge of a coping or gable, or from the hip or arria of a spire or pinnacle, or from the bell of a capital; usually in the form of a single heavy stem ending in leafage or flower. This ornament is probably derived originally from the corner volutes of the Corinthian type of capital with the acanthus leaves curled up under them. This form persists through all Romanesque styles and was developed by the Gothic architects into an independent ornament.

**CROCKETT**. A city and the county seat of Houston Co., Tex., 113 miles north of Houston, on the International and Great Northern Railroad (Map. Texas, E 4). It has a fine courthouse and the Mary Allen Seminary. Fruit, cotton, stock, and corn growing, lumbering, and the manufacture of cottonseed oil are the principal industries. The water works are owned by the city. Pop., 1900, 2612; 1910, 3947.

**CROCKETT, DAVID** (1786-1836). An American pioneer and politician, born in Greene Co., Tenn. He was a typical backwoodsman, unlettered but shrewd, and skillful as a hunter. He served under Jackson in the war against the Creek Indians, was elected to the Tennessee Legislature in 1821 and 1823, and in 1826, 1828, and 1832 was elected to Congress, where his oddities of dress attracted considerable attention. At the close of his third term he enlisted with the Texan forces, then in arms against Mexico, and in 1836 was one of the six survivors of the 140 defenders of the Alamo (q.v.), where, on March 6, the entire garrison was killed by Santa Anna's troops. Crockett was massacred by order of Santa Anna at his surrender. Crockett's well-known maxim was, "Be sure you are right, then go ahead." He very probably dictated or authorized *A Narrative of the Life of David Crockett* (1834); *A Tour to the North and Down East* (1835). He has been credited, probably erroneously, with *Exploits and Adventures in Texas* (1836); and *Sketches and Eccentricities* (1847), all of which are characterized by crude wit. The best popular biography is that by E. S. Ellis (Philadelphia, 1884).

**CROCKETT, SAMUEL RUTHERFORD** (1860-1914). A Scottish novelist. He was born at Duchrae, Galloway; graduated at Edinburgh University in 1879. His first publication, *Dulce Cor*, a book of poems, appeared in 1886. He was Free Church minister at Penicuik until the close of 1894, when he resigned to devote himself to writing. He wrote, notably: *The Stickit Minister* (1893); *The Raiders* (1894); *Bog-Myrtle and Peat* (1895); *The Grey Man* (1896); *The Standard Bearer* (1898); *Joan of the Sword*

*Hand* (1900); *The Banner of Blue* (1902); *Red Cape Tales* (1904); *Maid Margaret* (1905); *The Bloom of the Heather* (1908); *The White Plumes of Navarre* (1909); *Love in a Pernicketty Town* (1911); *Anne of the Barricades* (1912); *Patsy* (1913); *Sandy* (1914).

**CROC'ODILE** (Lat. *crocodilus*, Gk. *κροκόδειλος*, *krokodeilos*). An aquatic lacertiform carnivorous reptile, comparatively gigantic in size (several feet in length), representing the extensive subclass Crocodilia, regarded as the most highly organized of reptiles; more strictly one of the type genus *Crocodilus*, of the family Crocodylidae, typical of the order Eustachia. Crocodilians differ from lizards in many points of structure, and prominently in the horny plates within the thick skin which form a

on by civets, a monitor lizard, and many other enemies. In warm countries crocodiles bury themselves in mud in times of drought, and in cold countries during winter. They feed on fish, birds, and mammals, and human beings are sometimes their victims. The necessity of taking small pieces of food, induced by their rigidly articulated jaws and unelastic throat, compels them to sink all their large prey and keep it until it is sufficiently macerated to be torn into small pieces.

All the species have a voice, described as a loud short bark or croak, heard at night or when the reptile is angry. The age to which they live is unknown, but they arrive at reproductive maturity when about 10 years old and seem to continue to grow for a century or more. Captives,

SKULLS AND TEETH OF CROCODILIANS.

1. *Teleosaurus* (extinct). 2. *Gavia*. 3. Nile crocodile. 4. American alligator. 5. Back part of the series of teeth of the lower jaw of an alligator, with the inner wall of the alveolar groove cut away, showing the absence of partitions and the germs of the successional teeth. 6. Middle part of the same series, showing the partitions, forming here distinct sockets from which the teeth are raised to show germs of successional teeth and dentiparous cavities; a, a tooth turned around to show the effect (a hole) of the new germ on its base; b, shell of an old tooth and two successors.

dorsal armor, and the firm setting of the strong teeth into alveoli, the fourth tooth often being much enlarged as a seizer. The skull has greater solidity, and the internal anatomy generally is much advanced. The heart has four distinct chambers, preventing an admixture of arterial and venous blood, and the organs of sense are well developed. Their limbs are of much more use to them in walking than are those of either turtles or newts, yet their real home is in the water, where they swim by means of twisting strokes of their compressed tails, which are also powerful weapons, and of aid in gaining food, since animals standing at the edge of a piece of water deep enough to permit a crocodile to swim close to the shore unobserved are frequently swept into the stream by a blow of the tail, then seized and drowned.

All crocodilians are oviparous. The eggs are about the size of those of a goose and are buried in the sand or mud to be hatched by the heat of the sun alone. The females of some, if not all, of the species guard them and take care of their young; yet the eggs and very young are preyed

and those often alarmed, show an ability to learn from experience.

"The recent geographical distribution of the various kinds of Crocodilia loses its mystery," says Gadow, "when we recollect that during the Tertiary period alligators, crocodiles, and long-snouted gavials existed in Europe. The solitary species of alligator in China is the last living reminder of their former Periarctic distribution. The group, taken as a whole, is otherwise now intertropical, crocodiles alone inhabiting the Paleotropical region, together with long-snouted forms in the Oriental subregion, while alligators and caymans, with a few crocodiles, live in America."

The order Eustachia contains the crocodilians, ancient and modern. Two other (extinct) orders are recognized by Gadow (1902), both small and peculiar groups known only in late Mesozoic rocks. The genus *Etosaurus* represents the order Pseudosuchia, and *Belodon* the order Parasuchia. These and other Mesozoic crocodiles were marine and seem to have been descended from some terrestrial dinosaurian stock. "So

far as modern reptiles are concerned, only the *Chelonia* and *Sphenodon* are related to the Crocodilia, while monitors and other lizards resemble them only superficially."

The crocodilians (Eustachia) fall into seven families: 1. Teleosauridae, fossil in the Lias and Oölite of Europe; marine, and of the general appearance of gavials, with very long and slender snouts (see Fig. 1). 2. Metriorhynchidae, fossil in the Upper Oölite of Europe; marine. 3. Macrorhynchidae, fossil in fresh-water deposits of Wealden, etc., of Europe. 4. Gavialidae, the gavials (see GAVIAL), fossil and recent. 5. Atopsauridae, fossil in the Upper Oölite of France; diminutive alligator-like reptiles, only about a foot long. 6. Goniopholidæ, large fossil crocodiles of the late Mesozoic. 7. Crocodilidae, true crocodiles and alligators.

Of the crocodiles proper (which are characterized by their narrow, elongated heads and much-webbed feet), the best and longest known is the celebrated *Crocodilus vulgaris* of the Nile, which was revered, protected, and when dead embalmed, by certain sects of the ancient Egyptians. Crocodile worship, according to Flinders-Petrie, was indigenous, and one of the oldest worships of Egypt. It was most prevalent in Fayum, "the Lake of the Crocodile," whose marshy shores were especially favorable to that reptile, and which was the seat of the crocodile god Sebek. Up the Nile other places were devoted to this primitive worship, while at neighboring towns, such as Denderak, Apollinopolis, and Heracleopolis, it was detested. In the very earliest times the crocodile was regarded as a minister of vengeance, but not divine. Nowadays these animals are so much hunted that few remain in the lower Nile, but in its upper waters and in other African rivers crocodiles are still dangerously plentiful. The reptiles also abound in Madagascar; but the "common" one on the West Coast, from Senegal to the Congo, is *Crocodilus cataphractus*. Two species inhabit the fresh waters and estuaries of India (see MUGGER)—one ranging to Ceylon, and eastward to China, the Malay Islands, and Australia. A local species also inhabits northern Australia and Queensland. There are three crocodiles in North and South America and the West Indies. One (*Crocodilus americanus*) ranges as far north as Florida.

The eggs of crocodiles are prized by some people as food, the musk glands are taken for perfume, and the skin and fat are articles of considerable commercial value.

Consult Gadow, *Amphibia and Reptiles* (London and New York, 1902); and authorities on Egypt, Central Africa, India, Ceylon, and Australasia. See ALLIGATOR.

**Fossil Forms.** Fossil ancestors of the crocodilians are known from rocks as old as those of the Triassic, and they are found throughout the later rocks of Jurassic, Cretaceous, and Tertiary time. The more primitive forms, comprising the totally extinct suborder Parasuchia, are represented by *Belodon*, from the upper Keuper of Württemberg and the Triassic sandstones of North America; *Stagonolepis* of the Triassic of Scotland, and *Parasuchus* from the Gondwana series of central India. These three have long, narrow snouts, produced by the elongation of the premaxillary bones, and in the structure of their skulls they present some points of resemblance to the primitive dinosaurs and to the rhynchocephalians. The Mesosuchia of Jurassic age,

mostly reptiles of small size, have both long and short snouted forms, that differ from the Eusuchia in respect of the form of the palate, Eustachian tubes, and vertebrae. The principal genera are *Pelagosaurus*, *Metriorhynchus*, *Therapsuchus*, *Notosuchus*, *Teleosaurus*, *Stenosaurus*, from the Jurassic of Europe, and *Notochamps* from South Africa. The Eusuchia, also with both broad and long snouted species, range from the Upper Jurassic through the Cretaceous and Tertiary, and comprise all the recent species, in which the Eustachian tubes are inclosed by bone and the vertebral centra are procelous. Direct ancestors of the Malayan genus *Tomistoma* are found in the Miocene beds of the eastern Mediterranean region of south Europe. During the Eocene typical gavials lived in the seas of England, but they migrated southward during subsequent Tertiary time, and their remains are found fossilized in the Pliocene deposits of the Siwalik Hills of India. The largest-known crocodile was probably the genus *Rhamphosuchus*, from the Pliocene of the Siwalik Hills, India, with a length of over 50 feet.

**Bibliography.** Parker, "On the Structure and Development of the Skull in the Crocodile," *Zoological Society of London Transactions* (London, 1885); Tornier, "Die Crocodile," *Beihft zum Archiv für Naturgeschichte* (Berlin, 1901). For fossil forms, consult Dollo, "Première note sur les Crocodiliens de Bernissart," *Bulletin du Musée royal d'histoire naturelle de Belgique*, vol. ii (Brussels, 1883); Woodward, *Outlines of Vertebrate Paleontology for Students of Zoology* (Cambridge, 1898); Huxley, "On Stagonolepis and the Evolution of the Crocodilia," *Quarterly Journal of the Geological Society of London*, vol. xxxi (London, 1875); Woodward, "The History of Fossil Crocodiles," *Proceedings of the Geologists' Association*, vol. ix (ib., 1886); Gadow, "Amphibia and Reptiles," *Cambridge Natural History*, vol. viii (New York, 1902); Ditmars, *Reptiles of the World* (ib., 1910). See also ALLIGATOR, GAVIAL, NOTOSUCHUS; PELAGOSAURUS, TELEOSAURUS, THERIOSUCHUS.

**CROCODILE BIRD.** A plover (*Pluvianus aegyptius*) of the Nile valley, placed among the coursers (suborder *Cursori*). It is remarkable for its association with the crocodile and now is usually identified with the *trochilus*, or "leech-eater" of Herodotus, whose account of it, long regarded as fabulous, is quoted by Stejneger as follows: "As the crocodile lives chiefly on the river, it has the inside of its mouth constantly covered with leeches, hence it happens that, while all other birds and beasts avoid it, with the trochilus it lives at peace, since it owes much to that bird, for the crocodile, when he leaves the water and comes out upon the land, is in the habit of lying with his mouth wide open, facing the western breeze; at such times the trochilus goes into his mouth and devours the leeches. This benefits the crocodile, who is pleased and takes care not to hurt the trochilus." Modern writers wholly denied this, but it is now known to be mainly true; i.e., these birds do run about the bodies of crocodiles asleep or basking on the sand, in search of the insects or crustaceans clinging to their hides; and may at favorable moments pick parasites and particles of food from their lips, teeth, and gums. This has been actually seen by such good observers as Alfred Brehm and others and has also been asserted of a related bird, the Egyptian lapwing. A very complete account of the evidence of this

fact, and for identifying this species with the bird of the Herodotus tradition, will be found in Newton's *Dictionary of Birds* (London, 1894), article "Plover." The colors of this species are lavender and cream, strikingly marked with black on the crown and on the sides of the head, the black stripes joining and passing broadly along the back and also extending down the sides of the breast. Consult Whymper, *Egyptian Birds* (London, 1909). See Plate of PLOVERS.

**CROCODILE RIVER.** See LIMPOPO.

**CROCODILE TEARS.** Hypocritical, forced expressions of grief. This use of the term has sprung from the fiction of travelers that crocodiles shed tears over their prey. The conceit of *crocodiles' tears* (the animals have large lachrymal glands) was common in the sixteenth century. See Spenser's *Faerie Queene*, i, 14-18.

**CROCOCITE** (from Gk. *κροκοεις, krokoeis*, saffron-colored, from *κρόκος, krokos*, saffron). A lead chromate. It crystallizes in the monoclinic system, has an adamantine to vitreous lustre, and occurs in various shades from a bright hyacinth red to orange yellow. It is found in crystals in quartz veins or in intersecting gneiss or granite and is commonly associated with gold pyrite and other metallic ores. Crocoite occurs in the Urals, Hungary, Brazil, Tasmania, and with wulfenite in Maricopa Co., Ariz.

**CROCUS** (Lat., from Gk. *κρόκος, krokos*, saffron). A genus of the family Iridacæ. The species, about 70 in number, have much general similarity and are natives chiefly of the south of Europe and of the East. They set seed, but since the seed pods are underground and are frequently overlooked, and since production of flowers from seed-sown plants is slow, they are chiefly propagated by their corms. Saffron prepared from the stamens of *Crocus sativus* is used medicinally and for dyeing; for the latter purpose, however, aniline colors are replacing it. Some of the species are much cultivated in gardens for the beauty of their flowers, particularly those which, as *Crocus vernus* and *Crocus imperati* and the Dutch hybrids of *Crocus mariacus*, flower very early in the spring. The saffron crocus and some other species flower in autumn. The flowers of some species are fragrant. It is necessary frequently to take up crocus roots and plant anew, on account of the manner in which the corms multiply—the new forming in some species above the old, thus, in time, raising the corm to or even above the surface of the ground. When planted in lawns the bulbs must be replaced every two or three years, because they soon become smothered by the grass. The autumn flowering species are seldom cultivated in the United States. See Colored Plate with Iris. For illustration of *Crocus sativus* see article SAFFRON.

**CROCUS OF ANTIMONY**, or **CROCUS METALLORUM**. The bright-red antimony oxysulphide that is found native as *kermesite*.

**CROCUS OF MARS**, or **CROCUS MARTIS**. A polishing substance consisting of finely powdered ferric oxides.

**CROESUS, JOHN JAMES ROBERTSON** (1834-1906). An American civil engineer, born at Richmond, Va. After graduating in 1853 from the College of St. James (Md.) he served as engineer of the first high masonry dam in the United States at Boyd's Corners, N. Y. (1865-70), as topographical engineer of the New York Park

Department (1872-78), and as chief engineer of the Suburban Rapid Transit Railroad, New York (1885-91). He made several reports on water supply for New York and other cities. In 1903-05 he was consulting engineer of the New York State Health Department. He was treasurer in 1877-87 and president in 1901 of the American Society of Civil Engineers. Besides contributing to other magazines he was editorial writer for the *Sanitary Engineer* (1880-90).

**CRÆSUS** (Gk. *Κροισος, Kroisos*). A Lydian king of the Mermnada line. The son of Alyattes, whom he succeeded, he flourished in the sixth century B.C. He came to the throne about the age of 35 (560 B.C.), and found the wrangling Æolians, Dorians, and Ionians an easy prey, but he did not press his advantage as conqueror beyond the exaction of tribute. Save Lycia and Cilicia, all Asia Minor west of the Halys fell before him. His ability in practical affairs soon made his wealth a proverb. His capital, Sardis, became the brilliant centre of arts and letters, and Cræsus was a munificent patron. Herodotus asserts (i, 29 ff.) that Solon visited his court, and that, when asked by Cræsus whether the possessor of so great riches might not be deemed the happiest of men, he replied in effect that no man can be called happy who is yet alive; to be called happy he must have a fortunate death. When the long peace of the kingdom was evidently about to be disturbed by the encroaching Persians under Cyrus the Great (q.v.), Cræsus formed a league with the Lacedæmonians, and sought the aid also of Nabonidos of Babylon. He tried to propitiate the gods by bestowing rich gifts upon Apollo's shrine, and, encouraged by the oracle's deliverance that he "would destroy a great empire," he determined to take the offensive. With his Lydian forces only, he joined battle with the enemy, but achieved no advantage—a failure which he attributed to the inadequate support of his mercenaries. Returning to Sardis, he called upon the Lacedæmonians for their promised aid and invited the assistance of the Egyptian King, Amasis, meaning to renew the contest early in the next year. Cyrus, however, forced immediate action. Cræsus, almost totally unprepared, was defeated at Thymbra and, after a short siege of Sardis, surrendered his capital. After a reign of 14 years he gave up his crown to the Persian. The oracle spoke truth—he destroyed a great empire, but it was his own. Herodotus further relates that, as the Lydian awaited the fire which, by command of Cyrus, was to consume him, he remembered his conversation with the Athenian philosopher and called out "Solon, Solon, Solon!" Desiring to know the reason of the exclamation, Cyrus heard the story and straightway commanded the victim be spared. But the fire was by this time blazing vigorously. However, through Apollo's intercession merciful rain fell, and Cræsus was saved from the flames now raging about him. Recently, however, on the basis of a newly discovered poem of Bacchylides (q.v.), iii, 22 ff., it has been held that Cræsus had sought to escape capture by burning himself with his treasures, but that he was unable to effect his purpose. Consult How and Wells, *A Commentary on Herodotus*, vol. i, pp. 99-100 (Oxford, 1912); Jebb, *Bacchylides* (London, 1905). Cræsus, given a residence near Ecbatana, was taken into his

conqueror's favor and later into that of Cambryses. To both monarchs he is said to have rendered valuable service as a counselor, and both he survived. His end is not known.

**CROFFUT, WILLIAM AUGUSTUS** (1836-1915). An American journalist and author, born at Redding, Conn. During the Civil War he was first a soldier and then a correspondent in the field for the *New York Tribune*. Afterward he became editorially connected with various journals and was executive officer of the United States Geological Survey, whose publications he edited for some time. He is the author of *The War History of Connecticut* (1867); *A Helping Hand for American Homes* (1868); *A Midsummer Lark* (1882); *The Vanderbilt* (1886); *Folk's Next Door* (1892; 3d ed., 1904); *The Prophecy and Other Poems* (1893); a volume of poems, *Bourbon Ballads* (1880); the opening ode for the World's Columbian Exhibition (1893); *Deseret*, the libretto for the opera by Dudley Buck.

**CROFT** (AS, small field). A piece of inclosed land, usually connected with a humble kind of dwelling, whose inhabitant, the renter of the land, is called a "crofter." This method of letting small pieces of land, either for tillage or for pasture, is known as "the crofting system." This kind of petty farming was formerly common in Scotland, more particularly in the Highlands. See **CROFTER**.

**CROFT, KRÖFT, SIR HERBERT** (1751-1816). An English writer. He was educated at University College, Oxford, took orders, and was appointed to the living of Prittlewell, in Essex, which he retained till his death, passing, however, much of his time abroad. He wrote extensively, but is mainly remembered by his "Life" of the poet Young, which he contributed to Johnson's *Lives of the Poets* (1779-81). He succeeded capably in imitating Johnson's style. A novel in letter form called *Love and Madness* (1780) became notorious on account of the insertion of certain letters of Chatterton obtained under false pretense.

**CROFT, or CROFTS, WILLIAM** (1678-1727). An English musician. He was born at Nether Easington, Warwickshire, and studied music in the choir of the Chapel Royal, then under the direction of Dr. John Blow. He was organist of St. Anne's, Westminster, from 1700 to 1711. In 1707 he was also appointed organist at the Chapel Royal, and it was in this capacity that he produced the beautiful anthems which have perpetuated his fame. In 1724 he published his *Musica Sacra* (2 vols.), containing a collection of 30 anthems and a burial service. According to the preface of the composer, this was the first attempt made in England to print the score of a sacred composition from engravings on plates. Among the best anthems of Dr. Croft are the following: *I will Give Thanks* (1704), for the thanksgiving after the battle of Blenheim; *The Soul of the Righteous* (1714), for Queen Anne's funeral; *The Lord is a Sun and Shield* (1714), for the coronation of George I.; *O Give Thanks* (1715), for the suppression of the rebellion.

**CROFT'ANGEY, CHRYSAL**. The imaginary editor of Scott's *Chronicles of the Canongate*. He is said to have been intended for Scott's father.

**CROFTER**. A term designating a class of small tenants of the Scottish Highlands and islands who hold arable land in severalty and

usually certain rights of pasture in common. The crofter is for the most part a descendant of the lowest class under the early clan system; and the rights of common pasturage are traceable to the communal proprietorship of the clan. After the breaking up of the clans the legal status of the crofter became that of a tenant at will; by custom, however, he was usually accorded a certain fixity of tenure.

During the first half of the eighteenth century the chieftain of the clan, while losing his political leadership, came to be regarded as the proprietor of the soil. In some districts the chieftains who had been at war with the royal power were displaced, and the land granted to supporters of the king. In either case the followers of the chieftain became tenants, owing rent for their land instead of personal services and dues, as formerly. Nevertheless, their economic position was fairly satisfactory, especially in the islands. But with the expansion of the woolen industry it became profitable for the landlord to turn his estate into sheep runs; accordingly wholesale evictions of the crofters took place in many of the Highland districts. Moreover, natural increase of population had necessitated a reduction in the size of the individual holdings, so that at the end of the eighteenth century the whole class of crofters had been reduced to a condition of abject poverty. In the early part of the nineteenth century emigration of the crofters to America and the British colonies was officially encouraged; workhouses were established, and extensive measures for relief in time of famine were undertaken; but no permanent improvement was thus secured. In 1883 a parliamentary commission was appointed to investigate the conditions of life of the crofters. As a result of the investigation, the Crofters' Act of 1886 was passed. By this act the crofter is granted permanence of tenure, so long as he does not violate the specified conditions of his tenure: rents are fixed by a commission; compensation is allowed for improvements which the tenant may make, and the tenant has a right to demand the assistance of the landlord in making other permanent improvements. In order to remedy the evil effects of the excessive subdivision of holdings, the crofter is empowered to call upon the landlord to rent him additional land when the original holding is deemed by the commission to be insufficient.

Since the passage of this act the position of the crofter has materially improved. Rents have been lowered; and the crofter, assured that improvements which he may make will not have the effect of raising his rent and will not be taken from him through eviction, has advanced appreciably in methods of agriculture and in industry. See **SCOTLAND, Agriculture**.

Consult: Dalriad, *The Crofter in History* (Edinburgh, 1888); Guernier, *Les crofters écossais* (Paris, 1897); *Crofter Colonization: Eleventh Report of His Majesty's Commission* (London, 1901); "Crofters Past and Present," in *Blackwood's Magazine* (Edinburgh, 1906); *Crofters' Holdings, Scotland, Act* (London, 1907).

**CROFTON, FRANCIS BLAKE** (1841-1911). A Canadian author. He was born at Crossboyne, County Mayo, Ireland, and was educated at the Royal School, Dungannon, and at Trinity College, Dublin, where he graduated in 1863. He came to Canada and in 1864-65 was pro-

fessor of classics in Bishop's College, Lennoxville, Province of Quebec. For several years afterward he lived in New York City, where he was a contributor to various periodicals. In 1882 he was appointed librarian to the Nova Scotia Legislature, retiring from that position in 1906. He was an ardent advocate of Imperial federation. He published several humorous books, including *The Bewildered Querists and Other Nonsense* (1875), *The Major's Big Talk Stories* (1881), *The Hairbreadth Escapes of Major Mendax* (1889); also biographical and political studies, as *Haltburton, the Man, the Writer* (1889), *For Closer Union* (1897), *The Imperialism of Haltburton* (1898); *Sombre Tints* (poems), and *Is Suicide Sin?* In 1897 he became a vice president of the International Library Conference, London, England, and in 1901 a vice president of the Canadian Society of Authors.

**CROFTS**, krŏfts, ERNEST (1847-1911). An English painter, born at Leeds. He studied under A. B. Clav in London, and with E. J. Huxton in Dusseldorf, where he lived for many years. Among his works are: "Cromwell at Marston Moor" (1877); "Napoleon and the Old Guard at Waterloo" (1895); "Funeral of Charles I" (1907, Bristol Museum). They are distinguished for accuracy and truth of detail, but are deficient in action and often merely theatrical in effect. However, Crofts stands among the first of the few English battle painters. He was elected to the Royal Academy in 1896 and named keeper in 1898.

**CROGHAN**, krŏ'gan, GEORGE (1791-1849). An American soldier, born near Louisville, Ky. He graduated at William and Mary College in 1810, entered the army in 1812, distinguished himself under General Harrison at Fort Meigs, and on Aug. 1-2, 1813, defended Fort Stephenson (on the present site of Fremont, Ohio) against the attack of a greatly superior force of British and Indians, for which he received the thanks of Congress and a gold medal. In 1814 he was promoted to be lieutenant colonel, but resigned in 1817 and was appointed postmaster at New Orleans in 1824. He became inspector general with the rank of colonel in 1825, joined General Taylor's forces in Mexico in 1846, and took part in the battle of Monterey.

**CROISSET**, krwä'zä, MARIE JOSEPH ALFRED (1845- ). A French classical philologist, born in Paris. He was appointed professor of Greek at the Faculté des Lettres in 1885 and became a member of the Academy of Inscriptions in the following year. He is the editor of various Greek authors and wrote: *De Personis apud Aristophanem* (1873), *Xenophon, son caractère et son talent* (1873); *La poésie de Pindare et les lois du lyrisme grec* (1880); and, in conjunction with Maurice Croiset, *Histoire de la littérature grecque* (5 vols., 1887-99; new ed., 1913), an admirable work. An excellent abridgment of the last-named work, entitled *Manuel d'histoire de la littérature grecque*, appeared in 1901 (Paris; new ed., 1913). With J. Petitjean he wrote *Grammaire grecque* (3d ed., Paris, 1896).

**CROISSET**, MAURICE (1846- ). A French classical philologist, brother of the preceding, born in Paris. He became professor of the Greek language and literature at Montpellier in 1876, and professor of the Greek language and literature at the Collège de France in 1893. He is the author of *De Publica Eloquentia Prin-*

*cipiis apud Græcos in Homericis Carminibus* (1874); *Des idées morales dans l'éloquence politique de Démosthène* (1874); *Essai sur la vie et sur les œuvres de Lucien* (1882); *Aristophanes and the Political Parties at Athens* (Eng. trans. by James Loeb, London, 1909), and, in conjunction with Alfred Croiset, *Histoire de la littérature grecque*, 5 vols., and *Manuel d'histoire de la littérature grecque*.

**CROIX**, krwä, CARLOS FRANCISCO DE, MARQUÉS DE CROIX (1699-1786). A Spanish general and administrator. He was born at Lille, French Flanders, and after serving in the Spanish army was appointed commandant at Ceuta, whence he was transferred in the same capacity to Puerto de Santa María. He afterward became captain general of Galicia and was Viceroy of New Spain (Mexico) from 1766 to 1771. He was distinguished by strict integrity and high administrative ability. During the last 15 years of his life he was Viceroy and captain general of Valencia.

**CROIX**, CHARLES DE. See CLERFATT.

**CROIX**, TEODORO DE, CABALLERO DE CROIX (c.1730-91). A Spanish soldier. He was born at Lille, French Flanders, and was a brother of the Viceroy of New Spain (Mexico). In 1777 he was appointed Governor of the newly established district known as the "Interior Provinces" of the country and of Sonora, and served in this capacity until 1784. During his brief term as Viceroy of Peru (1784-90) he did much to ameliorate the condition of the Indians and enacted several laws for their protection. He died soon after his return to Madrid.

**CROIZETTE**, krwä'zét, SOPHIE (1848-1901). A French actress. She was born in St. Petersburg. After two years at the Conservatory she obtained the first prize for comedy. In 1869 she appeared at the Théâtre Français as Queen Anne in *Un verre d'eau* and four years afterward was made a "sociétaire." Mademoiselle Croizette rarely appeared in classic rôles. Her best work was in the *Sphinx* (Octave Feuillet), *L'Étrangère* (Dumas fils), *Fourchambault* (Émile Augier), and *La princesse de Bagdad* (Dumas fils), her last and greatest creation. She married and retired from the stage in 1885.

**CROKER**, B. M. An English novelist. She was a daughter of William Sheppard, rector of Kilgefin, Roscommon, Ireland, was educated in England; married John Croker, of the Royal Munster Fusiliers, and traveled extensively in India and other parts of the East. Mrs. Croker wrote some good Irish peasant stories, as *Terence* (1899), and excels in depicting Anglo-Indian life, particularly the fashionable feminine world. The scenes of *Jason and Other Stories* (1899), comedy running into farce, are laid in India, Australia, and England. Her novels are commonly translated into French and German. Besides those above may be cited: *Proper Pride* (1882); *Pretty Miss Neville* (1883); *Village Tales and Jungle Tragedies* (1894); *In the Kingdom of Kerry* (1896); *Beyond the Pale* (1897); *A State Secret* (1901); *Angel* (1901). *Johanna* (1903); *Nine Days' Wonder* (1905); *Old Cantonment* (1905); *Serpent's Tooth* (1913).

**CROKER**, JOHN WILSON (1780-1857). An English writer and politician. He was born at Galway, Ireland. Educated at Trinity College, Dublin, he entered Lincoln's Inn as a student in 1800 and two years later was called to the Irish bar. In 1804 he published *Familiar Epistles*, a

clever satire in verse on the Irish stage, and *An Intercepted Letter from Canton*, a satire in prose on Dublin society. Both ran through several editions. In 1808 he issued a treatise on the *State of Ireland, Past and Present*—a pamphlet on Catholic emancipation—which brought him to the notice of politicians, and in the same year he was elected member of Parliament for Downpatrick. A warm defense in Parliament, in 1809, of the Duke of York, charged with corrupt administration, helped Croker in the same year to the office of Secretary to the Admiralty, a post which he held for more than 20 years. He was one of the founders of the *Quarterly Review* and contributed many violent party articles to its pages, as well as a large number of personal and abusive reviews, one of the most famous being on Keats's *Endymion*. As Rigby he was caricatured by Disraeli in *Coningsby*. In Parliament he steadily opposed the Reform Bill in all its stages, and after its enactment he refused to enter Parliament again. He took an active part in the establishment of the Athenæum Club and rendered good service to literature by his annotated edition of Boswell's *Johnson* (1831), famous for Macaulay's savage review of it, and by his publication of the *Suffolk Papers* (1823) and Lord Hervey's *Memoirs of the Court of George II* (1848). His *Stories from the History of England for Children* (1817) supplied Scott with the idea of *Tales of a Grandfather*. He also continued for a time to write verse. His *Battle of Talavera* (1809) pleased Wellington and was praised by Scott. Consult Jennings, *Diaries and Correspondence of Croker* (London, 1884).

**CROKER, RICHARD** (1843– ). An American politician, well known as a leader of Tammany Hall in New York City. He was born at Black Rock, Ireland, but when two years of age was taken by his parents to America, and for a short time attended the public schools in New York City. He was then for seven years employed as a machinist, became prominent in the New York volunteer fire department, and took an active interest in local politics, and about 1865 identified himself with the Tammany Hall organization. From 1868 to 1870 he served as an alderman; was reelected in 1872, but was forced out of office by Tweed, and acted for several months, on Mayor Havemeyer's appointment, as city marshal, his special duty being the collection of arrears in taxes. He was elected city coroner in 1873 and again in 1876, was appointed fire commissioner in 1883, and was reappointed to that position by Mayor Abram S. Hewitt in 1887. In 1886, on the death of John Kelly (q.v.), he became chairman of the finance committee of that organization and its recognized leader. From April, 1889, to February, 1890, he was city chamberlain. He conducted the successful mayoralty campaigns of Hugh Grant, Thomas F. Gilroy, and Robert A. Van Wyck in 1889, 1893, and 1897 respectively, and during the presidential campaign of 1900 supported W. J. Bryan. In 1902, soon after the election of Seth Low to the mayoralty, he resigned as leader of Tammany Hall, and the following year went to England, and later to Ireland. In 1907 he won the Derby with his race horse Orby. Consult Lewis, *Richard Croker* (New York, 1901).

**CROKER, THOMAS CROFTON** (1798–1854). An Irish author and antiquarian. He was born

in Cork, Jan. 15, 1798. He early devoted himself to the collection of legends and songs of the Irish peasantry; and in 1824 he published his *Researches in the South of Ireland*, characterized by a happy blending of humor and sentiment with archaeological learning. The work was followed by the *Fairy Legends and Traditions of the South of Ireland* (1825), trans. into German by Grimm (1826); *Legends of the Lakes* (1829); *Popular Songs of Ireland* (1839). Croker also edited *Memoirs of Joseph Holt, General of the Irish Rebels*, wrote two novels, and contributed to the magazines. He devoted much time to archaeology, being member of many antiquarian societies. Through the influence of John Wilson Croker, a friend but no relative, he obtained at the age of 20 a clerkship in the Admiralty, a position which he held till 1850. He died Aug. 8, 1854. Consult "Life," by his son, prefixed to *Fairy Legends* (London, 1859), and "Memoir of T. C. Croker" in the introduction of his *Walk from London to Fulham* (ib., 1860). The *Popular Songs* were edited by Morley (ib., 1886). Other works that deserve to be mentioned are: *Adventures of Barney Mahoney* (2d ed., 1832); *Historical Songs of Ireland* (1841), relating especially to the revolutionary struggle between James II and William III, *The Keen of the South of Ireland* (1844), which illustrates Irish political and domestic history, manners, music, and superstitions; *Narratives Illustrative of the Contests in Ireland in 1641 and 1690* (1841); and *Britannia's Pastorals* (with W. Browne, 1852).

**CROLL, KRÖL, JAMES** (1821–90). A Scottish geologist. He was born at Whitefield, Perthshire, and received only the usual brief schooling of a peasant's son. He studied philosophy and physical science and published a treatise on the *Physical Cause of the Change of Climate during the Glacial Period* (1864). He was appointed an officer of the geological survey of Scotland and in that post (1867–81) prosecuted researches which resulted in works including the treatise on *Climate and Time in their Geological Relations* (1875), in which he ascribed climatic changes during geological epochs to secular variations in the eccentricity of the earth's orbit, and *Climate and Cosmology* (1885), containing a discussion of the origin of the sun's heat and the probable development of the nebulae and stars. Though considerable difference of opinion exists as to the real value of these views in relation to the establishment of a sound geological theory, there is general recognition of the value of his works as stimulating and directing inquiry. In his later life he returned to the field of philosophical speculation and published *The Philosophic Basis of Evolution* (1890), in which he discusses the fundamental principles underlying the doctrine of evolution. Consult *Autobiographical Sketch of James Croll, with Memoir of his Life and Work*, by J. C. Irons (London, 1896).

**CROLY, DAVID GOODMAN** (1829–89). An American journalist, born in New York and educated at the New York University. He was associated with the *Evening Post* and the *New York Herald* (1854–58) and then became city editor and subsequently managing editor of the *New York World*. In 1872 he predicted the panic of 1873 and the failures of Jay Cooke & Co. and the Northern Pacific Railroad. From 1872 to 1878 he was editor of the *Daily Graphic*.

He married "Jennie June" (see CROLY, JANE CUNNINGHAM). His published works include *Seymour and Blair: Their Lives and Services*, with an appendix containing a *History of Reconstruction* (1868), and a *Primer of Positivism* (1876).

**CROLY, GEORGE** (1780-1860). An Irish author and clergyman. He was born in Dublin and was educated at Trinity College there. In 1810 he was ordained a priest of the English church, and in 1845 became rector of St. Stephen's, Walbrook, London. His first work was a poem, entitled *Paris in 1815*, which appeared in 1817. From this time up to within a short period from his death he wrote almost incessantly as dramatic critic of the *New Times*, as a contributor to *Blackwood's* and the *Literary Gazette*, and as the author of numerous satires, romances, and biographies. Among his works are: *The Angel of the World* (1820); *Tales of St. Bernard* (1829); the novel *Marston* (1846); and the poem *The Modern Orlando* (1846). He was an imitator of the grandiose style of Byron and Moore, yet *Salathiel* (1829), his chief publication, contains many effective scenes and is still good reading. It was reprinted in New York in 1901 as *Tarry Thou till I Come*.

**CROLY, JANE CUNNINGHAM** (1831-1901). An American author and journalist, better known as JENNIE JUNE. She was born in England, came to the United States when a girl, and at an early age became a contributor to newspapers and magazines. She called the first congresses of women in the United States in 1856 and 1860, organized Sorosis in 1868, founded the New York Woman's Press Club in 1889, and in 1892 became professor of journalism and literature in the Rutgers Women's College. She was married to David G. Croly in 1856. Her works include: *For Better or Worse* (1875), *Jennie Juneana: Talks on Women's Topics* (1864); *Cookery-Book for Young Housekeepers* (1866); *Knitting and Crochet* (1885); *Thro' on her Own Resources* (1891); *History of the Woman's-Club Movement in America* (1898 and 1900). She was the editor of *Demorest's Magazine* from 1860 to 1887, and later was editor of the *Cycle* (which she founded) and the *Home-Maker*. Consult *Memories of Jane Cunningham Croly, "Jennie June"* (New York, 1904).

**CRO-MAGNON**, krô'mâ'nyô's'. A type of mankind supposed to have inhabited southwestern Europe at the end of the Magdalenian epoch, at the close of the Pleistocene. They were marked by the most dolichocephalic of crania, elongated at the back (index, 63-74.8), with low face and orbits, but by good stature. In 1858 workmen unearthed, in the cave called "Cro-Magnon" near Les Eyzies, in the Department of Dordogne, France, imperfect skeletons of three men, two women, and a child. A peasant found a human bone in a rabbit hole, and at the Cave of Aurignac the remains of 17 persons were recovered. At Laugerie Basse, in the Vézère valley, another discovery was made. In the Cave of Baumes Chaudes, in Lozère, 35 crania were collected, all of this long, low-faced type. To this type, wherever found, the name of Cro-Magnon is given. Consult: Mortillet, *Le préhistorique* (Paris, 1882); Deniker, *Races of Man* (London, 1900); Ripley, *The Races of Europe* (New York, 1899); and, for critical observations, Sergi, *The Mediterranean Race* (London, 1901); Obermaier, *Der Mensch der*

*Vorzeit* (1912); Keith, *Ancient Types of Man* (1912). See MAN.

**CROMARTY FIRTH**, krôm'är-ti fërth (from Gael. *crom*, Oir. *cromb*, Welsh *orion*, Bret. *crom*, crooked + Oir. art. Gall. *orion*, stone, and *firth*, *firth*, from Icel. *fjörðr*, ford; ultimately connected with Lat. *portus*, port, Skt. *par*, to cross). A landlocked inlet of the North Sea, on the northeast coast of Scotland, just northwest of the Moray Firth, 18 miles long, 3 to 5 miles broad, and 5 to 35 fathoms deep (Map: Scotland, D 2). The entrance is between the North and South Soutars, two high wooded headlands, and is 1½ miles across, with 12 to 30 fathoms of water, and with the Three Kings Reef about half a mile off land. Near the firth are the towns of Dingwall, Invergordon, and Cromarty. In the red sandstone, near the entrance, Hugh Miller discovered the fossil fishes *Pterichthys*, *Osteolepis*, etc.

**CROMARTYSHIRE**. See ROSS AND CROMARTY.

**CROMDALE** (from Gael. *crom*, crooked + Eng. *dale*). A village in Inverness-shire, Scotland, on the east bank of the Spey. It was the scene of a battle fought May 1, 1690, between the Scottish Jacobites and 800 of William III's troops, in which the latter were victorious. The event is celebrated in a song entitled "The Haughs of Cromdale."

**CROME**, JOHN (1768-1821). An eminent English landscape painter and etcher, founder of the Norwich school. He is usually called "Old Crome," to distinguish him from his son of the same name. Born on Dec. 22, 1768, he passed his youth in humble circumstances, acquiring his taste for painting during an apprenticeship to a sign painter. Together with Robert Ladbroke, a printer's apprentice, he rented a garret and started upon his career as a painter. The two artists spent their leisure time sketching in the field, endeavoring to reproduce nature exactly. Crome's pictures thus became "exact views" of the places he loved. His technique is reminiscent of the Dutch masters, whom he studied in the houses of the Norfolk gentry, in his capacity as a drawing teacher, and in a visit to Paris. Hobbema, in especial, was his favorite master; but the foundation of Crome's art was a genuine English realism, and his pictures combine great breadth with delicacy of color and lightness of brushwork, and although they are occasionally marred by overattention to detail, they always contain a true feeling for light and air. He painted trees with great force and individuality. His "Oak at Poringlam," in the National Gallery, and the "Willow" are highest masterpieces of their kind. His works are mostly in private possession, especially among the gentry of Norfolk. The National Gallery contains three good examples, "Household Heath" and "Chapel Fields, Norwich" besides the one already mentioned. In the Metropolitan Museum of Art, New York, are two good examples, "Haut-bois Common" and "The Old Oak." His favorite subjects were taken from the scenery about his native home, but he was capable of adapting himself to the livelier tones of French landscape, as is indicated in his "Fishmarket at Boulogne" and his "Boulevard des Italiens, Paris," both in Keswick Hall near Norwich. Although he followed etching as a pastime only, he was an excellent etcher, working with great care and detail, though sometimes not

achieving tone and atmosphere. His etchings were published after his death, in 1834, under the title of *Norfolk Picturesque Scenery* and again in 1838 and 1850. Crome seldom exhibited in London, but he displayed at different times no less than 288 pictures in the Norwich Society of Artists. This society he himself founded in 1803, becoming its president in 1808. He died, April 22, 1821, at Norwich, where nearly all of his life had been passed. Consult his biography by Turner (Norwich, 1838), Wodderspoon (ib., 1858), and Hardie, in the *Connoisseur* (London, 1904); also Van Dyck, *Old English Masters* (New York, 1902); Dickes, *The Norwich School of Painting* (London, 1905); Binyon, *J. Crome and J. S. Cotman* (ib., 1906); Theobald, *John Crome's Etchings* (ib., 1906).

**CROME, JOHN BERNY** (1794-1842). An English landscape painter, son and pupil of John Crome, usually called "Young Crome." He was born in Norwich and was appointed president of the Norwich Society of Artists in 1819. He painted usually coast and river scenes of England, France, Holland, and Italy, and his best pictures are so like those of his father that his "Yarmouth Water Frolic" (1821) was long considered Old Crome's masterpiece. Towards the end of his life his art degenerated, and he produced little besides potboilers, including many moonlight effects. Consult W. F. Dickes, *The Norwich School of Painting* (London, 1905).

**CROMER.** A seaport and watering place on the north coast of Norfolk, England, 21 miles north of Norwich (Map: England, H 4). It stands on the top of one of the highest cliffs on the coast. Nearly all the old town, called "Shipden," with one of the churches, was swept away by the sea about the year 1500. As the sea is encroaching on the land, vessels have to load and unload on the open beach. In 1825 some cliffs 200 feet high fell into the sea. Seamen call Cromer Bay the Devil's Throat, from its dangers to navigation. There is an excellent golf course in the neighborhood. Pop., 1901, 3781; 1911, 4073.

**CROMER, EVELYN BARING, first EARL** (1841- ). An English diplomatist and administrator, born at Cromer Hall, Norfolk, and educated at Woolwich Academy. After a brilliant career in the Royal Artillery, he was private secretary to the Earl of Northbrook, Governor-General of India, from 1872 to 1876; was Commissioner on the Egyptian public debt from 1877 to 1879, was Controller General of Egyptian finances from 1879 to 1880; was Finance Minister of India from 1880 to 1883, when he became Consul General and Agent in Egypt. He was created first Baron Cromer in 1892, Viscount in 1898, and Earl in 1901. He became virtually British Viceroy of Egypt, and his efficient administration won for him the appellation of "Maker of Modern Egypt." He rescued it from bankruptcy, replaced corrupt administrators by honest officials, reduced taxes, reformed the army, increased trade, and greatly extended railway, postal, and telegraph facilities. He resigned in 1907 and returned to England, where in 1911 he was active in securing Unionist votes for the passage of the Parliament Bill, so as to prevent the creation of new peers. He wrote *Modern Egypt* (1908) and *Ancient and Modern Imperialism* (1910).

**CROMER, MARTIN** (1512-89). A Polish historian and geographer, born at Biecz, near

Cracow, and educated at the academy in that city. He was secretary to the eldest son of King Sigismund I and was intrusted with diplomatic missions to Pope Paul V and to the emperors Charles V and Ferdinand I. In 1578 he was appointed Bishop of Ermeland. His history of Poland, from its beginning to the year 1506, *De Origine et Rebus Gestis Polonorum* (1555; frequently reprinted), is a valuable source of information on this subject. Another important work is the geographical and statistical publication *Polonia* (in Latin, 1586; Ger. trans., 1741).

**CROMLECH, króm'lek.** See **DOLMEN**.

**CROMPTON.** A town in Lancashire, England, 3 miles northeast of Oldham, and 11 miles northeast of Manchester. It has important cotton manufactures and collieries. Pop., 1901, 13,427; 1911, 14,750.

**CROMPTON, SAMUEL** (1753-1827). An English inventor, whose spinning mule revolutionized the cotton-weaving industry. In his youth he was largely occupied with weaving at home, and it was the dissatisfaction caused by the machine he used that led to the perfection of his invention in 1779. Unable to bear the expense of taking out a patent, he exploited his machine by private arrangement with manufacturers, some of whom later denied their obligations to him, so that for his valuable invention he received less than £70. In 1812, after much labor, he secured from the House of Commons a grant of £5000, the only official recognition bestowed upon him. Consult French, *Life and Times of Crompton* (London, 1860).

**CROMPTON'S SPINNER.** See **SPINNING**.

**CROMWELL.** A dramatic work by Victor Hugo (1827). It was not intended for the stage. The preface to its first edition has since become famous as containing the breviary of French dramatic "Romanticism."

**CROMWELL, BARTLETT JEFFERSON** (1840- ). An American naval officer, born near Springplace, Ga. He attended the Naval Academy (1857-60). During the Civil War he served in the South Atlantic blockading and Eastern Gulf squadrons, and rose to the rank of lieutenant commander. He was promoted commander in 1874, and as such was intrusted with the navigation of the flagship *Ticonderoga* during Admiral Schufeldt's voyage around the world in 1879-81. He thereafter successively became captain in 1880, commodore in 1898, and rear admiral in 1899. After the liberation of Cuba from Spain Cromwell was ordered to take charge of the naval station at Havana. In 1901 he was appointed to the command of the United States fleet in South American waters. In addition to his service at sea, Cromwell was inspector of ordnance at the Philadelphia navy yard (1874-78), at the Portsmouth navy yard (1882-84), and captain of the Norfolk navy yard (1891-94). He retired in 1902.

**CROMWELL, HENRY** (1628-74). The fourth son of Oliver Cromwell. At the age of 16 he served as a soldier in the Parliamentary army. In the Barebones Parliament he was one of the six Irish members. In 1655 he went to Ireland as a major general, and was appointed Lord Lieutenant in 1657. His rule was popular, and his moderation to Royalists received the approval of Charles II, who at the Restoration confirmed his Irish estates under the Act of Settlement. His latter years were passed as

a farmer on his estate, Spenway Abbey, in Cambridgeshire. He died March 23, 1674. His great-grandson, the last representative of the house of Cromwell, died in 1821.

**CROMWELL, OLIVER** (1599-1658). Lord Protector of England. He was born at Huntingdon, April 25, 1599, and was the only surviving son and heir of Robert Cromwell and Elizabeth, daughter of William Steward, whose family, tradition notwithstanding, has no connection with the royal house of Stuart. The Cromwell family sprang from Katherine, who was the sister of Thomas Cromwell, the Hammer of the Monks, and who married Morgan Williams, a Welsh brewer of means. Their son Richard took the surname Cromwell and, profiting by his uncle's influence, rose to wealth and honor in the service of Henry VIII, retaining his sovereign's favor even after his uncle's fall in 1540. The family continued to be prominent from that time and was noted for its lavish entertainment of royalty, but, owing to the extravagance of Oliver's uncle of the same name, the fortunes of the family had been squandered, and in 1627 the family seat at Hinchinbrook was sold to Sir Sidney Montague. Oliver's father was the second son of Henry, the Golden Knight, and the grandson of Richard (Williams) Cromwell, and he therefore represents a younger branch of the family, whose income was never large.

Little is known of Cromwell's early life. He was educated at the free school of Huntingdon under Dr. Thomas Beard, an austere Puritan. In 1616 he entered Sidney Sussex College at Cambridge, a stronghold of Puritanism, but soon withdrew, probably owing to his father's death, in 1617. There is no foundation for the reports by royalist biographers of wildness and profligacy in his early years, though he was boisterous and only moderately successful at his studies. He probably studied law for a short time at Lincoln's Inn. In 1620 he married Elizabeth Bourchier, daughter of a London merchant, and she seems to have brought him a considerable dowry. The few glimpses that we have of his life before the beginning of his active public career, which may be said to date from the meeting of the Long Parliament in 1640, leave no doubt as to which side he would espouse in the approaching struggle. For some years he was in the throes of a religious conflict, from which he emerged in a triumphant conversion. Throughout the rest of his life he was deeply religious, an ardent though tolerant Puritan. The earliest letter from his pen which has come down to us (1636) is a solicitation for a subscription to maintain a lectureship, by which means the Puritans supported preachers, owing to the neglect of this function by the established clergy. He was elected to the Parliament of 1628, where his only recorded speech is directed against the opponents of Puritanism. He watched the career of Gustavus Adolphus with eager sympathy, and it is thought that his own early military successes were in part a result of his careful study of Gustavus Adolphus' campaigns. He took less interest in purely political matters, but we know of three instances where he championed the poorer inhabitants of his districts whose rights of pasturage were threatened. He was fined £10 in 1630 for having neglected to be knighted, but we have no record of his having resisted the forced loan or the payment of ship money. Yet there can be no doubt that he was dissatisfied

with Charles's arbitrary rule, and there is a tradition which corresponds well with circumstances, that he once intended to emigrate to New England. If this is true, it was probably between 1631 and 1636, and it may have been prevented by a legacy which fell to him in the latter year. He was elected to the Short Parliament in 1640 and to the Long Parliament in the same year.

Cromwell played a subordinate part in the deliberations of the Long Parliament. He had no share in the impeachment of Strafford. He was rather more interested in the constitutional reforms, but most of all in ecclesiastical matters, and joined Sir Henry Vane and Hampden in demanding the abolition of the episcopacy, "root and branch." On the outbreak of the Irish insurrection of 1641 it was he who proposed that Parliament should assume control of the militia. When the Civil War broke out in 1642, he was very active in securing the authority of Parliament in the eastern counties and commanded a troop of horse in the battle of Edgehill, Oct. 23, 1642. In 1643 the war everywhere went against Parliament except in the Eastern Association, where Cromwell not only kept the Royalists at bay, but even gained ground. His one troop had grown to 10, and afterward grew to 14, forming two regiments of the best-drilled cavalry in England. For his services in the Eastern Association Parliament made him lieutenant general of the army of the Eastern Association (1644), and appointed him a member of the committee of both kingdoms. In the battle of Marston Moor, July 2, 1644, he commanded the Parliamentary horse, whose final charge decided the fortunes of the day. Hitherto the Parliamentarians had been inferior in cavalry, whose military importance was greater in those days than now. It was due to Cromwell that this inferiority was overcome. It is at about this time that the division of the Puritans into two parties clearly appears. The Presbyterians, who were largely in the majority in Parliament, were alarmed at the growth of religious sects in the army, and they were anxious for an accommodation with Charles in order to be free to suppress Independency. The army, on the other hand, had become the stronghold of Independency and desired religious toleration and a vigorous prosecution of the war. Cromwell was the spokesman of the party of toleration. He impeached Manchester for half-heartedness in the prosecution of the campaign and found support with the Commons, but not with the Lords. He then disinterestedly proposed the reorganization of the army under new leaders, and on the adoption of the New Model (q.v.), and the Self-Denying Ordinance (q.v.), assumed that his military career was over. On the contrary, he was appointed lieutenant general in command of the cavalry, and by a charge of the Parliamentary horse decided the day at Naseby, the last battle of the First Civil War, June 14, 1645. The distrust between the Presbyterian Parliament and the Independent army became an open breach when the Parliament not only proposed to disband the army without paying the arrears due to the men, but made overtures to Charles which seemed to the army a surrender of what they had been fighting for. Cromwell, now the recognized leader of the army, hesitated, as was his wont, and tried to mediate between the two parties,

but in the end threw in his lot with the army. It was he who ordered the abduction of the King from Holmby. In the Second Civil War, a consequence of this rupture, in which the King played off one party against the other, Cromwell defeated the Scots under Hamilton, who were over twice his number, in a remarkable three days' battle near Preston, Aug. 17-19, 1648. The army now clamored for the life of the King, whose duplicity had caused the renewal of the war. For a time Cromwell held back, but when his mind was once made up no legal technicality could stop him. "I tell you we will cut off his head with his crown upon it," he cried roughly, in answer to an argument denying the jurisdiction of the High Court of Justice. He had nothing to do with Pride's Purge, being absent at the time, but he accepted the result of it, and was foremost in all the events leading up to the King's execution (Jan. 30, 1649).

On the abolition of the monarchy the position of the Commonwealth was extremely perilous. It was torn asunder by partisan strife, and it was without a friend in Europe. Scotland, alienated by the execution of the King and hostile to the dominant Independent and Military party, proclaimed Charles II King, not only of Scotland, but of England and Ireland as well. Ireland demanded immediate attention, for the Second Civil War had its counterpart there, and a coalition of the various parties had all but driven the Parliamentary forces out of the island. Cromwell accepted the command of the forces destined for its reconquest on March 30, 1649, and landed at Dublin, August 15, with three regiments. At Drogheda, "being in the heat of action," he ordered the famous massacre of the garrison of 2800 men, which had refused to capitulate (September). This was in accordance with the strict rules of war of the time, though it had not been put into practice in England. Cromwell explained that it was a just punishment for the outrages of 1641, which he looked upon as entirely wanton and without provocation. The immediate military effect of the massacre was advantageous, since for a time town after town surrendered with little resistance, but its unfortunate political effect lasts until the present day. At Wexford there was another massacre, though not by Cromwell's order. In May, 1650, the resistance was so nearly broken that Cromwell left the completion of the conquest to his successors, Ireton and Ludlow, and hastened back to confront the danger from the side of Scotland. He swept away with impatience Fairfax's legal objection that the Scots had a right to choose their own King, for he saw clearly that England must either coerce the Scots or be coerced by them. He defeated one Scottish army at Dunbar, Sept. 3, 1650, and another, commanded by Charles II in person, exactly one year later at Worcester. While he had to be on his guard from this time forth against plots and uprisings, Worcester marks the end of armed resistance to the Republic. He brought Scotland and Ireland (or the Protestant part of Ireland) into legislative union with England, the first union of the three kingdoms, and gave them free trade and a better administration of justice, but the taxes to support the English garrisons were heavy. In addition, Ireland groaned under the attempt to transplant her Catholic population, or, as the

plan was afterward modified, her Catholic landowners, to the wilds of Connaught in order to make way for English settlers. Cromwell's treatment of Ireland was pitifully harsh, but it was caused principally by his complete ignorance of Irish affairs, though his ignorance was not greater than that of his countrymen.

The problem which now confronted the leaders of the Commonwealth was the substitution of a permanent constitutional government in the place of the provisional Rump. The withdrawal of the Cavalier party on the outbreak of the Civil War, and the expulsion of the Presbyterian members in the Pride's Purge, had left only 60 or 70 members in habitual attendance in Parliament, whose power depended solely upon the support of the victorious army. Not only had they made themselves very unpopular by their harsh measures, but they refused to give way to a newly elected and more truly representative Parliament which the army desired, unless they were made members of the new Parliament without election, and clothed with power to exclude undesirable new members, especially those of Royalist sympathies. In the course of the prolonged dispute they were guilty of what Cromwell considered a breach of good faith, whereupon he angrily expelled them on April 20, 1653, to the great satisfaction of the English nation. But with them went the last vestige of civil authority in the land, and England was left face to face with the army—a state of affairs which, in view of the well-known English detestation of military rule, could not long endure. Under the influence of Harrison and the extreme Puritans he called on the various Congregational churches to nominate members for a Parliament, which resulted in the Nominated or Barebone's Parliament (q.v.) of 149 members (of whom four represented Scotland and six Ireland). This Parliament soon showed such a readiness to adopt radical and impossible measures, and was so torn asunder by party strife, that when the Moderates rose, early on the morning of Dec. 12, 1653, and voted its dissolution, Cromwell was greatly relieved, though he had no previous knowledge of the conspiracy. The officers thereupon adopted a written constitution, called the *Instrument of Government* (q.v.), which is of great interest from the point of view of constitutional history, under which Cromwell, on December 16, assumed the title of Protector. An elected Parliament of one House was provided for, whose powers were defined by the Instrument. The first Parliament which met under its provisions, on Sept. 3, 1654, is of great importance to a correct understanding of the Protector's treatment of his parliaments. He invited a revision of the Instrument, but in the debates on it the Parliament showed signs of making itself perpetual, of taking away liberty of conscience, and of reducing both the army and the Protector to its exclusive control, thus breaking down the balance of power between the Protector and Parliament which the Instrument had sought to establish. Cromwell interfered by force and excluded from the House all who refused to sign an agreement not to alter the Instrument in these "four fundamentals." This incident is crucial in the appreciation of Cromwell's parliamentary difficulty. The leaders of the popular party failed to understand that government by consent of

OLIVER CROMWELL  
FROM AN ENGRAVING BY JAMES CALDWELL AFTER A PAINTING BY ROBERT WALKER

the people meant the return of the Stuarts and that the sole salvation of the Commonwealth lay in a strong executive backed by the army. Furthermore, his demands were moderate, for, says Mr. Gardiner, "his four fundamentals have been accepted by the nation and are at this day as firmly rooted in its conscience as parliamentary supremacy itself." Cromwell dissolved the Parliament without coming to an agreement with it and without receiving the necessary supplies. In the year following, Penruddock's rising drove the Protector to acts as illegal as any of which Charles I had been guilty. He divided England into 10 military districts, over which he placed major generals, with extensive police powers backed by military force, the estates of Royalists being taxed by his own arbitrary power to support the scheme. It was a success as a police measure, but the nation groaned when Cromwell used this method to enforce a stricter standard of Puritan morality than the people were ready to accept. The foreign wars made new supplies necessary, and in 1656 the Protector called his last Parliament, from which his council first excluded 100 undesirable members. Upon the discovery of a plot against the Protector's life, Parliament drew up a new constitution called the *Humble Petition and Advice*, providing for an Upper House and offering Cromwell the title of King. Cromwell hesitated for some weeks, but, finding the title unpopular with the army, he at last declined it. The *Petition and Advice* was then passed with the title Protector substituted for that of King, and was adopted in place of the *Instrument of Government*. Upon the second session of the Parliament in January, 1658, it was found that the promotion of Cromwell's supporters to the Upper House had given the Republicans a majority in the Lower House. They not only insisted upon revising the constitution anew, but were forming con-piracies of a dangerous sort whereupon Cromwell dissolved them, February 4. He had failed to transform the military into a civil state.

The vigor with which Cromwell conducted England's foreign affairs has been much admired. He had little to do with the Dutch War, which he disliked as a war against a Protestant power. This he brought to a successful conclusion, April 5, 1654. The two leading nations of Europe were at war and bidding for his alliance. He was at first inclined to favor Spain, partly from his sympathy for the French Huguenots and partly because France supported Henrietta Maria and the Stuart cause. Spain, however, had prohibited English ships from sailing in West Indian waters, even though bound for an English colony. In December, 1654, Cromwell sent out a badly equipped expedition under Penn and Venables, which suffered a disastrous repulse in an attack against Santo Domingo, but seized Jamaica, whose importance was little appreciated at that time. This attack naturally precipitated a war with Spain in Europe in which Blake, having previously brought the Bey of Tunis to terms (April 4, 1655), destroyed one Spanish treasure fleet at sea (Sept. 8, 1656) and sank another in the harbor of Cadiz (April 20, 1657). Two treaties were signed with France—the first on Oct. 24, 1655, providing for the expulsion of the Stuarts from French territory; the second on March 23, 1657, providing for a joint attack upon the Spanish

Netherlands, in which the English greatly distinguished themselves before Dunkirk, in the battle of the Dunes, June, 1658, and secured Mardick and Dunkirk as their share of the spoils. But while Cromwell succeeded by force of arms in making England universally feared, he was very ignorant of European politics and his aims were faulty. He was completely under the illusion that the Catholic powers were on the point of combining to crush Protestantism, and he was constantly negotiating with Charles X of Sweden, whom he erroneously regarded as a second Gustavus Adolphus, to form a counter Protestant league, not knowing that it was impossible to reconcile, for religious purposes, either Sweden and Holland on the one hand, or France and Spain on the other. Moreover, in allying with France against Spain he did much to prepare the way for Louis XIV and the period of French aggression in Europe. Nor should it be forgotten that his foreign enterprises greatly increased the burdens of a heavy taxation which alienated the people of England from his rule. He died on Sept. 3, 1658.

In 1899 Parliament erected a statue to Cromwell in Westminster, facing Whitehall. The debates which the erection of this tardy memorial to the great Puritan leader occasioned in Parliament show how vital to many Englishmen are, even yet, the principles for which their forefathers struggled in the period of the Great Civil War.

**Bibliography.** The chief source of information in forming an estimate of Cromwell's character will always be his own words, first collected by Carlyle, *Letters and Speeches of Oliver Cromwell* (London, 1845). The speeches are to be found in Stamer, *Speeches of Oliver Cromwell, 1644-58* (ib., 1901). His parliamentary career is to be followed in *Parliamentary History*, vols. ix-xi (ib., 1760-62), together with the numerous memoirs, of which those of Whitelock and Ludlow deserve special mention. The *Calendars of State Papers, Domestic Series*, together with the great collections of Rushworth, Clarendon, Somers, and Carte, are rich mines of material, while the *Thurloe State Papers* (ib., 1742) contain the greater part of the diplomatic correspondence. Gardiner, *Constitutional Documents of the Puritan Revolution* (ib., 1899), is invaluable. Of the older writers, Guizot and Ranke are still useful, but they are largely superseded by the great works of Gardiner, *History of England, 1603-42* (10 vols., London and New York, 1883-84); *The Great Civil War* (ib., 1893); and the *History of the Commonwealth and Protectorate* (ib., 1894-1901). Gardiner has summarized the results of his researches in *Cromwell's Place in History* (ib., 1897) and *Oliver Cromwell* (London, 1901). Hardly inferior to Gardiner's work is Firth, *Oliver Cromwell and the Rule of the Puritans in England* (London and New York, 1900). The biographies by Harrison (London, 1838) and Morley (New York, 1900) are brilliant, but hardly of equal value. The *Oliver Cromwell* of Theodore Roosevelt (ib., 1900) is brief and readable. Gardiner and Mullinger, *Introduction to the Study of English History*, part ii (London, 1894), contains an account of the literature of the period, both contemporary and modern. Later works include: Marshall, *Story of Oliver Cromwell* (New York, 1908); Rhodes, "A New Estimate of Cromwell," in his *Historical Essays* (ib., 1909); Firth, *The Last*

*Years of the Protectorate* (London, 1909); Wilkinson, "A Narrative of the Circumstances Concerning the Head of Oliver Cromwell," in the *Archæological Journal*, vol. lxviii (ib., 1911); Larned, *A Study of Greatness in Men* (Boston, 1911); Johnstone, *Oliver Cromwell* (London, 1912); Marshall, *Through Great Britain and Ireland with Cromwell* (New York, 1912).

**CROMWELL, RICHARD** (1626-1712). Lord Protector of England. The third and eldest surviving son of Oliver Cromwell; he was born at Huntingdon, Oct. 4, 1626. When Oliver became Protector, he wished to train his son as his successor. Richard entered Parliament, was appointed one of the Committee of Trade, and became Chancellor of Oxford. But, of an amiable temperament, he was more addicted to pleasure and sport than statecraft, and after his father's death, in 1658, retained the protectorship for not quite nine months, until his willing demission in May, 1659. He lived in retirement on the Continent during 20 years and returned to England in 1680. Richard was of a peaceful, bucolic temperament that little fitted him to play his part in stirring times. He died at Cheshunt, July 12, 1712. Consult Guizot, *History of England under Richard Cromwell* (London, 1856).

**CROMWELL, THOMAS, EARL OF ESSEX** (c.1485-1540). An English statesman and Henry VIII's prime agent in effecting the Reformation. He was born at Putney, near London, where his father, a man of peculiarly evil character, engaged in the varied pursuits of blacksmith, brewer, innkeeper, fuller, and shearer of cloth. After a meagre education he went to Antwerp as a clerk in a factory and successfully devoted his spare time to learning languages. He spent some time in Italy as a soldier and trader. He returned to England in 1513 and, while following the paternal vocations, developed into a money lender, a lawyer, and an influential citizen. He received a trusted appointment from Cardinal Wolsey and under his patronage entered Parliament, where his able speeches attracted attention. He successfully defended his master against the bill of impeachment, and Henry VIII, appreciating his talent, made him his private secretary. He received a succession of honors, which, after knighthood in 1531, included the Chancellorship of the Exchequer (1533), Mastership of the Rolls and Vicarship-General of Ecclesiastical Affairs (1535), the office of Lord Privy Seal (1536), and that of Lord Chamberlain (1539), and culminated in his creation as Earl of Essex in 1540. For seven years, by subservience to the King, he held supreme sway in the royal councils and controlled all the administrative departments. He carried out faithfully the monarch's schemes to establish the Reformation. His methods in suppressing the monasteries earned him the designation of *malleus monachorum*, the 'Hammer of the Monks.' He was very unpopular, and after promoting the marriage of Henry with Anne of Cleves, the King's aversion to the Queen was extended to the instigator of the union. Henry assented to a bill of attainder for treason on a long list of offenses, and, after a piteous entreaty for mercy, Cromwell was beheaded on July 28, 1540. Froude praises his character. Dixon calls him "the worst enemy the Church of England ever had." Consult: Drayton, *Historie of the Life and Death of the Lord Cromwell* (London, 1609); Hook, *Lives of the Archbishops of Canterbury*, vol. vi (ib., 1868); Froude, *History of*

*England* (ib., 1881-82); Merriman, *Life and Letters of Thomas Cromwell* (Oxford, 1902); Van Dyke, *Renaissance Portraits* (New York, 1905); Dixon, *History of the Church of England*, vol. i (London, 1884-1902); Gairdner, *The English Church in the Sixteenth Century* (ib., 1902).

**CROMWELL, THE LIFE AND DEATH OF THOMAS, LORD.** A play of unknown authorship, once attributed to Shakespeare, and entered at Stationers' Hall in 1602. It was founded on the tragic fate of the Earl of Essex. See **CROMWELL, THOMAS**.

**CRONACA**, krón'a-ká, IL. See POLLATUOLO, SIMONE DEL.

**CRONEGK**, krón'ek, JOHANN FRIEDRICH, BARON VON (1731-58). A promising young German dramatist of the pre-Lessing period. He was born at Ansbach (in the principality of that name), was educated at Leipzig, where he came under Gellert's influence, and at Halle, and in 1754 received the title of *Hofrat*. His best-known work is his tragedy *Codrus* (1757), in rhymed Alexandrines—a somewhat rhetorical but sonorous imitation of the French classic manner—which was awarded the prize offered by the Berlin bookseller Nicolai for the best German tragedy. His ode *Der Krieg* (1756) was praised by Lessing. He was among the first to direct German scholarship towards the study of Spanish literature. Consult the biography by Gensel (Leipzig, 1894).

**CRONENBERG**, krón'en-bérk. See **KRONENBERG**.

**CRONHOLM**, krón'hólm, ABRAHAM PETER (1809-79). A Swedish historian. He was born at Landskrona, was educated at Lund, and in 1849 became professor of history in that city. His works, which are based upon a careful personal study of the archives of Stockholm, Copenhagen, Berlin, Dresden, Vienna, and of other leading European cities, include the following: *Förnnordiska Männen* (1833-35); *Katholska Ligan och Huguenotterna* (1839); *Skånes politiska historia* (1847-51); *Sveriges historia under Gustaf II Adolfs regering* (1857-72).

**CRONJE**, krón'ye, PIETRUS ARNOLDUS (1835-1911). A Boer soldier. In the campaign of 1881 against England he distinguished himself at Doornkop and at Majuba Hill, where he was second in command. In 1896 he captured the raiders led by Dr. Jameson into the Transvaal. At the outbreak of the war against England in 1899 he was stationed with 6000 troops on the western frontier. At Modder River (November 28) he fought an indecisive battle with Lord Methuen, who was marching with his division to the relief of Kimberley, in which he inflicted terrible loss on the enemy, and at Magersfontein (December 11) he won a brilliant victory over the same general. Immediately upon the beginning of Lord Roberts's invasion of the Orange Free State, in 1900, he sent a portion of his army to the north, and with the remainder sought to oppose the English advance on Pretoria. At last surrounded, he entrenched himself at Paardeberg and, under a scathing artillery fire, sustained that position until the failure of food and ammunition compelled him to surrender, with some 4000 troops and six guns, on February 27, the anniversary of Majuba Hill. He was thereupon sent as a prisoner of war to St. Helena. He was one of the most sagacious of the Boer leaders and was a member of the Executive Council of the Transvaal. In 1905

he was forced by poverty to appear in the United States in a mimic war.

**CRON'OS.** See SATURN.

**CRONSTADT,** krön'stät. See KRONSTADT.

**CROOK,** kryk. A coal-mining town in Durham, England,  $4\frac{1}{2}$  miles northwest of Bishop Auckland. Pop., 1901, 11,470; 1911, 12,308.

**CROOK** (ME. *croke*, *crok*, Icel. *krókr*, hook). In musical instruments, such as the French horn or trumpet, a circular tube, which fits into the end of the instrument next the mouthpiece, for the purpose of lengthening the tube of the instrument and thus altering the pitch to suit the key of the music. These crooks save the player the great inconvenience of carrying as many instruments as there are keys in which he is to play.

**CROOK, GEORGE** (1828-90). An American soldier, born near Dayton, Ohio. He graduated at West Point in 1852 and spent the next nine years in California. He became colonel of the Thirty-eighth Ohio Volunteers and captain of the Fourth Infantry in the Federal army in 1861, served throughout the Civil War, and in March, 1865, was brevetted brigadier general and major general for services during the war. In March and April, 1865, he was in command of the cavalry of the Army of the Potomac. In 1866, as lieutenant colonel in the regular army, he was sent to Idaho, where he remained until 1872, in almost constant warfare with the Indians there. He subdued the tribes in Arizona in 1872 and in 1875-77 completely crushed the power of those in the Northwest, after Custer's defeat at their hands. He protected the Apaches (1882) from the encroachments of the Mormons and others on their lands, and defeated the Chiricahuas in 1883. Obtaining sole charge of all the tribes, he encouraged them in their industries and made them self-supporting communities. He was promoted to the rank of brigadier general in 1873 and to that of major general in 1888. From this year until his death he was in command of the Department of the Missouri.

**CROOK, ISAAC** (1833- ). An American clergyman and educator, born at Crossenville, Perrv Co., Ohio. In 1859 he graduated from Ohio Wesleyan University, and, having been ordained (1864) to the Methodist Episcopal ministry, he held pastorates in Ohio, Illinois, Michigan, Minnesota, and Kentucky. He was president of the University of the Pacific in 1891-92 and of Ohio University in 1896-98, and chancellor of Nebraska Wesleyan University in 1892-96. After serving for four years as pastor at Ironton, Ohio, he was presiding elder of the Chillicothe District, from 1902 to 1908. He is author of *Character Sketch of Hon. C. C. White, of Crete, Nebraska* (1896), *Jonathan Edwards* (1903); *Earnest Expectation* (1905), *John Knox, the Reformer* (1906); *The Great Five* (1907).

**CROOKBILL.** See WEYBILL.

**CROOKED ISLANDS.** A group of the Bahamas, consisting of Crooked Island, Acklin Island, Fortune Key, and Castle Island. The largest, Crooked Island, contains 76 square miles (Map: West Indies, D 2). In common with some others of the group, it is valuable chiefly for its salt. Pop., 1911, Acklin Island 1733, Crooked Island 1541. Chief town, Pitt's Town.

**CROOKED LAKE.** See KEUKA LAKE.

**CROOKES,** kryks. SIR WILLIAM (1832- ).

An English physicist and chemist, born in London, June 17, 1832. He studied at the Royal College of Chemistry, where he later assisted Hofmann. In 1854 he became superintendent of the meteorological department of the Radcliffe Observatory, Oxford, and in 1855 professor of chemistry at the Chester Training College. After 1859 he was editor and proprietor of the *Chemical News*, which he had founded, and after 1864 he also edited the *Quarterly Journal of Science*. He was foreign secretary of the Royal Society in 1908-12, at various times was president of the Chemical Society, the British Association, and the Institute of Electrical Engineers, and was chosen corresponding member of numerous continental societies. In 1897 he was knighted; in 1907, with Edouard Buchner, he was awarded the Nobel prize for chemistry; and in 1910 the Order of Merit was conferred upon him. He is an authority of the first rank on sanitary questions, especially the disposal of the sewage of towns, and his method of producing extreme vacua rendered incandescent electric lighting a practical possibility. His original researches in chemistry and physics led to the discovery of the metal thallium in 1861. Subsequently he devoted several years to an elaborate investigation on the atomic weight of that element. Among his other discoveries may be mentioned the sodium amalgamation process for separating gold and silver from their ores (1865), and especially his new method for the spectroscopic investigation of substances—one of the numerous and brilliant results of his prolonged studies of "radiant matter." He also devised the radiometer (q.v.) and later the otheoscope, a greatly improved form of the radiometer. Among his publications may be mentioned: *A Practical Handbook of Dyeing and Calico Printing* (2d ed., 1883), an English translation of Wagner's *Chemical Technology* (2d ed., 1894); *Select Methods of Chemical Analysis* (4th ed., 1905); *Diamonds* (1909); papers on spectroscopy and psychic research. His original views on the genesis of the elements may, with the development of knowledge, form an important contribution to chemical philosophy.

**CROOKES TUBE.** A sealed vessel of glass from which the air has been exhausted and a high vacuum obtained, through which a current from an induction coil or other source of high-potential electricity is passed. A Crookes tube differs from a Geissler tube (q.v.) in the higher degree of its exhaustion and in several important particulars which will appear in the description of its operation given below. The name is derived from Sir William Crookes (q.v.), who was able by his improvements in the Sprengel pump (see AIR PUMP) to obtain vacuum tubes of greater efficiency than those of previous investigators. Crookes was not the inventor of the highly exhausted tube, as Hitrtorf, of Münster (1869), had performed a number of experiments with tubes having a comparatively high vacuum; but it remained for the English investigator to push the experiments still further and to formulate hypotheses and theories.

A Crookes tube contains two or more electrodes known as the cathodes and anodes. These are formed by platinum wires which pass through the glass walls of the tube and terminate in metallic plates of the material and shape desired for the experiment. The exhaustion is effected by connecting the tube to a mercurial

air pump and then sealing it when the proper point is reached. The terminals are then connected with an induction coil, or other source of high potential, which is set in operation. The important peculiarity of such a vacuum tube noticed by Professor Hittorf consists of a fluorescence (q.v.) or golden-green glow produced on the glass opposite the cathode. There is not the brilliancy of glow that is found throughout the tube as in the Geissler tube, and the rays which produce the fluorescence issue from the surface of the cathode in straight lines normal or perpendicular to that surface, not being bent to follow the shape of the tube, as would be seen in tubes of a less degree of exhaustion. These cathode rays have many other interesting properties. They may be deflected by a magnet, and they cause a number of substances, such as diamonds and rubies, on which they impinge, to become brilliantly phosphorescent; their energy is sufficient to heat to a high temperature a surface on which they fall and can also be exhibited in causing a small wheel with mica vanes, mounted within the tube, to revolve as a result of the impact. Crookes used cathodes of plane, convex, and concave surface, from which the rays would be emitted in beams either parallel, diverging, or converging. After studying these rays and their properties he concluded that the discharge from the cathode represented a new form of matter which he considered as existing in an ultragaseous or radiant state. The most important use of the Crookes tube is for the production of Röntgen rays, or X-rays (q.v.), which are the rays passing out from the tube opposite the cathode. To produce these rays a tube must be employed where the vacuum is adapted to the work in hand, and there are self-regulating tubes on the market in which this property is obtained. In 1913 a tube susceptible of more exact regulation and power, as well as requiring less time of exposure, was devised by W. D. Coolidge, in which the cathode is formed of a tungsten filament maintained at a high temperature through the passage of current from a storage battery. These tubes have a very high vacuum and give a pure electric discharge. The absence of fluorescence is a notable feature. See ELECTRICITY for an account of the passage of a current through rarefied gases.

**CROOKES VACUUM.** See MATTER, *Theories of Matter*.

**CROOKS, GEORGE RICHARD** (1822-97). An American Methodist theologian. He was born in Philadelphia and graduated in 1840 from Dickinson College, where he later taught for several years. Between 1848 and 1880 he held pastorates in Philadelphia, Wilmington (Del.), New York City, and Brooklyn (N. Y.); thereafter until his death he was professor of historical theology at Drew Theological Seminary. Professor Crooks, one of the most influential and distinguished Methodist theologians of his time, was instrumental in inducing his church to sanction seminaries as a training for its ministry. He edited the *Methodist* from 1860 to 1875 and published an edition of Butler's *Analogy* (1852); *The Life and Letters of Rev. Dr. John McClintock* (1876); *Sermons* (1885) and *Life* (1890) of Bishop Matthew Simpson; and *The Story of the Christian Church* (1897).

**CROOKS, WILLIAM** (1852- ). An English labor leader. He was born in a London poorhouse, was apprenticed to a cooper when he was 14, and became active in the labor-union

movement. He was a member of the London County Council after 1892, mayor of Poplar in 1901, was elected to Parliament from Woolwich in 1903, and was reelected in 1906 and 1910.

**CROOKSTON**, kroyk'ston. A city and the county seat of Polk Co., Minn., 230 miles west by north of Duluth, on the Red Lake River, which affords abundant water power, and on the Great Northern and the Northern Pacific railroads (Map: Minnesota, A 3). Among noteworthy features are the Government Land Office, Carnegie library, Federal building, courthouse, St. Joseph's Academy, Bethesda Hospital, and the Northwestern School of Agriculture. The city derives a considerable trade from a tributary agricultural country and manufactures lumber, farm machinery, gas engines, castings, sashes and doors, leather goods, furniture, wagons, biscuits, etc. Crookston was incorporated in 1879. The government is administered by a mayor and a council. Pop., 1900, 5359; 1910, 7559.

**CROOKSVILLE.** A town in Perry Co., Ohio, 64 miles by rail southeast of Columbus, on the Zanesville and Western and the Cleveland, Akron, and Cincinnati railroads (Map: Ohio, F 6). It has large deposits of potter's clay, and there are a number of pottery plants, a crate factory, brickworks, and coal mines. Oil is also produced in considerable quantities. Pop., 1900, 835; 1910, 3028.

**CROPTIES.** A derisive nickname given by the Protestant Irish to their Catholic opponents in the time of the English Revolution of 1688. The name was applied to the Irish rebels of 1798 because of their sympathy with the French Revolutionists. The Roundheads were so called in 1642. A factional Irish song called "Cropies Lie Down!" was a favorite with Orangemen.

**CROPSEY, JASPER FRANCIS** (1823-1900). An American landscape painter, born at Rossville, N. Y. At first he studied architecture, but he abandoned it to study art and in 1847 visited Italy. He spent seven years in London and exhibited at the Royal Academy. His "Autumn on the Hudson" and "Richmond Hill" were praised by John Ruskin. Cropsey belonged to the so-called Hudson River school (q.v.) and painted mostly views of the White Mountains or the Hudson and English landscapes of similar type. His earlier works were in great demand; they are good in color and show much skill and feeling, of which scarcely a trace remains in his later pictures. Other pictures by him are: "Niagara Falls" (Brooklyn Museum); "Landscape" (Metropolitan Museum, New York); "Lake George," "View near Rome," and "Sunset, Lake George" (New York Public Library); "The Sibyl's Temple"; "High Tom, Rockland Lake." Consult Isham, *History of American Painting* (New York, 1905).

**CROQUEMITAINE**, krok'mé'tân' (Fr., from *croquer*, to crunch). A French monster or bogey invoked by nurses to frighten unruly children. In L'Epine's *Légende de Croquemitaine*, Mitaine, a goddaughter of Charlemagne, searches for the castle of Croquemitaine, near Saragossa.

**CROQUET.** See ROQUE.

**CRORE.** See LAC.

**CROSBY, KRŌZ'bī, ALPHEUS** (1810-74). An American educator and author. He was born at Sandwich, N. H., graduated at Dartmouth in 1827, and studied theology at Andover from 1831 to 1832. He became professor of Latin and Greek at Dartmouth in 1833 and of Greek

only in 1837. From 1857 to 1865 he was principal of the Salem (Mass.) Normal School. He published an edition of the *Anabasis*; *The Second Advent* (1850); *First Lessons in Geometry* (1851); *A Compendious Grammar of the Greek Language* (1871); *Greek Tables* (rev. ed., 1871); *Greek Lessons* (rev. ed., 1872).

**CROSBY, ERNEST HOWARD** (1856-1907). An American reformer and author, born in New York City. He was educated at New York University and the Columbia Law School. While a member of the State Assembly (1887-89), he introduced three high-license bills, all vetoed by the Governor. From 1889 to 1894 he was judge of the Court of the First Instance at Alexandria, Egypt. He became an exponent of the theories of Count Tolstoy, whom he visited before his return to America. His relations with the great Russian later ripened into intimate friendship, and he devoted himself in America largely to promulgating Tolstoy's ideas of universal peace. His book, *Plain Talk in Psalm and Parable* (1899), was widely commended by such writers as Bjornson, Kropotkin, and Zangwill. He is also author of *Captain Jinks, Hero* (1902); *Swords and Plowshares* (1902); *Tolstoy and his Message* (1903; 2d ed., 1904); *Tolstoy as a Schoolmaster* (1904); *Garrison, the Non-Resistant* (1905); *Broad-Cast* (1905); *Labor and Neighbor* (1908).

**CROSBY, FANNY** (MRS. FRANCES JANE VAN ALSTYNE) (1820-1915). An American hymn writer, born at South East, Putnam Co., N. Y. She lost her eyesight when an infant six weeks old. After attending the Institution for the Blind, in New York City, for nine years, she became instructor in Greek and Roman history and in various other branches at that institution, until her marriage to Alexander Van Alstyne in 1858. Some of her several thousand hymns are contained in Moody and Sankey's *Gospel Hymns* and in Mr. Sankey's *Sacred Songs and Solos*. Among her best-known verses are: "Safe in the Arms of Jesus", "Pass Me Not, O Gentle Saviour"; "Jesus is Calling"; and "I am Thine, O Lord." Her songs include the well-known "There's Music in the Air" and "Hazel Dell." Her secular poems have been published under the titles *The Blind Girl and Other Poems* (1844) and *Bells at Evening and Other Poems* (1898). Consult her *Memories of Eighty Years* (1906).

**CROSBY, HOWARD** (1826-91). An American Presbyterian clergyman, born in New York City. He graduated at New York University in 1844, was professor of Greek there in 1851-59, and subsequently held the same chair in Rutgers College. He was ordained in 1861 and became pastor of the First Presbyterian Church in New Brunswick, N. J. From 1863 to 1891 he was pastor of the Fourth Avenue Presbyterian Church, New York, and from 1870 to 1881 was chancellor of his alma mater. He was moderator of the General Assembly of 1873. He was instrumental in organizing, and for several years was president of, the Society for the Prevention of Crime and was prominent in his activity against the illegal liquor traffic, but distinguished between temperance and total abstinence. He was a member of the American Committee which revised the New Testament. Besides sermons and addresses, he published: *The Lands of the Moslem* (1851); *Notes on the New Testament* (1863); *Social Hints for Young Christians* (1866); *Jesus: His*

*Life and Works* (1870); *Thoughts on the Pentateuch* (1873); and commentaries on Nehemiah, Joshua, etc.

**CROSBY, JOHN SCHUTLER** (1839-1914). An American soldier. He was born in Albany Co., N. Y., was educated at New York University, was appointed second lieutenant of the First Artillery in 1861, served throughout the Civil War, and, after being three times brevetted, acted for a time as adjutant general on the staff of General Canby. Subsequently he served as aid, with rank of lieutenant colonel, under Sheridan and Custer against the Indians, and resigned from the army in 1871. He was United States Consul at Florence, Italy, from 1876 to 1882; was Governor of Montana Territory from 1882 to 1884; and from 1884 to 1886, when he resigned, was First Assistant Postmaster-General. In 1889 he served as school commissioner of the city of New York.

**CROSBY, PRICE** (1823-99). An American naval officer. He was born near Chester, Pa., entered the navy in 1838, and in 1861 served in Chesapeake Bay. He participated in the capture of New Orleans and the bombardment of Vicksburg, and in 1863-64 was employed chiefly in blockade duty. In 1864 he was placed in command of the *Metacombet* and participated in the attack on Mobile. He was promoted to be captain in 1868, commanded the South Atlantic squadron, was made rear admiral in 1882, and in 1883 was retired.

**CROSBY HALL.** A mediæval Gothic dwelling house in London on Bishopsgate Street, built in 1466 by Sir John Crosby. It is the scene of a part of Shakespeare's *Richard III.* Richard of Gloucester lived here for a time, and Sir Thomas More, who purchased the house, wrote his *Utopia* in it. Some of the original chambers still remain. The hall, after having been used for a variety of purposes, is now an eating house.

**CROSIER** (ME. *croser, crocer*, from *crois, croasse, croce, cross*, from Latin *crux, cross*). The pastoral staff of a bishop. Throughout antiquity a hooked or curved staff had been an emblem of civil and particularly of religious authority. The crozier is sometimes regarded as derived from the staff of the Roman augurs. It was adopted by early Christian bishops as a symbol of authority. It took two forms—that of the *tau* (T) with a short transverse top piece, giving the shape of a small *crux commissa*, in which the cross appears as a symbol of the authority by which the bishop ruled; and that of the curved end or volute, imitating the shepherd's crook, emblem of the office of the bishop to keep the Lord's sheep. The tau form seems the earlier, judging from extant monuments, for no records of the crook form exist as early as the Carolingian period. The tau often ends in the head of a lion, emblem of episcopal power; the crook often impales a serpent or a dragon, symbol of the triumph over evil. Abbots were often

CROSIER.

privileged to carry the crossier, as a symbol of their pastoral office, as early as the fifth century, and long before the other episcopal insignia of mitre and cross were allowed to them. Some of them still retain the *pannisellum* (a small silk veil hanging to the staff), which has long disappeared from those of bishops. Consult: Barraud and Martin, *Le bâton pastoral* (Paris, 1856); Lind, *Ueber den Krummstab* (Vienna, 1863). See COSTUME, ECCLESIASTICAL.

**CROSLAND, THOMAS W (ILLIAMS) H (ODGKSON).** A British editor and author. He became known as a contributor to the *Leeds Mercury* supplement, *Yorkshire Weekly Post*, *Black and White*, *Saturday Review*, *The Gentlewoman*, *Public Opinion*, and the *Evening Standard*. From 1899 to 1902 he was assistant editor of the *Outlook* (London). In 1905 he became editor of the *English Review*, in 1911 editor of the *Penny Illustrated Paper*, and later assistant editor and director of the *Academy*. His writings include: *The Unspeakable Scot* (1902); *Lovely Woman* (1903); *The Lord of Creation* (1904); *The Enemy* (1904); *The Wild Irishman* (1905); *The Suburbans* (1905); *Red Rose, verse* (1905); *The Country Life* (1906); *The Beautiful Tectotaller* (1907); *English Songs and Ballads* (1907); *Sonnets* (1912); *Taffy Was a Welshman* (1913).

**CROSSMAN, HENRIETTA (1870- ).** An American actress, born at Wheeling, W. Va., Sept. 2, 1870. She made her début in 1889 in *The White Slave* and later was successively under the management of Daly and the Frohmans. In 1897 she was married to Maurice Campbell. In the following year she became a star. Her greatest successes have been her production of George C. Hazleton's *Miss Nell*, Oct. 9, 1900, in New York, where it ran for over 100 performances, and her Rosalind in *As You Like It* (Feb. 27, 1902), which ran for eight weeks at the Theatre Republic, New York. After this she appeared in many popular successes, including *The Sword of the King* (1902); *Sweet Kitty Bellairs* (1903); *All-of-a-Sudden Peggy* (1906-07); *Sham* (1909); *Anti-Matrimony* (1910); *The Real Thing* (1911).

**CROSS** (AS. *cræc*, OHG. *crūci*, *chrūci*, *chrūze*, Ger. *Kreuz*, Prov. *crois*, *croiz*, OF. *crois*, *croiz*, *croiz*, *croiz*, Fr. *croix*, It. *croce*, cross, from Lat. *crux*, *cross*). The cross was a common instrument of capital punishment among the ancients; and the death on the cross was deemed so dishonorable that only slaves and malefactors of the lowest class were subjected to it by the Romans. It was customary to proclaim the name and offense of the person crucified, or to affix to the cross a tablet (*album*) on which name and offense were inscribed. Malefactors were sometimes fastened on a simple upright stake, and so left to die, or they were impaled upon it, and to this upright stake the Latin name *crux* was originally and more strictly applicable; but very generally a crosspiece (*patibulum*) was added to the stake, to which the arms of the criminal were tied, or to which his hands were nailed. The person crucified often lived for days. When the crosspiece was fastened at right angles below the summit of the upright stake, the cross was called *crux immissa* (the Latin cross); the Greek cross, where the crosspiece was set so low as to form four equal or nearly equal arms, is a variant of this form; when the crosspiece was fastened at right angles across the top of the upright stake, the

cross was *crux commissa* (also called "cross of St. Anthony"); and when it was formed of two beams crossing one another obliquely, it was *crux decussata* (also called "cross of St. Andrew"). The cross was erected outside the gates of towns, but in places of frequent resort.

It appears that the cross was in use as an emblem, having certain religious and mystic meanings attached to it, long before the Christian era. The Spanish conquerors were astonished to find it an object of religious veneration among the natives of America. But the death of Christ by crucifixion led Christians to regard it with peculiar feelings of veneration and to adopt it as a symbol with express reference to the central fact of their religion. It was seen everywhere in Christian countries, in the home as well as in the church, where it formed an invariable ornament of the altar. The Iconoclastic party contended against the worship of the cross, but the Church, while defining the sense in which worship might be offered to it, condemned their views. Though the word *latreia*, 'adoration,' is used of the veneration paid to the cross, it is explained as only relative, and referred back to the person of the Crucified. This species of veneration, which is sometimes misunderstood on account of the restricted use of the word "worship" in modern English, is solemnly paid in the Roman Catholic church to pieces of the true cross (considered the most sacred of all relics) whenever exposed, and to other crosses, especially on Good Friday. The cross on the high altar, which has been wrapped in a violet covering throughout Passiontide, is unveiled during the singing of the anthem "Behold the wood of the Cross, on which the Saviour of the world hung." It is then laid on the altar steps, and the celebrant and other sacred ministers approach with genuflections and kiss it. After this a smaller cross is offered to the congregation, kneeling at the altar rails, to be kissed. (Consult Cardinal Wiseman, *Lectures on the Offices and Ceremonies of Holy Week*, London, 1839.) The earliest account of the solemn veneration of the cross occurs in the *Peregrinatio Sanctæ Sibilæ ad Loca Sancta*, recently discovered by Gamurrini and published in Rome, 1887-88, which describes a pilgrimage to Jerusalem during the episcopate of St. Cyril, probably in the year 384 or 385. The sign of the cross has been made in Christian worship, since the second century at least, as an act of homage to God in remembrance of the Redemption, and of blessing to the person or object over which the sign is made. It is differently made in the Roman Catholic and Eastern churches, and has been disused among most Protestants, as a ceremony of human invention tending to superstition. A cross was in the Middle Ages prefixed to most inscriptions and documents as a sort of consecration, and placed before signatures for the same reason; the latter practice is still retained by Roman Catholic bishops. At the time of the Reformation the use of the cross was discontinued in the Anglican church, but later a reaction in its favor set in. At the present time it is often seen upon the altar of the churches of the Anglican communion and is also frequently carried before the procession of choir and clergy. The Lutheran churches have retained the cross behind the altar, and they occasionally use the sign of the cross in liturgy. This is the authoritative practice in the Anglican

churches at baptism and in the anointing of the monarch at the coronation.

The forms given to crosses in art are endless; but the two leading types are the Latin cross, or *cruz immissa*, supposed to be that on which Christ suffered, and the Greek cross, both of which are subject to many fantastic variations. The Greek cross forms the well-known cross of St. George, which, adopted from the legends of that hero, was the national ensign of the English previous to the union with Scotland. (See UNION JACK.) The cross of St. Andrew, according to the legend, was the form of cross on which St. Andrew, the national saint of Scotland, suffered martyrdom. As the Scottish ensign, it is now blended with the cross of St. George in the Union Jack. The Maltese cross, with its eight forked ends, was a form used by the Knights of Malta. It is similar to the crosslet form where small crosses are formed at the ends.

**Sanctuary, Boundary, or Monumental Crosses**, as they are called, consist of an upright flat pillar, or obelisk, covered with sculptured devices and set in a socket level with the ground. Occasionally they appear to have marked boundaries, but more frequently were monuments over the graves of heroes, kings, bishops, etc. In some instances they probably marked the verge of a sanctuary. The older of these crosses are said to be Scandinavian or Danish, and such are known as *runic crosses*, being inscribed with runes. We are told that the island of Iona at one time possessed 360 crosses, but all are now destroyed or dispersed, except one, called St. Martin's Cross, standing in the grounds of the cathedral. It is a column of compact mica schist, 14 feet high, 18 inches broad, and 6 inches thick, and is fixed in a pedestal formed out of a massive block of red granite, about 3 feet high. In connection with certain ancient religious houses in Ireland, there were some very fine crosses of this kind, the most gigantic and impressive which still exists being that of St. Luke's in the County of Louth. The prominence of such crosses extended to the East, where the Gothic and other tribes of the Caucasus, Georgia, and Armenia also used them prominently in church sculpture and in cemeteries.

**Memorial Crosses** are those which were erected in memory of some beloved object, or in commemoration of some event of local importance. In England there are some superb crosses of this kind: they are popularly called *Norman crosses*. This species of cross resembled a Gothic turret set on the ground or on a base of a few steps, and was erected by Edward I (1290) in memory of his queen, Eleanor, being placed on the spots where the body rested in its funeral progress to Westminster. Of the 15, three remain—at Geddington, Northampton, and Waltham.

**Town or Market Crosses** were erected as stands to preach from, or in commemoration of events regarding which it was deemed proper to evoke pious feelings. As these structures were incorporated with or surmounted by a crucifix, the term *cross* was so indelibly associated with them that it survived the religious character of the fabrics. The earliest examples of this kind consisted, probably, of tall crucifixes of wood, such as are still seen by the wayside in some continental countries. Afterward stone shafts would be substituted; and according to the in-

crease of market revenues, or progress of taste, these town crosses assumed that imposing character which they latterly possessed. Of the larger ornamental crosses of this kind, there are some striking specimens in England, such as that at Cheddar in Somersetshire, and that at Malmesbury in Wiltshire; both are open-vaulted structures, with a commodious space beneath, as a refuge for poor market folks during rain, and surmounted with a kind of Gothic turret. At Chichester, Bristol, and Winchester the market crosses, while similar in form, are of a higher architectural quality. Adjoining St. Paul's in London, stood Paul's Cross, a structure which we read of as early as 1259, in the reign of Henry III. It was essentially a town preaching cross and is associated with some interesting occurrences in history. Before this cross the unfortunate Jane Shore, the mistress of Edward IV from 1470 to 1483, was forced to do penance in the reign of Richard III. Here Dr. Shawe, in his infamous sermon, attempted to bastardize the children of Edward and eulogized Richard. In front of this cross sat Cardinal Wolsey to hear fulminations against Luther; and about 10 years later, by order of Henry VIII, preachers here delivered sermons in favor of the Reformation. At this cross Queen Elizabeth attended to hear a thanksgiving sermon for the defeat of the Spanish Armada. Here sermons continued to be delivered until 1643, when, with other so-called relics of popery, it was demolished by order of Parliament. Whatever was the original form of Paul's Cross, it was in later times a plain, pulpit-like fabric of wood, covered with lead.

The Scottish town crosses, while simple, had some distinguishing features. The more simple kind consisted of a shaft of stone, generally octangular in shape, and 12 or more feet in height. At the top was an ornamental capital, which bore a dial and vane, or the figure of a unicorn. The shaft sprang from the top of a graduated flight of circular or octangular steps. A specimen of this species of cross is seen in the market place of Melrose. The grander market cross consisted of a tall stone shaft, such as just described, but instead of having steps it sprang from the centre of an imposing substructure. This structure was circular, hexagonal, or octagonal, and from 10 to 16 feet high. The top formed a platform, which was surrounded with an ornamental stone parapet and was reached by a stair inside. The sides of the building were decorated with pilasters and bore various heraldic and other devices. Such were the crosses of Edinburgh, and such is the renovated cross of Aberdeen, the sides of which, however, are open. Losing their religious character, the Scottish market crosses were employed for royal and civic proclamations, and as places where certain judicial writs were executed. The general removal of these ancient and interesting structures has often been a matter of lamentation.

In the history of the cross as a Christian symbol, it is evident that it was used at first as a symbol of triumph, not of suffering. In the sarcophagi and mosaics from the fourth to the ninth century it often stands alone on the sacred rock from which flow the Four Rivers of Paradise. It is sometimes surmounted by the Constantinian monogram of Christ, the Labarum, and thus became the standard of victorious Christianity. It was inscribed within

the circle around the head of Christ, thus forming the cruciform nimbus (q.v.). As an emblem of Christ, it preceded the crucifix, and it was not until the tenth and eleventh centuries that the figure of Christ had quite generally replaced on the cross the ornamentation which had previously been its usual decoration. Even when the monumental crucifixes had come into general use in central and southern Europe, the northern nations (e.g., Great Britain and Scandinavia) continued for centuries the use of the mere cross. The form of the cross given to the majority of churches in the later Middle Ages is more connected with the specific crucifixion than the mere cross, as is shown by the bend sometimes given in some church ground plans, imitated from the twist of the body on the cross. Consult: Stockbauer, *Kunstgeschichte des Kreuzes* (Schaffhausen, 1870); Fulda, *Das Kreuz und die Kreuzigung* (Breslau, 1878); Dobbert, *Zur Entstehungsgeschichte des Kreuzes* (1880); Bunsen, *Das Symbol des Kreuzes bei allen Nationen* (Berlin, 1876); Alger, *History of the Cross* (Boston, 1858); Mortillet, *Le signe de la croix avant le christianisme* (Paris, 1886); Zieckler, *Das Kreuz Christi* (Gütersloh, 1875); Forrer and Muller, *Kreuz und Kreuzigung Christi in ihrer Kunstentwicklung* (Strassburg, 1893). See also the bibliographies of CRUCIFIX and JESUS CHRIST in ART.

**CROSS.** In heraldry (q.v.), one of the charges known as "ordinaries."

**CROSS, CONGREGATION OF THE HOLY.** See HOLY CROSS, CONGREGATION OF THE.

**CROSS, INVENTION OF FINDING OF THE.** The name of the Church festival commemorative of the finding of the cross upon which Christ died by the Empress Helena, the mother of Constantine, in the year 326. As related by Socrates (*Ecclesiastical History*, I, xvii), who wrote about 439, the story is this: In Christ's sepulchre she found three crosses, along with Pilate's tablet, and on the advice of Macarius, Bishop of Jerusalem, determined which was Christ's cross by taking the three to a sick woman, who touched the first two without avail, but was restored as soon as she had touched the third—so that was accepted as Christ's. Similar is the story in Sozomen (*Ecclesiastical History*, II, i), who wrote a little later. From this time on for many centuries there was no question of the fact. Doubt has been cast upon it by the consideration that Eusebius, who wrote in the fourth century, and who was particularly explicit regarding everything relative to the Constantine family in his account of Helena's visit to the Holy Land (*Life of Constantine*, III, lii), says nothing of her discovery of the crosses, nor when speaking of the erection of the church over the Holy Sepulchre (ib., III, xxviii et seq.). It is also noteworthy that the Bordeaux Pilgrim, the author of the *Itinerarium Burdigalense*, writing in 333, says nothing in his description of the holy places of any cross being discovered in the Holy Sepulchre (*Itinerary from Bordeaux to Jerusalem, Palestine Pilgrim's Text Society's Eng. trans.*, London, 1877, p. 24). Still Cyril of Jerusalem, writing in the Holy City in 347-348, uses this language: "He was truly crucified for our sins. For if thou wouldest deny it, the place refutes thee visibly, this blessed Golgotha, in which we are now assembled for the sake of Him who was crucified, and the whole world has since been filled with pieces of the wood of the cross"

(*Catechetical Lectures*, IV, 10). And he alludes to the finding of the cross when writing to Constantius, the son of Constantine (*Ep. ad Const.*, c. 3); though the authenticity of this letter has been questioned, but not disproved. That Helena found three crosses and that she and many others believed that one of them was the cross of Christ may be accepted, though we have no confirmatory proof of its authenticity.

The festival of the Invention of the Cross may date from the visit of Helena, but unless it was at first local, the earliest certain mention of it is in the eighth century. In the Latin church the day is May 3. In the Greek church there is a festival of the Exaltation of the Cross on September 14. Consult, in favor of the story: J. H. Newman, *Essay on Ecclesiastical Miracles*; and as against it: W. C. Prime, *A History of the Invention, Preservation, and Disappearance of the Wood Known as the True Cross* (New York, 1877); E. Nestle, *De Sancta Cruce, Ein Beitrag zur christlichen Legendengeschichte* (Berlin, 1889); Staley, *The Liturgical Year* (London, 1907).

**CROSS, JUDGMENT OF.** See ORDEAL.

**CROSS, ORDER OF THE HOLY.** See HOLY CROSS, ORDER OF.

**CROSS, SOUTHERN.** See CRUX.

**CROSS, VICTORIA.** See VICTORIA CROSS.

**CROSS, CHARLES ROBERT** (1848- ). An American physicist, born at Troy, N. Y. He graduated in 1870 at the Massachusetts Institute of Technology and was instructor there in 1870-77. In 1877 he was appointed professor of physics and director of the Rogers laboratory. He established at the institute in 1882 the first American course in electrical engineering. His publications include: *Course in Elementary Physics* (1873); *Lecture Notes on Mechanics and Optics* (1884); *Notes on Mechanics* (1908; 2d ed., 1911).

**CROSS, MARY ANN, or MARIAN.** See ELIOT, GEORGE.

**CROSS, MRS. GEORGE FREDERICK.** See CAMBRIDGE, ADA.

**CROSS, RICHARD ASSHETON**, first Viscount Cross (1823-1914). An English politician. He was born at Red Scar, Lancashire, graduated at Trinity College, Cambridge, in 1846, and in 1849 was called to the bar. He sat in Parliament as a Conservative, for Preston from 1857 to 1862, for Southwest Lancashire from 1868 to 1885, and for the Newton Division, Southwest Lancashire, from 1885 to 1886. From 1874 to 1880 and in 1885-86 he was Home Secretary, and from 1886, when he was made Viscount, to 1892 Secretary of State for India. In 1887 he headed a commission on the working of the Education Acts, which brought in reports diametrically opposed to each other. He published *The Acts Relating to the Settlement and Removal of the Poor* (1853) and *The General and Quarter Sessions of the Peace* (1855).

**CROSS, (CHARLES) WHITMAN** (1854- ). An American geologist, born at Amherst, Mass. He was educated at Amherst College and the University of Leipzig. In the United States Geological Survey he was assistant geologist in 1880-88, geologist after 1888, and chief of the section on petrology in 1903-06. In 1911 he became treasurer of the National Academy of Sciences. He is author, with three others, of the important *Quantitative Classification of Igneous Rocks* (1903), a new system with new nomenclature (see PETROGRAPHY). He also pre-

pared a number of Geological Survey bulletins and in 1902 published *The Development of Systematic Petrography in the Nineteenth Century*.

**CROSS, WILBUR LUCIUS** (1862- ). An American educator and author, born at Mansfield, Conn. He graduated in 1885 at Yale University, and from 1894 to 1897 was instructor in English in the Sheffield Scientific School. In 1897 he was appointed an assistant professor in English and in 1902 professor. In addition to magazine contributions on Ibsen, the novel, and editions (with notes and essays) of *Macbeth* (1900), the *Works of Laurence Sterne* (1904), and Defoe's *Robinson Crusoe* (1911), his publications include an excellent handbook, *The Development of the English Novel* (1899), and *Life and Times of Laurence Sterne* (1909). He contributed to the first edition of the *NEW INTERNATIONAL ENCYCLOPEDIA*. Under his editorship the *Yale Review* at once took a high place among contemporary periodicals.

**CROSSBILL**. A bird of the genus *Loxia*, large finches with a singular bill, the mandibles—which are rather long, thick at the base, and much curved—crossing each other at the points when the bill is closed. These mandibles are capable not merely of vertical but of lateral motion, and muscles of extraordinary power are provided for moving them; so that the crossbills readily obtain their principal food—the seeds of firs and pines—by tearing off the scales of the cones. They bring the points of the mandibles together (which they can do so as to pick up a very small seed) and insert them into the cone, when the act of allowing the points to slip past one another exerts a powerful lateral movement, opening the scale; and the tongue, which terminates in a singular movable scoop, formed of a bone articulated to the os hyoides, or ordinary bone of the tongue, is inserted to detach the seed.

BEAK OF THE CROSSBILL.
